BOUND JUN 9 1911

TO THE
QUEEN'S
MOST
Excellent MAJESTY.

MADAM,

YOUR gracious Acceptance of my late Book, which I had the Honour to Dedicate to His Royal Highneſs, makes me preſume to lay *This* at Your Majeſty's Feet.

The Diſcoveries that have been ſucceſſively made of the Religions, Manners, Cuſtoms, Politicks, and Natural Products of all Parts of the World, will *here* give Your Majeſty an *agreeable* and *uſeful* Entertainment: And, I'm ſure, it will add to Your Satisfaction to ſee, that they have been chiefly made by thoſe of Your *Own Nation.* It hath been thought by ſome a laudable Reaſon for ſending our Gentlemen Abroad, that they may the better learn to value their Native Country. And this I dare ſay, That when either a Man hath actually travell'd the whole World over himſelf, or carefully conſider'd the Accounts which thoſe give us that have done ſo, he will be abundantly convinced, that Our own Religion, Government and Conſtitution is, in the Main, much preferable to any he ſhall meet with Abroad; And eſpecially under the happy Influence of Your Majeſty's Reign, whom Providence ſeems graciouſly to have deſign'd to make us Great and Happy, even whether we will or no.

Your Majeſty's Goodneſs to all Your Subjects, makes our Duty and Loyalty, by no means a Burthen, but a ſubſtantial Pleaſure. Your Wiſdom and penetrating Judgment diſappoints all the Deſigns of the Enemies of Your Government, and nips them in the Bud. Your ſincere and ſteady Affection for the Eſtabliſh'd Church, damps all the Hopes of *Faction* and *Fanaticiſm*; And Your entire Compliance in all Things with Our Laws and Conſtitutions, Your Lenity, Love of, and Goodneſs to Your People, whoſe Eaſe and Happineſs You really ſtudy much more than Your Own, fruſtrates and blaſts all the barbarous Contrivances of thoſe, who would enſlave Us to Arbitrary Power, *French* and *Popiſh* Tyranny: And who wou'd deprive Us of the greateſt Bleſſing We ever yet had, Your Majeſty's Sacred Perſon and Excellent Government! This, *Dread Sovereign,* all the World ſees, and juſtly admires in Your Majeſty: *This* makes Your Armies conquer Empires Abroad, and every One call You Bleſſed, *pray* heartily to GOD for You, and *bleſs* GOD for You, at Home.

And as theſe are Vertues, *Madam,* that can never loſe their juſt Reward; ſo I doubt not but GOD will give it *You,* in a great Meaſure, *here*; and make *You* the Glorious Inſtrument of Settling the Peace and Liberty of *Europe* on a ſafe and laſting Foundation.

The mighty Succeſs Your juſt Arms have obtain'd already, againſt the Common Enemy, doth fairly foretell *This.* And as I doubt not but This is the Univerſal Prayer of all *true Engliſh* Men; ſo is it deſired by none, with greater Zeal and Earneſtneſs, than by,

MADAM,

Your Majeſty's moſt Dutiful,

And moſt Obedient Subject and Servant,

JOHN HARRIS.

TO THE READER.

THough the Contents are very full and particular, yet I judge it may be ſatisfactory to give ſome Account of this Work in general.

The former of theſe Volumes begins with the moſt early Diſcoveries, and Settlements of Trade, and reaches down to the Year 1626, where Purchas ends his Collection. But you will find here a ſuccinct Account, of the Books of very many other Authors, which are neither in Him nor Hackluit.

This Volume is divided into Five Books.

The Firſt of which contains an Account of the ſeveral Circum-Navigations of the Globe, by Columbus, Ferd. Magellane, Sir Francis Drake, Mr. Tho. Candiſh, Oliver Noort, Sebald de Wert, George Spitbergen, William Corneliſon, Schooten of Horne, &c.

The Second Book gives you the firſt Engliſh Voyages to the Eaſt-Indies, both before and after the Settlement of the Eaſt-India Company.

As alſo, the firſt Voyages of the Dutch to thoſe Parts, with their ſeveral Succeſſes there, till their Pretenſions to a Property and Sovereignty at the Banda Iſlands.

You will find here alſo, that the French, finding the great Advantage the Engliſh and Dutch made of the Trade to the Eaſt-Indies, fitted out Ships to come in for a Part with them: And here you have in particular the admirable Voyage of Monſieur Beauleu to the Eaſt-Indies, taken from the large Collections of Mouſieur Thevenot: In which you have a juſt Account of the Engliſh, Dutch and Portugueſe in that Part of the World, and on what Foundations and Principles each proceeded in their Pretences and Meaſures. To which is added all the Diſcoveries of the Spaniards, Portugals and Italians, relating to the Eaſt-Indies, and the adjacent Countries.

The Third Book contains the beſt Deſcriptions and Accounts of the ſeveral Parts of Africa, beginning with the Author called Leo-Africanus; and at the End of each Chapter, adding what Mormoll hath further obſerved. And to this is annex'd all that Mr. George Sandys relates of Africk, of his own Knowledge. You have here alſo the Subſtance of Ludolphus his excellent Hiſtory of Æthiopia, as alſo, Sir Tho. Herbert's Travels thro' a good Part of this Country: The Marrow of which Book we thought fit to bring in here; tho' Sir Thomas began *his Travels but in the Year in which* Purchas *ends his Collection, and was Thirty Years in compleating them. But then his Exactneſs and Fidelity will ſufficiently atone for this, and you will find him much more accurate, than thoſe Writers in* Purchas: *Which yet, to illuſtrate the Matter the more fully, we have put together with him.*

In the Fourth Book you have an Account of whatever is material in all the Voyages to Ruſſia, *and the* Northern *and* North-Eaſtern *Parts: In the Beginning of which we have been much beholding to* Hackluit, *who hath been very expreſs and particular, with Regard to this Part of the World.*

After this you have all the Attempts to diſcover a North-Eaſt *and* North-Weſt Paſſage *to the* Eaſt-Indies, *in a continued* Series *of Time, from the firſt to the laſt; together with a* Map *of the* North Pole, *ſhewing* how far, *and* which Way, *each Perſon went; how they* return'd, *or where they* periſh'd: *This ends with* Capt. Wood's *Voyage; and with it is connected all the Accounts of* Greenland, *and the adjacent* Northern *Parts.*

The Fifth Book contains the Diſcoveries of our own and all other Nations in America: *With an Account of the Settlement of our Plantations, Trade, &c. there: In which Book, as there is nothing at all omitted that is in* Hackluit *and* Purchas, *ſo there is beſides above a Third part more added.*

The Second Volume *hath nothing out of* Purchas *and* Hackluit; *but is entirely New: Being taken from the beſt of all the Modern Authors extant, and is divided into Four Parts, according to the general Diviſion of the World. The Account of the* Appendix *you have in the Title Page, as alſo of the* Introduction; *of which therefore I ſhall ſay nothing: Only I ought to advertiſe you, that in the* Contents *you will find every Author's Name, and to what Part of the World he travell'd, &c. And that the* Index *is ſo very large and compleat, that you may there readily find the Deſcription of any Part of the World; or an Account of any* Bird, Beaſt, *or* Plant *remarkable therein, that hath been deſcrib'd by Travellers.*

THE
CONTENTS
OF THE
Firſt Volume of *Navigantium atque Itinerantium Bibliotheca.*

INTRODUCTION.

Part I.

Of the Origination of Mankind, the Peopling of the World, and the Migration of Nations, p. i
Of the Peopling of America, p. ii

Containing a particular Account of the Kingdom of Morocco. *From* John Leo, p. 316

Additions *to* Chap. ii.
Collected from Marmol, p. 321

CHAP. III.
Containing John Leo's *Deſcription of the Kingdom of* Fez, p. 325

Additions *to* Chap. iii.
From Marmol, p. 334

CHAP. IV.
Containing John Leo's *Deſcription of the Kingdom of* Tremeſen, p. 338

Additions *to* Chap. iv.
Taken from Marmol, p. 340

CHAP. V.
Containing John Leo's *Deſcription of the Kingdoms of* Bugia *and* Tunis, p. 342

Additions *to* Chap. v.
Taken from Marmol, p. 344

CHAP. VI.
Containing John Leo's *Deſcription of* Numidia *and* Libya, p. 346

Additions *to* Chap. vi.
Collected from Marmol, p. 348

CHAP. VII.
Containing a Deſcription of Negroland, *from* John Leo, p. 350

Additions *to* Chap. vii.
Containing Marmol's *Account of Lower* Æthiopia, *or* Negroland, p. 352

CHAP. VIII.
Containing John Leo's *Deſcription of* Ægypt, Ibid.

Additions *to* Chap. viii.
Collected from Marmol, p. 357

CHAP. IX.
Containing John Leo's *Account of the remarkable Animals, Minerals, and Plants, in* Africa, p. 358

Additions *to* Chap. ix.
Collected from Marmol, p. 361

CHAP. X.
The Riſe and Progreſs of the Xeriffian *Family, in* Barbary; *with ſome Remarks upon the Policy and Trade of that Kingdom. Collected from the Writings of* R. C. p. 363

CHAP. XI.
An Account of the Places in Africa, *poſſeſſed by the King of* Spain, *and the Great* Turk, p. 367

CHAP. XII.
The Deſcription of Algier; *with the Hiſtory of its Falling into the Hands of* Barbaroſſa: *And a ſhort Account of* Malta *and* Tripoli. *Taken from* Nicholas Nicolay, Ibid.

CHAP. XIII.
An Account of the moſt remarkable Occurrences in the Voyage of the Engliſh *Fleet, ſent againſt the* Algerines *and others, under the Command of* Sir Robert Manſel, *Kt.* p. 369

CHAP. XIV.

INTRODUCTION.

PART the Firſt.

Of the Origination of Mankind, the Peopling of the World, and the Migration of Nations.

Whoever will carefully and unprejudicately conſider, That there hath in all Ages, and amongſt all Nations been a conſtant Tradition, That Mankind had its Original *ex non Genitis*, or from ſome firſt Parents not begotten in the common way, but immediately created by God himſelf: Whoever will obſerve that the Increaſe of Mankind daily exceeds the Decreaſe, and that Nations uſually have doubled their People in about 360 Years, if not ſooner: Whoever will enquire into the original Invention of Arts and Sciences, and ſatisfy himſelf from Hiſtory, as he may eaſily do, that they all had their Riſe within the compaſs of five or ſix Thouſand Years: Whoever will judiciouſly conſult the Hiſtory of the moſt antient Times, and from thence obſerve, that we have no authentick Accounts of any Tranſactions, Originals of Kingdoms, Wars, or Inſtitutions of Laws, Governments and Commonwealths beyond that Time; but that the Plantations of all known Parts of the World, nay even the Original and *Apotheoſes* of the Heathen Deities themſelves, fall all within that Period. Whoever, I ſay, will candidly conſider theſe Evidences, muſt conclude that we have all the moral Aſſurances poſſible, That the World had a Beginning, and that Mankind had its firſt Original about the Time we have ſo particular an Account of in the Sacred Hiſtory of the Bible: And conſequently, abſtracting from the Divine Authority of *Moſes*'s Hiſtory, it cannot but be lookt upon as the moſt valuable Piece of Antiquity extant in the World. For 'tis plainly to him only that we are indebted for our Knowledge of the Time and Manner of the Beginning of the World; of the firſt Parents of Mankind; of the Cauſe of the Frailty and Depravity of Human Nature, of the Inventors of Arts, the Original of Nations, the firſt Founders of Empires and Kingdoms, and of the Inſtitutions of Laws and Government. Which things in all other antient Hiſtories are ſo intermix'd with Fables and ridiculous unaccountable Stories, that all we can learn from them is, that they knew nothing of the matter, but what they ſtole from him deſignedly, or had conveyed to them by immemorial Tradition from him. The ambitious Pretences of almoſt all Nations to Antiquity, and to the Vain-glory of being *Aborigines*, hath occaſioned their Hiſtorians to intermingle ſo many Fables and Lies with the Accounts of their Origination, that there is hardly any heed to be given to what they relate; nor ought they to merit our Belief any further than as they are collaterally confirmed by other Hiſtories: But the Account which *Moſes* gives us of the peopling of the Earth after the Deluge by *Noah*'s Children, is ſo conformable to all the authentick Records yet remaining in any Languages, that it carries with it irreſiſtible Evidence; and its Brevity and manner of Relation is as admirable as its Truth and Intelligence is valuable: For we have more Information from him in one Chapter, than we can get without him from all the large Volumes of other Authors. Unleſs therefore Men will be ſo ridiculouſly capricious, as to deny the Authority of an Author, only becauſe he hath Divine Inſpiration to ſupport him, the Hiſtory which *Moſes* gives us of the Original of Mankind and the Peopling of the World, ought to claim the greateſt ſhare of our Veneration and Regard.

His Account of the Peopling of the Earth before the Deluge, is deſignedly ſhort, his Intention being only to relate the moſt remarkable Paſſages, and to give an account of the Succeſſion of the Holy Line down to *Noah*, and thence to his own Time.

Bp Patrick on Gen.

But he is very particular about the *Seat of Paradiſe*; telling us that it was placed *in Eden Eaſtward*; that is, Eaſtward of *Judea*, or from the Deſert of the *Amorites*, where *Moſes* was when he wrote this Account. Perhaps the Name *Eden* might be derived from the Pleaſantneſs of the Place: But we read of the Place or Country of *Eden* in ſeveral Places of Scripture, as in 2 *Kings* 19. 12. *Iſa.* 37. 12. *Ezek.* 27. 23. and this *Eden* was Eaſtward of *Judea*: For in the Scripture the Inhabitants of *Arabia*, *Meſopotamia*, and *Perſia*, are called the Children of the Eaſt. This *Eden* was part of the Kingdom of *Aſſyria*, as is plain from 2 *Kings* 19. 12. and that Kingdom antiently contained, not only the Country than called *Aſhur*, but alſo *Meſopotamia* and *Babylonia*, &c. in ſome part of which laſt Province the Biſhop of *Ely* thinks Paradiſe was ſituated; though the generality of Authors call the Region *Meſopotamia*.

Out of *Eden Moſes* tells us a River went, and from thence (*i. e.* below the Garden) was parted into two Heads. This River, according to the beſt Accounts I can find, was a Conjunction of *Euphrates* and *Tigris*: For tho' theſe Rivers have different Springs, and run a long way aſunder, yet at laſt they meet in *Apamia* (as *Ptolemy* ſaith;) which *Apamia*, *Bochart* ſaith, was the Place the *Arabians* now call *Alcatſar*, about 45 Miles from *Bagdat*, and then run together for a great way. This united Stream probably ran through the Country of *Eden*, and had the Garden of that Name ſeated on the Eaſt ſide of it; whoſe Southern End was at the parting again of the two Rivers; but how far it went Eaſtward, or ſpread it ſelf along the River, 'tis hardly poſſible to determine.

This River, *Moſes* ſaith, *became into four Heads*: The judicious Commentator abovementioned well obſerves he doth not ſay, *was parted*, but *became into four Heads*, that is, *Streams*: For Sir *Walter Raleigh* ſhews, that ſo all Diviſions of a great River are called. Which four Streams were, *Tigris* and *Euphrates* before they joined, and *Piſhon* and *Gihon* afterwards. *Piſhon* probably was the Weſtern River *Paſitigris*, the ſame with *Oroatis*, according to *Salmaſius*; and ſo 'tis drawn in the Maps of Sir *Walter Raleigh* and the moſt learned *Bochart*: And this, as our Mr. *Carver* obſerves from *Xenophon*, was called ſimply *Phyſeus*: and *Bochart* notes from *Arrian. Peripl.* that there was a Place called *Paſinum* lying near *Euphrates*; in all which Names there are ſome Remains of the Name *Phiſon* or *Piſon*. And *Strabo* tells us, that from ſome deep Trenches, which were cut to carry the Water of *Euphrates* into *Tigris*, came the Name of *Paſitigris*. But be this as it will, *Moſes* ſaith, *that this River compaſſed the whole Land of* Havilah. In *Gen.* 10. *Moſes* mentions two *Havilahs*, one deſcended from *Joktan*, v. 29. but this cannot be the *Havilah* here mentioned, becauſe his Poſterity were planted Eaſtward: But the other *Havilah*, v. 7. is ſaid to be deſcended from *Cuſh*, and gave riſe to a more Weſtern People ſeated on that part of *Arabia Felix*, which borders on this Stream. For we read *Gen.* 25. 18. that the *Iſhmaelites*, which certainly were the Inhabitants of *Arabia Deſerta*, are bounded by *Shur* towards *Egypt*, and by *Havilah* in the way to *Aſſyria*. And after this, 1 *Sam.* 15. 7. we read that *Saul* found *Havilah* in the ſame Situation. And *Bochart*, in his *Phaleg. lib.* 4. *c.* 11. *col.* 225. *Edit. Amſtelod.* obſerves from *Strabo*, that there were a People called Χαυλοταῖοι, which were Inhabitants of *Arabia*.

The next Stream *Moſes* calls *Gihon*, of which Name indeed there are hardly any Footſteps remaining; but by the Country it is ſaid to encompaſs, it muſt be the Eaſtern Diviſion of the River after its parting at *Eden*. This Country he calls *Ethiopia* or *Cuſh*; by which we are to underſtand, not that in *Africa*, but in *Aſia* (for the Antients mention two *Ethiopia*'s.) This *Bochart* aſſerts, and *Steph. Morinus*, in his Treatiſe of Paradiſe, proves to be the Country of *Suſiana*, which the *Greeks* called Κίσσια, and the *Perſians* at this time call *Chuzeſtan*, or the Country of *Chus*.

The Name of the Third River, he ſaith, is *Hiddekel*, which in *Dan.* 10. 4. is called the Great River, and therefore muſt be *Tigris*: For *Rauwolff* tells us in his Travels, *p.* 11. *c.* 9. that in his time the River *Tigris* was called by the People of *Caruch*, on the Confines of *Media*, *Hiddekel*. And *Pliny* ſaith, *lib.* 6. *c.* 27. that the *Tigris* is ſo called from its Swiftneſs; but that where it runs ſlower, 'tis called *Diglito*, and the *Arabians* call it *Deglat* and *Degela*; all which Words plainly are Corruptions of the Name *Hiddekel*. The *Targum* of *Onkelos* and *Jonathan* renders it *Diglat*.

The fourth River, *Euphrates*, *Moſes* doth only barely mention, becauſe it was very well known to thoſe to whom he wrote, and at that time. The Seat therefore of Paradiſe was thus placed: The Rivers *Euphrates* and *Tigris* (i. e. *Hiddekel*) joined ſomewhere in the antient *Babylonia*, or, as ſome call it, *Meſopotamia*, into one great Stream, on the Eaſt ſide of whoſe Banks the Garden of *Eden* was placed; at the Southward End of which the River parted again into two Streams, then called *Piſon* and *Gibion*; but in proceſs of time *Euphrates* and *Tigris*, as before their Conjunction, which Name we find in the *Greek* and *Roman* Writers given to them. Mr. *Whiſton*, in his *New Theory of the Earth*, p. 104. ſuppoſes the antient Paradiſe to be at the joint Courſe of the Rivers *Tigris* and *Euphrates*, either before they fall into the *Perſian* Gulph, where they now unite together, and ſeparate again, or rather where they antiently divided themſelves below the Iſland *Ormus*, where the *Perſian* Gulf, under the Tropick of *Cancer*, falls into the *Perſian* Sea. So that the exact Place of Paradiſe is now under Water, being a Branch, or Bay, of the great Ocean. What this Gentleman's Reaſons are that induce him to be ſo particular as to the Seat of Paradiſe, the Reader will ſee in his Ingenious Theory.

This ſhort Account of the Situation of Paradiſe I thought proper to give you here, becauſe 'tis a Geographical Matter, and therefore proper for this Place: and tho' no doubt the Site of thoſe Rivers was much changed by the Flood, yet 'tis likely *Moſes* deſcribes them as they were in his Time, and as ſuch they do not diſagree with the Accounts we have of thoſe Places from other hands.

There is little more neceſſary to be taken notice of here, of Matters tranſacted before the Deluge, unleſs the mention of *Cain*'s going out from the Preſence of the Lord *into the Land of* Nod, *on the Eaſt of* Eden; his dwelling there, and building a City, which he called after his Son's Name, *Enoch*. By which we may underſtand, that *Cain*'s Guilt and Remorſe of Mind was ſo great, that he could not bear the View of the *Schechinah*, or Divine Glory, the then viſible Mark of God's Preſence, and which abode probably in the Place where *Adam* ſettled himſelf after his Expulſion out of Paradiſe: and therefore wandred away Eaſtward from *Eden*, into a Country, that from his wandring up and down there, had the Name of *Nod* given it, that is, *the Land of Vagabonds*. This Place *Junius* thinks, was in that Tract of Land, where the firſt *Nomades* afterward dwelt (who perhaps took their Rambling way of living from this firſt Vagabond *Cain*) and which he ſuppoſes was near *Suſiana*, or *Chuzeſtan*. Here, after he had moved up and down for a great while, till his Progeny grew numerous, he at laſt ſettled, and built a City, and called it *Enoch* (as was antiently very uſual) after the Name of a Son he had then born. After this *Moſes* mentions only a few Paſſages of *Cain*'s Offspring; looking upon them, as ſome of the Fathers ſpeak, as ſuch a wicked Generation of Men, as were not worthy to be numbred in the Book of the Living; whereas he gives a plain Account of the Genealogy of *Seth* (*Adam*'s Son) down to the time of the Deluge, and thence to his own Age.

As to all other Matters from hence to the Flood; as how far the Earth was peopled by the *Antediluvians*, in what Parts of the World they ſettled, whether they had any Ships or Boats, and what Travels or Voyages they made, we can advance nothing but mere Conjecture, and therefore ſhall ſay nothing of it; but proceed to conſider the Peopling of the Earth after the Flood, by *Noah* and his Family, the only Survivors in that Univerſal Deluge.

Of the Capacity, Form and Figure of the Ark, I need ſay nothing, it having been ſufficiently proved over and over, that it was capable of holding all thoſe Creatures (and their Food) which were included in it during the time that the Waters of the Deluge cover'd the Earth, which was a whole Year: Only 'tis proper for my purpoſe to obſerve, that 'tis exceeding probable the Ark did not move far from the Place where *Noah* built it, but was only juſt, as it were, lifted up from the ground by the advancing Waters, and then ſet down again: For its very great Bulk and Cheſt-like Figure was very improper for Sailing; and we read of no Oars, Maſts or Sails that it had to move it, or Rudder to ſteer it: And there was no Wind to drive it from Place to Place; for the Wind came not till after the Ark was ſafe a-ground on the Mountains of *Ararat*, as is fairly concludable from the Text. This being ſo, and it being alſo probable, that tho' *Cain*'s Progeny rambled about the Earth, and ſettled themſelves remote from the Seat of *Adam*, and his Poſterity of the Holy Line; yet 'tis very likely that theſe, I ſay, fixed themſelves ſomewhere near to and about Paradiſe, in the Province of *Babylon*, *Aſſyria*, *Meſopotamia*, &c. For there, as *Bochart* well obſerves, was the greateſt Plenty of the *Gopher Wood* (that is, *Cypreſs*, as our *Fuller* in his Miſcellanies hath, I think, proved) of which God commanded *Noah* to make the Ark: And here alſo long after this, *Arrianus* tells us, *lib.* 7. *Alexander* built a Navy of Cypreſs Trees Wood.

Now we are told by *Moſes*, that the Ark reſted on the Mountains of *Ararat*, which now all Learned Writers do agree, ſignifies that long Ridge of Mountains which is now called *Taurus*, as it was by *Pliny*, and runs through *Armenia*, *Aſſyria*, *Meſopotamia*, *Media*, *Suſiana*, &c. from *Cilian* to *Parapomiſus*. On the higheſt and more Eaſtern part of this Tract of Hills did the Ark reſt; or, as *Epiphanius* calls them, and *Bochart* from him, the *Gordiæan Mountains*; which, as *Theodoret* obſerves on *Iſaiah* 16. 13. were always reckoned the higheſt in the World. *Porcius Cato* ſaith expreſly, that about 250 Years before *Ninus*, the Earth was drowned by a Deluge, and that Mankind was reſtored again in *Scythia Saga*; which Country Sir *Walter Raleigh* ſaith is certainly under the Mountain *Parapomiſus*. To the ſame purpoſes Dr. *Heylin* produces a Tradition of the Inhabitants thereabouts, that near the Foot of Mount *Caucaſus* there was a large Vineyard in *Margiana*, which was of *Noah*'s planting. Mr. *Whiſton* alſo, in his *New Theory of the Earth*, obſerves very juſtly, that it being plain from *Moſes*'s Text, and from the Nature of the thing, that the Ark reſted on the higheſt Hill of all *Aſia*, nay indeed of the whole Earth (for the Water was fifteen Cubits above the Tops of all the other Mountains, when the Ark was a-ground on Mount *Ararat*) *Parapomiſus* (the antient *Caucaſus*) muſt be the Place where the Ark reſted, becauſe it is agreed, that that Hill was the higheſt of all in *Aſia*. Theſe Mountains were not above 200 or 300 Miles from *Eden*, and probably about half as far from the Place where *Noah* built the Ark, according to *Bochart*: And the Courſe of the Rains and the Riſe of the Water coming from the South, might eaſily and gently drive the Ark ſo far Northerly, as to ſet it down on the Top of thoſe vaſt high Hills. And that it was the moſt Eaſterly part of theſe Mountains on which the Ark reſted, ſeems plain from the Account which *Moſes* gives us of the firſt Removal after the Deluge, which he ſaith was *from the Eaſt*, into the Plains of *Shinar*, *Gen.* 11. 2. and alſo becauſe we find by all ancient Hiſtory, that tho' we meet with none, or at leaſt but very few Colonies ſent Eaſtward after the Confuſion of Tongues at *Babel*; yet the Eaſtern Parts of the Earth have always been moſt numerous, as well as moſt polite and great.

After the Waters were aſſwaged, and the Earth grew dry by degrees, no doubt the Family of *Noah* began to come down from the Mountains, and to diſperſe themſelves into ſuch parts of the adjacent Countries, as probably by Birth-right, Lot, or ſome other ways of Diviſion each Party had appointed for them. And as theſe Families increas'd and grew numerous, they muſt of neceſſity extend farther and farther; ſo that at laſt, they and their Poſterity came to *overſpread the whole Earth*, as *Moſes* expreſly tells us, *Gen.* 9. 19. Bp. Patrick on Gen.

From whence it appears (as a very great Man obſerves) that *Noah* either had no Children after the Flood, or elſe that none of them lived to have any Poſterity.

'Tis more than probable, that from *Ararat* they went down towards the *South* firſt of all, peopling *Aſſyria*, *Babylon*, *Syria*, *Egypt*, and then *Ethiopia* by degrees: So that the Pretence of the *Egyptians* of being the moſt antient People of the World, was as vain as that of the *Ethiopians*, who contended with *them* for Antiquity, of whom they were but a Colony, as we learn from *Gen.* 13. 13.

But in order to give a more particular Account of the Peopling of the World, and the Origin of Nations, let us begin with the *Eaſt*, which by the general Voice of all

Antiquity, hath been pronounced the moſt antient Part of the World; and it hath been by one common Conſent always owned, that all Learning, Arts and Sciences, and Knowledge of antient Times, hath been derived from thence. This, as Dr. *Jackſon* obſerves, is apparent from the Riſe and Increaſe of Arts and Sciences, which were in the Eaſt in a good degree of Perfection, as early as we have any account of Time in profane Hiſtory, and were from thence propagated into other Parts of the World: and this alſo is confirmed by the State and Grandeur of the Eaſtern Kingdoms, long before *Greece* or *Italy* made any Noiſe or Figure in the World, and which 'tis plain were originally Colonies from thence.

The Ark therefore reſting on the *Gordiæan* Hills, or Eaſtern Part of the Mountain *Taurus*, and the pleaſant Plains of *Babylon*, *Meſopotamia*, &c. being below them to the Southward, nothing can be more likely than that ſome of *Noah's* Family would go down and ſettle themſelves thereabouts firſt of all, as knowing alſo that thereabout was the antient Seat of Paradiſe: And accordingly the Accounts that we have of the *Babylonians* and *Aſſyrians*, are the moſt antient of any. The *Gentile* Writers of Hiſtory all agree that *Babylon*, or *Babel*, was firſt built by the Firſt *Belus*; which Word doubtleſs comes from *Baal*, which ſignifies *Lord* or abſolute Commander: And therefore this Perſon can be no other but *Nimrod*, whoſe Kingdom *Moſes* tells us, *Gen.* 10. 10. was *Babel*, and who is called *a mighty Hunter before the Lord*: Which antient Exerciſe of Hunting qualified him for Monarchy, as an excellent Commentator ſhews: For he not only enured himſelf to labour and toil by it, but thereby alſo gathered together a great Company of Young Men, robuſt and active, who by this means became qualified for Battle, and were fitted to purſue and conquer *Men* as well as *Beaſts*. This *Nimrod* or *Belus*, *Bochart* ſhews was the antient *Bacchus*, who is mentioned to be a Conqueror in the Eaſt as far as *India*, and whoſe Name, he thinks, came from *Bar-Chus*; that is, the Son of *Cuſh*, who was *Nimrod's* Father, *Gen.* 10. 8. Some Writers indeed ſay, that *Ninus*, his eldeſt Son, built *Babylon*, or a Son that went by that Name; which may be conſiſtent enough, for the Father might begin it, and the Son finiſh it. As for the Account which *Cteſias* gives, that *Babylon* was firſt built by *Semiramis*, it cannot be underſtood of that *Semiramis* whom the *Greek* Hiſtories ſo much celebrate: For, as *Salmaſius* obſerves, ſhe lived near 2000 Years after *Belus*; (*Exercit in Solinum*) and beſides, both *Beroſus* and *Abydenus*, who compiled the Hiſtory of the Country from the antient Records, ſay it was built by *Belus*.

Bp *Patrick* in locum.

This mighty *Nimrod*, *Moſes* ſaith, built alſo three other Cities in the plain Land of *Shinar*; which comprehended not only that part of *Aſſyria* where *Babylon* ſtood, but alſo that Country bordering upon *Tigris* to the Foot of the Mountains of *Armenia*. Theſe Cities were, 1. *Erec*, which was, as *Bochart* ſhews, the *Arecka* of *Ptolomy*, and the *Arecha* of *Ammianus*. This was ſituate in the Country of *Suſiana* upon *Tigris*, and from hence came the *Areccæi Campi* mentioned by *Tibullus*, as *Salmaſius* obſerves. This *Erec* probably was the *Arderica* or *Anderica* of *Herodotus*, and from hence came that Colony mentioned *Ezra* 4. 9. called in the *Chaldee* ארכוי, by the *Septuagint* 'Αρχυαιοι, and in the Vulgar *Latin Erchuæi*, as *Bochart* thinks.

2. *Acchad*, which the LXX render *Archad*; and therefore *Bochart* thinks was the *Argad* of *Cteſias*, the ſame with *Sittace* or *Sittacene*, a City that had a River called *Argad* running by it, as *Ælian* ſhews, *lib.* 16. *c.* 42 *de animalibus*.

3. *Chalne*, called *Iſa.* 10. 9. *Chalno*, and *Ezekiel* 27. 23. *Channe*. From hence doubtleſs came the Country called *Chalonitis*, of which *Strabo*, *Polybius*, and *Pliny* make mention, whoſe chief City ('tis like) antiently was this *Chalne*, afterwards by *Pacorus* King of *Perſia* called *Cteſiphon*, as *Ammianus* expreſly ſaith, *lib.* 23. and *Strabo*, *lib.* 16. ſaith this *Cteſiphon* was near to *Babylon*.

But whether theſe three Cities were built before or after the Confuſion of Languages is not certain. There is all the reaſon in the world to believe that *Aſſyria* was alſo conquered in ſome meaſure by *Nimrod*: For tho' in *Gen.* 10. 11. it ſtands in our Tranſlation, *Out of that Land* (that is, *Babylonia*) *went forth* Aſhur; yet as *Bochart* and Bp *Patrick* prove, it ought to be tranſlated, *He* (*i. e.* Nimrod) *went out into* Aſſyria, and built *Niniveh*, *Rehoboth*, &c. and ſo 'tis rendred in the Margin of our Bible, and *Bochart* ſhews that *Aſhur* here is not the Name of a Perſon, but of a Place. Add to this, that *Aſſyria* is call'd *the Land of* Nimrod, *Mich.* 5. 6. For *Niniveh*, the Capital City of *Aſſyria*, is plainly the Habitation or Seat of *Ninus*; and therefore 'tis highly probable that, according to the antient Cuſtom (ſee *Gen.* 4. 17.) *Nimrod* built this City, and called it after the Name of his Son *Ninus*. This Place ſtood on the Weſt ſide of *Tigris*, was a very great and flouriſhing City for a long while, but at laſt utterly deſtroyed by the *Medes*, and never ſince rebuilt. The ſame *Nimrod*, *Moſes* tells us, alſo built *Rehoboth*, from the Signification of the Word, which in the *Hebrew* is *Streets*. *Bochart* conjectures that this is that City which *Ptolomy* calls *Birtha* and *Amianus*, *Virta*, ſituate on the Weſt of *Tigris*, at the Mouth of the River *Lycus*, becauſe *Beritha* or *Birtha* in the *Chaldee*, hath the ſame ſenſe as *Rehoboth* in the *Hebrew*. There is mention of a City called *Rehoboth*, *Gen.* 36. 37. which was the Birth-place of *Saul*, one of the Kings of *Edom*, or *Idumea*; but this was ſituate a little below *Cercuſium*, at the Mouth of the River *Chaboras*, or *Euphrates*, as *Bochart* ſhews from the *Nubian* Geographer, *Ammianus*, *Procopius*, &c. *lib.* 4. *c.* 21. and therefore was too far from *Niniveh* to be the Place here mentioned.

Nimrod alſo, as *Moſes* ſaith, built the City *Calah* or *Calach*, which *Bochart* ſhews was probably the Capital of the Country called *Calachene*, which was ſeated about the Fountain of the River *Lycus*. The City *Reſen* is ſaid alſo to have been built by *Nimrod*, which from the Situation, the Greatneſs of the Place, and the Similitude of the Name (*Lariſſa* being eaſily derivable from the *Chaldee* Genitive Caſe *Lereſen*) *Bochart* thinks to have been the *Lariſſa* of *Xenophon*, *lib.* 3. *Anabas*. For he ſaith it was ſituate on the *Tigris*, was eight Miles about, had its Walls 100 foot high and 25 thick: He ſaith alſo that the *Greeks* found it in Ruins, and without Inhabitants, when they came into this part of the World, it having been deſtroyed by the *Perſians*, when they got the Empire from the *Medes*.

Aſſyri

But this Country of *Aſſyria*, into which *Nimrod* made this Expedition, which was a very large Tract of Land, and in ſome ſenſe comprehended all *Syria*; for the Names are oftentimes confounded; tho *Aſſyria* properly was only that Country of which *Niniveh* was the Capital City, and was ſometimes called *Adiabene* and *Aturia*. This *Aſſyria*, I ſay, had its firſt Inhabitants from *Aſhur*, (as well as its Name) one of the Sons of *Shem*. *Syria* had its firſt Name from *Sur* or *Sor*, which was *Tyre*, the Metropolis of *Phœnicia*; and the firſt Inhabitants of this Part were the Sons of *Canaan*, the youngeſt Son of *Ham*: but afterwards *Syria* became a common Name for almoſt all the Country round about. Some of the *Syrians* were doubtleſs derived from *Arphaxad*, the Brother of *Aſhur*; for we find in *Ptolomy*, a Country of *Aſſyria* called *Araphacitis*, which is very eaſily derivable from his Name. And no queſtion a good part of the antient *Syria* was peopled by *Aram* (and his Poſterity) another Brother of *Aſhur*: For we find that the *Syrians* were antiently called *Aramæi*. *Homer* mentions the *Arimoi* (*Iliad.* 2.) and *Strabo* ſaith, that by thoſe *Arimoi* many underſtood the *Syrians*: Nay the Inhabitants of that Country do to this day call themſelves *Aramæans*: But the large Extent of the antient *Syria* will not permit us to think all the Inhabitants all round about *Babylon* and *Tyre* came from this *Aram*; and therefore Learned Men have in my opinion limited it only to thoſe Places which have the Word *Aram* either prefixed or ſubjoined to their proper Name; as *Padan Aram*, which is *Meſopotamia*; *Aram Sobah* the antient *Tadmor*, or *Palmyra*; *Aram Damaſck*, the Country about *Damaſcus*, &c. See *Patrick* on *Gen.* 10. 23. And this is confirmed, by finding the Remains of the Names of *Aram's* Sons in *Syria*. The Vally of *Damaſcus* is called by the *Arabians* to this day *Gaut* and *Gauta*, which Bp *Patrick* obſerves differs only in the Letters, but not in the Pronunciation, from *Utz* or *Uz*, the Son of *Aram*. *Grotius* takes notice of a City in *Syria*, which *Ptolomy* calls *Cholla*, plainly derivable from *Chull* or *Hull*, another Son of this *Aram*; from whom *Bochart* thinks the Country of *Cholobotene*, a part of *Armenia*, was peopled, the *Armenians*, *Syrians* and *Arabians* being much alike, as *Strabo* obſerves, in Body, Speech, and manner of Life.

In *Meſopotamia* there is mention made in good Authors, of the Mountain *Maſius*, from whence *Xenophon* ſaith there is a River flows, called *Maſca*. The Inhabitants of this Mountain, *Stephanus* ſaith, are called *Maſiani*: In all which Words there is a plain Alluſion to the Name of *Maſh*, another of *Aram's* Sons; and this Perſon being 1 *Chron.* 1. 17. called *Meſech*, 'tis very likely from him the *Meſcheni* were deſcended, whom *Pliny* places between *Adiabene* and *Armenia Major*. And ſince we learn from *Ammianus Marcellus*, that the ſecond

Capital City of the Province of *Suſiana* next to *Suſa*, was called *Sela*, 'tis very likely another Son of *Aram*, whom *Moſes* calls *Salah*, might give Riſe and a Name to it. There is alſo mention in profane Authors (as well as in *Acts* 2. 9.) of the *Elamites*, whoſe Capital City was *Elymais*: Theſe dwelt between *Media* and *Meſopotamia*, and very probably were derived and denominated from *Elam*, the eldeſt Son of *Shem*, *Gen.* 10.22. *Pliny* alſo and *Ptolomy* mentioning *Elamites* at the Mouth of the River *Eulæus* below *Suſiana*. What *Joſephus* ſaith of the *Elamites*, that they were Περσῶν ἀρχηγέται, the Founders of the *Perſians*, may be very right, when taken in a large Senſe. Perſia. And now we mention *Perſia*, the Learned *Bochart*, and others prove, that the Sons of *Cuſh* (all but *Nimrod*) ſeated themſelves round about the *Perſian* Sea, where he finds many Remainders of their antient Names, in the Geographical Writers among the *Greeks*. 'Tis almoſt agreed by every one, that the *Medes*, the Inhabitants of that antient, but long extinct Kingdom of *Media*, were derived from *Madai* the third Son of *Japheth*, *Gen.* 10. 2. The *Medes* being deſtroyed, *Pliny*, *lib.* 6. *c.* 7 ſaith, the *Sarmatæ*, *who are, as is ſaid, the Offſpring of the* Medes, *do now inhabit the* Palus Mæotis. And *Pomponius Mela*, *lib.*4. *c.*3. ſaith, the *Sarmatæ are a Nation in Habit and Arms next like to the* Parthians. Of which People, the *Parthians*, ſaith *Trogus*, *lib.* 41. *Their Speech is a Mixture of the* Scythian *and* Median *Languages, and their Arms like* Scythians, *but their Habit after they grew rich, was like the* Medes. From whence 'tis plain the *Sarmatæ*, *Parthians* and *Medes*, were People nearly alike, and probably a-kin; and therefore the Great *Bochart*'s Conjecture is very probable, that the Word *Sarmatæ* is derived from the *Chaldee* ראש מדי, that is, *Sear Madai*, the Offſpring of the *Medes*.

Arabia. *Cuſh* himſelf, the Father of *Nimrod*, certainly gave Riſe and Name to the famous Country of *Arabia*: For tho' *Cuſh* be in our Bible uſually tranſlated *Ethiopia*, yet the Paraphraſe of *Jonathan* is here to be rather followed, who tranſlates it *Arabia*: For *Cuſh* is the ſame with *Cuſhan*, which in *Habbak.* 3 7. is made the ſame with *Midian*; and *Moſes* his Wife, which certainly was a *Midianite*, *Exod.* 2. 16, 21. is called a *Cuſhite*. And an Excellent Commentator on *Geneſis* ſhews from *Ezekiel* 29. 10. That *Cuſh* cannot be *Ethiopia*, but muſt be *Arabia*. Of which alſo ſee *Bochart*, *lib.* 4. *c.* 2. who makes it probable from abundance of Circumſtances, that the *Cuſhites* were thoſe who afterwards were called *Scenitæ* becauſe of their living in Tents; and then *Saracens*, from their Rapines and Robberies: Which agrees mightily with the Inhabitants of *Arabia*. And from *Havilah* or *Chavilah*, one of the Sons of this *Cuſh*, came the People called by *Pliny*, *Charelæi*, by *Eratoſthenes*, *Chaulothæi*, who, as *Strabo* ſaith, were ſeated in *Arabia Fælix*. *Ptolomy* alſo ſaith, that there was in *Arabia Fælix* a City called *Saptha*, not far diſtant from the Sea; which plainly and eaſily may be derived from *Sabta*, another Son of *Cuſh*, according to *Moſes*. 'Twere endleſs to mention all the Authorities and Arguments to prove, that all parts of *Arabia* were peopled by the Poſterity of *Cuſh*; and therefore having ſhewed you where a great Stock of People were placed ready to ſend Colonies into the adjacent Countries, I ſhall enquire next into the Peopling of *Egypt*, that famous Place for Learning and Antiquity.

Egypt. *Egypt*, *Plutarch* calls Χημία, and 'tis certain that the Heathen *Jupiter* was there called *Hammon*, in both which Words there is a plain Alluſion to *Ham*; and indeed in the Scripture *Egypt* is in many Places called the Land of *Ham*: And *Stephanus Byzantinus* ſaith, that not only a part of *Africa*, but even all that Region, was called *Ammonia* from *Ammon*; and for this he quotes the Authority of *Alexander Polyhiſtor*. *Ham* was the ſecond Son of *Noah*, whoſe Son *Mizraim* is on good grounds ſuppoſed to be the Father of them who inhabited *Egypt* at firſt. There are plain Remains of his Name in the firſt *Egyptian* Month, which they called *Meſori*, and the Country it ſelf was called *Meſtra*, as *Grotius* and *Capellus* obſerve. The City of *Alcairo* is at this time by the *Arabians* called *Meſer*: and *Bochart* obſerves well, that *Moſes*'s word *Miſraim* being of the Dual Number, cannot ſo well be the Name of a Perſon, but will very properly ſignify *Egypt*, becauſe it conſiſts of two Parts, the *Upper* and the *Lower*: For all that Part of it which lies againſt the *Nile* while it runs in one Stream, is called the *Higher* or *Upper Egypt*; but the *Lower* is that where the River is divided into many Streams; and this the *Greeks* call *Delta*, from the Letter Δ. it being of a Triangular Form. *Bochart* obſerves, that 'tis probable *Egypt* might be called *Mizraim*, or in the Singular *Mazor*, from its being naturally fortified on every ſide; for *Mazor* is a fortified Place. That this is the caſe of *Egypt*, *Diodorus Siculus*, *lib.* 1. *p.* 18. takes notice very particularly: *On the Weſt*, ſaith he, *are inacceſſible Deſerts*; *on the South the Cataracts of* Nile, *and the Mountains of* Ethiopia; *on the Eaſt*, *Deſerts*, Barathra, *and the* Palus Sertonidis; *and on the North, a Sea almoſt without Ports or Havens*. And *Strabo* ſaith, that *Egypt* was a Country content with their own Commodities, becauſe it was not eaſily acceſſible to Strangers, *lib.* 16. *p.* 819.

'Tis not eaſy to ſay at what time from the Flood *Egypt* was peopled; but 'tis probable it was very early, ſince it ſeems to have given Denomination to *Ham*'s ſecond Son *Mizraim*, whom 'tis likely *Moſes* calls ſo from the Place of his Birth. We find in *Iſaiah* 19. 11. that the latter *Pharoahs* called themſelves *the Sons of antient Kings*, no doubt from a Tradition of the great Antiquity of *Egypt*. And if *Elmacinus* may be credited, the *Egyptian* Kingdom was Coæval with that of *Nimrod* in *Babylon*, who he ſaith began to reign there in the 130th Year of his Life, which was ſcarce 200 Years after the Flood. But that was certainly time enough to produce great numbers of People, eſpecially if you ſuppoſe the firſt Planters of Mankind after the Flood to have had two or more Children at a Birth; which is very probable, ſince, as one well obſerves, they were bid twice to encreaſe and multiply, and to repleniſh the Earth, *Gen.* 11. 1, 7. and it appears from the Text, that *Cain* and *Abel*, the firſt Children of *Adam*, were Twins, as Dr. *Lightfoot* notes. Between this *Mizraim* and his Brother *Phut*, *Bochart* Africa. ſhews that all *Africa* was divided. All *Egypt*, and ſeveral Parts of *Africa*, as far as the Lake *Tritonis* (which biſſected *Africa* nearly) was the Part of *Mizraim*; but all the reſt, beyond that Lake as far as the *Atlantick* Ocean was the Portion or Diviſion of *Phut*: Of which Name *Phut*, there are many Remains; as the City *Putea*, which is mentioned by *Ptolomy*, *lib.* 3. *c.* 1. and by him called Φοῦτ. There is a River alſo called by the Name of *Fut*, and mentioned by *Pliny*, *lib.* 5. *c.* 1. This River is in *Mauritania Tingitania*, and runs into the Ocean; and *Bochart* ſhews that the *Africans* were Lybia. called *Phutæi*, becauſe many of them were *Nomades*, and rambled about from Place to Place, the primary Signification of *Phut* or *Phuts* being *ſcatter'd or diſperſed*; and that the old *Africans* were ſuch, both *Strabo* and *Pomponius Mela* aſſert. 'Tis well known alſo that *Africa*, or a conſiderable part of it, was called *Lybia*; which Name certainly comes from the *Hebrew Lub*, ſignifying thirſty or dry, according to that of *Lucan*, *lib.* 1.

--------per calidas Lybiæ ſitientis arenas.

And *Lub* or *Lubia* is alſo the *Arabick* Name for *Lybia*.

Ethiopia. Let us next conſider *Ethiopia*, another famous Part of *Africa*. This, *Bochart* very probably proves to have been that Part of the Earth which in the Scripture is called *Lud*, and conſequently may be ſuppoſed to receive its firſt People from *Ludim* the eldeſt Son of *Mizraim*, *Gen.* 10. 13. for the *Hebrew Lud* ſignifies (as well as the *Arabick*) *winding* or turning in and out like a River? And he proves from *Herodotus*, *Agatharchides*, *Strabo*, *Eratoſthenes*, &c. that againſt *Ethiopia* the *Nile* had a great number of Windings and Turnings, like the *Meander*. And this ſeems to be confirmed very much from the Country about the *Meander*'s being called *Lydia*, as we learn from *Pliny*'s words, *lib.* 5. *c.* 29. *Lydia autem perfuſa fluctuoſi Amnis Meandri recurſibus.* And *Herodotus* ſpeaking of the *Ethiopick Nile*, ſaith, σκολιὸς δὲ πάντα καθάπερ ὁ Μαίανδρος ἐστὶ ὁ Νεῖλος. He ſhews alſo that the *Ethiopians* were very famous for their ſhooting in Long Bows; which is the Account the Scriptures give of the *Ludim*, *Iſa.* 66. 19. *Jerem.* 46.9. In the former of theſe Places of Scripture he obſerves alſo, that *Phul* and *Lud* are joined together; which confirms *Lud* to be *Ethiopia*, becauſe *Phul* is certainly the ſame with that City which the *Greeks* called *Phylæ*, which was inhabited by the *Ethiopians* and *Egyptians*, as it were in common, and ſtood about 100 *Stadia* from the *Nile*, as *Strabo* expreſly ſaith, *lib.* 27. and *Herodotus* confirms this at large, *lib.* 8. 'Tis plain alſo from *Diodorus*, that the *Egyptians* and *Ethiopians* were Nations nearly allied in their Religious and Civil Cuſtoms, and that they had the ſame Letters and Hieroglyphicks, and the ſame Sacerdotal Veſtments, &c. And he ſaith alſo, that the *Ethiopians* contended with the *Egyptians* for Antiquity (*lib.* 1.) alledging, that they living more Southerly than the *Egyptians*, had a ſtronger Sun, which therefore muſt contribute more early and efficaciouſly to Generation: They ſaid alſo that the Land of *Egypt* was all adventitious, and gained from the Sea, by the

Mud which *Nilus* threw up into a heap: But *Moſes* ſeems to have effectually determin'd this Diſpute by ſaying, that *Mizraim* begat *Ludim*; and therefore the *Ethopians* or *Ludim* muſt be leſs antient than the *Egyptians*. And indeed 'tis exceeding probable. that the Ark reſting on the *Gordiæan* or *Armenian* Mountains, the firſt Deſcent of the Sons of *Noah* was into the South, and having peopled *Babylon*, *Aſſyria*, *Syria* and *Egypt*, went, or ſent Colonies after this into *Ethiopia*, and the yet more Southern Parts. I omit *Bochart*'s other Arguments to prove the *Ethiopians* to be the *Ludim* of *Moſes*, which, who ſo pleaſes, may conſult in *lib*. 4. *c*. 26. of his *Phaleg*.

The *Egyptians*, 'tis highly probable, ſent out Colonies into many of the neighbouring Parts, as their Stock of People increaſed: But one would wonder any of them ſhould ramble ſo far as the *Euxine* Sea. And yet ſome are of opinion, that the *Chineſe* were the Offspring of the *Egyptians*: *Hornius* ſaith, 'tis paſt doubt that there are many things among them of *Egyptian* Original; as their antient way of writing, and their Philoſophy: And he thinks it not an improbable Conjecture, that part of *Seſoſtris* his Army might go thither, the Way not being ſo very great, but that ſome of them (eſpecially the Horſe, for which *Egypt* was famous) might march thither: For the *Scythians*, and of late Ages the *Tartars* have made Incurſions into *Egypt*. To this he adds, that the *Chineſe* Records ſay they were peopled firſt from the Weſt; and that the Province of *Xenſi* was the firſt inhabited, and after that *Hanan*, *Peking*, *Xangtung*, &c. *Hiſtor*. *p*. 53, 54.

Herodotus, *Strabo*, *Diodorus*, and *Ammianus*, all agree, that the *Colchi*, which inhabited the Eaſtern Parts of the *Euxine* beyond *Trapiſond*, were derived from the *Egyptians*. Since, as *Herodotus* ſhews, their *Language*, *Manners* and *Religious Rites* did very much agree, and the Name of *Colchi* being eaſily derivable from the Word *Caſluchim* (by only omitting the l, which before an S hath not a good Sound) as *Bochart* obſerves; we may eaſily believe the *Colchi* were derived from the *Egyptians*, ſince *Moſes* tells us, *Gen*. 10. 14. that the *Caſluchim* were the Offspring of *Mizraim*, the People of *Egypt*. And this receives Confirmation from *Moſes* ſaying that from theſe came the *Philiſtim*, and that the *Caphtorim* were near the *Caſluchim*. Theſe *Caphtorim* all the Antients take to be the *Cappadocians*; but *Bochart* ſhews they were not all the Inhabitants of that Country, but that Part which was next to *Trapiſond*, where *Colchis* ended: For here *Strabo* mentions a City called *Side*, and the Country *Sidene*; but *Bochart* ſhews that *Side* in the *Greek* hath the very ſame Signification as *Caphtor* in the *Hebrew*; and therefore 'tis highly probable that the ſame Country might be called *Caphtor* in one Language, which was *Sidene* in the other. And now we are in this part of the World, let us conſider the People whom we find by the *Greeks* called *Moſchi* and *Tybareni*: For theſe are uſually joined together by *Herodotus*. *Strabo* ſaith the *Moſchi* inhabited the Mountains called *Moſchici*, North-Eaſt of *Cappadocia*; and, as the Learned *Bochart* thinks alſo, all the Mountains from the River *Phaſis* to the *Pontus Cappadocicus*: And the *Tybareni*, *Strabo* places between the *Trapezuntii* and the Inhabitants of *Armenia Minor*. Theſe People, 'tis highly probable, came from *Meſheck* and *Tubal*, two Sons of *Japhet* mentioned by *Moſes*, *Gen*. 10. 2. For theſe are as conſtantly joined together in Scripture, as they are in Profane Authors: And the Derivation of *Moſchi* from *Meſheck* is very natural to any one acquainted with the *Hebrew* and *Greek* Languages; as alſo is the *Tybareni* from *Tubal* or *Tubar*, by only changing the L into an R, as is uſual every one knows with the *Greeks*, as in Βελίαρ for *Belial*, &c. And *Bochart* ſhews that theſe *Tybareni* and *Moſchi* had the ſame kind of Commerce, Traffick and Commodities with thoſe of *Tubal* and *Meſheck* in the Scripture, as the Reader may ſee at large in *lib*. 3. *c*. 9. of his *Phaleg*. But before I leave the *Egyptian* Colonies, I ought to take notice that *Plutarch*, in his Book *de Iſide & Oſiride*, ſaith, that the *Egyptians* called the Country and the Mountains which lay on the Coaſt of the *Mediterranean* which was called *Marmarica*, and now *Barcha*, *i. e.* that Part againſt the *Mare Lybicum*, by the Name of *Nephthun*. Now *Moſes* tells us, *Gen*. 10. 13. that one of the Sons of *Mizraim*, the Founder of the *Egyptian* Nation, was called *Naphtuhim*; which may very well ſignify the People of *Naphthuah*; and therefore from thence we have an Account of the Peopling of that Coaſt of the *Mediterranean* by a Colony from *Egypt*. And 'tis very obvious to obſerve here by the by, that from the *Egyptien* Name of this Maritime Country, *Nephthun*, the word *Neptune* may be derived: And we are ſure that *Neptune* was ſaid originally to be a *Lybian* God, and known only to that People, as *Herodotus* the Father of Hiſtory, tells us, *lib*. 2. *cap*. 50.

And ſince we are gotten into the *Mediterranean*, let us coaſt it round. That the *Phenicians*, *Syrians*, *Aſſyrians*, *Sidonians* or *Tyrians* were deſcended from the *Canaanites*, no one denies. This *Euſebius* tells us *Sanchoniathon* and his Editor *Philo-Byblius* expreſly aſſert; and *Sanchoniathon* calls *Phenicia* Χνᾶ. as the ſame *Euſebius* obſerves. And moſt certain it is that the LXX uſe the Names of *Canaanite* and *Phenician* promiſcuouſly: For *Shaul*, who in *Gen*. 46. 10. is called the Son of a *Canaanitiſh* Woman, is in *Exod*. 6. 15. ſaid to be the Son of a *Phenician* Woman: And her whom St. *Matthew* calls a Woman of *Canaan* in *ch*. 15. 22. St. *Mark* calls a *Syrophenician*, *ch*. 7. 26. Indeed we never find the *Greeks* calling the *Phœnicians* by the Name of *Canaanites*: The Reaſon of which probably is, that the *Phœnicians* carefully avoided that Name, becauſe of the Curſe pronounced on their Father *Canaan*.

The Metropolis of *Phœnicia* was *Tyre*, in *Hebrew*, *Sor* or *Sur*; whence came *Surim*, and thence the *Greek* Σύροι, or the *Syrians*. But *Sidon*, now *Said*, was much a more famous and antient City than *Tyre*; for *Homer* mentions nothing of *Tyre*, tho' he ſpeaks of *Sidon* and the *Sidonians* in many places: And in the Scripture we read nothing of *Tyre* till *David*'s Time, whereas *Sidon* is mentioned in the Books of *Moſes*, and no doubt the City took its Name (as the People from it) from *Sidon* the Firſt-born of *Canaan*, *Gen*. 10. 15.

From another Son of this *Canaan*, *Moſes* tells us the *Arkites* came, *Gen*. 10. 17. And theſe *Bochart* juſtly places about *Libanus*, where not only *Joſephus*, but *Ptolomy* mentions a City called *Arca* or *Arce*, in which 'tis probable ſtood the Temple of *Venus Architis*, which *Macrobius* ſaith was worſhipped by the *Phœnicians*, *Saturnal*. *lib*. 1. *c*. 27. *Pliny* alſo mentions a City called *Arce*, which he ſaith was in the *Decapolitan Syria*. *Moſes* alſo, *ver*. 18. mentions the *Aradites*, which People are certainly the ſame with the *Aradii*, who dwelt in the Iſland *Aradus* mention'd by *Strabo* and others to be on the Coaſt of *Phœnicia*; and on the Continent was a Place againſt it called *Antaradus*. I need ſay nothing here of the *Hebrew*, *Iſraelitiſh*, or *Jewiſh* Nation, which were Neighbours to, and at laſt Conquerors of moſt part of the Land of *Canaan* or *Phenicia*; becauſe of theſe (who were deſcended from *Eber* the Great Grandſon of *Shem*, *Gen*. 11. 14.) there is a full and particular Account in the Scripture.

Phrygia.

Bithinia.

Euxine Sea.

If from hence we go on into *Aſia Minor*, or *Anatolia*, now *Natolia*, we ſhall find that *Phrygia*, ſo called from Φρύγειν in the *Greek*, which ſignifies to torrify or roaſt, and therefore by *Diodorus Siculus* called κατακεκαυμένην, was peopled probably from *Gomer* the eldeſt Son of *Japhet*; for the *Hebrew Gumar* ſignifies to conſume by Fire, whence comes *Gumra* or *Gumro*, a Coal. Some very Learned Men indeed have fancied the *Cimbri* and *Cimmerii* to be the Offspring of this *Gomer*; but the Places they inhabited were much too remote for either himſelf or his firſt Children to travel to, tho' 'tis not improbable ſome of their Poſterity might go into theſe Parts afterwards in proceſs of time: But ſince *Ezekiel*, *ch*. 38. 6. mentions *Gomer*, as being a Neighbour to *Togarmah*; which Place, *ch*. 27. 14. he ſaith, uſed to ſend its Inhabitants to the Marts of *Tyre*; 'tis plain *Gomer* could not be ſo far off, either as *Scythia*, or *Germany*, *Spain* or *Britain*, and therefore very probably was placed in *Phrygia* and the Places adjacent. And this is much confirmed from the Situation of his Sons; for *Aſhkenaz* his eldeſt Son ſettled, beyond doubt, in *Bithynia*: For there was antiently many plain Remainders of his Name; as in the *Sinus Aſcanius*, the *Lacus Aſcanius*, and the *Inſula Aſcania*. In the adjoining Country of *Troas* and the *Leſſer Phrygia*, there was a Country and a City called *Aſcania*, from whence they ſent Colonies to the *Euxine* Sea, as we may on good grounds conjecture; becauſe 'tis certain from *Pindar* (*Pyth*. 4.) and from *Apolonius*'s *Argonaut*. *lib*. 2. that this was called firſt by the *Greeks* Ἄξενος; which *Diodorus* and *Strabo* confirm, ſaying it was ſo called from the Cruelty and Inhoſpitableneſs of its firſt Inhabitants; and therefore 'was afterwards changed into the contrary Εὔξενος, whence comes the preſent Name of the *Euxine* Sea: And 'tis very likely that the *Greeks* called it firſt *Axinus*, becauſe the firſt Inhabitants founded it *Aſcenaz*, from *Aſhkenaz* this Son of *Gomer*.

Near this alſo on the *Euxine* was the Country of *Paphlagonia*, a Native of which being called by *Strabo*, *Tibius*, *Bochart* thinks the Name may be derived from *Riphat* or *Diphat*, as he is called (1 *Chron*. 1. 6.) another Son of *Gomer*: But this is certain, that in *Bithynia*, a Country not far from *Paphlagonia*, there is the *Amnis Rhebæus* or *Rhebas*, mentioned by *Apollonius* in *Argonaut*.

lib. 2. *v.* 791. and *Stephanus Byzantinus* mentions a River, Country and City called by this Name of *Rhebas*, which he ſaith is παρὰ τὸν Πόντον, hard by the *Euxine*. Now this word *Rhebas* is eaſily derivable from *Riphath*; and to come yet nearer to the Word, *Grotius* obſerves that *Pomponius Mela* places a People called *Riphaces*, in this Country, *Annot. in Libell. de V.R.C.*

Capadocia. Not far from *Phrygia* in *Aſia Minor*, lies *Cappadocia* and *Galatia*: And *Strabo*, *lib.* 12. ſaith the antient *Trogmi* or *Trochmi* lived near *Pontus* and *Cappadocia*, poſſeſſing the Confines thereof. Theſe, *Stephanus Byzantinus* ſaith, were called alſo *Trocmeni*, as well as *Trocmii*, and were Inhabitants of *Galatia*. Now 'tis very likely theſe were derived from *Togarmah*, another Son of *Gomer*, and who was, as 'tis plain from *Ezek.* 27. 14. placed near his Father *Gomer*, as was before obſerved. The *Hebrew Togarmah*, the LXX always render *Torgama* or *Thorgamah*, from whence the *Trocmi*, or, as ſome write it, *Trogmi*, are eaſily derived. Now the Prophet *Ezekiel* ſaith in the Place above-mentioned, that the Inhabitants of *Togarmah* brought Horſes to the Fairs or Marts of *Tyre*: Which agrees very well with the Account we have of the antient *Cappadocia*, which was very famous for excellent Horſes; as *Solinus Iſiodorus*, and *Dionyſius Periegetes* tells us; and *Claudian* very plainly in theſe Words:

> ——————*Jam paſcua fumant*
> *Cappadocum, volucrumq; parens Argæus Equorum.*
> *In Rufinum, lib.* 2.

And a ſufficient Account of this may alſo be had from *Philostorgius*, an antient *Cappadocian* Hiſtorian, as you will find him cited by *Bochart*, *Phaleg. lib.*3. *c.* 11.

Greece. Let us next viſit the *Grecian Archipelagus* or *Cherſoneſus*, and enquire into the Original of the Inhabitants of that moſt famous Country for all kinds of antient Learning, *Greece*; where we ſhall find very good grounds to believe that this celebrated Part of the World was firſt peopled by *Javan* the fourth Son of *Japhet*: For the *Hebrew* יו may be very eaſily read *Ion* as well as *Javan*, if it have no Vowels under the Letters to determine its Pronunciation; and the LXX render it Ἰωυάν. In *Homer* the *Iones* are called *Iaones*, whoſe Nominative Singular *Iaon* comes very near to *Javan*. Now 'tis certain that the *Iones* were not antiently the People about *Athens* only; for in *Heſychius* the *Achæans* and *Boetians* are comprehended alſo under that Name; and in *Homer*'s Hymn to *Apollo* he makes the *Delii* to be alſo *Iaones*. 'Tis plain from the Name of the *Ionian Sea*, which is ſometimes given to that part of the *Adriatick* which is over-againſt *Macedonia* and the Countries Weſtward of it, that they were antiently reckoned part of *Ionia*; and accordingly the *Chaldee* Paraphraſe, for *Javan*, *Gen.* 10. 2. puts *Macedonia*. To this may be added that *Herodotus* ſaith the *Aſiatick Iones*, which were Colonies from *Greece*, had τέσσαρας γλώσσης χαρακτῆρας, *four diſtinct Idioms of Speech*; and therefore could not be only thoſe ſpeaking in the *Ionick* Dialect, tho' called *Iones*: and in one word, the Scholiaſt on *Ariſtophanes*, ſaith expreſly, πάντας τοὺς Ἕλληνας Ἰάονας οἱ βάρβαροι ἐκάλουν; *all Barbarians* (or Foreigners) *call the Greeks* Iaones. From all which we may conclude with the moſt Learned *Bochart*, that the *Hebrews* called all thoſe *Iones* or *Javan*, which lived from *Thrace* to the *Iſthmus*: Which is much confirmed by *Theſeus* his Column ſet up on the *Iſthmus*, which on that Side looking towards *Megara* had theſe Words: Τάδ' οὐχὶ Πελοπόννησος ἀλλ' Ἰωνία; *This is not* Peloponneſus, *but* Ionia. This Column is mentioned by *Strabo*, *lib.* 9. and by *Plutarch* in *Theſeus*; and is ſaid to be ſtanding in *Codrus* his time. *Bochart* ſhews alſo from the Merchandize which *Ezekiel* ſaith, *ch.* 27. 13. *Javan* carried to *Tyre*, that the *Grecians* uſed to trade in the very ſame things, *Phaleg. lib.* 4. *c.* 3.

And this Account of the firſt Peopling of *Greece* is much confirmed by *Moſes* ſaying, that the eldeſt Son of *Javan* was called *Eliſha*; for every one knows that the *Morea*, or antient *Peloponneſus*, was called of old *Elis*, from a very large Country there of that Name. And *Homer* calls one Part of it *Aliſium*: And as *Ezek. ch.* 27. *v.* 7. ſaith *Purple* came from the Iſles or Maritime Country of *Eliſha*; ſo 'tis abundantly certain, that *Elis* or *Peloponneſus* was very famous for its *Purple*, which was gotten both in the *Laconian* and *Corinthian* Sinus.

Thracia, *Myſia*, and the other Countries on the North of *Macedonia*, were probably peopled by the Poſterity of *Thiras* or *Tiras*, the youngeſt Son of *Japhet*: For *Jonathan* and the *Jeruſalem Targum* in *Gen.* 10. 2. for *Thiras* put *Thraces*; and that by *Thiras* is meant the *Thracians*, *Euſebius*, *Epiphanius*, *St. Jerom*, &c. do all agree; nor is the Derivation of *Thrace* at all forced from *Thiras*. And *Bochart* ſhews there are many Remains of the Name *Thiras* in *Thracia* and the neighbouring Countries. *Herodotus*, *Strabo*, *Ptolomy* and *Pliny* mention a City of *Myſia* called *Tyras*, ſeated on a River of the ſame Name: *Herodotus* mentions another River in *Thracia*, which was called *Tharus*. *Tharus* was antiently one of the Names of *Mars*, which was a *Thracian* Deity, and his Son was celebrated by the Name of *Tereus*, and is ſaid to be firſt King of *Thrace*. And *Ludovicus Capellus* thinks that *Tros* and *Troes*, the *Trojans*, were derived from this *Thiras* or *Tiras*; which is very probable, both on the account of their Situation, as well as the Agreement in the Sound of the Name. The ſame Learned Man is of opinion alſo, that the *Æoles*, and the Country *Æolia*, took their Riſe and Name from the above-named *Eliſha*, the Firſt-born of *Japhet*.

If we enquire next into the Original of *Italy*, we ſhall find that *Chittim*, another of *Japhet*'s Sons, hath a very good Claim for being its Founder. It's owned that the moſt antient Name of *Latium* or *Italy*, was *Cameſene* or *Camiſene*, of whoſe Etimology there is mighty Diſpute among the old *Grammarians*: But the famous *Bochart* ſeems to have given a very juſt account of it in deriving it from the *Hebrew Camas*, which ſignifies to hide; and this very well anſwers to its Name by Interpretation, *Latium*, which moſt ſay comes *à latendo*; and ſo alſo doth *Chetim* in the *Arabick* (a Branch or Dialect of the *Hebrew*) ſignifie *hidden* or *latent*. Beſides, in *Italy* there were many Footſteps of the Name *Chittim* or *Chetim*. *Halycarnaſſeus*, *lib.* 8. *p.* 356. mentions there a City called Κετία, which was one of thoſe that *Coriolanus* took, as *Plutarch* ſhews in his Life. And *Ariſtotle* in *Lib. de Mirab.* mentions a River called Κέτος in *Italy* (which *Bochart* takes to be *Silarus* or *Silaris* running about *Cumæ* into the *Tyrrhenian* Sea) that would turn Plants into Stones. Nay *Euſebius*, the *Chronicon Alexandrinum*, *Cedrenus* in his Annals, and *Suidas*, tell you the *Latines* came from a People called *Citii* or *Cetii*, and that their antient Name was ſo. Italy.

Spain. And as from *Chittim* came the *Italians*, ſo 'tis very likely *Spain* took its Original from *Tarſhiſh* or *Tarſis*, another of *Japhet*'s Sons. This, *Euſebius* was the firſt that aſſerted; but *Bochart* hath made it probable by many Arguments in *lib.* 3. *c.* 7. of his excellent *Phaleg.* As to the Name of *Tarſhiſh*, he cites *Polybius*, *lib.* 3. mentioning the League made between the *Romans* and *Carthaginians*, in which it was forbidden the former to make any Excurſions beyond *Maſtia* and *Tarſeium*. This *Maſtia Stephanus* calls *Maſſia*, and ſaith it was the Country of the *Tarteſſii*, and that the City *Tarſeium* was ſituate at *Hercules Pillars*, or *Gades*. In another place of *Polybius* he finds mention made of a People called *Therſitæ*: In all which words there is a plain Alluſion to *Tarſhiſh*; and therefore it may well enough be concluded, that *Tarſhiſh* is either *Spain* in general, or at leaſt that part of it about *Tarteſſus* or *Cadiz*, which was a Place much frequented by the *Phenicians*, as will appear plain enough hereafter, when I come to ſpeak of the Migrations of the People of that Nation: And 'tis very probable the Name *Iberi*, by which the *Spaniards* were antiently called, was given them by the *Phenicians*, from their word *Ebrim* or *Ibrim*, ſignifying the utmoſt Bounds and Limits of any thing; becauſe *Spain* was thought to be the utmoſt Extent of the Earth (as it is of this Continent) Weſtward. And this is much confirmed by the Merchandiſe brought from *Tarſhiſh* to *Tyre*, mentioned by *Ezekiel*, *ch.*21. 12. which is ſaid to be *Silver*, *Iron*, Tin and *Lead*: For *Strabo*, *lib.* 3. ſaith, οὐκ ἄργυρος, οὐδὲ χαλκὸς, οὐδὲ σίδηρος οὐδαμοῦ τῆς γῆς οὔτε τοσοῦτος, οὔτε τοιοῦτος ἐξητασμένος γεννώμενος μέχρι νῦν. That is, *There is not yet found any where either ſo much of, or ſo good Silver, Braſs and Iron, as there is in* Spain. And the ſame thing ſaith *Diodorus*, *Pomponius Mela*, and *Pliny*; mentioning alſo Tin in particular: And *Ariſtotle* in his Book of Wonders, ſaith, that 'tis reported the firſt *Phœnicians* in their Voyage to *Tarteſſus* found ſuch Quantities of Silver, that their Ships were not able to bring it away, and therefore at parting from thence made all their Veſſels, nay their very Anchors of Silver.

As *Spain* probably was peopled by the Poſterity of *Tarſhiſh*, ſo *France* ſeems to have been by *Dodanim*, the laſt of *Japhet*'s Sons. The LXX call him *Rhodanim* in 1 *Chron.* 1. 7. and 'tis very likely that his Children gave Name to the famous River *Rhodanus*, and called the Country round about it *Rhodanuſia*, or ſome ſuch like Name. For *Stephanus Byzantinus* mentions a City and Country ſo called, and ſituate in Μασσαλία; that is, *in Tractu Maſſilienſi*, where now ſtands *Marſeilles*. And *Bochart* thinks there are Remains of the Name *Rhodanus* France.

in the City *Rhodumna*, now *Roane*; and in the *Rhedones* and *Ruteni*, antient People of *France*, whoſe chief Cities are now *Rennes* and *Rhodes*; and he ſuggeſts that the Word *Eridanus* may be a Corruption from *Rhodanus*, the *Po* and the *Rhoſne* being often confounded by the Antients. See *Apollonius* his *Argonaut. lib.* 4. *v.* 627.

Germany.

As to *Germany* and the other Midland Parts of *Europe*, 'tis as difficult to find when they were firſt peopled, as by whom: *Bochart* thinks it probable that the *Egyptian Hercules* might ſend out Colonies as far as *Germany*; for *Tacitus* tells us in his Tract *de Moribus Germanorum*, that they had a Tradition that *Hercules*, the ſtrongeſt of all Men, had been amongſt them; and he ſaith, *Pars ſuevorum Iſidi ſacrificat*; which *Iſis* was an *Egyptian* Deity: And the *Germans* celebrate *Tuito* and *Mannus* as their firſt Founders; which *Bochart* very probably thinks were *Thoth* the *Egyptian Mercury*, and *Menas* the firſt King of *Egypt*. As for the Word *Germania*, *Tacitus* gives its Original in theſe Words: *Germaniæ vocabulum recens eſt & nuper additum; quoniam qui primi Rhenum tranſgreſſi Gallos expulerunt, nunc* Tungri, *tunc* Germani *vocati ſunt*. And *Bochart* thinks *Germanus* is as much as a warlike Man; *Ger* coming from the *Hebrew Gera*, which ſignifies to wage Wars.

Ruſſia, Muſcovy.

Scythia.

Ruſſia.

Ruſſia and *Muſcovy*, and the Countries adjacent to the South and Weſt, were in all probability peopled firſt from the *Scythians*; and they certainly came from *Magog* the ſecond Son of *Japhet*, *Ezek.* 38. 2, 3. *Magog* or *Gog* is ſaid to be the chief Prince of *Meſhek* and *Tubal*; or ἄρχοντα Ῥὼς Μόσοχ ϗ Θοβὲλ, as the LXX render it, and many learned Men think very juſtly, making *Rhos*, not *Chief*, as we have tranſlated it, but the Name of a Country. *Bochart* very ingeniouſly conjectures that the Word *Caucaſus* came from the *Chaldee Gog-haſan*, that is, the Strong-hold or Defence of *Gog*, changing the *Gimel* into a *Kappa*, as for Softneſs of Sound is uſual in the *Greek* Language (thus for the *Hebrew Gamal*, a Camel, they write κάμηλον) and therefore 'tis propable that *Scythia*, about the Mountain *Caucaſus*, is *Magog*, or the Land of *Gog*; and there is certainly ſome Remains of the Name *Gog* in the City *Gogarene* of *Steph. Byzantinus*, which he places hereabouts between the *Colchi* and the *Iberi Orientales*. And following the LXX and others, who make *Rhos* the Name of a Country or Region, which was contiguous to *Meſhek* and *Tubal*, we cannot but think it gave Name and Riſe to *Ruſſia* and *Muſcovia*: For *Rhos* appears to have been the Name of the River *Araxis* in *Armenia* (now *Turcomania*) running into the *Caſpian* Sea, and joining into one Stream with the River *Cyrus*, a little before its Diſembogue there. For thus ſaith the *Nubian* Geographer, as *Bochart* cites him. "In *Armenia* are two Rivers of great note, *Rhos* and *Cor*, both "running from the Weſt Eaſtward: *Cor*, which is great "and navigable, riſes near the Mountain (that is, *Caucaſus*) and running to *Tiflis* (the *Zaliſſa* of *Ptolemy*) "and from thence to the Confines of *Hanna* and *Samcun*, joins with the *Rhos*, and runs out into the Sea of "*Chozar*, or the *Caſpian*. By which 'tis plain that the *Rhos* is the *Araxes*, as the *Cor* is *Cyrus*. And he cites alſo *Joſeph Gen Gorion* for ſaying that the *Rhoſſi* inhabit the Banks of the River *Cyrus*, which runs into the *Georgian* (*i. e.* the *Caſpian*) Sea; and he might eaſily miſtake *Cyrus* for *Araxes*, the Rivers being near together. And that the *Scythians*, antiently called *Sacæ*, were Maſters of this Part of the World, *Strabo* is expreſs, *lib.* 11. where he ſaith, the *Sacæ*, or *Scythians*, poſſeſt the beſt Part of *Armenia*, calling it *Sacaſenia*, after themſelves, and went as far as the *Cappadocians*, who live on the *Euxine* Sea: And *Herodotus* ſaith, *the* Scythian Nomades, *which now inhabit* Aſia, *when they were beaten by the* Meſſagetes, *paſt the* Araxis *into* Cimmeria. And *Diodorus*, *lib.* 2. ſaith, *that the* Scythians, *firſt dwelt about the* Araxis. But after they were driven from this Situation, 'tis very likely ſome of them went Northward, and inhabited the *Tauric Cherſoneſus*, and called it by their own Name *Roos*; for ſo *Bochart* obſerves from *Tzetzes*, that in his Time *Rhos* was a more common Word for a Bull than *Taurus*: He thinks alſo that the Name *Rhoxolani*, by which *Pliny*, *lib.* 4. *c.* 12. calls ſome of the old *Scythians*, came from *Rhox* or *Roos* and *Alani*; becauſe *Ptolemy*, *lib.* 3. *c.* 5. places the *Scythians* between the *Tauri* and the *Alani*, about the *Palus Meotis*. After this *Bochart* goes on to ſhew, that the Words of *Ezek.* 38. *v.* 3, &c. do agree very well to the *Scythians*, as to their being famous for Horſes, Bows and Arrows, and other Armour offenſive and defenſive; which the Reader may conſult at large, *lib.* 3. *co.* 13. of his *Phaleg*.

India.

From whence the numerous and various People of *India Orientalis* were firſt deriv'd, 'tis not ſo eaſy to diſcover, and probably they might have their Original from very different Families of the Sons of *Noah*. The commonly received Opinion is, that they came from the Sons of *Jocktan* or *Joctan*, the Brother of *Phaleg*, which were *thirteen* in number. But *Bochart* and Bp *Patrick* confine the Situation of all theſe to the innermoſt part of *Arabia*, or *Arabia Felix*. *Hornius* ſaith the Antients divided all the People of the World into the *Scythians* and *Ethiopians*, the *Indians* and the *Celtæ*: And the *Indians* he ſuppoſes to be the Offspring of *Sem*, as the *Ethiopians* are of *Cham*, and the *Scythians* and the *Celtæ* (*i. e.* the *Galatæ*, or *Gauls*, as *Bochart* ſhews) from *Japhet*. And *Voſſius*, *lib.* 1. *de Idolatr.* ſhews, that by *India* in the largeſt ſenſe, was antiently meant the Upper *Aſia*, *Phænicia* and *Arabia*. *Hornius* thinks that ſome of the Poſterity of *Joctan* paſſed Eaſtward out of *Arabia Fælix*, a croſs the *Perſian* Gulf, and ſo peopled *India*, which is not improbable: And in his *Diſſert. Hiſtor. Pollit. p.* 85. he thinks this is apparent from hence, as well as from other Arguments, that *Ophir*, one of *Joctan*'s Sons, left his Name to *Ophir*, the Place from whence *Solomon* fetch'd his Gold. But *Bochart*, tho' he thinks the *Ophir* to be *Ceylon*, as others take it to be *Sumatra*, others one of the *Moluccas* in *Eaſt India*; yet he judges that the *Phænicians* gave it that Name, when they found it to abound ſo much with Gold and other Riches (as the other *Ophir* in *Arabia* did) from their Word *Auphar* or *Uphre*, which ſignifies rich or opulent: And for the ſame reaſon it was called *Tapro-bana*, from *Taph-parvan* or *Taphprovan* in the ſame Language; for that ſignifies the Land or Shore of Wealth, *Phaleg. c.* 27. Now tho' *Moſes* ſaith that the Dwelling of theſe Sons of *Joktan* (all except *Obal*, who paſſing through the Streights of the *Sinus Arabicus*, probably peopled *Arabia Troglodytica*) was from *Meſha*, &c. *Gen.* 10. 30. that is, round about the Mountain *Maſius* or *Meſh*, between *Cicilia* and *Meſopotamia*; yet as Sir *Walter Raleigh* obſerves, 'tis very probable, that either they or their Poſterity might tranſplant themſelves into ſome Parts of *Eaſt India*, as thoſe of *Magog*, who peopled *Scythia* and *Tartary*, might do into others.

China.

Mr. *Whiſton*, in his *Theory of the Earth*, hath a peculiar Notion about the peopling of *China*, a famous Part of *Eaſt India*, whoſe Inhabitants he ſuppoſes to take their Original from *Noah*, and ſome other Children of his beſides *Shem*, *Ham* and *Japhet*, which were born to him afterwards. But this ſeems to be a little inconſiſtent with what *Moſes* tells us, *Gen.* 9. 19. where he ſaith, that from thoſe three Sons of *Noah*, *was the whole Earth* overſpread. From whence, as the moſt Learned and Judicious Bp *Patrick* obſerves, it appears, that tho' *Noah* lived above 300 Years after the Deluge, yet he either had no more Children, or that none of them lived to have any Poſterity.

Of the Peopling of America.

IT being expreſly ſaid by *Moſes*, *Gen.* 10. 32. *That the Nations were divided by the Sons of* Noah *after the Flood:* and 9. 18. *That of them the whole Earth was overſpread:* And yet in his Account of the Peopling of the World, there being mention made only of three Parts of it, *viz. Europe*, *Aſia*, and *Africa*, as inhabited and poſſeſt by the Poſterity of *Noah*. This hath induced ſome Perſons to aſſert, that the vaſt and populous Tract of *America* did not receive its firſt Inhabitants from any part of our World, at leaſt not from the Deſcendents of *Noah*; but that either the *Americans* were *Aborigines* after the Deluge, if they had a Beginning ſince that, or elſe were not deſtroyed by the Flood; which conſequently could not be univerſal, as *Moſes* aſſerts, and the generality of Chriſtians believe.

The common Arguments for which Opinion are in ſhort, 1. The abovementioned Silence of the Scripture about their Original. 2. The prodigious Numbers of their Inhabitants when they were firſt diſcover'd. 3. The vaſt difference that there is between them and the reſt of Mankind, in their Perſons, Manners, Cuſtoms and Languages. 4. There being found in theſe Parts many *Species* of living Creatures common to no other Part of the World, and their wanting entirely others. 5. Their being divided from *Europe*, *Aſia* and *Africa* by ſuch vaſt Seas, or inacceſſible Tracts of Ice, that 'tis incredible to ſuppoſe any of *our* Inhabitants could ever paſs from us to them, or any of *theirs* to us. And 6. That no account can be given why Beaſts of Prey, ſuch as *Lions*, *Tygers*, *Bears*, &c. ſhould ever be tranſported thither by Men, even allowing, that Curioſity, or Chance, Wars or deſire of Gain ſhould carry them thither.

To which may be anſwered, 1. That the Silence of the Scripture about the Way, Manner and Time of the peopling of *America*, is in it ſelf no good Proof that it did not receive its Inhabitants from ſome of the Deſcendants from *Noah*, unleſs it were aſſerted by thoſe who believe *Moſes*, that *America* was peopled *immediately* after the Confuſion of Languages, and by thoſe very Children of *Noah* whoſe Names are there recorded; which is what (I think) is affirmed by no body: For as *Moſes* doth not think it neceſſary to enter into a particular Detail of the peopling of each individual Tract of Land throughout the whole Earth; but only to ſhew in general after what way and manner the *Noachians* were divided and diſtributed after the Deluge; ſo we may very well ſuppoſe, that ſome of them might in proceſs of time travail into *America*, if it were poſſible ſo to do, as well as into many other remote Regions not directly mentioned by *Moſes*. For 'tis probable, as Judge *Hales* obſerves, that ſome Migrations into *America* might be within 3 or 400 Years after the Flood. *Hales*.' Original of Mankind.

2. As for the great Numbers of the Inhabitants of *America*, 'tis certain there is time enough and to ſpare, ſince the Deluge, to account for ſuch an Increaſe: And 'tis probable, as will appear below, they might receive ſome of their Inhabitants not long after that time.

3. Their Shape, Make, Colour, Languages, Manners and Cuſtoms, tho' very different, as well from one another, as from thoſe of our *Continent*; yet are not more different from ours than our own are from one another: And therefore if there be any thing in this Argument, it will conclude as well againſt the *Aſiaticks*, *Africans* and *Europeans* being derived from one Stock and Original; tho' perhaps it may appear by and by, that 'tis no good one againſt either.

The 4th Objection will fall in with this in ſome meaſure, and may be cleared up after the ſame manner. For no good Arguments can be drawn from the different Species of the Beaſts of *America*, that they had not their firſt Parents from our Continent: Are not the Inhabitants, Beaſts and Birds of *Africa* vaſtly different from thoſe of *Europe*? And don't the *Tartars* and *Chineſe* differ in Shape and Form very much from the long hair'd black *Indians* of the Eaſt, as much almoſt as they do from the White People of our Northern Parts? If therefore we have ſuch different *Species*, as it were, of Men in *Europe*, *Aſia* and *Africa*, why ſhould it be thought ſtrange, that there ſhould be the ſame in *America*, and ſome of thoſe different from any of them? For that they are not all ſo is certain.

But perhaps it will be ſaid, this only increaſes the Difficulty ſtill of ſolving the Moſaical Account of the Propagation of ſuch differing kinds of Men from one and the ſame Father *Noah*; and that it rather proves they had very different Originals. But methinks 'tis not difficult to conceive how very different Colours and Shapes of Men may eaſily ariſe from the difference of Climates, Humours and Faſhions of Mankind, and from the Power of the Mother's Imagination operating on the *Fœtus*. Suppoſe for inſtance, in the Caſe of the *Cafres* or *Negroes* of *Africa*, *New Guinea*, *Madagaſcar*, &c. might not the naked Bodies of the firſt Inhabitants of thoſe Parts, by the vaſt Heat and Drought of the Climate, become very ſwarthy, burnt and black; eſpecially of thoſe who went much abroad, and expoſed themſelves to Hunting and Fiſhing, Toil and Labour in the Sun? And is it not natural enough to conceive that thoſe Perſons, who were bold and active Men at Hunting, Fiſhing, or Feats of War, would come by degrees to value themſelves on the Colour their Bodies had gain'd by ſuch brave and heroick Exploits? And would not they deſpiſe the effeminate Whiteneſs and Softneſs of thoſe that ſtaid at home? And when this *aduſt Hew* was once grown honourable, would not every one affect it, and even uſe *Arts* and *Pigments* to procure it? To be ſure alſo the Women, who always admire daring Activity and Valour in the Men, would be beſt pleaſed with Perſons of this Form and Appearance, and conſequently have their Imaginations and Fancies always (even *inter Amplexus*) filled with Ideas of them. From whence 'tis eaſy to ſuppoſe (by what we daily ſee of the Marks that pregnant Women give their Children) that the *Fœtus* in the Womb of the Mother (which is but like a Graft on a Tree) would be tinged with the ſame Colour, Form and Complexion; and this going on further by degrees, might eaſily produce as great a Change as that of an *Aſiatick* into a *Negro*; eſpecially if to this you add the probable Suppoſition, that ſome great and eminent Hero in theſe Parts, or a famous Hunter, might happen to have a ſhorter Noſe and thicker Lips than ordinary, might cut his Hair very ſhort, and have it naturally black and curled; for by this means others of his Contemporaries or Poſterity would endeavour to imitate him as much as they could, and the Mothers would mould their tender Infants into his Shape and Form, and ſupply it all (by degrees) by the Force and Power of Fancy and Imagination, in their latter born Children. I think it needleſs to give Inſtances of this, becauſe they are ſo very common and obvious, that all Hiſtory, and every ones Experience can furniſh them in ſome meaſure: And there want not Accounts, even in the very point before us, tho' with none of its previous Cauſes and Steps, of Women, that by the Power of Imagination only, have brought forth Children of quite contrary Colour and different Shape and Form from either the Mother or the Father.

And this Conſideration will help us to account in ſome meaſure alſo for the different Species of Animals now found in *America*, from thoſe in our Continent. Where by the by, we ought to obſerve, that there are not ſo many different Species as ſome tell us, who will needs make Wonders and Monſters of every new thing they ſee, without examining into it ſo nicely as they ought to do. Conſult Mr. *Ray's Wiſdom of God in the Works of the Creation*, at the beginning.

It hath been obſerved by many Authors, that *Africa* hath produced a much greater Variety of Animals than other Parts of the World, and eſpecially of Brutes; and this was a Proverb in *Ariſtotle*'s time, that *Africa was ſtill producing ſomething new*, of this kind, *lib.* 2. *c.* 5. *de Generatione:* And the Solution that is uſually given for this is, that Waters in thoſe dry pearched Countries being very ſcarce, great Varieties of Animals uſed to meet together at the Springs or Rivers, in order to drink and cool themſelves, and by promiſcuous Couplings there, did continually produce new *Species* of Animals. Now tho' it be uſually ſaid, that ſuch *Hebridous* Offſprings and Births as theſe don't copulate and produce Animals *ſui Generis* again; yet whether it be ſo univerſally or not, I judge may be doubted, and I believe there are Inſtances to the contrary pretty frequent, eſpecially among Birds. But be this as it will, no doubt the Climate and Soil, the Air and Degree of Heat, difference of Feeding, &c. will very much change the Shape and Appearance of Animals; as well as will accidental Impulſes on the Imagination of the Females of the Brute Creation, when (as our Great *Harvey* ſpeaks) *the ſpeci-*

Lib. de Generat.

cifick Operative Idea in the Fancy of the **Dam**, *may be diſturbed and changed by ſome other inordinate one.* If this were not ſo, why ſhould ſeveral Countries be more famous than others for a better Breed of the ſame kind of Animals; and ſome Places be perfectly void of Beaſts, Birds and Fiſhes, which others abound in? 'Tis not at all ſhocking to Reaſon therefore to believe, that there may be great Variety in the Shape, Colour, Make and Figure of divers Birds, Beaſts or Fiſhes in *America* from thoſe in our continent; and yet all *Species* at firſt have the ſame Original.

But beſides all this, 'tis certain that *Tartary*, *Cathay*, and thoſe North-Eaſtern Parts, do abound with a prodigious Variety of Beaſts and Birds, many of which have been diſcovered to be vaſtly different from thoſe of our Regions. Now the Bounds of this Part of the World being unknown and undiſcover'd, and the ſtretching out of the *Tartarian* Capes undetermin'd, it cannot be proved that there may not be in thoſe Parts, Beaſts and Birds of the ſame Form and Shape with thoſe we ſo much wonder at in *America*: And therefore Men ought to forbear concluding any thing certainly about the *American* Animals being *Aborigines*, till they are ſure they know all thoſe which inhabit thoſe vaſt Deſerts, and yet undiſcover'd Tracts of Land: which if they don't actually join to the Continent of *America*, do undoubtedly come very near it.

The 5th Objection is a bare Aſſertion without proof, and therefore may be as freely denied; and I ſhall ſhew, there is much more reaſon to do ſo, than to hold it in the affirmative. And the laſt or ſixth Argument about Beaſts of Prey, *&c.* getting into *America*, will be found to have little of force in it, when the ſeveral ways of peopling that part of the World are laid before you.

But I cannot omit taking notice now, that tho' the *Spaniards* found the *Continent* of *America* full of thoſe ſavage Beaſts; yet there were none of them in any of the Iſlands which lay remote from the Continent, tho' very large; which both ſhews that theſe Creatures were not at leaſt, *Aborigines* there, as Trees, Fruits and Plants were; and therefore *America* muſt be ſtockt with them from ſome other Part of the World; and which by a fair way of Concluſion too, lay *nearer* to them than thoſe Iſlands. This *Acoſta* aſſerts to be true on ſtrict Examination of the Primitive State of *Cuba*, *Hiſpaniola*, *Margarita*, *Dominica*, *Jamaica*, &c. And this hath been confirmed ſince to be the Caſe of other Iſlands newly diſcover'd by ſubſequent Navigation. And *J. de Laet* ſaith there were no ſuch Birds found in theſe Iſlands, as could not fly far, ſuch as Patridges, *&c.* (*P.*99 *de Orig. Gent. Americ.*)

About the ways of the firſt peopling of *America* there have been a vaſt number of Opinions and Conjectures, and ſome very wild and extravagant; as particularly that of *Leſcarbotus* mentioned by *Laet*, *viz.* That *Noah* (who he fancies was born there) went either thither himſelf, or ſent a ſecond Venter of Children into *America*, after he had divided our three Parts of the World amongſt his three former Sons. But this ſeems directly contrary to the Hiſtory of *Geneſis*, where we find that all the Eaſt was peopled by *Shem*, *Ham*, and *Japhet*, and their Poſterity; and is alſo aſſerted without any manner of Proof, Ground or Argument. Leaving therefore this and all other Opinions, which ſeem to me to have little Foundation from Reaſon, Hiſtory, or Collation of Cuſtoms; I ſhall inſiſt only on ſuch as appear to have thoſe real Foundations to ſupport them.

But here 'tis neceſſary to premiſe, that there were found in *America* at its firſt Diſcovery by the *Spaniards*, People of ſo very different Shapes, Colours, Habits, Cuſtoms, Languages and Manner of Living; that 'tis almoſt a Demonſtration they did not all come from the ſame Original; but probably were peopled from different Parts of the World, and at different times, and that ſome of their Inhabitants came to them very early too. For tho' all the Inhabitants of the great Continent of *Europe*, *Aſia* and *Africa*, did come from *Noah*'s Sons, who yet differ as much from one another in many Parts, as the ſeveral Inhabitants of *America* do; yet this will receive ſome Solution from the Moſaical Account of the Confuſion of Languages. But this cannot have place with thoſe who firſt peopled *America*, unleſs you ſuppoſe a ſupernatural Effect without any Ground or Reaſon.

Hornius very judiciouſly, in order to clear the way for the better diſcovery of thoſe Perſons who *did* firſt people *America*, firſt conſiders what Nation ought juſtly to be excluded from that Claim, and ſhews who *did not* go thither. And firſt he makes it probable, that the Inhabitants of *America* came not from *Swedeland*, *Norway*, *Denmark*, *Germany*, &c. becauſe all the Inhabitants of *that new World* are black hair'd, tho' not curl'd and woolly like the *Ethiopian Negroes*. The Northern *Americans* alſo were found to have no Proper Names, neither *Gentile* nor *Perſonal*: And if any Part of it was peopled from the *Celtæ*, the Northern Parts muſt: But the *Celtæ* were always curious and exact about Names; and therefore the Conceit of *Grotius* about *America*'s being peopled chiefly from *Norway*, ſeems entirely groundleſs, as *J. de Laet* hath fully proved; tho' 'tis likely that *Greenland* might have ſome of its Inhabitants from thence, but theſe did not ſpread far.

'Twas about the Year 982 after *Chriſt*, when *Ericus Ruffus* peopled *Iſland*, and ſome part of *Greenland*, and the Chriſtian Religion was planted there about 18 Years after: Wherefore ſince no Footſteps of Chriſtianity were found in *America*, theſe *Greenlanders* could ſend few or no Colonies far into *America*. Alſo the Northern *Americans* were all without Beards, or at leaſt generally ſo: For *Vaſquez de Conrado* ſaith he never ſaw in all *Mexico* above one old Man bearded; whereas the *Celtæ*, or antient *Gauls*, wore all Beards. There was no Footſteps found in *America* of that common Notion about the Tranſmigration of Souls; nor in the Southern Parts any that burned the Dead inſtead of burying of them, as the *Aſiatick Indians* always did: Whence he concludes alſo, that neither the *Celtæ* ſent the firſt Inhabitants into the Northern, nor the *Indians* thoſe into the Southern Parts.

'Tis very improbable alſo, that either the *Greeks* or *Romans* could people *America*, tho' from ſome forced Etimologies of Words, ſome have thought ſo: And the Reaſon is, becauſe they were kept within the *Mediterranean* by the *Carthaginians*, and had no Settlements on the Coaſts of the *Atlantick* Ocean, from whence they could get into the New World, if they had Skill in Navigation to attempt Diſcoveries of that nature, as it doth not appear they had.

Tho' alſo ſome, as *Arius Montanus*, and from him others, have been very fond of deriving ſome of the firſt Inhabitants of *America* from the *Jews*; and tho' ſome Authors, as our *Brerewood*, ſuppoſe the Ten Tribes which *Salmanazar* and his Succeſſors carried Captives into *Aſſyria*, to have gotten (I know not how) into that New World: Yet there being no ſuch Rite as Circumciſion, nor any other, purely *Levitical*, found amongſt them, this can have no ſolid Foundation. I know ſome have ſaid, that the *Americans* were found to be circumciſed; but 'tis owned they were but very few; and thoſe perhaps, as others judge, apeared to be ſo to leſs curious Obſervers, becauſe their *Preputia* were eaten away by the Pox: But both *Acoſta* and *Herrera*, on an exact Enquiry, could find no Signs of a true Circumciſion. From which 'tis plain, that neither the *Jews*, nor any Nation that conſtantly uſed Circumciſion as a Religious Rite, did people this Part of the World; from whence all the *Turks* and *Mahometans* are alſo excluded. And if the *Scythians* or *Tartars* had any ſhare in the ſending Inhabitants to the Northern Parts of *America*, 'twas before they received *Mahometaniſm*, and with it Circumciſion: So that *America* was either peopled before *Mahomet*'s Time in all its Parts, which is highly probable; or at leaſt by ſuch as were not of his Religion.

And as there were no Footſteps of the *Jewiſh*, ſo there were none alſo of the Chriſtian Religion found in *America* at its firſt Diſcovery. Some indeed have ſaid, that there were Croſſes found erected in *Jucatan*, and that they had a Tradition of their being left there by a Man beautiful and glorious as the Sun it ſelf, and who died upon one of them; but this ſeems a meer Legend, for *P. Martyr* ſaith there is nothing certain in this Relation. And *Herrera* juſtly ſcruples at *Gomara*'s Relation of there being Croſſes of *Aurichalcum* and Wood, placed upon the Graves of the *Jucataneſes*; becauſe he ſaith there is no *Aurichalcum* found either in *Jucatan*, or any where elſe in *America*: And *Garcilaſſo* ſaith, that at *Cuzco* there was indeed a great Marble Stone in the Form of a Croſs, but it had no Religious Uſe. Some inſiſt much alſo on the Uſe of Baptiſm among the *Jucataneſes*, to prove it to be a Chriſtian Colony: But as every one knows Baptiſm was a Rite in uſe long before Chriſt, and in many Places of the World; and that therefore nothing certain can be concluded from thence: So 'tis certain that the *Jucataneſes* never had any Baptiſm as a Religious Rite properly ſo called; and all the modern *Spaniſh* Writers, on a nearer Enquiry into the State of *America*, do deny that there was any ſuch thing as Chriſtian Rites found among them: And their abominable Idolatry, Human Sacrifices, and other barbarous Uſages, ſufficiently ſhew, that they had not their

Original from any Chriſtian Nation; for wherever that Religion hath once been eſtabliſh'd, all ſuch Heathen Rites and Cuſtoms have fallen before it. It ſeems therefore plain, that *America* was not peopled by Chriſtians, but probably had its Inhabitants in all or moſt Parts of it, before our Saviour's Incarnation; as will further appear hereafter.

'Tis not likely alſo, that any of the firſt Inhabitants of *America* came from *Ethiopia*, or at leaſt very few of them, becauſe there are no *Ethiopic* Negro's, or at leaſt but very few, found there, but what the *Europeans* have carried thither: And for the ſame reaſon *New Guinea* alſo muſt be excluded from being ſuppoſed to have ſent any of its numerous Inhabitants thither, if our late Relations are true, that they are all *Negro's* there; for the firſt Diſcoverers mention a vaſt variety of Colours and Shape among the *Americans*.

Indeed *Hornius* cites *Peter Martyr* and *Gomara*, as making mention of ſome *Ethiopic* Negro's, which were found about *Careta* in *America*; which probably might be driven over in a Storm, or might deſignedly go over from *Congo* in *Africa*; for *Lopez* ſaith the People thereabouts antiently had Ships carrying 200 Oars.

And thus having endeavoured to ſhew from what Parts of our World *America* was not peopled, let us next enquire from whence it probably did derive its numerous Inhabitants. And to begin with the Northern Part of it: 'tis not unlikely, as *Hornius* obſerves, That that Tract of Land might receive its firſt People three ways: On the North from the antient *Scythians*, on the Weſt from the *Phænicians*, and on the Eaſt from the *Chineſes*.

There ſeems good reaſon to believe, that the *Phænicians* went very early into *America*: For when the *Canaanites* were expelled their Country by the Children of *Iſrael* in *Joſhua*'s time, 'tis very probable that neceſſity drove them to ſeek new Habitations; eſpecially if the Story of the two Marble Pillars, which *Evagrius Scholaſticus* cites out of *Procopius*, be true: For he ſaith theſe were ſet up near *Tingri* or *Tangier*, and had in the *Phænician* Language and Character this Inſcription upon them. *We fly from the Face of that Robber* Joſhuah *the Son of* Nun: And that they would have recourſe to their Shipping too for this purpoſe, for which they were antiently very famous, ſeems paſt doubt.

They went early into *Spain* and *Africa*, 'tis certain; and ſome Writers ſay they went all round *Lybia* (which antiently ſignified *Africa*.) This they could not well do along the Shoar, but muſt venture out far into the Ocean; and therefore they might as eaſily from thence ſail into *America*, as to the Canary Iſlands; which is not above 15 days Sail from the Canaries: And 'tis fact that they were as far as the *Canaries* and *Azores*. *Strabo* ſaith expreſly, *That entring the* Atlantick *Ocean, they built Cities beyond the* Herculean *Straits*: And alſo that *they had many and great Ships in ours, and in the moſt outward Sea*. *Eratoſthenes* alſo and *Strabo* both ſay, that the *Phænicians* being infeſted with Wars at home, took Shipping, and ſought new Settlements in the *Atlantick* Ocean: And the ſame thing we learn from *Diodorus Siculus, lib.* 5. And that the Antients had a Notion of another World, or another Part of ours, lying beyond the *Atlantick* Ocean, is very plain and evident. *Ælian* in his third Book ſaith, that *Silenus* told *Midas*, that beſides *Europe*, *Aſia* and *Lybia* (or *Africa*) there was another infinitely large Continent, in which were great Cities, and People of different Laws and Cuſtoms from ours; and where there was a vaſt Quantity of Gold and Silver, which was leſs valued there than Iron with us. No doubt alſo theſe were the great Iſlands mentioned by *Apuleius* in his Book *de Mundo*, on the Authority of *Ariſtotle* and *Theophraſtus*. And we find in *Seneca*, *Avitus* ſaying, *Fertiles in Oceano jacere terras, ultraq; eum, rurſus alia Littora, alium jacere Orbem*. And in the *Medea* of the other *Seneca*, you have this remarkable Paſſage.

> *——————Venient Annis*
> *Secula ſeris quibus Oceanus*
> *Vincula rerum laxat, & ingens*
> *Patrat tellus, Typhiſq; novos*
> *Detegat Orbes, nec ſit Terris ultima Thule.*

To which may be added what we find in *Ammianus Marcellinus*; which is, that there *was an Iſland in the* Atlantick *Ocean, larger than all* Europe.

But to return to the *Phænician* Plantation of this New World; *Hornius* thinks there were three eminent Voyages made by the *Phænicians* into *America*: The firſt under *Atlas*, who, *Plato* in his *Critias* ſaith, was the Son of *Neptune* (a *Phænician* Deity) and others call him the Son of *Cælus* and the Brother of *Saturn*. Under this *Atlas* they paſſed the Straits, of old called *Hercules Pillars*, and coming into the Ocean, gave the Name of *Atlantick* to it, which it retains to this day: And it appears from *Strabo*, that all the Sea round about *Aſia*, and great part of *Africa*, was called the *Atlantick* Ocean: becauſe, he ſaith, Arabia Fælix *extended it ſelf as far as the* Atlantick *Ocean*. In this *Atlantick* Ocean, the old *Phænicians* found a great Iſland as large as *Aſia* and *Africa*, which they called *Atlantis*, and I think could be nothing but *America*. This famous *Atlantis* is mentioned by *Plato* in his *Timæus* and *Critias*, and by many hath been thought to be entirely a fabulous Relation: But *Plato* himſelf expreſly ſaith, *That he doth not write a Fable, but a true Hiſtory*. And *Proclus* cites one *Marcellus* an *Ethiopian* Hiſtorian, who relates the ſame Story as a Truth; to which may be added, that *Crantor*, *Plato*'s firſt Interpreter, takes the thing to be a true Hiſtory, and no Fable. All this conſidered, tho' there are, according to the antient Cuſtom, ſome fabulous Stories connected with the Relation; yet there is very good reaſon to take it to be truth in the main, ſince there is nothing impoſſible or improbable in the Account of it: For the *Phænicians* had very early, good Ships, and did not uſe to coaſt along the Shore only, but ventur'd out far to Sea in the clear and fair time of the Year, guiding their Courſe by the Sun and Stars, as they might very eaſily do: And in this point they were ſo ſkilful, that all our Aſtronomy at firſt came from them. And we find *Pliny, lib.* 2. *cap.* 16. complaining, that the Men of his time were lazy and enervated, the Skill of Navigation loſt, and the Deſire of ſeeking New Worlds and Regions extinguiſh'd.

There is alſo good Authority from Antiquity, that the *Phænicians* made a ſecond Voyage into *America*: For what can be plainer than what we find in *Diodorus Siculus, lib.* 5. *p.* 299, 300. *Edit. Hanoviæ A.D.* 1604. where he tells us, "That the *Phænicians* did very antiently ſail "out beyond *Hercules*'s *Pillars*, along the *African* Coaſt; "and there meeting with Storms and Tempeſts, were "carried to the remoteſt Part of the Ocean, and after "many days came to a vaſt Iſland many days Sail from "*Lybia*, and lying very far Weſt. This Place had a "fruitful Soil, navigable Rivers, and ſumptuous Edifices: And from hence the *Carthaginians* came to the "Knowledge of theſe new Lands. And in another place he ſaith, "That the *Carthaginians* finding that "they were often preſt with Wars by the *Tyrians* and "*Mauritanians*, took Shipping, paſſed *Cadiz*, and ſail'd "to this new Region in the *Atlantick* Ocean, and "planted a Colony there; but kept the Diſcovery a "long while cloſe, that if they ſhould ever be driven "from their native Soil again, they might have this "Place to retire to. This is a very plain and remarkable Paſſage, and can be meant of nothing but *America*, to which Place the Deſcription given by *Diodorus* doth well agree: And this alſo will help us to gueſs pretty well at the *Time of this Expedition*; for it muſt be juſt after the Wars above-mentioned between the *Carthaginians*, and the *Tyrians* and *Mauritanians*.

The third Voyage of the *Phænicians* into *America*, *Hornius* judges to be in *Solomon*'s Time, when the *Tyrian* Fleet went to *Ophir* for Gold. Which *Ophir* he thinks might be *Hiſpaniola* or *Cuba* in the *Weſt Indies*: And certain it is, that in the former of theſe Iſlands *Bartholomæus* the Nephew of *Columbus* found Gold Mines of a prodigious greatneſs, *viz.* of 16 Miles in length; but the Natives then had loſt the uſe of them (*Novus Orbis Regionum, &c. p.* 77.) And therefore *Columbus*, *Vetablus*, *Rob. Stephanus*, *Genobardus*, and many others, have believed this *Hiſpaniola* to be *Solomon*'s *Ophir*; as *Arius Montanus*, *Goropius Becanus*, *Guil. Poſtellus*, *Marcus Marinus*, *Brixianus in lib. de Arca Noæ*, *Ant. Poſſevinus*, *&c.* do believe it was ſomewhere in *Peru*. And would the Place from whence *Solomon*'s Ships were built and did ſet out, which was *Ezion Gaber*, agree with this, I ſhould think alſo that there is great reaſon to ſuppoſe *Ophir* to have been *Hiſpaniola*, or ſome Place thereabout. But after all the Endeavours of *Goropius Becanus*, who was the firſt, and ſome others, to prove *Ezion Gaber* to be ſituated in the *Mediterranean*, 'tis plain from 2 *Chron.* 8. 17. 1 *Kings* 19. 26. that *Ezion Gaber* was in *Idumæa*, or *Edom*, which *David* had conquered, and on the Shore of the *Red Sea*. *Goropius Becanus* alſo would have *Solomon*'s *Tharſhiſh* to be *Tarteſſus* in *Spain*; whereas 'tis plain that *Tharſhiſh* is only a general Word for the Sea, or Ocean, as appears from 2 *Kings* 22. 48. where *Jehoſaphat*'s Ships are called *Ships of Tarſhiſh*: So likewiſe in 2 *Chron.* 20. 36. *to go to* Tarſhiſh, ſignifies *to go into the Sea*, or *into the Great Sea*. And conſequently the Navy of *Tarſhiſh* in 1 *Kings* 10. 22. muſt be underſtood

ſtood in the ſame general Senſe, for a Fleet that were to ſail in the wide Sea, or *Indian* Ocean, in order to fetch Gold from *Ophir*, or *Zeilan*. Which being determined, as *Lippenius* in his *Navigatio Solomonis Ophiritica, cap.* 2. *Sect.* 1. and *Bochart* in his *Canaan, lit.* 1. *cap.* 44. have put it out of doubt: 'Tis then certainly a very unreaſonable thing to ſuppoſe that *Solomon*'s Ships ſhould go all round *Africa*, and thence into *America* for Gold. Wherefore *Ophir* muſt be placed ſomewhere elſe; and the moſt Learned *Bochart* makes two *Ophirs, Vid. Phaleg. lib.* 2. *cap.* 27. One in *Arabia* very rich in Gold, and from whence the *Iſraelites* had it before *Solomon*'s time, when the *Tyrians* firſt made them Navigators. This *Ophir* was the Country of the *Caſſanitæ* of *Ptolomy*, the *Gaſandæ* of *Diodorus*, and the *Caſandres* of *Agatharchides*. But the *Ophir* to which *Solomon* ſent for Gold, he ſhews to be the *Taprobana* of *Ptolomy*, the Iſland *Seilan*, or *Zeilan*, in the *Eaſt Indies*. See alſo his *Canaan, lib.* 1. *cap.* 46. But tho' I cannot think *Hornius* is in the right in aſſerting that *Solomon*'s Ships went with the *Tyrians* into *America* for Gold, when they went to *Ophir* from the *Red Sea*; which alſo is contradictory to what he himſelf had before advanced, that no *Jews* had ever been in *America*: Yet I can ſee no reaſon to deny that the *Tyrians* and *Phænicians* might go thither from *Tyre*, or other Ports in the *Mediterranean*, as early as in *Solomon*'s Time, and 'tis likely, before that. For they had Colonies very antiently in the *Atlantick* Ocean, in the *Canary* Iſlands, and in the *Azores*; aud ſo might as eaſily go to *America* from thence, as from the *Straits* thither.

That the *Canary* Iſlands are the ſame with thoſe antiently called *Fortunate*, is certain; and what *Hornius* ſuggeſts is very probable, that they derived their Name of *Canaries*, not *à Canibus* (for *Gomara* ſaith, when the *Fortunate Iſles* were firſt diſcover'd, there were no Dogs found there) but *à Chananæis*, from the *Phænicians*, who as *Scylax Caryandenus* ſaith, *uſed to ſail often from the Continent of* Africa *to* Cerne, *and back again*. The change of the Letter N into R is very uſual, as in *Nebuchadrezar* for *Nabuchadnezar*; and *Cerne*, ſome think, is only a Contraction of *Canaria*. In the time of *Pliny* and *Juba*, 'tis ſaid the Inhabitants of theſe Iſlands left them; and ſince we have no account whither they went, 'tis likely, as *J. de Laet* obſerves, that they went into *America*; and after this, they grew ſo barbarous, that, as *Hornius* ſaith, *'tis certain they had loſt the Uſe and Knowledge of Fire.* Tho' it appears alſo from *Pliny*, and other antient Writers, that when the *Fortunate* or *Canary* Iſlands were firſt diſcovered, there were the Ruins of great Buildings found there; which ſhews that formerly they had been well inhabited.

We find alſo from *Strabo*, that the *Phænicians* did very earlily ſail to the *Caſſiterides*, but concealed their Diſcovery: He ſaith, they found the Inhabitants to be *Wanderers, long-bearded like Goats, clothed in long black Gowns, that they walked with Staves, were deſirous of Peace, and wholly given to Maritime Affairs. Lib.* 3. Which is juſt ſuch a Deſcription as *Athanæus* gives of the antient *Spaniards*, and therefore 'tis probable theſe Iſlanders came from thence. And it being now agreed, that by the *Caſſiterides* in this place, *Strabo* meant the Iſlands *Azores*; 'tis an eaſy Suppoſition, that the *Phænicians* might thence ſail into *America*, as well as from the Continent thither. Which confirms, another way, what *Plato* ſaith, *viz. From* Atlantis (*or* America) *Men went to other Iſlands, and from thence to the Continent.* When the *Azores* were diſcovered by the *Flandrians* and *Portugals*, they were uninhabited, their People having probably all gone into *America*.

It hath been generally thought that the Antients dared not venture out far to Sea, but always coaſted along the Shores: But theſe Voyages of the *Carthaginians* to the *Fortunate* or *Canary Iſlands*, to the *Azores*, &c. plainly diſprove that Opinion: And beſides, we find *Herodotus* in his *Melpom.* ſaying, that the *Carthaginians* ſail'd all round *Africa*, which they could not well do along the Shore, Sailing being there much more difficult and dangerous than it is further out at Sea. And *Herodotus* ſaith alſo, that *Necho* King of *Egypt* ſetting out from the *Red Sea*, ſail'd all round *Africa* as far as *Cadiz*, and ſo back again to *Egypt*. 'Tis agreed alſo that the Iſles of *Cape Verde* were peopled firſt by the *Phænicians*, from thence 'tis an eaſy Paſſage to *Braſile* in *America*; and the Manners, Language, Form of Body of the *Braſilians*, agrees with that of the *Autololes*, or Inhabitants of theſe Iſlands, who are *Getuli*, not *Ethiopes*. And now we are hereabouts, it may be proper to take notice of thoſe *Ethiopick* Negro's which *Peter Martyr* and *Gomara* tell us were found in the Region of *Careta* in *America*, if ſuch there are; who 'tis probable might get over from *Congo* in *Africa*, where, as *Lopez* ſaith, the Natives have had Ships of 200 Oars, as hath been before obſerved. *J. de Laet.* ſaith that *Tercera*, one of the *Azores*, lies almoſt in the Mid-way between *Spain* and *America*; wherefore the *Phænicians* might as well go from thence into *America*, as from *Spain* thither.

There are found alſo in *America* many Words, Civil and Religious Rites and Cuſtoms, which ſeem plainly to be of a *Punick* or *Phænician* Original; and tho' perhaps theſe ſingly taken may not be of weight enough to convince, yet in the whole they muſt be allowed to be of conſiderable force for the proving the Suppoſition we are now upon. *Hornius* thinks the Names of *Panama Puna* in *Peru*, and *Bunigando*, to be plainly *Punick*; as alſo *Pinoles*, the Names of the moſt antient People of *New Spain*. But certain it is there were many Words there found that are plainly *Phænician*; ſuch as *Abenamagos*, the Son of *Mago*; *Ben-ommian*, the Son of *Ommia*; the one an eminent *Carthaginian* Family, the latter an *Arabian* one. About the *Iſthmus of Darien*, as *Peter Martyr* and *Gomara* both ſay, there were the Words *Ab-raibas, Abibeibas* in uſe; and in *Jucatan, Ab-dola*; in *Guadalaira* there was found the Word *Bar-Cimeæ*; and in *Nixapa* they had *Balderoci*; in *Cumana, Beradochi*: And the three laſt *Indian* Kings in *Jamaica* were called *Beroica, Ben-Beroica*, and *Aben-Beroica*. There is alſo in many words a plain Derivation from the famous *Phænician* Word *Anak*; as in *Anakuz*, a famous *American* Prince in *Caribana*: and in *Paria*, the Word *Anaxerat*, as in *Aiti* or *Hiſpaniola*, they had at *Anakaone*.

And methinks 'tis very remarkable, that the Natives of *New England* ſhould call the *Septentriones, Mosk* and *Pankunaw*, which in their Language ſignified a *Bear*; for there being no reſemblance between the Figure of that Conſtellation, and that Animal, 'tis highly probable that they learnt to give it that Name from the *Phænicians*, who did call it ſo, and from whom all our Aſtronomy is originally derived, and moſt of the Names of the Conſtellations came.

Roger Williams.

There were alſo ſome *Phænician* Rites and Cuſtoms found in *America*; but Proceſs of time, and the Invaſion of the *Scythians*, who, as you will find below, overrun moſt Parts of *America*, did make great Confuſion and Intermixtures in things of that nature.

Thus there were found about *Manta, Tragaanacus*, and the Lake *Titicaca* in *Peru*, prodigiouſly large, ſplendid and excellently wrought Buildings of a round Form, and arched over like an Oven or Tent, exactly reſembling the old *Punick Mapalia*; and theſe were ſo antient, that they were built long before the Family of the *Inca* had the Government of *Peru*. Alſo in *Hiſpaniola* the Huts of the Natives were built, as *P. Martyr* tells us, of a Spherical Figure, of Wood, and in the Form of a Tent at the top.

Gomara tells us, that in the *Iſthmus* of *Panama* the dying Kings uſed to kiſs the Feet of their Succeſſors; which was an old *Phænician* Cuſtom. We find alſo from *Joſephus*, in his firſt Book againſt *Apion*, that the *Phænicians* uſed to cut or ſhave all Parts of their Head but only one Lock upon the Crown, which they uſed to tie up in a Knot; and juſt ſo did the *Nicaraguaians* and the *Jucataneſe* wear theirs. It hath been ſhewn above, that the firſt Inhabitants of the *Canary Iſlands*, were *Phænicians*; and there is a great Agreement between the *Canarians*, and the People of *Paria* and *Darien* in *America*, as to the preſerving the Bodies of the Dead, and hanging them up in their Houſes: And as 'twas the Cuſtom in the *Canaries* to give their Princes the firſt Night with every Bride, ſo was it alſo in *Nicaraguay*.

Hornius obſerves very well, that 'tis probable many *Egyptians* might go along with the *Phænicians* into *America*, as well as into *Greece*, &c. Now there are ſome odd *Egyptian* Cuſtoms which were found in *Peru* and *Nicaraguay*; as that the Husband ſhould ſpin, ſweep and waſh the Houſe, while the Wife did all the Buſineſs abroad; and that the former ſhould make water (*genubus inflexis*) the latter *Corpore erecto*. 'Tis well known that *Cham, Jupiter Hammon, Baal* or *Belus*, was the antient Deity of the *Phænicians*; of whoſe Name there is ſome Remains found in *Jucatan*, where they called one of their old Prophets *Chila-Cham-baal*. *Porphyry* cites *Sanchoniathon* to prove that the old *Phænicians* uſed to ſacrifice great Numbers of their Children to their Gods, and to uſe for a Form of Adoration, Kiſſing their Hands, cutting their Fleſh, and letting out their Blood: The two former of which Cuſtoms were common in *Peru* and *Jucatan*, and the latter was uſed in *Mexico* and *Nicaraguay*. *Euſebius* hath ſhewed from *Sanchoniathon*, that paying Divine Honour to ſuch departed Perſons as were famous for all Actions or Inventions, was an old *Phœnician* Cuſtom; and this the Inhabitants of *New England* had amongſt them.

And thus there ſeems to be many good Reaſons for ſuppoſing the old *Phœnicians* to have had very early a Knowledge of *America*; to have ſail'd frequently thither, and to have peopled a good part of it: But ſuch was either their Envy, Avarice, or deſign of retiring thither under the Preſſures of a War, *&c.* that they kept this Diſcovery as a great Secret: And the *Carthaginians* forbad all manner of Navigation thither, under moſt ſevere Penalties, and by a publick Edict (ſaith *Hornius*) excluded not only others, as the *Tyrrheni*, but alſo their own People, from ſailing into the *Atlantick* Ocean; which they could eaſily do, being Maſters of the Straits.

And this will help us to account why *America*, tho' ſo well known to the antient *Phœnicians*, ſhould be loſt to the Memory of their latter Succeſſors, and why the *Americans* ſhould loſe almoſt all Remembrance of their Original, and degenerate in many Places, into ſuch Barbarity and Wildneſs, as they were found to be in, on the *Spaniards* firſt Diſcovery of them.

But tho' the *Phœnicians* were thus the firſt People that went out of the *Mediterranean* into the *Atlantick*, and ſo into *America*, yet 'tis probable enough that the *Spaniards* might go thither afterward; for we learn from Hiſtory, that they ſent out Ships on purpoſe to make Diſcoveries in the *Atlantick* Ocean; *Plutarch* telling us, that *Sertorius* went out with that deſign. And *Laet* and *Hornius* ſeem to me to gueſs very reaſonably, that the *Spaniards* being haraſs'd and preſt with the *Punick* War, took the *Carthaginians* Ships, and *Hanno* for their Pilot and Captain, and ſought new Seats for themſelves in the Ocean. We have been told, that plain Remains of *Spaniſh* Ships have been found in the *Arabian* Gulph (and no doubt they might much eaſier go to *America* than thither) and *Strabo* ſaith that the *Spaniards* were antiently Pirates in the *Atlantick* Ocean: And it appears from the ſame Author in ſeveral Places, that the *Spaniards* about *Cales* had antiently great Ships, were very skilful in Navigation, and did more than once go round *Africa*, as *Laet* obſerves in his Anſwer to *Grotius*, *p.* 105. Wherefore when theſe were driven by the *Romans*, they might fly firſt to the *Canaries*, or other Iſlands in the *Atlantick*, and thence into *America*.

The *Nubian* Geographer tells us alſo, that ſome *Moors* were once fitted out from *Lisbon*, with Ships victualled for many Months, to make Diſcoveries in the *Dark Sea* (as the *Arabians* called the *Atlantick*) and after many days Sail having found ſome Iſlands, they were driven by a Storm back to *Africa*, and thence went home *re infectâ*. 'Tis probable alſo that ſome *Ethiopians* might go deſignedly, or be driven into *America*, not long before the Diſcovery of this new World by the *Spaniards*: For tho' ſome few Negro's were found in *America*; yet their Number was ſo ſmall, and themſelves confined to one Place, that 'tis very likely they could not have been there any conſiderable time before the *Spaniards* found them in *Braſile*.

There is alſo another Account of the Peopling of ſome part of *America* by an Expedition from *Wales*, which hath ſomething more than Gueſſes to authoriſe it, and is this. *Powell*, in his Hiſtory of *Wales*, ſaith, that *A.D.* 1170. *Owen Guinneth* being dead, and his Sons quarrelling and contending for the Government, which a Baſtard got from them; one of them, whoſe Name was *Madoc*, got proper Proviſions, *&c.* and ſought for new Regions in the Ocean; and that leaving *Spain* behind him, he bent his Courſe to the Weſtward, and ſo diſcovered a new World, where he found many wonderful things. This he came back and told to his People, mightily praiſing and extolling the Beauty and Fertility of the Place, which he found entirely uninhabited. After this he went with a great number of People of both Sexes thither again, and ſettled Plantations there; and returning home, he went a third time alſo with 10 Ships (as *Hackluit* ſaith) If this Account be true, as I ſee no reaſon to diſtruſt it, the Place *Madoc* went to muſt be *Virginia*, *New England*, or ſomewhere thereabouts. In confirmation of which *Peter Martyr* in *Decad.* 7. *cap.* 3. ſaith, that the *Virginians* and *Guatimallians* uſed to celebrate the Memory of one *Madoc*, as an antient and great Hero amongſt them: And in *Decad.* 8. *c.* 5. he makes mention of the Words *Matoc-Zunga* and *Mat-Inga*, as being in uſe among the *Guatimallians*, in which there is a plain Alluſion to *Madoc*, and that with the *D* ſoftned into *T*, according to the *Welch* way of Pronunciation. Now theſe *Welch*-men mingling with the barbarous *Chichimeca*, there might in [illegible] or [illegible] Years, their native Language, and almoſt every thing of their firſt Original be loſt amongſt People rude and uncultivated, and who perhaps knew nothing at all of Letters, or at leaſt of keeping an Account in Writing of their Annals and Tranſactions.

I proceed next to conſider another very eminent way by which *America* was peopled, and from whence 'tis probable it had far the greateſt part of its Inhabitants, and that is, from *Scythia*: And by *Scythia* I underſtand what the *Greeks* antiently called by that Name, *viz.* all that Tract of Land which lies Weſterly, Northerly and Eaſterly of the *Caſpian* and *Euxine* Seas. The barbarous Inhabitants of this mighty Extent of Ground the Antients ſometimes called *Arimai*, as we learn from *Pliny*, from whence afterward the Word *Arimaſpi* was derived: And the *Perſians* called them all *Sacæ* from a neighbouring Nation of the *Scythians* of that Name, as indeed they were all called *Scythians* from a People of that Denomination ſituate at firſt in a little Place about *Araxes*, and who became very eminent for their Courage and Conqueſts; for they got into their Power and Poſſeſſion all the Country lying between Mount *Caucaſus*, the Ocean, *Palus Meotis*, and the River *Tanais*; and from theſe came the fierce People called *Pali*, *Napæ*, *Sacæ*, *Maſſagetæ*, *Arimaſpi*, &c. of which ſee *Diodorus Siculus*, *lib.* 2. *Bibliothecæ*. Theſe *Scythians* after they had run over and filled all the Northern *Aſia*, you will ſee by and by, rambled in great Numbers into *America*, and that, by ways open enough (ſaith *Hornius*) both to the Weſt and Eaſt; but the latter was the eaſier: And accordingly it hath been obſerved, that *America* hath been much fuller of People in thoſe Parts of it which border on *Aſia*, than towards *Europe*. *Grotius* excepts againſt this Opinion of the *Scythians* Peopling *America*, becauſe no Horſes were found there at the firſt Diſcovery of it by the *Spaniards*; which yet the *Scythians* were always famous for the uſe of. But to this it may be anſwered, that the *Scythians*, when they came ſo far North, as to the Paſſage by which they went into *America*, would find their Horſes quite uſeleſs to them; neither indeed is it probable that they would live there: For on the Icy Ocean there are vaſt Numbers of *Scythians* (ſaith *Hornius*) which are derived from the *Hunns*, and other People which were famous for the uſe of Horſes, which yet now do entirely want them, being not able to uſe or to keep any there: And therefore inſtead of them they uſe their *Rangiferæ* or Rain Deer, and great Maſtiff Dogs: Which Cuſtom (to confirm what we are now advancing) is found in ſeveral Places of *America*. And 'tis remarkable that *Tacitus*, in his Book *de Moribus Germanorum*, at the end, ſaith that the *Fenni*, who certainly came from the *Sarmatæ*, *had no Horſes*; and 'tis very likely that Horſes will not live in ſuch cold Climates. *Grotius* alſo ſuppoſing that there is no Way by Land into *America*, objects that the *Scythians* were no *Navigators*, and ſo conſequently could not get thither. But that ſeems to be a Miſtake in Fact; for *Diodorus* mentions a Sea-fight between the *Amazons* (which were *Scythians*) and the *Atlantii*. The *Scotch*, whom *Cambden* proves to have a *Scythian* Original, ſailed firſt into *Ireland*, and then into *Caledonia*, in the Age of *Oroſius*: The *Heruuli*, whom *Zozimus* reckons among the *Scythians*, poſſeſt themſelves early of the *Thule*, as *Hornius* aſſerts. The Navigations of the *Ruſſians*, in the *Euxine*, are as eminent in the *Greek* Hiſtory, as thoſe they have made in the Northern Ocean are in ours. And *Hornius*, *lib.* 3. *p.* 142. *de Orig. Gent. Americ.* ſaith, that in the Eaſt, the *Tartars* had a Fleet of 15000 Ships between *Corcangui* and *Caigui*, where the River *Comoron* runs into the Sea; and this in the Time of their Emperor *Kublai*, and before their taking of *Mangi*, which is *China*. *Ludovicus Frois*, in his Account of *Japan*, ſaith that the *Japeneſes* relate of the *Jeza* or *Tartars*, that they ſail'd from the Continent to the Iſland of *Mateumai*, which is 15000 Paces from the Kingdom of *Legeran* in *Japan*. And to put this Matter into a clearer Light, we learn from *Thuanus*, *lib.* 67. both the manner of Navigation uſed by the *Tartars*, and why they carried no Horſes with them: *When in their Rambles they come to an Arm of the Sea, or a Strait, they kill* (ſaith he) *their worſt Horſes (perhaps now render'd uſeleſs) and with their Skins turned the wrong Side outward, and their Ribs inſtead of Timber, they make Boats, which they ſow together with their Horſes Hair, large enough to hold* 8 *Men a-piece, and ſo they paſs over.* Now why they might not go into *America*, if there be a Paſſage for them, as it will appear below that there is, no good Reaſon can be aſſign'd.

And as the Nations very far North uſed not Horſes, which by reaſon of the Cold will not live there; ſo neither had they much knowledge of the uſe of Iron:

For *Tacitus* ſaith of the *Fenni*, in his Book of the Manners and Cuſtoms of the *Germans*, that they *for want of Iron uſed to head their Arrows with Bones*, as is practiſed in many Places of *America*, who ſeem to have had but little knowledge of that Metal, becauſe they were peopled in a great meaſure by ſuch Nations as had it not in uſe, as ſeveral of the *Scythian* Nations had not: For *Strabo* ſaith of the *Meſſagetæ*, that they uſed Brazen Weapons of War, becauſe there was but very little Iron amongſt them; and the very ſame Cuſtom was found in *America*, where there was but very little Iron uſed, but all their Weapons were uſually made of Braſs But that they were perfectly ignorant of the uſe of Iron, is a great Miſtake, tho' *Peter Martyr* too raſhly ſaith it; for *Acoſta* mentions an Iron Cage, which the *Mexicans* uſed to put Offenders in; and the *Paraguayans* uſed Pieces of Iron for Mony: And *J. de Laet* ſpeaking of the *Peruvians*, ſaith, that they were in a great meaſure, but not entirely ignorant of the uſe of Iron.

Hornius ſhews that there were three Nations of the antient *Scythians* which went into *America*, the *Hunni*, the *Kithæ*, and the *Sinæ*. The *Hunni* were a very large People, containing the *Alani*, *Ungri*, *Turcæ*, *Tartari*, *Fenni*, *Lucumores*, *Tingeſii*, with many other barbarous Nations inhabiting the Shores of the Icy Sea, as we learn from the Words of *Ammianus Marcellinus*. And yet plainer ſpeaks *Rubruquis*, as I find him cited by *Hornius*: *Trans Volgam*, &c. “ Beyond the *Volga*, towards “ the North, there is a Region called *Paſcatir*, from “ whence the *Hunni* and *Hungari* took their Original, “ and the Language of the *Hungari* is the ſame with “ that of *Paſcatir*.

Hornius aſſigns two Cauſes for the *Scythians* rambling into *America*, their numerous People, and their conſtant Wars: For the Vanquiſhed, or the weaker People, who could not make head againſt them, always fled as far as they could out of the way, leſt they ſhould be eaten by the Conquerors; for the *Scythians* uſed to eat their Enemies: The antient *Scythians* were alſo mighty Hunters, and Purſuers of wild Beaſts. *Bonfinius* ſaith, this brought the *Hunni* out of the interior *Aſia* into *Europe*; and therefore the Flight of the wild Beaſts, if there was Way paſſable for them (of which hereafter) might eaſily draw the *Scythian* Hunters after them into *America*. The *Scythians* alſo never had any fixed Place of Settlement or Abode, but changed their Camps, as the Seaſon of the Year, Game, Water or Woods invited them, never ſtaying long in a Place, but continually ſeeking new Habitations and new Regions to hunt in. Therefore on ſome preſſing occaſion, they might travel either over ſome ſmall Strait, after the manner above deſcribed, or over the Ice into *America*: As to which latter way, it may receive ſome confirmation from what *Rubriquis* ſaith of the *Tartars*, that they uſe to invade, in the Winter, the Iſlanders called *Tautæ* and *Manſæ* in the *Frozen Sea*, up above *Tartary*, getting over to them upon the Ice: And the ſame Practice, *Olaus* ſaith, was in uſe amongſt the antient *Sueci*.

Hornius thinks 'tis not difficult to gueſs at the time in which theſe *Scythians* and *Huns* went into *America*; and to be ſure it was much later than the Voyages of the *Phœnicians* thither above-mentioned, becauſe the Northern Parts of *America*, which theſe *Scythians* peopled, were much thinner of Inhabitants than the Southern Regions: And indeed 'tis likely no Perſons would have taken to ſuch a cold Climate, unleſs driven by Wars, and forced by Neceſſity: And ſuch a Neceſſity did fall upon many of the People of the Northern Parts of the World about the Year of Chriſt 400, in which the Affairs of the North were in the utmoſt confuſion, and they were ſo over-ſtockt with People, that they rambled almoſt all manner of ways; and then 'tis probable thoſe that were neareſt to thoſe Parts were driven into *America*. And this receives a good Confirmation from the Account the *Americans* gave of the *Chichimecæ*, a barbarous People, who in their Hunting and Rambling kind of Life, and many Cuſtoms beſides, were mighty like to the old *Scythians*; for theſe People, they ſaid, came into *Mexico* about the Year 700 after Chriſt, according to our way of Accounting. So that if they went from our World in the Year 400, they might people the Northern Parts of *America* tolerably well in 300 Years, after that thin rate that the *Spaniards* found them inhabited: For *Purchas* tells us, that all *Virginia*, *New-England*, and all the Countries up to the Pole, had not ſo many People as there were then in *London*.

So that this ſecond Peopling of *America* by the *Scythian Hunns*, is tolerably well determined to be about the Year of Chriſt 400.

And this probably was effected two ways, both Eaſtward and Weſtward, and that either by *Land*, the Continents there joining, or elſe over but *Narrow Straits* of the Sea. Thoſe that went to the Weſtward, might go firſt to the Banks of the River *Oby*, and ſo to the Shore of the *Frozen Sea*, up towards *Nova Zembla*. This Part of the World the *Nubian* Geographer, and *M. Paulus Venetus* call the *Regions of Darkneſs*; and you will find theſe Names given to the People that inhabit there: The *Calami*, *Tingeſii*, *Oſtachii*, *Molgzomii*, *Serpanoutzi*, *Lucumores*, *Gruſtini*, *Vogulitzæ*, *Samojedi*, *Papinæi*, *Premskii*, *Obdoræ*, *Condoræ*, *Loppi*, *Fenni*, *Caroli*, &c. The three laſt of theſe People inhabited the utmoſt Parts of *Scandia* as far as the Promontory of *Rubea*, now called *Noordkyn*. This is the Eaſtern *Lapland*, which the *Swedes* call *Trennes*, others *Biarmia*; and the general Name for all the *Finni* and *Laplanders* is *Skidfinni*, from their wearing Wooden Shoes, which the *Swedes* call *Skidh*. Theſe *Finlanders* and *Laplanders* going ſtill farther North, came at laſt to *Nova Zembla*, and ſo, as ſome ſay, into *Greenland*: For *Linſcotius* ſaith, that in the Months *June*, *July* and *Auguſt*, theſe People uſed to frequent thoſe Places for the ſake of Hunting, and for the Fertility of the Soil, and the Pleaſantneſs of the Place at that time of the Year. In *Nova Zembla*, *Groenland*, and the neighbouring Iſlands, *Pomp. Mela*, and others of the Antients, place the *Hunni* and *Fenni*, or *Faneſii*. From *Nova Zembla* and *Lapland* there is but a ſhort Paſſage to *Groenland* (about 4 days Sail) there being many Iſlands interſperſed in the way, which are eaſily paſſed to by ſuch Boats, or *Canoes*, as are now uſed in *Groenland*, &c. and probably are all, in the Winter, approachable on the Ice. Nor was this Part of the World unknown to the Antients, for the moſt antient Geographers called that Sea which lies beyond the Promontory of *Rubea* and *Scandia*, by the Name of *Cronium*, from an adjacent Iſland which they called *Cronia*, or the Iſle of *Saturn*, and ſometimes *Ogygia*, and which was very probably *Groenland*: And their *Ultima Thule* was certainly *Iſland*; becauſe *Strabo* ſaith expreſly, *that* Thule *was ſix days Sail Northward from* Britain; which cannot agree with *Shetland*, or any other Pretender to that Name. *Groenland* therefore was not ſo named from its green Appearance, but from its antient Name *Cronion*: And that it was inhabited when the *Norwayans* firſt diſcovered it, is plain from there being found there now People of Shape, Colour and Manner of Life vaſtly different from the *Norwayans*; but exactly like the old *Scythians*, *Tartars*, *Laplanders*, and Northern *Americans*. And we find in *Purchas* one *Ivorus Boty*, a *Groenlander* by Birth, but of *Norwayan* Parents, who giving a Deſcription of this Place, ſaith, that in the Weſtern Parts of *Groenland* there are a very potent People, who are Enemies to the *Norwayans*, and which are called *Screlingers*, and who are of a Yellow or Olive Colour, and continually are rambling, for the ſake of Hunting, Fiſhing and Fowling. *Martin Forbiſher*, about the *Straits* that bear his Name, found Men with broad Faces, flat Noſes, large Noſtrils, long black Hair, and of an Olive Colour; and others deſcribe them as having none or very thin Beards, and in Form juſt like the *Samojeds* or *Tartars*: And ſuch have been the People that have been brought to our Parts of the World from thence. In the moſt Northern Parts therefore of *Tartary*, *Nova Zembla*, *Lapland*, *Groenland* and *America*, there being found Men of the ſame Shape, Form, Colour, way of Life, Manners and Cuſtoms; 'tis very likely that they are all of the ſame Original, and that the Northern Parts of *America* were peopled by the *Hunni*, or *Scythians*, this way. The Animals that are found in theſe Places are alike too: in all vaſt Numbers of white Bears that feed on Fiſh; and 'tis highly probable that theſe came out of *Groenland* into *America*, becauſe in the Southern Parts of *America*, about the *Terra Magellanica*, there are none ever found. *Arngrimus* maintains alſo againſt *Blefkenius*, as I find him cited by *Hornius*,, that in *Iſland* there are no Bears but what come over from *Groenland* on the Ice; and that thoſe Creatures uſe to travel a great way on the Ice, and ſail on Pieces of it, the Navigators into theſe Northern Parts do aſſure us. *Leſcarbotus* thinks it probable that the Elks come into *Canada*, the *Terra de Labrador*, &c. from the Northern Parts of *Europe*, ſwimming over a-croſs ſome Strait or Arm of the Northern Sea. And there is one *Bibaldus Pirkhaimerus*, a *German* Writer mentioned by *Hornius*, who aſſerts, that “ there come into *Groenland* “ uſually from the Northern *Terra Incognita*, and the “ *Frozen Sea*, certain ſavage and barbarous Men called “ *Caroli*, in great Numbers, for the ſake of Trade and “ Merchandizing; and that 'tis there taken for granted, “ that they come from the other ſide of the North Pole. But *Hornius* thinks, that tho' *Groenland* be certainly a

Part of the *American* Continent; yet that theſe People went thither rather over the Ice, from *Tartary*, &c. when the Sea was frozen up, than round about by the Pole, of which Parts we do indeed know nothing certain at all.

Grotius is of the opinion that the Northern *America* was peopled much after the way we have been now deſcribing, but from another Original: He will have the *Norwayans* to go firſt to *Iſland*, thence into *Groenland*, and after this into *Frieſland* and *Eſtotiland*, that is, at laſt into *America*, becauſe he makes thoſe two Places to be part of the *American* Continent. But as *Laet* and *Hornius* ſhew, this Opinion is improbable in theſe reſpects: 1. Becauſe 'tis unlikely the *Iſlanders* ſhould not tranſport Horſes and Kine along with them into *Groenland*, and ſo into *America*; and yet none were found any where in *America* at its firſt Diſcovery. 2. 'Tis ſtrange alſo and unaccountable how the *Norwayan* Language ſhould come to be quite loſt both in *Groenland* and *America*, and yet retained in *Iſland*. But 3. Chronology will not allow of it; for the *Spaniards* found that the *Americans* had a firm Tradition that the *Chichimeca* came to the Lake of *Mexico* before the Year of our Lord 720; whereas *Iſland* was not inhabited till about the Year 879; and the *Norwayans* did not get from thence to *Groenland* till *A.D.* 984. Beſides, there was not found in *America* any *European* Corn, which ſure the *Norwayans* would have carried with them; as they would alſo their Vice of hard Drinking, which we find the *Mexicans* abhored, and puniſhed Drunkenneſs ſeverely.

However *Hornius* allows, that ſome *Germans*, *Danes*, and *Norwayans* might get into *America*: For *Ivorus Booty* and *Arngrimus* give an Account of ſome Colonies going into *Groenland* from *Iſland*; but theſe were but a few, and were ſettled only juſt upon the Coaſt, and in all probability did not go up far into the Country, nor people *Groenland*, but by ſome Caſualty or other were loſt or deſtroyed; and perhaps this way: *Iſacius Pontanus*, in his Hiſtory of the *Danes*, ſaith, that *Helgeland*, *Weſtenore*, *Iſland*, *Feroa*, *Findmark*, and *Groenland*, did antiently belong to the King and Queen of *Denmark*, and were only frequented by the *Daniſh* Fleet. But this *annual* Navigation thither was at laſt omitted for two Reaſons: 1. Becauſe in the Year of Chriſt 1348. there was a terrible Plague, which raged almoſt every where, and near exhauſted *Denmark*; ſo that there was no yearly Navigation to *Groenland* as uſually. 2. And that in his Time the Ice lay in ſuch vaſt Quantities and Heaps in the way, that there was ſcarcely any entring into the Ports of *Groenland*: So that the People of *Norway*, *Denmark*, or from whatever Northern Parts of *Germany* they came, who went to *Groenland*, were either ſtarved, or deſtroyed by the Natives.

For a further Confirmation of this *Scythian* Peopling of *America* by a Weſtern Expedition, 'tis worth obſerving what *George Fournier* ſaith, *viz.* That 'tis certain many People come yearly from *Nova Zembla*, by the *Frozen Sea* and the Iſland of *Vaigaſt*, into *Muſcovy*, that they may traffick with the *Samojeds* and *Tartars*; and therefore (ſaith he) we need not doubt but that People might antiently go that way into *America*; for here *Europe* and *Aſia* are ſeparated only from *Nova Zembla* in *America*, by a little Strait. To which alſo may be added what *Vaſquez de Coronado* and *Martin Forbiſher* ſay of their own knowledge, that in *Groenland*, and above *Cibola*, the People uſe Dogs inſtead of Horſes, as 'tis well known the *Siberi* of *Ruſſia*, and all the *Finlanders* and *Laplanders* upon the *Frozen Sea* uſed to do, as *Paulus Venetus* tells us. But I rather think theſe Dogs are in reality the *Rain Deer*, becauſe the Antients call them *Cervi*, and ſay there were a kind of *Scythians* who uſed to ride on Stags.

As theſe *Hunns* and *Scythians* went into and peopled *America* by the Weſt; ſo a far greater Number, we will ſhew you, went thither by the Eaſt; where the Paſſage is ſhorter and eaſier, and the Regions fuller of People. And this way the Animals found in *America*, ſeem to have gone; for all that New World almoſt, but eſpecially the Northern Parts, was full of Deer, Lions and Tygers: And there being none of theſe Creatures found in *Groenland* (nor the *Terra Magellanica*) 'tis more than probable they got into it by an Eaſtern Paſſage. Now we learn from *Solinus*, that as *Scythia* abounded with no Animals more than Deer, ſo many of them uſed to ſwim a-croſs a Part or Arm of the Sea. *Am. Marcellinus* tells us of prodigious Numbers of Tygers in *Hyrcania*; and *P. Venetus* ſaith, that all over *Tartary* there were Lions, Bears and Deer: And we learn from *Pliny*, that there was a vaſt Variety, as well as Multitude, of wild Beaſts in the great *Tartarian* Deſerts, and that the Country in many Places was render'd a Deſert by thoſe Beaſts. 'Tis not therefore an unreaſonable Suppoſition, that in theſe mighty Wilds and Forreſts of *Ruſſia* and *Tartary*, there may be many ſtrange *Species* of wild Beaſts unknown to us; (for we ſee we have new Creatures brought to us every day, and ſhewn about as ſtrange Sights) and why may we not then with equal reaſon ſuppoſe, that thoſe ſtrange Beaſts and Birds which *America* abounds with, might come from hence, and by this Eaſtern Paſſage get thither?

And as to Birds, we learn from *Paulus Venetus*, that there is a great Variety and Quantity of them in *Tartary*. That *Aſia* and *America* are here divided by a *Strait*, and not connected by Land, *Hornius* thinks very probable from what the *Dutch* have obſerved in their Navigations to *Nova Zembla*, &c. for in the Straits of *Naſſaw* they found a double Tide, or a meeting of two Tides, one of which ſet to the Eaſtward, and the other to the Weſtward, as it hath been obſerved to be in the *Magellanick* Straits, the *Baltick*, and as it is in our Channel; and when they were paſt *Waigatz*, they found another Salt and blue Sea. *Strabo*, *Pliny*, and the *Nubian* Geographer, all ſay that *Aſia* is encompaſſed round with the Ocean in theſe North Eaſtern Parts; and *Rubruquis*, *Paulus Venetus*, *Planccarpus*, and *Vincentius*, all agree in the ſame thing, making no mention of any *Iſthmus*; only they ſay there are Iſlands beyond it, whither the *Tartarians* get upon the Ice: And *Rubruquis* ſaith, the Names of the Inhabitants of thoſe Iſlands are *Tautæ* and *Manſæ*. How far the *Tartarian* Capes ſtretch out to the Northward, is not yet exactly determined, but *Hornius* computes it to be to the 70th Degree of Latitude, and our late Maps have made it 3 or 4 Degrees yet more North: And the King of *Sweden*'s Mathematicians found N*orkum*, or the North Cape of *Lapland*, to lie in 72 deg. 30 min. *Paulus Venetus* ſaith, that 'twas uſual to ſail from the Continent of *Barga* to the Iſles in the *Frozen Sea*; Why not alſo into *America*? which cannot be far from thence.

And that antiently there was good reaſon why the Borderers upon the Frozen Sea ſhould endeavour to get into *America*, if they could, or truſt themſelves to the Ocean to ſeek out new Habitations, *Pliny* acquaints us, when he tells us, *ab Anthropagis Scythis omnia deſerta fuiſſe uſque ad Tabin, quod ejus Gentis Ferociam ſuſtinere nemo poſſet*: That is, the *Scythian* Man-Eaters, or *Cannibals*, made all the Country thereabouts deſert, as far as *Tabis*; becauſe no body could ſuſtain the Brutal Cruelty of thoſe People. Some therefore they killed and eat; others (which no doubt were many) they drove into the Sea, into the adjoining Iſlands, and into *America*.

And thus *Ammianus Marcellinus* relates the Matter: "The Man-Eaters, ſaith he, made all things Deſert "where they came; all their neighbouring People flying "before them, and ſeeking new Habitations as far out "of their way as they could get. Who thoſe People were that were thus driven into *America* at this time, 'tis hard to determine now; but there ſeems, as *Hornius* thinks, to be the Remains of two old Names in *America* that may give ſome light into this matter: About *Florida* were a People called *Apalatci* and *Apalcheni*, which he thinks are the Remainders of the *Apalæi* mentioned by *Solinus*, and whom he joins with the *Maſſagetæ*; of which laſt Word the *Mazatecæ*, one of the four old Nations of *New Spain*, and the *Maſſachaſetæ* in *New England*, ſeem to be plain Derivitives. The other Name is *Tambi*, a very antient People in *Peru*, and whom *Hornius* thinks came from the *Tabieni* of *Ptolomy*, and who gave Name to the Promontory *Tabis*.

Hornius thinks alſo that there was a ſecond Ramble into *America* by the Eaſt, which tho' later than the former above-mentioned, yet was very numerous and famous: For the *Hunni*, *Alani*, *Avares*, *Turcæ*, *Tartari*, *Mogoles*, *Parthi*, &c. and many other Nations, of which there is frequent mention in the antient Geography, did then go into that new World.

The *Hunni* were a very barbarous People, and were placed firſt of all in the fartheſt Part of *Aſia* next the Sea, where there are the Names of *Cunad* and *Ung*, People bordering upon the *Mogoles*; and that the *Cunadani* were the ſame with the *Hunni*, is plain, becauſe they call themſelves *Mogoles*, and that in *Hungaria* it ſelf. Theſe *Hunni*, *Cuni*, *Cunchi*, *Cunadi*, *Hornius* thinks, peopled and gave Name to *Canada* in *America*; and indeed *Canadi* is eaſily derived from *Cunadi*: And ſince in *Vincentinus* his *Speculum Hiſtoriarum* there is mention made of the *Huyrones*, a Nation adjoining to the *Mogoles*, he ſuppoſes with great probability, that from them came the *Hurons*, a Nation of *America*, not far from *Canada*.

Theſe *Chuni* or *Hunni* going into *America* with their Neighbours the *Alani*, might give the mix'd Name of *Chonsuli* to the People about *Nicaragua*; and in *Peru* there were found ſome that called themſelves *Tallanes*. The *Ingæ* were an antient and eminent Nation in *America*, whoſe Name came very probably from the *Ungæ*, among the *Tartars*. The old *Parthi* being driven by the *Scythians*, rambled into almoſt all Parts: There is mention made of ſome of them in *Macedonia* by *Strabo*, *Stephanus* and *Pliny*; but the far greateſt part travell'd into the Deſerts of *Hyrcania*, *Daha*, *Aria*, *Margia*, &c. where at laſt they were called *Parſi*; and from hence doubtleſs came the Name of *Perſæ*, which in the Book of *Daniel* are called *Paras* and *Pharſi*: And ſince we find mention in *Strabo* of the *Parii*, an antient Nation among the *Scythians*, the ſame with the *Parthi* and *Parſi*; 'tis very probable the Region of *Paria* in *America* took its Name from, and was peopled by the old *Scythian Parii*. When alſo we find in *Herodotus* an antient *Scythian* People called *Napæ*, and another *Pali*, we may fairly conjecture that the *Nepi* in the Iſland *Trinidada* came from the former, and the *Otapali* in *Florida* from the latter.

The antient *Turcæ*, called by the *Greeks Tauri* and *Tauriſci*, ſpread themſelves largely in many Parts of the World: Theſe being ſeated at firſt about the *Caſpian* Sea, might with their Neighbours the *Tartars* go over into *America*. *Herodotus* calls them *Iyrcæ*; and ſo *Hornius* thinks *Strabo* ſhould be corrected in his Eleventh Book, where he ſaith the *Iyrcæ* (not the *Cyrcii*, as the Vulgar Text hath) were Neighbours to the *Tapyri*. From theſe antient *Iyrcæ* 'tis likely the *Iroquoi* of *America* might come, and the *Souriquoi* too, if what *Leunclavius* tells be true, that the *Hyrcani*, which came from theſe antient *Iyrcæ*, are called in their own Language *Tzuruki*. To which may be added, that the *Mexicans* called God *Teu*, which *Nicephorus* ſaith was the Name for the Deity among the *Turcæ*; and in *Mexico* a Mountain was called *Tepec*, which the old *Turcæ* called *Tepe*.

The *Tartars* were a very antient *Scythian* People, and of theſe *Rubruquis* ſaith the true Name was *Moales*, and that they would be called ſo, and not *Tartari* or *Tatari*, becauſe *Cingis Can* was of the Nation of *Moal*. Theſe *Moales* are the ſame with the *Mogoles*, and of theſe there is plain Remains in *America*: In *Cinaloa* there are a People called *Tamogali*; and about the *Rio de la Plata*, a People called expreſly *Mogoles*. The adjoining Provinces to the *Mogoles* in *Aſia* are *Cotan*, *Baita*, and *Tangur*. Now in *America* you have almoſt thoſe very Words: In *St. Martha* was a Place called *Coto*, and in *Chili* one called *Coton*, and *Paita* in *Peru* ſeems plainly to come from *Baita*: In *Peru* alſo is a Place called by the *Americans*, *Tangora*, and another *Tangarala*. *Hornius* alſo gives many Inſtances of the Names of Towns and Cities in *America* agreeing with thoſe of *Tartary*: And he urges it as a very conſiderable Argument, that the *Tartars* peopled *Mexico* and the adjoining Part of *America*, that ſo many *Mexican* Words end in *an*, as the Names of Places there generally do; ſuch as *Teutitlan*, *Coatlan*, *Hazatlan*, *Quezatlan*, *Petutlan*, *Tenouitlan*, *Ezapan*, &c. For *an* is a mighty common Termination for the Names of Places amongſt the *Tartars*, and the Inhabitants of thoſe Eaſtern Parts of the World. And as many Proper Names among the *Huns*, *Scythians*, &c. uſed to begin with the Particle *Al*; ſo they are obſerved to do in *Jucatan*, and the adjoining Parts of *North America*. In the preceding Age there was an *American* King reigned in *Quivira*, whoſe Name was *Tatarax*; in which as there is plainly the Word *Tatar* or *Tartar*; ſo there is the Particle *ax*; which was frequently added to the Names of their Princes among the old *Turks* and *Tartars*: And this we find often done alſo in *America*, where the Names of *Stalderax*, *Almorax*, *Mereb-ax* and *Naguatax* have been given to their Princes. An antient Name in the Kingdom of *Mexico* was *Atzlan*, ſaith *Hornius*, which is purely *Turkiſh*, one *Atzlan-beg* being Prince of *Caraſina* in *Natolia* about the Year of Chriſt M.CCC. The Founder of the *Peruvian* Empire was one *Mango*, as the *Americans* ſay; which is a very common Name among the *Tartars*, whoſe 4th Emperor was a *Mango*: So that there is both in the Names of Places and of Perſons, plain Remains of the Old *Scythians*, *Hunni*, *Turcæ*, *Tartari*, *Mogoles*, &c. in ſeveral Places of *America*.

In the laſt place let us conſider the Manners and Cuſtoms of theſe *Scythians*, *Huns* and *Tartars*, and compare them with thoſe of the *Americans*, from whence a further Light will be given to their Original. *Tacitus* at the End of his Book *de Moribus Germanorum*, gives this Account of the Manners and Cuſtoms of the antient *Fenni*: *Fennis mira feritas, fœda paupertas, non Arma, non* EQUI, *non Penates; Victui Herbæ, Veſtitui Pelles, Cubile Humus, ſola in Sagittis ſpes, quas inopia Ferri, Oſſibus aſperant. Idemq; Venatus Viros pariter ac Feminas alit: Paſſim enim comitantur, partemq; Prædæ petunt,* Nec *aliud Infantibus Ferarum imbriumq; ſuffugium, quam ut in aliquo Ramorum nexu contegantur. Huc redeunt Juvenes, hoc Senum receptaculum. Id beatius arbitrantur quam ingemere agris, illaborare domibus, ſuas alienaſq; Fortunas ſpe metuq; vertere; ſecuri adverſus Homines, ſecuri adverſus Deos, rem difficilimam aſſecuti ſunt, ut illis ne Voto quidem opus ſit.*

And much the ſame Account *Ammianus Marcellinus* gives of the old *Hunni*; adding that they have no Beards, even in Old Age, that they are a thick ſtrong ſhort ſort of People, and very deformed. Both which Deſcriptions do agree ſo exactly with the *Chichimecæ*, *Pilcoſones* and *Cheriguanæ* in *North America*, and with the *Braſilians* in the *South*, that one would think they were deſign'd on purpoſe for them: For there is no Part of the World that ever had any thing like the Barbarity of thoſe *Americans*, but the *Scythian Nomades*; nor were there *Anthrophagi*, *Cannibals*, or Man Eaters, any where, but amongſt theſe *Scythians* and the *Americans*: Which I think is a very conſiderable Reaſon to ſuppoſe, that theſe Inhabitants of the New World, which were thus unnaturally barbarous, muſt be derived from thoſe Parts of the Old, where only ſuch abominable things were cuſtomary. *Paulus Venetus*, *Vincentius*, and *Planocarpus*, deſcribe the Old *Tartars* to be of mean Stature, broad flat Faces, with little or no Beards, and that they eat their Enemies taken in War. And indeed the *Scythian* Cuſtoms prevail in many Places of *America*, ſuch as many Wives to one Man, eating their Enemies, and ſticking their Heads upon Poles, painting their Bodies, continual Hunting and changing their Places of Abode, like the old *Nomades*. *Paulus Venetus* ſaith, that in *Cangigu* the *Scythians* uſed to paint their Faces and Bodies with the Images of Birds, Beaſts, Dragons, *&c.* ſo that they could not be waſh'd out: And we find by Prince *Ieoli*, whom Capt. *Dampier* brought from *Mindanao*, tho' he was born at *Meangis*, that this Painting was in uſe alſo in the Eaſtern Iſlands. Now the People of *Virginia* and *Florida* in *America* were found thus painted when *America* was firſt diſcovered. And as *Herodotus* ſaith of the *Scythians*, that they uſed to carry always about them a part of one of their Enemies Skins, ſo did the *Hurons* and *Floridans*; and who ſometimes flawed them, and made Mantles of their Enemies Skins. The ſame *Herodotus* and *Strabo* both ſay, that tho' Polygamy were uſual amongſt the *Scythians*, yet there was one Nation of them, *viz.* the *Maſſagetæ*, which were content with one Wife: And ſo likewiſe in *America* the *Mazatecæ*, a Name not much unlike the *Meſſagetæ*, with the *Pinoles*, the *Otomies*, and the *Chichimecæ*, four of the moſt antient *American* Nations, kept to one Wife. The *Scythians*, and in particular the *Maſſagetæ*, uſed to kill thoſe that they thought were deſperately and incurably ill, to put them out of their Pain; which Cuſtom was found among the wild *Canadans* in *America*. The *Parthi*, an antient *Scythian* People, uſed to expoſe dying Perſons in the open Fields, to be devoured by the wild Beaſts and Birds; and ſo, from them, did the *Perſæ*, *Gaſpii*, and *Hyrcani*, do the ſame thing; as alſo the *Tebetenſes* in *Cathay*: (ſaith *Hornius*) and this odd Cuſtom was found practiſed in the *Terra Firma* of *America*. The Eating of dead Relations was an unaccountable and abominable Cuſtom; and *Strabo* tells us, that this was uſed by the *Maſſagetæ* and *Derbices*; and no doubt from thoſe barbarous *Scythians* it paſt into *America*; for we find it was practiſed by the People of *Venezuela*, and the *Chirihuani*, a Nation beyond the *Andes* in *Peru*, as *Garcilaſſo* tells us. 'Twas a known Cuſtom alſo among the Old *Scythians*, to place at the Sepulchers of their Dead, Meat, Drink, Arms and Mony; and this was alſo in uſe amongſt the *Americans*. And as the *Scythians* uſed to let out their Blood, and cut themſelves with Lances, when they made a League or ſolemn Covenant; and ſometimes alſo to teſtify their joyful Reception of any Perſon: So did the *Jucatanſes* and the People of *New Albion*. And that very odd Cuſtom which the *Scythians* about *Tebet* had, of giving their Brides to be firſt enjoyed by another, was found amongſt the Inhabitants of *Nicaragua* in *America*. The *Inga* or *Peruvian* Princes, uſed Diadems or *Turbants* of various coloured Cloth, wound 4 or 5 times round their Heads; were very rarely ſeen by their Subjects; made them fall proſtrate before them: All which were Cuſtoms uſed by the *Scythians* and *Tartars*. When any King or Prince died, the *Mexicans*, *Peruvians*, *Floridans*, *Canadans*, *Darienſes*, &c. uſed to ſlay a certain number of his Slaves, Domeſticks, Captives, *&c.*

that they might attend him and wait upon him in the other World; which every one knows was practiſed by the *Tartars*. And the *Americans* alſo did not burn, but bury their Dead, as the antient *Tartars* uſed to do. The *Braſilians* in particular, by 3 ſorts of very odd Cuſtoms, ſhew that they came originally from the *Tartars*: For firſt they ſhaved their Heads on the top like Monks, as *Vincentius* tells us the Old *Tartars* uſed to do. 2. The Manner of their eating their Enemies, uſed by the *Braſilians* was the ſame with that of the *Tartars*; for both did it *in Terrorem*, called all the Neighbourhood together; then ſolemnly ſlew the Captives, and boiling or roaſting them, deliver'd Pieces of them about to every one preſent, to excite his Hatred and Rage againſt thoſe with whom they were at War. 3. In *Braſile* the Child-Wife, as ſoon as ever ſhe was brought to Bed, uſed to riſe and go about her Buſineſs, and take care of the Family Affairs, as if ſhe had not been delivered of any Child at all; when inſtead of her, the Husband gets himſelf into Bed, pretends to feel Pains, to be weak and out of order, and to be got well again gradually by gentle and nouriſhing Phyſick. Now this ridiculous Whim, *Paulus Venetus* ſaith, was practiſed among the *Arcladani* in the extream Parts of *Tartary*, as well as in ſome other Parts of the World; as we find by *Diodorus*, *Strabo*, and *Flaccus* in his *Argonauticks*.

The *Americans* have been very famous for their wearing of Feathers, the reaſon of which ſeems to have been, the vaſt Variety of beautiful Birds which the New World affords: And this was a very antient Cuſtom amongſt the Old *Turcæ*, *Tartari*, *Garamantes* and *Lycii*; as is plain from *Herodotus* and other antient Writers.

That particular Puniſhment for Theft, which *Oviedo* and *Gomora* tell us the Old *Aitanians*, or the Inhabitants of *Hiſpaniola* uſed, which was impaling them alive, was alſo of very antient uſe among the *Turcæ*, *Tartari* and *Perſæ*. And that cruel out-of-the-way Trick, which the *Groenlanders*, *Cinaloenſes*, and *Nicaraguani*, were found to play with their Children, of cutting and ſlaſhing their Cheeks into great Gaſhes, when they were very young, was practiſed alſo frequently among the *Hunni*: And they are ſaid to have done it, to render their Males beardleſs. Now all *America* is beardleſs, but three Nations: And *Vincentius* and *P. Venetus* obſerve alſo, that the *Tartars* have none at all, or but very thin Beards.

The Food alſo of the *Americans* correſponds with that of the *Tartars*, their Bread being *Maize*, and their Drink *Chica*; which latter, ſaith *Hornius*, is a ſort of Broth made of Pulſe, which they drink hot; and this was certainly the chief Diet of the *Turcæ* and *Tartari*: But this *Maize* and *Chica* is uſed no where in the World but in *Aſia* and *Scythia*: and as *Acoſta* obſerves, the *Maize* is called *Frumentum Turcicum*. Tho' alſo *America* abounds with Vines, yet they never had any Wine there, any more than in *Tartary* or *China* formerly, whatever they may have now.

'Twere endleſs to mention all the particular Cuſtoms in which the *Americans* do plainly agree with theſe antient *Scythians*; but I think theſe I have enumerated may render their Original (in part) from *Scythia* very probable; eſpecially if to theſe we add, in the laſt Place, their Religious Rites and Obſervations. The *Americans* worſhip the Sun and the Fire, and in *Mexico* there was a perpetual Fire kept in the Temple; and thoſe Deities were worſhipped by the *Scythians*, *Turcæ* and *Tartari*. And this is very remarkable, which is taken notice of by *Hornius de Originibus Gent. Americanarum, lib. 3. p. 216.* That the *Obdoræ* and *Condoræ* worſhip an Idol called *Zlotta-baba*, which was of Stone in a Womans ſhape, and ſituate on the Banks of the River *Obi*; to this they uſed to ſacrifice Animals, and to beſmear all the Parts of the Idol with their Blood. Now of this Image there are two plain Remains in *America*: At *Pipeles* in *Guahutimalla* there was a Stone Image worſhipped in the Form of a Woman; and in the *Iſthmus* of *Darien* there was a Female Deity, which they called *Da-Baiba*, to which they paid mighty Honours and Worſhip; and here there is ſome Agreement in the Names of *Zlotta-Baba* and *Da-Baiba*. To their Deities the *Americans* uſed to offer the Hearts of Human and of other Sacrifices, as we find was the uſual Cuſtom in *Mexico*; and this alſo was the Practice among the *Tartars*. And thus much for the Peopling of *America* from the North Eaſtern Parts of *Europe* and *Aſia*, from the Country of the antient *Hunni*, *Tartari*, and other *Scythians*; in which there are ſo many things deducing the Origine of part of the *Americans* from theſe barbarous People, that when it is laid all together, and duly conſidered, it amounts to a fair degree of probability; and farther than that we cannot pretend to go, there being no way to come at a Demonſtration in the Account of things ſo long remote and obſcure.

But becauſe there were found in *America* at its firſt Diſcovery, two very polite, civilized and mighty Nations, *Mexico* and *Peru*, which can ſcarcely be ſuppoſed to be derived from ſuch barbarous People as thoſe *Scythians* above-mentioned; 'twill be worth our while to enquire, whether there be not good ground to believe they might have their Inhabitants from ſome Parts of our World where Arts and Sciences were much more cultivated, than in thoſe deſert and ſavage Regions of *Scythia*, &c.

Now of all the Inhabitants of the New World, the *Peruvians* were the beſt and moſt civilized, as abſtaining entirely from Human Sacrifices, or eating Human Fleſh; which becauſe of the Intermixture of the barbarous *Chichimecæ*, was not exactly true of the *Mexicans*. *Hornius* his Conjecture therefore ſeems very probable to me, that the *Peruvians*, *Chilians* and *Mexicans* received their firſt People from *Cathay*, *Eaſt India* and *China*, or ſome adjoining Nations as polite as thoſe. *Cathai* was the moſt civilized part of all *Scythia*, and was not unknown to the Antients; for *Ptolomy* mentions the *Chatæ* thereabouts, and *Strabo* ſpeaks of a Region called *Cathea*: In latter Times it came to be called *Kitha*; and this was divided into two Parts, one called ſimply *Kithai*, and the other *Kara-Kithai*. In this latter part, the famous *Preſter John* had his Seat and Dominion, of whom becauſe there are many fabulous Stories, *Hornius*, from the judicious *Rubruquis* and *Venetus*, gives the following Account. When the *Gauls* took *Antiochia*, which was in the Year of Chriſt 1098, one whoſe Name was *Con-Can*, reigned in *Kara-Kithai*, and commanded alſo the Northern Regions, from whence the *Turcæ* went out. In this *Kara-Kithai* there was a *Neſtorian* Shepherd, who was a powerful Prince of the People of *Tayman*; and this Man, after *Con-Chan*'s Death, invaded the Kingdom of *Kathai*, and by the *Neſtorians* was called *John*, who have feigned 1000 Stories about him; and from hence came all the Fable of *Presbyter John*, or *Preſter John*.

The *Abyſſine* Emperor in *Ethiopia*, hath by the *Europeans* been called this Name, as well as this *Aſiatick* Prince; but ſaith *Hornius*, for different Reaſons: The latter was called *Preſtegan* by the *Perſians* and *Neſtorians*, becauſe he was an Apoſtolical Perſon, as the Word in their Language ſignifies; but the *Abyſſine* Prince was by the *Indians* and *Perſians* called *Preſter Chan*, i. e. *Rex Mancipiorum*, the King of Slaves; becauſe great Numbers of Slaves were brought from *Ethiopia*.

P. Venetus ſaith, there was in *Cathaia* a Prince called *Presbyter John* in his Time; and the ſame ſaith *Antonius Andrada Luſitanus*, who in the Year 1624, went from the Kingdom of the *Great Mogul* to ſearch out that Region, and found him to have large Dominions.

This *Cathay* was not a part of the antient Kingdom of *China*, but a Northern Region adjoining to it, as appears from the *Nubian* Geographer: But about the Year 1360, *Cathay* and *Mangi* were united into one *Chineſe* Kingdom, and then the famous *Chineſe* Wall wat built, to ſecure them againſt Invaſions from the *Tartars*; and that it can't be much older, is certain, becauſe there is not any mention of it in *Paulus Venetus*, who wrote about the Year 1200: It was therefore no doubt built by *Homva*, who drove the *Tartars* out of *China*, and left them nothing but the Kingdom of *Caſcar*.

By the antient *Sinenſes* or *Chineſe*, we are to underſtand therefore all thoſe who lived to the South of *Cathay*, in the vaſt Region of *Mangi*. Theſe, tho' originally derived from the *Scythians* and *Indians*, yet had all their Letters, Politure, Arts and Sciences, from the *Egyptians* and *Phænicians*, who made frequent Expeditions into this Country; as appears from the Voyages of *Bacchus* and *Hercules*, whom the Antients ſay were *Phænicians*. The *Tyrians* had a Colony at the *Euxine*, as mentioned by *Am. Marcellinus*; which was on the Banks or at the Mouth of the River called *Tyras*. In the *Perſian* Gulph there was an Iſland called *Tyrus* and *Aradus*, whoſe Inhabitants, *Strabo* ſaith, contended that they were derived from the *Sidonians*. And there was a Nation of the *Phænicians* called *Sinæi*, from whom 'tis very probable the Name of *Sinæ* or *Sinenſes* firſt came: Theſe *Sinæi* lived firſt about *Sina* in *Arabia* and *Syene* in *Egypt*. The Kingdom of *Egypt*, it appears, did antiently extend all over *India*; for *Diodorus* ſaith of *Seſoſtris*, that he conquered all *Aſia*, beyond *Ganges*, as far as the *Indian* Ocean; and *Strabo* ſaith, their Empire extended as far as *Bactria*, *India* and *Scythia*; and much to the ſame purpoſe *Tacitus* ſpeaks. 'Tis very likely therefore, that the *Egyptians* and *Phænicians* went into *China*, and there left part of their Language, Hieroglyphicks, Learning, Arts and Sciences, for there is a great Conformity between the *Chineſe* Language, Arts, *&c.* and thoſe of the Old *Egyptians*: Their Cuſtoms alſo and Manners agree; the Women in *China*, manage the Publick Affairs, while the Men are Cot-Queans, dreſs the Victuals and manage all Domeſtick Buſineſs, and this we learn from *Herodotus*, *Mela*, *Epiphanius*, *Diodorus*, &c. was the way of the Antient *Egyptians*: The *Chineſe* had alſo the manner of hatching Chickins by the heat of Ovens, which the *Egyptians* have been ſo famous for: And their Way of Writing by a kind of Pictures and Characters agrees very nearly; and ſo did the Writing of the *Mexicans*, with both. For that the *Chineſe*, *Cathayans*, *Japoneſes*, *Coreans*, and other Nations of *Eaſt-India* did ſail into *America*, ſeems very Clear and Evident. The *Epicerini* a People of *Canada*, aſſerted at our firſt diſcovery of them; that to the Weſt end of them, very far off, there lived another People, who affirmed that foreign Merchants without Beards, uſed to come in great Ships to their Coaſts: Who could theſe be but the *Indians* or *Chineſes*? *Vaſquez de Coronado* ſaith that in *Quivira*, there were Ships found whoſe Sterns were adorned with Gold and Silver: Which *Maſſeius* in his Hiſtory of *India*, and *Ludovicus Frois* in his Letters about *Japan* ſay, was uſual in the *Japaneſe* and *Chineſe* Ships. And in *Acoſta*, we find the *Spaniſh* Admiral *Melendeſius* aſſerting that *Chineſe* Ships were found wrackt in the *Mare del Nord* above *Florida*, which perhaps were the ſame with thoſe ſeen at *Quivira*. In *Quatulca* too, there was a plain Tradition of *Foreign Merchants* which uſed to come thither from the Weſtward, and which were *clothed in Silk*. Theſe 'tis like ſailed under the Tropick of *Cancer*, and came firſt to *Quivira* or *California*, and thence coaſting along the Shoar, went down into *New-Spain*, &c. The Wind is generally fair for ſuch a Voyage, and it may be, and uſually is (ſaith *Hornius*) performed in about 50 or 60 days time: and there can be no reaſon to doubt of their ſailing to *America* ſince they had Ships fit for this purpoſe; and ſince as we learn from the *Nubian Geographer*, that they ſailed into *Arabia*, and others ſay into *Africa*.

But beſides all this, there is frequent mention of theſe Oriental Places in the Names and Traditions of the *Americans*. There were a People in *America* called *Chiapanecæ*; which word is much the ſame in ſound with *Japan*, or *Japaneſes*: Theſe came from *Nicaragua*, according to *Herrera*; to which place they came from *Guatimala*, and to *Guatimala* from *Mexico* and *California*. In *Guatimala* there is a River and Province called *Chiapa*, and in the Kingdom of *Mexico* a Lake of the ſame name. In the Iſland of St. *Trinidada*, there is a place called *Ker-Japan*, as *Hornius* writes.

In the Language of *Japan*, *Tonus* ſignifies the Sun, Moon, or Stars; and alſo Princes: and the *Mexicans* call the Sun *Tanaticus*, and the Moon *Tona*; and in *Hiſpaniola*, *Taino* ſignifies Nobles or Princes; *Japan*, is by the *Chineſes* called *Jequen*, that is, *Sunriſing*; by the *Japoneſes*, 'tis called *Gitpan* and *Nitpon*, or *Nippon*: and by *Paulus Venetus*, 'tis called *Zipangri*, after the *Tartarian* Language, and accordingly when *Columbus* came to *Hiſpaniola*, and heard there, that part of that place was called *Zipangi* by the Natives, he thought he had been come to the *Aſiatick Japan*. The word alſo *Montezuma*, or *Motezuma*, is plainly of *Japoneſe* Original, and as it was the uſual Titles for the Emperors of *Mexico*: ſo *Motazaiuma* in *Japan*, is the common Apellation for their Princes, as *Hornius* obſerves. 'Tis very probable therefore, that the *Japoneſes* ſailing to the Eaſtward, went firſt to the Intermediate Iſlands (for ſuch there are) and thence into *America*.

Fr. Caron in his Deſcription of *Japan* (where he lived from a Child) ſaith 'tis uncertain whether *Japan* be an Iſland, or part of ſome Continent, and that the greateſt part of it is yet unknown to the *Japoneſes* themſelves. From the Province of *Quanto*, where the Principal City *Jedo* and the Seat of the King is, he ſaith, it reaches 27 Days Journey towards the South-Eaſt; and then you come to the Promontory of the utmoſt Province *Tſunga*; from hence paſſing a Strait of Eleven Miles over, you come to the Land of *Jeſſo*, or *Seſſo*; which is vaſtly large and Mountainous, and but thinly inhabited, and hath never been fully diſcovered by the *Japoneſe*, becauſe of its great extent and want of Proviſions, tho' it abound with precious Skins and Furrs. The Inhabitants of this Land of *Jeſſo*, he ſaith, are long-hair'd, with thin Beards like the *Chineſe*, and perfectly Brutiſh and Barbarous. And to this place (he ſaith) the *Japoneſe* paſs over in little Boats (*in Scaphis*.)

Why then (as *Hornius* obſerves, from whom I have cited this) ſhould not this Land be either the Continent of *America* it ſelf, or elſe ſome Iſland contiguous thereunto, ſince the deſcription of the Natives is ſo like that of the Inhabitants of *America* thereabouts.

J. De Laet ſeems alſo to be of Opinion that the Junction of *America* with our Continent is ſomewhere without the *Artic Circle*, about *Cathay*; which falls in very well with this Account of *Fr. Caron*: and this place he, *viz. Laet* obſerves, is near enough to the Place where the Ark reſted after the Deluge, to account for a very early Paſſage into *America* out of *Aſia*. *Vid Lib. de Orig. Gent. Amer.* p. 91.

Corea, which the *Chineſe* call *Corai*, the *Japoneſes Coraſs*, the Natives or Inhabitants call *Cacli*, wherefore 'tis likely the Inhabitants of this *Cacli*, diſcovered and named *California*: and perhaps they ſpread themſelves much further: for there is a Province in *Florida* called *Calos*. This *Corea* is parted from *Cathay* (ſaith *Hornius*) by a large River of Three Miles broad, which I ſuppoſe, runs out of the Sea of *Cango* into the *Chineſe* Ocean: of this Place the principal Province is called *Cambalu*, from whence *Hornius* thinks *Cempoala* in *New Spain* takes its Name. But certain it is that *Cathay* was called *Kitaia*, and near the *Chinawall*, there is a Lake called *Kitha* or *Kita*: and *Hornius* ſaith, the Inhabitants were called ſometimes *Kotani* and *Gotani*; and that there is an Iſland lying off of the Continent of *Japan*, called *Goto*: of which Words there are many Remains in *America*, *Gota*, *Goto*, and *Gata*, being a common Termination for the names of Places there, as is plain in the *Eparagoti*, *Arcoagoti*, &c. in *Guiana*; the *Managoti* of *Cumana*, the *Ologota* of *Florida*, &c. And the Natives of *New England* called the Sea *Kithan*, and the Ships *Kithaneck*, probably from the Lake *Kitha*.

Near *Xaliſco* there is a City called *Chita*; in *Peru* you have *Quito*, a very famous place; and in *New Granada*, a Sea called *Quito*. In *Chuquiaba*, *Hornius* ſaith there is a place called *Caracate*, which, indeed, is very like *Kara Kithai*, one part of *Cathay*.

Then, as to *China*; there are many names of Places in *America* that ſeem to be plainly derivable from *Chineſe* Words.

In *Mechoacana* a Province of *Mexico*, there is a City called *Zintzonta*, which is plainly a *Chineſe* Word, *Tzintzon* being a uſual Word in that Language, as *Hornius* ſaith: And near to this Province of *Mechoachan*, there are Two Cities called *Mauchao* and *Campao*, as there are Two in *China*, called *Macao* and *Campa*.

The *Peruvians* boaſted no higher an Original than about 400 Years, for the Family of the *Inca*, *Ynca* or *Inga*, their Princes that Governed them when the *Spaniards* firſt diſcovered *Peru*. Before this, they ſay, they were barbarous, lived wild in the Woods, eat Mans Fleſh, *&c.* Till one *Manco* came to them from their Father the *Sun*, and taught them a better, more civilized way of Life; from this *Manco* came the whole Family of the *Ynca*'s.

This Tradition of theirs, ſhews plainly that *Manco* was a Foreigner, and that their Good Government was ſet up by him all at once, and therefore he muſt have learnt and gain'd his Wiſdom and Politeneſs in ſome other place. 'Tis very probable therefore that this *Manco* came from *China*, and that with a Good Fleet of Ships, and as *Laet* ſaith, with a Good Army too, or elſe he could not have ſubdued ſo numerous a People, nor have brought them under any Government. I ſay, 'tis probable he came from *China*, or *Cathay*, &c. becauſe the Architecture of the *Inca*'s in *Peru*, and all their mighty Buildings, Towers, *&c.* are exactly after the *Chineſe* manner; their Cities alſo were vaſtly great, like thoſe of *China*: In *Cuſco* there were above 100000 Houſes, many of Stone; their Streets, Large, Noble, and Strait, adorn'd now and then with Squares, paved with Flint or Stone, and Towers fortified with Three Walls round them: Many alſo of their Cuſtoms agreed with thoſe of the *Chineſes*.

The *Mexicans* were the Politeſt, but the leſt antient of any of the People of *America*; for their Account of themſelves reached not above 300 Years backward: Now ſince we learn from *P. Venetus*, and with a little Variation as to Time, from the Annals of *Gonſalo Mendoza* too, that about the Year of Chriſt 1268; the *Chineſe* being driven out of their Country by the Invaſions of the *Tartars*, *fled into certain remote Iſlands and there remained*, 'tis very likely that they went then into *America*; and to make this Expedition, *Facfur* their preſent King provided a 1000 Ships, and took with him a great number of People. Theſe *Remote Iſlands*, as *Hornius* obſerves, could neither be *Japan* nor *Java*, for both thoſe were well known to *Paulus Venetus*, and 'tis plain they could not be the *Philipines*; becauſe there are no remains of the Manners or Cuſtoms of the *Chineſes* there, and the People are of another Make and Language: wherefore 'tis likely theſe Remote Iſlands were in *America*; and that ſince, *Venetus* ſaith they were *Inexpugnabiles*, it was this remoteneſs or diſtance from *Tartary*, that made them ſo. And if we allow 100 Perſons to go in each Ship, which is probable enough (they having large Ships, as hath been ſhewn above) the Number of theſe Fugitive *Chineſes* would be 100000, which are too many to be beſtowed in any place leſs than ſuch great Iſlands as thoſe of *America*. And if any one ſhould make an Objection to this, on the Account of the *Americans* wanting Horſes, which theſe *Chineſes* may be ſuppoſed to have taken with them. *P. Venetus* anſwers it plainly, by ſaying, *There were then no Horſes in* China.

Hornius takes a great deal of pains to adjuſt the Chronology of the *Mexicans*, and he concludes that their Antiquity cannot exceed the Year 1200, and therefore may eaſily and fairly be derived from this *Chineſe* Ramble under *Facfur*, about the Year 1270. But 'tis like their other Six neighbouring Nations of the *Navatlaca*, about the Lake of *Mexico*, are much more ancient; and 'tis very well worth obſerving how well this agrees with *Metezuma*'s account of the *Mexicans* which he gave to *Cortez*, *That they were originally Strangers, and came from foreign Parts, from the Eaſt, in the Fleet of a great Prince ſo long ago that the Memory of the Time was loſt.* This great Prince muſt be *Facfur*, whom the *Chineſes* call *Tepin*, but the *Mexicans Tolpecin*. 'Tis likely *Facfur* and his Fleet landed firſt on *California*, and from thence they went to the Continent in *Canoas*, &c. for the *Mexicans* had a Tradition, *that their Anceſtors came over an Arm of the Sea in* Canoas *into* Atzlanc: by which they meant the Sea between *California* and *New Mexico*, and which the *Spaniards* call, *Mare vermeio*. For *Mortezuma* told *Cortez* that this Prince that brought them over, went home again, leaving them behind: that after this, returning again, he would have maintained his former Authority over them, but that they had intermarried with the Natives of the Place, had built themſelves Houſes, *&c.* and choſe themſelves a Senate, and Princes of the People, and ſo would not receive him at all amongſt them: He therefore going back again, or away with the Fleet, they made themſelves *Canoes* to paſs over to the main Land, and it hath been taken notice of by almoſt all the Writers of *America*, that about *California* there were found a People that ſpake nearly the ſame Language with the *Mexicans*, and had the ſame Laws, Cuſtoms, and Manners; which therefore were the Remains of thoſe *Chineſes* that Married, Settled, and ſtayed in or about *California*, while their main Body might go over to the Main, and ſettle themſelves among the *Navatlacæ*, upon the Lake of *Mexico*.

And the Cuſtoms and Manners of the *Mexicans* were found to be very agreeing with thoſe of the *Chineſe*: The *Mexicans* had large Cities, adorned with ſtately Buildings, their Streets divided into Squares, they had Caſtles, Towers, Palaces, and publick Places (like Inns) for the entertainment of Travellers, which were built at the Publick Coſt; all which agrees with the Cuſtom of *China*, and other parts of the Eaſt, and tho' the *Peruvians* had no Mortar, fewer Towers, and thoſe not very high; yet the *Mexicans* had both Mortar (or a Cement equivalent thereunto) Edifices built with Marble, and Towers of a vaſt height; inſomuch that *Cortez* ſaith, he never ſaw any thing ſo Great and Magnificent, and that their Cities exceeded any in *Europe*, both for Magnitude and Splendor. In *Tezcuco*, he ſaith, there were 30000 Houſes; and that *Tlaſcala* was larger and more populous than *Granada*: and as for their Skill in Mechanical Arts, he ſaith the *Mexicans* were wonderfully famous; and that they would draw the Picture of any Animal that they had but once ſeen, very lively and ſtrong.

The *Mexicans* had two ways of diſpoſing of their Dead; one was by Sepulture, or burying in the Ground, and the other by Burning: In the former of theſe ways, the Body was always kept juſt 15 Days at the Houſe of the Deceaſed, where there was Feaſting all the while: And for the ſame number of Days did the *Chineſe* keep a dead Man above Ground, at his own Houſe, during which time the Prieſts performed the uſual Rites. Their way of ſaluting their Princes, and going out backward from their Preſence, was the ſame with that of the *Chineſes*; and the Titles of their Kings of the ſame pompous Nature. The *Mexicans* had a great or Royal Seal, by which all Grants and Publick Buſineſs were ſigned: In *Mexico* as in *China*, their Senators or Palatines were uſually Twelve, but ſometimes but Ten. The Enſigns and Standards of the *Chineſes* were Dragons and Serpents, and ſuch had the *Peruvians* and *Mexicans*. The way of writing in *Mexico* was like that of the *Chineſes* in moſt things; their Letters were Pictures or Characters of things, their Paper made of the Threads of Trees: of their Books compacted of which, in *Cozumel*, *Iucatan*, *Mexico*, *Nicaragua* and *Guatimalla*; there were innumerable Volumes found, treating about *Agriculture*, Plants, and the Actions and Affairs of their Anceſtors, which the brutal *Spaniards* deſtroyed and burnt. The *Mexicans* cultivated the ſame Arts, as the *Chineſes*; and in particular, had *Geographical Tables*, or a kind of Maps of their Country, very large and curious. The *Mexicans* alſo were ſo skilful in making Fire-works, that they ſeem to have been acquainted with a Compoſition ſomething like our Gunpowder; of which the *Chineſe* pretend (as well as of Printing) to have had a very antient Knowledge: Tho' with what Truth, *Hornius* juſtly makes a doubt, ſince there is no mention made of any ſuch thing in *Paulus Venetus*; and yet he deſcribes ſeveral of their warlike Engines.

And thus have I laid before you in as fair a Light as I can, the Evidence I could collect about this abſtruſe and difficult Point, *The firſt peopling of* America: and which, when it comes to be conſidered impartially, and viewed altogether, ſeems to me, to make out the Derivation of them from our World very plain and conſpicuous, and to point out the Time of it too with ſome tolerable Exactneſs.

INTRO-

INTRODUCTION.

PART the Second.

Of the Antient Shipping and Navigation, and their ſucceeding Improvements.

WHether there was any conſiderable Navigation before the univerſal Deluge may be juſtly queſtioned; ſince we have no authentick Account whereon to build ſuch a Suppoſition; nor have we, I think, Authority enough to deny, as ſome do, all manner of Knowledge of the uſe of Boats to the Antediluvians. Certain it is, that there was a Sea, and Rivers before the Flood; and in above a 1500 Years time, which according to the laſt Account, paſt between the Creation and the Deluge, 'tis ſtrange that no one ſhould diſcover, that it was poſſible to be born upon the Water, in proper Veſſels. The daily uſe of Water, for almoſt all the Neceſſaries and Conveniences of Life; required them to employ hollow Veſſels to raiſe it up with, and to tranſport it to their Places of Abode, and they could not avoid taking notice that thoſe Veſſels would ſwim or float upon the Water: In the Rivers alſo, they could not but ſometimes ſee floating Wood, and their endeavour to get it out for their uſe, might very probably ſatisfy them, that a large Tree would more than bear the weight of a Man upon it, without ſinking, and that it would do this much better if it were hollowed out like their Water-Veſſels: They muſt ſee that this would be an uſeful Invention to paſs Rivers, *&c.* and therefore it ſeems very probable to me, that they would take the hint and improve it, as (its granted) Men did, ſoon after the Flood. *Moſes* no where tells us that the Ark which *Noah* built was a new and ſurpriſing thing to the Antidiluvians; and 'tis plain from *Plato*; *Lib.* 3. *de Legit*: That there was a Tradition of the Art of Navigation, being in ſome meaſure known before the Flood; but that it was loſt with the Boats themſelves at the Deluge. The ſame we find alſo from *Ovid*'s deſcription of the Flood, *Metam. lib.* 1. *fol.* 7,

> *Occupat hic collem, Cymbâ ſedet alter aduncâ,*
> *Et ducit Remos ille, ubi nuper ararat.*

All this, I grant, is only conjecture, and I deſign to build nothing more on it, than to ſhew that thoſe who boldly aſſert that *Noah*'s Ark was the firſt Veſſel that ever was made to carry Men on the Water, have not ſufficient Authority for it, either from Hiſtory, Tradition, or Reaſon. But ſo much are we in the dark, about Matters at ſo great a diſtance from us, that 'tis very hard to determine who was the firſt inventor of Ships or Boats after the Flood. No doubt *Noah*'s Sons all made a ſpeedy uſe of ſo beneficial an Invention, as they had occaſion. But who they were that from them, brought it into the learned Part of the World, and taught the *Egyptians* and *Grecians* the Knowledge of this Art, it is not now very eaſy to ſhew. *Promethus*, *Neptune*, *Minerva*, *Jaſon*, *Atlas*, *Hercules*, *Danaus*, *Erythræus*, &c. are all by ſome Authors or other, ſaid to be ſeverally the Inventors of Shipping. But what is ſaid of moſt them is ſo entirely fabulous, that there is no relyance on theſe Relations.

It may with great probability be ſaid that the *Egyptians* and *Phænicians* have the juſteſt claim for this Invention. *Euripides* in his *Troas*, *Act.* 1. calls Shipping an *Egyptian Art*; and 'tis certain that they were very early famous for their Shipping. *Cicero* ſaith, that the *Phænicians* were the firſt Navigators, and brought Merchandizes into *Greece*. And *Pliny*, attributes the firſt Invention of Shipping and Sea Battles to them, *Lib.* 5. c. 12. *Herodotus* ſaith, that the *Phænicians* coming out of the *Red-Sea* made very long Voyages, and carried their Wares into many Places, and particularly into *Argos*, a then famous City of *Greece*. *Strabo*, *Lib.* 7. ſaith, that nothing of the Ocean was known in *Homer*'s time: But this *Bochart* ſhews to be a miſtake. Vid. *Canaan. Lib.* 1. *c.*36. and *Lib.*9. Shews that the *Caſſiterides* Iſlands (which he makes Ten in Number) were known to the *Phænicians*, but their Navigation thither ſtudiouſly concealed. The ſame Author, *Lib.* 16. tells, us that the *Sidonians* firſt learned Aſtronomy and Arithmetick (I ſuppoſe he means ſome kind of Calculation or Eſtimation of the Ships way) from their Nocturnal Navigations; and 'tis certain that theſe Arts came Originally from them.

> *Prima Rates ventis credere docta Tyros,*
> Tibul. El. 7.

Pomponius Mela. Lib. 1. *c* 12. and *Diodorus Siculus*, *Lib.* 12. both agree alſo in attributing the Invention of Navigation to the *Phænicians*. *Strabo*, *Lib.* 1. gives us good grounds to believe that the *Phænicians* ſail'd out of the Straits, and built Cities in *Africa*, before the *Greeks* knew any thing of Shipping, and before the ſiege of *Troy*. *Scheffer* in his excellent Book, *De Militia Navali*, Lib. 1. p. 3. Thinks that the *Indian* Sea was very early known to the *Phænicians*; becauſe there is mention made in the Book of *Job*, *c.* 28. 16. of the Gold of *Ophir*: But tho' this (I judge) not to be concluſive enough; ſince as the moſt learned *Bochart* hath ſhewed, there were Two *Ophirs*, one in *India* which was the *Taprobana*, now *Ceylon*; and the other in *Arabia*, of which latter 'tis probable *Job* may ſpeak. Yet 'tis likely enough that the *Phænicians* might try the *Indian* Ocean as early as that: for having Ships in the *Red-Sea* (which *Scheffer* thinks was denominated, *Mare Rubrum*, *Puniceum*, or *Phænicium*, from the *Pæni* or *Phænices*) they might eaſily venture out into the *Indian* Sea. *Agenor* was the firſt *Tyrian* King whom *Scheffer* makes contemporary with *Gideon*, and his Sons *Cadmus* and *Phænix* had tolerable Fleets. This was a good while before *Minos*, whoſe Mother was *Europa Cadmus* his Daughter: *Minos* indeed, raiſed a Fleet, 'tis ſaid, to clear the Seas from Pirates; but we learn from good Authority, that *Phocas* alſo King of *Corſica* and *Sardinia*, and *Bacchus*, had Fleets long before him, as well as the *Phænicians*. *Siden* was a flouriſhing City 300 Years before *Minos* his time: 'Twas built as *Bochart* ſaith, *Phal. lib.* 4. *c.* 35. by the Nephew of **Cham**; and we learn from *Trogus* (lib. 18.) *Poſt multos deinde annos a Rege Aſcaloniorum expugnati Sidonii; Navibus appulſi, Tyrum Urbem, ante annum Trojanæ cladis condiderunt*: And indeed, tho' we find *Sidon* mentioned as long ago as *Jacob*'s Time, the *Holy Scriptures* ſpeak not of *Tyre* till *David*'s Reign; and *Strabo*, and *Pomponius Mela*, both celebrate it as the richeſt City of all *Phænicia*, and that it was antiently very eminent for great Numbers of large Ships. *Agatharchides* alſo, and *Philoſtratus*, do agree that *Erythras* the firſt Founder of the *Phænicians* (and from whom probably the *Red-Sea* was called *Mare Erythræam*) was very famous for his Naval Power.

Diodorus Siculus, lib. 2. Mentions a very large Fleet (ſuch as it was) of *Semiramis* the Wife of *Ninus*, whom *Euſebius* and St. *Auſtin* place about 300 Years after the Flood. This Fleet engaged upon the River *Indus* with one belonging to *Scaurobates* or *Staurobates*, a King of that part of the World; and the *Indian* Fleet was worſted: But there are many Circumſtances in this Story, as particularly of her Army, conſiſting of above Three Millions of Men, and her having 2000 Ships, that make it appear Fabulous, and indeed it hath juſtly been eſteemed ed ſo by Sir *Walter Rawleigh*, and moſt Judicious Writers. Others will have *Seſoſtris* King of *Egypt* to have invented Gallies, *&c.* very anciently, and to have been very famous for Shipping; others ſay, that the *Egyptians* did uſe very anciently to coaſt along the *Red Sea* in Rafts deviſed by King *Erythrus*: But in theſe Accounts there is nothing certain to be relyed upon. For ſuch was the Genius of the *Greeks*, that they turned every thing almoſt into Fable. The Poets called a Ship, a *Sea Chariot*; for *Æſchylus* ſaith of *Prometheus*, that he —— εὗρε ναυτίλων ὀχήματα: And in *Catullus* we find this Line.

Ipſa levi fecit volitantem flumine currum.

Homer and others called a Ship an Horſe, whence aroſe the Fable of *Bellerophon* and *Perſeus* his Flying Horſe, *Pegaſus*: *Vid. Palephati Libr.* 1. *Mirabil. Hiſtoriarum*: and of *Neſſus* the Centaur, whom they repreſent as both a *Portitor* and as a *Nauta*. Thus becauſe *Europe* the Daughter of *Agenor* the *Phœnician* King, being carried away by the *Cretians* in a Ship that had a Bull for its *Paraſemum*, its Ancient, Colours, Device, *&c.* She was repreſented as being carried away by that Animal. Thus alſo the Fable of *Scylla*, as *Palephatus* ſaith, came from hence; that the *Tyrrheni* as long ago as the Siege of *Troy* uſing Piracy, and with their *Myoparones* and *Triremes* infeſting the Coaſts; one of theſe being called *Scylla*, was a very good Sailor, but yet *Ulyſſes* outſailed her, and ſo eſcaped.

Euſebius tells us, *Lib.* 1. *Præp. Evang.* c. 10. that one *Uſous* was the firſt that ever dared venture out to Sea, which he did in a *Canoa* made of the Trunk of a Tree and hollowed by the Fire. This *Uſous* which *Gyraldus* miſcals *Uſe*, *Scheffer* will have to be *Eſau* the Brother of *Jacob*, and that he uſed this *Canoa* to fly from him: As indeed the Story in *Euſebius* probably hints. This Boat was the μονόξυλον or σκάφη of the *Greeks*, ſo called, ἀπὸ τοῦ σκάπτεσθαι, becauſe it was made by hollowing. And this *Scheffer* ſhews to have been in moſt ancient Uſe among the *Phœnicians*, *Egyptians*, and after them the *Greeks*: And alſo as *Pliny* takes notice, *Lib.* 16. *c.* 41. by the *German* Piraſes too. From their Hollowneſs the *Romans* called theſe *Alvei*.

Tunc Alveos fluvii primam ſenſere cavatas.
Virg.

They were called alſo *Trabariæ*, becauſe they were made out of one only Beam or *Trabs*: As both *Diodorus* obſerves: And we find from *Virgil*, *Æneid*. 3.

——— *Vaſtumq; cava Trabe currimus Equor.*

Theſe were alſo the ſame with the *Lintres*, as appears by the Paſſage of *Sidonius Apollinaris in Paneg.*

———— *Pars Lintre Cavatâ*
Jam dociles exponit Equos———

Xenephon Lib. 6. ſaith, that theſe Skiffs, or μονόξυλα, held each of them three Men a-piece: But to be ſure the Number of hands varied with their Largeneſs. *Snellius* thinks, that *Dædalus* and *Icarus* went ſingly to Sea, in ſuch little Canoa's as are uſed about *Davis* his Straits in *America*: And that the latter venturing too far from Shoar, was drown'd: But however, theſe Canoa's have been, and are ſtill, in uſe in many Places of *America*, the Inhabitants of which Place, no doubt, deriving the Invention very early from thoſe of our Continent.

Iſiderus Lib. 19. cap. 1. ſaith, that the *Rates* were the firſt and moſt ancient kind of Boats, and that they were only Beams of Timber faſtned together: The ſame *Maximus Tyrius* aſſerts alſo, ſaying, that the firſt Men uſed to make σχεδίαν τινὰ φαύλην, a poor ſmall haſty made Raft of ſome light Wood, by framing pieces of Timber together; and on this they would venture to Sea. *Diſſertat.* 40. Theſe *Rafts*, Floats, or Bark-Logs are deſcribed by Capt. *Dampier* in his Voyage round the World, *p.* 141 and in other places. Some of which are ſmall, and without Sail or Rudder, carrying but one Man, who ſits upon it, or aſtride it, with his Legs in the Water: Theſe are uſed on the Coaſt of *Coromandel* in the *Eaſt Indies*, and are now called *Catamarans*: But in the *South Sea*, he deſcribes Rafts or Bark-Logs made to carry Goods; which were very large, carying 60 or 70 Tuns of Wine, *&c.* and are uſed to go between *Lima* and *Traxillo*, *Gaiaquil*, and *Panama*. Theſe have a large Rudder, and a Maſt, and Sail. *Pliny* Lib. 7. c. 56. and *Strabo* Lib. 16. tell us, that theſe Rates were uſed by the moſt Ancient People; the *Phœnicians*, *Ethiopians*, and the *Gerrhæi*, which uſed to trade in them to *Babylon*.

Prima Ratem Ventis credere docta Tyros.
Tibullus Eleg. 7.

Thucydides Lib. 6. that the *Scicilians* uſually paſſed from their Iſland into *Italy* in theſe Rafts. Theſe the *Greeks* called σχεδίαι, haſtily made Boats; but in *Aulus Gellius* Lib. X. c. 25. they are called *Ratariæ*, and *Gyraldus* ſaith they were firſt invented by *Pyrrhonus Magus*, in *Lydia*: But *Scheffer* cites *Iſiodorus*, for attributing the firſt Invention of Ships to the *Lydians*; which he ſaith *Gyraldus* miſtook for theſe *Rates*. 'Tis highly probable, that the *Rates* were the firſt Veſſels in which Men ventur'd to Sea; the Invention being ſo Natural, Rude, and Simple: But after this, 'tis eaſy to ſuppoſe, they might by degrees think of hollowing Trees, or making Boats of Skins, Reeds, Canes, Barks of Trees, and at laſt of *Boards*. We learn from *Strabo*, Lib. 17. and all Antiquity, that Boats made of Reeds, and the *Egyptian Papyrus*, were uſed very early.

Sic cum tenet omnia Nilus
Conſeritur bibula Memphytis Cymba Papyro.
Lucan.

And 'tis highly probable, that *Juvenal* means theſe Reed or Cane Boats, in this Paſſage of *Satyr* V.

——— *Illud veſtris datur alveolis; quod*
Canna Mycepſarum prorâ ſubvexit acutâ.

The Scholiaſt ſaith, that the *Canna* was a ſmall Boat made of Reeds or Canes, and from hence perhaps came the *Canoa* or *Cannoo*, which is every where uſed to ſignify a ſmall *Indian* Boat. And tho' it be odd enough to ſuppoſe, that Men ſhould think of Earthen Boats: Yet ſuch, the ſame Satyriſt tells us were uſed by the *Egyptians*. Satyr 15.

——— *Imbelle & inutile Vulgus*
Parvula fictilibus ſolitum dare vela Phaſelis
Et brevibus Pictæ remis incumbere Teſtæ.

Pliny Lib.   c. 9. mentions ſome Boats uſed by the *Ethiopians*, which he calls *Plicatiles*, becauſe he ſaith they uſed to fold them up together, and carry them upon their Backs whenever they come to a Cataract: And ſuch *Herodotus* tells us were uſed by the *Babylonians*, and he deſcribes them thus. Their Boats were made of a *round Form* of Skins or Hides, and were covered with a kind of Baskets made of the Twigs of Oziers, and into each of theſe he ſaith they would put an Aſs, and after they were come to *Babylon* they uſe to ſell the Baskets, *&c.* and laying the Leather upon their Aſſes, march away for *Armenia*. Theſe σκύτινα πλοῖα and πλοῖα διφθέρινα and δερμάτινα, as the *Greeks* called them, or *Naves Sutiles*, were uſed in many other Places, as by the *Liburni*, &c. and the Poets repreſent Old *Charon*'s Boat to be of Leather, for thus *Virgil Æn.* 6. *v.* 414.

——— *Gemuit ſub pondere Cymba,*
Sutilis, & multum accepit rimoſa Paludem.

And theſe kind of Boats, it appears from *Lucan*, were very eaſily uſed by the *Venetians* and the *Britains*.

Primum cana Salix madefacto vimine, parvam
Texitur in Puppim, cæſoq; induta Juvenco,
Vectoris patiens tumidum ſupernatat amnem:
Sic Venetus ſtagnante Pado; fuſoq; Britannus
Navigat Oceano.

And to this very Day theſe Leathern Boats are uſed upon the River *Severn*, and in ſome other Places in *England*.

Pliny Lib. 9. *Diodorus* Lib. 3. *Strabo* Lib. 16. All mentions the Shells of Tortoiſes, being anciently alſo uſed as Boats. *Pontanus* Lib. 2. Hiſtor. Amſt. c. 21. as I find him cited by *Scheffer*, mentions Boats made of the Barks of Trees (like *Weſt-Indian* Birchen Canoa's) and uſed by the *Pitzorienſes*, a People of *Eaſt-India*: And no queſtion very various were the Materials that were uſed in different Places to make ſuch ſmall Boats as theſe, which were uſed in the Infancy of the Art of Navigation, and chiefly to paſs Rivers, *&c.* *Strabo* alſo *Lib.* 16. ſaith, that the *Phœnicians* had a kind of Boats that could be taken to pieces and carried upon Mens Backs: And of theſe *Scheffer* from *Steuvechius* gives a Figure, but I take it to be purely conjectural. The πλοῖα among the *Greeks* were not Ships, but only a kind of larger Boats; whoſe ſides at firſt were covered only with Hides of Beaſts, but afterwards they came to uſe Planks or Boards, as we do now. Of theſe πλοῖα we find a great many particular Names in Authors: For the *Cymba*, which 'tis ſaid the *Phœnicians* invented, the *Lembus* which the *Cyrenæi*; the *Celox*, which the *Rhodians*; the *Myaparo*, which the *Tyrrheni*; the *Phaſelus*, which the *Campani*; and the *Scapha*, which the *Illyrians* pretend to have found out are all called πλοῖα, by ſome Writers. Thoſe ſmall Boats (like our Scullers upon the *Thames*) that had but one Man in them, who rowed with two Oars, or Sculls, the *Greeks* called *Ampheres*: But thoſe in which each Man had an Oar they called κέλωκας, *Celoces*, as appears from *Thucydides* and *Strabo*. And ſometimes ſuch a little Boat that had but two Men to row, was by the *Latines* called *Briremis*: As appears from theſe two places of *Lucan*.

> -------- *Quem contra non longa Biremi*
> *Appulerat ſcelerata manus* --------
>
> Lib. 8. v. 562.

And Lib. x. v. 56.

> -------- *Se parva Cleopatri Biremi*
> *Correpto cuſtode Phari, laxare catenas,*
> *Intulit Ematiis, ignaro Cæſari, tectis.*

Wherefore 'twas not only a Ship with two Banks or Tire's of Oars that was called a *Biremis*, but ſometimes a little Boat. And the ſame muſt be obſerved as to the *Triremis*: For *Plutarch* in the Life of *Theſeus* ſaith, that there was a τρίσκαλμος, or *Triremis*, of but three Oars; for it was appointed by the *Grecian* Council, That no *Triremis* ſhould be fitted out any whither, that could hold above five Men. Nor need we be ſtartled at an odd Number of Oars, being uſed in a Boat: For both *Polybius* Lib. 8. mentions the σκάφος πεντήρικος, a Skiff with five Oars; and *Diodorus Siculus* Lib. 20. the σκάφος τριτήρικος, a Skiff with thirteen Oars: But *Scheffer* himſelf tells us, that Boats with an odd Number of Oars, are now uſed upon the *Rhyne*. By this Name of πλοῖα alſo were the *Acatia*, *Lintres*, *Caraba*, *Epholcia*, *Capulæ*, *Cumbæ*, *Alvei*, &c. often called: Of which more particularly heareafter among the Alphabetical Names of Ships and Boats. *Bochart* in the ſecond Book of his Geography, *Ch.* 11. ſaith, that theſe Πλοῖα were alſo called anciently γαῦλοι: And he cites the Scholiaſt upon *Ariſtophanes*, *Callimachus*, and *Epicharmus* out of *Athenæus*; to prove that γαῦλος was the Term for a *Phœnician* Boat. *Aulus Gellius* mentions the *Gaulus* among the ſeveral kinds of Boats; and *Feſtus* deſcribes it to be *Genus Navigii penè rotundum.* And he ſhews, that the word *Gaulus* among the *Phœnicians* was oppoſed to *Arca* or *Arco*: Which ſignified a *long Ship*, as the *Gaulus* was a roundiſh one; and therefore *Bochart* thinks with great Probability, that the *Argo Navis* was ſo called from its being the firſt *long Ship* among the *Greeks*: For *Pliny* cites *Philoſtephanus* for ſaying, *That* Jaſon *was the firſt that ever ſailed in a long Ship*: The Ancient Fleets conſiſted of two Parts; the *Onerariæ Naves* or Ships of Burden; which were of a roundiſh Form (that they might have the more Room for Stowage;) and were ſeldom or never rowed: But were carried only by their Sails. And the other ſort were the μακραὶ the *Naves longæ*, which the *Greeks* called ἐπίκωπα, becauſe they were uſually rowed, and theſe were their fighting Ships. See *Livy* Lib. 25. c. 27. The firſt Invention of theſe *Longæ Naves*, or Gallies, *Ægeſias* in *Pliny*, Lib. 7. c. 56. aſcribes to *Paralus*: *Philoſtephanus* gives the Honour of it to *Jaſon*: *Cteſias* to *Samiras*; *Saphanus* to *Semiramis*, and *Archimacus* to *Ægeon*, Vid. Sir *Walter Rawleigh*, Book 1. Ch. 8. p. 114. Others ſay, *Seſoſtris* King of *Egypt* firſt deviſed theſe Gallies, tho' others tell us, that *Semiramis* uſed them in the Paſſage of her vaſt Army upon the *Indies*. *Thucydides* gives this Invention to the *Corinthians*; *Tertullian* aſcribes it to *Minerva*, others to *Neptune*: The *Samorhacians* claim it as their Diſcovery; and ſome will have *Danaus* to be the firſt that brought it into *Greece*: And *Pliny* ſaith, that the Invention came from *Egypt*, *Navem Danaus ex Egypto in Greciam advexit*, Lib 7. c. 56. which thing is alſo fairly to be concluded from the beginning of the Fragment of *Archelaus* in *Euripides*. *Clemens Alexandrinus* Lib. 1. *Strom.* ſaith, that the firſt Ship was built by the *Lybian Atlas*, and he lived as is ſuppoſed, about *Moſes* his Time. This ναῦς, or *Navis*, was an εἰκόσορος, or of twenty Oars all on one Bank, and was of a long Form: And that ſuch were built, and in uſe before *Jaſon*'s Time (whom others aſſert to have built the firſt long Ship in *Greece*) is plain from what *Herodotus* tells us of the *Egyptian* Prieſts; *viz.* that they ſay *Seſoſtris* was the firſt that ever ſailed in long Ships; which he did into the *Arabian* Gulph, ſubduing the People who inhabited the Coaſts of the *Red Sea*. *Scheffer de Militiâ Navali* Lib. 1. c. 3. ſaith, that *Danaus* raiſed the kind of Ship found out by the *Lybian Atlas*, up to one of fifty Oars, and that *Jaſon* copied after *Daneus*. *Diodorus Siculus* ſaith, that *Liparus*, who lived before *Jaſon*, ſailed into *Italy* with long Ships. The Word *Gally*, *Scheffer* ſaith, comes from the *Greek*, γαλέα; which *Leon* tells us was the Word uſed for a Long Ship, or a *Moneris*, having one only Bank of Oars: And ſuch a Ship *Strabo* calls μονόκροτος, *Lib.* 7. and *Tacitus* ſpeaking of ſuch Ships, *Lib.* V. *Hiſtor.* c. 23. ſaith, *ſimplice Ordine aguntur.*

Snellius in the Preface to his *Typhys Batavus*, ſaith, that the Invention of Long Ships came firſt from the *Sidonians*: As he thinks is plain, from this Paſſage in the *Helena* of *Euripides*.

> Χώρει σὺ καὶ ναῦν τοῖς δὲ πεντηκόντορον
> Σιδωνίαν δὸς, καὶ ἐρετμῶν ἐπιστάτας.
>
> Act. 5. Scæn. 1.

And indeed the ſame thing appears from the following *Chorus*; and from ſeveral other Places of that Tragedy. The *Argo Navis* which *Bochart* ſhews (*loco prius citat.*) was ſo called from the *Phœnician* Word *Arco* or *Argo*, *longa*, was a *Pentecontoros*, as appears from the number of Hands that were in her: Where the Gods and Heroes themſelves were Rowers: And the Poet *Serenus* laughs at *Hercules*, calling him *Semiremex*, from his awkward rowing in this *Argo-Navis*. This *Argo-Navis* ſome ſay, was built by one *Glaucus*: *Moriſotus de Orbe Maritimo*, p. 2. *Bochart. Gregr. Sacr.* Lib. 2. c. 11. ſhews that the *Arco-Navis* was at leaſt 50 Cubits, or 75 Feet in length: If the *Inte ſcalmia* were διπηχυαῖα two Cubits aſunder (Vid Lib. 1. c. 2.) And if any thing can be gathered of Certainty from *Theocritus* his calling it τριακοντάζυγος, that is, its having 30 *Scalmi* on a ſide, it muſt be yet longer. And certain it is, that it had more than 50 Rowers, tho' *numero rotund* it be called πεντηκόντορος; for there were 54 *Argonautæ* in it beſides *Jaſon*; all the Flower of *Greece*, their Deſign being to fetch Gold from *Colchos*, Vid. *Plin.* Lib. 3. c 33. In this Ship there was but one Man to an Oar, and but one Bank or Tire of Oars; ſo that this was a μονόκροτος, or *Moneris*. And theſe kind of Ships ſometimes had an hundred Rowers in them, as *Scheffer* tells us, and tho' they were a kind of mean Rate, between an *Actuaria* or Piratical Runner, and a Ship of more than one Bank of Oars, yet they ſometimes were built ſo large as to exceed a *Triremis*; as we learn from *Diodorus Siculus*, Lib. 18.

Pliny, From the Authority of *Damaſthene*, or as *Scheffer* corrects it, *Demaſthe*, who lived in *Herodotus* his Time, tells us, that the *Erythræi* were the firſt that found out the *Biremis*, or a Ship with two Banks of Oars, rowing one above another. And *Herodotus*, *Thucydides*, and *Diodorus*, all agree, that about three hundred Years after the Siege of *Troy*, *Aminocles* the *Corinthian* built the firſt *Triremis*. But even this Invention *Clemens Alexandrinus* (Lib. 1. *Strom.*) attributes to the *Sidonians*. According to *Pliny* the *Quadriremis* was invented by *Ariſtoteles Carthaginenſis*: And the *Quinquiremis*, by *Neſichton* of *Salamis*. But this *Diodorus* Lib. 14. denies, ſaying, that *Dionyſius* after he had taken the *Corinthian Triremes*, contrived to enlarge the Dimenſions and *Ordines* of thoſe Ships; and that he firſt of all, built the *Quinque Remis*. After this, as *Pliny* tells us, *Zenagoras* the *Syracuſian*, built a Ship of *Sex Ordines*, or Banks of Oars: And *Neſigiton*, one of ten Banks or Tires. *Alexander* the Great is ſaid to have built a Ship of twelve *Ordines*; and *Philoſtephanus* ſaith, that *Ptolemy Soter* built one of fifteen, And that *Demetrius*, the Son of *Antigonus*, built one of thirty: to which *Plutarch* agrees. After this, *Ptolemy Philadelphus* is ſaid to have raiſed up the Number to forty *Ordines*; and *Ptolemy Philopator*, to fifty. But the Ships of theſe high Orders were uſeleſs Moles of Timber, built only for Vanity, Oſtentation, and Amuſement.

The Deſcriptions of theſe Ships of ſeveral *Ordines* or Banks of Oars, before *Auguſtus* his time, are really very obſcure; and in ſome of them there is little more than Conjecture to build upon. But what light I could get into this Affair, I will here give the Reader; as alſo the ancient Names of the ſeveral kinds of Ships, Boats, *&c.* and their Armature, ſeveral Parts, *&c.* both in the *Greek* and *Latin* Languages; becauſe, beſides its Curioſity, it will be of good uſe for our underſtanding of the Writings of the Antients, of both thoſe Nations.

There is a great diſpute among the Learned about the Form of theſe Ships: Some have thought that the *Ordines* are only to be reckoned length-wiſe, or fore and aft, in the Ship Of this Opinion is *Bayſius*, *Steuvechius* on *Vegetius*, *Caſtilionius* upon *Vitruvius*, and many others: And *Scheffer* thinks theſe ground their Notion upon what the Scholiaſt on *Ariſtophanes* ſaith, whoſe Words are: θρανίτης ἐστὶν, ὁ πρὸς τὴν πρύμναν· Ζυγίτης, ὁ μέσος, ἡ θαλάμιος, ὁ πρὸς πρῶραν: That is, the *Thranita* is that Rower, which rows in the *Stern*; the *Zygita*, he that rows in the *Mid-ſhip*; and the *Thalamita* is he that rows in the *Head*: Which what to make of, I confeſs I know not. Tho' to this *Bayſius* agrees, dividing a Ship length-wiſe into 3 parts, from the Head to the Maſt, from the Maſt to the beginning of the *Acroſtolion*, and from thence to the End of the Stern: In the firſt of which Diviſions he places the *Thranitæ*, in the middle one the *Zygitæ*, and in the laſt the *Thalamitæ*: But the Reaſons he produces for this are very weak and inconcluſive. For certain it is, that the *Ordines* of Rowers were elevated ſomething one above another, as *Joſ. Scaliger* in his Comment upon the *Chronicon* of *Euſebius*, hath plainly proved againſt *Bayſius*: For he cites theſe Words of *Lucan*, *lib.* 3. *v.*536. (among a great many other Evidences.)

----Summis longè petit æquora Remis.

Where the *longè* and *ſummis Remis* ſufficiently ſhew, that in this Ship of *Brutus*, there were ſome Oars placed above others, and that to a conſiderable height too. Theſe Verſes alſo of *Silius Italicus*, lib. 14. v. 424. prove the ſame thing.

Intrat diffuſos peſtis Vulcania paſſim,
Atq; implet diſperſa Foros: Trepidatur omiſſo
Summis remigio, ſed enim tam rebus in arctis
Fama mali nondum tanti penetrarat ad imos.

By which 'tis plain, that tho' the Fire raged upon the Deck, and ſo affrighted the upper Rowers, or the *Thranitæ*; yet it had not yet reached thoſe Rowers which were below under the *Cataſtromata*. And ſome of theſe were placed ſo low, that to uſe *Arrianus* his words on another occaſion, Αὐτῶν (ſpeaking of the ***Biremes***) τὰς κάτω κώπας οὐκ ἐπὶ πολὺ ἔξω ἐχούσαι τοῦ ὕδατος. *Their lower Oars were but a very little above the Level of the Water.* Lib.6. *in Exped. Alexandr.* *Vegetius* alſo, in his Book *de Quinqueremibus*, ſaith expreſly, *quinos ſortiuntur remigum gradus*: And by what we have of *Memnon* in *Photius*, it appears, that the *Octeres Navis* was ſo called, becauſe ſhe had 8 Decks, Banks, or Tires of Oars riſing one above another. *Lib.*3. We find ***Lucan*** alſo ſpeaking of the *Quadriremis* after ſuch a manner, as plainly ſhews the *Ordines* were raiſed one above another.

Quoſq; quater ſurgens extructi Remigis Ordo
Commovet, & terno conſurgunt ordine Remi.

Sir *H. Savile* would have theſe *Ordines* neither to be accounted length-wiſe in the Ship, as *Bayſius*, nor in height one above another, as *Joſ. Scaliger*; but tranſverſly, or a-thwart Ships: But this ſingle Conjecture of his having no ground from the Writings of the Antients, and being refuted by *Rivius*, I ſhall do no more than barely mention it, and proceed.

However, tho' theſe *Ordines* or Banks of Oars were not all on the ſame Floor, Deck, or Horizontal Plain; yet they were not neither, as *Joſ. Scaliger* would have them, *directly* over one another: For this, as will appear below, neither the height of the Ship, nor the length of the Oars will (in many Inſtances) allow to be poſſible; nor is there any Deſcription or Figure of any ſuch Ship to be found in Antiquity.

But before I enter into a particular Detail of the ſeveral Opinions of Authors how theſe *Ordines* are to be accounted for, in ſuch great Ships, as are ſaid to contain 30 or 40 of them; it may be proper and inſtructive to premiſe what the Learned *Snellius* hath obſerved in the Preface to his *Typhys Batavus*; which is, that the *Greeks* made two Diſtinctions of long Ships: One with regard to the number of Oars or Rowers; and the proper Termination for this was in ορος: Thus εἰκόσορος, τριακόντορος, πεντηκόντορος, &c. was a Ship of 20, 30, or 50 Oars. The other in reſpect to the number of the *Verſus* or *Ordines Remorum*; and the right Termination for this was in ηρης. Thus the moſt antient Gally, or long Ship, was, as it is now in the *Mediterranean*, a μονήρης, having only one Bank or Tire of Oars; but a Ship that had 2, 3, *&c.* Banks or Tires of Oars, was called a διήρης, a τριήρης, &c. as is plain from theſe words of an old Author upon the *Tacticks* of *Ælian*: ἡ τριακόντορος καὶ τεσσαρακόντορος καὶ πεντηκόντορος λέγεται κατὰ τὸ πλῆθος τῶν κωπῶν. ἡ μονήρης καὶ διήρης ἢ τριήρης, κατὰ τὰς στίχους καὶ κατὰ τὸ ὕψος ἐπ' ἀλλήλοις. But tho' they expreſt the number of a Ship's Oars by a Word whoſe Termination was in ορος, yet they carried this no lower than to εἰκόσορος, a Ship of 20 Oars: For if ſhe had fewer Oars than 20, they denominated her from the σκαλμός, *Paxylus*, or Peg on which the Oar was placed. Wherefore, when in *Strabo* we meet with the Words πεντεκαιδεκάσκαλμος, δωδεκάσκαλμος; we are to underſtand by it a Ship or Boat that was rowed with 15 or 12 Oars only.

There was alſo yet another diſtinction of Ships uſed by the *Greeks*, which 'tis proper enough to take notice of on this occaſion; and that is, whereby they diſtinguiſhed one Ship of the ſame *Ordo* or number of Oars from another, with regard to their bigneſs; ſince they had an half Bank of Oars, either alone, or between two *Ordines*. Thus the Ἡμιολία or ἡμιόλιος, ſeems to have been, as *Snellius*, and *Potter* in his *Greek* Antiquities, obſerve; a Ship between an *Uniremis* and a *Biremis*; as having one Bank or Order of Oars, and half, or about half, another: And ſo the τριημιολία was between a *Biremis* and a *Triremis*; being denominated, as the former of theſe Authors judiciouſly obſerves, from the Order it *approached to*, and not from that which it *exceeded*.

But to return to the Solution of the Difficulties about the *Ordines Remorum* in the antient Ships. *Scheffer* rejects the Notion of *Rivius* (which is ſince eſpouſed by *Voſſius*, as I ſhall ſhew you hereafter) that there were more than one Man to an Oar: He aſſerts that the Ship took its Name always from the Number of its *Ordines* or Banks of Oars one above another, never from the Number of Oars (in which, by what hath been ſaid above, you will find that Learned Man was in ſome meaſure miſtaken) and his firſt Senſe of the Matter lay thus. According as a Ship was called *Biremis*, *Triremis*, *Quinqueremis*, *Quadragintaremis*, *&c.* ſo he ſuppoſes ſhe had 2, 3, 5, or 40 ἐλασίαι (as the *Greeks* called them,) that is, *Verſus Remorum*, or Banks of Oars: That each of theſe *Verſus* or Banks, was divided into certain *Ordines* or Claſſes; of which a *Quadriremis* had 4 ſuch, a *Quinqueremis* 5, *&c.* more or leſs, according to the Ship's length. And he ſaith, that the Rowers were denominated from the *Verſus*, and the Ship from the *Ordines Verſuum*: As for inſtance, a *Triremis* was ſo called, becauſe it had three of theſe *Verſus*, *viz.* the uppermoſt that of the *Thranitæ*, the middlemoſt that of the *Zygitæ*, the lowermoſt that of the *Thalamitæ*: And in each of theſe *Verſus* there were three *Ordines* or *Claſſes* extended length-wiſe in the Ship; which Diviſion and Diſtinction he thinks authoriſed by theſe Lines of *Virgil*, lib. 5. Æn.

-----Triplici pubes quam Dardana verſu
Impellunt, terno conſurgunt Ordine remi.

Where the *Verſus* are plainly diſtinguiſhed from the *Ordines*, and the Number of Oars in each *Verſus*: And to make this out he produces a Coin mentioned by *Goltius*, and ſtruck by *Lepidus*; and alſo a Picture out of the *Naumachia* of *Onuphrius Pavinias*. But on a maturer conſideration of this Affair, he owns this Account to be involv'd with Difficulties ſcarce ſolvable. For both the length of the Ships of the higher *Ordines* will not allow of this; and if it would, the *Ordines* in the greater Ships muſt be fewer than thoſe in the leſſer: And therefore he concludes we ought rather to adhere to thoſe who make theſe *Ordines* to be accounted in height, and not length-wiſe.

But however, theſe *Ordines* were not in diſtinct Decks, directly over one another; ſo that the upper Rower ſat with his Feet over the Head of him that rowed next below him: But they were diſpoſed into the *Ordines* by their *Juga*, *Seats* or *Benches*, and were diſtant from one another the ſpace of two, three, four or more Cubits, according to the length of the Ship: And theſe Spaces or Diſtances (he ſaith) *Salmaſius* and *Philander* in their Notes upon *Vitruvius* have ſhewn to be the *Interſcalmia*: And becauſe *Vitruvius* calls this Space διπηχυαία, that is, of two Cubits, he thinks the Architect ſpeaks only of the vulgar *Triremis*, in which the *Scalmi* were not above two Cubits aſunder. But that they were further diſtant in the greater Ships, he judges from what *Vitruvius* ſaith in another place (*Lib.* 1. *c.* 2.) *viz.* that from the *Interſcalmia* you may determine the *Ratio* of the bigneſs of the Ship. The Rowers ſate therefore at a due diſtance from each other, both that the Oars ſhould not interfere or be foul one of another; and alſo that there might be a Space for the Rower next above them to ſit between them, &c. And this Diſpoſition is confirmed by the Figures which *Bayſius* gives us of the antient *Biremes* and *Triremes*, which have the Old *Marmora* to authoriſe them; and which both *Scheffer* himſelf and Mr *Potter* in his *Archeologiæ Grecæ* have inſerted in their Books. From which Figures he judges that the *Ordines* were not above a Cubit one above another, and that they roſe not directly, but ſloping. And he ſuppoſes that this height of the *Ordines* one above another, was leſs in the greater Ships than in the leſſer, becauſe there was room for a greater diſtance between the Rowers: And he ſuppoſes that in that vaſt Ship of *Ptolomy Philopater*, which is ſaid to be of 40 *Ordines*, the Oars of the loweſt *Verſus* were but 5 Cubits long: Why then (ſaith he) might not the Oars of the higheſt Bank of Rowers in that Ship, and which from *Athenæus* we learn were 38 Cubits long, touch the Water; ſince perhaps there might not be above 30 Cubits in the whole height of the Ship, or it may be, a yet leſs diſtance? This Account he thinks is incumbred with no Difficulties, and will be conſiſtent with what we find in all the antient Authors who have written upon this Subject. As for the three Appellations of the Oars, 'tis probable they came firſt from the *Triremis*, the moſt uſual Ship of War, and which had 3 Banks or *Ordines* of Rowers: But that in larger Ships the Rowers were divided into three *Claſſes*, of which thoſe that were neareſt the Water were called the *Thalamitæ*, the middle Claſs the *Zygitæ*, and the uppermoſt the *Thranitæ*. The Number of Rowers that were in each *Verſus*, or Rank of Benches, was not certain: Sometimes there was 50, ſometimes 40, ſometimes 30 Men on each; and in the leſſer Ships yet fewer: And every Pair of theſe *Verſus*, *viz.* the Starboard and Larboard, or the Right and Left Rank or Row of Benches reckoned together, made the *Ordo*, the Tire, Deck or entire Bank: And the Ship was denominated from the Number of theſe *Ordines*, *ex gr.* being called a *Quinqueremis*, for having five of theſe *Ordines* one riſing above another. If the *Tacticks* of *Leo* may be relied on, there were never leſs than 25 Men or Rowers in each *Verſus*, or not leſs than 50 in each *Ordo*; but the exact Number can't be determined. *Silius Italicus*, Lib. 14. *de Bello Punico*, v. 38. ſpeaking of a *Quinqueremis*, ſaith,

> *Sed quater hac centum numeroſa remige pontum*
> *Pulſabat Tonſis*——

So that uſually a *Quinquiremis* may be ſuppoſed to have 400 Oars, 40 on each *Verſus*, and 80 in each *Ordo*; if all the *Ordines* had a like Number. But *Scheffer* thinks the Number of *Ordines* themſelves (as he accounts them) abated as you went upwards: So that in the loweſt *Verſus* of a *Quinquiremis* he makes five *Ordines*; but in the two uppermoſt, but four. From whence it follows, ſaith *Scheffer*, that there never was any *Moneres*, or Ship with one only Bank of Oars, but what was a *Pentecontorus*: And below this Number of 50 Oars, the Ship was only denominated from the Number of her Oars, and not from the *Ordines*. Thus a Ship or Boat of 20 Oars was called εἰκόσορος, one of 30 Oars, τριακόντορος. There were indeed very large Boats that had but one Deck or Tire of Oars, or which were of the μονήρης kind: For we read of the ἑξηκόντοροι and the ἑκατόντοροι; but beyond this laſt *Rate* of 100 Oars, no *Moneres* or Ship of one only *Ordo* of Oars ever went. And let the Number of Oars in one of theſe be what it will, if it was doubled, or had a new *Ordo* or Deck, or Tire of Oars of the ſame Number placed above it, it then became a *Biremis*; if trebled after the ſame manner in height, it was called a *Triremis*, &c. So that *Ptolomy*'s Τεσσαρακοντήρης was a ἑκατόντορος raiſed up to 40 *Ordines*; or a Ship with 40 *Ordines Remorum* of an hundred Oars on each Deck, Tire, *Ordo* or Bank, and of 50 in each *Verſus*. *Scheffer* obſerves very well, *P.* 95. that the *Hecatontorus*, or a Ship with an hundred Oars, all in one and the ſame Bank, was more frequently doubled or trebled up into a *Biremis* or a *Triremis*, than the *Pentecontorus* was: For the Form of this latter Ship requiring it to have but 25 Oars in a *Verſus*, incapacitated it for being raiſed up into the higher *Ordines*, by clapping more Tires of the ſame Number of Oars upon it; for the length of the Ship increaſing with its height, there would have been both a deficiency of Hands to row it; and alſo ſuch great Gaps or empty Spaces in her, as would have been uſeleſs and inconvenient. They did therefore either double, or in ſome other *Ratio* encreaſe the Number of Oars in a *Verſus*, in the higher Ships; as we find by the *Quinqueremis* of *Pliny*, which had 40 in each *Verſus*, or 80 in each Bank, 400 in all. Wherefore, ſince we find by *Polybius* (*Lib.* 1.) that the firſt *Roman* Ships had 300 Oars, and were of the *Quinqueremis* kind (and this was the Form of all their Ships of War, he ſaith, in the firſt *Punick* War); 'tis plain they muſt have 30 Oars in each *Verſus*, or 60 in each *Ordo*; for that multiplied by 5, the *Numerus Ordinum*, makes 300. In the Fragments of *Memnon* put out by *Photius*, there is an Account of an *Octeres* of *Ptolomy*'s, called the *Lyon*, *which was admirable for her Length and Neatneſs: She had an* 100 *Oars in each* Verſus; *ſo that on each Side ſhe had* 800 *Men*, 1600 *in all.* *Scheffer* thinks this Ship was compoſed of a double *Hecatontorus* placed lengthwiſe, and but of the common height: For the placing of more Oars lengthwiſe in a Ship, contributes much more to her Sailing, than placing them in height one above another.

There is alſo another Diſtinction of all theſe kinds of Ships of War, which we find in *Livy*, viz. *Naves majoris & minoris Formæ.* The Ships of the leſſer *Form* or *Rate* were the *Moneres*, *Biremes*, *Triremes* and *Quadriremes*: Thoſe of the higher *Form* or *Rate* were the *Penteres*, *Hexeres*, and all the higher *Ordines*. For thus the Hiſtorian expreſſes himſelf, *Lib.* 28. *cap.* 23. *Regia Claſſis Septem & Triginta majoris Formæ Navium fuit, in quibus tres Hepteres & quatuor Hexeres habebat; præter has decem Triremes erant.* And in *Chap.* 31. *Hoſtium Claſſis unde nonaginta Navium fuit, & maximæ Formæ Naves, tres Heperes habebat, duas Heſteres.* Which helps us to underſtand his Meaning in *Lib.* 36. *cap.* 43. where are theſe Words: *Centum navibus, quarum ſeptuaginta tectæ, ceteræ apertæ, minoris Formæ omnes erant.* Theſe leſſer Ships the *Greeks* called κουφότεραι; but thoſe of the larger, Form or Rate Βαρεῖαι. The Ships of the leſſer Rate or Form were called κουφότεραι, becauſe they had not ſo many Banks of Oars as the greater ones had; and alſo lay ſnugger, and were much better Sailers: Wherefore they were alſo called *Dromones* or *Curſoriæ*, by the later Writers. And the Form of theſe began at laſt to be changed into that of Onerary Ships, ſo that they ſerved for both Uſes, as we learn from *Caſſiodorus* (*Lib.* 5. *Var. Ep.* 16.) For ſpeaking of their *Dromones*, ſaith he, *Mille Dromones fabricandos aſſumere decrevimus, qui & frumenta publica poſſint convehere, & adverſis Navibus, ſi neceſſe fuerit, obviare.*

Vegetius, Lib. 4. c. 33. tells us, that *Mark Antony*'s Fleet being routed in the Battle of *Actium*, chiefly by the Ships of the *Liburni*; the *Romans* made their Ships afterwards after their Make and Form; and henceforward all Ships of War began to be called *Liburnæ*, and the Names of *Quinquiremes*, *Triremes*, &c. to be little uſed: As indeed the Ships themſelves of the higher *Ordines* were quite laid aſide; for we find by *Suidas*, that the *Liburnæ*, νῆες ἦσαν οὐ κτ̀ τὴν τριηραρχικὴν ἐσχηματισμέναι τύπον, ἀλλὰ λῃστρικώτεραι, χαλκεμβολοῦσαι, κ̀ ἰσχυραὶ, κ̀ κατάφρακτοι, κ̀ τάχος ἄπιστον ἄγουσαι: *i. e.* were Ships, not ſo much in the Form of the *Triremes*, but more like Piratical Ships, ſtrong, cloſe, and of incredible Celerity. And *Zozimus* ſaith, that a good while before his time, the *Triremes* were out of uſe: So that theſe great pompous Ships, of many *Ordines*, were by degrees found to be very unfit for Service, and at laſt quite laid aſide by the *Romans* after the Battle of *Actium*; and their *Liburnæ* or Gallies ſeldom or never after that had above one Deck, or Bank of Oars, and never exceeded two.

The Emperor *Leo* in his *Tacticks* expreſly calls the *Dromones*, *Gallies*; and our Gallies in the *Mediterranean* at this day are nearly of the Form of the *Liburnæ* or *Dromones* above-mentioned, which the *Romans* at laſt pitcht upon, as the beſt and moſt ſerviceable Ships of War.

Having thus given you the Solution of the Learned *Scheffer*, of the Difficulties which ariſe in accounting for the ſeveral *Ordines Remorum* in ſuch great Ships as that of *Ptolomy Philopater*, &c. and mentioned alſo all along with it ſuch Diſtinctions of the ſeveral kinds of the antient Ships, as did collaterally occur: I proceed next to acquaint you with the Senſe of the Learned *Snellius* on the ſame Subject, from the Preface to his *Typhys Batavus*. He takes notice, that the Meaſures of *Ptolomy Philopater*'s Ship were theſe: She was 280 Cubits, or 420 Feet, in length; 38 Cubits, or 57 Feet, broad within board; in height, to the *Acroſtolion*, ſhe was 48 Cubits, or 72 Feet; and at the Stern ſhe was built 53 Cubits, or 79½ Feet above the Water. There are two things here very remarkable, *viz.* the great length of the upper Oars, in order to their ſtriking the Water; and the vaſt height and bulk of the Ship. 'Tis ſaid by *Athenæus*, from whom we have theſe Meaſures, that the upper Oars were 38 Cubits, or 57 Feet in length. Now tho' caſting Lead into their Handles, and putting more Hands than one to an Oar, would make theſe Oars eaſily moveable, the former of which things *Athenæus* ſaith was done, in theſe Words: Κώπας δ' Θρανιτικὰς ἔσχε κ̀ τριακονταπήχεις τὰς μεγίστας, μεγίςας, ἃι διὰ τὸ μόλυϐδον ἔχειν τοῖς ἐγχειριδίοις ϗ γεγονέναι λίαν εἴσω βαρεῖαι κατὰ τὴν ζύγωσιν εὐήρεις ὑπῆρχον ἐπὶ χρείας: And *Snellius* thinks there was two Men at leaſt to an Oar, and no doubt of it a greater number, to the upper Oars: Yet how to account for the upper Oars ſtriking the Water when they were but 57 Feet in length, is not ſo eaſy; or indeed, how a Ship of 40 *Ordines* ſhould riſe no higher. To ſolve which, *Snellius* firſt computes, that from the *Os Sacrum* to the Crown of the Head, in a Man of a mean height, there is about 3 Foot; and conſidering that with long Oars Men riſe up to pull, let a Foot be allowed for that. This, ſaith he, will neceſſarily make the diſtance of 4 Feet between *Tranſtrum* and *Tranſtrum*. Now taking this 40 times, in *Ptolomy*'s Ship, there will be 160 feet diſtance in height, between the uppermoſt and loweſt Oars: Whereas *Athenæus* ſaith, ſhe was in height to the *Acroſtolion* in all but 48 Cubits, or 72 Feet, which is not half that. To ſurmount which great Difficulty, he ſuppoſes that the *Thalamitæ*, or loweſt Rowers, uſed very ſhort Oars; and conſequently there was but little of the Oar within Board, they ſitting very near the Ship's Side: But the higher any *Ordo* of Oars was, the longer were the Oars, and the greater diſtance was the Hand of the Rower from the *Scalmus*, *Hypomochlion*, or *Thoul*, as our People call it in a Boat. By this means he accounts for Room for the inferior *Ordines* to move their Head and Body, and to make their Stroke. He juſtly obſerves alſo, that the Oars were not placed directly over one another, but each Rower in the ſecond *Ordo*, ſate in the middle between two Rowers of the *Thalamitæ*, &c. And as this appears plainly to be the caſe in the *Biremis*, whoſe Figure *Bayſius* hath given us; ſo 'tis very likely it was the diſpoſition of the Rowers in all Ships of the higher *Ordines*. And this being ſuppoſed, he thinks, if the Interval or Diſtance between Oar and Oar, in the ſame *Ordo* or Tire, were but ſettled, the whole Matter would be eaſily accountable. He thinks alſo, that the *Tranſtra* in all Ships, were not exactly at the ſame diſtance one above another, which he endeavours to make good by two Arguments. The firſt is, that ſince *Ptolomy*'s *Quadragintaremis* had 4000 Oars, if you divide 4000 by 40, the Quotient will be 100; therefore there muſt be an 100 Oars in a Bank in this Ship, *viz.* 50 on each ſide. Now this Ship was 280 Cubits, or 420 feet in length; and allowing 60 foot for thoſe parts of her towards the Ends, which to be ſure had no Oars, there remains 360 feet for the whole length of her Decks of Oars. Dividing then this Number 360 by 50, the Quotient will be but 7 ⅕ (not 9, as 'tis in *Snellius*, who divides by 40 the Number of Banks, inſtead of 50 the Number of Oars (in length) in each *Ordo*.) Which 7 ⅕ feet will be ſufficient for the Motion of the Rowers Body in making his Stroke, and recovering his Oar. But to him the ſtrangeſt thing of all is, and 'tis what, he ſaith, is utterly incredible (*omnem fidem excedit*, p. 30.) the uppermoſt Oars in this vaſt Ship were leſs than 40 feet above the loweſt; which he concludes from the length of the Oars, thus: Suppoſe a Right-angled *Joſcecles* Triangle, whoſe Hypothenuſe is 38 Cubits, or 57 feet, (the whole length of the uppermoſt Oars, according to *Athenæus*.) Now tho' about one third of this Number ought to be allowed for the part of the Oar within board; yet let there be but 7 feet from the *Scalmus* to the *Manubrium*, there will then be 50 feet for the Hypothenuſe without board. The Square of 50 is 2500, whoſe half is 1250; and the Root of this is not full 35 ½, for the height of the uppermoſt Bank of Oars above the loweſt of all. So that there being 40 of theſe Banks or *Ordines*, they could not be ſo much as 12 Inches one above another, allowing the thickneſs of the *Tranſtra* too into the number of 35 ½ feet. So that, ſaith *Snellius*, unleſs you ſuppoſe the Men to be ſtowed as they lay Herrings in a Ship, 'tis impoſſible to conceive how the Ship ſhould hold ſo many Rowers. And this Difficulty will ſtill increaſe upon us, when we conſider that a good part of the Ship's height will be taken up by a Deck over all the Rowers, by Cabins, State-Rooms, &c. And *Snellius* thinks there is no way to get over this, but by ſuppoſing the Number of the loweſt Banks of Oars to have been very ſmall, but that of the uppermoſt very great: Which Account renders the Ship a meer uſeleſs Mole of Wood, more like a little Town, or a great Caſtle, than a Ship: And accordingly we find the Antients calling by the Names of *Cyclades* ſuch pompous Structures as this was. Nay *Virgil* compares the Ships of *M. Antony*, in the Battel of *Actium*, to the *Cyclades*, which indeed, as appears from *L. Florus*, Lib. 4. were huge unweildy things, but yet theſe did not exceed above 8 or 9 *Ordines*. But of ſuch as that Ship of *Philopater*,

> *——Pelago credas inare revulſas*
> *Cycladas, aut Montes concurrere Montibus altos:*
> *Tanta Mole viri Turritis Puppibus inſtant.*

And he thinks that *Ptolomy Philadelphus* began to build ſuch huge Ships out of a vain Humour of rivalling the Ark of *Noah*: For he before this of 40, built one of 30 *Ordines*, and another of 20.

He obſerves alſo, that the *Octeris* of *Ptolomy Ceraunus* (mentioned by *Memnon* in *Photius*) had a much eaſier Explication; and where there was a yet greater Number of Oars in an *Ordo*, *viz.* 200, or one 100 in every *Verſus*. He ſuppoſes the diſtance between the uppermoſt and loweſt Oars to have been near 40 foot, and that the *Ordines* were 5 feet one above another. He concludes with telling us, that *Archimedes* made a *Vigintiremis*, which was bigger than this uſeleſs Ship of *Philopater*. This went loaded with Corn from *Syracuſe* to *Alexandria*, being ſent as a Preſent to King *Ptolomy*.

But tho' this *Quadragintaremis*, and another mentioned by *Athenæus*, as built by the ſame Prince, were vaſtly large, there being as much Timber uſed in the former, as would have built 50 *Triremes*: Yet were theſe, for Bulk, nothing comparable to that Ship which *Archimedes* ordered to be built for *Hiero* of *Syracuſe*; of which *Snellius* gives us an account from *Athenæus*, and he from *Moſchion*, who wrote a whole Book of its Deſcription. This vaſt Mountain of Wood required 300 Workmen to build her, and had her Hold, or Room within Board ſo divided into Partitions, that here were good Lodging Rooms, Parlours, Places for Study and Learning, Walks, Gardens, Fiſhponds, Baths, Stables for Horſes, a Temple of *Venus*, &c. This Ship was encompaſſed round with an Iron *Vallus*: (ſaith *Snellius*) by which whether he means a Hoop to ſtrengthen the Ship, or a kind of Rail and Baluſtre to adorn it, it is not eaſy to determine. But this Ship had alſo eight Towers, two in the Forecaſtle, and two in the Stern, and two on each ſide of her. On her Deck was a Wall with Forts, and upon this Wall, in the Towers, and in the tops of her Maſts, were Engines of Battery, and for other warlike Uſes, placed; one of which would throw or caſt a Stone of 300 Pound weight, and a Dart of 12 Cubits long to the diſtance of 600 foot. And yet this wonderful Ship *Snellius* thinks was exceeded in ſome meaſure by thoſe which the *Romans* uſed to tranſport the Obelisks from *Alexandria* to *Oſtia*. See alſo *Plin.* Lib. 36. c. 9.

This was the Senſe of the Judicious *Snellius*, a Man of very good Skill in antient Learning, and in the moſt uſeful Parts of the Mathematicks: But however his Account is not to me compleatly ſatisfactory. Let us therefore ſee next what *Iſ. Voſſius*'s Judgment is about this matter, *viz.* about the diſpoſition of the *Ordines*, as you may find it more at large in his Diſſertation *de Triremium & Liburnicarum Conſtructione*, printed among his Obſervations, *Lond.* 1685. in *Latin*. He builds what he hath to ſay upon this Subject chiefly on a Paſſage in *Vitruvius*, Lib. 1. c. 11. where the Architect ſpeaking of the Symmetry of all kinds of Edifices, and how to judge of it, ſaith, You may judge of the Proportion of Ships by the *Interſcalmium*, which the *Greeks* call εἰρεσία: For ſo *Voſſius* corrects the Word *Diphciaca*, as it is in *Turnebus*, or *Iphesiaca*, as it is in the MS. in the *Cotton* Library. In the common Books the Word is διπηχαϊκή; but this *Turnebus* juſtly explodes, for *Vitruvius* could not be ſo abſurd, as to conclude one might judge of the Bigneſs of Ships, from the *Interſcalmium*, in all of them, being of the quantity of 2 Cubits. The *Interſcalmium* therefore, ſaith *Voſſius*, was not, as Learned Men have thought, the Space or Diſtance between two Oars, or between two Benches of Rowers; but the Space between the *Scalmus* and the Rower that ſate fartheſt from the *Scalmus*: Or to ſpeak plainer and more ſignificantly, the ἐντὸς κώπης, as *Heſychius* calls it; that is, as much as is the length of that part of the longeſt Oar which is within the Ship: And this Space the *Greeks* called εἰρεσία, becauſe it was moſtly, tho' not entirely taken up by the Rowers: And this εἰρεσία, he ſaith, once known, not only the Length and Breadth of every Ship that rows is given, but alſo the Proportion of all Parts of her, and the Length of the Oars; as is now well known to be the caſe of the Gallies in the *Mediterranean*. And he judges, that the antient *Triremes*, and the Ships of more *Ordines*, were built much after the Rate and Proportion of the modern Gallies, ſince their Length to their Breadth is repreſented to be about 7 to 1, as it is in our Gallies. *Lucian* indeed deſcribes a Ship, whoſe Length was about

4

4 times its Breadth; but this was not of the kind we are ſpeaking, *viz.* Ships of War, but an Onerary one, which went only with Sails, without Oars: And was much like our preſent Ships of Burden, whoſe Length is about 4 times their Breadth. And leſt this great Length in a Ship of War or Gally, ſhould prove a weakening to her; the Ancients, as well as the Moderns, placed ſtrong Tranſom Beams every where a-croſs her, to keep her Sides together: which both ſtrengthen'd the Ship mightily, And alſo was of uſe to the Rowers, who always pull the eaſier the further they are placed from the *Scalmus.*

As to the length of the Oars, he thinks juſtly, that it varied according to the Rate of the Ship, as it doth now: But this Proportion, he ſaith, is now-a-days obſerved, that if a Gally be 95 Cubits long, and $12\frac{1}{2}$ broad; the length of her Oars muſt be 24 Cubits and $\frac{1}{4}$, that is, ſuppoſing half a common Cubit to be the *Palmus Major* of 9 Inches: $48\frac{1}{2}$ ſuch Palms. The length of the Oar within Board from the end or the handle to the *Scalmus* is eleven Palms or 99 Inches: And to this part there are placed uſually five, and ſometimes ſix hands, or Men to row: for about $4\frac{1}{2}$ Palms from the *Scalmus* (within Board) the Oar hath no hands applied to it, ſince both Experience and the Nature of things teaches, that the Rowers have little or no Force, if they ſit very near to that ſide of the Ship or Boat their Oar is put out from. From the *Scalmus* without the Ship the Oar is 37 Palms in length, at the handle it is 9 Inches in Diameter, and grows by degrees bigger till you come juſt to the *Scamus*, where 'tis 14 Inches in Diameter: And then 'tis 9 Inches again in Diameter at the *Scalmus*; but without it, not above 4 Inches, and this Thickneſs it keeps till you come to the *Palmula*, or part that ſtrikes the Water, which is alſo 9 Inches broad. Theſe Meaſures all Builders of Gallies obſerve in the *Mediterranean*; and unleſs they are obſerved, the Oars will be either ſo weak as to break, or ſo big as to be cumberſome and unmanageable. Having premiſed this, he takes *Ptolemy Philopator*'s Famous Ships of 40 *Ordines* into Conſideration, about which you have ſeen above the Opinions of others. And ſince *Athenæus* tells us, that the longeſt Oars of this Ship were 38 Cubits, or 57 feet in length, the Proportions of the ſeveral parts of thoſe Oars he judges eaſily eſtimable: As for inſtance, he ſhews, that the Thickneſs of thoſe Oars, juſt without the *Scalmus*, ought to have been ſomething above 7 Inches in Diameter, and that 36 foot of the length of the Oar was without the Ship. At the part, or handle, where the Rowers ſate and pulled, it was at leaſt 15 Inches in Diameter: Into which thick handles, if Lead were caſt, as *Athenæus* ſaith there was, they would be eaſily enough manageable by 4 or more Hands, eſpecially having a third part of their length, or 19 Foot within Board: Which is the Proportion that ſhould be obſerved in all Oars. He ſaith further, that there can be no good Rowing Ship but what will have the length of the Oar without Board to the height of the uppermoſt *Scalmi* above the Surface of the Water, in a *Seſquitertian* (he ſhould have ſaid, *Tripla Seſquitertian*) *Ratio*: Or as $3\frac{1}{3}$ to one. Wherefore the Oars in this great Ship being 36 Foot long without Board, if when being put down to ſtrike the Water, they be lowered 1 Foot from the perpendicular of the higheſt *Scalmi*, the diſtance of theſe *Scalmi* from the Water will be 9 Foot. But then the next Difficulty will be, how to account for 4000 Rowers in no greater an height from the Water than 9 Foot, and what is to be underſtood by their riſing up to forty *Ordines*: And how theſe 4000 Rowers could be divided into 40 *Ordines*. He avoids repeating what ſome learned Men in *France* have ſaid upon this Subject: And only obſerves, that they have rightly aſſigned the Riſe of theſe *Ordines* not to be directly perpendicular, but ſlopewiſe, or obliquely: As is apparent from ſome ancient Monuments: But he thinks thoſe are in the wrong, who aſſign but one Man to an Oar, eſpecially in the upper *Ordines* of ſuch great Ships; for ſince they allow but a ſmall part of the Oar to have been within Board, 'tis impoſſible ſuch vaſt Oars would be manag'd by a ſingle Man, ſo as to be of any uſe. For if this Ship of 40 *Ordines* had, as they allow, a Cubits riſe in every Bank, or Order, it muſt be at leaſt 40 Cubits high from the Water: So that by the by, ſince *Athenæus* ſaith her Oars were but 38 Cubits, how could they ſtrike the Water? He ſhews alſo that the Oars muſt not only be long enough to reach the Water, but that they muſt keep to the Proportion above-mentioned: And conſequently muſt have been 180 Feet without Board, and 90 within: Alſo that theſe Oars near the *Scalmus* muſt have been 15 Foot in Diameter; and allowing a proportionable Thickneſs for them at the handles, the part of ſuch an Oar which is within the *Scalmus*, would take up (he ſaith) the room of a 1000 Rowers.

Next, as to placing the Rowers, and the diſtance of their Oars and Benches one from another: There is not much Light to be had from the Ancient Coins and Medals; becauſe there was not room to expreſs above one *Ordo* or Bank of Oars, in the Figures of the *Triremes* and *Liburnicæ.* But in a Coin of *Cæſar Gordianus*, a Draught of which Sir *J. Maſham* had from *Caracari*, and which he ſhew'd to *Voſſius*, there are apparently two *Ordines*, one riſing above another. And upon *Trajan's* Pillar at *Rome*, and ſome other old *Marmora*, there are plainly to be ſeen three *Ordines Remorum* riſing obliquely. And from hence it was, that *Palmerius* and ſome other Learned Men, have fancied, that in the Ships of the Superior Orders, and particularly in that of *Ptolemy Philopator*, the *Ordines* were all accountable after the ſame way, *viz.* in height one above another: But this cannot be allowed, becauſe of the great Abſurdities and Inconſiſtencies above-mentioned, which will plainly be deducible from this Suppoſition.

Voſſius thinks therefore, that there were never any Ships built with above 7 *Ordines* or Banks of Oars: And this he cites *Julius Pollux*, as affirming in theſe words; where he hath corrected the Vulgar *Greek* Text, by his own *Liber Optimus*, as he calls it. ὅτι δὲ τὴν τριήρη ἑκατέρωθεν παρατεινομένη τρόπις, τρῖτος καὶ δίζυγος ὁ καὶ θαλάμιος· ἔστι δὲ ἐνίοτε ἀνίσταται ἡ τριήρης, ὡς ἱέραξ καὶ πῆξιν ἀνελεῖται τρῖτος βίλος, καὶ δίζυγος, καὶ [illegible]. I ſhall not undertake to give you the *Engliſh* of theſe words; becauſe *Voſſius* hath not put them into *Latin* himſelf: And I queſtion, whether there can be ſo much gain'd from them, as he would infer: But however, 'tis probable, that the Banks or Tires of Oars ſeldom or never roſe higher than this, in Ships of uſe, as I have in part obſerved before.

In order to make out that this huge Ship of *Philopator*'s did not riſe to above ſeven *Ordines Remorum*, he next enquires into the diſtance between Rower and Rower. In the preſent Gallies this diſtance is never leſs than 3, and uſually about 4 Foot. And *Ferdinandus Oliverius Luſitanus* ſaith $2\frac{1}{2}$ Feet is enough. In the Ancient *Triremes* theſe Intervals between the Rowers, are not always to be conſidered after the ſame manner. If the Oars were to be placed directly and perpendicularly over each other; the Diſtance of 3 Feet or $2\frac{1}{2}$ Feet was enough between Rower and Rower. But if the *Ordines* roſe obliquely, the Rowers were at leaſt 7 Feet diſtant one from another. But this could not be in the *Pontick Octeris*, deſcribed by *Memnon* in *Photius*: In each ſingle *Ordo* of which he ſaith, there were 100 Rowers; for if we allow 7 Foot diſtance between Oar and Oar, the Ship muſt be above 700 Feet in length, beſides Head and Stern: Wherefore *Voſſius* thinks 'tis pretty clear, that this *Octeris* had but one *Ordo* of Oars, and eight Men to each Oar; but in the Ship of *Ptolemy Philopator*, there could not be ſuch a Diſpoſition of the Oars. For if you ſhould ſuppoſe, that there was only the ſpace of 3 Foot between the Oars of the ſame *Ordo* in this Ship; The τὸ ἔγκωπον, or Part of the Ship where the Oars were uſed, could not be above 100 Cubits; and ſo there would be the ſpace of 180 Cubits, in which there were no Oars at all. Now in all Rowing Ships (ſaith he) more than [illegible]ths of the Length of them ought to be taken up by the Oars. But he concludes, that there was in Reality but one 6th part of *Ptolemy*'s Ships, free from Oars: Becauſe *Athenæus* ſaith there were but 50 Rowers in each *Ordo*: (I ſuppoſe he means on each ſide, for 50 times 40 is but 2000, whereas here were 4000 Rowers) whence 'tis eaſy (he ſaith) to gather, that the Rowers were diſpoſed in oblique Parallelograms: Whoſe Form and Length he gives you a Diagram of. In the *Mediiterranean* Gallies each Rower's Bench or Seat is 22 Inches high, and out of this, if you take 4 Inches for the height of the Footſtep or Stretcher; there will remain the diſtance of a Cubit or 18 Inches between them. And the ſpace of 9 Feet (which he had before ſhewed the higheſt *Scalmi* were in this Ship above the Water) would contain 6 ſuch Benches of Oars. In his Figures he ſhews you the manner of the Rowers being placed, and what ſpaces are taken up by the Motion of their Bodies in Rowing, whether I muſt refer the Reader. After this, he juſtly rejects the Opinion of *Palmerius* and others, of the 40 *Ordines* being all one above another; ſince, according to his Scheme, all the Orders of Rowers (above the third) would rather hinder than forward the Motion of the Ship, by the Oars ſtriking the Water. And this Difficulty ſtill encreaſes with their Notion of their being but a ſmall part of the Oar within the Ship: Eſpecially too ſince they will needs have the Oars (as *Scheffer* in particular) moved by but one Man a-piece. For how is it poſſible for one Man, at but a little diſtance from the *Scalmus*, to manage an Oar of the Length and Bigneſs of thoſe in this celebrated Ship? Since 'tis found, that the ſmall Oars (in Compariſon of thoſe) of a Modern Gally, will ſignify nothing if moved by but one hand, tho' at the diſtance of 12 Foot from the *Scalmus*! And yet 'tis an Eternal Rule in Staticks; that one Man at 20 foot from the *Scalmus*, will have as much power to move an Oar, as 20 Men ſhall have at the diſtance of but one foot from the *Scalmus*. So that finding inſuperable Difficulties in all other Solutions of this matter, he at laſt propoſes his own Opinion and Judgment about the Diſpoſition of the Rowers in this mighty Ship: And he thinks his Account will ſolve the whole Affair, and make it clear and intelligible. 1. Therefore, he ſuppoſes that in the loweſt *Ordo*, or that next the Water, there was but one Man to an Oar. 2. That as for the Oars of the higher *Ordines*, the higher they were poſited, and the farther diſtant the handle of the Oar was from the *Scalmus*, ſo proportionably, had they more Men to each Oar. 3. That the *Gradus* and *Ordines Remorum*, ſo often mentioned by the Ancients, are not only to be ſought in the Decks or Tires of Oars one above another, but rather in the *Juga* or Benches upon which the Rowers ſate, and to which they went up by ſteps. And that theſe Benches were not, as is vulgarly believed, placed parallel to the Sea, or in an Horizontal Poſition, but they aſcended orroſe in height obliquely towards the middle of the Ship, ſo that the Seats of thoſe Rowers upon the ſame *Jugum*, or Bench, which were next the *Forum*, were an entire Cubit's height above thoſe next the *Scalmus*. Then he gives another Diagram, in which he ſhews the manner of the Poſition of the Oars in a Ship of ſix *Ordines*: Where the *Scalmi* of the uppermoſt Oars are 9 foot above the Surface of the Water, each *Ordo* being a Cubit above that next below it; and ſo every where.

The *Thalamita*, or lowermoſt Oar, ſate 4 foot from the *Scalmus*, and his Seat was elevated 4 Inches above it. The Rower in the ſecond *Ordo* ſate 7 feet from the *Scalmus*, and 7 Inches above it. The Rower in the third *Ordo* ſate 10 feet from the *Scalmus*, and 10 Inches above it. The fourth, 13 Inches above, and 13 feet from the *Scalmus*: The fifth ſate 16 Inches over it, and 16 feet from it: And the ſixth or uppermoſt Rower ſate 19 feet from, and 19 Inches above the *Scalmus*. And higher than theſe ſix *Ordines*, he thinks, they did not build, both becauſe the Oars would be of ſuch a length as to be unmanageable; and alſo becauſe there can no great uſe be made of an Oar, when its handle riſes as high as the head of the Rower.

Next, in order to diſcover the Number of *Juga*, or Benches, that were in this Ship, and how many Rowers ſate on each Bench, he takes the length of the longeſt Oars into Conſideration: Theſe *Athenæus* ſaith, were 57 feet long; and conſequently allowing a third part of the Oar to be within Board, as the natural and uſual Proportion is, the *Interſcalmium*, or diſtance between the *Scalmus* and the inner end of the Oar will be 19 feet. But he allows a Cubit for the Thickneſs of the Ship's ſide, reckoning from the *Epiſcalmium*, or the point of Decuſſation. Then he enquires how much of the *Interſcalmium* had no Rowers in it: And ſaith, That in the common Gallies if the *Interſcalmium* be of 17 Spans (or 153 Inches) there are no Rowers for the diſtance of 7 Spans (or 63 Inches) *i. e.* 5 feet 3 Inches from the *Scalmus*. But then the other 10 Spans of length are all taken up with the Rowers; which are 5 in Number. And he finds from *Heſychius*, that this Proportion was obſerved in the Ancient Ships, which were but of one *Ordo* or Deck. But becauſe in Oars of ſuch a vaſt length as thoſe in *Ptolomy*'s Ships, require a greater diſtance between the Rowers and the *Epiſcalmium*; inſtead of 5 foot as in the common Gallies, let the diſtance here be ſuppoſed to be 5 Cubits, or 7 Feet and an half: Then there will remain the ſpace of 12½ feet which he ſuppoſes was taken up by 10 Rowers; 15 Inches being ſpace enough for each Rower. After this he gives another Scheme of the manner of placing the *Juga* of Benches for the Rowers to ſit on; which Benches roſe up in height obliquely one above another: The lowermoſt *Ordo* had but one Rower, the ſecond two, the third four, the fourth ſix, the fifth eight, the ſixth or uppermoſt ten; ſo that in the whole, theſe *Juga* contained 31 *Ordines*. And he ſuppoſes a double Obliquity in theſe *Juga*, i. e. that they roſe or aſcended length ways, as well as in Breadth; and alſo that the *Tigna*, or Beams which ſupported theſe *Juga* were framed ſo as to exhibit a kind of Grate or Lettice. Between theſe Gratings, and the *Juga*, he allows a ſpace for the Maſters or Commanders of the ſeveral Banks of Oars, to come to their Poſts: For ſince between the uppermoſt Rowers there was the diſtance of 19 feet, altho' 2 Cubits ſhould be allowed for the Thickneſs of the Beams which ſupport the *Juga*, and as much for the way for Officers and Commanders to go up to their Poſts, there will yet remain the ſpace of 13 feet: Which Breadth is ſufficient, becauſe this Ship, he ſaith, was [illegible], *i. e.* had three *Fori*.

After this he conſiders the ſeventh *Ordo* of Oars, where the Rowers ſate above the *Tranſtra*; whereas the other ſix Banks of Rowers before ſpoken of, ſate all below: And he ſaith, that tho' this may ſeem to be a higher place than that of thoſe which rowed below or under the *Tranſtra*, yet that in reality it was not ſo, the 6th and 7th *Ordo Remorum* being of an equal Height from the Water, as were alſo their *Scalmi*: which ſeeming Paradox he thus endeavours to make out. Theſe *Tranſtra* were Beams going a-croſs the Ship from ſide to ſide, and not only ſo, but running clear thro' the Side, and jutting out to a conſiderable diſtance without Board. Theſe ſerved ſometimes for Benches for the Men to ſit and row on, which was their firſt Signification; the lower Benches being called *Juga*: The *Tranſtra* the *Greeks* called Θρᾶνοι. Beſides the above-named uſe of which *Tranſtra* for the Men to ſit upon and row, as well without the Ship as within it, they were alſo the greateſt ſtrength Ships of ſo long a Form could have, and which indeed kept them together intirely: And without ſuch 'tis impoſſible to ſuppoſe that Veſſels which were 7 or 8 times as long as they were broad, could bear the Motion of a moderate Sea. And tho' in many of the ancient Coins and Medals which have Ships ſtampt upon them, the ends of theſe *Tranſtra* without the Ship do not appear, the Axis of the Eye being ſuppoſed to be at right Angles with the Ships ſide uſually; yet however in ſome Coins they do appear very plainly and particularly in the firſt of thoſe mentioned and deſigned by *Bayfius*, in which the *Mutuli* or Brackets ſupporting the *Projecture* of the *Tranſtra* are very viſible. And the ſame thing may be collected from *Archimedes* his Ship, mentioned by *Athenæus*, where the *Struppi* and *Scalmi Remorum*, are ſaid to have been a convenient diſtance without the Ship. And theſe *Projectures* with the coverings upon them, had anciently different Appellations according to the parts of the Ship they poſſeſt. That which was next the Poop, they called *Jugum Puppis*, and that next the Prow, *Jugum Proræ*: And theſe *Pollux* ſaith, they called alſo *Maxillæ* and *alæ*. The very extreme ends of theſe Beams jetting out without Board in the Foreſhip, the *Greeks* called ἐπωτίδες, as being like Ears, and theſe Beams were always made of very firm and ſtrong Wood, leſt in an Engagement, the Oars ſhould break off there. For in a Sea Fight the Enemies directed the *Roſtra* of their Man of War after two ſeveral ways: If they engaged a Ship Head to Head directly, then they endeavoured by means of the *Roſtra*, to break off the two Eminent *Epotides* which were in the Prow, ſo that they being broken and the *Scalmi* carried off, the Ship would be ſo diſabled that ſhe could not row; and beſides, the ſtroke did alſo very much endanger the carrying away the Anchors of the Adverſe Ship, which hung at her Bow. But if inſtead of attacking her a head, they aimed at the Stern: Then the Direction of the *Roſtra* was againſt thoſe *Epotides* to which the Rudders were affixed: Which they hoped to bear away by the Shock, and ſo diſable her from ſteering.

Upon the *Tranſtra* were the *Cataſtromata* built; which were a kind of *Decks*, or rather half or quarter Decks: For they were not cloſe every way, but always left open in the middle, that there might come in Air to refreſh the numerous Rowers. And theſe Decks did not only reach as far as the Ship's ſides, but projected out beyond them a good way, even as far as the *Scalmi* of the uppermoſt Oars, and were ſupported by Brackets or Stanchions, at the external Ends of the *Tranſtra*. And therefore when *Thucydides* ſaith that the *Naves Longæ* were without Decks or Coverings before the *Perſic* Wars, he means within Board: For we find from *Homer*, that the moſt ancient *Greek* Ships had thoſe Covering upon the exterior parts of the *Tranſtra*: But they were open in the middle within Board, for the Reaſons above given. Theſe *Cataſtromata* were alſo both ſupported and adorned by *Atlantes* and *Telemones*, that is Pillars of Wood, carved after the ſame manner as the *Caryatides*: Which were Human Figures, whoſe Heads ſupported the Entablature of a Column.

After this uſeful and curious Digreſſion about the *Cataſtromata*, he returns to the Point he was before to make good; and that was, that the uppermoſt Oars of the 7th *Ordo* were not higher, or had their *Scalmi* further from the Water, than thoſe of the ſixth *Ordo* next below them, and under the *Tranſtra*. And this he accounts for by ſhewing, that the *Thranitæ*, or uppermoſt Rowers, ſate not above, but ſidewiſe, of the upper *Zygitæ*: And of theſe he gives a Diagram, and ſuppoſes that the Oars of theſe *Thranitæ* were of the ſame length and magnitude with thoſe of the uppermoſt *Zygitæ*; and conſequently there was in each *Ordo* an equal number of Men to an Oar. And having obſerved before, that the *Sex Ordines Remorum* contained 31 *Ordines Remigum*, accounting from the Rower next the Water, to the uppermoſt of the *Zygitæ*; if you add ten more for the *Thranitæ*, you will have 41 *Ordines* of Rowers upon ſeven *Juga* or Benches, and riſing gradually into ſeven *Ordines Remorum*. Now ſince it appears from *Athenæus*, that in this celebrated Ship of *Philopator*, there were 50 Oars of a Side placed lengthwiſe, and that ſhe was of the height of 7 Banks or *Ordines* of Oars; 50 multiplied by 7 gives 350, which doubled, gives 700 for the whole number of Oars ſhe was rowed with. And ſince it hath been probably ſhewn, that for the Management of theſe Oars there was allotted 41 Men to every 7 Oars, accounted in height one obliquely above another, according to the *Remorum Ordines*: You muſt ſay by the Rule of Three, if 7 give 41 :: what ſhall 700 give? The Anſwer will be 4100. Wherefore there muſt be in this Ship, according to *Voſſius* his Account, 4100 Rowers; which agrees well with *Athenæus*, who ſaith, there were above 4000: In a round Number therefore ſhe may be called a τεσσαρακοντήρης, or a Ship of 40 *Ordines*, tho' ſhe was in reality of a little larger Rate.

And thus doth this very Learned and Judicious Man account for the diſtribution of the 4000 Rowers in this eminent Ship of *Ptolomy Philopater*, offers it for a Solution of the Difficulties about the *Ordines*, which I have the more largely given you, becauſe it is much the beſt of any I have met with; tho' even this is embarraſſed with ſome Perplexities, not to ſay Inconſiſtencies, which ſeem to ariſe from our want of knowing the exact Senſe of the *Greek* and *Latin* Words uſed by the Antients about Shipping; but this is no more than what at this diſtance of Time we may expect.

The Learned and Inquiſitive *Scheffer* came near to a right Solution of this Matter; but he was hinder'd from compleating it, by falling into an Error, in which ſome others have alſo followed him, or he them; which is, that none of the antient Writers mention Oars that were moved by more than one Man at a time. But this Miſtake *Voſſius* ſhews to ariſe from their not conſidering, that both *Greeks* and *Latines* uſe the ſame word for the Oar, the Men that row with it, and the Veſſel rowed by it; as we do at this very day on the River *Thames*. For when we find *Cicero*, in his *5th Orat. in Verrem*, ſaying of the *Syracuſians*, *Conjeciſſe multitudinem Piratarum ex ipſo Navigio, quod erat factum ſex Remorum numero*. 'Tis plain he could not mean there were but 6 Oars in the Ship; for how could thoſe be called a Multitude? Nor could he mean that the Ship had *ſex Ordines Remorum*; for no Piratical Ships ever were of that form in his time, but were built low and flat like the modern Gallies: And therefore he muſt mean, that the Oars were moved by ſix Hands, or Men, a-piece. So alſo when in *Livy*, *Lib.* 33. we find mention made of a Ship of K. *Philip*, which, he ſaith, had *ſedecim Verſus Remorum*. *Voſſius* having proved it to be impoſſible, that any Ship ſhould either directly or obliquely riſe up ſo high, thinks that by *Remos* here is underſtood *Remiges*; and that either there were ſome Oars in this Ship ſo large as to be moved by 16 Men; or rather that the Ship having 4 Orders, Banks or Tires of Oars, the loweſt were moved by one Man at each; the Oars of the ſecond Bank were ſeverally, moved by 3 Men; thoſe in the 3d *Ordo* by 5, and thoſe in the uppermoſt Tire by 7 Men: For 7 + 5 + 3 + 1 makes juſt 16. But this is no more than a probable Conjecture. And after the ſame manner doth he interpret that Paſſage of *L. Florus*, where he ſaith, that *M. Anthony* had Ships from 6 to 9 *Ordines Remorum*: He underſtands by it *Ordines Remigum*, and that ſome of his Ships were ſo large, as to have their upper Oars moved by 9 Men; becauſe a Ship of 9 Banks or Orders in height, muſt needs have her upper Oars perfectly uſeleſs.

And ſo much for this difficult and preplexing Matter; I proceed next to conſider the ſeveral Kinds, Forms, Diviſions, Uſes and Names of Ships, with their Parts, Rigging, Tackle, Armature, Ornaments, Commanders, Officers, &c.

Mr. *Potter* tells us rightly, that the *Greeks* divided their Ships into 3 kinds, *Ships of Burden*, *of War*, and *of Paſſage*. The firſt ſort, *viz.* Ships of Burden, they called φορτηγοὶ, ὁλκάδες (whence our *Engliſh*, *Hulk*) and in the general πλοῖα. Theſe the *Latines* called *Onerariæ* uſually, and ſometimes *Annotinæ* (*Vid. Lib.* 3. *Cæſaris de Bell. Gall.*) That is, *Victuallers* to their Ships of War. The *Greeks* called alſo Ships of Burden στρογγύλα, from their being more bulky, and coming nearer to a round Figure than the Men of War, which were μακραὶ, lean and long. There were ſeveral kinds of theſe Ships of Burden, as you will find below in the general Alphabet of the Names and Kinds of Ships; and they uſually went without Oars, uſing only Sails; but ſometimes they made uſe of Oars too, as is plain from many Paſſages in Antiquity. Theſe kinds of Ships were called ἐφολκίδες, becauſe they were frequently towed after the Ships of War which went with Oars, as being of themſelves very ſluggiſh Sailers: For ὁλκαὶ were the *Remulci* or Ropes with which one Ship towed another. The *Naves Onerariæ* were by the *Greeks* called πλοῖα, to diſtinguiſh them from the νῆες, or Ships of War, to which that word νῆες was appropriated.

Theſe Ships of War were by the *Greeks* called μακραὶ, that is, *Naves longæ*, as the *Roman* Term was, becauſe they were of a very great length in proportion to their breadth, *viz.* in about that of 7 to 1. They were alſo named [illegible], becauſe they were chiefly moved by Oars; and ſometimes, as in *Plutarch* and *Thucydides*, they are called κωπῆρες, for the ſame reaſon. Theſe long Ships or Ships of War were again alſo diſtinguiſhed and named according to the Number of, or the manner of carrying their Oars, as I have already largely ſhewn above. To this Species of the *Naves longæ*, the *Actuariæ* or *Runners* ought to be referred, which were deſigned for Speed, Intelligence, Piracy, &c. For they were called *Actuariæ, quia cito agi poſſunt*, as *Scheffer* thinks; but according to *Iſidorus* and *Bayſius*, becauſe they went with Sails and Oars both. There were two ſorts of theſe *Actuariæ*, a greater and a leſſer Size, of which the latter were called *Actuariolæ*. The *Actuariæ* were ſeldom uſed as Ships of War, but chiefly in Piracy, as Rovers, Corſairs, Runners: They had never leſs than 18 or 20 Oars, and ſome had 30 or 40; but if they roſe up to 50, they exceeded this kind, ſaith *Scheffer*. They had no *Roſtra*.

The third kind of Ships were *Ships for Paſſage*, or *Tranſports*, and theſe the *Greeks* diſtinguiſhed according to the nature of their Paſſengers, or thoſe they were to tranſport. Thoſe that ſerved in general for tranſporting of Men, they called πορεῖα and ἀγωγίδες; but when they carried armed Soldiers, they were called ὁπλιταγωγοὶ and στρατιωτίδες; or if Horſes or Horſemen, ἱππαγωγοί. Theſe Tranſports for Horſe, the *Latines*, as *Feſtus* and *Gellius*, call *Hippagines*, from the *Greek*. And ſo peculiar was this way of denominating the Ships from the Things they carried in them, that we find in *Strabo* ſome σκευαγωγοὶ; and in *Arrianus* we have the word σκευοφόρον in the ſame ſenſe, as the Name of a Ship, which he oppoſes to a Man of War. Theſe therefore were deſigned to tranſport, Tents, Carriages, and all ſuch Utenſils as an Army would have need of in a Camp, or upon a March. *Pollux* calls theſe Tranſport Ships, Βάρις and Βαρεῖαι, becauſe their Form and heavy Lading made them ſlow or ſluggiſh Sailers. As to the Form and Structure of Ships in general, the Antients had a regard to three things: That their Ships might be of a due or juſt bigneſs, of ſufficient lightneſs, and yet of ſufficient ſtrength. If they are made too great, they are both unmanageable, and ruin themſelves by their own bulk and weight. We find the *Perſians* telling *Alexander* the Great (in *Curtius*) *That Ships above meaſure large, were ungovernable*, Lib. 6. c. 11. and this was the great fault of the Ships of *Antony* and *Cleopatra*, whoſe Bulk *Florus* obſerves was ſuch, *ut non ſine gemitu Maris & labore Ventorum veherentur*; and there was hardly any thing more injurious to them than their own Weight. And this we have found by our long Experience in Naval Affairs, that the ſhorter and ſnugger our new Ships are built, the better they ſail, bear hard Weather and a tumbling Sea, and work as eaſily as ſome old Ships of much leſſer Rates.

They were alſo careful that their Ships ſhould not be too heavy: And this was a good conſideration at that time, when the manner of fighting at Sea was ſo vaſtly different from what it is now; for then Speed and Expedition, and eaſy tacking about or turning any way, going readily forward or backward, as occaſion ſerved, was the chief thing they aimed at; and all things conſidered, they are now as good Qualifications in a Ship, as they were then: To have Ships, as *Lucan* expreſſes it,

-----Habiles Pugnamq; capeſſere-----
Et tentare Fugam, nec longo frangere Gyro
Curſum, nec tardè flectenti cedere Clavo.
Lib. 3. v. 553.

In order to gain this point, they took care to provide proper Timber to build Ships withal; and chiefly that it was well ſeaſoned and dry enough, to make it light, buoyant and ſtanch: For green Plank and Timber will both be very heavy, and alſo will in time ſhrink, chap, and ſo leave the Seams open, and the Ship leaky. The *Laryx Sylveſtris*, the *Pinus Domeſticus*, and the *Abies*, are commended by *Vegetius*, lib. 4. c. 34. for this purpoſe: And of the laſt of theſe *Virgil* ſaith,

Naſcitur & caſus abies viſura marinos.

And when this *Abies* was prepared by thorough Seaſoning, *&c.* for this uſe, it was called *Sapinus*, as appears from *Pliny*, lib. 16. c. 40, 42. and alſo from *Vitruvius*, lib. 2. c. 9. But both theſe condemn the *Larix*, as being too ponderous, and the former Author ſaith, 'tis apt to be worm-eaten too faſt. The *Alnus* is much celebrated for this purpoſe by the Antients (*Alnus amica Fretis*) and *Pliny* recommends the *Arbor Perſica*, lib. 13. c. 9. In *Homer*'s time the *Citra* and the *Populus* were in uſe, and *Theophraſtus* praiſes the Cedar: and of theſe, and of ſeveral other kinds of Trees, they adapted Timber for the ſeveral Parts of the Ship.

Quæ longa eſt, tumidis præbebit cornua velis.
Quæ fortis, clavo potior, quæ lenta, favebit
Remigio, ſtagni patiens aptanda carinæ.
Claud. lib 3. de Rapt. Proſ.

And in order to ſecure themſelves againſt the want of Timber for Shipping on any emergent occaſion, the *Romans* appointed Woods and Foreſts for this ſole purpoſe; in which they well deſerve our Imitation, among whom there is very little care taken about the Preſervation of Timber, tho' our Shipping be ſo eminent a part of our Security and Advantage. This *Livy* ſaith was done by *Scipio*, and as others tell us, by *Ancus Martius* their firſt King; and when they had not enough and ſufficient at home, they were ſo wiſe (as ſome of our neighbouring Countries have been in reſpect of us) to get it from their Friends and Allies.

The third thing they lookt after was the Strength of their Shipping; and this they thought depended chiefly on the time of the Year their Timber was felled, and on the cloſe framing and joining the Planks and Beams, *&c.* together. The *Romans* thought the beginning of Autumn the fitteſt Time to cut down Timber for Sea Uſes, and in particular to do it at the New Moon. Timber rightly felled they called *Tempeſtiva*, as you may find by this Line of *Virgil*.

Aut Tempeſtivam Sylvis evertere Pinum.

But whether in this point they were not more nice, exact and curious than is neceſſary, I muſt leave to better Judges.

To render their Ships cloſe, ſtrong and compact, they drove Braſs Nails through all their Planks; which Metal they preferred to Iron, for this purpoſe, becauſe it was leſs apt to ruſt in the Water. And to hinder Leakage, and to render them ſtanch and tight againſt the Water, they drove in *Stuppa*, *i. e.* Oakam, as we do now, into all the Chinks or Crannys between Plank and Plank. And over all this they put a Coat of Wax, and ſometimes of Pitch, as appears from *Flaccus*, lib 1.

Parte trahat tacitum puppis Mare, fiſſaq; fluctu
Vel pice, vel molli concludere vulnera cerâ.

And this Invention *Suidas* attributes to *Phæaces*. *Vegetius* mentions their uſing Roſin alſo among the Wax and Pitch. This Mixture of Pitch and Wax, when taken off the Sides of Ships, *Pliny* calls *Zopiſſa*, lib. 16. c. 13. After all was finiſhed, and the Ship launched, they made always a ſolemn trial of her, how ſhe would ſail or row, and what was to be depended upon from her, before ever they tried her in Service: And from a Paſſage out of *Cicero*'s 5th Oration againſt *Verres*, *Scheffer* thinks 'tis plain, that the Officer, who had the care of the Trial of new built Ships, was called the *Prætor*.

And thus much for the general Conſtruction of Ships: Let us next conſider the ſeveral Parts of a Ship, and their antient Names in the two famous Languages, the *Greek* and the *Latine*.

Scheffer ſaith, the principal Parts of a Ship are, the *Prora* or *Prow*, the *Puppis* or Poop, and the *Venter* or Belly. In the Belly is firſt conſiderable the *Keel*, which is a long Piece of Timber placed along the Bottom of a Ship, into which all her ground Timbers and Hooks are faſtened and bolted fore and aft. This the *Romans* called *Carina*, and the *Greeks* τρόπις and στεῖρα. The Keel was bent in its proper Form, by the means of certain Poſts or Timbers to which it was faſtened, and which the *Greeks* called δρυόχοι; and this word *Cauſabon* thinks anſwered to the *Latin Statumina*. Antiently they put Keels only to their *Long Ships*; their ſmall Boats, and the *Naves Onerariæ* being uſually without them, as *Scheffer* ſhews from *Iſiodorus*.

Next to the Keel was the σάλκις, the *Sentina*, Gutter, or Sink, like our Hollow between the *Keel* and *Keelſon*, where the Keel-Rope runs to clear the Limber-holes, that the Water may come freely to the *Antlia* or Pump. This σάλκις ſome have confounded with the δευτέρα τρόπις, or Keelſon, which in reality lies above the σάλκις, and is frequently by the *Greeks* called λέσβιον χαλκιδὼν, κλειτροπίδιον; and by *Ariſtophanes* ἰδωός. At the bottom of the Keel were placed pieces of Timber, to ſave the Ship from danger of ſpringing a Leak, if ſhe ſhould happen to ſtrike upon a Rock, *&c.* and alſo, as *Pollux* ſaith, to ſave the Keel from breaking and wearing. Theſe the *Greeks* called χελύσματα, and the *Latins Cunei*, as *Scheffer* concludes from this of *Ovid*, Lib. 11. *Metamorph.* v. 516.

Jamq; labant Cunei, ſpoliataq; tegmine Cera
Rima patet---------

Theſe *Celevſmata* muſt needs very much retard the Motion of the Ship, and therefore I ſuppoſe were ſoon left off, as the Art of Ship building improved; and I know of nothing like them that we have now.

Next above the Keelſon and Floor was an Hollow, which the *Greeks* called κοίλη ναῦς, and γάστρη, the *Romans Teſtudo*, *viz.* the Belly, or middlemoſt and loweſt part of the Hold. This Place was compaſſed in by the νομεῖς, *Coſtæ*, or Ribs of the Ship, called alſo ſometime ἐγκοίλια: On theſe the internal Planks were nailed, which, together with the ὑποζώματα, ζωστῆρες, or according to *Ariſtophanes* the ζωμεύματα, which are the *Wales* or *Bends* which run round the Ship length-ways, and on which Men ſet their Feet, when they clamber up the Ship's Side: and the Ribs, external Plank, *&c.* compoſed the πλευραὶ, *Latera* or Sides of the Ship. And the depth of the Ship within board, or height of her from the Water without, they divided into three Parts, according to the Number of the Zones or *Wales* (much as we now call the *Wales*, by the names of 1, 2, 3, and 4 *Wale* from the Water). The lowermoſt *Wale* was called Θάλαμος, becauſe next to the Sea or Water, the middlemoſt ζυγὰ, and the uppermoſt Θρᾶνος, and according as the Rowers ſate in any of the Planes of theſe Zones, they were called *Thalamitæ*, *Zygitæ*, and *Thranitæ*, as hath been before obſerved. Theſe Zones, or Ranks of Places of the Rowers, the *Greeks* called τοῖχοι and ἑδώλια; and the *Latins Fori*: For the *Fori* were not the ſame with the *Cataſtromata* (as ſome have fancied) which are the uppermoſt Decks or Coverings in a Ship: For *Lucan* mentions the upper and lower *Fori*, as being Places where the Rowers ſate, in theſe Verſes, beforementioned on another occaſion.

Intrat diffuſos peſtis Vulcania paſſim,
Atq; implet diſperſa Foros: Trepidatur omiſſo
Summis remigio, ſed enim tam rebus in arctis
Fama mali nondum tanti penetrarat ad imos.

And before in *Lib.* 3. *v.* 29.

At poſtquam ruptis pelagus compagibus hauſit
Ad ſummos repleat Foros, deſcendit in undas.

In the Ships Sides were Places or Holes to thruſt the Oars out at, which if it were all in one continued Vacuity, Mr. *Potter* ſaith, the *Greeks* called it τρῆμα: But if, as it was moſt uſual, each Oar had its ſingle Hole, then theſe diſtinct Holes were called τρήματα and τρυπήματα, as appears from *Ariſtophanes* and *Pollux*: And the Interpreter on the former ſaith truly, that they were ſometimes called ὀφθαλμοὶ, from their appearing ſomething like Eyes. Theſe Holes, 'tis plain from *Feſtus*, the *Latins* called *Columbaria*, becauſe they were like Holes in a Dove-houſe, placed orderly, one above another. They took their Appellation alſo (as the Rowers did) from their height above the Water, the uppermoſt being called θαλάμια, the middle Ranks ζύγια, and thoſe next the Water θράνια. The whole ſpace which the Men took up to ſit and row, in the *Greeks* was called ἐγκωπον: Which Word ſeems alſo to ſignify the ſpaces between the ſeveral *Ordines Remorum*.

Above the *Thranus*, over all the Banks of Oars, there was a Paſſage left free to walk in, and therefore called πάροδος, and ſometimes παράθρανος, as being contiguous to the uppermoſt Banks of Oars. *Scheffer* thinks, That the Entrance into the Ship's hold was near this place, and therefore 'tis called *Aditus* by *Ovid*, in *Libr.* 3. *Metamorph.*

> *——— Pars hic mihi maxima Juris*
> *Inque Aditu ſubſiſto————*

Anciently 'twas called *Agear*: Which word *Ennius* hath in this Verſe, *Lib.* 8.

> *Multa foro ponunt, agearia longa replentur.*

As *Scheffer* rightly corrects the Text: Inſtead of the Vulgar, *Agiaria*.

Let us now leave the middle part of the Ship, and move forwards into the Fore-Caſtle, Head or Prow: This the *Greeks* called πρῶρα, and μέτωπον, and the *Latines Prora*: In ſome Ancient Ships, we read, that this part was double, as alſo the Stern; as in that Ship of *Danaus*, with which he fled into *Egypt*. Here was conſiderable, firſt the στόλος, which was a long Peece of Timber ſticking out of the Head, ſomething in the form of a Helmet, and with a kind of *Voluta* or Scroul at the end winding downwards; which from its Shape they called ὀφθαλμὸς, it being ſomething like an Eye; this *Stolus* was alſo called χήνισκος and στειροκαταλαία: The uppermoſt Convex part of this, as appears by the draught of the Ancient *Triremis* which *Lazarus Bayſius* pretends to give us from the *Trajan* Column, was the ἀκροστόλιον, which the *Romans* called *Apluſtre*, and anſwered to the ἄφλαστα in the Stern: Sometimes the *Acroſtolia* were of an Orbicular Form, ſometime ſhaped like Wings; and to it there was often an ἀσπιδεῖον, ἀσπιδίσκη, a *Scutulum*, or little Shield affixed, and ſometimes a piece of Wood was erected, to which Ribbonds of divers Colours were hung, and ſerved both for Ornament, and Diſtinction of the Ship: But there was uſually in the Prow placed juſt below the στόλος the παράσημον, the *Ancient* or Flag by which Ships were not then diſtinguiſhed, to what Nation they belonged, as they are now, but from one another. The *Latines* called this *Pictura*, becauſe it uſually repreſented ſome Animal, Flower, or ſome Artificial thing, a Crown, *&c.* Sometimes alſo this was carved on a kind of Table, Shield, *&c.* of Wood, and painted afterwards: From the Figure of this *Paraſemum* the Ship took its Name, being called the *Dolphin*, if it repreſented that *Fiſh*: But with us now, this is uſually done from the Picture in the Stern. In *Virgil* there are two Paſſages confirming this, as I find them cited by *Moriſotus* in his *Orbis Maritimus*.

The firſt is,

> *——————— Æneia puppis*
> *Prima tenet, roſtro Phrygios invecta leones.*

Where tho' the Ship of *Æneas* was *Sub Tutela Matris Deum*, whoſe Image was therefore painted in her Stern, yet in her Prow ſhe bore a Lion or Lions for her *Paraſemum*, and ſo was denominated from thence.

The other is this;

> *Maſſicus cerata Princeps ſerat æquora tygri.*

Where 'tis plain the *Paraſemum* (which was a Tyger) was in the Prow. In the Head of the Ship there was ἔμβολον or *Roſtrum*; the Uſe of which I ſhall ſhew hereafter, this was the loweſt part of the Head, and uſually under Water. *Scheffer* ſaith the Sides of the Prow were called [illegible], and ſometimes παρια: Which Mr. *Potter* corrects into παρειαὶ, that is Cheeks, in Alluſion to an Humane Face. Between the Sides of the Prow or Head was contained that ſpace which the *Greeks* called παρεξειρεσία, becauſe it was free from Rowers, and this reached from the foremoſt Oars to the ἀκροστόλιον. This Prow or Fore-part of the Ship was anciently finely adorned: Sometimes guilded with Gold, and ſometimes painted with beautiful and lively Colours. Of which *Red* was moſt anciently in uſe: For we find *Homer* giving the *Greek* Ships the Titles of μιλτοπάρῃοι and φοινικοπάρῃοι: This they thought very proper for Ships of War, becauſe it was the Colour of Blood: But ſometime Blew or Sky-Colour was alſo the Faſhion, as bearing ſome Reſemblance with the Colour of the Sea: Thus we find in *Homer*, Ships called κυανόπρῳροι from their blew Heads; and in *Ariſtophanes* they are called κυανέμβολοι: Several other Colours were alſo uſed; and theſe were not only Varniſhes or Colours ſlightly laid on, but they were done after a much ſtronger manner; and annealed in by Wax melted in the Fire, and incorporated with the Pigment, ſo that neither Wind, Water, nor the heat of the Sun, would much damage it. From the Wax that was uſed in this kind of Painting, it was called κηρογραφία, and from its being done by fire ἐγκαυστική. 'Tis mentioned by *Ovid* in the 4th Book of his *Faſti*: Thus,

> *————— Picta coloribus uſtis.*
> *Cærulem matrem concava puppis habet.*

In theſe Colours, and in divers parts of the Ship, they did uſe to repreſent the Figures of their Deities, of Animals, Plants, Flowers, *&c.* as *Bayſius* at large ſhews from the Ancient Monuments. And the manner how they did it is deſcribed by *Vitruvius* in *Lib.* 7. *c.* 9. There was alſo one kind of Ornament which, with the *Greeks*, was peculiar to the Prow of a Ship; and wherewith the Extremities of it were adorned: Theſe in general they called ἀκρώνια; and by the Scholiaſt on *Thucydides*, νεῶν κορωνίδες. The *Latines* called them *Corymbi*, as I ſuppoſe from this of *Homer*.

> ————νεῶν ἀποκόψειν ἄκρα κόρυμβα.

But the *Latines* did make theſe *Corymbi* common Ornaments to the Stern of the Ship, as well as the Prow; and in the general, they ſeem to be much the ſame with the ἀκροστόλια.

In the *Stern* of the Ship, which the *Greeks* called πρύμνα, and their Poets οὐρά. The Top, or uppermoſt part of it, was the ἄφλαστον, or *Apluſtre* in *Latine*; which was a kind of handſome Shell framed of Boards, and placed over the Captain's Seat in the Poop; a little lower was a Place called ἀσάνδιον, whoſe lower part was the ἰσθμίον; and becauſe it was bent in an Arch, like the head of a Cradle, or of a Basket Chair, they called it [illegible]: And the Planks of Wood out of which this was made, [illegible]. The Poop, or upper part of the Stern was much higher than the Head, and incurvated in Arch-wiſe: For *Virgil* mentions the Commander of the Ship as ſtanding, — *Celſâ in puppi*; and *Ovid* hath it, *Stantem in Puppe recurvâ*: For this was the Pilot or Maſter's Place, who gave Directions for ſteering the Ship: And here the Commander in chief ſate, in the abovementioned arched Seat: Which *Athenæus* calls σκηνὴ, the *Latines* called it *Diæta* and *Tabernaculum*. In the Stern was alſo the *Tutela Navis*, or the Picture or Image of the Deity under whoſe Protection the Ship was thought to be, as having been ſolemnly committed to it. The Stern was alſo then, as it is now, the moſt honourable part of the Ship: And held ſo ſacred, that it was a kind of Sanctuary to retire to in the greateſt Danger: And this *Fonsbergius* (in *Scheffer*) ſaith is the Cuſtom at this Day in the *Mediterranean* Ships. It is called by *Germanicus*, *Veneranda Puppis*: And *Livy* ſpeaking of the *Carthaginian* Embaſſadors petitioning for Peace of the *Romans*, ſaith, *Lib.* 30. *c.* 36. *Cum ad Puppim Prætoriæ Navis acceſſiſſent, Velamenta ſupplicum porrexerunt, orantes implorantesq; fidem Scipionis.*

Let us next conſider the Rigging, Tackle, and Inſtruments uſed aboard a Ship, both for common and Warlike Uſes. The Inſtruments neceſſary for common Uſe, were ſuch as were ſubſervient either to her Rowing, Sailing, or both. Thoſe neceſſary for Rowing were firſt the *Tranſtra*, as the *Latines* called them, becauſe they went a-croſs or a-thwart the Ship, from ſide to ſide; theſe were the Seats on which the Men ſate that rowed; of whom *Virgil* ſaith,

> *Conſidunt Tranſtris————*

The *Greeks* called theſe σέλματα, ἑδώλια and ζυγά: From whence the *Latine* word *Juga* in the ſame Senſe: Theſe *Tranſtra* ſerved the Rowers for Beds as well as Seats; as is plain from this Paſſage out of the *Agamemnon* of *Seneca*.

> *—————Credita eſt vento Ratis*
> *Fuſusq; Tranſtris Miles————*

And from this of *Virgil*, *Æneid.* V.

> ———*Placida laxarunt membra quiete*
> *Sub Remis, fuſi per dura Sedilia Nautæ.*

He might very juſtly call them *dura Sedilia*: For they were only the bare croſs Beams of the Ship, without any Beds upon them: For to have had ſuch would in thoſe Days, would have been thought too ſoft lying for a Soldier or a Sailer. Nay the very Captain, or Commander himſelf, ſlept at Night in his Arched Hutt, or Century Box, upon the Poop; where he abode, eat and drank by day: And *Plutarch*, in the Life of *Alcibiades*, takes notice, that ſome ſofter and eaſier Methods of lying, which that General had contrived for himſelf, were objected againſt him as a great Fault.

2. *Remi*, κῶπαι, or Oars: Theſe are ſometimes called *Palmulæ*; but this word properly ſignifies the outermoſt broad ends of the Oar which ſtrike the Water: Theſe the *Greeks* call πλάται; and they were often lined or covered with Braſs: Theſe Oars were of different Length, Strength, and Weight, according as there was occaſion, as hath been before obſerved: The *Thranitæ* uſing the greateſt and longeſt: The *Thalamitæ* the leaſt and ſhorteſt.

3. There were neceſſary to rowing, the *Lora* or *Struppi*, by which, as with Leathern *Strops*, the Oars were faſtened to the *Scalmi*, that they might not ſlip too far out of the Ships ſide, or out of the hands of the Rowers. *Vitruvius* Lib. 10. c. 8. ſaith, *Remos circa Scalmos Strophis religari*: *Q. Curtius* calls this, *aptare Remos*, the fitting the Oars for Buſineſs. The *Gubernacula*, or Paddle-Helms, with which the Ship was ſteered (of which below) were alſo bound to their *Scalmus*, with theſe *Lora*. Theſe *Lora*, the *Greeks* called τροποὶ and τροπωτῆρες: And in *Heſychius* you find ὑποκωπητῆρες in the ſame Senſe.

4. *Scalmus* was the *Thoul*, *Pin* or *Peg*, placed in the Hole in the Ships ſide, *&c.* on which, as on an *Obex*, or *Hypomochlion*, the Oar was fixt; and on which, as on a Centre, it moved: The *Greeks* called it alſo σκάλμος, but *Heſychius* κωπηλίς; and ſometimes not only the *Paxyllus* in one particular Hole where an Oar was thruſt out and faſtened by the *Lora* to it, was called *Scalmus*, but the whole Rank of Oar-holes, belonging to any particular *Ordo*. And thoſe pieces of Leather, with which we now line the *Scalmus*, to ſave the Oar from wearing out too faſt at the part which plays in the *Scalmus*; the *Greeks* called ἱμάντια, and ἄσκωμα. There was alſo a piece of Leather faſtened upon the Seat of each Rower, which the *Greeks* called ὑπηρέσιον; and theſe were all the Inſtruments which I can find mentioned by Authors as ſubſervient to bare Rowing. Let us next conſider ſuch as were neceſſary for Sailing. Of theſe the

1. Were *Sails*, which the *Latines* called *Vela* and *Tunices*: And the *Greeks* ſometimes, ὀθόνας. They called them alſo ἄρμενα; but moſt uſually ἱστία from their requiring a Maſt to carry them. The *Sail*, ſome ſay, was firſt invented by *Icarus*; others by *Dædalus*. At firſt there was but one Sail in a Ship: But in a little time we find mention made of the uſe of more; whoſe Names are 1. ἀρτέμων: And this according to *Pollux* was a kind of Top-ſail, uſed above the *Antenna*: And ſerved rather to direct the Ship, than to forward her Motion, or give her freſh way. The *Artemon* ſeems to be the ſame with what the *Latines* called *Supparum*.

> *Summa pandens*————
> *Suppara Velorum, perituras colligit auras.*
>
> Lucan. Lib. V.

For *Lipſius* ſaith the *Suppara* were ſuch Sails as were born aloft, or on the Tops of the Maſts. 2 ἀκάτια were the lower, or great Sails, the Courſes, as we now call them (*i. e.*) the Main-ſail and Fore-ſail. Some have confounded the ἀκάτια with the δόλωνες, but theſe were very ſmall Sails uſed ſomewhere in the Head, or rather about the Bow-ſprit: They are ſometimes called alſo *Lipada*. (3.) Ἐπίδρομον was a Sail of the 2d Degree of Magnitude, and as *Heſychius* and *Iſidorus* ſay was placed in the Stern, *i. e.* it was the Mizzen, as 'tis now called.

The Matter of which the firſt Sails ſeem to have been made was *Leather*: Which *Varro* concludes from the *Latine* Word *Velum*, *à Vellere*. Theſe Leathern Sails were uſed by the *Venetians* in *Cæſar*'s time: *Vid. Lib.* 3. *de Bell. Galico.* But they were generally of Linen afterwards, as they now are, and of this Linen there was a ſort peculiar for Sail-cloth, which they called *Carbaſus*. As appears by this of *Virgil*, and many other Paſſages.

> ——— *Tumido; inflatur carbaſus Auſtro.*

Strabo tells us, *Lib.* [illegible] that the People on the *Nile* uſed Sails made of Reeds; and many kinds of Reeds and Ruſhes are uſed for the purpoſe to this Day in the *Eaſt Indies*, where nothing is more common than *matted Sails*, or Sail made of Matts.

2. The Yards on which the Sails were hung, or bent to; the *Greeks* called κεραῖαι, the *Latines Antennæ*: But *Silius Italicus* calls them ſometimes *Cornua*, in Imitation of the *Greek*.

> ————— *Veloq; Superba capaci*
> *Cum rapidum hauriret Boream, & Cornibus omnes*
> *Confligeret flatus*————

The Parts of the Yards next the Maſt, by which they ſlide up and down upon it, they called ἄμβολα and σύμβολα: The parts of the Yard fartheſt from the Maſt they called ἀγκῶναι, *Brachia*: i.e. as we ſay, the Yard Arms: But the very extream Parts of all, they named ἀκροκεραῖαι, the Tips or Points of the Yard-Arms.

3. Ἱστὸς the Maſt in *Latin*, *Malus*, was the upright Pole that bore the Yard, and on which it moved up and down. At firſt there was but one Maſt; and this was placed exactly in the middle of the Ship: And therefore its Step, or Hole in which it was placed was called by the *Greeks* μεσόδμη, and by the *Latines Modius*. But the ἱστοδόκη of *Homer* was a place provided a-ſhore to lay up the Maſts, Yards, *&c.* in, becauſe whenever they came a-ſhore they did uſe to take down the Maſts, in thoſe days. The Parts of the Maſt were, 1. πτέρνα, the Foot of it, which went into the Hole or Step. 2. ληνὸς, or as *Athenæus* writes it λῆνος, the ſame with τράχηλος, was that part of the Maſt to which the Yard was fitted when the Sail was ſet. 3. Θωράκιον, the round Top of the Maſt, where Men ſtood to look out for Land, and in time of Fight to throw Darts, *&c.* the Top-maſt above this was called ἰκρίον, and the very Extremity or Top of it the *Greeks* called ἠλακάτην, on which hung a Pendant or Streamer called ἐπίσειον.

4. Ἐπίτονοι, *Funes* in General: Of which the Account in the Ancient Writers is very obſcure. *Scheffer* thinks the *Latines* called the *Halliards* and *Lifts* with which the Yards were hoiſted up, or lowered upon occaſion, *Rudentes*: And theſe *Vegetius* calls *Funes Chalatorii* from the *Greek* χαλᾶν, *dimittere.* *Suidas* ſeems to limit the ἐπιτόνους ſo, as that we are to underſtand by them only thoſe Breaſt Ropes and Parrels, which faſten the Yards to the Maſts. The *Ceruchus*, *Anchonis* and *Anquina*, ſeems to have been what we now call a *Brace*, which is a Rope at each end of the Yard-Arm, by means of which the Yard is *ſquared*, *traverſed*, &c. or ſet in any Poſition, which is beſt, that the Sail may draw the moſt Wind; and whether theſe be not what *Homer* calls the κάλωαι, what *Suidas* calls ὑπέραι, and the *Latines Opiferæ*, ſince they ſeem to be intended, by the dark Deſcriptions we have of them, for the ſame uſe: I muſt have the Learned Reader to judge. Theſe Ropes belonged all to the Yard; but the Πόδες, or *Pedes*, were immediately faſtned to the Sails: Theſe I take to be what we now call the *Sheets*; which are Ropes bent to the Clews of the Sails, and are deſigned to hale off, or hale on the Sail as there is occaſion, and according as the Wind veers about. The Ropes with which they uſed to ſtrike or raiſe their Maſt, *Scheffer* from the Scholiaſt upon *Apollonius*, calls μεσουρίαι, *Meſuriæ*: Which I take to be the *Stays* of the Maſts: And thoſe Ropes which ſtrengthen, keep, erect, and ſupport the Maſts ſides way, he ſaith were called πρότονοι, *Protones*; i. e. a kind of *Shrouds*. The Καρχήσιον ſeems to have been either the Tackle, or a Block with Shivers in it, thro' which the running Ropes of the Ship went. The Cables, Hawſers, or Ropes by which the Ship rode at Anchor, the *Greeks* called πείσματα and ſometimes κάμιλοι: The *Latines Anchorarii*; and *Anchoralia*: The *Venetians* long ago uſed Iron Chains inſtead of theſe, as *Cæſar* obſerves: *Anchoræ pro funibus ferreis catenis revinctæ.* The Rope with which any Ship or Boat was towed along after another at Sea: Or on Shore by Men or Horſes: The *Greeks* called ὁλκοί, ῥύμουλα and σειραί: The *Latines Parolcones* and *Remulci*: And by *Feſtus* and *Iſidorus* the Word *Spira* is retained. Thoſe Ropes by which any Ship was faſtened a-ſhore, the *Greeks* called Ἀπόγεια, Ἐπίγεια, πείσματα and πρυμνήσια: But the *Romans Retinacula*. And uſually near the Water-ſide where Ships lay, there were great Stones ſet up, with Holes

bored in them to let the *Retinacula* thro': Theſe Stones the *Greeks* called δακτύλια: But ſometimes Anchors were uſed alſo for this purpoſe; and ſometimes Poſts ſet up with Rings on them; which *Feſtus* tells us were called *Tonſillæ*. There was a Rope alſo which they called *Tormentum*, which went from Head to Stern, and was uſed to keep the Ship tight together in hard Weather, as *Iſidorus* ſaith; and of this kind, as *Rivius* obſerves, muſt the *Hypozomata* be, which are mentioned by St. *Luke* to be uſed about the Ship in which St. *Paul* was ſhipwrackt. 'Tis plain ſuch uſed to be carried to Sea; for *Athenæus* ſaith, in *Ptolomy Philopator*'s Ship there were 12 ſuch provided, which were 600 Cubits in length each of them; being Cables long enough to compaſs the Ship all round about, and ſo to keep her from falling or breaking to pieces. That ſuch things were practiſed at other times alſo, is apparent from the Account we have of *App. Alexandrinus* his blaming *Sext. Pompeius*: Becauſe he purſued not the Enemies Ships hard enough after he had worſted them, but ſuffered them to ſave their diſabled ſhatter'd Ships, by under-girting them with Ropes: And as it is plain from this of *Horace*.

> ------*Sine Funibus vix durare Carinæ*
> *Poſſint imperioſius Æquor.*--------

4. Πηδάλια, *Gubernacula*, the Rudders: In the ancient Ships were a kind of Paddles, or ſtrong Oars with broad Palms; theſe were faſtened on a *Scalmus* on each ſide of the Stern of the Ship, not juſt behind as our Rudders are, but where ſhe begins to round away towards the Stern Poſt. Sometimes theſe were called *Plectra*. The ſeveral Parts of theſe Rudders had theſe Names, Οἴαξ, *Clavus*, which was a Nail, or Sprig of Iron, which went a-croſs thro' the *Pertica*, at the end of the *Anſa*, to keep the Rudder right in the *Scalmus*. [illegible], *Pertica*, the round long Pole running thro' the middle of the broad part of their Paddle: πτερύγιον, *Pinna*, the broad part of the Paddle, on each ſide of the *Pertica*. αὐχὴν, *Anſa*, the handle or *Tiller*, which the Steerſ-man held in his hand. Some ſmall Boats had but one of theſe Rudders, and then that was placed juſt behind in the middle of the Stern; but the larger Ships had always two at the leaſt, diſpoſed as is above-ſaid: And *Ptolomy Philopator*'s Great Ship had four. In ſome of their Ships of War, there were alſo Rudders in the Fore-ſhip, that ſo they might ſteer away Stern formoſt, if there were Occaſion.

5. ἄγκυρα, *Anchora*. This was firſt the Invention of the *Tyrrhenians*, as *Pliny* ſaith, tho' others attribute it to *Midas*, the Son of *Gordion*: They were very anciently made of Stone: And that not only as being great Stones with Holes bored thro' to faſten Boats to, as in Rivers now a-days; but formed into the Shape and Figure, nearly, of our preſent Iron Anchors: And *Ludovicus Romanus* tells us, that at *Calecut*, in the *Eaſt Indies*, Marble Anchors are uſed to this day, the like others relate of *Japan*. *Athenæus* ſaith, that in *Ptolomy Philopator*'s Ship there were four Wooden, and eight Iron Anchors. But theſe Anchors of Wood, *Scheffer* thinks, were not of the Figure of ours; but only pieces of Wood, with Lead caſt into them, by the weight of which the Ship was ſtaid. And this he gathers from a Paſſage in *Diodorus*, Lib. V. where he ſaith, that the *Phœnicians* coming into *Italy* to buy Silver, and finding very great Plenty of it, they took out the Lead out of their Anchors, and put Silver in the room of it. They uſed alſo for the ſame purpoſe Pyramidal Baskets, which they filled with Stones and Pebbles, eſpecially in hard Ground, where the Fluke of an Anchor would not take hold, and thoſe Anchors they called [illegible], as *Polyænus* tells us in the Hiſtory of *Iphicrates*, Lib. 3. exemp. 38. In time they came to make their Anchors of Iron; but at firſt they had but one Fluke, theſe the *Greeks* called ἑτερόστομοι; but after ſome time, *Eupalamius*, or ſome ſay *Anacharſis*, a *Scythian* Philoſopher, found out, that it was better they ſhould have two Flukes; this the *Greeks* called ἀμφίστομος and ἀμφίβολος; and the *Romans*, *Anchora Bidens*. The Antients, as well as the Moderns, uſed ſeveral Anchors aboard their Ships: Of which the ſtrongeſt and largeſt the *Greeks* called ἱερὰ, the *Latines*, *Sacra*: The ſame with what our Seamen call now the *Sheet Anchor*. Whether they made uſe of any Stock to go thro' the Ring of the Anchor, in order to keep the Arms right, ſo that the Fluke might ſtrike into the Ground; as one would think they muſt needs do, is not certain: There being not above one or two ancient Coins that expreſs any ſuch thing: But this indeed, as *Scheffer* obſerves, may ariſe from want of Care in thoſe that made the Dies for Meddals.

6. Βολὶς, which *Iſidorus* and *Lucilius* call *Catapirates*, and *Herodotus*, καταπειρητηρίη, was the Sounding Line and Plummet, with which they both examined the Depth of the Sea, and alſo underſtood the Nature of the Bottom or Ground, over which the Ship was.

7. Ἄντλον, ἀντλίον, which *Feſtus* calls *Tollena*, was the Ship's Pump, whereby to free her from the Water which leaks into the Hold. This *Lucretius* calls *Hauſtrum*:

> *Ut Fluvios verſare Rotas atq; Hauſtra videmus.*

8. Κοντοὶ, which *Sophocles* calls πλῆκτρα: The *Latines* retained the word *Contus*, which was a ſtrong Pole of ſufficient Length, by which they fended off the Ship from ſtriking againſt Rocks, Shelves, &c. and alſo ſet her off from the Shore into the Water: Theſe had, as our Setting Poles to this day have, Iron Spikes at the bottom, as appears from this of *Virgil*,

> *Conſurgunt Nautæ, & magno clamore morantur;*
> *Ferratoſq; Sudes, & acutâ cuſpide Contos*
> *Expediunt*----------
>
> Æneid 5.

A Boat that had neither Sails nor Oars, and which was ſet, or ſhov'd along only by theſe *Conti*, the *Greeks* called κοντωτόν; from their Uſe the *Romans* called them alſo, *Trudes*, and ſometimes *Sudes*.

7. Ἀσφάλισμα, ἔρμα, ἕρεισμα and θεμέλιος, in *Latine Saburra*, the Ballaſt, was then, as it is now, uſually of Sand, or ſmall ſtony Gravel, &c. and had the ſame uſe with them, as with us.

Having thus ſhewed you the Inſtruments aboard the antient Ships, which were neceſſary to ſail and row them, we will next conſider their Armature, and after what manner their Ships of War *offended* their Enemies, and *defended* themſelves. And firſt, the Old Ships of War were famous for their ἔμβολα or *Roſtra*, which were Beams of Wood ſticking out forward in the Head of the Ship, armed ſometimes with Braſs, and ſometimes with Iron Spikes, and their uſe was to run into the Sides of the Enemies Ships under Water, and ſo by making Holes in them, to ſink them. Theſe do not appear to have been in uſe in *Homer*'s Time, for in him there is no mention of them. But yet *Æſchylus* calls *Neſtor*'s Ship δεκέμβολος; and *Eurypides* in his *Iphigenia* ſpeaks of Brazen *Roſtra*, uſed in the *Grecian* Ships, as long ago as the *Trojan* War; but 'tis probable they deſcribed the antient Ships, as built after the manner of thoſe of their own Age. The Invention of theſe *Roſtra* is by ſome attributed to one *Ariſto* a *Corinthian*; and he communicating this to the *Syracuſians*, it proved of great Advantage to them in a Sea-fight which they ſoon after had with the *Athenians*: For by this new Device ſeveral of the *Grecian* Ships were broken and ſunk, as *Diodorus Siculus* mentions, *Lib.* 13. Theſe *Roſtra* are ſpoken of by *Cæſar*, Lib. 4. c. 14. and *Pliny*, Lib. 7. c. 57. will have one *Piſeus*, whom in the ſame Chapter he calls *Tyrrhenus*, and ſaith that he invented the Trumpet, to be the firſt Author or Inventor of them. At firſt they were made very large and long; but afterwards finding that they too much hinder'd the Motion of the Ship, they were made leſs and ſhorter: For they were placed uſually under the Surface of the Water, as appears from this Paſſage in *Virgil*, Æneid. 5.

> ----------*Totumq; dehiſcet*
> *Convulſum Remis, Roſtriſq; ſtridentibus Æquor.*

But there are ſome old Medals that expreſs the *Roſtra* as partly above, and partly under Water, in the Ships uſed in the firſt *Punick* War. And *Scheffer* from *Diodorus* attributes the Contrivance of placing theſe *Roſtra* entirely under Water, and not the firſt Invention of them, to *Ariſto* the *Corinthian*. The Number of theſe *Roſtra* was uncertain: Sometimes a Ship had but one, ſometimes two or three of them: *Ptolomy Philopater*'s vaſt Ship is ſaid to have had ſeven *Roſtra*, and *Æſchylus* makes *Neſtor*'s Ship to have ten of them. Their Figure was often that of the Beak of a Bird, the Head of a Serpent or of ſome Beaſt, and from thence came the Name *Roſtre*. They were only in Ships of War, which therefore are often called *Naves Roſtratæ*.

The Ἐπωτίδες alſo, as the *Greeks* call them, were another part of the Armature of the Antients Men of War; and theſe were thick, ſtrong, and proportionably long Beams, coming out of each ſide of the Prow or Head of the Ship, in order to fend off againſt the Stroke of the Enemies *Roſtra*. *Scheffer* thinks that the *Corinthians* invented

vented theſe *Epotides*, and that the *Syracuſians* were the firſt that followed their Example. They were always placed in the Foreſhip, and conſequently the Etymologiſts are miſtaken, who fix them in the Stern part alſo. It doth not appear that the *Romans* had any Name of their own for theſe *Epotides*, nor do their *Coins* or *Marbles* expreſs their Figure: But in ſome of the *Greek* Medals they are very plain, an Inſtance of which *Scheffer* gives from *Lazius*. He alſo thinks, that thoſe Beams which are ſometimes deſcribed on Coins, as ſticking out directly forward, and over the *Roſtra* (which I ſuppoſe were moveable, and were taken in when the Ship attacked the Enemy with her *Roſtra*, and thruſt out when ſhe was attacked) were called alſo *Epotides*. The breaking off theſe *Epotides*, and ſo diſabling a Ship from rowing, was, as I have above ſhewn, one of the chief Aims of every adverſe Ship.

Another part of the Armature of the Antients Ships, were the ἴκρια or *Cataſtromata*, which from *Thucydides*, *Polybius*, *Pollux*, *Heſychius*, &c. we learn were certain Decks or Stages of Wood on which the Soldiers ſtood to fight, in a Ship of War, and to throw Darts, Javelins, *&c.* at the Enemy. *Petronius* calls this Deck the *Conſtratum Navis*; whence ſuch Ships as had theſe *Cataſtromata*, the *Latines* called *Naves Conſtratæ*, the *Greeks* κατάφρακτοι, and ſometimes they called the καταστρώματα by the Name of καταφράγματα. Theſe *Naves Conſtratæ* were oppoſed to the *Apertæ* or ἄφρακτοι, *i. e.* as we now call them, *Open Boats*. *Pliny*, Lib. 7. c. 5. attributes the Invention of theſe *Cataſtromata* to *Theſius*, and ſaith, that before Men fought only in the Head and Stern of the Ship, where there were ſome *Tabulæ* or Frames of Boards erected for the Men to ſtand on, eſpecially in the Head of the Ship. And this Cuſtom of covering the Ships of War only in part, remained till the time of *Themiſtocles*: For it appears by Hiſtory, that the Ships that fought againſt the *Æginetæ*, *Corcyræi*, and alſo againſt *Xerxes*, were only covered over with Decks, Stages or *Cataſtromata* in the Head and Stern: For, as *Thucydides* expreſſes it, καὶ αὗται οὔπω εἶχον διὰ πάσης καταστρώματα. Some Writers have confounded theſe *Cataſtromata* with the *Fori*, but falſly; for the *Fori* were a kind of Diviſions of the Rowers into *Claſſes*; but theſe Decks were above all the Oars, and over all the Rowers Heads, and were the higheſt part of the Ship, or the *Propugnacula*, as they are ſometimes called, where the Soldiers ſtood to fight.

Bayſius obſerves, that there were ſome of the leſſer Ships which were covered cloſe over for their Security againſt Darts, *&c.* And *Cæſar* ſaith of the *Maſſilienſes*, *Lib. 2. de Bel. Civil.* that they uſed Fiſhing Boats cloſe covered, to ſecure their Rowers from the Danger of the Enemies Darts. But *Scheffer* thinks this was rather by way of erecting Blinds, *Waſt Clothes*, &c. or ſome Covering or Defences perpendicularly on the Ship's Side, than by a Covering quite over at the top. And this kind of Defence *Thucydides* calls παραῤῥύματα, the *Latines Plutei*, and it was made ſometimes of ſtrong Leather, and ſometimes of Pieces of Ropes platted together. The *Greeks* called theſe alſo παραφράγματα, παραβλήματα, προκαλύμματα and παραπετάσματα.

Another part of the Armature of the Antient Ships of War, was their Towers; theſe were chiefly uſed by the *Romans*, and were continued as long as to the time of *Commodus*. *Armatæ Claſſes imponunt ſibi Turrium propugnacula, uti in Mare quoque pugnetur, velut è Muris*, ſaith *Pliny*, Lib. 32. c. 1. Sometimes there was a Tower both in the Head and Stern of the Ship, and ſometimes one on each Side of the Ship about the middle. *Plutarch* calls theſe Rowers ξύλινοι, becauſe they were framed of Wood. Some will have *Agrippa* in *Auguſtus* his Time, to be the firſt Inventor of theſe Towers, as *Servius* upon *Virgil*, *Zonaras*, *Cælius Rhodignius*, &c. But certain it is, they are mentioned by *Cæſar*, *lib. 3. de Bell. Civ.* and *Lib. 3. de Bell. Gall.* They were of different Forms and Figures, according as their Deſigns and Uſes were different, and were painted of divers Colours both for Ornament and Diſtinction. Out of them the Soldiers caſt Darts and Stones, ſhot Arrows, *&c.* at the Enemy, and by their help they came near to and ſcaled the Walls of Sea Port Towns in Sieges.

The next Weapon or Inſtrument of War, which the antient Ships uſed, was, what they called the δελφὶς or *Dolphin*, which was a vaſt Weight of Lead or Iron caſt into the Form of a Dolphin, and in time of a Fight was drawn up by Pullys to the end of the Yard-Arm, which when they could conveniently, they let go all of a ſudden, that it might fall into the Enemies Ship, and ſo ſink it; and perhaps alſo they had ſome Device to throw it with ſome violence, which added to its own great weight, would make its Force, to break the adverſe Ship, the greater.

There were alſo ſeveral other Inſtruments of Miſchief, which the Antients made uſe of in a Sea-fight, as *Harpagones* or *Harpagæ*, which were long Poles with Iron Hooks at the Ends, to hold the Enemies Ships, that they might not get off. *Manus Ferreæ*, which *Moriſotus* ſaith were of two ſorts, either a kind of Gantlets which they put on their Hands to ſave them from Cuts, Blows, Fire, *&c.* and alſo a kind of Iron Hooks or Graples, which they faſtened at the End of a Rope, to throw into and and catch hold of the Enemies Ship, Rigging, *&c.* They uſed alſo *Falces*, or large cutting Hooks, which were faſtened at the End of long Poles, to cut Rigging. Theſe Hooks and Poles ſometimes were deſigned to lay hold only of the Enemies Ship and Rigging, and then the *Greeks* called them δόρατα ναύμαχα, the *Latins*, *Tela trabalia*, *Navales Unci*, and *Haſtæ longæ*, the ſame with the *Harpagones*, as I ſuppoſe: and an Inſtrument which they called *Bipennis*, to cut the Rudder Bands of the Enemies Ships. The uſual Arms of the Soldiers were nearly the ſame as in the Land Service, viz. *Thoraces*, Breaſt-plates, *Clypei*, Shields or Bucklers, *Galeæ*, Helmets or Head-pieces, together with *Gantlets* of Iron, and *Greaves* of the ſame, to ſecure their Legs. They had alſo an Engine called *Aſſer*, which *Vegetius* deſcribes to be a ſlender long Beam, like a Yard, which in time of Action was flung upon the Maſt, and had at each end an Iron Head like a Battering Ram. This *Aſſer* they had a way of forcibly driving againſt the Enemies Ships; and it would deſtroy and ruin any Men that it fell upon, and ſometimes break a Hole through the Ship it ſelf. At the Ends of their Yards they had alſo oftentimes κεραῖαι placed, which were Engines to throw Stones down into the Enemies Ships. *Diodorus Siculus*, Lib. 12. *Livy* calls them *Telleni*, and by ſome Writers 'tis called *Ciconia*, κηλώνειον, *Tolleno*. They uſed alſo the *Corvi*, which were Pieces of ſolid Iron with 3 Spikes to them, and a Ring on the top (according to *Scheffer*) to which an Iron Chain was faſtened. Theſe were violently thrown by an Engine into the Enemies Ships, and did often break Holes in her, but moſt times held her ſo faſt linkt, that they could not get off. The way to prevent theſe *Corvi* and *Manus Ferreæ* from taking effect, was, as *Pollux* ſaith, to ſtretch Hides all over their Decks. They uſed alſo *Siphones*, as they called them, that is, *Tubes*, or hollow Cylinders filled with combuſtible Matter, which would ſuddenly take Fire, and break out upon the Enemy with Flame, Noiſe, and Smoke. *Ignis cum Tonitru & Fumo ignito per Siphones emiſſus Naves incendens.* And ſometimes they threw Pots of burning Coals, ſometimes of Quick-lime, to blind them; and *Hannibal* uſed to throw Earthen Pots filled with Serpents, as *Juſtine* and *Cor. Nepos* tell us. And to compleat all Miſchiefs in one, the *Ignis Græcus*, as 'tis called from *Greece*, the Place where it was invented by one *Callinicus* a *Syrian* Architect; which was a Fire that would burn under Water, and as ſome ſay, be kindled by it: After it had been a convenient time lodged deep in the Water, it would riſe up and burn any thing that came in its way. See *Rivius* his *Hiſt. Naval. Pars media*, p. 196. The Miſchievous Conſequence of which way of fighting *Lucan* deſcribes, *Lib.* 3. Thus:

Nulla tamen plures hæc edidit æquore Clades
Quam pelago diverſa Lues. Nam pinguibus Ignis
Affixus tædis, & tecto Sulphure vivax
Spargitur: at faciles præbere alimenta Carinæ
Nunc pice, nunc liquida rapuere incendia Cerâ.

And again,

Nec flammis ſuperant undæ, ſparſiſq; per Æquor
Jam ratibus, fragmenta ferus ſibi vendicat Ignis.

But let us leave this dreadful Subject, to conſider ſomething more pleaſing and agreeable.

The *Greeks* and *Romans* had ſeveral Peculiarities in their Method of adorning their Ships. I have already obſerved, that they uſed to paint the Prow of their Ships with Red, Blue, and ſometimes White Colours, ſo ſtrongly, that no Weather would injure it: The Method of doing which was by burning in the Colours with Oil and Wax, as *Vitruvius* deſcribes it at large, *Lib.* 7. c. 9. and this Method of Painting the *Greeks* called *Encauſtice*: And ſometimes with this they uſed to paint the Figures of Animals, Plants, Flowers, *&c.* In the Heads of their Ships they had alſo ſolid Adornments carved in the Form of Helmets, Crowns, round Balls, which the

Greeks ἀκροστόλια and ἀκρῶνα, and the *Latines Corymba*; and by ſome Authors they are called *Roſtra*. In the Stern they had a kind of Shell framed of Boards, which turned forward over the Commander's Seat: This the *Greeks* called Ἄφλαστα, and the *Latines Apluſtre.* Behind the *Apluſtre* ſtood up a long and ſtrait Staff, about the middle of which was faſtened a particoloured Pendant, which play'd to and fro in the Wind, and ſhewed alſo which way it blew. Of this Ornament *Bayſius* gives a Figure. Another Ornament was the χηνίσκος, or *Anſerculus*, which tho' ſome will have to belong to the Head, yet moſt Authors place in the Poop of the Ship: It was the Figure of a Gooſe his Head and Neck, and was uſually placed adjoining to the *Apluſtre*. The Gooſe was lookt upon as an Animal of good Omen to Seamen, becauſe of its ſwimming ſo well in the Water, without danger of drowning. They uſed alſo ſometimes to gild the Head and Stern of their Ships with Gold; and ſometimes they ſilvered them o'er; and ſometimes made the *Acroſtolia* of Gold, Ivory, *&c.* *Alcibiades* had the Sails of his Ship of Purple, as had alſo *Cleopatra* thoſe of her famous Gally; and often they uſed Cloth painted of a Flame Colour, and ſometimes with Inſcriptions or Motto's upon them. *Suetonius* mentions Ships of *Caligula*, whoſe Sails were of various Colours; and ſometimes they painted and gilded the very Oars, according to the Humour of the Commander, or the Dignity of the Expedition, or the Quality of the Paſſengers, *&c.*

But tho' the Parts of the Ship were thus beautified and adorned, the common Sailers themſelves were generally naked almoſt all over. *Victor* ſpeaking of the Wife of *Antonius*, ſaith, *In Campania ſedens amæna Littorum obſidebat ad legendos ex Nauticis, qui plerumq; nudi agunt, flagitiis aptiores.* And they went thus almoſt naked, to enure them to Hardſhip, that they might bear all manner of Weather, as *Seneca* ſaith, *Lib. de Providentia, c.* 4. And the Clothes which they did wear at any time, were made of Goats Hair, becauſe that was thought beſt to keep out Wind and Water. Theſe Garments, becauſe firſt invented in *Cicilia*, were called by that Name. The Rowers were as naked as thoſe that handed the Sails, and but very ſeldom wore any Clothes at all. But the *Gubernator* or Maſter, or he that commanded the Rowers and Sailers, and gave direction for the guidance or ſteering of the Veſſel, was dignified with a *Pallium* or Cloak, which was worn over his Shoulders, and gathered and faſtened on the Left Shoulder with a Button, Buckle, *&c.* but yet ſo as that his Arm came out, and was at liberty to manage the *Gubernaculum*. This is plain from *Plautus* in his *Miles Glorioſus*, Act. 14.

Facito ut venias ornatus hac ornatu Nauclerico
Cauſam habeas ferrugineam, culcitum ob oculos laneam
Palliolum habes ferrugineum (nam is colos Theſſalicus eſt)
Id erit convexum in Humero læve, expapillato brachio
Præcinctus, atq; aſſimilato, quaſi Gubernator Sies.

And thus *Virgil* deſcribes Maſter *Charon*:

Sordidus ex humeris nodo dependet amictus:
Æn. 6. v. 301.

Thus much for the Ornaments in the Antient Ships, and the Habits of the Seamen: Let us next conſider their Enſigns, Colours, Flags, *&c.* And firſt, that which diſtinguiſhed one Ship from another, and gave her a Name, was the Παράσημον, as the *Greeks* called it; which was ſome Device, the Figure of ſome Animal, Flower, or Artificial Thing, and was ſometimes painted on a Flag, and ſometimes carved in Wood, and afterward painted. This was therefore by the *Latines* called *Pictura*, and was placed of old, not as it is now with us, in the Stern, but in the Head of the Ship, between the *Embolos* and the *Proembolides*, as *Scheffer* ſaith; and juſt below the *Stolos*, ſay others. But that it was in the Head, and above the *Roſtrum*, appears from this of *Virgil*, Æneid. 5.

——*Ænea puppis*
Prima tenet, Roſtro Phrygios invecta Leones.

Where the *Paraſemum* was a Lion, and therefore probably the Ship called by that Name: For that Ships were named from hence, is plain from *Ovid*.

Eſt mihi, ſitq; precor, flavæ Tutela Minervæ
Navis, & a pictâ Caſſide nomen habet.

Here the *Paraſemum* was an Helmet, and therefore the Ship was ſo called; but the *Tutela* was *Minerva*. This *Tutela Navis* was a very different thing from the *Paraſemum*, tho' confounded with it by ſome Writers: For the *Tutela* was the Image of ſome Deity under whoſe Protection the Ship was ſuppoſed peculiarly to be: This *Tutela* was placed in the Stern, which was therefore accounted the moſt ſacred part of the Ship, and was ſometimes a carved Image, but moſt times painted, as appears from *Ovid*.

Accipit & pictos Puppis adunca Deos.

The Name of each Ship was uſually written in the Front of the Ship's Head, about the *Acroſtolion*: This Place where the Name was written, *Pollux* ſaith, the *Greeks* called πτυχὶς; and it was done upon a roundiſh or oval Board, which from its Figure the *Greeks* frequently call ὀφθαλμὸς. The Name of the Ship was always taken from the *Paraſemum*, as we ſaid before.

The Prætorian Ship was alſo diſtinguiſhed from the reſt by a peculiar *Vexillum* or Flag, which was uſually of a Purple or Red Colour, and hoiſted up upon a long Pole or Staff placed commonly in the Forecaſtle of the Ship, and ſometimes in the Stern. In the *Roman* Prætorian Ships, the Eagle, as a Standard, was often diſplayed, as appears from antient Monuments, ſaith *Scheffer*. In the Prætorian Ships there were alſo peculiar Towers, built higher, and quite different from the fighting Towers beforementioned. Thus *Lucan*,

Et jam Turrigerum Bruti comitata Carinam
Venerat in Fluctus Rhodani cum gurgite Claſſis.
Lib. 3.

Theſe were placed in the Stern of the Ship, and from them the Word of Command was given to the Men, and Signals erected or diſplayed to direct other Ships; which in the Night was effected by Lights hung out in the Prætorian or Admirals Ships; and ſometimes there were two, and ſometimes three ſuch, and as often but one. But *Livy* ſaith, that the Men of War always hung out one Light a-nights, and the Onerary ones two. Some ſay alſo that the Men of War carried (by day) a thing like an Helmet at their Topmaſt-head, and the Onerary ones always a Basket: Which latter ſeems very true, ſince *Feſtus* calls the *Naves Onerariæ* by the Names of *Corbitæ*; as alſo doth *Cicero, Lib.* 16. *Epiſt. ad Attic.* The Signal for a Battel was a Helmet or Shield of Gold or Braſs hung up on the Cap of the Maſt, as our Admirals hang out the Bloody Flag, when they are going to engage. There was alſo a peculiar Sign, which was uſed to the Rowers, to make them keep time, and pull all together: This was ſometimes done by the Voice, like the Noiſe our Seamen uſe in weighing Anchor, and ſometimes by waving of a Stick, which they called *Pertica*: He that did this was called *Hortator* and *Portiſculus* among the *Romans*; and the *Pertica* was alſo ſometimes called by this Name *Portiſculus*. And perhaps ſometimes this *Pertica* was ſtruck againſt ſome ſounding Body, to make the Rowers hear, as well as ſee how and when to pull. Alſo, beſides the Trumpet, which was uſed to excite and encourage the Soldiers to fight, for which purpoſe the *Lituus* was alſo ſounded; there were two peculiar Signs given to the Rowers by the Voice of the *Hortator*: The former of theſe the *Greeks* called κέλευσμα, and the *Latines Hortamentum, Signum, Juſſum, Juſſus,* and *Juſſio*: And this *Servius* on *Lib.* 8. *Æn. Virg.* ſaith, was the *Clamor nauticus ad hortandum; ut, nunc, nunc incumbite Remis!* But *Ariſtophanes*, in *Ranis Act.* 4. *Scæn.* 2. tells us, that the Word which was uſed to make them row, was ῥυππαπαῖ, and that by which he made them deſiſt or leave off, was ὢ ὄπ; and either of theſe is ſignified by the word *Celeuſma*. The other Noiſe or Sign, which the *Hortator* made with his Mouth, and which was ſeconded by all the Rowers, and aſſiſted with Muſick, if they had it, was what the *Greeks* call *Symphonia*. *Scheffer* obſerves, that this hath generally been confounded with the *Celeuſma* but erroneouſly: For the latter was but only one Word, the former a kind of continued Song Tone, or Noiſe in Tune, modulated by the Pipe uſually, and ſometimes by the Harp. The Deſign of it was, that the Rowers might be at a certain and true Time with their Oars, ſtrike a long and even Stroke, and alſo be diverted and pleaſed at their Labour. *Pedianus* in *Cicero* ſaith, *Sciendum eſt cani remigibus per Symphoniacos ſolitum, & per aſſam Vocem, id eſt, ore prolatam, & per Citharam.* And *Ariſtophanes* in his *Ranis*, makes *Charon* tell *Bacchus*, who would fain have baulkt his Oar out of a pretence that he knew not how to pull right.

——————ῥᾶς' ἀκύσεισαι μέλη
Κάλλις', ἐπειδὰν ἐμβάλῃς ἅπαξ.

That is ; *You'll eaſily learn ; for aſſoon as ever you put your Oar down into the Water you will hear a delicate fine Song,* which will keep you right : And after this, the Comick Poet gives you the Song, but chiefly in the Frogs croaking Language, to carry on the Humour of the Play. This *Symphonia Cicero* calls, *Cautilena Nautica*, and *Ariſtophanes* Νίγλαρος, as doth alſo his Interpreter, explaining it to be, *genus Muſicæ Modulationis, quo Remiges exhortuntur*: And the other End and Deſign of this Sea Song, we learn from *Statius* his *Theb.* V. v. 343.

Acclivis malo mediis interſonat Orpheus
Remigiis, tantoſq; jubet neſcire labores.

And ſince we are now ſpeaking of the Antient Method of regulating the Motion of the Oars, ſo as that they ſhould ſtrike all together, and give the Ship as freſh way as was poſſible : I ought to take notice of the *Liburnæ Rotatæ*, which a certain Anonymous Author mentions, as invented and uſed in the Time of *Honorius*, and were Ships with Water-Wheels inſtead of Oars, and theſe Wheels were turned round within by Oxen. In *Moriſotus* his *Orbis Maritimus*, p. 712. There is a Figure of a Ship with ſix ſuch Wheels, and thoſe moved by as many Oxen. Theſe *Liburnæ Rotatæ* our *Rivius* p. 14, 15. of his *Hiſt. Naval. Mediæ* is pleaſed very much to ridicule ; but it ſeems to ariſe from his underſtanding little of Contrivances of that Nature : The Deſign indeed of *Moriſotus* his Figure appears clumſey and inadequate for the purpoſe it was intended for : in appointing an Ox to every Wheel. But it doth not follow from hence, that no Improvements can be made of ſo good and uſeful a Deſign. The Advantages of ſuch an Engine, could it be performed as it ſhould be, would be very great. A Ship by this means would be able to continue her Courſe in a perfect Calm ; ſhe would eaſily get out of the way of a Spout, and it may be of a Gally, that ſhould give her Chaſe. Ships, eſpecially in the *Mediterranean*, might be brought into a Line of Battle, or rowed away when diſabled : And perhaps moſt of the Advantages which the *French* Fleet hath from their Gallies, might accrue to an *Engliſh* one by this Invention. I cannot therefore avoid taking notice of the Rowing Engine invented by the Ingenious Captain *Thomas Savery* : A Deſcription of which was publiſhed in the Year 1698. and ſince that, a ſhort Account hath been given of it in the *Lexicon Technicum*. The Contrivance is thus : He adapts a Wheel to the Drum Head of the Capſtan of a Ship, whoſe Teeth turn a Trundle Head, thro' which runs an Iron Bar clear a-croſs, and which reaches out thro' the ſides of her ; on its ends without board, at a convenient diſtance from the Ship's ſides, are faſtened 2 Drum-heads, in which are fitted, to take out at Pleaſure, 6, 8, 10, or 12 Paddles, according to the Rate of the Ship. At the upper ends of theſe Paddles are faſtened Iron Pins with Heads to them ; by which means, and by the help of a Cord, taking an half Tun about all thoſe Pins, both the Paddles may be ſwifted, or ſtrain'd and ſtrengthened ſo, that they ſhall all work proportionably ; and alſo a Paddle may (with a Luff Tackle) be eaſily handed in and out, in order to be fitted into or taken out of the Drum-head of the Bar. Now here, if the Men will but work (and the Labour is nothing near ſo hard and dangerous as that of weighing Anchor, *&c.*) if there be a ſufficient Number of them, and the Paddles made proportionably large, I doubt not but the Engine will give the Veſſel freſher way than any Oars can do, workt by the ſame Number of Hands, as indeed hath been found true by Experiment : And I hope our Grand Fleet will not viſit the *Mediterranean* another Summer without this Contrivance. But to go on,

From this brief Account of the Ornaments, Enſigns, Flags, Standards and Signals of the Antient Ships, we may make an eaſy Tranſition to the ſeveral Diſtinctions among their Soldiers and Sailers. The Soldiers or Marines differed moſtly from thoſe in the Land Service, by the Strength and Weight of their Armour : Which exceeded theirs, becauſe their fighting was more ſtationary. *Plutarch* in the Life of *Themiſtocles*, ſaith, that each Man of War had 18 *Propugnatores*, which were to fight on the *Cataſtromata* : Of which four were *Sagitarii*, who threw Darts, Javelins, Spears, *&c.* the reſt were all heavy Armed, and theſe the *Romans* called *Claſſiarii*. The *Greeks* called them *Epibatæ* : And tho' they are plainly diſtinguiſhed, by Authors, from the *Remiges* : Yet *Scheffer* thinks that ſometimes upon emergent Neceſſity, the Rowers fought too ; and ſo might be called *Epibatæ*. And indeed all the Rowers were Soldiers too, except the *Gubernator* : As we learn from *Thucydides*, and from the *Agamemnon* in *Seneca* ; for *Act.* 3. *v.* 417. we find theſe words,

Jamq; enſe feſſum Miles exonerat latus
Neglectaq; Summas per puppes ſcuta jacet
Ad militares Remus aptatur manus.

And theſe doubly qualify'd Hands, that could both fight and row, the *Greeks* called αὐτερέται ; as *Pollux*, *Thucydides*, and *Suidas* informs us. But in proceſs of time, as their Ships became larger, and were better fitted for War, we find the Men aboard plainly diſtinguiſhed into three ſorts, *viz.* Sailers, Rowers, and *Marines*, or Soldiers. The Rowers were called in *Greek* ἐρέται, κωπηλάται, and ſometimes πληρώματα. And by *Livy*, *Socii* ; tho' that Term is alſo ſometimes given to the *Marines*, and to the *Nautæ* or Sailers too. I have already ſhewed the Diviſion of the Rowers, into the *Thalamitæ*, which ſate loweſt and next the Water : The *Zygitæ*, which rowed in the middle, next above them ; and the *Thranitæ*, or the higheſt or uppermoſt which ſate next to the *Cataſtromata*. And as the Rowers had this Triple Diſtinction from their Scituation in the Ship ; ſo were they denominated alſo from the Ship it ſelf : Thoſe which belonged to a *Triremis*, the *Greeks* called τριηρῖται : And thoſe that rowed in the Onerary Ships (in which there were very ſeldom Oars) they called στρογγυλοναῦται : The Sailers were diſtinguiſhed by their ſeveral Offices and Employments. Thoſe that handed the Sails, the *Greeks* called ἀρμενισαὶ ; thoſe that got up the Maſt to look for Ships, Land, *&c.* Some ſay were called *Schoenobatæ* ; and by the *Latines*, *Speculatores* : Theſe *Feſtus* calls alſo *Corbitores*, becauſe they lay or ſtood for this purpoſe in the *Corbes* on the Tops of the Maſts : Tho' the *Corbes* were rather peculiar to the Tops of *Onerary* Ships, as I have before obſerved : The Tops of the Maſts of Men of War being called *Galeæ*. Thoſe which were employed in Meſſages and Errants up and down the Ship were called μισοναῦται : And theſe did all meaner and more ſervile Offices : Some plied the Pump, others weighed and dropt the Anchor : And they had a peculiar ſort of Fellows, whom they called *Urinatores*, whoſe Buſineſs was to dive down and clear the Anchor, if it were foul of any thing, and would not come up, as appears from this of *Lucan*, Lib. 3 v. 697.

——————*Pugna fuit uſus in illa*
Eximius Phocæus animam ſervare ſub undis
Scrutariq; fretum, ſiquid merſeſſet arenis,
Et nimis affixos unci convellere morſus,
Adductam quoties non ſenſerit Anchora funem.

Theſe Divers, *Pollux* tells us, the *Greeks* called κολυμβηταὶ ; and they made many other Uſes of them beſides this of helping to get up the Anchor : For as *Manilius*, Lib. V. Aſtron. obſerves.

Exportuntq; mari prædas, & rapto profundo
Naufragio, atque imas ſcrutantur arenas.

They alſo uſed to get up any thing from the bottom, that by chance fell over-board, and to ſeek for Wracks, *&c.* and the *Rhodian* Laws appointed them a peculiar Proportion of the Value of the things they fetched up, according to the Depth of the Water : If they dived in 8 Cubits they had ⅓, if in 15 Cubits they had ½. They were very ſerviceable alſo in Sea Engagements and Expeditions : For *Thucydides* Lib. VII. ſaith, that the *Syracuſian* Mole was cut aſunder by the Divers under Water : And in *Arrianus*, Lib II. *de Exped.* we read of their being employed to cut the Enemies Cables. There was alſo another ſort of *Nautæ*, called *Carabitæ*, *Scaphitæ*, and *Lintrarii* : Theſe were the *Boat's Crew*, who always attended upon the Pinnace, Barge, Long-Boat, or whatever you will call her. There is mention made alſo in ſome Writers of the *Heleyarii* ; who were a kind of *Tackle-Men*, and their Poſt was to ſhip and unſhip all Goods, Casks, Proviſions, Arms, *&c.* which came aboard at any time, or were ſent a-ſhore, or put on board ſome other Ship. Some Writers, and particularly St. *Ambroſius*, mention the *Thalaſſometræ*, which were thoſe that ſounded the Depth of the Sea with the Βόλις, or Plummet. There were alſo the ναυπηγοὶ, as the *Greeks* called them : and the *Latines* from them, *Naupegæ*, i. e. the Shipwrights or *Carpenters*, who were to mend any thing which was broken or out of Order: But tho' theſe were very neceſſary Fellows aboard a Ship, yet the Ancients accounted them in the loweſt and meaneſt Rank, of any Perſons belonging to the whole Company.

Before the Ship put to Sea, every Hand aboard her was exerciſed, in his ſeveral Capacity, that he might be knowing and ready in his Buſineſs: We learn from *Cæſar* and *Dion*, that among the *Romans* a very conſiderable time was allotted to exerciſe the Rowers, and to render them fit for Service: And *Polybius*, *Diodorus*, and *Thucydides*, all ſay the ſame thing of the *Greeks*; and for the better Performance of theſe uſeful Exerciſes, there were peculiar Officers appointed; which by *Vegetius*, Lib. IV. c. 32. are called *Navarchi*: But we don't read any thing of theſe *Navarchi*, before the time of *Antoninus*. The *Gubernatores* alſo were exerciſed in their way; for they juſtly thought it a dreadful thing, that the Maſter of a Ship ſhould be

-----Pelagi rudis, & Pontum tractare per artem
Neſcius, accepit miſeræ ſi Jura Carinæ.
Ventorum tenet ipſe vicem, cunctiſq; Porcellis
Dat Jactare ratem, fertur vaga gurgite puppis
Ipſius in Scopulos, dextrâ impellente Magiſtri.

Silius, Lib. V.

The very Soldiers alſo were continually exerciſed, by ſham Sea-Fights, to make them knowing and daring in real ones: Nay the *Romans* at laſt began to be ſo ſatified of the Uſefulneſs of theſe Naval Games or Exerciſes; that they made a place on purpoſe for their Celebration in the *Campus Martius*; where there was naturally a Lake; and this by Art, in the times of *Julius* and *Auguſtus*, was made very fit for ſuch Exerciſes. And ſoon after, theſe ſham Sea-Fights became part of the Entertainment of the Publick, and were inſtituted not only for the Uſes above-mentioned; but alſo to pleaſe the People (as with other publick Shews) and ſhew the Magnificence, Liberality, not to ſay Vanity, of the great ones.

Aſſoon as ever Orders were given, from the Prince, for putting forth of a Fleet to Sea: The Seamen firſt of all launched the *Triremes*, &c. the Ships of War; which, as it appears by theſe Lines of *Flaccus*, Arg. Lib. I. lay with their Sterns a-ſhore.

At Ducis imperio Minijæ, monituq; frequentes
Puppem Humeris ſubeunt, & tento poplite proni
Decurrunt ----------

And thus alſo *Virgil*,

--------Stant Littore Puppes.

The Inſtruments they uſed in lanching out theſe Ships, were (1.) *Vectes* or Levers, 2 *Cylindri* or Rollers of Wood: Which were called alſo *Palanges*, and by *Virgil*, Lib. 2. Æneid. *Lapſus*.

Accingunt omnes operi, pedibuſq; Rotarum.
Subjiciunt Lapſus.

Iſidorus ſaith theſe were called alſo *Pulvini*. There was a great deal of Trouble in this clearing or getting off the Stern from the Shore; till *Archimedes* invented an Engine for this purpoſe, as *Plutarch* tells us in the Life of *Marcellus*: And of which thus *Silius*, Lib. 14. v. 252.

--------Puppes etiam, conſtructaq; Saxa
Fœmineâ traxiſſe ferunt contra ardua dextrâ.

In *Bellonus* his *Theatrum* you have a Figure of this Inſtrument or Engine of *Archimedes*, or of one which he imagines was like it, and would ſerve well enough for this purpoſe.

When the Ships lay up far from the Water, they drew them down to the Sea in *Plauſtra*, which had their Bottoms covered with Skins, raw Hides, &c. to ſave the Ships Bottom and Sides from Injury, as *Diodorus Siculus*, Lib. 1. and *Livy*, Lib. 25. c. 11. both tell us. Aſſoon as the Ships were lanched, then the *Annona* or Proviſions were put on Board; and that often in the Ships of War themſelves, for 8, 10, or 12 Days time: But ſeldom longer: Tho' uſually the Proviſions were carried in other Ships or Victuallers, particularly provided for that purpoſe. This being done, the Sailers were firſt ſummoned on board by the ſound of a Trumpet: Then the Rowers got in, and each Man took his *Tranſtrum* and Oar, either by Command, and Appointment of the *Proreta*, or more uſually by Lot.

Nunc agite, Socii, propellite in Æquora Navem,
Remorumq; pares ducite ſorte vices.

Propert. lib. 3. v. 870.

And to the ſame purpoſe *Virgil*, Lib. 3. Æn.

Sternimus optatæ gremio telluris ad Undam
Sortiti remos---------

And aſſoon as each Man had his Bench and his Oars allotted him, his Name was put upon both. Then the Arms offenſive and defenſive were put into the Poop, Towers, &c. and the whole Solemnity was concluded with Sacrifices, Luſtrations, &c. When the Fleet prepared to ſail, notice was given by the Sound of a Trumpet, for every one to get ready, and at night a Light was put out from the Tower in the Poop of the Prætorian Ship. The Order of their Voyage was thus: Firſt went light Ships, Spy Boats, &c. to find out good Ports, Stations, Anchor-ground, &c. and becauſe they went thus firſt, the *Greeks* called them πρόπλοι. Next to theſe went the *Triremes*, and other Ships of War, and in the Rear of all the *Naves Onerariæ*. The Fleet was uſually commanded by two Perſons, whom we may call the Admirals of the Ships of War, and of the Victuallers, Tenders, Tranſports, &c. and ſometimes there were more Commanders, each having the Charge of a ſmall Squadron of 6 or 8 Men of War a-piece.

When they came to the deſired Port, Shore, or Place of landing, they left off rowing, held Water with their Oars, and brought the Ship about, and ran her a-ſhore Stern foremoſt. This the *Latines* called *Inhibitio Remigationis*, and the *Greeks* ἐπὶ πρύμναν κρούεσθαι. To effect this the Rowers got up off their Seats, turn'd about, and look towards the Head of the Ship, as *Silius Italicus* obſerves, *Lib.* 2.

Converſo Tyrios petierunt remige Patres.

This turning the Ship about the *Latines* called *Obverſio*:

---Obvertunt Pelago Proras.

Virgil.

Then they lowered their Yards, and ſtruck their Maſts, and caſt their Anchors out of the Forecaſtle. The Rowing Ships had their Oars brought cloſe to, and laſht faſt to the Ship's Side, having their outermoſt Ends elevated: For in this poſture they were both out of the way the preſent, and alſo ready to uſe again, aſſoon as there was occaſion for them. The Naval Camp or Place where the Fleet lay, they called *Caſtra Nautica* and *Navalia*. To defend themſelves in this Place, if any Enemy were near, they uſually cut or dug a Semicircular Ditch, which they fortified with a kind of Ramparts of Earth, and a Parapet or Wall of Wood, and this was their Defence to Landward. Without the Fleet, in the Sea, they ſtuck Piles down in the Water ſtanding obliquely, and with very ſharp Points towards the Sea. When they had thus effectually ſecured their Sea-Camp, if it were Winter, and they deſigned to ſtay there any conſiderable time, they brought their Ships of War quite up upon the dry Land; otherwiſe they only made their Sterns faſt aſhore. When a Fleet lay only ſtill for a while at an Anchor, and did not touch the Shore, they called it *Statio*, and the *Greeks* ὅρμος, ὕφορμος; and by *Appianus* theſe Stations are called ἐφορμίσματα. Their Havens the *Greeks* called λιμένα, the *Latines Portus*: Tho' the *Portus* was more properly an Artificial Haven, which was commonly called *Cothona* or *Cotones*; whereas a Natural Haven was called *Oſtium*. The Artificial Ports were to have, firſt a good χηλὴ, or Work run doubly into the Sea, in order to procure between its Sides a good Entrance into the Haven, ſecure againſt Winds and Tides. This double Mole the *Latines* called *Cornua*, as we find from *Lucan*, Lib. 2.

Precipiti curſu flexi per cornua Portus
Ora petunt, Pelaguſq; dolent contingere Claſſes.

The Sea Entrance into theſe *Cornua* was defended by Chains and Bars of Wood; therefore it was called *Clauſtrum* by the *Latines*: It was alſo fortified with Towers, and near the Entrance were the *Phari* or Watch Towers placed, where Lights were hung out a-nights to guide Ships into the Harbour. They were ſo called from the famous *Pharos* or Watch-Tower built at *Alexandria* by *Ptolomy*.

> *Lumina Noctivagæ tollit* Pharus *æmula Lunæ.*
> Statius.

The Paſſage between theſe *Cornua* or *Moles* was called *Stoma* by the *Greeks*, and *Oſtium* by the *Latines*, and ſometimes *Fauces*. This let the Ships into the μυχὸς or innermoſt part of the Haven, where they were made faſt to the *Crepidæ*, or as *Homer* calls it, the ὅρμος, which was a Work of Stone built like our Keys, on which were Houſes filled with Stores, Docks, &c. for building or refitting Ships, &c. Theſe Docks the *Greeks* called νεώσοικοι, ἐπίνεια, νεώρια, &c.

Whenever the Antients had a Proſpect of a Sea Engagement, the firſt thing they did was to clear their Ships of War of all unneceſſary Weight and Lumber, leaving no more Proviſions on board than what was of indiſpenſible neceſſity: And then, if it were poſſible to avoid it, they would not engage but in a calm Sea, and good Weather. Next, they took great care to get the Enemy between the Shoar and them, both that themſelves might have room enough, and the Enemy be pent up and ſtreightened; and alſo that they might bring on ſtill new Ships into the Engagement, and row off their diſabled ones with ſafety and eaſe. *Appianus*, Lib. 5. takes notice, that *Calviſius* neglecting this Maxim, was almoſt deſtroyed by *Menecrates*, his Ships driven aſhore, ſtranded and wrackt. And thus was it with the *Roman* Fleet in the Battle againſt *Adherbal* the *Carthaginian* Admiral, as *Polybius* tells us, *Lib.* 1. They choſe alſo, if they could, rather to engage near their Enemies Coaſts than their own: The Reaſon of which, *Leo* gives in his Tacticks. *Ne (inquit) in tuâ ipſius Terrâ Prælium committas in quâ ſperant milites (juxta Proverbium) ſi tantum haſtas deſigunt, ſervari; ſed prope Hoſtilem Terram potius ut Hoſtes Salutem ſperantes, ſua in Terrâ fugam dimicationi anteponant.* They took care alſo, not to engage againſt Wind or Tide, (*i. e.*) they ſtrove to get the Weather Gage of the Enemy, as we ſpeak. When they came to actual Fighting, they took in all their great Sails; and then the *Imperator* or Commander in chief appointed the Order of Battel: Which was various according to Circumſtances; but the firſt Line, when there was more than one, they called *Prima Claſſis*, and the ſecond *Suſidiaria*: And ſometimes there was a third Line of light ſmall Ships which lay behind the two former. Uſually there was but one Line, and then the ſtrongeſt and ſtouteſt Ships were in the Wings, and the weakeſt in the Centre: Alſo the *Prætor*'s, or chief Admiral's Poſt, was in the right Wing; but if they were in the Form of an Half Moon, his Poſt was in the Center, as appears by the Tacticks of the Emperor *Leo*. This Half Moon, which the *Greeks* called μηνοειδὴς στόλος, was the moſt ordinary Figure of any: And it gained theſe two Advantages; that the Enemy could not eaſily break through, and were alſo eaſily hemm'd in, or encompaſſed round on all ſides. Of this Form *Lucan*, Lib. 4 thus ſpeaks,

> *Cornua Romanæ Claſſis, validaq; Triremes*
> *Quaſq; quater ſurgens extructi remigis ordo*
> *Commovet, & plures quæ mergunt æquore Pinus*
> *Multiplices cinxere rates. Hoc robur aperto*
> *Oppoſitum Pelago: Lunata Claſſe recedunt*
> *Ordine contentæ gemino creviſſe Liburnæ.*

But there were alſo in uſe other Figures, with ſtrait lined Fronts; and theſe ſometimes were all in one Body, ſometimes divided into two Squadrons; and ſometimes into three: Which laſt Form was called the *Phalaux*, as appears by *Diodorus Siculus*. *Sheffer* mentions many other leſs common Forms, as that of a Wedge, an Oval, &c. Vid. Lib. 3. c. V. Whether I refer the curious Reader, being in haſt to conclude this long Diſſertation. The Soldiers who were to fight, were divided into the *Superiores*, which were actually engaged upon the *cataſtromata*; and the *Inferiores* which ſtood below ready to relieve and ſupply them, as they were diſtreſſed or cut off. Of thoſe aloft, the heavy and armed ſtood in the Mid-ſhip, the moſt expert, bold active Fellows in the Head; and they were all ready, with one foot upon the Gunwale or ſide of the Ship, expecting the Signal when they ſhould begin to throw their Darts, &c.

> *Vix meminere maris tam vaſto ad prælia niſu,*
> *Incumbunt Proræ, poſitiſq; in margine puppis*
> *Extremæ plantis, nutantes ſpicula torquent.*
> Sil. Ital. Lib. 14.

When they were juſt going to engage in an actual Fight, the Imperator went in his Boat and made an encouraging Speech to every Ship: Then the Signal for the Battle was hung out of the Pretorian Ship; which by being waved to the right or left, being lifted up higher, lowered, or entirely taken down, was an Inſtruction to them which way to carry the Fight, how long to hold it, and when to deſiſt. This Signal was ſometimes a Red Flag, and ſometimes an Helmet, as I have before obſerved. The Onſet was begun with Trumpets, who ſounded the πολεμικὸν, or *Claſſicum*. Then one of their chief Aims was *detergere Remos*.

> *Aſt aliæ laceræ atq; incuſſi roboris ictu*
> *Detergere Remos.*——————
> Sil. Ital. Lib. 4.

As the *Romans* call'd it, ἀνακόπτειν κώπας, to break or cut off one anothers Oars, and ſo diſable the Ship from rowing. If this could not be done, then they got cloſe to one another, and fought it hand to hand with the Marines; tho' ſtill endeavouring to ſink one another: as before, by the *Roſtra*, ſo now by Engines, &c. and to grapple faſt with, and to board one another: And then it grew very warm Work indeed, as *Silius Italicus* deſcribes it, *Lib.* 14.

> ————*Injecta ligant hinc vincula ferri,*
> *Atq; illinc ſteteruntq; ad prælia nexæ,*
> *Nec jacula aut longè certatur harundine fuſâ*
> *Cominus, & gladio terreſtria prælia miſcent.*

And thus you ſee how they behaved themſelves in an open Fight at Sea: A word or two of their Naval Sieges, and Defences. When they beſieged any place by Sea, they uſed to block up the Harbour, and encompaſs it all round with their Ships, whom they joined one to another with Chains; and communicated by Bridges or Gallies; where the Soldiers were always ready to throw Darts, &c. and to oppoſe the Paſſage of any Ships in or out. They ſtrengthned this Naval Mole alſo by driving long Piles down into the Ground, to which they faſtened their Ships. This was their *Circumvallation*. The Attack upon the Town they uſually managed by two Ships joined to one another by a Bridge, on which they placed their battering Engines, and wooden Towers alſo, which they filled with Men to ſcale the Walls, and to drive thoſe that defended them from thence: Againſt theſe bold Attempts, the beſieged defended themſelves by their own Ships; by driving Piles down into the Earth under Water, whoſe Tops were ſhod with Braſs or Iron Spikes, to annoy the Enemies Ships as they approached to the Walls: Sometimes they made a *Contravallation* with their Ships againſt the work of the Enemy; and ſometimes endeavoured to burn it, by throwing in Pitch, Tar, and other combuſtible Matter actually enkindled amongſt their Ships; and now and then by ſending Boats loaden with ſuch Materials in among them; [as the *Tyrians* did, when *Alexander* beſieged their City] and then ſetting them on Fire to burn the Enemies Fleet. So that a kind of Fire Ships, you ſee, the Antients had a Notion of long ago; the Invention of Man being very early ripe for Miſchief.

I proceed next, to conſider, the Officers, Magiſtrates, Stipends, Salaries, Triumphs, Rewards and Puniſhments in uſe amongſt the Antients, in their Ships and Fleets.

The Officers and Magiſtrates in the Antient Fleets and Ships were theſe.

1. The στρατηγὸς. στόλαρχος. ναύαρχος. The *Præfectus Claſſis*, as the *Romans* ſtil'd him. Among the *Greeks*, this great Office was ſometime in the hand of one Man, but oftner divided between two, or three, who were all equal in Power: As *Alcibiades*, *Niceas*, and *Lamachus* were; with them alſo, the Office was precarious, depending upon the Good Will of the People, entirely as to its Continuance. But among the *Romans*, the *Prætors*, while they had the Care of Naval Affairs, were to continue this Command but for one Year, and then they were to deliver up their Charge to their Succeſſors. This was the Officer which we now call an Admiral: (in chief) The Name of *Admiral*, or as the *French* write it, *Amiral*, ſome think came from the *Admirantes*, a ſort of commanding Officers, both for Sea and Land Service, amongſt the *Saracens*. But *Moriſotus*, in his *Orbis Maritimus*, Lib. 2. c. 7. will have it to come from the word Ἀμηραλιὸς, which was, he ſaith, the Title for the *Præfectus Claſſis*, or Commander of the Fleet (in the *Eaſtern* Empire) before the time of the Emperors *Leo* and

Mauricius, tho' ſome will have it be derived from ἁλμυρὸς, *Salſus, à Salſugine Maris.*

The next Officer to the High Admiral or Commander in chief, was the Ἐπιστολεὺς, or, as he is called alſo, ἐπιστολαφόρος. This was a kind of *Vice-Admiral*, and was ſo called by the *Greeks* (ſaith *Pollux*) becauſe he was Aſſiſtant, and immediately under the ναύαρχος; and that this was his Office, appears alſo from ſeveral Paſſages in *Zenophon*'s Hiſt. The *Romans* called him *Subpræfectus*; and tho' he were but Vice-Admiral to the Prætorial Squadron, he was *Præfectus* or Commander in chief of another Squadron or Fleet. *Scheffer* obſerves, that thoſe Officers above-mentioned were ſuch as more peculiarly commanded the Soldiers and Naval Strength of a Fleet; but there were another ſort, which the *Greeks* called ἀρχικυβερνῆται, which had more immediately the Care of the Ships, who had the Management of all Maritime Affairs, were to provide commodious Harbours, to direct the Courſe of the Fleet, *&c.* And perhaps he that was *Maſter* of the Prætorial Ship had peculiarly this Title of *Archigubernus*. *Scheffer* thinks that this was the ſame Officer with him whom *Tacitus* calls *Præfectus Remigum*, and whom *Livy*, lib. 24. c. 41. calls *Præfectus Socium* or *Sociorum*. But there being no particular Deſcription of his Office, 'tis hard to determine any thing poſitively about it.

The Captain alſo of each particular Ship the *Greeks* called Ναύαρχος, and the *Latines* from them *Navarchus*. Tho' *Livy* frequently ſtiles him *Præfectus*, and *Lib.* 45. *c.* 42. *Magiſter Navis*, and *Tacitus* gives him the Name of *Trierarchus*, Ann. 14. c. 8. Hiſt. 2. c. 9. which laſt Term among the *Greeks* ſignified the Captain of a *Triremis*: And there is mention alſo of a συντριήραρχος, who ſeems to have been a Sharer with ſome other Perſon in the Command of Captain of a *Triremis*. The Captain of a πεντηκόντορος, or a Ship of 5 *Ordines*, was called Πεντηκοντόραρχος, and ſo for other Rates. Thoſe who commanded the Seamen, and had the immediate care of the Guidance and Working of the Ships, the *Greeks* called κυβερνῆται, the *Latines Gubernatores*, and ſometimes *Magiſtri Sociorum Navalium*. This Officer was the ſame with our Maſter of a Ship, and his Poſt was in the Poop.

—*Solus ſtat Puppe Magiſter.* *Statius*, Theb. 8. v. 267.

Sometimes he is deſcribed as ſitting at the Helm, and the Place where he ſate was by the *Greeks* called ἴγκλημα: His Authority over the Seamen appears to have been very great by this of *Flaccus*, lib. 1.

Typhys agit, taciti ſedent ad Juſſa Miniſtri,
Qualiter ad ſummi Solium Jovis omnia circum
Prona parata Deo.----------

The Art of guiding, conducting and ſailing the Ship well, the *Greeks* called τέχνη κυβερνητικὴ, and it conſiſted, as *Scheffer* obſerves, chiefly in theſe three things: The Knowledge of the Stars and of the Courſe of the Winds; the Diſtance and Scituation of Ports and Havens, and the Art of working of a Ship ſo as to find her *Trim*, as we call it, and make her ſail to the beſt advantage. Their Knowledge of the Stars in a manner was confined to the Obſervations of the *Great* and *Little Bear*, two Conſtellations near the North Pole, ſo called, as appears from *Lucan*, *Lib.* 8. *v.* 172.

Signifero quæcunq; fluunt labentia Cœlo
Nunquam ſtante Polo miſeros fallentia Nautos
Sydera non ſequimur, ſed quæ non mergitur undis
Axis inocciduus gemina clariſſimus Arcto
Ille regit Puppes---------

Of theſe two Conſtellations the *Greeks* took moſt notice of the *Great Bear*, which they called *Helix*, and we *Charles his Wain.*

Dat Graiis Helice curſum majoribus Aſtri.

The Leſſer Bear, which the *Greeks* called *Cynoſura*, was moſt regarded by the *Phœnicians*; they firſt diſcovered and obſerved its Motion round the Pole, and that the Pole Star it ſelf was the laſt in its Tail. And indeed the Knowledge of the Stars in general, and the firſt Foundations of all our Aſtronomy, is entirely owing to the *Phœnicians*. And the Reaſon why they obſerved the *Cynoſura* rather than the Helix, *Germanicus in Arateis* thus expreſſes.

Certior eſt Cynoſura tamen ſulcantibus æquor:
Quippe brevis totam fido ſe Cardine vertit,
Sidoniamq; Ratem nunquam ſpectata fefellit.

They had Charts alſo, in which not only the Scituation of Countries and diſtant Regions were deſcribed; but the Courſe of the Winds alſo was expreſſed, and how, and from what Parts, and at what time, they uſually blew: as appears from this Paſſage of *Propertius*, lib. 4. *de Arethuſa.*

Cogor & è Tabulâ pictos ediſcere mundos
Qualis & hoc docti ſit poſitura Dei.
Quæ tellus ſit tecta gelu, quæ putris ab Æſtu,
Ventus in Italiam qui bene vela regat.

The *Gubernator* was alſo skilful how to avoid Rocks, Shelfs, Sands, *&c.* either by his own Experience in former Voyages made to the ſame Places, or by the Writings of others; the Deſcriptions and Accounts of whoſe Voyages they called *Peripli*, and *Itineraria*. He was alſo ſuppoſed to underſtand perfectly well the way of working of a Ship, and how to put her into ſuch poſture, that ſhe ſhould make the beſt of her way. For as *Oppianus*, Lib. 1. v. 229. expreſſes it.

-- ---Πρύμνῃ δ᾽ ἐπὶ πάντα χαλινὰ
Ἰθείης ἀνέχων.

And as *Lucan* deſcribes the *Gubernator* at work in his Poſt, *Lib.* 8 *v.* 88.

Juſto vela modo pendentia cornibus æquis
Torſit, & in lævum puppim dedit------
Hos dedit in proram, tenet hos in puppe rudentes.

Sometimes there were two of theſe *Gubernatores*, eſpeciall in the greater Ships: And *Ælian* ſaith, it was the uſual Cuſtom to have it ſo among the *Carthaginians*. The next Office under the *Maſter*, was the *Proreta*, who was to manage the Helm according to the direction of the *Gubernator*. The *Greeks* called him πρωρεὺς, and he was, as *Zenophon* ſaith, τοῦ κυβερνήτου διάκονος; and therefore, as *Pollux* ſaith, was to ſteer the Ship at the Command of the Maſter. Tho', as his Name implies, he had no doubt alſo his proper Poſt in the *Prow* or Head of the Ship, where ſome ſay he was to ſit and obſerve the Winds, to give notice of Rocks, *&c.* and all approaching Danger: Some will have him to have had the Care alſo of the diſpoſition of the Rowers, of the Rigging and Tackling of the Ship, and he that was to aſſiſt the Maſter with his Advice and actual Service, whenever required.

The next Officer was the κελευστὴς, as the *Greeks* called him; the *Portiſculus*, or *Hortator Remigum*, ſomething like our *Boatſwain*; one that either by a Noiſe he made with his Mouth, by the Blow of a Mallet, Hammer, Stick (which they called *Pertica*) &c. gave a Sign to the Rowers to pull away all together, or to deſiſt, *&c.* This Officer was alſo called *Ageator*, and *Juſſor*.

Next to the *Portiſculus*, the Τριηραύλης deſerves to be conſidered, which was a Muſician, that either by the Harp or Pipe, not only ſtruck the true Time for the Rowers to obſerve with their Oars as to the Length of the Stroke, but by engaging them to join in the Harmony with him, exhilerated their Spirits, and made them forget their Labour.

-------*Mediæ ſtat Margine Puppis,*
Qui voce alternos Nautarum temperet ictus,
Et remis dictat Sonitum; pariterq; relatis
Ad numerum plaudat reſonantia cærula tonſis.
Silius, Lib. 6. v. 361.

And thus alſo *Statius*, Lib. 5. *Thebaid.* v. 343.

Acclivis malo mediis interſonat Orpheus
Remigiis, tantoſq; jubet neſcire labores.

But of this we have ſaid ſomething before.

The next Officers were the Ναυφύλακες, or *Cuſtodes Navium*: Theſe *Scheffer* thinks, took charge of all the Sails, Cables, and all other Inſtruments on board. *Jul. Pollux* calls them οὖροι, and he repreſents their Office to be, taking care, eſpecially a-nights, that the Ship came to no damage by running againſt Rocks, ſtriking againſt the Ground, *&c.* which they were to prevent by the uſe of Booms or long Poles, with which they were to fend againſt Danger, and to ſet off upon occaſion.

Ὡς ναυφύλακες νυκτέρου ναυκληρίας
Πλήκτροις ἀπευθύνουσιν οὐρίαν τρόπιν.
Sophocles.

There were alſo Officers whom the *Greeks* called τοιχάρχοι; theſe had peculiarly the Charge of the Ships Sides, as appears from *Turnebus*, and from this of *Claudian*:

> *Ac velut exertus tentandis navita tonſis*
> *Preficitur Lateri cuſtos*——————
>
> de Conſul. Mallii, v. 47.

Scheffer thinks theſe were two Officers that commanded, one the Starboard, the other the Larboard Oars, all along the Ships Side in length, which ſeems very probable.

In the antient Ships there were alſo Officers called ταμίαι by *Homer*, who were appointed to deliver out the ſeveral Meſſes or proportion of Proviſions to the Ships Company: Theſe ſeem to be the ſame with what the *Romans* called *Diætarii*, a kind of *Quæſtores*, or Clerks of the Proviſions: Some will have them to be the ſame with the *Celeuſtes*, but I judge they were different. There was alſo the γραμματεὺς, λογιστὴς, the *Navalis Scriba*, as *Feſtus* calls him; which ſeems to have been an Officer analogous to our Purſer. And laſtly there was the ἐσχάριος, whom *Pollux* deſcribes as being an Attendnat upon the Fire: But whether he were the Cook, or the *Sacrificator*, 'tis hardly poſſible to determine at this diſtance, there being no particular Account of this Office given any where in Antiquity.

Let us next conſider what Stipends, Wages and Encouragements the Antients gave to their Marines, Rowers and Sailers: And theſe were of 3 kinds, as *Scheffer* obſerves: Money; Bread, Proviſions, *&c.* and Clothes. In moſt antient Times, when either the Men went Voluntiers, or a Privateering, or when they were ſummoned to take Arms for the neceſſary Defence of their Country againſt an Invaſion, we do not find that any Stipend or Salary was given to either Soldiers or Rowers. Afterwards as private Men made a Trade of War, they paid the Soldiers and Seamen; and it was not till the firſt *Punick* War, that their Stipend came out of the publick Treaſury, among the *Romans*. But in the ſecond *Punick* War 'tis clear from *Livy*, Lib. 33. c. 21. that their Wages and Pay was taken from thence: But if the Treaſury were out of Caſh, ſometimes particular Men of great Fortune and Poſſeſſions paid the Fleet, and at laſt it came to be laid as a Burden upon private Perſons: For *Livy*, Lib. 29. ſaith, that according to each Man's Circumſtances or Eſtate he was obliged to find one or more Seamen, and to give them ſo many Months Pay. This was done by Decree of the Senate, when *L. Æmilius* and *C. Flaminius* were Cenſors: And then (ſaith he) *Primum eſt Factum, ut Claſſis Romana Sociis Navalibus privata impenſa paratis compleretur.* And this Cuſtom held till *Hannibal* was driven out of *Italy*, and then the *Roman* Affairs began to mend a little. After this it appears again from *Livy*, that they paid their Seamen out of the publick Treaſury; and as for the Fleets which were put out by their *Socii* or Allies, they made *them* pay the Soldiers and Rowers at a certain Stipend. Indeed what this Stipend or Wages was, which either the *Romans* themſelves, or their Allies allowed, is not certainly known. *Scheffer* thinks 'twas leſs than the Land Pay, and gueſſes, that as the Land Soldiers had 3 *Aſſes*, ſo theſe had but two: But afterwards in the times of the Emperors, it was raiſed; for *Scheffer* obſerves, that in the time of *Anaſtaſius* the Rowers had 5 *Roman Solidi*; and the Officers Pay was raiſed proportionably, as the *Rhodian Laws* ſhew us: For 'tis there appointed that *Illi qui Clavum tenet Portio una cum ſemiſſe, tantundem Proretæ & Naupego: Nautæ & Carabitæ portio una, Paraſchitæ portio dimidia tribuitur.* What Stipend the *Grecians* allowed their Seamen is equally obſcure; tho' that they did allow ſome, is plain from *Plutarch*'s Life of *Themiſtocles*, from *Xenophon* and *Thucydides*; and this Stipend came out of the publick Treaſury. But tho' the certain quantity of their Pay *per* Day, or *per Month*, be not known; yet 'tis apparent that there was a difference in it, according to the difference in the Pains and Labour of the Perſons. The Scholiaſt upon *Ariſtophanes* ſaith, that the *Thalamitæ* or lowermoſt Rowers had leſs Pay than the reſt, becauſe their Oars were ſhorter, and nearer to the Sea: And *Thucydides*, Lib. 6. mentions ſomething extraordinaay given to the *Thranitæ* over and above the publick Stipend; becauſe (as the Scholiaſt ſaith) their Oars being longer than any others in the Ship, they had the hardeſt Labour; and to this we may add, that they *ſtood* and rowed, whereas the others *ſate*; and beſides, if the Ship were of 5 or 6 Orders, their Oars muſt move over their Heads, which made it yet more laborious and difficult. Theſe were called ὀρθιοκῶπαι by *Heſychius* on this account. But what each particular Man had, is not eaſy to diſcover. There is a Paſſage in *Plutarch*'s *Lyſander*, by which it appears, that the common Allowance for every *Nauta* was three *Oboli*, and that *Cyrus* at *Lyſander*'s requeſt made it four. After this *Tiſſaphernes* increaſed their Pay to a *Drachma*, or ſix *Oboli*, as we learn from *Thucydides*, Lib. 8.

They had alſo Clothes (ſuch as they were) allowed them out of the publick Money, and this was accounted as part of their Pay, as was alſo the *Frumentum* or Proviſions which were appointed for them at the charge of the Publick. Sometimes they had a certain quantity of Corn allowed them, as when there was a proſpect of a long Voyage; and often bak'd and boil'd Meats. When they had crude Corn, there were Mills allowed on board to grind it; but they had oftner their Allowance in Meal or Flower. Which, with Water (to which ſometimes Milk, Wine or Oil was added) they made up into a kind of *Cakes*, which the *Greeks* called μᾶζα; but this was a kind of Haſty-pudding, and came far ſhort of the goodneſs of Bread.

Garlick was alſo a mighty Food with the Rowers, both among the *Greeks* and *Latines*; and Cheeſe and Eggs they uſually took along with them. For there is an Account in *Ariſtophanes* of a certain odd kind of Broth, which he calls μυττωτὸς, which was much uſed at Sea, and was compoſed of Cheeſe, Eggs and Garlick. This Tarr-Pottage the *Romans* called *Moſetum* and *Moretum*, and ſometimes *Intritum*, as *Scaliger* ſhews from *Donatus*. Their Drink was nothing but Water, eſpecially for the common Seamen; But we do now and then read of Officers having Wine on board.

Theſe Proviſions were, as we have before obſerved, carried in peculiar Veſſels, and not put on board the Men of War: And how theſe Ships differ'd from the *Naves longæ*, or Ships of War, and by what peculiar Names they were called, I have in part ſhewed before, and ſhall ſpeak of again in the Catalogue of the ſeveral kinds of Ships, and therefore ſhall ſay nothing further of them now. I ſhall conclude with a word or two about their Rewards and Puniſhments, and of the Sea Triumphs.

The uſual Reward that a Commander or Captain had for behaving himſelf honeſtly and bravely, had, was a *Naval* or *Claſſical Crown* or *Coronet*; and more peculiarly was this given to him, *Qui primus in Hoſtilem Navim tranſilierit, Cujuſve operâ manuve Navis Hoſtium capta fuit*, as *A. Gellius* and *Feſtus* expreſs it. This Coronet or Garland, was wrought into Figures repreſenting the *Roſtra*, *Acroſtolia* &c. of Ships, and was worn upon ſolemn Occaſions: And ſometimes he was ſolemnly preſented with a Purple Flag or Standard, which was hung up in his Houſe as a Token of and Trophy for his Conduct and Courage. The *Gubernatores* or *Maſters*, the ſubaltern Officers and common Soldiers, Rowers or Seamen, had uſually a Gift of Money beſtowed upon them, in value proportionable to their Merit, being greater or leſs according as they behaved themſelves: If they were Foreigners they were ſometimes made Denizens; they were exempted from Taxes, and they were endowed with ſeveral other Privileges and Advantages, according to the Pleaſure of the Government; and they had often alſo the Honour to be buried in ſome publick Place of Repute when they died; which was a thing they were very fond of.

And as their Rewards you ſee were Honorary; ſo their Puniſhments were uſually Diſgraces: Such as degrading them from their Station, taking away their Commiſſion, incapacitating them from any publick Office or Employment, and ſometimes depriving them of the Liberty of wearing the common and ordinary Habit, with thoſe of their own Rank: But this was chiefly if not ſolely, a Puniſhment for Officers that did not behave themſelves as they ſhould have done. The common Soldiers, Rowers, or Sailers, were uſually chaſtiſed with Corporal Puniſhment: And this was of 2 kinds; 1. *Common* or *Ordinary*, which was laſhing their Back with ſmall Ropes or Cords; or with a Cat of Nine-tails, as we now call them; and this was a Puniſhment for little Faults committed in the Ship: Or 2. *Extraordinary*; for great Crimes and Offences: And this was to hang them up by the Heels on the Ships ſide, without Board, and with their Heads downwards: And ſometimes tying a Rope about their Middle to let them down under Water, and letting them go quite under the Ships Keel, to draw them up on the other ſide of the Ship: Which Puniſhment we now call *Keel-Hailing*. If a Man deſerted, or fled from his Poſt, the Puniſhment was to cut off both his hands. 'Twas a common Puniſhment alſo, for a great Fault, to put the Offender on ſhore, in ſome barbarous and ſavage Place, and there to leave him to ſhift for himſelf: But for Capital Crimes the Puniſhment was throwing the Offender over-board, and ſo drowning him in the Sea.

Naval Triumphs were deſigned as peculiar Rewards, and as the Honours done to the *Imperator*, High Admiral, or Commander in chief, for an Eminent Victory in an Engagement by Sea. The firſt that ever had this Honour among the *Romans*, was *Duillius* their Admiral in the firſt Punick War, for his Signal Victory over the *Carthaginian* Fleet at *Lipara*: Himſelf and *Cn. Cornelius* being Conſuls. Before any Triumph was determined, the *Prætor* or Conſul always ſent to *Rome* a Ship crown'd with Laurel as a Token and Notification of the Victory: And next he came home himſelf, if he could, or at leaſt ſent his own Ship, or Ships, adorn'd with the Spoils of the Enemy: And if he came himſelf, he was met by the Conſuls, Prætors, and moſt of the great Officers of the City; when he was landed he applied himſelf to the Senate for Leave to have a Triumph, without whoſe Decree it could not be done: When on due Examination of the Circumſtances of the Victory, they thought fit to allow him a Triumphal Entry, it was uſually performed after this manner, Firſt, as in a Land Triumph, the *Lictors* began the Cavalcade; theſe were followed by Muſicians, who ſang and play'd the Sea Song, Tune, or *Harmonia*, whereby the Rowers were brought to ſtrike true, and to keep juſt time with their Oars, as is above deſcribed. Next followed Pictures and Repreſentations of the Engagement; after this came the *Roſtra*, and other Spoils and Ornaments of the Enemies Ships, together with their Arms and Weapons of War, drawn a-long in Carriages: Then were brought Tables, in which the Number and Names of the Enemies Ships were written, which the *Victor* had taken or deſtroy'd, and after theſe were carried the Treaſure taken from the Enemy, the Crowns which were preſented by the Allies. Behind which marched the Captive Pirates, Captains, and Commanders of the Enemies Ships: And next came the Admiral himſelf in a Triumphant Chariot, raiſed conſpicuouſly high, and wearing a Gown adorned with Gold and Purple, and with his Head crown'd with Laurel, and after the Chariot followed the *Marines*, *Rowers*, and *Sailers*, all adorned with Laurel, in this Pomp they went to the Capitol, and there after having offered up the proper Sacrifices, &c. they hung the *Roſtra* and Naval Spoils up in the Temple,

> *Multaq; præterea Sacris in Poſtibus arma*
> *Captiva pendent currus*----------
> -----------*ereptaq; Roſtra Carinis.*
>
> Virg. Æn. 7.

And ſometimes Columns and other Trophies were erected in ſeveral Places, in Honour of the Conquerour.

The manner of the Naval Triumph, amongſt the *Greeks*, was in very few material Points different from this of the *Romans*, and therefore I need not ſtay to give any particular Deſcription of it.

An ALPHABETICAL CATALOGUE *of the Ancient* Latine *and* Greek *Names of* SHIPS, *expreſſing their ſeveral Kinds, Rates, Sizes*, &c.

1. *Acatus* was a ſmall Ship, which went only coaſting along the Shore: This Word being the Term for the Main Sail of a Ship, 'tis probable this *Acatus* was only a Boat with one broad ſquare Sail. From hence came alſo the
2. *Acation*, which ſeems to have been a ſmall, ſwift, or Actuary Boat. *Suidas* ſaith it was the Name of a Fiſhing Boat; and *Thucydides* gives it the Title of *Amphericon*. *Plutarch* makes it the ſame with *Scapha*.
3. *Actuariæ Naves*, were a ſort of *Naves Longæ*; ſometimes they are called *Actuariolæ*; unleſs theſe were a yet a ſmaller ſort. Theſe were called by this Name, *Quia cito agi poſſunt*, and therefore come often under the Name of *Celeres*. They ſeem to have been a kind of Runners, and uſed for Piratical Uſes.
4. *Alveus* was a Canoa or ſmall Boat, made out of one Piece of Timber, by hollowing it like a Trough.
5. *Ampheres*, were Scullers, or Boats rowed with two Oars by the Management of only one Man. The Scholiaſt upon *Thucydides* calls it *Amphericon*, and *Strabo*, δίκωπον. *Apertæ Naves* were ſuch as we call open Boats: Without any Deck; in Oppoſition to the *Cataphractæ*, *Conſtratæ*, and *Tectæ Naves*.
6. *Aulones*, were Ships of State, built for the Entertainment and Paſſage of Princes.
7. *Autochabdolus* and *Autoſchedius*, was a Ship haſtily made, and in an urgent Neceſſity.
8. *Barca*, according to *Iſidorus*, is a Veſſel *quæ cuncta Navis commercia ad Littus portat*. The Name ſeems to be taken from the *Greek*, Βάρις and Βαρεῖαι, which were Onerary Ships.
9. *Biremis*, uſually was a Ship that had two Banks or Tires of Oars one above another; but the word is ſometimes uſed for a ſmall Boat in which there were but two Oars; and thoſe perhaps moved but by one Man, and in this Senſe 'tis the ſame with *Ampheres*, or *Sculler*.
10. *Byrſopagus*, was a ſort of Boat made of Leather, of a round Form, and wickered over: Theſe were of old uſed by the *Aſſyrians*, *Armenians*, *Venetians*, and *Britains*, as I have ſhew'd above: *Vid. Lucan. Pharſal.* Lib. 1.
11. *Camera*, was a cloſe wide bellied Boat, capable of holding 25 or 30 Men: It was uſed of old by the *Henicchani*, the *Boſporani*, and at this day by the *Tartars* againſt the *Turks*: (ſaith *Moriſotus*), they are built without Iron, or any other Metal, to keep them together: Such Boats as theſe the Inhabitants of the *Palus Meotis* and the *Euxine*, are ſaid to row themſelves in, in the Summer time; and then carrying them up into the Woods in the Winter they make them ſerve for Hutts to lodge in.
12. *Cameraa* was a larger, and yet more big-bellied Boat than the ordinary *Camera*, but of the ſame kind, and uſed by the ſame People. *Canna* (whence *Canoa*) was the *Monoxylon*, or Boat made all of one Tree, hollowed out.
13. *Cantharus*, according to *Suidas*, was a Boat ſo called from its Figure, being ſomething like a drinking Cup. It was uſed in the Iſland *Naxo*: And thence called *Naxiurges*.
14. *Carabus*, according to *Iſidorus*, Lib. 19. c. 1. is a ſmall Skiff made of Twigs, Oziers, &c. and covered with Leather: Called by the *Greeks* [illegible].
15. *Cataphractæ* were cloſe covered Ships, with Decks over them, called *Cataſtromata*, on which the Soldiers ſtood to engage in a Sea Fight. Theſe are ſaid to be firſt invented by the *Rhodians*; and are called by the *Latines*, *Tectæ* and *Conſtratæ Naves*. *Cataplus*, according to *Moriſotus*, was a ſmall Trading Ship, or Merchant-man.
16. *Cataſcopium*, a Spy-Boat, or ſmall Ship employed to get Intelligence. The ſame with the *Navis Speculatoria*. *Caudicæ Naves*, according to *Iſidorus*, are Boats made all of one hollowed Tree: The ſame with *Canna*.
17. *Caupulicæ* and *Capulicæ*, a kind of Privateers or Pirates: So called *à Capiendo*, ſaith *Moriſotus*.
18. *Celox* and *Celetes*, was a ſmall Boat, in which two or more Men rowed, each with a ſingle Oar: By which it was diſtinguiſhed from the *Ampheres*, or Sculler. Some will have this to be a long Ship, and ſomething like our *Brigantines*: But *Scheffer*, from *Appian*, proves the former Account of it to be the right one. They were called alſo *Celones*. But not *Celeres*; which were the *Naves Actuariæ*.
19. *Cercurus*, found out by the *Corcyreans* in *Aſia*; and by them called *Cercyra*, as *Moriſotus* tells us. It was a large Ship of Burthen, and yet rowed too with Oars in the Fore-ſhip. *Chalcembolon* was a Ship whoſe *Roſtrum* was covered with Braſs.
20. *Cholones*, very large, and yet ſwift ſailing Ships. *Moriſotus*.
21. *Comiſtica*, Ships in which the *Grecians* carried home the Enemies Spoils taken in the Engagement.
22. *Conſtratæ Naves*. See *Cataphracta*.
23. *Corbitæ* were Onerary Ships, which carried a Basket (*Corbis*) for a Signal on the Top of their Maſts ſaith *Feſtus*.
24. *Cumba*, the ſame with *Cymba*.
25. *Cybæa* was a kind of large *Triremis*, finely adorned and beautified, *Moriſotus*.
26. *Cymba*, a ſmall Boat invented by the *Phœnicians*. The ſame with the πλοῖον of the *Greeks*.

27.

27. *Dicrota*, Ships that row with two Banks of Oars, the ſame with the *Biremes*: But *Moriſotus* will have them to be Ships with two Rudders (one in the Head, and the other in the Stern) which could go with either end foremoſt.

28. *Dromones*, according to *Iſidorus*, are long Ships, ſwift Sailers, and fit for Purſuit or Chaſe. Some will have them to be Store-ſhips, but erroneouſly.

29. *Exploratoriæ Naves*, the ſame with *Speculatoriæ*, Spy-Boats.

30. *Fictiles Naves* were a ſort of Boats made of Clay, or Earth baked, and anciently uſed by the *Egyptians* upon the *Nile*: As both *Strabo* Lib. 17. teſtifies, and is plain from *Juvenal*. Sat. XV.

> ———— *Imbelle & inutile Vulgus*
> *Parvula fictilibus ſolitum dare vela Phaſelis*
> *Et brevibus pictæ Remis incumbere teſtæ.*

31. *Galeæ*, which the Emperor *Leo* calls γαλαῖαι, were μονήρεις; μονόκροτοι, long Ships with one only Bank of Oars: *Qui ſimptici ordine aguntur*, ſaith *Tacitus*. From theſe came our Modern *Gallies*: Which out-do all the Antient *Liburnicæ*, &c in Swiftneſs. For *Voſſius* ſaith, that no *Triremis*, or any other ancient Ships, with Sails, Oars, *&c.* could ever go above 200 *Stadia* in one day: And *Artemidorus* accounts 90 *Stadia* a good day's run: Whereas our Modern Gallies will go 1400 *Stadia* in a day: And our Gallies (he ſaith) gain 28 Feet 10½ Inches at every ſtroke of the Oars, whereas the Old *Triremes* could get but 25 Feet and 8 Inches at a ſtroke.

32. *Gerariæ* were Veſſels of Burden, and ſeem to be the ſame with the

33. *Gauli*: Which *Feſtus* ſaith were Ships almoſt of a round Form, uſed for carrying of Merchants Goods. *Heſychius* ſaith they were *Phœnician* Veſſels, in whoſe Language, *Bochart* ſhews, *Gaulus* ſignifies round. In the general they sre *Onerary Ships*, and diſtinguiſhed from the Men of War which were *long Ships*.

34. *Hemiola*, *Hemiolus*, a ſmall Piratical Ship or Boat, 1½ of whoſe Capacity was was without Oars, for the Men to ſtand and fight there.

35. *Hepteres* *Hexers* were Ships of War of 7 or 6 *Ordines Remorum*.

36. *Hibriota* was a long narrow Ship, invented and uſed by the *Scythian Iberi*, *Moriſotus*.

37. *Hippagines* *Hippagogæ* *Hippophoræ* were Ships uſed to Tranſport Horſe.

38. *Julopeza*, the Name of a Ship; but how to diſtinguiſh it I know not, ſaith *Moriſotus*: And I never met with the word any where, but in him.

39. *Lamiæ*, a kind of long Ships, and very ſwift Sailers. *Moriſotus*.

40. *Lembus* was a ſmall Ship, or rather Boat: As *Iſidorus* ſaith, the ſame with the *Cymba*, *Linter*, and *Carabus*. A ſmaller Boat of this kind was called

41. *Lemnunculus*, and *Lenunculus*.

42. *Liburnæ*, *Liburnicæ*, were a kind of *Biremes* invented by the *Liburni Jadertini*, a People upon the *Adriatick* Gulph. *Vegetius* ſaith, *Lib.* 4. *c.* 33. That *Auguſtus* at the Battle of *Actium*, finding that *M. Antony*'s Ships were chiefly worſted by the Ships of the *Liburni*, who were Auxiliaries to *Auguſtus*; concluded *That* kind of Shipping beſt for the Service of the War.

And after that almoſt all Ships of War were called *Liburnæ*; and the Names of *Quadriremes*, *Quinquiremes* were diſuſed. But as *Suidas* ſaith expreſly, the Ancient *Liburnæ* were not built like the *Triremes*, or ſuch like Ships of more than one *Ordo*; But were ſtrong, cloſe, ſnug built Veſſels, prodigiouſly ſwift, and therefore uſed for Piracy. The largeſt *Liburnica* that ever was built, *Voſſius* obſerves, was that of *Caligula*: *Suetonius* calls it a δεκήρης. Becauſe it had 10 *Ordines Remigum*; or 10 Men to an Oar. This Ship had 80 Oars of a ſide: Which doubled makes 160, and that multiplied by 10 gives 1600 for the Number of Oars. The *Quinque Remis* of *Cajus*, alſo mentioned by *Pliny*, was a *Liburnica*: She had 40 Oars of a ſide, and each moved by 5 Men: So that the Number of her Rowers was 400. But no *Liburnica* had ever above one Deck of Oars: Tho ſome were ſo large anciently, as to have 1000 Rowers; theſe were like our *Galeaſſes* covered and built with Towers, *&c.* So that a *Galeaſſe* may be called *Liburnica Conſtrata*.

49. *Linter* was antiently the ſame with the *Scapha*, *Alveus*, or *Monoxylon*; a Canoa made out of one Piece of Timber by hollowing it.

50. *Littorariæ* or *Orariæ*, the ſame with the *Tral a i.e*, Boats which were uſed only in Rivers, or to coaſt along the Shore.

51. *Longæ*, μακραὶ, were the *Ships of War* of the Antients, which were ſo called from their great Length, being uſually 7 or 8 times as long as they were broad: And theſe were of two kinds, either with but one Tire of Oars, or with more.

52. *Moneris* was a long Ship of one only Bank of Oars, the ſame with what the *Greeks* at laſt called γαλαία, and we now call a *Gally*. *Scheffer* ſhews that no Ship with 50 Oars was called a *Moneris*.

53. *Monoxylus* was a *Canoa* made out of one Tree, by hollowing it like a Trough.

54. *Muſculus* was a kind of bending or crooked Ship according to *Gyraldus*.

55. *Myoparo* or *Paro*; ſo called, ſaith *Iſiodorus*, *quaſi minimus Paro*; was a Piratical Ship, between a long Ship and an Onerary one, called alſo *Trieretica* and *Hemiola*; and *Livy* mentions the *Myoparo* and *Lembus*, as one and the ſame thing. 'Tis ſaid to be invented by the *Tyrrheni*, and by *Iſiodore* is ranked with the *Carabus*; and *Scheffer* thinks it was built juſt as the *Hemiola*, having only Oars in the Fore-ſhip. *Bayſius* thinks they were like our *Galleons*; but 'tis plain the *Myoparo* was but a ſmall Ship or Boat.

56. *Nanſus*. *Moriſotus* ſaith there was antiently a Gallick ſmall Ship called by this Name; but I never found it in any Author.

57 *Ocyalus* and *Oxia*, with ſome is the Name of a ſwift ſailing Ship.

58. *Onerariæ Naves* were Ships of Burden to carry Stores and Proviſions for the Men of War, and alſo for Trade and Merchandize. The *Greeks* called them φορτηγοὶ, and φορτίδες; and indeed they had peculiar Names according to their uſe: If they carried Proviſions, the *Latines* called them *Annotinæ*; if they carried Horſe, *Hippagines*, &c.

59. *Orthocraus* is one whoſe Yards ſtand exactly upright ſtrait or ſquare.

60. *Paralus* was the Name of a Ship uſed by the *Athenians*, to export ſuch Perſons as were baniſhed the City.

61. *Phaſelus* was invented by the *Campani*, and was a ſmall weak Boat, as we may gather from this of *Horace*:

> *Fragilemq; mecum ſolvat Phaſelon.*

62. *Pentecontorus* was a Ship of 50 Oars: Such was the *Argo-Navis*, or the firſt Long Ship.

63. *Pentiremis* was a Ship of 5 Orders or Banks of Oars, the ſame with the *Quinqueremis*.

64. *Plicatiles Naves* were ſmall Boats of Leather, with which the *Æthiopians* and *Babylonians* uſed to paſs up and down Rivers. *Pliny*, lib. 5. c. 9.

56. *Pontones*, ſo *Cæſar* calls the *Gallick* Ships, which were of the Onerary kind: ſome ſay they were of old uſed to paſs Rivers, *&c.* as our Pontons are now: But becauſe *Diodorus* calls them Πορεῖα, they ſeem rather to have been originally a kind of Tranſport Ships.

66. *Præcurſoriæ Naves*, the *Greeks* called them Πρόπλοι, were Ships appointed to go before a Fleet to make Diſcoveries.

67. *Prætoriæ Naves* were thoſe in which the Commanders in chief went, and which carried peculiar Flags or Standards by day, and three Lights every Night.

68. *Proſumiæ* are a kind of Ships mentioned by *Plautus* in his *Amplytrio* to be a kind of *Naves Speculatoriæ* or Spy-Boats.

69. *Quadriremis* was a Ship of 4 Banks or Orders of Oars.

70. *Quinqueremis* one of 5 ſuch.

71. *Rates* and *Ratariæ Naves* were the moſt antient Veſſels in which Men ever went to Sea; being a kind of *Rafts* or Bark Logs, made only of ſeveral Pieces of Timber put together, as I have above at large deſribed.

72. *Roſtrata*

72. *Roſtratæ Naves* were ſuch Men of War as were armed with *Roſtra* to break off the Enemies Oars, and to break Holes through the Side, and ſo ſink the Enemies Ships.

73. *Samania* or *Samia* was a kind of *Biremis*. I have not found this Word any where but in *Moriſotus*.

74. *Scapha* was a Canoa made by hollowing out a Tree, and then forming it into the Form of a Boat: the ſame with the *Monoxylus*, *Carabus*, *Speculatoria*, *&c.* For Authors confound them altogether. This was often taken for a Boat attending upon a Ship; which becauſe it was towed after her with a Rope, the *Greeks* called it alſo ἐφόλκια.

75. *Schedia*, which the *Greeks* called ζευκτή, the ſame with the *Rates* or *Bark-logs*.

76. *Speculatoriæ Naves* were Boats ſent out to ſpy or diſcover the Enemies Fleet. Theſe were ſometimes called *Cattæ* and *Cataſcopia*.

77. *Stlatum*, according to *Moriſotus*, is a very broad Ship.

78. *Strongylon*, a roundiſh kind of Ship, ſwoln bellied, and fit for Burden.

79. *Sutilis Navis* was a Leathern Boat, whoſe Sides were ſowed together.

80. *Synedria* was a large Ship built with Seats, *&c.* to hold Councils of War.

81. *Tabellariæ Naves* were ſuch as carried Letters, Orders, *&c.* in an Engagement: Theſe were called by various Names, as *Præcurſoriæ*, *Dromones*, *Luſoriæ*, &c.

82. *Thalamegæ* were Ships of State and Pomp, having fine Lodging Rooms, and other Apartments, *&c.* finely adorned.

83. *Theoris* was the Name of a peculiar Ship, which the *Athenians* ſent every Year to *Delphos*, to conſult the Oracle there. *Moriſotus.*

84. *Trabariæ Naves* were the ſame with *Ratariæ* and *Rates*.

85. *Trieris*, the ſame with *Triremis*, a Ship of 3 Banks or Orders of Oars.

86 *Vitiles Naves*, the ſame with the *Sutiles*.

87 *Vagiones*, were Veſſels built of very thin Boards or Planks, and joined together by Braſs Pins, *&c.* with wonderful Art. *Moriſotus.*

Of the Invention, Uſe, and Properties of the MAGNET.

THE *Magnet* or Loadſtone, as to its wonderful Quality of attracting Iron, was known to almoſt all Parts of the World, from all Antiquity. *Kircher* quotes *Abarbinel*, to ſhew that it was known to the *Hebrews*; and from *Plutarch* it appears that the antient *Egyptians* had the Knowledge of this Property. *Homer* alſo, *Ariſtotle*, *Ptolomy*, *Pythagoras*, *Theophraſtus*, *Gallen*, &c. and all the *Greeks* knew and admired this attractive Property of the Magnet, of drawing *only* Iron. The *Grecians* uſually called it the *Heraclean Stone*, becauſe it was firſt found about *Heraclea*, a City of *Magneſia* in *Lydia*: But the Author of the *Etimologicum* will have it called *Heraclius Lapis* διὰ τὸ ἰσχύειν καὶ κρατεῖν τῆς ὕλης, becauſe of the Strength and Power of its Attraction of Iron. *Pliny* ſaith, *Lib.*36. *c.*17. that it took the Name of *Magnes* from a certain Shepherd of that Name, who by chance diſcovered its Virtue by his nailed Shoes and Iron-ſhod Staff ſticking or adhering to theſe kind of Stones: But 'tis more probable that it was ſo called from *Magneſia*, that Part of *Lydia* where it was firſt diſcovered by the *Greeks*, as *Lucretius* tells us,

> *Quam Magneta vocant Patrio de Nomine Graii,*
> *Magnetum quia ſit Patriis de finibus ortus.*

And by *Achilles Tatius* 'tis called μαγνῆτις λίθος. *Snellius* and ſome others quote *Euripides* as the firſt who gave the Loadſtone the Name of *Magnes*. By *Sophocles* 'tis called *Lydius Lapis*, from *Lydia*, the Region where it was found, of which *Magneſia* is a part. The *Greeks* alſo ſometimes gave it the Name of *Sideritis*, from its Property of attracting Iron unto it. For which indeed it is deſervedly celebrated by all the Antients, whenever they ſpeak of it: And *Claudian* hath a particular Poem on this Subject, in which he very elegantly and maſterly deſcribes the Virtues of this Stone, and admires the ſecret Cauſe of ſuch an amazing effect.

> *Quis calor infundit geminis alterna metallis*
> *Fœdera? Quæ duras jungit diſcordia mentes?*
> *Flagrat anhela Silex, & amicam ſaucia ſentit*
> *Materiam, placidos Chalybs cognoſcit amores.*

But notwithſtanding the ſo long and ſo univerſal a Knowledge as there plainly appears to have been of this Stone, there do not ſeem any good grounds to believe that the *Directive Faculty* of it was at all known to the antient *Greeks* or *Latines*, or to the *Egyptians*, from whom the *Greeks* received all their curious Learning. Our *N. Fuller* indeed labours hard to prove the contrary Opinion; but he is ſufficiently refuted by the moſt Learned *Bochart* in his *Geogr. Sacr.* and by many others. Whether there were not ſome Knowledge of this moſt uſeful and excellent Property among the *Chineſes*, *Arabians* and *Africans* before we had made the Diſcovery of it in *Europe*, may' I think, be very juſtly doubted; notwithſtanding *Kircher*, p. 18. ſaith, that after all his moſt diligent Enquiry of thoſe who had been in *China*, and who perfectly were acquainted with the *Chineſe* Annals and Hiſtory, he could find nothing of it among them. For *Iſ. Voſſius* in his Diſſertation *de Artibus & Scientiis Sinarum*, ſaith expreſly, that the Knowledge of the Magnet, and its directive Faculty of pointing to the North, was known to the *Chineſes* for 2800 Years ago; and that other Nations had it from them. And he cites *Jacobus de Vitriaco*, as aſſerting, that the *Saracens* had made uſe of the Compaſs in Navigation, for near five hundred Years ago: And he ſaith, 'tis certain that the Knowledge of the Declination or Variation of the Mariners Compaſs was known alſo to the *Saracens*, and from thence came to the *Chriſtians*: And he thinks that the *Saracens* had this Knowledge from the *Chineſe*, who uſed to trade to *Taprobana* or *Ceylon*, p. 80. *J. de Laet. p.* 75. *de Orig. Gent. Americ.* ſaith, that 'tis not juſt to conclude, that becauſe the *Greeks* and *Latines* had antiently no Knowledge of the *Pyxis Nautica*, therefore none of the Orientals any where had: For ſaith he, *Acoſta* confeſſes, that *Vaſques de Gama* found the *Ethiopians* about *Moſambique* knew the Uſe of the Compaſs; and it did not appear from whom they had learnt the Uſe of it. This *Vaſques de Gama* was the firſt that diſcovered the *Cape of Good Hope*. The ſame thing *Kircher* takes notice of; and owns alſo, that in the *Geographia Arabica Vaticana*, and in the *Nubiana*, which are ſufficiently antient, there are *not obſcure Hints* of the Knowledge of the Mariners Compaſs. *Cabæus de Magnete*, p. 21. ſaith, the firſt that he could find that mentioned the Knowledge of the *Directive Faculty*, or as our *Gilbert* calls it, the *Verticity* of the Magnet, was *Albertus Magnus* and *Vincentius Belluacenſis*; and theſe both quote a Book *de Lapidibus*, which they will have to be *Ariſtotle*'s, in which there is mention made of the *North* and *South Part* of the Magnet. And tho' *Cabæus* doth not believe this Book to be really his whoſe Name it carries, yet he thinks juſtly enough, that it may be written by ſome old *Arabick* Author, and ſo put out under *Ariſtotle*'s Name; which if true, will ſufficiently prove our Point, *viz.* that there was a Knowledge of the *Verticity* of the Magnet in ſome other Part of the World, before we diſcovered or produced it here. To which muſt be added what is poſitively aſſerted by *Gilbert* and many good Authors, *viz.* that *Paulus Venetus* brought its Uſe into *Italy* about *A. D.* 1260. having learnt it in *China*, or ſomewhere in his Travels to the Eaſt. *Cabæus* ſaith, the firſt Writer on this Subject of the Directive Faculty of the *Magnet*, was one *Petrus Peregrinus Gallus*, in a little Book (which he calls) *Epiſtola*; and this Book he ſaith, *Garzonius* aſſerts he ſaw in the *Bibliotheca Caſtellana* at *Venice*. This Epiſtle, he ſaith, *Johannes Taiſner*, in his *Opuſculum perpetuâ memoriâ digniſſum de Natura & Effectibus Magnetis*, printed at *Cologn* 1562, hath diſguiſed and deformed, and then publiſhed as his own; tho' that Epiſtle it ſelf were printed 4 Years before. *Athan. Kircher*, p. 19. ſaith, ſome account this *Petrus Peregrinus Gallus* to have been our *Roger Bacon*: And this he thinks is the Truth; which *Sturmius* alſo confirms in his *Epiſtola Invitatoria*, Dat. Altorf. 1682. ſaying expreſly, that 'twas *Roger Bacon* firſt found out the *Verticity* or *Polarity* of the Magnet. And for the Honour of our own Nation alſo, the late Learned and Excellent Mathematician Dr. *Wallis*, *Savilian* Profeſſor of Geometry in the Univerſity of *Oxford*, *Phil. Tranſ.* N°. 278. conjectured, that the Mariners Compaſs was an *Engliſh* Invention, from the Word *Compaſs*, which is almoſt every where retained; and is properly an *Engliſh* Word, being uſed in many of our Provincial Parts for a Circle, or exactly round Figure, whoſe Circumference is every where equally diſtant from a Point within it, called its Centre.

But it muſt be granted in all this which is above advanced, tho' there be great probability, yet there is little certainty of: And therefore we muſt next attribute, with the generality of Writers, the firſt Invention of the Mariners Compaſs to *Joh. Goia*, or *Gira*, of *Malphi*, a Town in the Kingdom of *Naples*, not far from *Salernum*, in the *Terra de Lavoro*; ſome call him *Flavius Gioia*: And this was about the Year 1300.

After this great and moſt uſeful Diſcovery was known to *Europe*, there were ſoon many inquiſitive Heads that employed their Thoughts about making further Diſcoveries of this celebrated Stone. So that in ſome time its *Variation* or *Deflection* from the true Meridian, was diſcovered by *Sebaſtian Cabot*. The *Declination* (as it was at firſt called, whereas now the *Variation* often paſſes by that Name) or rather the *Inclination* of the Needle, was firſt diſcovered by our Countryman *Robert Norman*. (See his Book called the *New Attractive*, printed at *Lond.* 1614.) which is a ſurprizing Property, whereby it always *dips* under the Horizon, when placed upon a Pin like a Compaſs, except in ſuch Places as are juſt under the Equator; and there it keeps always parallel to the Horizon exactly. And he found the greateſt Inclination at *London* to be 71°. 50'. Dr. *Wallis*, *Phil. Tranſ.* N°. 276. thinks that the Diſcovery of this Dipping of the Needle is owing to Mr. *Blagrave*, or ſome other *Greſhamite*: And he deſcribes this Property to be a Direction of Altitude above the Horizon: So that if it be duly poiſed on an Horizontal Axis, it will point to a determinate Degree of Altitude or Elevation above the Horizon: And he ſaith truly, that of this Diſcovery, tho' made ſo long ago, there hath not yet been any conſiderable uſe made. The *Variation of the Variation* is another conſiderable and very ſurprizing Property of the Loadſtone; that is, That the Magnetick Needle (in its Horizontal Poſition) doth not always retain the ſame Variation or Declination from the true Meridian, in the ſame Place and at all Times; but doth ſucceſſively vary its Declination or Variation from Time to Time. This was firſt (as 'tis now agreed on all hands, ſaith Dr. *Wallis*) diſcovered by Mr. *Gellibrand*, about the Year 1635. But *Sturmius* ſaith, that this was taken notice of alſo by *Hevelius*, *Auzout*, *Petit*, *Volckamer*, and others, much about the ſame time. So that our *Engliſh* Nation have had a very conſiderable Share in the Diſcoveries which have been made about the Magnet, and its wonderful and uſeful Properties.

A ſuccinct Account of which Properties, and other ſuch *Phænomena* of the Loadſtone, as have been found out truly to belong to it by plain Experiments and repeated Obſervations, I ſhall here ſubjoin, without entring into *Theories* or Explications of the Cauſes of them: And after this, I will give you the Thoughts and Obſervations of the Learned and Ingenious Capt. *Hally* (now *Savilian* Profeſſor of Geometry in *Oxford*) upon the Variation of the Compaſs, and the Reaſon of the *Variation* of that *Variation*: Becauſe both theſe will be of great uſe to aſſiſt the Enquiries of publick ſpirited and ingenious Men, in their future Trials, Obſervations and Experiments on this very great Subject, ſo univerſally uſeful and advantageous to all trading Nations: And alſo becauſe many Travellers and Navigators may perhaps carry this *Bibliotheca* with them abroad, tho' to them other Books, in which theſe things are to be found, are leſs known or agreeable.

The Properties or Phænomena *of the* Magnet, *or* Loadſtone, *as they have been diſcovered by* Gilbert, Cabæus, Kircher, Vin. Leotaudus, Cartes, *Dr.* Power, *the Honourable Mr.* Boyle, *&c.*

1. THAT in every *Magnet* there are two Poles, one pointing North, the other South; and if a Stone be cut or broke into never ſo many Pieces, there are theſe two Poles in each Piece.

2. That theſe Poles, in divers Parts of the Globe, are diverſly inclined towards the Earths Centre.

3. That theſe Poles, tho' contrary to one another, do help mutually towards the *Magnet*'s Attraction and Suſpenſion of Iron.

4. If two *Magnets* are Spherical, one will turn or conform it ſelf to the other, ſo as either of them wou'd do to the Earth, and that after they have ſo conformed or turned themſelves, they endeavour to approach to join each other; but if placed in a contrary Poſition, they avoid each other.

5. If a *Magnet* be cut through the Axis, the Parts or Segment of the Stone, which before were joined, will now avoid and fly each other.

6. If the *Magnet* be cut by a Section perpendicular to its Axis, the two Points there which before were conjoined, will become contrary Poles, one in one, the other in the other Segments.

7. Iron receives Virtue from the Magnet by Application to it, or barely from an Approach near it, tho' it do not touch it; and the Iron receives this Virtue varioufly, according to the Parts of the Stone it's made to touch, or made approach to.

8. If an Oblong Piece of Iron be any how applied to the Stone, it receives Virtue from it only as to its Length.

9. The *Magnet* loſes none of its own Virtue by communicating any to Iron, and this Virtue it can communicate to Iron very ſpeedily; tho' the longer the Iron touches or joins the Stone, the longer will its communicated Virtue hold, and a better *Magnet* will communicate more of it, and ſooner than one not ſo good.

10. That Steel receives Virtue from the *Magnet* better than Iron.

11. A Needle touch by a *Magnet*, will turn its Ends the ſame way towards the Poles of the World, as the Magnet will do.

12. That neither Loadſtone nor Needles toucht by it, do conform their Poles exactly to thoſe of the World; but have uſually ſome Variation from them: And this Variation is different in divers Places, and at divers Times, in the ſame Place.

13. That a Loadſtone will take up much more Iron when armed or capt, than it can alone: And that tho' an Iron Ring or Key be ſuſpended by the Loadſtone, yet the Magnetical Particles do not hinder that Ring or Key from turning round any way either to the Right or Left.

14. That the Force of a Loadſtone may be variouſly encreaſed or leſſened, by the various Application of Iron or another Loadſtone to it.

15. That a ſtrong *Magnet*, at the leaſt diſtance from a leſſer or a weaker, cannot draw to it a Piece of Iron adhering actually to ſuch leſſer or weaker Stone; but if it come to touch it, it can draw it from the other: But a weaker Magnet, or even a little Piece of Iron, can draw away or ſeparate a Piece of Iron contiguous to a greater or ſtronger Loadſtone.

16. That in our North Parts of the World, the South Pole of a Loadſtone will raiſe up more Iron than the North Pole.

17. That a Plate of Iron only, but no other Body interpoſed, can impede the Operation of the Loadſtone, either as to its *attractive* or *directive* Quality. Mr. *Boyle* found it true in Glaſſes ſealed Hermetically; and Glaſs is a Body as impervious as moſt are to any *Effluvia*.

18. That the Power or Virtue of a Loadſtone may be impaired by lying long in a wrong Poſture, as alſo by Ruſt, Wet, &c. and may be quite deſtroyed by Fire.

Experiments

Experiments of the Nature and Properties of the Magnet. *By Mr.* Boyle.

1. MR. *Boyle* found, that by heating a *Magnet* red hot, it could be ſpeedily deprived of its *Attractive Quality*.

2. If a Loadſtone be heated red-hot, and then cooled, either with its South Pole to the North, in a Horizontal Poſition, or with its South Pole downwards in a Perpendicular one, it will change its Polarity, the South Pole becoming the Northern one, and *vice verſâ*.

3. By applying the Poles of a very ſmall Fragment of a Loadſtone to the oppoſite vigorous ones of a good larger *Magnet*, Mr. *Boyle* found he could ſpeedily change the Poles of the Fragment; but he cou'd not effect it in a Fragment that was conſiderably bigger, tho' he tried many hours.

4. He obſerved, that well tempered and hardned Iron Tools, when heated by Attrition, Turning, Filing, *&c.* they would, while warm, attract thin Filings or Chips of Iron and Steel, but not when cold. Yet I remember once to have ſeen my ſelf, and tried, that a Piece of a File which was in the hands of Mr. *Tarwell* the Spectacle Maker, did retain ſuch an attractive Quality, that it would take up and keep ſuſpended the Key of a Cabinet or *Eſcritore*, and needed no Attrition to excite this Magnetical Vertue.

5. The Iron Bars of Windows which have long ſtood in an erect Poſition, do grow permanently Magnetical, the lower Ends of ſuch Bars being the North Poles, and the upper the Southern: For according to Laws of *Magnetiſm*, we find the lower Ends of ſuch Bars will drive away the North End of a poiſed Needle, and will attract the Southern: Which ſhews, that by the continual Paſſage of the ſubtile Magnetical Particles through them, they are turned into a kind of Magnet themſelves.

6. If a Bar of Iron that hath not long ſtood in an erected Poſture, be only held perpendicularly, its lower End will be the North Pole, and attract the South Point of a touched Needle: But then this Virtue is tranſient, and will ſhift as you invert the Bar; for the other End, when held lowermoſt, will preſently become the North Pole: Wherefore, in order to render the Quality of *Verticity* permanent in an Iron Bar, it muſt remain a long time in a proper Poſition: But the Fire will produce this Effect in a very ſhort time; for as it will immediately deprive a Loadſtone of Attractive Power, or change its Poles (as in *Exper.* 1, 2.) ſo it will as ſoon give a *Verticity* to a Bar of Iron, if being heated red hot, it be cooled in an erect Poſition, or directly North and South. Nay, it hath been obſerved often, that even Tongs and Fire-Forks, by being often heated, and then ſet to cool in a Poſition near to erect, have gained this Magnetical Property. The Reaſon of which very different Effects of the Fire on a *Magnet*, and on Iron, Mr. *Boyle*, with his uſual Modeſty, ſuggeſts to be this: That the peculiar Texture or Conſtitution by which a *Magnet* differs from common Iron Oar, being accurate and fine, is ſpoiled by the rude and violent Attacks of the Fire: But this mighty Agent by working upon Iron, ſoftens and opens the Pores of the Mettal (which is harder than Iron Oar;) ſo that it becomes capable of being pervaded by the Magnetical Particles, and by that means gains a *Vertical Quality*.

7. Mr. *Boyle* found, that by heating a Piece of *Engliſh Oker* red hot, and placing it to cool in a proper Poſture, it plainly gained a Magnetick Power.

8. The ſame Noble Gentleman found, that an excellent Loadſtone of his own having lain almoſt a Year in an inconvenient Poſture, had its Virtue ſo impaired, that he at firſt thought ſomebody had ſpoiled it by Fire.

9. If a Needle be well touched on a good Loadſtone, 'tis known it will, when duly poiſed, point North and South; but if it have one contrary Touch of the ſame Stone, it will immediately be deprived of that Faculty; and by another ſuch Touch it will have its Poles quite changed; ſo that the End which before pointed North, ſhall now point Southward.

10. Dr. *Power* and Mr. *Boyle* both tried; that after a red-hot Iron had gained a *Verticity* by being well heated and cooled North and South, and then alſo hammered at the Ends, this Virtue would immediately be deſtroy'd by 2 or 3 Blows of a ſtrong Hammer ſmartly given about the middle of it.

11. Mr. *Boyle* found, that by drawing the Pack of a Knife, or long Piece of Steel Wire, *&c.* over the Pole of a Loadſtone leiſurely, once or divers times, beginning the Motion from the Equator or middle of the Stone, towards the Pole, the Knife or Wire will accordingly attract one End of a poiſed Magnetical Needle: but if you take another Knife or Wire, and thruſt it leiſurely over the Pole, from the Pole towards the Equator, or middle of the Equator, this Knife ſhall expel or drive away the ſame End of the Needle which the former Knife would attract. Which Experiment makes it very probable, that the Operation of the *Magnet* depends on the Flux of ſome fine Particles which go out at one Pole, then round about, and in again at the other.

13. Becauſe it is one of the univerſal Laws of Nature, That *Action and Re-action are always equal*: Therefore 'tis plain, the Iron muſt attract the Magnet as much as that doth the Iron; and ſo you may eaſily experiment it to be in Fact, if you place a Magnet or Piece of Iron on a Piece of Cork, ſo as that it may ſwim freely in the Water; for then you will ſee, that which ſoever you hold in your Hand, will draw the other towards it.

A Diſcourſe of the Variation of the Compaſs, by Mr. Edm. Hally, Savilian *Profeſſor of Geometry in* Oxford, *and* F.R.S.

THE Variation of the Compaſs (by which I mean the Deflection of the Magnetical Needle from the true Meridian) is of that great concernment in the Art of Navigation, that the Neglect thereof does little leſs than render uſeleſs one of the Nobleſt Inventions Mankind ever yet attained to: And for this cauſe all Ships of conſequence (eſpecially thoſe bound beyond the Equator) carry with them Inſtruments on purpoſe to obſerve this Variation; that ſo the Courſe ſteer'd by the Compaſs, may be reduced to the true Courſe in reſpect of the Meridian.

Now altho' the great Utility that a perfect Knowledge of the Theory of the Magnetical Direction would afford to Mankind in general, and eſpecially to thoſe concern'd in Sea Affairs, ſeems a ſufficient Incitement to all Philoſophical and Mathematical Heads, to take under ſerious Conſideration the ſeveral *Phænomena*, and to endeavour to reconcile them by ſome general Rule: Yet ſo it is, that almoſt all the Authors from whom a Diſcourſe of this kind ought to have been expected, paſs by in ſilence the Difficulties they here encounter. And thoſe that mention this Variation, by affirming it to proceed from Cauſes altogether uncertain (as are the caſual lying of Iron Mines and Loadſtones in the Earth) put a ſtop to all further Contemplation, and give diſcouragement to theſe that would otherwiſe undertake this Enquiry. 'Tis true, that not long ſince one Mr. *Bond*, an old Teacher of Navigation, put forth a ſmall Treatiſe, wherein he pretends to calculate the Variation; but he limits his Hypotheſis to the City of *London*, affirming himſelf (as he had a great deal of reaſon) that the ſame *Calculus* is not ſufficient for other Places; whereby it appears, that this Rule is far ſhort of the ſo much deſired general one.

Now altho' (through want of ſufficient Obſervations, and ſome other Difficulties which I ſhall anon ſhew) I cannot pretend perfectly to eſtabliſh the Numbers and Rules of a *Calculus*, which ſhall preciſely anſwer to the Variations of all Parts of the World; yet I ſuppoſe it will not be unacceptable to the Curious to propoſe ſomething of a Light into this abſtruſe Myſtery; which, if no other, may have this good effect, to ſtir up the Philoſophical *Genii* of the Age to apply themſelves more attentively to this uſeful Speculation. But before I proceed, 'twill be neceſſary to lay down the Grounds upon which I raiſe my Concluſions, and at once to give a Synopſis of thoſe Variations which I have reaſon to look upon as ſure, being moſtly the Obſervations of Perſons of good Skill and Integrity.

A TABLE of VARIATIONS.

Names of Places.	Longitude from London.	Latitude	Anno Dom.	Variation observed.
	d. m.	d. m.		d. m.

At the West Point of *New Guinea*	126: 0 E	0:26 S	1643	5: 0 E

Tho' I could wiſh we could obtain from the *Spaniards* what Variations they find in their Voyages from the *Manilhas* towards *Acapulco*, through the North Part of the South Sea; as likewiſe what it is at *Japan*, from the *Dutch*: Yet (conſidering the number of theſe Obſervations I have collected, and that they are made in Parts of the World ſo remote from *Europe*, and from one another) I ſuppoſe that the Theory that anſwers theſe, will ſcarce fail in thoſe Regions from whence we have as yet no account. But firſt we muſt make ſome Remarks upon the foregoing Table: And firſt,

That in all *Europe* the Variation at this time is *Weſt*, and more in the Eaſtern Parts thereof than the Weſtern: As likewiſe that it ſeems throughout to be upon the Increaſe that way.

Secondly, That on the Coaſt of *America*, about *Virginia*, *New-England* and *New-found-land*, the Variation is likewiſe Weſterly; and that it increaſes all the way as you go Northerly along the Coaſt, ſo as to be above 20 Degrees at *New-found-land*, nearly 30 Degrees in *Hudſon's* Straits, and not leſs than 57 Degrees in *Baffins* Bay: Alſo that as you ſail Eaſtward from this Coaſt, the Variation diminiſhes. From theſe two it is a legitimate Corollary, That *ſomewhere between* Europe, *and the North Part of* America, *there ought to be an Eaſterly Variation, or at leaſt no Weſterly.* And ſo I conjecture it is about the Eaſtermoſt of the *Tercera Iſlands*.

Thirdly, That on the Coaſt of *Brazile* there is Eaſt Variation, which increaſes very notably as you go to the Southward, ſo as to be 12 Degrees at Cape *Frio*, and over-againſt the River of Plate 20 ½ Degrees: And from thence ſailing Southweſterly to the Straits of *Magellan*, it decreaſes 17 Degrees, and at the Weſt Entrance but 14 Degrees.

Fourthly, That at the Eaſtward of *Brazile* properly ſo called, this Eaſterly Variation decreaſes, ſo as to be very little at *St. Helena* and *Aſcenſion*, and to be quite gone, and the Compaſs Point true about 18 Degrees of Longitude Weſt from the *Cape of Good Hope*.

Fifthly, That to the Eaſtward of the aforeſaid Places Weſtward Variation begins, which reigns in the whole *Indian* Sea, ariſes to no leſs than 18 Degrees under the Equator it ſelf, about the Meridian of the Northern Part of *Madagaſcar*: and near the ſame Meridian, but in 39 Degrees South Latitude, it is found full 27 ½ Degrees: From thence Eaſterly the Weſt Variation decreaſes, ſo as to be little more than eight Degrees at Cape *Comorin*, and than three Degrees upon the Coaſt of *Java*; and to be quite extinct about the *Molucca Iſlands*, as alſo a little to the Weſtward of *Van Diemens* Land, found out by the *Dutch* in 1642.

Sixthly, That to the Eaſtward of the *Molucca's* and *Van Diemens* Land in South Latitude, there ariſes another Eaſterly Variation, which ſeems not ſo great as the former, nor of ſo large extent; for that at the Iſland *Rotterdam* it is ſenſibly leſs than upon the Eaſt Coaſt of *New Guinea*. And at the rate it decreaſes, it may be well ſuppoſed, that about 20 Degrees farther Eaſt, or 225 Degrees Eaſt Longitude from *London*, in the Latitude of 20 Degrees South, a Weſterly Variation begins.

Seventhly, That the Variations obſerved by the Honourable Sir *John Norborough* at *Baldivia*, and at the Weſt Entrance of the Straights of *Magellan*, do plainly ſhew, that that Eaſt Variation noted in our third Remark, is decreaſing apace; and that it cannot reaſonably extend many Degrees into the South Sea, from the Coaſt of *Peru* and *Chili*, leaving room for a ſmall Weſterly Variation, in that Tract of the unknown World that lies in the Mid-way between *Chili* and *New Zealand*, and between *Hounds-Iſland* and *Peru*.

Eightly, That in ſailing North-Weſt from *St. Helena* by *Aſcenſion* as far as the Equator, the Variation continues very ſmall Eaſt, and as it were conſtantly the ſame: So that in this part of the World the Courſe, wherein there is no Variation, is evidently no Meridian, but rather North-Weſt.

Ninthly, That the Entrance of *Hudſons* Straights, and the Mouth of the River of *Plate* being nearly under the ſame Meridian, at the one place the Needle varies 29 ½ Degrees to the Weſt, at the other 20 ½ Degrees to the Eaſt. This plainly demonſtrates the Impoſſibility of reconciling theſe Variations by the Theory of *Bond*, *which is by two Magnetical Poles and an Axis inclined to the Axis of the Earth.* From whence it would follow, That *under the ſame Meridian the Variation ſhould be in all Places the ſame way.*

Theſe things being premiſed, may ſerve as a ſure Foundation to raiſe the Superſtructure of a Theory upon. But firſt it would not be amiſs to ſhew hereby the Miſtake of *Gilbert* and *Des Cartes*: The firſt whereof ſuppoſes, That *the Earth it ſelf being in all its Parts Magnetical, and the Water not; whereſoever the Land is, thither alſo ſhould the Needle turn, as to the greater Quantity of Magnetical Matter.* But this in many Inſtances is not true, but moſt remarkably upon the Coaſt of *Brazile*, where the Needle is ſo far from being attracted by the Land, that it turns the quite contrary way, leaving the Meridian to lie N.b.E. which is juſt along the Coaſt. As to the Poſition of *Des Cartes*, That *the Iron and Loadſtones hid in the Bowels of the Earth and the Bottom of the Sea may be the Cauſes that the Needle varies*, if we conſider for how great a Part of the

Earth's Surface, *ex gr.* in the whole *Indian* Sea, the Needle declines the ſame way, and that regularly, 'twill follow that the attracting Subſtance that occaſions it, muſt be very far diſtant. Now by Experience we find the little force that Iron Guns have upon the Compaſs in Ships (their Virtue, tho' they be Demiculverin, or greater Cannon, being not perceptible at four or five Yards Diſtance) and the Experiments now before the *Royal Society* do plainly ſhew, how little a Magnetiſm there is in moſt crude Iron Oars: What Quantity thereof muſt be then ſuppoſed to make ſo powerful a Diverſion at two or three Thouſand Miles diſtance? Yet I I cannot deny that in ſome Places near the Shoar, or in Shoal-Water, the Needle may be irregularly directed from the aforeſaid Cauſes, and that not a little, as *Gaſſendus* gives a notable Inſtance of the Iſland *Elba* in the *Mediterranean* Sea: But theſe Differences from the general Direction are always Signs of the Nearneſs of thoſe Magnetical Subſtances, for the Production whereof that Iſland *Elba* has been famous from all Antiquity. Beſides, againſt both *Des Cartes* and *Gilbert*, the Change of the Variation which has been within theſe hundred Years laſt paſt more than 15 Degrees at *London*, is an entire Demonſtration; tho' *Des Cartes* does not ſtick to ſay, that the Tranſportation of Iron from Place to Place, and the Growth of new Iron within the Earth, where there was none before, may be the Cauſe thereof. The ſame holds likewiſe againſt the *Hypotheſis* of *Magnetical Fibres*, which *Kircher* maintains

Now to propoſe ſomething that may anſwer the ſeveral Appearances, and introduce nothing ſtrange in Philoſophy, after a great many cloſe Thoughts, I can come to no other Concluſion than, That *the whole Glebe of the Earth is one great Magnet, having four Magnetical Poles, or Points of Attraction, near each Pole of the Equator two; and adjacent to any one of theſe Magnetical Poles, the Needle is governed thereby, the neareſt Pole being always predominate over the more remote.* The Parts of the Earth wherein theſe Magnetical *Poles* lie, cannot as yet be exactly determined, for want of ſufficient *Data* to proceed Geometrically; but as near as Conjecture can reach, I reckon that the *Pole*, which is at preſent neareſt to us, lies in or near the Meridian of the Lands End of *England*, and not above ſeven Degrees from the Pole Arctick. By this Pole the Variations in all *Europe*, and *Tartary*, and the *North Sea*, are principally govern'd, tho' with regard to the other Northern Pole, whoſe Situation is in a *Meridian* paſſing about the middle of *California*, and about 15 Degrees from the North Pole of the World. To this the Needle has chiefly reſpect in all the *North America*, and in the two Oceans on either ſide thereof, from the *Azores* Weſtward to *Japan*, and farther. The two Southern Poles are farther diſtant from the South Pole of the World: The one about ſixteen Degrees therefrom, is in a Meridian, ſome twenty Degrees to the Weſtward of *Magellan Straights*, or 25 Degrees Weſt from *London*. This commands the Needle in all the *South America*, in the *Pacifick Sea*, and the greateſt Part of the *Ethiopick Ocean*. The fourth and laſt Pole ſeems to have the greateſt Power and largeſt Dominions of all, as it is the moſt remote from the Pole of the World, being little leſs than 20 Degrees diſtant therefrom in the Meridian, which paſſes through *Hollandia Nova* and the Iſland *Celebes*, about 120 Degrees Eaſt from *London*. This Pole is predominant in the South Part of *Africa*, in *Arabia*, and the *Red Sea*, in *Perſia*, *India*, and its Iſlands, and all over the *Indian Sea*, from the Cape of *Good Hope* Eaſtwards to the middle of the great South Sea that divides *Aſia* from *America*. This ſeems to be the preſent Diſpoſition of the Magnetical Vertue throughout the whole Globe of the Earth: It remains to ſhew how this Hypotheſis makes out all the Variations that have been obſerved of late, and how it anſwers to our ſeveral Remarks drawn from the Table. And firſt it is plain, that (our *European* North *Pole* being in the Meridian of the Lands-end of *England*) all Places more Eaſterly than that will have it on the Weſt-ſide of their Meridian, and conſequently the Needle, reſpecting it with its Northern Point, will have a Weſterly Variation, which will ſtill be greater as you go to the Eaſtwards, till you come to ſome Meridian of *Ruſſia*, where 'twill be greateſt, and from thence decreaſe again. Thus at *Breſt* the Variation is but 1 ½ Degrees, at *London* 4 ½ Degrees; but at *Dantzick* ſeven Degrees Weſt. To the Weſtward of the Meridian of the Lands-end, the Needle ought to have an Eaſterly Variation, were it not that (by approaching the *American* Northern Pole, which lies on the Weſt ſide of the Meridian, and ſeems to be of greater force than this other) the Needle is drawn thereby Weſtwards, ſo as to counterballance the Direction given by the *European Pole*, and to make a ſmall Weſt Variation in the Meridian of the Lands-end it ſelf; yet I ſuppoſe, that about the Meridian of the Iſle *Tercera*, our neareſt Pole may ſo far prevail, as to give the Needle a little turn to the Eaſt, tho' but for a very ſmall ſpace: The Counterballance of thoſe two Poles permitting no conſiderable Variation in all the Eaſtern Parts of the *Atlantick* Ocean; nor upon the Weſt Coaſts of *England* and *Ireland*, *France*, *Spain* and *Barbary*: But to the Weſtward of the *Azores*, the Power of the *American* Pole overcoming that of the *European*, the Needle has chiefly reſpect thereto, and turns ſtill more and more towards it, as you approach it. Whence it comes to paſs, that on the Coaſt of *Virginia*, *New-England*, *New-found-land* and *Hudſons Straights*, the Variation is Weſtward; that it decreaſes as you go from thence towards *Europe*, and that it is leſs in *Virginia* and *New-England*, than in *New-found-land* and *Hudſons Straights*. This Weſterly Variation again decreaſes, as you paſs over the *North America*; and about the Meridian of the middle of *California*, the Needle again points due North; and from thence Weſtward to *Tedzo* and *Japan*, I make no doubt but the Variation is Eaſterly, and half the Sea over no leſs than fifteen Degrees, if there be any truth in this Hypotheſis of mine. Therefore I propoſe this as a trial, that the whole may be ſcann'd thereby; and I conceive it will not be hard to know of the *Spaniards* how it is, who ſo frequently ſail through that Ocean in their Return from the *Manilha Iſles*. This Eaſt Variation extends over *Japan*, *Tedzo*, *Eaſt Tartary*, and part of *China*, till it meet with the Weſterly, which is govern'd by the *European* North Pole, and which I ſaid was greateſt ſomewhere in *Ruſſia*.

Towards the Southern Pole the Effect is much the ſame, only that here the South Point of the Needle is attracted. Hence it will follow, that the Variation on the Coaſt of *Brazile*, at the *River of Plate*, and ſo on to the Straights of *Magellan*, ſhould be Eaſterly (as in our third Remark); if we ſuppoſe a Magnetical Pole ſituate about twenty Degrees more Weſterly than the Straights of *Magellan*. And this Eaſterly Variation doth extend Eaſtward over the greateſt part of the *Ethiopick* Sea, till it be counterpoiſed by the Virtue of the other Southern *Pole*; as it is about mid-way between the Cape of *Good Hope*, and the Iſles of *Triſtan d' Acuntia*. From thence Eaſtwards, the *Aſian* South Pole (as I muſt take the liberty to call it) becoming prevalent, and the South Point of the Needle being attracted thereby, there ariſes a Weſt Variation very great in Quantity and Extent, becauſe of the great diſtance of this Magnetical Pole of the World.

Hence it is, that in all the *Indian* Sea, as far as *Hollandia Nova*, and farther, there is conſtantly Weſt Variation; and that under the Equator it ſelf it ariſes to no leſs than eighteen Degrees where 'tis moſt. About the Meridian of the Iſland *Celebes*, being likewiſe that of this Pole, this Weſterly Variation ceaſes, and an Eaſterly begins, which reaches, according to my Hypotheſis, to the middle of the *South Sea* between *Zelandia Nova* and *Chili*, leaving room for a ſmall Weſt Variation govern'd by the *American* South Pole, which I ſhewed to be in the *Pacifick* Sea, in the ſixth and ſeventh Remark.

What I have now ſaid does plainly ſhew the Sufficiency of this Hypotheſis for ſolving the Variations that are at this time obſerv'd in the temperate and frigid *Zones*, where the Direction of the Needle chiefly depends upon the Counterpoiſe of the Forces of two Magnetical Poles of the ſame nature; and I ſuppoſe I have ſhewn how it comes to paſs, that under the ſame Meridian the Variation ſhould be in one place 29 ½ Weſt, and another 20 ½ Eaſt, as I have noted in my ninth Remark. In the *Torrid Zone*, and particularly under the Equinoctial, reſpect muſt be had to all four Poles, and their Poles and their Poſitions well conſidered; otherwiſe it will not be eaſy to determine what the Variations ſhall be, the neareſt Pole being always the ſtrongeſt: Yet not ſo as not to be counter-ballanced by the united Forces of two more remote. A notable Inſtance whereof is in our eighth Remark, where I took notice, that in ſailing from *St. Helena* by the Iſle of *Aſcenſion*, to the Equator, on a N. W. Courſe, the Variation is very little Eaſterly, and in that whole Tract unalterable; for which I give this Reaſon, that the South *American* Pole (which is conſiderably the neareſt in the aforeſaid Places) requiring a great Eaſterly Variation, is counter-poiſed by the contrary Attraction of the *North American* and the *Aſian* South-Pole; each whereof ſingly are in theſe Parts weaker than the *American* South-Pole: and upon the N. W. Courſe, the diſtance from this latter is very little varied, and as you recede from the *Aſian* South-Pole, the Ballance is ſtill preſerved by the Acceſs towards the *North-American* Pole. I mention not in this

Caſe the *European* North-Pole, its Meridian being little removed from thoſe of theſe Places, and of it ſelf requiring the ſame Variations we here find. After the ſame manner we might proceed to conclude the Variations in other Places under and near the Equator: But I purpoſe to leave it for an Exerciſe to the Thoughts of the ſerious Reader, who is deſired to help his Imagination, by having before him a Map or Globe of the Earth, and to mark thereon the Magnetical Poles in the *Longitudes* and *Latitudes* I aſſign them.

Thus I hope I have not loſt my Pains and Study in this difficult Subject, believing that I have put it paſt doubt, *That there are in the Earth four ſuch Magnetical Points or Poles, which occaſion the great Variety and ſeeming Irregularity which is obſerved in the Variations of the Compaſs.* But to calculate what it is, in any Place aſſign'd, is what I dare not yet pretend to, tho' I could wiſh it were my Happineſs to be able to oblige the World with ſo uſeful a Piece of Knowledge: There are Difficulties that occur, that render the thing as yet not feaſible; for firſt there are a great many Obſervations requiſite, which ought to be made at the ſame time; not at Sea, but a-ſhore, with greater Care and Attendance than the generality of Sailors apply. And beſides, it remains undetermin'd in what proportion the attractive Power decreaſes, as you remove from the Pole of a Magnet, without which it were a vain Attempt to go about to calculate. There is yet a further Difficulty, which is the Change of the Variation, one of the Diſcoveries of this laſt Century; which ſhews, that it will require ſome hundreds of Years to eſtabliſh a compleat Doctrine of the Magnetical Syſtem. From the foregoing Table it ſhould ſeem, that all the Magnetical Poles had a Motion Weſtward. But if it be ſo, tis evident, that it is not a Rotation about the Axis of the Earth; for then the Variations would continue the ſame in the ſame Parallel of *Latitude* (the *Longitude* only changed) as much as is the Motion of the Magnetical Poles: But the contrary is found by Experience; for there is no where in the Latitude of 15½ North between *England* and *America*, a Variation of eleven Degrees Eaſt at this time, as it was once here at *London*: It ſeems therefore, that our *European* Pole is grown nearer the Pole Artick than it was heretofore, or elſe that it has loſt part of its Virtue. But whether theſe Magnetical Poles move altogether with one Motion, or with ſeveral; whether equally or unequally; whether Circular or Libratory: If circular, about what Center; if Libratory, after what manner; are Secrets as yet utterly unknown to Mankind, and are reſerv'd for the Induſtry of future Ages.

Having in the precedent Diſcourſe delivered a Theory of the Variation of the Magnetical Compaſs, wherein I did collect as many Obſervations as at that time I could procure, and having carefully compar'd them together, I came at length to this general Concluſion, *That the Globe of the Earth might be ſuppoſed to be one great Magnet, having four Magnetical Poles or Points of Attraction, near each Pole of the Equator two: And that in thoſe Parts of the World which lie near adjacent to any of thoſe Magnetical Poles, the Needle is chiefly govern'd thereby; the neareſt Pole being always predominant over the more remote.* And I there have endeavour'd to ſtate and limit the preſent Poſition of thoſe Poles in the Surface of our Globe, which the Reader pleaſing to conſult, will ſave us the pains of repeating. But after all, tho' that Diſcourſe was favourably received both at home and abroad, as ſeeming to render a tolerable Account of the obſerved Variations; yet I found two Difficulties not eaſy to ſurmount: The one was, that no Magnet I had ever ſeen or heard of, had more than two oppoſite Poles, whereas the Earth had viſibly four, and perhaps more. And ſecondly, it was plain that theſe Poles were not, at leaſt all of them, fixt in the Earth, but ſhifted from Place to Place, as appeared by the great Changes in the Needle's direction within this laſt Century of Years, not only at *London* (where this great Diſcovery was made) but almoſt all over the Globe of the Earth; whereas it is not known or obſerved that the Poles of a Loadſtone ever ſhifted their Place in the Stone, nor (conſidering the compact Hardneſs of that Subſtance) can it eaſily be ſuppos'd; tho the Matter of Fact be too notorious and univerſal not to be accounted for.

Theſe Difficulties had wholly made me deſpond, and I had long ſince given over an Inquiry I had ſo little hopes of, when in accidental Diſcourſe, and leaſt expecting it, I ſtumbled on the following Hypotheſis; in delivering whereof, if I ſhall ſeem to advance any thing that looks like extravagant or romantick, the Reader is deſired to ſuſpend his Cenſure, till he has conſider'd the Force and Number of many Arguments which concur to make good ſo new and ſo bold a Suppoſition.

Tho' it be ſufficiently known and allowed, that the Needle's Variation changes, it will be neceſſary however to give a few Inſtances, whereby it may appear that this Change is gradual and univerſal, and the effect of a great and permanent Motion: For which take the following Examples.

At *London*, in the Year 1580, the Variation was obſerved by Mr. *Burrows* to be 11 deg. 15 min. Eaſt. In *Anno* 1622, the ſame was found by Mr. *Gunter* to be but 6 deg. 0 min. Eaſt. In the Year 1634, Mr. *Gellibrand* found it 4 deg. 5 min. Eaſt. In 1657, Mr. *Bond* obſerved that there was no Variation at *London*. *Anno* 1672, my ſelf obſerved it 2 deg. 30 min. to the Weſt. In the Year 1692, I again found it 6 deg. 0 min. Weſt. So that in 112 Years the Direction of the Needle was changed no leſs than ſeventeen Degrees.

At *Paris*, *Orontius Finæus*, about the Year 1550, did account it about eight or nine Degrees Eaſt Variation. *Anno* 1640, it was found three Degrees Eaſt. *Anno* 1666, there was was no Variation there, and *Anno* 1681, I found it to be 2 deg. 30 min. to the Weſt.

At *Cape d' Agulhas*, the moſt Southern Promontory of *Africa*, about the Year 1600, the Needle pointed due North and South without Variation, whence the *Portugueſe* gave its Name. *Anno* 1622, there was two Degrees Weſt Variation. *Anno* 1675, it was 8 deg. 0 min. Weſt; and in the Year 1691, it was curiouſly obſerved not leſs than 11 Degrees Weſt.

At *St. Helena*, about the Year 1600, the Needle declined eight Degrees to the Eaſt. *Anno* 1623, it was but 6 deg. 0 min. Eaſt. *Anno* 1677, when I was there, I obſerved it accurately on ſhoar to be 0 deg. 40 min. Eaſt; and in 1692, was found about 1 deg. Weſtward of the North.

At *Cape Comorin* in *India*, in the Year 1620, there was 14 deg. 20 min. Weſt Variation. In the Year 1680, there was 8 deg. 48 min. but now lately in the Year 1688, it was no more than 7 deg. 30 min. So that here the Needle has returned to the Eaſt about ſeven Degrees in ſeventy Years.

In all other Examples the Needle has gradually mov'd towards the Weſt, and the Places are too far aſunder to be influenc'd by the removal of any Magnetical Matter, which may by accident be tranſplac'd within the Bowels, or on the Surface of the Earth. If more Examples are deſired, the Reader may be furniſh'd with them in the *Portugueſe Routier* of *Alliexo de Motta* (written about the Year 1600) and in the Voyage of *Beaulieu*, both publiſhed in Mr. *Thevenot*'s firſt Collection of curious Voyages, printed at *Paris*, *Anno* 1663; which he is to compare with the Journals of our late *Eaſt India* Voyagers, and I am aſſured that it will be thereby evident, that the Direction of the Needle is in no Place fix'd and conſtant, tho' in ſome it changes faſter than in others: And where for a long time it has continu'd as it were unalter'd, it is there to be underſtood, that the Needle has its greateſt Deflection, and is become ſtationary, in order to return, like the Sun in the Tropick. This, at preſent, is in the *Indian* Sea, about the Iſland *Mauritius*, where is the higheſt Weſt Variation, and in a Tract tending from thence into the N. N. W. towards the *Red Sea* and *Egypt*. And in all Places to the Weſtward of this Tract, all over *Africa*, and the Seas adjoining, the Weſt Variation will be found to have encreas'd; and to the Eaſtwards thereof, as in the Example of *Cape Comorin*, to have decreas'd, *viz.* all over the *Eaſt Indies*, and the Iſlands near it.

After the like manner, in that ſpace of Eaſt Variations, which beginning near *St. Helena*, is found all over the *South America*, and which at preſent is higheſt about the Mouth of *Rio de la Plata*, it has been obſerv'd, that in the Eaſtern Parts thereof, the Variation of the Needle gradually decreaſes: But whether on the contrary it increaſes in thoſe Places which lie more Weſterly than that Tract wherein the higheſt Eaſt Variation is found, or how it may be in the vaſt *Pacifick Sea*, we have not Experience enough to aſcertain, only we may by Analogy infer, that both the Eaſt and Weſt Variations therein do gradually increaſe and decreaſe after the ſame Rule.

Theſe *Phænomena* being well underſtood and duly conſidered, ſufficiently evince, that the whole Magnetical Syſtem is by one, or perhaps more Motions tranſlated; whether Eaſtwards or Weſtwards, I ſhall anon diſcuſs: That this moving thing is very great, as extending its Effects from Pole to Pole; and that the Motion thereof is not *per Saltum*, but a gradual and regular Motion.

Now conſidering the Structure of our *Terraqueous* Globe, it cannot be well ſuppos'd that a very great part thereof can move within it, without notably changing its Centre of Gravity, and the Equilibre of its Parts, which would produce very wonderful Effects in changing the Axis of diurnal Rotation, and occaſion ſtrange Alterations in the Sea's Surface, by Inundations and Receſſes thereof, ſuch as Hiſtory never yet mention'd. Beſides, the ſolid Parts of the Earth are not to be granted permeable by any other than fluid Subſtances, of which we know none that are any ways Magnetical: So that the only way to render this Motion intelligible and poſſible, is to ſuppoſe it to turn about the Center of the Earth: And there is yet requir'd, that this moving internal Subſtance be looſe, and detached from the external Parts of the Earth wherein we live; for otherwiſe were it affix'd thereto, the whole muſt neceſſarily move together.

So then the external Parts of the Globe may well be reckon'd as the Shell, and the internal as a *Nucleus* or inner Globe included within ours, with a fluid *Medium* between, which having the ſame common Concentre and Axis of diurnal Rotation, may turn about with our Earth each twenty four hours; only their outer Sphere having its turbinating Motion ſome ſmall matter either ſwifter or ſlower than the Internal Ball; and a very Minute difference in length of Time, in many Repetitions becoming ſenſible, the Internal Parts will by degrees recede from the External, and not keeping pace with one another, will appear gradually to move either Eaſtward or Weſtward by the difference of their Motions.

Now ſuppoſing ſuch an Internal Sphere to have ſuch a Motion, we ſhall ſolve the two great Difficulties we encountred in my former Hypotheſis: For if this Exterior Shell of Earth be a *Magnet*, having its Poles at a diſtance from the Poles of the Diurnal Rotation; and if the Internal *Nucleus* be likewiſe a *Magnet*, having its Poles in two other places diſtant alſo from the *Axis*; and theſe latter by a gradual and ſlow Motion change their place in reſpect of the External; we may give a reaſonable Account of the four Magnetical Poles I preſume to have demonſtrated before; as likewiſe of the Changes of the Needle's Variations, which till now hath been unattempted.

The Period of this Motion being wonderful great, and there being hardly an hundred Years ſince theſe Variations have been duly obſerved, it will be very hard to bring this *Hypotheſis* to a *Calculus*; eſpecially ſince, tho' the Variations do increaſe and decreaſe regularly in the ſame place, yet in differing Places, and at no great diſtance, there are found ſuch caſual Changes thereof as can no way be accounted for by a regular *Hypotheſis*; as depending on the unequal and irregular diſtribution of the Magnetical Matter within the Subſtance of the External Shell or Coat of the Earth, which deflect the Needle from the Poſition it would acquire from the Effect of the general Magnetiſm of the whole. Of this the Variations at *London* and *Paris* give a notable Inſtance: For the Needle hath been conſtantly about 1 deg. 30 min. more Eaſterly at *Paris* than at *London*; tho' it be certain that according to the general Effect, the difference ought to be the contrary way; notwithſtanding which, the Variations in both Places do change alike.

Hence, and from ſome other things of like nature, I conclude, That the two Poles of the External Globe are fixt in the Earth; and that if the Needle were wholly governed by them, the Variations thereof would be always the ſame, with ſome little Irregularities on the account I but juſt above mentioned: But the Internal Sphere having ſuch a gradual Tranſlation of its Poles, does influence the Needle, and direct it variouſly according to the reſult of the Attractive or Directive Power of each Pole; and conſequently there muſt be a Period of the Revolution of this Internal Ball, after which the Variations will return again as before. But if it ſhould in future Ages be obſerved otherwiſe, we muſt then conclude that there are more of theſe internal Spheres, and more Magnetick Poles than four; which at preſent we have not a ſufficient Number of Obſervations to determine; and particularly in that vaſt *Mare del Zur*, which occupies ſo great a part of the whole Surface of the Earth.

If then two of the Poles be fixt, and two moveable, it remains to aſcertain which they are that keep their place; and tho' I could wiſh we had the Experience of another Century of Years to found our Concluſions upon, yet I think we may ſafely determine, *That our* European *Pole* (which in the precedent Diſcourſe I ſuppoſed near the Meridian of the Lands-end of *England*, and about 7 Degrees therefrom) is That that is moveable of the two Northern Poles, and That that has chiefly influenced the Variation in theſe Parts of the World: For in *Hudſons Bay*, which is under the Direction of the *American* Pole, the change is not obſerv'd to be near ſo faſt as in thoſe Parts of *Europe*, tho' that Pole be much farther remov'd from the *Axis*.

As to the *South Poles*, I take the *Aſian* Pole, which I place about the Meridian of the Iſland *Celebes*, to be the fixt, and conſequently the *American* Pole, to move; from the like Obſervations of the ſlow Decreaſe of the Variation on the Coaſt of *Java*; and near the Meridian of the *Aſian* Pole; tho' I muſt confeſs to have no account of the Effects of the other beyond *Magellane Straights*.

If this be allowed me, 'tis plain that the fixt Poles are the Poles of this External Shell or *Cortex* of the *Earth*, and the other two, the Poles of a Magnetical *Nucleus* included and moveable within the other. It likewiſe follows, that this Motion is Weſtward; and by conſequence, that the aforeſaid *Nucleus* has not preciſely attained the ſame degree of Velocity with the exterior Parts in their diurnal Revolution; but ſo nearly equals it, that in 365 Revolves, the difference is ſcarce ſenſible. This I conceive to ariſe from the Impulſe whereby this diurnal Motion was impreſt on the Earth, being given to the External Parts, and from thence in time communicated to the Internal; but not ſo as perfectly to equal the Velocity of the firſt Motion impreſs'd on them, and ſtill conſerv'd by the ſuperficial Parts of the Globe.

As to the Quantity of this Motion, it is almoſt impoſſible to define it, both from the Nature of this kind of Obſervation, which cannot be very accurately perform'd, as alſo from the ſmall time theſe Variations have been obſerv'd, and their Change diſcover'd. It appears by all Circumſtances, that its Period is of many Centuries of Years, and as far as may be collected from the Change of the Place, where there was no Variation, by reaſon of the Equilibre of the two Southern Magnetical Poles, *viz.* from *Cape d' Agulhas* to the Meridian of *St. Helena* (which is about 23 deg. in about 90 Years) and of the Place where the Weſterly Variation is in its ἀκμὴ or greateſt Deflection, being about half ſo much, *viz.* from the Iſle of *Diego Roiz* to the South Weſt Parts of *Madagaſcar*; we may with ſome reaſon conjecture, that the *American* Pole has mov'd Weſtwards forty ſix Degrees in that time, and that the whole Period thereof is performed in ſeven hundred Years, or thereabouts: So that the nice Determination of this, and of ſeveral other Particulars in the Magnetick Syſtem, is reſerv'd for remote Poſterity: All that we can hope to do, is to leave behind us Obſervations that may be confided in, and to propoſe *Hypotheſes* which after Ages may examine, amend or refute. Only here I muſt take leave to recommend to all Maſters of Ships and all others, Lovers of Natural Truths, that they uſe their utmoſt Diligence to make, or procure to be made, Obſervations of theſe Variations in all Parts of the World, as well in the North as South Latitude (after the laudable Cuſtom of our *Eaſt India* Commanders) and that they pleaſe to communicate them to the *Royal Society*, in order to leave as compleat a Hiſtory as may be to thoſe that are hereafter to compare all together, and to compleat and perfect this abſtruſe Theory.

And by the way, it will not be amiſs to amend a receiv'd Error in the Practice of obſerving the Variation; which is, to take it by the Amplitude of the Riſing and Setting Sun, when his Center appears in the viſible Horizon; whereas he ought to be obſerv'd when his under Limb is ſtill above the Horizon about ⅔ of his Diameter, or twenty Minutes, upon the ſcore of his Refraction, and the height of the Eye of the Obſerver above the Surface of the Sea; or elſe they are to work the Amplitudes as they do the Azimuth, reckoning the Sun's Diſtance from the Zenith 90 deg. 36 min. This, tho' it be of little conſequence near the Equinoctial, will make a great Error in high Latitudes, where the Sun riſes and ſets obliquely.

The Firſt BOOK.

A DESCRIPTION OF THE Circum-Navigations of the Globe.

CHAP. I.

Of the Improvement of NAVIGATION *in Latter Times: The firſt Application of Magnetical and Aſtronomical Inſtruments thereto: And the Diſcoveries made by the* Portugueze.

IF we look back upon Antiquity, and conſider the State of Navigation in the remoter Ages of the World, we ſhall eaſily confeſs, that they did, in all Points, fall vaſtly ſhort of the admirable Attainments of their Succeſſors, in theſe Matters: For the Proof of this, we need but conſider, that the Invention of the Compaſs is of a very modern Date; and 'tis not to be diſcerned, by any convincing Tokens, that our Forefathers did ever dream of any ſuch Contrivance. And being deſtitute of ſuch a Direction, as this Noble Inſtrument affords, they were put to no ſmall Shifts to find their Way at Sea. They were forced to fetch Inſtructions from the Heavens above, and the Proſpect of the Globe round about them. The Rocks and Mountains were their Guides by Day, and the Stars by Night had the Conduct of the Ship. Their imperfect Art could not protect a Veſſel under the Fury of a ruffled Sea: 'Twas in the Power of each Wind to fruſtrate a Voyage, and detain them cloſe Priſoners in their own Port. They dared not venture out to Range the wide Ocean, and bid Adieu to the Land, for Weeks or Months together; but generally took Care to keep the Shore in ſight, ſailing as near it as they could with Safety, and nothing but Tempeſts could ever drive them further: So that they could make no great Progreſs in the Diſcovery of any Countries, that did not juſt border upon them; and the Globe they lived on, might be either ten times bigger, or as many times leſs than it is, for any thing they could find by their Navigation.

The Advantage of Modern Navigation, above that of the Ancients.

But the latter Ages, by the happy Diſcovery of ſome Properties of the Loadſtone, have with much eaſe ſurmounted thoſe formerly reputed Impoſſibilities in Sailing: They have now gotten the free Uſe, and the full Command of the Ocean: They can travel all over the vaſt Dimenſions of it, without fear of loſing themſelves, or their intended Harbour: They can, by infallible Methods, ſteer their Courſe to the remoteſt Parts, and ſurvey the whole Globe from the one Pole to the other: They are not liable to any of thoſe Diſappointments, nor tied to obſerve thoſe ſhort uncertain Meaſures in their Sailing, that the Ancients did. Tho' the Air be all black with Miſts and Fogs, and the Stars afford no Light nor Direction; tho' the Forces of Winds and Waves combine to make them wander up and down the Deep, yet ſtill under the Conduct of this excellent Guide, they know where they are, and how to extricate themſelves out of every Labyrinth. Something of the Nature and Property of the Loadſtone, was without all queſtion known to Antiquity. They knew the attractive Power it exerciſes upon Iron, and the ſtrange Sympathy between thoſe two Bodies. * This the Works of *Plato*, *Ariſtotle*, &c. do ſufficiently juſtifie; in which we find ſome of thoſe Phænomena taken notice of. But the Polar Direction of that Stone, and the Needle affected with it, together with its Variation from N. and S. which in many Parts of the Earth 'tis of a ſudden forced into: Theſe are Diſcoveries, the Glory of which ſeems purely to belong to the latter Ages of the World. 'Tis true, that ſome over-zealous Champions for the Cauſe and Honour of Antiquity, will find this Diſcovery there, in ſpite of all Demonſtrations to the contrary: And *Solomon* being granted to be the Wiſeſt of Men, muſt of neceſſity alſo be the Author of this Invention, as ſome will fain have it. But without any Derogation from the Honour of that Prince's Wiſdom, it is not very likely that this Diſcovery came from him: For we never heard of any Volumes of his concerning Minerals and Foſſils, tho' we know he diſcourſed largely of the Vegetable Kingdom: Or had he done ſo in any part of his Writings, tho' the Books themſelves had been loſt, yet the Virtues of ſuch a Stone ſo uſeful to the World, and celebrated by ſuch an Author, would certainly have been nicely preſerved in Memory, and as carefully tranſmitted to Poſterity. Beſides, 'tis moſt certain, that this Invention muſt have been known not only to *Solomon* himſelf, but to all the *Tyrian* Sailors, and Sea-men, who were the Managers of his Fleet; and who by the help of it, were to perform the *Ophirian* Voyages, (which Voyages, by the way, were too ſlow and tedious, to be performed by the Direction of a Compaſs.) And had the *Tyrians* known it, the News would not have ſtopp'd there; the whole World would quickly have rang with the Noiſe of it: And their Ships would have carried the Report, where-ever the Wind had blown, and the Seas had run. And every Age unqueſtionably would have been infinitely fond and tender, of ſo profitable a Contrivance as this; and have recommended it to the ſucceeding Generations, as the moſt ineſtimable Jewel a People could be poſſeſſed of. In ſhort, the Worth and Uſefulneſs of it, muſt needs have made it Immortal, after once it had a Birth in the World.

See *Varen.* *Geog. Gen.* Lib. 3. Cap. 33. Pr. 2.

* See a vaſt Catalogue of Authors to this purpoſe mention'd by Dr. *Gilb.* *Libro de Magnete.*

***Solomon* not probably the Author of the Compaſs.**

There are various Opinions and Reports beſides, concerning this Providential Invention of the Compaſs; tho' rather determining the Places than the Time, in which it firſt appeared. Some ſay, that the famous *Venetian*, *Marco Polo*, brought it from *China* into *Italy*, 300 Years ago. That the *Portugueze*, at their firſt Entrance into the *Indian* Seas, found Compaſſes and Quadrants in all, amongſt the *Moors*. That (*a*) *Vertomannus* travelling with the ſame People over the *Arabian* Deſarts, to *Mecha*, obſerved them to ſteer over that huge Sandy Ocean, by the help of the Compaſs. That a certain Perſon of (*b*) *Malfi*, a Town in the Kingdom of *Naples*, *Johannes Goja* by Name, may deſervedly put in his Claim here, before all other Pretenders. However the Matter is, 'tis by far moſt probable, that as the *European* World was the firſt Fountain to it ſelf of other very Noble Inventions, ſo it was alſo of this: And that the *Eaſt*, (with all its glorious Pretences) has rather borrowed the Perfection of Arts from us, than we the firſt Elements of them, from thence.

See *Sect.* 7.

A. D. 1503. (*a*) *Vertomannus*, chap. 14.

(*b*) Of which Town is this remarkable Verſe, *Prima dedit Nautis Uſum Magnetis Amalphis.*

This may ſuffice as to the firſt Diſcovery and Application of this wonderful Foſſile, to the Uſes of Navigation, concerning which we may further note in general, That the Needle inſpired with the Virtue of this Stone, preſents us with theſe two moſt remarkable Phænomena. The one is its Verticity, or Polar Direction; by which as a true and faithful Index, it points out (tho' not always, yet often) the true Poles of the great Magnet, our Terreſtrial Globe. The other is that which is vulgarly called, the Variation of the Compaſs; and it is the Deflexion of the Magnetick Meridian, from an exact N. and S. Line; ſo that the former makes a certain Angle with this latter, declining from it either Eaſterly or Weſterly, according as the Cauſe of that Declination (whatever it be), is ſealed either towards the one or the other of theſe Quarters: This Variation obſerves for the moſt part, no ſtated Rule, nor Law, in proportion to the Longitude, Latitude, or Situation of Places. It is not equally obſerved in all Parts of the ſame Meridian: As under the Meridian of the Iſle *Del Cowe*, which is one of the *Azores*; there is no Variation at the Iſle it ſelf, but there is conſiderable in ſome other Parts of the ſame Meridian. Again, It doth not obſerve any certain proportion in going from Eaſt to Weſt, and Weſt to Eaſt: For from the Iſle *Del Cowe*, it increaſes to the Iſles *Triſtan de Canha*, and to thoſe further Eaſterly, where it is near 13 Degr. but from thence to the *Cabo Das Agulhas*, it decreaſes again; ſo that near that Cape, which is not far from the Cape of *Good Hope*, there is very little Variation, if any: Neither is the Quantity of it always exactly the ſame, in the ſame individual place. For inſtance: At *London*, *A. D.* 1580, the Variation was obſerved to be 11 Degr. 15 Min.; but by a ſucceeding Obſervation, in 1662, it was found 6 Degr. 13 Min. So at *Paris*, in 1640, it was obſerved to be 3 Degr. whereas 30 Years before, (*viz.*) 1610. it was found at the ſame place to be 8 Degr. The Cauſes of all theſe ſurprizing Phœnomena, are purely of Philoſophick Conſideration, and therefore are not to be enquired after in this place.

Var. Geog. Gen. Lib. 3. Prop. 4.

But having now briefly diſcourſed theſe General Introductory Heads, concerning the Compaſs it ſelf, we muſt look farther into the Succeſſive Uſes and Applications of it, to the Buſineſs of Navigation: And here juſtly to purſue the Circumſtances of the Matter of Fact; and to begin with the firſt conſiderable Beginnings of the *European* Sailing, it is neceſſary for us to look into *Spain* and *Portugal*; the latter of which Countries, we ſhall find firſt attempting to pull off the dark Veil from the Face of the World, and prying into thoſe Parts of it, which (through Ignorance of this Art) had lain hitherto conceal'd. And ſince the Country we look into, had lately been the Scene of ſo many remarkable Actions, and (juſt freed from the Hurries of a bloody War) entred upon the Proſecution of this Noble Deſign; we may briefly trace thoſe Circumſtances of it down to thoſe happier and calmer Days, wherein it found it ſelf at leiſure to undertake this Work.

The *Moors* ſtirr'd up by *Julian* Earl of *Ceuta*, in Revenge of his Daughter's Raviſhment, by the *Gothiſh* King *Roderick*; * like a mighty Torrent, ſpread themſelves through the whole Country of *Spain*: Which now having loſt the *Gothick*, was forced to ſubmit to the *Saracenical* Yoke. The firſt that made head againſt this Rout of *Barbarians*, with any Succeſs, was *Pelagius*; whoſe Succeſſors very happily carried on (what he had ſo nobly begun) for the ſpace of 300 Years: About which time the great City *Toledo* was forcibly wreſted from the *Moors*, by the Bravery of *Alphonſus* VI. From the Daughter of this Prince, (married to *Henry* of *Lorrain*) was deſcended *Alphonſus* I. King of *Portugal*; from whoſe time, till that of *John*, the Firſt of that Name, the Wars againſt the *Moors* were continued with Vigour, and crown'd with ſo many Victories, that they were quite driven out of thoſe Parts of *Spain*.

* *A.D.* 712.

King *John* purſuing the Hereditary Quarrel, paſſed over into *Africk*, removing the Scene of War from his own Country, into that of the *Moors*. And here he took the Town of *Ceuta* from them, as an Introduction to further Conqueſts in the Country; in the gaining of which he was not a little aſſiſted by the Noble Valour of the (*a*) *Engliſh*, who were principally (tho' not only) concerned in that Action. And the *Engliſh* were inclined to give the *Portugueze* this Countenance, partly from an Alliance between the two Crowns, the Sence of which was yet freſh in the Nation: For *Henry* V. that then Reigned in *England*, was Nephew to *Philip*, the Wife of this King *John* of *Portugal*, ſhe being the Daughter, and he the Grandſon of *John* Duke of *Lancaſter*.

An. 1415

(*a*) *Walſing.* Hiſt. Ang.

Neither was this the only Benefit of this Nature the *Portugueze* are indebted to our Nation for: For long before this, * at the Requeſt of the King of *Portugal*, they had forced the *Moors* out of an important Town (*b*), giving 47000 of thoſe Infidels, the Honour of dying by *Engliſh* Hands. Which Aſſiſtance of the *Engliſh* was at that time the more valuable; becauſe being then bound for the Holy Land, they did by this means, as it were, quench the Flame of their Devotions for a while, and delay their Service for the Bleſſed Sepulchre.

* *A.D.* 1188.

(*b*) *Sylvia.* See *Math. Paris*, at the end of *Hen.* II.

The Third Son of this King *John*, by the foremention'd *Engliſh* Princeſs, was the famous Prince *Henry*, to whom the World is indebted for ſo many Diſcoveries. He having tried his Fortune againſt the *Moors*, to his own, and his Nation's Honour, began to think of remoter Conqueſts than thoſe, and finding out new Subjects, in Countries yet unknown. For this purpoſe he attended the Mathematical Sciences, became an hard Student himſelf, and encouraged his Subjects to purſue thoſe Studies. He erected a School for Navigation and Aſtronomy, and invited a skilful Mathematician from the Iſle of *Majorca*, in order to the ſpreading the Knowledge of thoſe Arts through his Country.

Being thus in ſome meaſure prepared for the Sea, he ſent ſome Ships out to try their Fortune: But they went no farther than Cape *Bajadore*, about 180 Miles beyond Cape (*c*) *Non*; which was the ſtated *Ne plus ultra* of former Navigations. The Reaſon of which ſpeedy Return was this: That the violent breaking of the Sea upon the Cape, made it dangerous to paſs near it; and they dared not put off far to Sea, for fear of loſing themſelves. But that which Art durſt venture to attempt, a Tempeſt did the next time compel them to; for by Diſtreſs of Weather, they were carried out as far as * *Porto Santo*; which having juſt ſaluted, and beſtowed the Name upon it, they returned home with the News of this new-found Iſland.

(*c*) Cape *Non*, ſo called, becauſe they went not beyond it.

* They gave it that Name, becauſe 'twas their Port, and found on *All Saints* Day.

The Prince, upon Notice of this Diſcovery, quickly after ſent out three Ships again; of which number two were committed to the Conduct of *John Gonſalvo Zarco*, and *Triſtan de vaz*, the former Diſcoverers; the third, to *Barthol. Pereſtrello*. Theſe (beſides the intended Planters of this new Colony) carried a Ship-board with them * a Coney, big with Young; which having diſcharged her Burden upon the Iſland, laid ſuch a Foundation for the Increaſe of thoſe Animals, that in two Years time, the numerous Progeny became a Plague to the whole Country, conſuming the Labours of the Inhabitants, and laying all waſte before them. Upon this *Pereſtrello* going off, the other two addreſſed themſelves to further Diſcoveries. And ſeeing * at a diſtance ſomething appear like a Cloud, they reſolved to try whether 'twas Land or no; which accordingly it fell out to be, and was the Iſland afterwards called *Madera*. This, by the King's Conſent, was divided between the two Diſcoverers: The one part called *Funciale*, to *Gonſalvo*, and his Heirs; and the other named *Machio*, to *Triſtan de vaz*. This latter Diviſion of the Iſland, was ſo called from one (*d*) *Macham*, an *Engliſh-man*, whom a Tempeſt had driven thither. This Man having buried a Miſtreſs here, left upon her Tomb-ſtone, the relation of his Adventure: After which, with a Boat cut out of a Tree, without Sail, or Oar, he reached the Coaſt of *Barbary*: Where being preſented to the King for a Wonder, he was ſent by him to the King of *Caſtile*.

* The ſtrange Increaſe of Coneys.

* *Madera* diſcover'd.

(*d*) *Macham* an *Engliſh-man*, firſt at *Madera*. *A. D.* 1344.

In the Year 1420, the Plantation at *Madera* commenced: *Gonſalvo* being forced to open his way with Fire, which (if, as 'tis reported, burnt for Seven Years continually) we may be ſure, made a very great Scarcity of Wood in thoſe Parts. The King deſigning to improve the Country, ordered * Sugar-Canes to be brought from *Sicily* thither: Which thrive ſo well in that Soil, that ſome Years the Fifth-part has amounted to more than 60000 Arrobes, each of which is 25 *l.* and all the Product of a ſmall Spot of Ground, not above Nine Miles in Compaſs.

* *Madera* Sugar.

The Iſle *Porto Santo*, diſcovered before, was given to *Pereſtrello*, upon Condition of Peopling it: And this proved a very hard Task; the place being ſo fearfully over-run with Coneys, that 'twas ſcarce able to admit any other Inhabitants. However, they were by degrees diſpoſſeſs'd; but not without prodigious Maſſacres, 3000 of them being killed at one time in a ſmall Iſlet.

* *A. D.* 1433.

Twelve Years had now paſſed, ſince the firſt Attempt was made of getting beyond Cape *Bajadore*; which yet appeared an inſuperable Difficulty. They fanſied Tempeſts and Hurricanes in the Air, ſtrange Gulphs and Whirlpools, that would ſwallow up Ships, with all the Horrours of *Scylla* and *Charybdis*, about that Cape. At laſt a certain *Portugueze*, *Gilianes* by Name, had the Courage to bid Defiance to all theſe Dangers, and to look the Cape in the Face: He found the Seas open and paſſable; came home commending the Air and Soil of the Places where he had been. He performed his * Voyage with great Succeſs, having neither been toſs'd in the Air by Whirlwinds, nor plunged in any of the Vortices about Cape *Bajadore*.

(e) Cape *Blanco* found.

The *Portugueze* now rid of theſe Fears, adventured the next Year 40 Miles farther; where they found the Country uninhabited: This was done by *Anthony Gonſalvo*. After this, no great Progreſs was made, till *A. D.* 1441; when *Nunyo Triſtan* diſcovered Cape (e) *Blanco*, and took ſome Priſoners; the only Prize of his Voyage.

(f) The Popes Liberality, in giving what was not his own.

Matters being gone thus far, King *Henry* obtain'd at the Hands of the Pope, (which was then *Martin* V.) the perpetual Donation to (f) the Crown of *Portugal*, of whatſoever ſhould be diſcovered from Cape *Bajadore*, to the *Eaſt-Indies*, incluſively: Together, with an Indulgence in full, for all thoſe devout Souls, whoſe Bodies ſhould chance to be drop'd in the Undertaking. And this the ſucceeding Popes confirmed, at the Requeſt of King *Alphonſus*, and his Son, King *John*.

* *A. D.* 1443.

* *A. D.* 1444.

* The next time they went abroad, they Traded with the Negroes, and got good ſtore of Gold and Slaves: This made them call the place, *The Golden River*, where thoſe Golden Streams had poured in upon them. Beyond this they paſſed to the Iſles of *Argin*, and *Garze*. And now the *Portugueze* began to be pleaſed with theſe Expeditions; and the Gold that was brought home, effectually ſtop'd their Complaints: * Yea, the People of *Lagos* agreed with the King, to ſet forth Caravels at their own Charges, which brought them in ſome ſtore of Priſoners.

* *A. D.* 1445.

(g) *Sanuga*, & Cape *Verd* found.

* After this, *Denys Fernandez* paſſed the River (g) *Sanuga*, (which ſeparates the *Azegni* from the People of *Guinee*, call'd *Gialof*) and diſcovered alſo Cape *Verd*. And whereas in ſome ſucceeding Voyages, ſome that were Friends to the *Portugueze*, had been made Slaves: The King did at once an excellent Piece of Juſtice and Charity, making thoſe that had ſtolen them, ſend them back to the *Canaries* from whence they were forced), well Apparelled, at their own Charges. Theſe *Canaries* were firſt made known to the *French* and *Spaniards*, by *Macham* the *Engliſh-man*, mentioned before: And one *Berancet*, a *French-man*, who held three of them in poſſeſſion, compounded with King *Henry* for them: But the *Spaniard* put in his Claim to them, as being conquered by that *French-man*, under the Countenance and Support of *Caſtile*: To which Crown they ſtill belong, having gone through various Fortunes, and been in many Hands.

(h) K. *Henry's* Death.

But King *Henry* ſtill proſecuted his Noble Deſign of laying open an unknown World to view, till the time came for himſelf to make a Voyage into another. (h) His Death happen'd, *Nov.* 13. *A. D.* 1463. and about 43 Years after the firſt Diſcovery of *Madera*: And tho' his whole Life, (that upon the Throne at leaſt) had been entirely devoted to this Buſineſs, and vaſt Treaſures had been expended upon the ſame); that in all his time (which was near Fifty Years) no greater Progreſs had been made, than from Cape *Bajadore*, to *Sierra Liona*, which is about 1110 Miles.

(i) Iſles of Cape *Verd* diſcover'd. *Maio*, *Jago*, &c.

A little before his Death, the Iſles of Cape (i) *Verd* were diſcovered, by *Antonio di Nolle*, a *Genoueſe*, in Commiſſion from the King; together with *Maio*, *Philip*, and *Jago* Iſles. In his time alſo, ſome *Flemings* ſailing for *Lisbon*, diſcover'd the *Tercera's*, which were Peopled in *A. D.* 1449.

(k) *Mina* & C. St. *Catharine*, St. *Thom.* &c.

King *Alphonſus*, his Succeſſor, having little leiſure for farther Diſcoveries, farmed that Concern to one *Fernard Gomez*, a Citizen of *Lisbon*, for the ſpace of five Years; upon Condition, of Diſcovering 300 Miles every Year, beginning from *Sierra Liona*, and ſo along the Coaſt. This Perſon diſcover'd (k) *Mina*; and after that, down to Cape St. *Catharine*, on the South-ſide of the Line. About that time alſo, were diſcover'd the Iſles of *Fernand Po*, St. *Thoma*, St. *Matthew*, *Annobon*, and *Del Principe*: But the World cannot enroll the Names of thoſe Diſcoverers, amongſt the reſt of thoſe who merit a Publick Acknowledgment, becauſe they are wholly unknown. But we are now to look into the Management of Affairs, under the ſucceeding King of *Portugal*, *John* II.

This Prince poſſeſs'd of the Throne of *Portugal*, found leiſure to proſecute the Buſineſs of Diſcovery, tho' his Predeceſſor could not. He having once taſted the Golden Profits of *Guiney*, reſolved to give himſelf a more complete Satisfaction, and enter into a more intimate Correſpondence with that charming Country.

* *A. D.* 1481.

(a) Note, that one of the Captains in this Expedition, was an *Engliſh-man*, named *Diego*, or *James Rois*.

Accordingly he ſent * out a Fleet of 10 *Caravels*, under the (a) Command of *Diego Dazambuin*, to build the Caſtle of St. *George della Mina*; which in *A. D.* 1486, he dignified with the Privileges of a City. In the Church of this place, a Prieſt was appointed to pray for the Soul of King *Henry*; and quickly after, the King aſſumes the Title of Lord of *Guiney*. *Carameza*, the Prince of that Country, would have hindred the building of the Caſtle, and the Negroes began to mutiny upon it; but partly by fair means, and partly by foul, the Mutineers were quieted, and the Deſign went on. The King gave Orders for the ſetting up of Stone Pillars in divers places, with the *Portugueze* Arms upon them, expreſſing the Times and Authors of the Diſcoveries that were made. Which Method was alſo uſed by *Diego Cau* (b), in the firſt Diſcovery of the Kingdom of *Congo*, who left divers ſuch Memorials, as thoſe upon the Banks of the River *Zair*. This Man, in both his Voyages, diſcovered 1125 Miles, from Cape St. *Catharine*, along the Coaſt.

(b) *Congo* diſcover'd in *A. D.* 1484.

(c) Notice of *Preſter-John*.

(d) Enquiries after him.

By the Embaſſador of the King of *Benin*, (not far from *Mina*) the King of *Portugal* had (c) News of the Great Emperor of *Æthiopia*, commonly called *Preſter-John*: Of which mighty Prince's Acquaintance being very ambitious; and alſo, no leſs deſirous of an Acquaintance with the *Eaſt-Indies*, he ſent out quickly in purſuance of both thoſe Deſigns. Two Pinnaces, of 50 Tuns apiece, were diſpatched, under the Command of *Barth. Diaz*, with a little Victualling-Bark, in *Auguſt*, *A. D.* 1486. This Captain made his (d) Enquiries after *Preſter-John*, by certain Negroes (whom he ſet aſhore in divers places), who were to make ample Reports of the *Portugueze* Civility, and Grandeur; the Marks of which they carried along with them, in their Apparel, and other Gifts beſtowed upon them. He gave Names to ſeveral places that were diſcovered, and ſet up Croſſes of Stone in an Iſland, called from thence, *The Croſs*; where his People weary of the Voyage, and having loſt their Victualling-Bark, with ſome Earneſtneſs urged his Return. Notwithſtanding which, he proceeded a little further, and diſcovered the famous (e) Cape, which in remembrance of his Troubles he call'd *Tormentoto*; and was afterwards, by K. *John*, call'd, the *Cape of Good Hope*. Here he alſo ſet up another Pillar of Stone, which he called St. *Philip*, as the other at the River of *Zair* was call'd St. *George*; and that at Cape St. *Auguſtine*, had its Name from the Cape. He return'd in *Decemb. A. D.* 1487. 16 Months, and 17 Days, after his ſetting out. By the way he met with his Victualler, ſuppoſed to be loſt, and in it nine Men; three only of which were found alive: And one of that number, died with a Surprize of Joy, upon the meeting with their Ships again These were the King's Endeavours by Sea, to come to the Knowledge of *Preſter-John*.

(e) Cape of Good Hope.

(f) *Couilian* firſt in *Æthiopia*.

* *A. D.* 1487.

By Land he ſent ſome to fall in with the *Æthiopian* Company, and travel as Pilgrims; but wanting Skill in the *Arabick* Tongue, they were forced to return. Upon this one *Peter* (f) *Couilian*, verſed in that Language, was employed in this Affair, (and with him *Alphonſo Paina* *.) Theſe went from *Alexandria* to *Cairo*, and ſo to *Aden*, from whence *Paina* went to purſue the *Æthiopian* Diſcovery, but died at *Cairo*. *Couilian* embark'd for the *Eaſt-Indies*, from whence he return'd to *Africa*, with a Deſign of going to *Portugal*. But he received Orders from the King, not to return till he had been in *Æthiopia*, whither he was deputed to go, in the Character of an Embaſſador. *Couilian* (having writ to the King, to encourage his Navigation, and ſent him a Map of his Diſcoveries in *India* and *Africa*) proſecuted his Journey to the *Æthiopian* Court: Where he was made ſo Welcome, that he could never get looſe again. The Report of which Reception, together with the Circumſtances of his Travels, he made about 30 Years afterwards, to *Francis Alvarez*, an Attendant on *Roderick de Lima*, the King's Embaſſador to that Court.

And thus far were Matters carried on by King *John*: He open'd the way by Land into the Bowels of *Africa*, and began a Correſpondence with the moſt potent Monarch of that Quarter of the World. He might have done more, in all probability, had he fallen in with *Columbus's* Offers, whom he ſaw in his firſt Return from the *Indies*, in *March*, *A. D.* 1493. Yet is Navigation a very great Debtor to this Prince, who paſſionately deſired its Glory and Improvement (*g*), and took hearty Care to accompliſh it. Two of his Phyſicians, *Roderigo*, and *Joſeph*, were good Mathematicians; and theſe he employ'd, with *Martin Bohemus*, (who was *Regiomontanus*'s Scholar) to ſupply the Deficiencies, and enlarge the Bounds of the Science. And now was Aſtronomy called in to its aſſiſtance; and various Inſtruments (the Privilege only of Aſtronomers before) were put into the Hands of the Sailors, and turn'd over to the Uſes of the Sea. Tables alſo of Declination were made, for the finding out the Latitude, and Courſe; with many other very curious Helps: All which were the Genuine Products of this happy Conjunction of Navigation and Aſtronomy.

(*g*) K. *John*'s Endeavours to improve the Arts of the Sea.

And hitherto we have ſeen the Induſtrious *Portugueze*, drawing the firſt and more imperfect Lines of the Practice of Navigation: 'Tis our Buſineſs now to enquire, what heightning Strokes have been given by ſucceeding Maſters, and by what Steps and Draughts it has arrived to the Perfection in which we ſee it at this Day. And firſt of all comes in the Performance of *Columbus*; who diſcovers no leſs than half a World at once, and draws us a perfectly new Face on t'other ſide the Globe.

But before we ſet out with him, or any other of the General Sailors, we think it proper to deſire (once for all) the Reader's patient Indulgence, in the Liberty we take, of tracing the ſeveral particular Steps of theſe Mens Voyages. He may obſerve, that we reckon not only the Years and Months with them, but alſo the very Days too, when they are out at Sea: that we go with them almoſt into every Port, ſee them aſhore in every Iſland they come to, and take Notice of ſeveral Paſſages in their Sailing, that at firſt ſight may appear too minute and trifling, to deſerve a particular mention. But to perſwade his favourable Cenſure of this Liberty, he is deſired to conſider: That the Particularneſs of thoſe Obſervations, which might be a Fault, with reſpect to a well-known World, is neceſſary (or at leaſt very excuſable), in reference to a World not yet diſcovered. We are now going to take our firſt View of thoſe Parts of the Globe, which as yet we are ſuppoſed not to know. Theſe Men are our firſt Sailors, and go in an untrodden Path, and whatſoever they ſhew us is quite new: Upon this Score, to ſail but two or three Leagues with them, and only to ſee a Cape, or ſome ſorry Iſland, which lies in their way; may be of more moment, than to follow a Modern Sailor all round the Globe, and hear him talk of thoſe Places that have been a thouſand times deſcrib'd before. Every Step taken by a firſt Diſcoverer, preſents an Original in thoſe Matters; others that come after, do but Copy or Refine upon him, and continue the Story that he begins. His Relations are Text, (in their Conſequence and Weight) compar'd with thoſe of others, and therefore to be purſu'd even to a Scruple, in every Circumſtance, that does not appear with a bare Face of Folly and Impertinence. 'Tis for this Reaſon, that we propoſe ſo punctual an Obſervation of the ſeveral Steps of the Voyages, made by thoſe celebrated Perſons, who firſt ventur'd out into the World, and laid a Foundation for *Europe*'s Acquaintance and Converſe with the remoter Parts of it. But as the Diſcovery of the World goes on before us, and the Strangeneſs of thoſe Countries wears off by repeated Viſits made to them; tho' we will loſe nothing valuable, that our Modern Navigators have to ſhew us; yet we ſhall not give them that Ceremonious Attendance in Sailing, that we allow the more Ancient Ones.

CHAP. II.

Of COLUMBUS, *&c.*

WHERE this Fortunate Diſcoverer was born, is not agreed amongſt Writers: Some ſay at *Savona*; ſome at *Narni*; others at *Cicurco*, in the Territories of *Genoua*, of an ancient Houſe, and great Reputation, in the time of *Otho* II. This Great Man, it ſeems, tho' he brought a new World to light, yet left the Place of his own Birth and Breeding in ſo much obſcurity, that there needs another *Columbus* to find that out. However this be, 'tis enough to know, that he had an early Paſſion for the Sea, and began both to Trade, and make Charts for Sea Service, when he was very young. The Fame of the *Portugueze*, for their Skill in Marine Affairs, brought him to thoſe Parts; where he Married and Settled, and Traded to the Coaſts of *Guiney*. He had the Character of a Man, ſober, temperate, grave, and devout, of competent Learning in other reſpects, and very ſtudious in the Mathematicks. What Motives induced him to the Great Undertaking, he afterwards ſo happily finiſh'd, are unknown. Some ſay, a certain Pilot, that had been driven upon the Iſlands of *America*, gave him the firſt hint of a new World there: But this is thought to be the fruit of *Spaniſh* Envy; that People perhaps being much concern'd that *Italy* ſhould raviſh this Glory from their Country. 'Tis probable, that his own Mathematical Reaſonings might make him conclude, the poſſibility of finding Inhabitants on the other ſide of the Globe. That conſidering the vaſt Dimenſions of the Earth (which might eaſily be determined from the Principles of *Geometry*); and that the known World was circumſcribed within very narrow Bounds: It was utterly improbable, that all the reſt of ſo great a Ball, ſhould be overſpread with Water, and be an Habitation for Fiſhes, inſtead of Men, who had at firſt ſo peculiar a Charge from the Almighty, to multiply and repleniſh it. Being alſo amongſt the *Portugueze*, he could not but hear ſeveral things, from ſome Hands or other, that might ſerve to confirm thoſe Suſpicions of a new Face of the Globe, which Mathematicks perhaps had at firſt given him. Thus 'tis ſaid, that a certain (*a*) Mariner, which uſed the *Azores* and *Tercera* Iſles, told him, That he was once carried 450 Leagues to the Weſt of Cape *Vincent*, and there took up a piece of Timber, wrought by a Man's Hand, and, as he thought, without Iron; and this, he fanſied, muſt come from ſome more Weſtern Iſland. (*b*) Another alſo reported, That he had ſeen a piece at *Puerto Santo*, wrought after the ſame Faſhion, brought thither by the Weſterly Winds; beſides very large Canes, capable of holding two Gallons of Water in each Knot: Which being reported to grow in *India*, he ſuppoſed might be conveyed into thoſe Parts, by the ſame forces of Winds as the Timber was. Some Informations from the *Azores*, likewiſe aſſured him, That certain Pines had been caſt up at *Fayal*, and *Gracioſa*, by ſtrong Weſterly and N. W. Winds; together with two Canoes, and the like number of dead Men, upon the Coaſt of *Floras*; who by their much larger Faces, and different Countenances, ſeem'd to have been Inhabitants of ſome remote and unknown Region. There were ſome alſo, that confidently aſſerted, That Land had divers times been ſeen at a diſtance, which lay far beyond the Bounds of the preſent Diſcoveries; and conſequently, was ſome part of the Globe that had not yet been viſited by the *European* Sailors. Some of theſe Perſons made their Reports to *Columbus* himſelf, as *Diego Velaſques*; and particularly a certain Mariner, who told him of an Iſland which he had ſeen lie far Weſt of *Ireland*, and ſuppoſed to be that now called *Newfoundland*. Others (*c*) had given in their Experiences to the ſame effect, if not to *Columbus* himſelf, yet to the World and the Nation where he reſided; ſo that he cou'd not miſs of the Information. And now being fully aſſured, that a New World lay ſome where or other conceal'd, his next Care was to come at the ſight of it: And in order thereto, to procure ſuch due Encouragement and Aſſiſtance, as might render his Attempts ſucceſsful. In the firſt place therefore, he propounded the Matter to the *Genoueſe*, his Country-men: To whom his Propoſals not being at all agreeable, he addreſſed himſelf, in hope of better Fortune, to the Court of *Portugal*. But the Project took no better at *Lisbon*, than it did at *Genoua*; and the Notion of a New World was much in the ſame degree of Reputation amongſt them, as that of a New-raiſed Body was formerly at *Athens*. Here the King's Mathematicians acted the parts of thoſe Bantering Philoſophers, and heard this New Doctrine broach'd with not a little Sport and Jeſt. However, *Columbus*'s Reaſonings made ſome Impreſſion upon them, ſo far, that they thought it proper to adviſe the King, to try whether he ſpoke Truth or no. And thereupon a Veſſel was ſecretly ſent out, with Orders to look after *Columbus*'s World; which not finding, and meeting with bad Weather, they return'd home, having done nothing.

Columbus early a Student in Mathematicks.

(*a*) *Martin Vincent.*

(*b*) *Pedro Correa.*

Some Hints given him of undiſcover'd Land.

(*c*) *Antonio Lene*, *Petro de Velaſco*, *Vincent Diaz*, a *Portugueze*.

Genoueſe and *Portugueze* reject his Propoſals.

Columbus in the next place (tho' having had ſo many diſcouraging Repulſes) thought of making one Effort more, and that was, trying of the Temper and Inclinations of the *Engliſh*: And accordingly ſent his Brother *Bartholomew*

Delayed in *England.*
* *A.D.*1484.

to King *Henry* VII. This Meſſenger falling into the Hands of Pirates by the way, and not being ſo lucky as to get a ſpeedy Hearing of the King, Matters were delayed ſo long, that *Columbus* weary with fruitleſs Waitings, immediately * applied himſelf to the Court of *Spain.* But their Catholick Majeſties being then engaged in War with the *Moors*, his Anſwer was (after five Years Suit), That the Treaſure of the Nation was ſo exhauſted with thoſe Wars, that they could not afford to be at any New Expences.

Columbus needed not have felt the Pain of this new Repulſe, had he deferr'd his Applications to this Court, and not begg'd of *Spain*, till he had received a poſitive Denial from *England*: For this latter Court did embrace his Propoſals, tho' things went ſo tediouſly on, that (as it happen'd) his Requeſt was granted in *Spain*, before he knew 'twas conſider'd in *England.* But 'twas the Fruit of much Labour and Toil, and came after innumerable Slights and Repulſes.

Succeeds in *Spain.*

The two Dukes of *Medina Celi*, and *M. Sidon.* were his Advocates; but could not be heard on his behalf. Twice he thought of ſetting a final Period to his unprofitable Endeavours in *Spain*, and get over to his Brother, at the *Engliſh* Court. But at laſt the Scene changed; and the Clergy undertaking his Cauſe, it proſper'd in their Hands. *Columbus* was admitted to their Catholick Majeſties Preſence, and had a favourable Audience, and Grant of his Deſires; the Queen being willing to pawn her very Jewels, to raiſe Money for his Expedition. This was the beſt uſe they could poſſibly be put to at that time; becauſe they were quickly (with great Advantage) to be redeemed, by the rich Mines of *Mexico* and *Peru.* Beſides, the *Spaniſh* Stock was very low, at that Juncture; and they could never have nick'd the time more exactly to go to the *Weſt-Indies*, to do themſelves a kindneſs.

The Terms *Columbus* made with their Catholick Majeſties, were theſe: *That if he made no Diſcoveries, he would have no Reward: And if he did, that he ſhould ſuſtain the Office of Vice-Roy by Land, and Admiral by Sea; with the Advantage of the Tenths of the Profits, through all the Countries diſcovered by him. And theſe Privileges not to be reſtrain'd to his own Perſon only, but to become Hereditary.* This Agreement was made in the open Field, at the Siege of *Granada*, April 17. 1492.

And 'twas not long before the Voyage thus reſolved upon, did actually commence: For the Court was now as warm in the Proſecution of the Deſign, as before 'twas cold and indifferent. *Columbus* had reaſon'd them all into ſuch high Expectations of the Succeſs of his Undertaking, that they were as eager for his going, as he himſelf.

Columbus ſets out.

Accordingly having gotten a ſmall Fleet of three Caravels he ſet forth from *Palos*, on *Friday*, *Auguſt* 2. *A. D.* 1492. Himſelf commanded the Admiral called St. *Maria.* *Martin Alonzo Pinçon*, was Captain of the *Pinta*; and his Brother, *Franciſco*, was Maſter. And in the Third Veſſel, which they called the *Ninna*, *Vincent Yannez Pinçon*, was Captain, and Maſter. Theſe Officers had under their Command, in theſe Three Veſſels, about 120, or as ſome ſay, but 90 Men.

On the 11th they had ſight of the *Canaries*, where they ſtaid till *September* the 6th, refreſhing themſelves at the Iſle *Gomera*; but went off then for fear of the *Portugueze*, who had Mann'd out three Caravels to take them.

The *Portugueza* attempt to hinder them.

(a) The Variation firſt obſerved.

September the 7th, they loſt ſight of Land; and with that, their Courages too; a great many of them taking their leaves of this, and expecting the next time to land in the other World. *Columbus* comforted theſe Cowards as well as he could; and to do it effectually, was fain to cheat them in his Reckoning; making them believe they were not ſo far from Home, as indeed they were. On the 14th they obſerved the Variation of the (a) Compaſs; which was the firſt time that Phænomenon had fallen under Obſervation. On *Sunday* the 16th they ſaw Graſs and Herbs floating on the Water, and ſome ſmall Animals, (Graſhoppers) alive amongſt them; which made ſome of them (now come to a little better hope) believe, they ſhould ſee dry Land once more, and that quickly too. The Nineteenth and Twentieth, theſe Preſages continued; beſides which, they ſaw ſome Sea-Fowl: All which put together, conſiderably raiſed their Expectations of it. All this while the Wind favoured their Voyage; but on *September* the 22d, it came croſs at S. W. And now the *Spaniards* began downright to repent them of their raſh Attempt, in venturing ſo far from home; and therefore expecting to become a Banquet to the Fiſhes, in a very little time, they began to ſtorm at their Admiral, that he had brought them thither: Not ſparing the very King and Queen themſelves in their Paſſion, as Perſons too eaſie and credulous, charging them with Indiſcretion, in liſtening to ſuch wild Propoſals, and ſacrificing their Subjects upon ſuch trivial Occaſions. As for *Columbus*'s part, they told him plainly, That if he wou'd not tack about, and make homewards again, he ſhould go over-board without fail: For they were reſolved to ſhift for themſelves, and ſave their own Lives, if they cou'd. The Admiral return'd them good Words for bad; and anſwer'd theſe inſolent Threatnings of the Rabble, with charming Promiſes of great Rewards, upon Condition of a little more Patience. And tho' he made ſhift to cheat them into a little good Humour, by crying out Land, on the 25th of *September*: Yet that Calm was quickly ſucceeded by a more outragious Storm than before; the Reſult of which was, that after ſome farther Trials, *Columbus* (having no way to defend himſelf any longer), was forced to promiſe to return, if they diſcovered not Land in three Day's time; this being the utmoſt ſpace, that the domineering Sailors would allow him.

The *Spaniards* mutiny.

Columbus forced to Compound with them.

(b) They ſee Land.

(c) *Salvador* diſcover'd.

The firſt of thoſe Days, he found by the Sun-ſetting, that Land was near; upon which they contracted their Sails; and that ſame Night they ſaw Light. About two Hours after Midnight, one of the Company diſcover'd Land (b). This happy Sight was on *October* the 11th, *A. D.* 1492. This they found to be an Iſland of 15 Leagues compaſs; and it was one of the *Lucayans*, called by the Inhabitants, *Gavebani*; but by them *San* (c) *Salvador*, being about 950 Leagues from the *Canaries.* Here they went aſhoar, and having ſung a *Te Deum*, they took ſolemn Poſſeſſion of the place, in the Name of their Catholick Majeſties, King *Ferdinand*, and Queen *Iſabella.*

* The Natives.

The Natives of the place thought them to be very ſtrange People; and much more wondred at their Ships, which they believ'd to be Great Animals. The *Spaniards* gave them Caps, Beads, and other Toys; which they payed themſelves very well for, in more valuable things. Theſe People were naked, of a middle-ſize, well proportion'd Bodies; their Natural Complexion of an Olive, but painted with other Colours, according to their Fancies *. They knew not the Uſe of Iron, nor the Make of Weapons, but innocently laid their Hands on the Edges of the *Spaniards* Swords. Their Iſle abounded with Parrots, beſides which they ſcarce ſaw any other Animals. They truck'd for Cotton-Yarn: And told the *Spaniards*, That the Gold they wore in Rings at their Noſtrils, came from the South; where they would find a Prince very rich therein.

(d) *Conception* Iſle found.
(e) *Fernandina*
(f) *Iſabella*:
(g) *Cuba*, which they call'd *Juana*, in Honour of the Prince of *Caſtile.*

On the 15th of *October* they went to another Iſland, ſeven Leagues from thence, which they call'd (d) St. *Maria de la Conception.* The 17th they went to *Fernandina* (e), the Women of which place had only ſhort Cotton Coats, from the Navel to the Mid-thigh, to cover their Nakedneſs. After this they came to another Iſle, which they called *Iſabella* (f): Of which, as of all the others, they took ſolemn Poſſeſſion; and in all theſe Places carried it juſtly and honeſtly towards the Natives. They proceeded hence to *Cuba* (g), which the *Indians* told him afforded Gold and Pearl. Two *Spaniards*, and as many *Indians*, were here ſent to ſearch the Country; and lighting of an *Indian* Town of about Fifty Houſes, they were well treated there, the *Spaniards* being honour'd with Incenſe as they went along, as if they had been Deities; which the ſimple *Indians* indeed did almoſt believe, tho' after Experience made them wiſer. Here they ſaw Cotton grow of it ſelf, with ſeveral ſorts of ſtrange Birds and Trees: But the Commodity the *Spaniards* moſt minded, was the Gold which they ſaw the *Indians* wear in their Noſes; about which they were ſo curious as to aſk ſome Queſtions: To which the *Indians* as honeſtly anſwer'd, *Cubanacan*; that is, they had it out of the midſt of *Cuba*; the *Spaniards* thinking (becauſe of that Term *Can*) that they had talk'd of the Great Cham of *Cathay.*

(h) *Hiſpaniola* diſcover'd.

Alonzo Pinçon left *Columbus* here, who quickly after went himſelf in queſt of *Hiſpaniola* (h), which the Natives at that time call'd *Hayti.* They took here a Woman, a Native of the Iſland, whom treating well, ſhe became a ſerviceable Agent on their behalf, with the reſt of the Natives: So that at laſt there was a very good Correſpondence eſtabliſh'd between the *Indians* and *Spaniards* there, the King of the Place inviting *Columbus* to come aſhoar. A Fort was built upon this Iſland, to maintain the *Spaniſh* Pretenſions and Authority; in which 38 Soldiers were left: And after this Buſineſs done, *Columbus* made Proviſions for a Voyage homewards, charging his *Spaniards* to carry it obligingly to the *Indians*, and their King.

Accordingly on *Friday*, *Jan.* 4. 1493. he ſet out from the Port of *Nativity.* In his Voyage, he affirms, he ſaw Mermaids; as alſo before, on the Coaſt of *Guiney.* And now much more of the Coaſts of that large Iſle *Hiſpaniola* came under their view; which they diligently obſerved, and

gave

its Glory and Improvement (*g*), and took hearty Care to accompliſh it. Two of his Phyſicians, *Roderigo*, and *Joſeph*, were good Mathematicians; and theſe he employ'd, with *Martin Bohemus*, (who was *Regiomontanus*'s Scholar) to ſupply the Deficiencies, and enlarge the Bounds of the Science. And now was Aſtronomy called in to its aſſiſtance; and various Inſtruments (the Privilege only of Aſtronomers before) were put into the Hands of the Sailors, and turn'd over to the Uſes of the Sea. Tables alſo of Declination were made, for the finding out the Latitude, and Courſe; with many other very curious Helps: All which were the Genuine Products of this happy Conjunction of Navigation and Aſtronomy.

(*g*) K. *John's* Endeavours to improve the Arts of the Sea.

And hitherto we have ſeen the Induſtrious *Portugueze*, drawing the firſt and more imperfect Lines of the Practice of Navigation: 'Tis our Buſineſs now to enquire, what heightning Strokes have been given by ſucceeding Maſters, and by what Steps and Draughts it has arrived to the Perfection in which we ſee it at this Day. And firſt of all comes in the Performance of *Columbus*; who diſcovers no leſs than half a World at once, and draws us a perfectly new Face on t'other ſide the Globe.

But before we ſet out with him, or any other of the General Sailors, we think it proper to deſire (once for all) the Reader's patient Indulgence, in the Liberty we take, of tracing the ſeveral particular Steps of theſe Mens Voyages. He may obſerve, that we reckon not only the Years and Months with them, but alſo the very Days too, when they are out at Sea: that we go with them almoſt into every Port, ſee them aſhore in every Iſland they come to, and take Notice of ſeveral Paſſages in their Sailing, that at firſt ſight may appear too minute and trifling, to deſerve a particular mention. But to perſwade his favourable Cenſure of this Liberty, he is deſired to conſider: That the Particularneſs of thoſe Obſervations, which might be a Fault, with reſpect to a well-known World, is neceſſary (or at leaſt very excuſable), in reference to a World not yet diſcovered. We are now going to take our firſt View of thoſe Parts of the Globe, which as yet we are ſuppoſed not to know. Theſe Men are our firſt Sailors, and go in an untrodden Path, and whatſoever they ſhew us is quite new: Upon this Score, to ſail but two or three Leagues with them, and only to ſee a Cape, or ſome ſorry Iſland, which lies in their way; may be of more moment, than to follow a Modern Sailor all round the Globe, and hear him talk of thoſe Places that have been a thouſand times deſcrib'd before. Every Step taken by a firſt Diſcoverer, preſents an Original in thoſe Matters; others that come after, do but Copy or Refine upon him, and continue the Story that he begins. His Relations are Text, (in their Conſequence and Weight) compar'd with thoſe of others, and therefore to be purſu'd even to a Scruple, in every Circumſtance, that does not appear with a bare Face of Folly and Impertinence. 'Tis for this Reaſon, that we propoſe ſo punctual an Obſervation of the ſeveral Steps of the Voyages, made by thoſe celebrated Perſons, who firſt ventur'd out into the World, and laid a Foundation for *Europe*'s Acquaintance and Converſe with the remoter Parts of it. But as the Diſcovery of the World goes on before us, and the Strangeneſs of thoſe Countries wears off by repeated Viſits made to them; tho' we will loſe nothing valuable, that our Modern Navigators have to ſhew us; yet we ſhall not give them that Ceremonious Attendance in Sailing, that we allow the more Ancient Ones.

CHAP. II.

Of COLUMBUS, *&c.*

WHERE this Fortunate Diſcoverer was born, is not agreed amongſt Writers: Some ſay at *Savona*; ſome at *Narni*; others at *Cicurco*, in the Territories of *Genoua*, of an ancient Houſe, and great Reputation, in the time of *Otho* II. This Great Man, it ſeems, tho' he brought a new World to light, yet left the Place of his own Birth and Breeding in ſo much obſcurity, that there needs another *Columbus* to find that out. However this be, 'tis enough to know, that he had an early Paſſion for the Sea, and began both to Trade, and make Charts for Sea Service, when he was very young. The Fame of the *Portugueze*, for their Skill in Marine Affairs, brought him to thoſe Parts; where he Married and Settled, and Traded to the Coaſts of *Guiney*. He had the Character of a Man, ſober, temperate, grave, and devout, of competent Learning in other reſpects, and very ſtudious in the Mathematicks. What Motives induced him to the Great Undertaking, he afterwards ſo happily finiſh'd, are unknown. Some ſay, a certain Pilot, that had been driven upon the Iſlands of *America*, gave him the firſt hint of a new World there: But this is thought to be the fruit of *Spaniſh* Envy; that People perhaps being much concern'd that *Italy* ſhould raviſh this Glory from their Country. 'Tis probable, that his own Mathematical Reaſonings might make him conclude, the poſſibility of finding Inhabitants on the other ſide of the Globe. That conſidering the vaſt Dimenſions of the Earth (which might eaſily be determined from the Principles of *Geometry*); and that the known World was circumſcribed within very narrow Bounds: It was utterly improbable, that all the reſt of ſo great a Ball, ſhould be overſpread with Water, and be an Habitation for Fiſhes, inſtead of Men, who had at firſt ſo peculiar a Charge from the Almighty, to multiply and repleniſh it. Being alſo amongſt the *Portugueze*, he could not but hear ſeveral things, from ſome Hands or other, that might ſerve to confirm thoſe Suſpicions of a new Face of the Globe, which Mathematicks perhaps had at firſt given him. Thus 'tis ſaid, that a certain (*a*) Mariner, which uſed the *Azores* and *Tercera* Iſles, told him, That he was once carried 450 Leagues to the Weſt of Cape *Vincent*, and there took up a piece of Timber, wrought by a Man's Hand, and, as he thought, without Iron; and this, he fanſied, muſt come from ſome more Weſtern Iſland. (*b*) Another alſo reported, That he had ſeen a piece at *Puerto Santo*, wrought after the ſame Faſhion, brought thither by the Weſterly Winds; beſides very large Canes, capable of holding two Gallons of Water in each Knot: Which being reported to grow in *India*, he ſuppoſed might be conveyed into thoſe Parts, by the ſame forces of Winds as the Timber was. Some Informations from the *Azores*, likewiſe aſſured him, That certain Pines had been caſt up at *Fayal*, and *Gracioſa*, by ſtrong Weſterly and N. W. Winds; together with two Canoes, and the like number of dead Men, upon the Coaſt of *Floras*; who by their much larger Faces, and different Countenances, ſeem'd to have been Inhabitants of ſome remote and unknown Region. There were ſome alſo, that confidently aſſerted, That Land had diverstimes been ſeen at a diſtance, which lay far beyond the Bounds of the preſent Diſcoveries; and conſequently, was ſome part of the Globe that had not yet been viſited by the *European* Sailors. Some of theſe Perſons made their Reports to *Columbus* himſelf, as *Diego Velaſques*; and particularly a certain Mariner, who told him of an Iſland which he had ſeen lie far Weſt of *Ireland*, and ſuppoſed to be that now called *Newfoundland*. Others (*c*) had given in their Experiences to the ſame effect, if not to *Columbus* himſelf, yet to the World and the Nation where he reſided; ſo that he cou'd not miſs of the Information. And now being fully aſſured, that a New World lay ſome where or other conceal'd, his next Care was to come at the ſight of it: And in order thereto, to procure ſuch due Encouragement and Aſſiſtance, as might render his Attempts ſucceſsful. In the firſt place therefore, he propounded the Matter to the *Genoueſe*, his Country-men: To whom his Propoſals not being at all agreeable, he addreſſed himſelf, in hope of better Fortune, to the Court of *Portugal*. But the Project took no better at *Lisbon*, than it did at *Genoua*; and the Notion of a New World was much in the ſame degree of Reputation amongſt them, as that of a New-raiſed Body was formerly at *Athens*. Here the King's Mathematicians acted the parts of thoſe Bantering Philoſophers, and heard this New Doctrine broach'd with not a little Sport and Jeſt. However, *Columbus*'s Reaſonings made ſome Impreſſion upon them, ſo far, that they thought it proper to adviſe the King, to try whether he ſpoke Truth or no. And thereupon a Veſſel was ſecretly ſent out, with Orders to look after *Columbus*'s World; which not finding, and meeting with bad Weather, they return'd home, having done nothing.

Columbus early a Student in Mathematicks.

(*a*) *Martin Vincent.*

(*b*) *Pedro Correa.*

Some Hints given him of undiſcover'd Land.

(*c*) *Antonio Lene, Petro de Velaſco, Vincent Diaz, a Portugueze.*

Genoueſe and *Portugueze* reject his Propoſals.

Columbus in the next place (tho' having had ſo many diſcouraging Repulſes) thought of making one Effort more, and that was, trying of the Temper and Inclinations of the *Engliſh*: And accordingly ſent his Brother *Bartholomew*

to

Delayed in England. * A.D.1484.

to King *Henry* VII. This Meſſenger falling into the Hands of Pirates by the way, and not being ſo lucky as to get a ſpeedy Hearing of the King, Matters were delayed ſo long, that *Columbus* weary with fruitleſs Waitings, immediately * applied himſelf to the Court of *Spain*. But their Catholick Majeſties being then engaged in War with the *Moors*, his Anſwer was (after five Years Suit), That the Treaſure of the Nation was ſo exhauſted with thoſe Wars, that they could not afford to be at any New Expences.

Columbus needed not have felt the Pain of this new Repulſe, had he deferr'd his Applications to this Court, and not begg'd of *Spain*, till he had received a poſitive Denial from *England*: For this latter Court did embrace his Propoſals, tho' things went ſo tediouſly on, that (as it happen'd) his Requeſt was granted in *Spain*, before he knew 'twas conſider'd in *England*. But 'twas the Fruit of much Labour and Toil, and came after innumerable Slights and Repulſes.

The two Dukes of *Medina Celi*, and *M. Sidon.* were his Advocates; but could not be heard on his behalf. Twice he thought of ſetting a final Period to his unprofitable Endeavours in *Spain*, and get over to his Brother, at the *Engliſh* Court. But at laſt the Scene changed; and the Clergy undertaking his Cauſe, it proſper'd in their Hands. *Columbus* was admitted to their Catholick Majeſties Preſence, and had a favourable Audience, and Grant of his Deſires; the Queen being willing to pawn her very Jewels, to raiſe Money for his Expedition. This was the beſt uſe they could poſſibly be put to at that time; becauſe they were quickly (with great Advantage) to be redeemed, by the rich Mines of *Mexico* and *Peru*. Beſides, the *Spaniſh* Stock was very low, at that Juncture; and they could never have nick'd the time more exactly to go to the *Weſt-Indies*, to do themſelves a kindneſs.

Succeeds in *Spain.*

The Terms *Columbus* made with their Catholick Majeſties, were theſe: *That if he made no Diſcoveries, he would have no Reward: And if he did, that he ſhould ſuſtain the Office of Vice-Roy by Land, and Admiral by Sea; with the Advantage of the Tenths of the Profits, through all the Countries diſcovered by him. And theſe Privileges not to be reſtrain'd to his own Perſon only, but to become Hereditary.* This Agreement was made in the open Field, at the Siege of *Granada*, April 17. 1492.

And 'twas not long before the Voyage thus reſolved upon, did actually commence: For the Court was now as warm in the Proſecution of the Deſign, as before 'twas cold and indifferent. *Columbus* had reaſon'd them all into ſuch high Expectations of the Succeſs of his Undertaking, that they were as eager for his going, as he himſelf.

Columbus ſets out.

Accordingly having gotten a ſmall Fleet of three Caravels he ſet forth from *Palos*, on *Friday*, *Auguſt* 2. *A. D.* 1492. Himſelf commanded the Admiral called St. *Maria*. *Martin Alonzo Pinçon*, was Captain of the *Pinta*; and his Brother, *Franciſco*, was Maſter. And in the Third Veſſel, which they called the *Ninna*, *Vincent Tannez Pinçon*, was Captain, and Maſter. Theſe Officers had under their Command, in theſe Three Veſſels, about 120, or as ſome ſay, but 90 Men.

On the 11th they had ſight of the *Canaries*, where they ſtaid till *September* the 6th, refreſhing themſelves at the Iſle *Gomera*; but went off then for fear of the *Portugueze*, who had Mann'd out three Caravels to take them.

The *Portugueze* attempt to hinder them.

September the 7th, they loſt ſight of Land; and with that, their Courages too; a great many of them taking their leaves of this, and expecting the next time to land in the other World. *Columbus* comforted theſe Cowards as well as he could; and to do it effectually, was fain to cheat them in his Reckoning; making them believe they were not ſo far from Home, as indeed they were. On the 14th they obſerved the Variation of the (*a*) Compaſs; which was the firſt time that Phænomenon had fallen under Obſervation. On *Sunday* the 16th they ſaw Graſs and Herbs floating on the Water, and ſome ſmall Animals, (Graſhoppers) alive amongſt them; which made ſome of them (now come to a little better hope) believe, they ſhould ſee dry Land once more, and that quickly too. The Nineteenth and Twentieth, theſe Preſages continued; beſides which, they ſaw ſome Sea-Fowl: All which put together, conſiderably raiſed their Expectations of it. All this while the Wind favoured their Voyage; but on *September* the 22d, it came croſs at S. W. And now the *Spaniards* began downright to repent them of their raſh Attempt, in venturing ſo far from home; and therefore expecting to become a Banquet to the Fiſhes, in a very little time, they began to ſtorm at their Admiral, that he had brought them thither: Not ſparing the very King and Queen themſelves in their Paſſion, as Perſons too eaſie and credulous, charging them with Indiſcretion, in liſtening to ſuch wild Propoſals, and ſacrificing their Subjects upon ſuch trivial Occaſions. As for *Columbus*'s part, they told him plainly, That if he wou'd not tack about, and make homewards again, he ſhould go over-board without fail: For they were reſolved to ſhift for themſelves, and ſave their own Lives, if they cou'd. The Admiral return'd them good Words for bad; and anſwer'd theſe inſolent Threatnings of the Rabble, with charming Promiſes of great Rewards, upon Condition of a little more Patience. And tho' he made ſhift to cheat them into a little good Humour, by crying out Land, on the 25th of *September*: Yet that Calm was quickly ſucceeded by a more outragious Storm than before; the Reſult of which was, that after ſome farther Trials, *Columbus* (having no way to defend himſelf any longer), was forced to promiſe to return, if they diſcovered not Land in three Day's time; this being the utmoſt ſpace, that the domineering Sailors would allow him.

(*a*) The Variation firſt obſerved.

The *Spaniards* mutiny.

Columbus forced to Compound with them.

The firſt of thoſe Days, he found by the Sun-ſetting, that Land was near; upon which they contracted their Sails; and that ſame Night they ſaw Light. About two Hours after Midnight, one of the Company diſcover'd Land (*b*). This happy Sight was on *October* the 11th, *A. D.* 1492. This they found to be an Iſland of 15 Leagues compaſs; and it was one of the *Lucayans*, called by the Inhabitants, *Gavehani*; but by them *San* (*c*) *Salvador*, being about 950 Leagues from the *Canaries*. Here they went aſhoar, and having ſung a *Te Deum*, they took ſolemn Poſſeſſion of the place, in the Name of their Catholick Majeſties, King *Ferdinand*, and Queen *Iſabella*.

(*b*) They ſee Land.

(*c*) *Salvador* diſcover'd.

The Natives of the place thought them to be very ſtrange People; and much more wondred at their Ships, which they believ'd to be Great Animals. The *Spaniards* gave them Caps, Beads, and other Toys; which they payed themſelves very well for, in more valuable things. Theſe People were naked, of a middle-ſize, well proportion'd Bodies; their Natural Complexion of an Olive, but painted with other Colours, according to their Fancies *. They knew not the Uſe of Iron, nor the Make of Weapons, but innocently laid their Hands on the Edges of the *Spaniards* Swords. Their Iſle abounded with Parrots, beſides which they ſcarce ſaw any other Animals. They truck'd for Cotton-Yarn: And told the *Spaniards*, That the Gold they wore in Rings at their Noſtrils, came from the South; where they would find a Prince very rich therein.

* The Natives.

On the 15th of *October* they went to another Iſland, ſeven Leagues from thence, which they call'd (*d*) St. *Maria de la Conception*. The 17th they went to *Fernandina* (*e*), the Women of which place had only ſhort Cotton Coats, from the Navel to the Mid-thigh, to cover their Nakedneſs. After this they came to another Iſle, which they called *Iſabella* (*f*): Of which, as of all the others, they took ſolemn Poſſeſſion; and in all theſe Places carried it juſtly and honeſtly towards the Natives. They proceeded hence to *Cuba* (*g*), which the *Indians* told him afforded Gold and Pearl. Two *Spaniards*, and as many *Indians*, were here ſent to ſearch the Country; and lighting of an *Indian* Town of about Fifty Houſes, they were well treated there, the *Spaniards* being honour'd with Incenſe as they went along, as if they had been Deities; which the ſimple *Indians* indeed did almoſt believe, tho' after Experience made them wiſer. Here they ſaw Cotton grow of it ſelf, with ſeveral ſorts of ſtrange Birds and Trees: But the Commodity the *Spaniards* moſt minded, was the Gold which they ſaw the *Indians* wear in their Noſes; about which they were ſo curious as to ask ſome Queſtions: To which the *Indians* as honeſtly anſwer'd, *Cubanacan*; that is, they had it out of the midſt of *Cuba*; the *Spaniards* thinking (becauſe of that Term *Can*) that they had talk'd of the Great Cham of *Cathay*.

(*d*) Conception Iſle found.

(*e*) *Fernandina*

(*f*) *Iſabella.*

(*g*) *Cuba*, which they call'd *Juana*, in Honour of the Prince of *Caſtile*.

Alonzo Pinçon left *Columbus* here, who quickly after went himſelf in queſt of *Hiſpaniola* (*h*), which the Natives at that time call'd *Hayti*. They took here a Woman, a Native of the Iſland, whom treating well, ſhe became a ſerviceable Agent on their behalf, with the reſt of the Natives: So that at laſt there was a very good Correſpondence eſtabliſh'd between the *Indians* and *Spaniards* there, the King of the Place inviting *Columbus* to come aſhoar. A Fort was built upon this Iſland, to maintain the *Spaniſh* Pretenſions and Authority; in which 38 Soldiers were left: And after this Buſineſs done, *Columbus* made Proviſions for a Voyage homewards, charging his *Spaniards* to carry it obligingly to the *Indians*, and their King.

(*h*) *Hiſpaniola* diſcover'd.

Accordingly on *Friday*, *Jan.* 4. 1493. he ſet out from the Port of *Nativity*. In his Voyage, he affirms, he ſaw Mermaids; as alſo before, on the Coaſt of *Guiney*. And now much more of the Coaſts of that large Iſle *Hiſpaniola* came under their view; which they diligently obſerved, and

gave

(i) The Gulf *de las Flechas.* Sail Homeward.

gave Names to divers Capes and Harbours. About ſome of theſe Parts, the *Indians* and *Spaniards* had a Quarrel, which came to a ſmall Skirmiſh; but this Breach was quickly made up, and the Controverſie finiſh'd, by a Token of Submiſſion from the *Indian* King, which was his Crown of Gold, ſending them good Intelligence in to the Bargain. From this (*i*) place they ſet out *Jan.* 17. making the beſt of their Way homewards; *Columbus*'s Reckoning being now as many Leagues ſhort of theirs, in coming from the *Indies* to *Spain*, as theirs was of the Truth in going from *Spain* to the *Indies*.

Vows made in a Storm.

In *February* a fierce Tempeſt overtook them, in which time of Danger (all other Remedies failing) they humbly implored our Lady's Help, vowing Pilgrimages in Honour of her, if ever they came ſafe to Shoar. For this they caſt Lots; the firſt of which fell on *Columbus* himſelf, to go to *Guadalupe*; the ſecond on *Pedro de Villa*, to *Loretto*; and the third common to all of them, to march in ſolemn Proceſſion in their Shirts, to the firſt Church of our Lady they came at. Yet had they ſunk, the World might poſſibly have had the Knowledge of *Columbus*'s Diſcoveries: For he writ the Diſcourſe of it at large in Parchment, and put it up in a Barrel, intending to commit it thus to the Care of Providence. But they ſcap'd this Danger, and *Feb.* 15. had ſight of St. *Mary*'s Iſland, one of the *Azores*. And here going aſhoar upon the pious Deſign of fulfilling their Vows, they fell into the Hands of the *Portugueze*; the Saint of their Vows, it ſeems, not taking due Care to protect them from that Misfortune.

Columbus's ſecond Vow forces him to *Lisbon*.

The King of *Portugal* releaſes him.

The *Portugueze* and *Spaniards* envy him.

However, by ſome means or other, they made an Eſcape from thence; and going off to Sea, were met with another Storm, which exercis'd their Devotion a ſecond time, and produced another Vow of Pilgrimage (but unhappily made) to our Lady of *Cinta*. Here the Admiral ſuffer'd for his Devotion, for the Lot fell on him, and ſo forced him to *Lisbon*, into the Hands of his Enemies. Some of the *Portugueze* would have given him a rough Entertainment; but the more Generous King defended him from their Malice, gave him good Entertainment, and Crown'd all his Favours with a Conceſſion of full Liberty to depart into *Spain*. But this was not the only Injury the *Portugueze* did this moſt deſerving Perſon: For they aſſaulted his Fame, and endeavour'd to eclipſe the Glory of that Performance of his, which all Poſterity will celebrate him for. Nay, the *Spaniards* themſelves (for the Good of whoſe Nation his Labours were beſtowed) could hardly forbear traducing (at leaſt leſſening) of him, and what he had done; telling him, 'Twas a very eaſie Matter to make the Diſcoveries he had made. This envious Objection he very pleaſantly diverted by the Problem of the Egg, which was to be made ſtand upright on one end. When the Shell was broke, the Egg would ſtand; but they could not hit of that Method to make it ſtand, and gave over the Problem as inſoluble, till *Columbus* crack'd the Shell, and ſolv'd it. So when his Diſcoveries of the New World were made, 'twas an eaſie matter then to find it out. But Envy and Malice will find Employment for themſelves, and no Merit nor Goodneſs can be a Defence againſt the Aſſault of them. This *Columbus* found by many other unpleaſant Experiences: Who yet, (notwithſtanding the ſcurvy Uſage of ſome Men) was highly valued by their Catholick Majeſties, Nobly Rewarded for his good Service, and had the far better and more laſting Reward, of the Praiſes of the moſt ingenious Writers of that Age.

King of *Spain* addreſſes the Pope, &c.

Their Catholick Majeſties poſſeſs'd of theſe new Dominions, thought fit to deſire a Confirmation of their Title to them, from the Divine Vicegerent here on Earth. This was a very ſure Courſe, and every way as effectual for their Majeſties purpoſe, as an immediate Grant from the High Court above: Since the Act and Deed of this Great Miniſter of Heaven, would be eſteem'd of by all the Catholick World, as that of the Supreme King himſelf.

Accordingly an Embaſſador was ſent to *Rome* upon this important Affair; which as it was the firſt of that nature that ever that Court was addreſs'd to upon; ſo it ſucceeded in all Points as well as could be hoped for. The Pope then in the Chair was *Alexander* VI. a *Spaniard* by Birth, and a Native of *Valentia*. He immediately granted their Catholick Majeſties Requeſt; and by Virtue of that Power (long before pretended to by the Succeſſors of St. *Peter*), which extended to the Sovereign Diſpoſal of all the Kingdoms of this World, he paſs'd over theſe New Acquiſitions in *America*, to the Crown of *Caſtile*; which he declared to the World in a ſolemn Bull publiſh'd upon that occaſion. A Copy of this Bull is here faithfully tranſcribed for the Entertainment of thoſe that would ſee how little the *Romiſh* Pontiffs do ſcruple breaking the Rules of common Juſtice and Equity, to ſerve the Purpoſes of their own Worldly Intereſt and Glory. That they can Dethrone Princes, diſpoſſeſs whole Nations of their rightful Inheritances, transfer the Properties of one People to another, turn out thoſe whom God and Nature have put any where in poſſeſſion, to make room for their own Votaries.

Exemplar BULLÆ ſeu Donationis, Autoritate cujus, Epiſcopus Romanus *Alexander* ejus nominis Sextus, Conceſſit & Donavit *Caſtellæ* Regibus & ſuis Succeſſoribus, Regiones & Inſulas Novi Orbis.

The Pope's Bull.

ALexander *Epiſcopus, Servus Servorum Dei, Chariſſimo in Chriſto Filio* Ferdinando *Regi, & Chariſſimæ in Chriſto Filiæ* Elizabeth *Reginæ* Caſtellæ, Legionis, Arragonum, Siciliæ, *&* Granatæ, *Illuſtribus, Salutem & Apoſtolicam Benedictionem.*

Inter cætera Divinæ Majeſtati beneplacita opera & cordis noſtri deſiderabilia, illud profecto potiſſimum exiſtit, ut Fides Catholica & Chriſtiana Religio noſtris præſertim temporibus exaltetur, ac ubilibet amplietur ac dilatetur, animarumque ſalus procuretur, ac barbaræ Nationes deprimantur & ad Fidem ipſam reducantur. Unde cum ad hanc Sacram Petri *Sedem Divina favente clementia (meritis licet imparibus) evocati fuerimus, cognoſcentes vos tanquam veros Catholicos Reges & Principes: Quales ſemper fuiſſe novimus, & à vobis præclare geſta, toti pœne Orbi notiſſima demonſtrant, nedum id exoptare, ſed omni conatu, ſtudio, & diligentia, nullis laboribus, nullis impenſis, nulliſque parcendo periculis, etiam proprium ſanguinem effundendo efficere, ac omnem animum veſtrum, omneſque conatus ad hoc jamdudum dedicaſſe, quemadmodum recuperatio Regni Granatæ à Tyrannide Saracenorum hodiernis temporibus per vos, cum tanta Divini nominis gloria facta, teſtatur. Digne ducimur non immerito, & debemus illa vobis etiam ſponte, ac favorabiliter concedere per quæ hujuſmodi ſanctum ac laudabile ab immortali Deo acceptum propoſitum, indies ferventiori animo ad ipſius Dei honorem & Imperii Chriſtiani propagationem, proſequi valeatis. Sane accepimus quòd vos qui dudum animum propoſueratis aliquas Inſulas & Terras firmas remotas & incognitas, ac per alios hactenus non repertas, quærere & invenire, ut illarum incolas & habitatores ad colendum redemptorem noſtrum & fidem Catholicam profitendum reduceretis, hactenus in expugnatione & recuperatione ipſius Regni Granatæ plurimum occupati, hujuſmodi ſanctum & laudabile propoſitum veſtrum ad optatum finem perducere nequiviſtis. Sed tandem, ſicut Domino placuit, Regno prædicto recuperato, volentes deſiderium veſtrum adimplere, dilectum filium* Chriſtophorum Colonum, *virum utique dignum, & plurimum commendatum, ac tanto negotio aptum, cum Navigiis & hominibus ad ſimilia inſtructis, non ſine maximis laboribus, ac periculis, & expenſis deſtinaſtis ut Terras firmas & Inſulas remotas & incognitas, hujuſmodi per Mare, ubi hactenus Navigatum non fuerat, diligenter inquireret. Qui tandem (Divino auxilio facta extrema diligentia in Mari Oceano Navigantes) certas Inſulas remotiſſimas, & etiam Terras firmas, quæ per alios hactenus repertæ non fuerant, invenerunt. In quibus plurimæ gentes pacifice viventes, & (ut aſſeritur) nudi incedentes, nec carnibus veſcentes, inhabitant: Et ut præfati Nuntii veſtri poſſunt opinari, gentes ipſæ in Inſulis, & terris prædictis habitantes, credunt unum Deum Creatorem in Cœlis eſſe, ac ad fidem Catholicam amplexandum & bonis moribus imbuendum, ſatis apti videntur: Speſque habetur, quod ſi erudirentur, nomen ſalvatoris Domini noſtri Jeſu Chriſti in Terris & Inſulis prædictis facile induceretur. Ac præfatus* Chriſtophorus *in una ex principalibus Inſulis prædictis, jam unam turrim ſatis munitam, in qua certos Chriſtianos qui ſecum inerant in cuſtodiam, & ut alias Inſulas ac Terras firmas remotas & incognitas inquirerent, poſuit, conſtrui & ædificari fecit. In quibus quidem Inſulis & terris jam repertis, Aurum, Aromata, & aliæ quam plurimæ res præcioſæ diverſi generis & diverſæ qualitatis reperiuntur. Unde omnibus diligenter, & præſertim fidei Catholicæ exaltatione & dilatione (prout decet Catholicos Reges & Principes) conſideratis, more progenitorum veſtrorum claræ memoriæ Regum, Terras firmas & Inſulas prædictas, illarumque Incolas & Habitatores, vobis Divina favente clementia ſubjicere, & ad fidem Catholicam reducere propoſuiſtis. Nos itaque hujuſmodi veſtrum ſanctum & laudabile propoſitum plurimum in Domino commendantes, ac cupientes ut illud ad debitum finem perducatur, & ipſum nomen ſalvatoris noſtri in partibus illis inducatur, hortamur vos quamplurimum in Domino, & per ſacri lavacri ſuſceptionem, qua mandatis Apoſtolicis obligati eſtis, ut per viſcera miſericordiæ Domini noſtri Jeſu Chriſti attente requirimus, ut cum expeditionem hujuſmodi omnino proſequi & aſſumere prona mente Orthodoxæ fidei zelo intendatis, populos in hujuſmodi Inſulis & Terris degentes, ad Chriſtianam Religionem ſuſcipiendum inducere velitis & debeatis, nec pericula*

cula nec labores ullo unquam tempore vos deterreant, firma ſpe fiduciaque conceptis, quod Deus omnipotens conatus veſtros fœliciter proſequetur. Et ut tanti Negotii Provinciam Apoſtolicæ gratiæ largitate donati, liberius & audacius aſſumatis, motu proprio non ad veſtram vel alterius, pro vobis ſuper hoc nobis oblatæ petitionis inſtantiam, ſed de noſtra mera liberalitate, & ex certa ſcientia, ac de Apoſtolicæ poteſtatis plenitudine, omnes Inſulas & Terras firmas inventas & inveniendas, detectas & detegendas verſus Occidentem & Meridiem, fabricando & conſtruendo unam lineam à Polo Arctico, ſcilicet Septentrione, ad Polum Antarcticum, ſcilicet Meridiem, ſive Terræ firmæ & Inſulæ inventæ, & inveniendæ ſint, verſus Indiam, aut verſus aliam quamcunque partem, unæ linea diſtet à qualibet Inſularum, quæ vulgariter nuncupantur de los Azores, & Cabo Verde centum leucis, verſus Occidentem & Meridiem. Itaque omnes Inſulæ & Terræ firmæ repertæ & reperiendæ, detectæ & detegendæ à præfata linea verſus Occidentem & Meridiem, quæ per alium Regem aut Principem Chriſtianum non fuerint actualiter poſſeſſæ uſque ad diem Nativitatis Domini noſtri Jeſu Chriſti proxime præteritum, à quo incipit Annus præſens Milleſimus quadringentiſimus nongeſimus tertius, quando fuerunt per Nuncios & Capitaneos veſtros inventæ aliquæ prædictarum Inſularum Autoritate Omnipotentis Dei nobis in beato Petro *conceſſa, ac Vicariatus Jeſu Chriſti, qua fungimur in Terris, cum omnibus illarum Dominiis, Civitatibus, Caſtris, Locis, & Villis, juribuſque & juriſdictionibus ac pertinentiis univerſis vobis, hæredibuſque, & ſucceſſoribus veſtris (Caſtellæ & Legionis Regibus) in perpetuum tenore præſentium donamus, concedimus, & aſſignamus: Voſque, & hæredes, ac ſucceſſores præfatos illarum Dominos, cum plena, libera, & omnimoda poteſtate, autoritate, & juriſdictione, facimus, conſtituimus, & deputamus. Decernentes nihilo minus, per hujuſmodi donationem, conceſſionem, & aſſignationem noſtram, nulli Chriſtiano Principi, qui actualiter præfatas Inſulas & Terras firmas poſſederit uſque ad prædictum diem Nativitatis Domini noſtri Jeſu Chriſti jus quæſitum, ſublatum intelligi poſſe, aut auferrì debere.*

Et inſuper mandamus vobis in virtute ſanctæ obedientiæ (ut ſicut pollicemini, & non dubitamus pro veſtra maxima devotione & Regia magnanimitate vos eſſe facturos) ad Terras firmas & Inſulas prædictas, viros probos & Deum timentes, doctos, peritos, & expertos ad inſtruendum Incolas & habitatores præfatos in fide Catholica, & bonis moribus imbuendum, deſtinare debeatis, omnem debitam diligentiam in præmiſſis adhibentes. Ac quibuſcunque perſonis, cujuſcunque dignitatis, etiam Imperialis & Regalis ſtatus, gradus, ordinis vel conditionis, ſub excommunicationis latæ ſententiæ pœna quam eo ipſo, ſi contra fecerint incurrant, diſtrictius inhibemus ne ad Inſulas & Terras firmas inventas & inveniendas, detectas & detegendas verſus Occidentem & Meridiem, fabricando & conſtruendo lineam à Polo Arctico ad Polum Antarcticum, ſive Terræ firmæ & Inſulæ inventæ & inveniendæ ſint verſus Indiam aut verſus aliam quamcunque partem, quæ linea diſtet à qualibet Inſularum, quæ vulgariter nuncupantur de los Azores, & Cabo Verde centum leucis verſus Occidentem & Meridiem ut præfertur, pro mercibus habendis, vel quavis alia cauſa accedere præſumat, abſque veſtra ac hæredum & ſucceſſorum veſtrorum prædictorum licentia ſpeciali: Non obſtantibus conſtitutionibus & ordinationibus Apoſtolicis, cæteriſque quibuſcunque: In illo in quo Imperio & Dominationes & bona cuncta procedunt, Confidentes quod dirigente Domino actus veſtros, ſi hujuſmodi ſanctum ac laudabile propoſitum proſequamini, brevi tempore cum fœlicitate & gloria totius populi Chriſtiani, veſtri labores & conatus exitum fœliciſſimum conſequentur. Verum quia difficile foret præſentes literas ad ſingula quæque loca in quibus expediens fuerit deferri, volumus ac motu & ſcientia ſimilibus decernimus, quod illarum tranſſumptis manu publici Notarii inde rogati ſubſcriptis, & ſigillo alicujus perſonæ in Eccleſiaſtica dignitate conſtitutæ, ſeu Curiæ Eccleſiaſticæ munitis, ea prorſus fides in judicio & extra, ac alias ubilibet adhibeatur, quæ præſentibus adhiberetur ſi eſſent adhibitæ vel oſtenſæ.

Nulli ergo omnino hominum liceat hanc Paginam noſtræ commendationis, hortationis, requiſitionis, donationis, conceſſionis, aſſignationis, conſtitutionis, deputationis, decreti, mandati, inhibitionis, & voluntatis, infringere, vel ei auſu temerario contraire. Si quis autem hoc attentare præſumpſerit, indignationem Omnipotentis Dei, ac beatorum Petri & Pauli *Apoſtolorum ejus, ſe noverit incurſurum.*

Datum Romæ apud Sanctum *Petrum*, Anno Incarnationis Dominicæ 1493. quarto Nonas Maii, Pontificatus noſtri Anno Primo.

A Copy of the Bull, or Grant, by Virtue of which, Alexander VI. *Biſhop of* Rome, *entitled the Kings of* Caſtile, *and their Succeſſors, to the Countries and Iſlands of the New World.*

ALexander Biſhop, the Servant of the Servants of God, to our dearly beloved Son in Chriſt, *Ferdinand* King; and to our dearly beloved Daughter in Chriſt, *Elizabeth* Queen of *Caſtile*, *Leon*, *Arragon*, *Sicily*, and *Granada*, moſt Illuſtrious Princes, wiſheth all Health and Apoſtolical Benediction.

This Bull is to be ſeen in *Lopez de Gomara*, in his Hiſt. Gen. Part 2. c. 19. and in *R. Eden.*

Of all the Works that are acceptable to the Divine Majeſty, and agreeable to our Wiſhes; that doubtleſs is the greateſt, which conſiſts in promoting, enlarging, and conveying into all Parts the Catholick Faith, and Chriſtian Religion, eſpecially in the Age we live in, in procuring the Salvation of Souls, in Subduing and Converting the barbarous Nations: We therefore being call'd by the Divine Clemency, (tho' without a ſuitable Merit) to St. *Peter*'s Sacred Chair; and having always known you to be true Catholick Kings and Princes; eſpecially conſidering that your Noble Exploits, celebrated almoſt all the World over, are demonſtrative Evidence, that you not only wiſh for the Advancement of the Catholick Intereſt, but actually promote it by all your Efforts, Study, and Diligence, ſparing no Labour, Expences, or Danger, nor even the Effuſion of your own Blood: In a word, that all your Thoughts and Endeavours have for a long time been ſolely bent upon it; of which your reſcuing of the Kingdom of *Granada* from the Tyranny of the *Saracens*, in our time, to the infinite Glory of the Divine Name, is a memorable Inſtance. As theſe Accounts plead your Merit, ſo we are ſenſible that we ought of our own Accord, and out of pure Favour, to grant you whatever may enable you to carry on, and purſue with growing Fervency your holy and laudable Deſigns, ſo acceptable to the Immortal Being, in order to promote the Honour of his Name, and enlarge the Bounds of Chriſtianity. In earneſt, we are inform'd, that you had form'd a Deſign ſome time ago, to carry on the Queſt and Diſcovery of ſome remote Iſlands, and Continents, that are not yet known or diſcover'd by others; in order to reduce the Inhabitants to the Worſhip of our Redeemer, and the Profeſſion of the Catholick Faith; but being then diverted by the Conqueſt and Regaining of the Kingdom of *Granada*, you were not at that time able to compaſs your holy and laudable Ends. We underſtand likewiſe, that at laſt having recover'd *Granada*, purſuant to the Divine Will, you purſued your former Intention, by appointing our beloved Son, *Chriſtopher Colonus*, a Man of Worth and Repute, and qualify'd for ſo great an Undertaking, to Viſit the Seas that Navigation had not reach'd, in queſt of the remote and undiſcover'd Continents and Iſlands; and furniſh'd him with Men and Shipping proper for the purpoſe, not without great Labour, Danger, and Charge: That the ſaid *Chriſtopher*, and his Companions, by God's Aſſiſtance, ſailing with extream Diligence thro' the Ocean, did accordingly diſcover ſome very remote Iſlands, and even Continents, that were formerly unknown, and are inhabited by ſeveral peaceable Nations, which (as 'tis ſaid) go naked, and abſtain from Fleſh; and in the Opinion of your Diſcoverers, believe that one God, the Creator of the Univerſe, reſides in Heaven, and ſeem ſufficiently diſpos'd for embracing Civility, and the Catholick Faith; inſomuch, that 'tis hop'd that proper Inſtruction would eaſily introduce the Name of our Lord and Saviour Jeſus Chriſt, into the above-mention'd Continents and Iſlands. Our Intelligence likewiſe bears, That the ſaid *Chriſtopher* caus'd a Fortreſs of ſome ſtrength to be built, in one of the moſt conſiderable of thoſe Iſlands; and has therein plac'd a Garriſon of ſome Chriſtians that accompanied him, who are likewiſe to look out for other undiſcover'd Iſlands and Continents: That the Iſlands and Continents thus diſcover'd, afford Plenty of Gold, Spices, and ſeveral other precious Things: And that you, after a mature Conſideration of all the Circumſtances, eſpecially the Promotion and Enlargement of the Catholick Faith, purſuant to the Duty of Catholick Kings and Princes, have reſolv'd, in imitation of the Illuſtrious Kings your Anceſtors, by the Favour of Almighty God, to ſubdue and reclaim to the Catholick Faith, the above-mention'd Continents and Iſlands, their Natives and Inhabitants. Now we approving very much of this your holy and godly Purpoſe in our Lord, and deſiring that it may be brought to a due Period, that the Name of our Saviour may be eſtabliſhed in thoſe Parts, do ſeriouſly exhort you in our Lord, conjuring you by your holy Baptiſm,

ptiſm, which obliges you to an Apoſtolical Obedience, and earneſtly require you, by the Bowels of the Mercy of our Lord Jeſus Chriſt, that ſince you intend, out of a Zeal for the Orthodox Faith, vigorouſly to purſue, and carry on the ſaid Expedition, to reduce the People of the foreſaid Lands and Iſlands, to the Chriſtian Religion: You ſhall not be at any time ſcar'd by Danger or Labour, relying upon a firm Hope and Confidence, that the Almighty will Crown your Endeavours with Succeſs. And to the end that the Bounty of Apoſtolical Grace may inſpire you with more Freedom and Boldneſs, in purſuing ſo great a Deſign; we do of our own Accord, without any Influence from your Solicitation, or that of others in your behalf; but out of our own pure Bounty, and by Virtue of our certain Knowledge, and the Fulneſs of Apoſtolical Power, Give, Grant, and Aſſign to you, your Heirs and Succeſſors, the Kings of *Caſtile* and *Leon*, all the Iſlands and Continents, found, or to be found, diſcovered, or to be diſcover'd, toward the Weſt and South, whether towards *India*, or any other part; drawing a Line from the Artick Pole, or the North, to the Antartick Pole, or the South, at the diſtance of a hundred Leagues towards the Weſt and South, from any of the Iſlands that are commonly call'd, *De los Azores*, and *Capo Verde*. So that all the Iſlands and Continents found and to be found, diſcover'd and to be diſcover'd, from the ſaid Line, towards the Weſt and South, that were not actually poſſeſs'd by any other Chriſtian Prince before the laſt Chriſtmaſs, (*i. e.*) the Commencement of the preſent Year of our Lord 1493. any of theſe Countries, I ſay, when diſcover'd by your Captains, and Servants, together with their Dominions, Cities, Caſtles, Forts, Villages, Rights, Juriſdictions, and all Appurtenances, are by the Tenor of theſe Preſents Given, Granted, and Aſſign'd to you, your Heirs, and Succeſſors for ever, by Virtue of the Authority of Almighty God granted to us in St. *Peter*, and the Vicarſhip of Jeſus Chriſt, lodg'd in us upon Earth: And hereby Make, Conſtitute, and Depute you, your Heirs and Succeſſors, the Lords thereof, with Full, Free and Univerſal Power, Authority, and Juriſdiction: Provided ſtill, that this our Gift, Grant, and Aſſignation, ſhan't be underſtood to diſpoſſeſs any Chriſtian Prince, of what Iſlands, or Continents, he may have poſſeſs'd before the Chriſtmaſs afore-mention'd.

And further, with regard to that Holy Obedience, which you have promis'd, and we doubt not, will perform, in Conformity to your ſingular Devotion, and Royal Magnanimity, we command you to purſue the Premiſes with utmoſt Diligence, and to ſend to thoſe Iſlands and Continents, Men of Probity and Learning, ſuch as fear God, and are qualified to inſtruct the Inhabitants in the Catholick Faith, and Good Manners. At the ſame time we ſtrictly prohibit all Perſons of what Eſtate, Degree, Order, or Condition ſoever; or whatever Dignity, whether Imperial, or Regal, under the Pain of the Sentence of Excommunication, to preſume, without the Special Leave of you, or your Heirs and Succeſſors, under the Pretence of Trade, or any other, to touch upon the ſaid Continents or Iſlands, found or to be found, diſcover'd or to be diſcover'd, towards the Weſt and Eaſt, whether towards *India*, or any other part, a Line being drawn from the Artick to the Antartick Pole, at the diſtance of a Hundred Leagues, as to the Weſt and South, from any of the Iſlands that are commonly call'd, *De los Azores*, and *Capo Verde*: Notwithſtanding any Conſtitution, Decrees, and Apoſtolical Orders to the contrary. In him from whom Empire, Dominion, and all Good Things do proceed, truſting, that by the Direction of Almighty God, if you purſue your holy and laudable Deſign, your Labours and Endeavours will in a ſhort time be brought to a happy Concluſion, to the Glory and Felicity of all Chriſtendom. But foraſmuch as theſe Letters can't without great difficulty be convey'd to all the Places, where it may be convenient to ſhew 'em, we do with equal Knowlege and Good-will declare, That the ſame Faith and Credit ſhou'd be given in all Places, whether before Courts, or any where elſe, to the Tranſcript of theſe Letters, ſign'd by a Publick Notary thereunto requir'd, and atteſted by the Seal of an Eccleſiaſtical Court, or of any Perſons inveſted with Eccleſiaſtical Dignity, as would be given to the Original it ſelf.

Let no Man therefore whatſoever, offer to infringe, or with a raſh Attempt to counteract this Letter of our Commendation, Exhortation, Demand, Gift, Grant, Aſſignation, Conſtitution, Deputation, Decree, Command, Prohibition, and Determination. If any one has the Preſumption to venture upon ſuch an Attempt, he is hereby given to know, that he will thereupon incur the Indignation of the Almighty God, and *Peter* and *Paul* his holy Apoſtles.

Given at Rome *at* St. Peter's, *in the Year of the Incarnation of our Lord* 1493. *the Third Day of* May, *and the firſt Year of our Popedom.*

The Quarrel between *Portugal* and *Spain.*

What Intereſt the *Spaniards* had in the New W. World, 'tis certain the *Portugueze* might have had before them, had they been ſo wiſe as to have embrac'd *Columbus*'s Offers. But having rejected them as vain and ridiculous, and thereby neglected a very favourable Opportunity of advancing the Intereſts of their Nation: Now ſeeing the *Spaniards* ſo well ſeated there, where they might have been themſelves, they began to grow very angry at them. The King of *Portugal*, by his Embaſſador ſignified his Reſentment: But the *Caſtilian* (willing if poſſible, to preſerve the ancient Peace between thoſe two Crowns) by his Embaſſadors endeavour'd to cool that Heat, and temper the Choler of the *Portugueze*, in ſome meaſure making fair and plauſible Overtures for that purpoſe: Telling him, That if he thought good, the Matter in Diſpute between them, ſhould be put to a Reference, and left to the Arbitration of a ſelect Number of Judges on both ſides; or that the Controverſie ſhould be carried to the Court of *Rome*, and ſo left to be decided by the infallible Sentence of the Pope. The *Portugueze* on his ſide, alſo offered to the *Spaniard*, all the Diſcoveries through the World Northward from the *Canaries*, reſerving to himſelf the Countries that ſhould be diſcover'd Southward from thoſe Iſles. But theſe Propoſals then took of neither hand, and ſo the Controverſie remained as it was. Yet afterwards it was agreed, that ſome Perſons ſhould be deputed on the behalf of both Nations, to examine the Matter, and look into the Pretenſions of both Parties to the New Diſcoveries; as alſo, to ſettle the Limits of their ſeveral Pretenſions. There were three of theſe Plenipotentiaries on the *Spaniſh*, and as many on the *Portugueze* ſide; and their Conferences at laſt iſſued in an Agreement to this purpoſe, *viz.* That the Line of Partition mention'd in the Pope's Bull, ſhould be extended 270 Leagues further to the Weſt, that all from thence Weſtward ſhould fall to the ſhare of the *Spaniards*, and from thence Eaſtward to the *Portugueze*: That there ſhould be free Sailing on both Parts; but that neither ſhould Trade beyond the appointed Bounds. This Agreement was made *June* 7. *A. D.* 1493. ſeal'd by the King of *Spain*, July the 2d; and by the King of *Portugal Feb.* 27. 1494. And now each Party had nothing to do, but to prepare for further Diſcoveries; which Work while King *John* was intent upon, he died, leaving it to his Succeſſor *.

The Pope's Authority infring'd.

They agree.

* *A.D.* 1495.

The new King *Emanuel*, in purſuance of that Deſign, * ſent out three Ships, with one Victualler; in which were about 160 Men, under the Command of *Vaſco di Gama*. This Captain (having *Couilian*'s Maps and Inſtructions) ſet ſail *July* the 9th, and paſſing by the Iſle St. *James*, he directed his Courſe Eaſtwards. The firſt Land he ſaw, was that which he called (*a*) the Bay of St. *Helena*; where after three Months ill Weather they went aſhoar. Here they took certain Negroes, whoſe Friendſhip they procured by little Trifles which they beſtowed upon them; and by this means a free Traffick with the reſt of the Natives, for ſuch Victuals as they had. But this good Underſtanding was loſt, by the means of the Folly and Cowardice of one of their Company; who having been civilly treated at the Negroes Houſes, and honeſtly conducted back, cried out in a fearful manner, as he was coming home to his Company; at which the *Portugueze* coming in, and the Negroes running, a Skirmiſh commenc'd between them; in which the Negroes, with their ſharp-pointed Poles, which they darted at the *Portugueze*, wounded many of them, *Gama* himſelf feeling the ſharpneſs of them amongſt the reſt. Upon this they left St. *Helena*, and ſail'd towards the Cape of *Good Hope*; but were encountred with ſo violent Storm by the way, that they were forced to ſtrike Sail, and commit themſelves to the Mercy of the Winds. In this Confuſion *Gama*'s Company preſs'd him to think of returning homewards, and not expoſe them to ſo cruel a Death as ſeem'd to threaten them. But he refuſing to do this, they plotted his Death; which by his Brother's Vigilance and Care he avoided; and ſo laying the chief of the Mutiniers in Chains, he proceeded in his Voyage without controul.

* *A.D.* 1497

(*a*) St. *Helena*

Sail towards the Cape of *Good Hope.*

Novemb. 20. he doubled the Cape of *Good Hope*, and ſail'd continually near the Land, which they ſaw full of Cattle, and People like them at St. *Helena*; naked, ſpeaking odly in the Throat, and encloſing their Privy Parts in a Receptacle of Wood. Having refreſh'd themſelves here, they proceeded; and *Decem.* 8. met with a Storm, that loſt them the ſight of Land, which with fair Weather they recover'd again. And now having paſt 230 Miles from their laſt Watering-place, and ſeeing a pleaſant Country well ſtock'd with People; on *Jan.* 10. a Meſſenger was ſent on Shoar, with a Preſent, who was return'd with the like again, after good Uſage. Here *Gama* ſet two condemned aſhoar, giving them their Lives, that being

Double the Cape.

being planted there, they might make Obſervations of the Country, and People.

Good Entertainment by the Natives of St *Raphael*

The next place he came at, the People were much of the ſame colour, but more bold and familiar: And here one of them told him, in broken *Arabick*, That Ships like theirs did uſe to come to a Country that lay not far off. This Country he called St. *Raphael*, and that particular place where he had this Information, *The River of Good Signs*. Here he erected a Stone Croſs, and left two condemned Perſons for the ſame purpoſe as before.

(b) *Mozambique* diſcover'd.

Having refreſh'd his Company, and ſet out again, on *March* the 1ſt, they ſpied ſeven Sail, which coming near, ſaluted them in *Arabick*, and made them a great deal of Muſick. The Men in theſe Ships had Garments of Silk, Linen Turbants wrought with Gold, and Faulchions by their ſides. The *Portugueze* were inform'd by them, that the place they were near was *Mozambique (b)*; the Inhabitants of which were moſtly *Mahometans*, tho' the Genuine Natives were Idolaters. That 'twas Subject to the King of *Quiloa*, and that there was Trading from thence into *Arabia*, *India*, and other Parts of the World.

(c) The Compaſs in uſe amongſt the *Moors* in the *Indian Seas*, before the *Portugueze* came there.

Treachery at *Mozambique*

The *Portugueze* found theſe *Moors* furniſh'd with Sea-Charts, and Quadrants, and to be Maſters of the moſt uſeful Invention of the (c) Compaſs. *Zacoeia*, the Governour of the place (whom they had ſweetned before with ſome Preſents) came in great Pomp to Viſit them a Ship-board; where he was nobly feaſted: At which time they obſerved, that theſe *Mahometans* did make very bold with the Juice of the Grape, which they took off in large Quantities, in ſpite of all that *Mahomet* and the *Alchoran* had ſaid to the contrary. The Governour taking it for granted, that *Gama*, and his Company, were *Mahometans* (for had they known they were Chriſtians, they wou'd have treated them otherwiſe) ask'd, Whether they were *Moors*, or *Turks*? He enquired alſo concerning the Weapons they uſed, and the *Mahometan* Books they had amongſt them. *Gama* could ſay little as to the Books, but gave ſutable Anſwers to all the other Queſtions; telling the Governour, he was going to the *Indies*; and therefore deſired him to furniſh him with Pilots for his Voyage. This the Governour promiſed, and the next Day ſent him two: But happening now to diſcover they were Chriſtia[illegible]hey not only plotted Miſchief againſt them, but aſſaulted them with open Violence.

(d) *Quiloa.*

(e) *Mombaza.*

Deſigns againſt them at *Mombaza.*

Gama hereupon went to *Quiloa (d)*, having now but three Ships, the fourth being burnt before: But here he cou'd not Land; which whether 'twere owing to the Treachery of the Pilots, or to any other Miſfortune, is not certain. Being diſappointed, he went to *Mombaza (e)*, which his deceitful Pilots perſwaded him, was a very proper place to refreſh his ſick Men at. The Air indeed here he found ſweet and pleaſant, the Country fertile and very agreeable; but the People falſe and treacherous. The King ſent 100 Men, well arm'd, after the Turkiſh Faſhion, with a deſign to ſurprize the Admiral, cou'd they have had opportunity: But this *Gama* prevented, poſitively refuſing them entrance, and admitting only four of the principal of them. They told him, *The King was deſirous of his Acquaintance; and would have him bring his Ships a little nearer the Town*: Which together with a Preſent, perſwaded *Gama* of his ſincere Intentions. And this had certainly been done, but that fearing a Shelve in his paſſage thither, he ſtopt ſuddenly, and caſt Anchor: Upon which the *Mooriſh* Pilots, conſcious to themſelves of their Treachery, (for they had agreed with the King of *Mombaza*, either to run the Ships a-ground, or elſe bring them within his reach) and fearing 'twas diſcover'd, leap'd into the Sea, and left him to be his own Pilot. The King alſo, that Night, ſent out ſome to cut their Cables; but this Danger they avoided too.

(f) *Melinda.*

From hence they ſail'd to *Melinda (f)*, where they arrived on *Eaſter*-Day. This Town appear'd ſtately and well built, the Country about it fruitful; the People Idolaters, black, with curl'd Hair, naked from the Navel upwards, and from thence cover'd with Silk down to the Mid-leg. The Chriſtians of *India* here, were glad to ſee the *Portugueze*; and gave them ſome uſeful Inſtructions, relating to their Voyage. The King of the place was very civil and kind in his Deportment towards them, and gave them a Pilot to conduct them to the *Indies*. They departed hence *April* the 22d, and having paſs'd the Line, recover'd, to their great Joy, the ſight of the Stars, which they had not ſeen for ſome conſiderable time before.

Gama comes to *Calecut.*

The next Proſpect they had of Land, was the pleaſant one of the high Mountains of *Calecut*, which they ſaw *May* 19. and came within two Miles of the City the ſame Day. One of the Condemned Men being here ſet aſhoar to obſerve the Town, and Inhabitants, was like to have been ſqueez'd to Death with the Throngs of People, that came crouding about him to ſee him, wondring at his *Spaniſh* Dreſs; which made amongſt them, who were uſed to other Faſhions, a very odd and ſtrange Figure. But one *Monzaid*, a *Tunis* Merchant, knowing of what Country he was, carried him to his Houſe, and after good Entertainment given him, went with him aboard *Gama*'s Veſſel. He told the Admiral, that the King of *Calecut* would be glad of his coming, the beſt part of his Revenues being his Cuſtoms. Upon this *Gama* ſent two of his Company (who were conducted by *Monzaid*) to wait on the King; and withal to tell him, That the King of *Portugal* was deſirous of a Friendly Correſpondence with his Majeſty; and that a Free Trade might be opened between both Kingdoms, for the Glory and Profit of each; and that he had ſent them thither to lay a Foundation for it. The King ſeem'd to be pleas'd with the Meſſage; and ſent a certain Officer (called the *Catual*) honourably to conduct *Gama* to him; who giving his Brother Charge of the Fleet in his abſence, order'd him to return home, if any Miſfortune happen'd to him aſhoar.

Welcom'd by the King.

His Introduction to the King.

Gama comes before the King.

The City of *Calecut.*

Gama, and his Attendants being landed, there were Litters provided to receive them, and the King's Guards walk'd along by their ſides: Being brought to a very ſtately Temple, and ſet down at the Door of it, four Men, in the habit of Bramens, ſprinkl'd Holy Water upon them, and gave them ſweet Pouders. By the Painting they obſerved upon the Walls within, and ſome other Ornaments, they could not tell, at firſt, but that this Temple was deſigned for Chriſtian Worſhip. But they were more effectually cheated into that Fancy afterwards, when the Prieſts, in the Performance of the Rites of their Superſtition, pointing to a certain Image, cried aloud, *Maria*; at which all the Pagans falling proſtrate, preſently began to mumble out their Prayers. The *Portugueze* thinking this to be ſome ſort of Devotion to the bleſſed Virgin, bore the Pagans Company in their devout Poſtures, and began to pray as well as they. Their own way of ſerving God, it ſeems, being ſo like that of the Heathens, that they could not know them aſunder, nor avoid miſtaking one for the other. From this Temple they paſs'd into another as magnificent as the former, and ſo to the Palace, at the Gates of which they were met by ſome of the Nobles, as alſo at the Door of the Preſence-Room, by the principal of the Bramens, who embraced *Gama*. This Room was large, with Benches over one another, almoſt like a Theatre; the Floor being cover'd with Silken Carpets, and the Walls hung with Embroidery. The King lay upon a very rich Couch, having a Noble *Tiara* upon his Head, thick beſet with Jewels, which together with thoſe in his Ears, and upon his Fingers and Toes, made him yield a very glorious Figure. He was a Comely, Tall, Majeſtick Perſon; and the King appear'd as much in his Face, as in his Royal Apparel. *Gama* having done him Reverence, was placed in a Seat by him, and the other *Portugueze* were made to ſit likewiſe. After this, he diſcourſed with *Gama*, about the Deſign of his Embaſſage; who not being free to declare it in that promiſcuous Aſſembly, the King removed into another Room; where *Gama* told him, what he had in Charge from the King of *Portugal*; which this Prince receiv'd with great Satisfaction. The Catual was order'd to conduct him to his Lodgings: where he had Time and Advantage to look about him. The City he obſerved to be large and rambling, the Houſes not curiouſly built, nor joining cloſe together, but parted by Gardens and Orchards which lay betwixt them. There was hardly any Stone-Building in the City, (their Laws forbidding pompous Houſes) the King's Palace only excepted; altho' *Calecut* was at that time a ſort of an Imperial City: The King being in Power and Riches ſuperiour to all his Neighbour-Princes, and having, at that time, many Tributaries.

After three Days, *Gama* conducted by the *Catual*, preſented his Credentials to the King, which he deſired might not be interpreted by any of the *Moors*, who plainly appear'd to be his Enemies. Theſe Letters were interpreted by *Monzaid*, his Friend; and the King was ſo kind, as to give him a plain Hint of the Tricks, and fraudulent Dealings of the *Moors*: For which he return'd him Thanks and departed.

(g) The Malice of the *Moors.*

Yet notwithſtanding this, did the King ſuffer himſelf to be perſwaded into a very bad Opinion, and into unfair Treatment of the *Portugueze* too, by theſe very *Moors* whom he had warned them of. (g) They told him, That *Gama* was a Spy, and deſigned no good to his Country; that 'twas not conſiſtent with the Safety of his Nation, to encourage him to Trade there: And that for their parts, if the *Portugueze* had that Liberty afforded them, they would remove, with all their Effects, to another Country; which would redound very greatly to his Majeſty's diſadvantage. By theſe, and other like Inſinuations, the King was ſet againſt them; and began to fall in with them in their treacherous Deſigns, of doing the *Portugueze* what Miſchief they could. And to effect this, he ſent to *Gama*, to bring his Ships nearer the Town, and for Security to deliver up his Sails: But he ordered his Brother, inſtead of that, to ſail homewards, if he ſaw him long detained aſhoar. Yet *Gama*, by their Perſwaſion, ſent his Merchandize aſhoar, with Men to ſell them, having Liberty then himſelf to return to his Ships; tho' his Goods were not ſold there, but carried to *Calecut*, by the Treachery of the *Catual*, who pretended that they would go off there to better advantage. *Gama* ſent away every Day, two or three to look after his Affairs in the Town; and alſo to deſire of the King, the liberty of placing a Factor there: But he had no Anſwer from the Court, but only the bad News, that two of his Men, with their Merchandize, were committed to ſafe Cuſtody.

Injuries offer'd to them, and *Gama's* Endeavour to right himſelf.

In Revenge of this Injury, *Gama* attack'd the next Ship that came thither, and took ſix conſiderable Perſons belonging to the King Priſoners. This the King (tho' he grievouſly reſented) yet ſeem'd to paſs by; and therefore to pacifie *Gama*, ſent his two Servants the next Day, with Letters to the King of *Portugal*; but keeping ſtill the Goods, pretending, that he might, if he would, ſend a Factor thither, to diſpoſe of them. But this *Gama* abſolutely refuſed now, declaring he would have all his Effects aboard again, and would keep thoſe Priſoners till he had them. Upon this the King quickly ſent his Wares in Boats to him, demanding his Priſoners: But *Gama* denying the delivery of them, ſent the King Word, That he would carry thoſe *Malabars* into *Portugal* with him, as an Evidence of his injurious Uſage and Treachery: And ſo giving them his final Anſwer out of the Mouths of his Great Guns, he drove them away. The King could not tell how to help himſelf at that time, becauſe his Fleet was all unrigg'd; yet he ſent out 60 Merchant-men after them, but a Tempeſt interpoſed, and put an end to that Purſuit.

Falſe dealing of the King of *Calecut*.

Gama, at the next Port he came to, writ a mollifying Letter to the King; which he ſent by the Hand of one of his Servants, which he had before Arreſted. And here he was ſet upon by a very famous * Pirate, with eight Ships, one of which he took, and diſperſed the reſt.

* *Timoia*.

Putting in at *Anchedina*, to mend his ſhatter'd Veſſels, he receiv'd there a Meſſage from *Zabaius*, Lord of *Goa*, an *Italian*, who offer'd him very great Kindneſſes, if he would come thither. *Gama* ſuſpecting the Integrity both of the Meſſage, and Meſſenger, put the Fellow upon the Rack; who then confeſs'd himſelf a Spy: So he carried him into *Portugal* with him; where he was Baptized, and proved a uſeful Servant to the King.

Sails homewards.

He haſted from hence, and came to *Magadoxo*, on the *African* Coaſt, the People of which being ſpiteful *Mahometans*, he ſunk and ſpoil'd their Ships, and beat down part of their Walls.

At *Melinda* he had kind Entertainment; where having ſtay'd five Days, he haſted homewards, for fear of Winter Weather at the Cape, carrying along with him an Embaſſador from the King of *Melinda*.

By the way he burnt one of his Ships, it being ſhatter'd and diſabled, and there being need of the Men aboard her, to ſupply the want of Mariners in the other two.

(h) *Zanzibar*.

February the 27th, he came to *Zanzibar* (h), which is Twenty four Miles from the Continent; the Prince of which, tho' a *Moor*, treated him Civilly.

(i) St. *Blaſe*.

He refreſhed again at St. *Blaſe*'s (i) watering. And on *April* the 25th, he doubled the Cape: From whence he came to St. *Jago*, where a Tempeſt parted the two Veſſels. *Celius*, the other Commander, went directly to *Lisbon*; but *Gama* put in at the *Tercera's*, where his Brother died: But ſoon after he himſelf came ſafely to *Lisbon*, having now finiſh'd a long and difficult Voyage: An Account of which was given to the King by the other Captains, before his Arrival *.

* 1499.

He brought along with him the *Tunis* Merchant, *Monzaid*; who was his Friend at *Calecut*, and deſired to go into *Portugal* with him, where he afterwards became a Chriſtian. But of his own Men he brought home but few, the Voyage having left him but 55, (and thoſe very feeble too) out of near 200, which he carried with him.

Tho' the *Portugueze* in their firſt Viſit to the *Eaſt-Indies*, had met with no very obliging Entertainment; yet unwilling preſently to quit their Pretenſions to a Correſpondence with ſo Noble a Country, they reſolved to repeat their Civility, and make them a ſecond.

King *Emanuel*, for this purpoſe, ſet out a Fleet of thirteen Ships, in which were 1500 Men, and good ſtore of all neceſſary Proviſions for ſuch a Voyage. Amongſt which it is not to be forgotten, that there were ſome Proviſions intended for the Benefit of the Souls of thoſe Infidels, amongſt whom they were going, *viz.* Five large Bodies of Divinity, Friars of St. *Francis*'s Order, who doing the Work of Chaplains a Ship-board, were to do that of Apoſtles when they came a Shoar. This Fleet was commanded by *Peter Alvarez Capralis*; who had ſpecial Orders from the King, to live peaceably with the King of *Calecut*, if poſſible: As alſo to get leave to build a Fort, for a Security from the Hoſtilities of the *Moors*.

Capralis ſets out.

Capralis ſet out from *Lisbon*, March the 8th, of the then Secular Year *; and coming to St. *Jago*, a Storm ſcatter'd the whole Fleet, and forc'd one Ship to return home. The reſt of the Fleet having ſtay'd for this Veſſel two Days to no purpoſe, ſet Sail Weſtward; and *April* the 23d, to their very great Wonder, had ſight of Land (a). *Capralis* commanded the Maſter aſhoar; who brought News of a fertile, and well water'd Country; but poſſeſs'd by a barbarous People, naked, with very long Hair, arm'd with Bows and Arrows. A Storm overtook them that Night; but they got into a ſecure Harbour, which *Capralis* call'd, *Puerto Seguro*, becauſe he had there a ſafe Retreat from the Fury of the Storm. They took two Fiſher-men, whom furniſhing with ſome ſmall Trinkets, they ſet aſhoar again; after which they brought many of their Countrimen, who for Beads and Bells, and ſuch like Toys, gave them Meal and Fruits, and ſuch things as they wanted. This Country they called, *The Country of the Holy Croſs*; from the vaſt quantity of that ſort of Wood, ſince call'd *Brazil*. They ſanctified it with a Sermon, and Maſs ſaid aſhoar, and erected a Stone Pillar for a Memorial: After which having diſpatched a Ship to *Portugal* with this News, they proceeded in their Voyage. 'Twas on *May* the 5th, that they went from hence; and on the 23d, a ſudden Storm ſunk four of their Ships, and drown'd all the Men of them, ſcattering the other ſeven at ſo violent a rate, that they quite loſt the Sight and Company of each other for a long time. One of them wandred into the *Arabian* Gulf, and thence got home, having loſt almoſt all her Men: But the other ſix, on *July* the 25th, got together again, and went on towards the Cape. Having doubled it, they found a good pleaſant Country; but the People were not free for Trade, but utterly refuſed having any thing to do with them: Which whether 'twere the Effect of Poverty, or Perverſeneſs, is not much material. At *Mozambique* they had free Watering, and hired there a Pilot for *Quiloa*.

* *A.D.* 1500.

(a) *Brazile* diſcover'd.

Go on from *Brazile*.

The People about the Cape refuſe their Correſpondence.

The King (b) of *Quiloa*'s Dominions reach 900 Miles in length: His Subjects a mix'd ſort of People, but ſpeak moſtly *Arabick*. The Country abounds in Springs, Trees, Cattel, wild and tame; the Soil is alſo rich, and the Fiſhing good. It is ſeparated from the Land by a narrow Sea, and is about 400 Miles from *Mozambique*. The City is large and populous, the Houſes magnificent, and well furniſh'd. They uſe here a ſort of Baſtard Frankincenſe about their Ships, for want of Pitch. *Capralis* ſent to Complement the King, who kindly entertained the Meſſengers, and promis'd the next Day to come aboard. This he did at the time appointed, in a very ſplendid manner, having a gallant Retinue, noble Furniture, and variety of Muſick, to grace his Viſit. The *Portugueze* receiv'd him in the beſt manner they could; and *Capralis* having deliver'd his Meſſage from the King of *Portugal* to him, he promis'd to enter into a ſtrict League of Friendſhip with that Prince; and the next Day was appointed for the concluding it. (c) But the *Moors*, who were ſworn to do the Chriſtians all the ill Offices they could in all places, did not fail to blaſt their Deſigns in this place alſo. *Capralis* upon this, went to *Melinde*, where the *Portugueze* had ever found very good Entertainment: But here he made no ſtay, only taking care before he went, to find out ſome way to *Preſter John*'s Country; which he did by two condemned Perſons, whom he left there for that purpoſe.

(b) Deſcription of *Quiloa*.

(c) Treachery of the *Moors*.

Auguſt the 22d, he came to *Anchediva*: and after a ſhort ſtay there, to *Calecut*. Being come thither, the King ſent two * *Naire*'s, with a *Guzaratte* Merchant, to bid him Welcome: Which Civility he return'd by four of thoſe Perſons whom *Gama* had taken Priſoners the Year before. Theſe he ſent to the King, dreſs'd in the *Portugueze* Habit, in Company of ſome others: At whoſe coming the King was exceeding glad. He entertain'd *Capralis* in a Palace near the Shoar; and after a great deal of Complement, promiſed him far larger Grants than ever he demanded. He gave 'em free Liberty of Trade, and Houſes for their Merchandize; and all this delivered to them in a moſt Noble Charter, which was a Golden Table; upon which theſe Grants of the King were engraven. They had liberty alſo of ſetting up the King of *Portugal*'s Banner, upon the top of their Houſe, as a Token of his Reſpect to that Prince. The King having a mind to ſee ſome Proof of the

* Some of the Guard.

Entertainment at *Calecut*, and the kind Promiſes of the King.

Portu-

Intrigues of the *Moors.*

Portugueze Courage and Valour, deſired *Capralis* to go and take a certain great Ship that was coming from *Cochin* to *Cambaia.* *Capralis* order'd out one of his leaſt Veſſels for this Enterprize; which yet performed it ſucceſsfully, bringing that mighty Ship in Triumph, the next Day, into *Calecut* Road. This Action procured them at once the King's Admiration, and the *Moor*'s Envy; who now began to Practice their accuſtom'd Arts of Treachery and Deceit, abuſing them by all the Methods they cou'd deviſe, notwithſtanding the King's Encouragement and Protection. The *Portugueze*, by that Charter, were to have had the firſt Refuſals of the Market: But the *Moors* prevented them, and got their own Veſſels well laded firſt; making the *Portugueze* ſtay three Months, inſtead of twenty Days, for their Lading, tho' they were promis'd to be diſpatch'd in that ſpace of time.

Capralis complain'd to the King of theſe Proceedings; who bid him take Satisfaction from the *Moors*, and lade his own out of their Veſſels. This he was himſelf unwilling to do; but *Correa*, the Cape Merchant, urg'd him to it ſo much, that he brought back one of the *Moor*'s Ships (which was marching off) into the Haven; the King not openly countenancing one ſide or the other, but ſeeming willing to have them try the Matter out betwixt them. The *Moors* upon this, with a Company of Soldiers, broke into the *Portugueze* Houſe, and aſſail'd them with great Heat and Fury. The odds were very great too, there being but 70 *Portugueze* to 4000 of theſe Barbarians, ſo that *Correa*, with 50 more of them, were there killed upon the ſpot, and the reſt (making a hard ſhift) were got aboard their Ships.

Moors aſſault them.

Capralis's Revenge.

In Revenge of this Injury, *Capralis* the next Day fell upon ten great Ships of the *Moors*, kill'd 600 Men, and diſtributed the reſt as Slaves, laded his own Veſſels with their Goods, and ſet the empty Ships afire. The next Morning he batter'd the Town with his great Guns, which cut off a great many, the King himſelf very narrowly eſcaping one of their rambling Balls, knocking down one of his Courtiers dead at his Feet.

(d) Cochin.

'Twas high time now to leave *Calecut*; from which therefore *Capralis* departed, and went to (*d*) *Cochin*, which is about 170 Miles from *Calecut* Southward. The King of this place was at that time poor, and a Tributary to *Calecut*; however he gave the *Portugueze* free leave to Trade, and Houſes for that purpoſe; which Privilege was alſo offer'd by the Kings of *Crangmor*, and *Coulam*: But 'twas at *Cochin* that *Capralis* fix'd his Staple.

Not long after this, News was brought him, that the King of *Calecut*, (reſolved to requite the Inſolence and Outrages of the *Portugueze*) had ſent out a Fleet of twenty great Ships, and ſeveral ſmall ones, to purſue and fight them. *Capralis* went out to attack them, but the Wind not ſerving, the two Fleets did not meet to diſpute the Point at that time: Leaving therefore two Factors at *Cochin*, and taking in the reſt of his Freight at *Cananor*, he ſet out homewards, *January* the 16th. One of his Ships was here wreck'd; and another of them he employ'd in the Search of the Golden *Zophale*; and with the reſt he return'd to *Lisbon*, which he reach'd the laſt of *July*.

Factory at *Cochin.*

Comes to *Lisbon.*

* 150[illegible].

(e) The 3d, 4th, and 5th *Indian* Voyages.

Before he came home, the King had diſpatch'd three other Ships upon the ſame *Indian* Affair. And the * Year following he ſent *Vaſco Gama* a ſecond time, with ten Ships. (*e*) One *Soderius* alſo went out with a Fleet of 15 Ships, having receiv'd Orders to make himſelf Maſter of the Sea, and to do his utmoſt againſt the *Moors.*

Five Ships more went under *Stephen Gama*; and in ſhort, ſo many Ships went, that in a little time, the main Riches and Profits of the *Eaſt-Indies*, were ſhipp'd over into *Portugal.* This Prince *Emanuel*, having been made in a few Years ſpace (by the Induſtry of theſe Commanders) Lord of the Trade and Navigation of thoſe Parts, as well as of the Kingdoms of *Ormuz*, *Goa*, and *Malacca*, and other parts of the *Eaſt.*

A fuller Account of theſe Matters, is to be drawn out of the *Portugueze* Writers themſelves; no more being here meddled with, than what neceſſarily occurs in our tracing the Original and Progreſs of Trade and Navigation.

The many Affronts that had been offer'd to the *Portugueze* Nation by the People of *Calecut*, had incited them to endeavour a juſt Revenge. And they made a ſhift in ſome meaſure to accompliſh their Deſigns, notwithſtanding all the Aſſiſtance afforded to the other Party, both by the Neighbouring, and by Foreign Powers.

Portugueze ſtorm *Calecut.*

They proceeded ſo far as to bid Defiance to all the Force of the great City of *Calecut* it ſelf; and not only ſo, but to ſtorm it too; ſetting up their Victorious Banners in the midſt of it, in ſpite of all oppoſition to the contrary. The two principal Managers of this Action, were *Albuquerque*, and *Cotinius*, under whoſe Conduct the *Portugueze* made this famous Attempt. *Cotinius* having a mind to the Plunder of the King's Palace, and envying any elſe a ſhare in the Glory of taking it, puſh'd Matters on with too much Heat and Raſhneſs for his own Security: For here his Soldiers thinking all their own, and minding nothing elſe but enriching themſelves with the Royal Spoils, gave the Adverſaries ſuch an advantage, that in a freſh Charge which they made upon them, *Cotinius* himſelf loſt his Life. *Albuquerque* (while this hot Action was going on at the Palace, was buſie in ſetting the City on fire; which had near coſt him the ſame Price (that *Cotinius* paid before him), being forc'd to be carried away out of the Encounter, and that as good as dead with his Wounds; which yet he ſurvived, as the *Indians* afterwards found to their Coſt. Neither were theſe the only Loſſes of this nature the *Portugueze* ſuſtain'd that Year; for *Almeida*, one of their Vice-Roys, was ſacrificed near the Cape of *Good Hope*, by the Fury of a Troop of Savages.

Firſt Attempt for Trade at *Malacca.*

(a) Cape *Cory.*

(b) Bay of *Bengala.*

(c) *Sumatra.*

While theſe things were doing at *Calecut*, one *Didacus Sequerie*, was ſent from *Portugal*, to ſettle a Trade at *Malacca.* He having paſſed the Promontory (*a*) *Cory*, and ſailed through the *Bengalan* (*b*) Bay, put in at (*c*) *Sumatra*; which is divided by a very narrow and dangerous Strait, from the Continent of *Malacca*, and was ſuppoſed formerly to have been a Peninſula: *Sequeria* was the firſt that did this. Having here made a League with the Kings of *Achen* and *Pedir*, and erected ſome Stone Monuments, he came to (*d*) *Malacca*; the Prince of which was very kind and favourable to him at firſt; but afterwards ſour'd to that degree by the *Moors*, that he plotted to kill the *Portugueze*, and ſeize their Ships. He invited *Sequeria* to a Feaſt, with a Deſign to cut him off when he had him in his power: But being made ſenſible of the intended Villany, he excuſed himſelf from being his Gueſt.

(d) *Malacca.*

This not taking, the Plot was laid to diſperſe his Men about in ſeveral places from him, and then to aſſault his Ship, and take both him and it together. To accompliſh this, the perfidious King offer'd him, as a very great Favour, the Liberty of Lading his Ships, and that before any other Merchants whatever; only deſiring him to keep this Favour to himſelf, and not to publiſh it. By this means a good part of his Men were employ'd abroad, whilſt he wanted (as it appear'd afterwards) their Aſſiſtance at home. But now the Plot was ready to have been put in a general Execution; and ſome of the Conſpiracy were come aboard *Sequeria*'s Veſſel, pretending a Complement from the King, but indeed to fall upon him; and wanting only to ſee the deſired Sign given; which was a Smoke that was to be raiſed in a certain place: But ſome of thoſe in the Town, not having Patience to ſtay for the Sign, began the Charge upon *Sequeria*'s Men that were there; which being eſpied by the Watch at top of the Ship, *Sequeria* preſently arm'd the Men he had with him, and ſent a ſmall Party to help them that were engaged aſhoar, whilſt himſelf, with the reſt, ſo warmly plied the *Malaccan* Ships with their Ordnance, that they were glad to fly out of his reach as faſt as they cou'd. Of *Sequeria*'s Men, there were 40 that were kill'd aſhoar, and more taken Priſoners. After this, having inform'd his Country-men of this Piece of Treachery, and left it to them to chaſtize the *Malaccans* for it, he himſelf went directly to the Cape of *Good Hope*, and ſo home to *Lisbon.*

By that time this Action was over; *Albuquerque* (whom we left wounded at *Calecut*) began to ſhew himſelf to the World again; and being deſirous to enter upon ſome conſiderable Service for the Glory of his Prince and Country, he reſolved upon the Recovery of the famous Iſle of *Ormuz* (*e*). This Kingdom had once already ſubmitted it ſelf to the *Portugueze* Yoke, and paid a Yearly Tribute of 15000 Seraſines of Gold to King *Emanuel*; the *Portugueze* alſo had a good Fort erected there. But in proceſs of time by their Negligence, by Mutinies and Inteſtine Diviſions, they ſo weakned themſelves, and encouraged the *Ormuzians* ready for a Revolt, that they took that Opportunity to recover their ancient Liberty, and expel the domineering *Portugueze*; which they accordingly effected. *Albuquerque* now had projected the Reduction of this Iſland, and was upon his way thither, with a Fleet of 21 Sail; but was accidentally invited in his paſſage, to the Conqueſt of *Goa*; for which he had then a very favourable Opportunity: For the Prince, *Zabaius* was then lately dead, leaving his young Son, *Idalcan*, as full of Troubles, as he was void of Experience. The Perſon that gave him this Intelligence, was *Timoia* the Pyrate, who alſo promis'd his beſt Aſſiſtance. The *Portugueze* upon this, preſently laid Siege to *Goa*; which laſted not long before 'twas ſurrendred into their Hands. Yet did the young Prince *Idalcan*, in a very ſhort time, drive them out again; but had not the good luck to keep them out, when they were out; ſince they quickly

(e) *Ormuz*, once ſubject to the *Portugueze*, but loſt, and then recover'd again by *Albuquerque.*

Goa taken by the *Portugueze.*

made the ſecond Conqueſt of it, ever ſince which they have kept it.

And now was *Albuquerque* ſetting out for *Ormuz* again, when the Winds blew him to another Side-Conqueſt: They wou'd not let him ſail to *Ormuz*, but favoured him to *Malacca*. Here he demanded of the treacherous King, *Mancudius*, the Priſoners taken from *Sequeria*; who pretended at firſt, they were fled; but ſeeing the Town fir'd by the *Portugueze*, he produc'd 'em. He demanded of him likewiſe all the Charges of the two Fleets, and Reſtitution of all things that were loſt: Which Conditions ſeem'd ſo hard to this Prince, and his Counſellors, that they choſe rather to commit all to the Event of a War, than to ſubmit to them. And the Iſſue of it was this, that *Mancudius* was ſlain, and his Kingdom of *Malacca* entirely reduc'd to the Obedience of *Portugal*.

Malacca conquer'd.

'Tis remarkable, that when *Albuquerque* was going to *Malacca*, he met with ſome Ships coming from thence, which he aſſaulted and took. In one of them there was a certain Perſon, *Naodabegucca* by Name, who was one of thoſe that had conſpired againſt *Sequeria* before; this Man, tho' he were bitterly wounded in the Skirmiſh with *Albuquerque*, ſo that he could ſtand no longer upon his Legs, yet was obſerved to loſe not a Drop of Blood, as other wounded Men did; tho' they found afterwards, that he was not a Bloodleſs Animal: For upon the pulling away of a Golden Chain, which he wore upon his Arm, he immediately poured forth his Soul, in Torrents of Blood, that iſſued out of thoſe Paſſages that were made before. The Reaſon of this they attributed to the Virtue of a certain Bone (f), taken from a Beaſt call'd *Cabis*, in the Kingdom of *Siam*; which Bone was included in the Golden Chain. They pretend, that this Bone, by a very potent Reſtringency, which Nature has endowed it with, did forcibly hold the Blood in the ſeveral Channels of the Body, notwithſtanding the many Vents given it to run out at. This was deſigned to be ſent as a moſt precious Jewel, and a wonderful Rarity, into *Portugal*; but, they ſay, 'twas loſt in a Shipwreck in the way.

(f) The Bone of the Beaſt *Cabis*.

But to return: After the Conqueſt of *Malacca*, *Albuquerque* having no more Lets by the Way, did accompliſh his Voyage to *Ormuz*, and the Conqueſt of it too. And now the *Portugueze* made a very formidable Figure in the *Eaſtern* World, and moſt of the *Indian* Princes began to Court their Favour, being Eye-witneſſes of their Every-Days riſing Greatneſs. *Idalcan*, and the King of *Calecut*, deſired a League with them: The King of *Maldiva* became their Vaſſal: Nay, in *Africk*, the Great *Preſter-John* himſelf, pretended to their Friendſhip. Their Victory at *Malacca*, prepar'd their way to a great many other Conqueſts, and good Correſpondencies in thoſe Parts, as at *Amboina*, *Banda*, and the *Molucca's*. *Antonius Abreus* was ſent in ſearch of theſe *Molucca's*; who came firſt to *Java*, then to *Amboina*, erecting Stone Pillars in both thoſe places; and from thence to *Banda*, ſo full of, and ſo famous for the excellent Spices, Nutmegs and Mace. He found both here, and at the *Molucca's*, that the Fame of the *Malaccan* Victory was got into thoſe Parts, to the great Advantage of the *Portugueze*; ſo much, that the Kings of *Ternate*, and *Tiridore*, ſolemnly referr'd their Controverſies to their Deciſion, and even ſprung a new Quarrel, in ſtriving who ſhould have the *Portugueze* on their ſide. Tho' they have paid for chuſing them the Arbitrators of their Differences; the *Portugueze* having decided the Controverſie neither to the King of *Ternate's*, nor the King of *Tiridore's*, but to their own Advantage.

The Greatneſs of the *Portugueze* in the *Eaſt*.

CHAP. III.

The Voyage of Ferdinandus Maglianes, *the firſt Compleat Circum-Navigator, and Diſcoverer of the* Straits, (*from him called* Magellanick.) *Taken out of* Antony Pigafetta, *an* Italian *of* Vicenza, *and one that aſſiſted in this Voyage.*

IT very often falls out, that Croſſes and Diſappointments, diverting Men from the Proſecution of their firſt Deſigns, open and prepare their way to new Undertakings, which are afterwards attended with more Benefit and Succeſs. 'Twas ſo in the Caſe of this famous Perſon, whoſe Diſcoveries in the World we are now to look over.

Maglianes (a *Portugueze* Gentleman, and a Soldier of no mean Character) had ſerv'd his Country to very good purpoſe, both in the *African* and *Indian* Wars. Particularly we find, that he fought under *Albuquerque's* Banners, in thoſe ſucceſsful Wars of his, that brought in the Kingdoms of *Malacca*, *Goa*, and *Ormuz*, to the Obedience of *Portugal*. How far *Maglianes* was engaged in theſe Affairs, is uncertain; but this Character he has in the general; to have done very good Service, and given large Proofs of his Valour and Conduct. And having thus perform'd what he thought might merit ſome further Conſideration and Reward from his Prince, he petition'd for a ſmall Augmentation of his Stipend, as much as would make it half a Ducket *per* Month more. But King *Emanuel* thinking fit to reject the Suit, and deny any further Increaſe of his Wages: The Petitioner (who deeply reſented it) gave up himſelf wholly to be guided by his own revengeful diſcontented Thoughts. He reſolv'd to quit the Service of a Maſter, whom he reckon'd hard and ungrateful; and find out ſome other, that ſhou'd know how to treat his Merit better. So bidding Adieu to the Court of *Portugal*, and all his Hopes of Preferment there, he betook himſelf to that of *Spain*, and offer'd his Service to the Emperor * *Charles* V.

Maglianes in Diſcontent, goes to be employ'd at the Court of *Spain*.

* Who was King of *Spain* as well as Emperor of *Germany*.

He acquainted this Prince, That all the *Banda* and *Molucca* Iſlands, fell to his ſhare, by the Laws of that Diviſion, which *John* II. of *Portugal*, and *Ferdinand* and *Iſabel* of *Caſtile*, had formerly agreed on. And farther propos'd, to make a compleat Diſcovery of thoſe rich Iſlands, by a new and unheard of Navigation round about by the Weſt. The Emperor (as it appears by the Conſequence) was glad of this Information, and well pleas'd at the Propoſal of the New Method of Diſcovery: For five good Ships were quickly prepar'd and furniſh'd at his Charges, and put under the Command of *Maglianes* as Admiral. The Number of the whole Company aboard this Fleet, amounted not to 300; and of theſe Thirty were *Portugueze*.

They ſet ſail from *Sevil* the 10th of *Auguſt*, *A. D.* 1519. and *October* the 3d, got up betwixt Cape *Verd*, and the Iſlands of that Name. They ſpent a great deal of time about the Coaſt of *Guiney*, and by tedious Calms, (which laſted Seventy Days) were ſo long a labouring to croſs the Line. But when they had done this difficult Work, and the *South* Pole appear'd above the Horizon, they held on their *South* Courſe, and came upon the Main of *Braſile*, about that part of it which lies in 22½ Degrees. They obſerv'd it to be all one continued Tract of Land hither, from Cape St. *Auguſtine* (upon that ſame Coaſt) which is about 8 Degrees from the Equinoctial Line.

Maglianes ſets out.

Braſile.

In this part of the Country they were well refreſh'd with all Conveniences for Life; they found good ſtore of Fruits, Sugar-Canes, and divers ſorts of Animals, out of all which they had a liberal Entertainment. Having made 2½ Degrees more of *South* Lat. they fell in with a Country inhabited by a wild and monſtrous ſort of People: They were of a prodigious Stature, fierce, and barbarous, made a horrible roaring Noiſe, more like ſo many Bulls, than Human Creatures; and yet with all that mighty Bulk were ſo very nimble and light of Foot, that none of our *Spaniards*, or *Portugueze*, cou'd overtake them. Here was a ſtately River of freſh Water, that had ſeven Iſlands in the Mouth of it, and was full Seventeen Leagues wide in that part: The biggeſt of theſe Iſlands yielded them ſome Jewels, and they gave it the Name of St. *Mary*. They continued Coaſting along this Tract of Land, towards the South Pole, and met with a couple of Iſlands ſo full of Seols and Pengwins, that in an Hour's ſpace they cou'd have laden all the five Ships. The Pengwins were a black, heavy, unwieldy Fowl, extreamly fat, cover'd over with a ſort of Down, inſtead of Feathers, and arm'd with a Bill

Sugar-Canes,

Cannibals.

Cape St. *Mary*.

Seols and Pengwins.

Bill like a Raven's. They maintain themſelves altogether out of the Waters, eating nothing but Fiſh: For which Reaſon, perhaps, they might be very ſerviceable in this Fleet upon Fiſh-Days, if they were diſpos'd to obſerve thoſe Rules at Sea.

Their next Advance was to 49 ½ Degr. *South* Lat. Here they were ſhut up with hard Weather, and forc'd to take up their Winter-Quarters. They had a miſerable dull time on't at this place, ſeeing no living Creature, but themſelves, for a long time together.

A Giant comes to them.

At laſt, to put an end to the Solitude, a certain Giant of the Neighbouring Parts, came up to give them a Viſit: A briſk, jolly, frolickſome Fellow, very merrily diſpos'd, ſinging and dancing all the way as he came. Being got to the Haven, he ſtood there, and threw Duſt upon his Head; which they obſerving, ſent ſome aſhoar to him; who making the like Signs of Peace, upon that Aſſurance he came along with them to the Ship, without any thing of fear or ſcruple. His Bulk and Stature was ſuch, as would eaſily allow him the Character of a Giant; the Head of one of their middle-ſiz'd Men reach'd but to his Waſte, and he was proportionably big. His Body was formidably painted all over, eſpecially his Face; here were a couple of Staggs drawn, one upon each Cheek, and great red Circles about his Eyes. His Colours were otherwiſe moſtly yellow, only his Hair was done with white.

The Deſcription of him.

For his Apparel, he had the Skin of a certain Beaſt, clumſily ſowed together; but a Beaſt as ſtrange as that was that wore it; every way unaccountable; neither Mule, Horſe, nor Camel; but ſomething of every one; the Ears of the firſt, the Tail of the ſecond, and the Shape and Body of the laſt. 'Twas an entire Suit, all of one piece from Head to Foot; as his Breaſt and Back were cover'd with it above, ſo his very Legs and Feet were wrapp'd up in the ſame beneath. The Arms that he brought with him, were a ſtout Bow and Arrows; the String of the former was a Gut, or Sinew, of that monſtrous Beaſt; and the latter, inſtead of Iron-heads, were tipp'd with ſharp Stones.

The Admiral made him Eat and Drink, and he enjoy'd himſelf very comfortably a Shipboard, till he happen'd to peep in a great Looking-Glaſs, that was given him amongſt other Trifles. This put him into a Fright, that he could not eaſily recover from; the diſmal Face he ſaw there, ſtar'd him quite out of all Countenance and Courage; and he ſtarted back with ſuch Violence, that he tumbled a couple of the Men that ſtood by him, to the Ground. This was a Sign that he was throughly and effectually frightned; but no doubt, the thing that appeared to him, will be thought ſufficient to do it, if the foregoing Deſcription be well conſidered. A Pair of great Staggs with branched Horns, and the flaming Circles drawn about the Eyes: What Hobgoblin cou'd have a worſe Look than this? A Dæmon's Face, in a Vizzard Mask, with a Set of long Teeth, and a Noſe of half a Yard, could not have more power over the Imagination, and give a Man a worſe Shock of a ſudden, than ſuch a ſight. However, this Giant far'd ſo well amongſt them, (notwithſtanding the Fright by the Looking-Glaſs) that quickly after they had the Company of more of them. Particularly one came, and made himſelf mighty familiar, carried it pleaſantly, merrily, and with ſo much good Humour amongſt them, that our *Europeans* were almoſt (at leaſt as far as they cou'd be) pleas'd with his Company. He gave them a ſight of one of thoſe Beaſts, whoſe Skins they ſo frequently wear; but we have nothing of any particular Character of it added, to juſtifie or diſprove the former Surmiſes about it. They taught him to ſpeak and pronounce, pretty clearly, ſeveral Words of their Devotion, as *Jeſus*, *Ave Maria*, &c. The doing of which was (if duly conſider'd) an Act of great Charity: For theſe Giants, they ſay, were horribly peſter'd with Apparitions, and ſo wanted a Sett of proper Words, to bid Defiance to thoſe Diſturbers of their Quiet and Repoſe: And if ſuch Charms as theſe will do the Buſineſs in *Europe*, there's no Reaſon why they ſhould not be as effectual in *Braſile*.

They take ſome of them Priſoners.

But they ſeem to be very much to blame, in offering, as they did, to make Priſoners of any of thoſe wild People, which carried it ſo fairly and civilly to them. To circumvent them by Stratagems, and cheat them of their Liberty, when they had not (as far as appears) done any thing to deſerve the Forfeiture of it. They fill'd their Hands with Toys, and little Things, that pleas'd them, and in the mean time put Iron Shackles upon their Legs; which the Wretches thought were very fine Play-things as well as the reſt, and were pleas'd with the Gingling Sound of them, till they found how they were hamper'd and betray'd. But then they fell a Bellowing like Bulls, and implor'd the Help of *Setebos*, in that Extremity; they cry'd aloud for his Aſſiſtance, but he did not come to deliver them; and what Power it is they give that Name to, they themſelves beſt know. To deſire his Help in Miſery, implied ſome Notions conceiv'd of his Goodneſs and Compaſſion; and 'tis not to be imagin'd, that they wou'd thus crave Relief of an Evil Spirit, that us'd to vex and afflict them. It muſt be own'd, that they report very ſtrange things, of horrid Forms and Appearances frequently ſeen amongſt theſe People: Of Horned Dæmons, with long ſhag Hair, throwing out Fire both before and behind. But are not the Giants almoſt as bad Figures themſelves? And is it not poſſible for them to miſtake the foul Shapes of one another for ſomething elſe? We ſee how one of them was ſcared almoſt out of his Wits with ſeeing his own Face in a Glaſs, and might not another Face as ugly as that do the buſineſs as well? 'Tis too true, that the Power and Dominion of evil Spirits is very far extended in this Lower World; the Princes of the Air are fond of Empire, as well as thoſe that are upon the Earth, and not leſs willing (to be ſure) to enlarge their Territories than they. But 'tis not for the Honour of the Supreme Being, to ſuppoſe ſo very large a ſhare of his Inheritance in their hands; to bring them in, upon every occaſion, Abuſing and Tyrannizing over his Creatures, and turning the biggeſt part of the Creation into a Bedlam, by playing all the mad pranks in it that Helliſh frenzy can inſpire. This ſeems to be a very coarſe Complement to Infinite Wiſdom and Goodneſs; and, in ſhort, an Honour too great to be allowed to any Beings that are acted by Principles of Malice and Wickedneſs.

Their Clothing, and Diet, &c. in general.

But to return to their other Obſervations about theſe People: They tell us that moſt of them wear the ſame ſort of Apparel that the firſt they ſaw appear'd in; that is, the Skins of the fore-mentioned Beaſt. They go with their hair ſhort, yet that that is they tie up with a Cotton-lace. They have no fix'd Habitations, but certain Portable Cottages, which they remove from one place to another as their fancy leads them; and the very ſame Materials which they uſe for the defence of their Bodies, they uſe alſo for the defence and covering of theſe Cottages. What fleſh they eat they beſtow no ceremonies of Dreſſing upon, but devour it juſt freſh and raw as it comes to their hands; beſides which, they have a certain ſweet Root amongſt them (call'd *Capar*) which is a conſiderable part of their feeding likewiſe. They add, that they are extremely jealous of their Women; they don't tell us they ſaw any of them, by that means to give the Men any occaſion of awakening that paſſion in themſelves.

The Practice of Phyſick is reduc'd into a very narrow compaſs amongſt them, and takes in no more than Vomiting and Phleboromy: Theſe two Evacuations muſt anſwer all varieties of Caſes and Purpoſes; and where this won't do, the Diſeaſe is incurable in that Land. Their way of bleeding is to give a good chop with ſome edge Tool or other in the Part that Labours, be it Leg or Arm, or Face, 'tis all one. But tho' 'tis odd to uſe a Chopping-Knife inſtead of a Lancet for letting Blood, yet 'tis worſe to thruſt an Arrow a Foot and a half down the Throat to procure a Vomit: No doubt but this will prick the Fibres, and ſet a Man a reaching to ſome purpoſe; and whereas they ſay it makes them puke very freely, and bring up a vaſt deal of Choler and Blood, 'tis very likely to be true, and if the point of an Arrow thruſt down ſo far did not draw Blood from them, a Man wou'd be ready to queſtion what ſort of Metal their inſides were made of. So that upon this account, their Practice may be yet more compendiouſly ſumm'd up, and we may ſay theſe People cure all diſtempers at one ſingle operation, which is alſo both Vomiting and Bleeding at the ſame time. From this way of managing themſelves, and thriving ſo well upon't, any Man will be ready to allow them a good ſtrength of Conſtitution; but it ſeems that of their Limbs is as conſiderable too, of which they give us this inſtance: That when they made the attempt of taking ſome of them Priſoners, one of them alone very near tired the utmoſt forces of nine of their Men that were employ'd to Maſter him; and tho' they had him down, and bound his hands tightly, yet he freed himſelf from his Bonds, and got looſe in ſpight of all their endeavours to hold him. And proportional to both theſe ſtrengths, is that alſo of their Appetite; one of them eat up a whole Basket of Ship-bisket at a Meal, and drank a Bowl (they don't ſay how large) of water at a draught; but any thing of this kind is not ſo very ſtrange, conſidering the huge Carkaſſes they have to maintain. One thing of them (which is ſomething ſingular) is not to be omitted before we leave them; and that is, that by reaſon of the vehement cold, they truſs themſelves up ſo very cloſe and tight, that the Genitals in the Men are not to be diſcover'd, lying hid entirely within their Bodies. The

Admiral

Magliane*s* calls 'em *Patagons.*

Some common words of their Language.

Admiral gave theſe People the Name of *Patagons*; and if any *Europeans* ſhould at any time go amongſt them, theſe few common words may be of ſome uſe in dealing with them. They call Bread *Capar*, Water *Oli*, black *Amel*, red *Cheiche*, red Cloth *Cherecai*: *Setebos* and *Cheleule* are the Names of two Beings they pay a Religious reſpect to, of which the former is the Supreme, the latter an Inferiour one; but whether they are Proper Names, or only the Terms for a higher and ſubordinate Power in general is not certain.

Port *St. Julian.*

They ſet ſail again.

The Port they ſtaid in all this while was call'd *Port St. Julian*; of which, as of the whole adjoyning Country, they took ſolemn Poſſeſſion, and left a Croſs erected in token of it. 'Twas full five Months that they continued here in the Converſation of theſe barbarous People, and the feeling of the much more cruel and ſevere weather. It was the beginning of *October* by that time they got up to the *Cape de Verd* Iſlands, and were detain'd ſo long by the Calms, that they made it ſome time in *December* before they croſs'd the Line. Then was the Sun quite at, or very near the Tropick of Capricorn, and conſequently was advancing back again towards the Line as they were moving Southward from it; ſo that by that time they came down to 49 ½ degrees of S. Latitude, things began to look with a Winter-like appearance, and the hard Weather came on apace. This term of Time expir'd, they ſet out again and ſail'd to 51 degrees 40 minutes S. Latitude; here they found a convenient Port, and met with good Proviſions of Fuel, Fiſh and freſh Water. They linger'd away at this place a matter of two Months more, and then came to 52 degrees South Latitude, where they light upon the Entrance into the *Streights*. They found them about 110 Leagues in length, and as for the breadth very uncertain; in ſome places very wide, in others not more than half a League over; the Land on both ſides high and uneven, and the Mountains cover'd with Snow. When they came to the end of it, and found an open paſſage into the great Ocean, *Maglianes* was ſurpriz'd with a Joy that exceeded all the common bounds and meaſures, for this was the happy thing he look'd for, and now he was able to demonſtrate his Sailing round by the Weſt to the Emperor. The Point of Land from whence he firſt ſaw this moſt deſirable ſight, he call'd in memory of it *Cape Deſiderato*; but it ſeems 'twas not ſo deſirable to all the reſt of the company, for here one of the Ships ſtole away and ſail'd homewards by her ſelf. They give a very good Character of the *Streights*, for affording all the conveniencies of freſh Water, Fiſh, grateful Herbs, Wood, ſecure Havens, of which there are great plenty; and they ſay, are almoſt at every Leagues end. And theſe Advantages are to be met with all over the *Streights*, and not in one or two particular places only; there's none of the Havens (by their report) but what will entertain you with both Food and Firing.

They enter the *Streights.*

Cape *Deſiderato.*

Diſtreſs in the *Pacifick Sea.*

They entred the *Pacifick Sea*, (as they call'd it) *Nov.* 28. *A. D.* 1520. and in this wide rambling Ocean they ſail'd 3 Months and 20 Days without ſight of Land: The miſeries they endured for want of Proviſion, a good part of this time, were ſuch as are ſeldom heard of. The freſh Water they had aboard ſtunk and was very loathſome; all their Bread was gone, and nothing left to eat but Skins and pieces of hard Leather. Nature will make any ſhift, tho' ever ſo hard and poor, to bear her ſelf out in a diſtreſs, when 'tis poſſible to be done; and the poor Seamen here, rather than ſtarve, fell very greedily to work upon thoſe dry tough pieces of Leather that were folded about the Ropes of their Ships. But it being impoſſible to eat them till they were ſome way ſoften'd and fitted for chewing, they laid them aſteep in the Salt Water for ſome days, and then made the beſt of them as long as they laſted. But then again, what with this impure ſort of feeding, which was ſhort and ſcanty too, and the daily impoveriſhment of their Spirits wanting better Recruits, their numbers leſſen'd apace; ſome died outright, others fell into pining Sickneſs, others had their Gums that grew quite over their Teeth on every ſide; by which means, being totally unable to manage thoſe tough ſolids they were forc'd to feed upon, they were paſt all help, and ſo miſerably ſtarv'd to death. Their only comfort in all theſe direful circumſtances, was a conſtancy of fair and good weather: The Winds blew them ſmoothly and gently along, and broke out into nothing of a raging Fit, all the while they were thus expos'd; the Sea as calm and quiet too, and by this got the Celebrated name of *Pacifick*. And how happy was it to be thus at reſt from the Toils of a Stormy Sea? Had Famine and Tempeſts come together, how quickly would they have been wearied out? Whither wou'd the ſhatter'd Fleet have been toſt, and what wou'd have become of the Diſcovery of the *Moluccas*? In all this time, they ſaw nothing but two uninhabited Iſlands that gave no proſpect of any Relief. The Needle of their Compaſs varied ſometimes, and at others moved ſo dully and irregularly, that they were often forc'd to inſpire and quicken it with a freſh touch of the Loadſtone. The *South Pole*, they tell us, has no remarkable Star near it as the North has: There are two Cluſters of ſmall Stars (which appear more like Clouds than any thing elſe) and are ſeparated one from another at a ſmall diſtance; between theſe there are a couple of Stars not very large nor bright, which diſcover themſelves, by the ſmallneſs of the Circle they deſcribe, to be pretty near the Pole, at leaſt the neareſt of any that are diſcernible.

South Pole Stars.

Iſlands *Sumbdit* and *Cipanghu.*

At the diſtance of 20 degrees from the *South Pole*, they tell us of an Iſland of exceeding height call'd *Cipanghu*, and at 15 degrees of another as high, the Name of which is *Sumbdit*. They ſail'd in one Gulph at leaſt 4000 Leagues, and having made by their Reckoning 120 degr. Longitude from their firſt departure, at the ſame time they found they drew towards the *Equinoctial*. When they had paſs'd that Line, and were got to 13 degrees *North* Lat. they deſign'd for the Cape call'd by the old Geographers the *Cape of Cattigare*; but this they miſs'd, going upon that old Account of the Lat. of it, which places it thereabouts, and came to underſtand afterwards that it lies in 12 degrees.

Iſland *Ladrones.*

March 6. they came up with a parcel of Iſlands, being then in 12 degr. *North* Lat. and 146 degr. Lon. from their firſt ſetting out. Here they went aſhore to breathe and refreſh a little, after all the fatigues of their tedious Voyage thro' the *South* Sea; but the thieviſh People of theſe Iſlands would not let them be quiet; while they were repoſing themſelves aſhore, the others would be pilfering and ſtealing things out of the Ships, ſo that 'twas impoſſible to enjoy their eaſe in any meaſure, till they had taken ſome courſe to deliver themſelves from theſe unwearied Diſturbers. So they march'd with a ſmall Party, pretty well Arm'd, up into one of the Iſlands, burnt ſome of their Houſes, and killed ſome few of them; but this Correction, tho' it might awe them for the preſent, yet could not mend their evil Temper and Diſpoſition, but they that were Thieves would be Thieves ſtill, and in ſpight of Swords and Guns, wou'd play the Knave as before, for which reaſon they reſolv'd to make no long ſtay there, but find out ſome other place where they might Reſt with more ſafety and quiet. As for the Character of this People and their Manners, they give us this Relation:

The People of the *Ladrones* and their Cuſtoms.

That there is not the leaſt appearance of any Order or Form of Government amongſt them, but every Man lives as he liſts, and does what's agreeable to his own humour and inclination. Nay, conſidering how univerſally that Thieving, Cheating Diſpoſition prevails, 'tis next to impoſſible there ſhould be any thing of that kind, for the governing part wou'd never fail to tranſgreſs the Laws of Juſtice and Common Honeſty as much as the reſt; and the Inferiours would never bear to be curb'd and puniſh'd by thoſe that they ſaw do the very ſame things, and ſet ſuch an example before their Eyes. So that the general corruption of their Manners will neceſſarily keep them all upon a level, and eſtabliſh a perpetual Anarchy amongſt them. As far as appears, the Men go entirely naked, not diſcovering any thing of that common modeſty which obtains amongſt moſt barbarous People to beſtow ſome covering upon the Privy Parts; that diſtinction indeed ceaſes here, all Parts being equally expos'd to view. Their hair is very black, both on their Heads and Beards, the former being generally very long, and reaching down to their Waſtes. They anoint themſelves all over with the Oil of the Coco, but their natural Complexion is Olive. They colour the Teeth black and red; and ſome of them will wear a Bonnet made of the Palm-tree upon their Heads. The Women are much better favour'd than the Men, and (as their Sex requires) more modeſt too; they all wear Coverings made of the inner Bark of the Palm-tree, their Hair black, thick and long; and (as they ſay) ready to trail upon the ground. They commend them for very careful induſtrious Houſewifes, ſpending their time at a much better rate than the Men do, for whilſt theſe are pilfering abroad, the others are making Mats and Nets of the Palm-tree at home; but of both ſides the Work goes to the furniſhing of the Houſe. Their Houſes are built of Timber, cover'd over with Boards and large Fig-leaves, and diſtinguiſh'd into ſeveral Apartments; their Beds are the Palm-Mats laid one upon another, and the leaves of the ſame are inſtead of Sheets and Blankets. They have no weapons but Clubs and long Poles, upon which they put heads of horn. Their feeding is upon Coco's, Benana's, Figs of a hands length, Sugar Canes, Fowl and Flying Fiſh. Their Canoes are pretty oddly contriv'd and patch'd up, that they'll ſail with them at a very great rate; the Sails of them are made of broad Date-leaves ſowed together; inſtead of a Rudder they uſe a large Board with a Staff at the top, and may, when they will, make the Stern the Forecaſtle, or the Forecaſtle the Stern; they are always painted over either black, or white, or red, ſome one colour, and ſome another, as they like. Theſe People are mightily taken with any little thing that's new and agreeable to their childiſh humour: When the *Spaniards* had wounded ſeveral of them with their Arrows; nay, pierced them almoſt through and through, theſe being ſtrange things to them, they wou'd pull them out of their wounds, and hold them in their hands, ſtaring at them till they dropt down dead. And after all, tho' they had been ſo roughly handled, yet they would follow the Ships as they were going away to gaze at them; ſo that they had at one time a matter of 200 of their Canoes preſſing about them, as near as they could, to behold thoſe wonderful Contrivances.

Zamal and Humunu Iſlands.

March the 10th, they landed upon the Iſland of *Zamal*, which is 30 Leagues from the *Ladrones*; and the next day they went aſhore at *Humunu*, an Iſland not inhabited, but well deſerving to be ſo. Here they found Springs of delicate clear water, abundance of Fruit Trees, Gold and white Coral: The Admiral called it the *Iſland of good Signs*. The Inhabitants of ſome of the neighbouring Iſlands came up to them not long after, a People of much Humanity and good Diſpoſition, very fair and friendly in their Carriage, and appearing to be mighty well pleas'd at their coming amongſt them. They came laden with Preſents of Fiſh, and the Wine made of the Coco-Tree, and promis'd other Proviſions in a little time.

Natives of the adjacent Iſlands.

Since the Coco-Wine is mention'd, it may not be amiſs to ſhew the various Uſes theſe People put that Fruit to; by which it will appear, how very ſerviceable a thing it is, and how many of the Conveniencies of Life are furniſh'd out by it. The Coco is the Fruit of a certain Tree like a Date, and ſupplies them at once with Bread, Wine, Oil and Vinegar; and (beſides all this Food and Sawce) with Phyſick too. The Wine is drank from the Tree it ſelf, but all the reſt are made from the Fruit. They cut off ſome part of a branch of the Tree, and faſten on to the remaining piece a good large Reed, into which drops a Liquor like White-wine, in colour and appearance, and of a taſte gratefully tart. A good quantity of this thus drawn forth, and put up in a Veſſel, is their Coco-Wine, without any farther preparation. The Fruit (which is as big as a Man's Head at leaſt) has two rinds, the outermoſt of which is green, two fingers thick, and full of ſtrings and threads; and of theſe they make all the Cords they uſe about their Boats. Under this rind there is another, or rather indeed a ſhell, being conſiderably thick and hard; this burnt and pulveriz'd, is us'd as a remedy for ſeveral diſtempers. Next to this lies the kernel, which is white, and of the thickneſs of a finger; it has a pleaſing taſte, almoſt like an Almond, and when 'tis dried they make it into Bread. In the middle of this kernel, there is a hollow full of a pure limpid water, and of a very cordial and refreſhing nature; it will ſometimes congeal, and lie like an Egg within the ſhell. When they would make Oil, they leave the Fruit a ſteep in water till it putrifies, and then ſet it over the fire, and boil it into an Oil. And the Vinegar is only the ſame water expos'd for ſome time to the Sun, which turns it into a Vinegar like that of White-Wine. Laſtly, If they mix the kernel together with the water that is lodged in the cavity of it, and then ſtrain it through a Cloth, they make a good Milk of it. The Coco-Trees reſemble the common Date-Trees in all other things but this, That they are not ſo rugged and knotty as they are. They'll hold out very well 100 Year, and two of them will maintain a Family of ten People with Wine very handſomely, provided they be uſed by turns, and each Tree having been drawn ſeven or eight days, be allow'd as many to recover again before any more be taken from it: This care taken, ſuch a number of People may drink as much as they will, and the Trees will bear them out in it.

Deſcription of the Coco, and its uſes.

People of the Iſland of [illegible]

But to return to the Concerns between the People and them: According to their Promiſe they came again with more Proviſions, and enter'd into a farther degree of familiarity and friendly Correſpondence with them; they invited the Admiral into their Barks, and were reciprocally invited aboard the Admiral's Ship, where a great Gun being let off to entertain them, it put them into ſuch a fright, that they were all ready to leap over-board, but good Words and Preſents brought them to themſelves again, and with much ado they were perſwaded to keep out of the water. The Name of their Iſland was *Zulvan*, of no very great compaſs, but conſiderable for its Products. They had all manner of Spices in their Barks, Cinnamon, Cloves, Nutmegs, Ginger and Mace, and ſeveral things made in Gold; all which they carry up and down for Merchandize. They were without Apparel, but yet dreſs'd at a more coſtly rate than the *Europeans* that had it; they had Earings of Gold in each Ear, and ſeveral Jewels faſten'd with pieces of Gold to their Arms: Beſides, they had Daggers, Knives and Lances, that were all very richly garniſh'd with the ſame Metal. But tho' they had nothing of any Garment on, yet they had ſomething of a Covering before, and that a ſort of Cloth very ingeniouſly made out of the rind of a certain Tree that grows amongſt them. The moſt conſiderable Men are diſtinguiſh'd from the common ſort by a piece of ſilken Needle-work wrapp'd about their Heads. They are groſs-bodied, broad, and well ſet, of an Olive Colour; and this Hue they maintain by a conſtant Inunction of their Bodies with the Oyl of the Coco.

They departed from this Iſle, *March* 25. *A. D.* 1521. and directed their Courſe between the W. and S. W. ſailing between the Iſles *Cenalc*, *Huinangſtan*, *Hibuſſon*, and *Abarian*.

(l) Buthuan.

March 28. They came to the Iſle of *Buthuan* (l); the King of which, and the Prince his Son, gave them honourable Entertainment, together with good Quantities of Gold and Spices. The Admiral preſented the King with two Veſts of Cloth, one red, and the other yellow, made after the *Turkiſh* Faſhion; and ſome of his Courtiers with Knives, Glaſſes, and Beads of Cryſtal. His Majeſty was terribly frightned at the Diſcharge of a Piece of Ordnance, and as much ſurpriz'd to ſee one of the *Portugueze* in Armour, laſh'd with naked Swords, without receiving any harm. But he was much more confounded at the Magick of the Compaſs, and to hear that they had found their way thro' the wide Ocean, by the Direction of that. The Admiral ſent two of his Company aſhoar along with him, of which *Antom. Pigafetta* was one. When they were landed, the King and his Attendants, all lifted up their Hands to Heaven, and then towards the two Chriſtians; in which Ceremony theſe alſo followed them: And this Cuſtom they obſerved in Drinking too. His Majeſty's Palace was like a Hay-houſe, cover'd with Palm and Fig-leaves, mounted ſo high upon great Timber-poſts, that they were forced to uſe Ladders to get in. Tho' they are no Chriſtians, yet at their Meals they always make the Sign of the Croſs, ſitting in the ſame manner with their Legs as Taylors do. At Night, inſtead of Candles, they burn the Gum of a certain Tree, wrapp'd up in Palm-leaves. The King and Prince having entertain'd them, each in their ſeveral (m) Palaces, and given them Noble Preſents, diſmiſs'd them; but not without new admiration, and a firm perſwaſion now rooted in their Minds, that they were above the Rank of common Mortals, having ſeen ſo many ſtrange things by them; and eſpecially *Pigafetta*'s Writing, and Reading what he had written, which were Myſteries they could not comprehend.

(m) The Prince's Palace in the Iſle of Calegban.

Plenty of Gold.

In the Iſle of *Buthuan*, as they ſifted the Earth of a certain Mine, they found great Lumps of Gold, ſome as big as Nuts, others as large as Eggs; of which Metal were all the King's Domeſtick Veſſels made.

The King of Buthuan.

The King himſelf was a very comely Perſon, his Hair black and long, his Complexion Olive; his Body perfum'd with ſweet Oils, of Storax and Benjamin, and painted with divers Colours. He had Rings of Gold in his Ears, and on every Finger three: His Head was wrapp'd with a Silken Veil, and a piece of Cotton wrought with Silk and Gold, cover'd his Body to his Knees. He wore a long Dagger by his ſide, with a Haft of Gold, and a Scabbard of fair carved Wood. His Country, it ſeems, is ſo rich, that one of his Subjects offer'd a Crown of Maſſy Gold, with a Collar, for ſix Threds of Cryſtal Beads; but the Admiral would not permit ſuch Bargains as theſe, that they might not appear to be too fond and covetous of their Gold.

The Natives.

The People are of an active and ſpritely Nature; the Men quite naked, except a Covering of Paint: But the Women go clothed from the Waſte downwards, and both wear Golden Ear-Rings. They are always chewing *Arecca*, and ſay, they can't live without it. This is a ſort of Fruit like a Pear, cut in Quarters, and rolled up in the Leaves of a Tree (call'd * *Vetele*), which are almoſt like Bay-leaves.

* Or Betels.

Magliames orders a Banner with a Croſs, to be erected.

As for Religious Rites, they had no other in uſe amongſt them, but only to lift up their Faces, and Joined-hands, to Heaven, and call upon their God *Abba*. The Admiral cauſed a Banner, in which was the Pourtraicture of the Croſs, and a Crown of Thorns, with Nails, to be brought forth, and publickly Reverenc'd by all his Men, in the King's Preſence; telling His Majeſty, it ſhould be ſet up in ſome high Mountain in his Country; not only for a Token of good Entertainment to Chriſtians in that place, but alſo for his own, and Nation's Security, and Defence;

ſince if they devoutly pray'd to it, 'twou'd infallibly protect them from the Miſchiefs of Lightning and Tempeſt, as well as from other Evils. This the poor Prince promis'd to do, knowing no better,and glad to be ſo defended from Thunderbolts.

Many Iſlands, *Zubut*, &c.

Departing from hence, this King's Pilots brought them to the Iſles of *Zeilon*, *Zubut*, *Meſſana*, and *Caleghan*, of which *Zubut* is the beſt, and has the beſt Trade. In *Meſſana* they found Dogs, Cats, Hogs, Hens, Goats, Rice, Ginger, Cocus, Myll, Panicke, Barley, Figs, Oranges, Wax, and Gold,in great ſtore. This Iſle lies in $9\frac{2}{3}$ Degr. of N. Lat. and 162 Degr. of Longitude, from the firſt Stage.

Fowl's with Horns. Eggs hatch'd in the Sand.

They ſtay'd here eight Days, and then ſailing to the N. W. paſs'd by the Iſles *Zeilon*, *Bohol*, *Canghu*, *Barbai*, and *Catighan*. In which laſt Iſle, there are Bats as big as Eagles, and that taſte, when dreſs'd, like a Hen : There are alſo Stock-Doves, Turtle-Doves, Popinjays, and a certain ſort of Fowl like a Hen, which have little Horns, and lay their Eggs a Cubits depth in the Sand, where the Sun's heat Hatches them.

From *Meſſana* to *Caleghan*, is about 20 Leagues ſailing to the Weſt,and from *Caleghan* to *Zubut* about 50 Leagues ; to which they now directed their courſe, having the Company of the King of *Meſſana* along with them.

(n) The Iſle of *Zubut*.

Shedding Blood a token of Friendſhip.

The Iſland receives the Chriſtian Faith.

The King.

April 7. about Noon,they entred the Port of *Zubut* (n), and coming near the City let off all their great Guns, which put that place into a very great conſternation. But all that apprehenſion of danger from the Ships was quickly remov'd, by the coming of their Ambaſſador to the Town, who aſſur'd the King, that 'twas cuſtomary with them to diſcharge their Cannon whenever they came into any great Ports ; and that 'twas a piece of Reſpect they always paid to the Lords and Governours of Towns. He told him how mighty a Prince they were Servants to, and that their deſign was to find out the *Moluccas* : That they only came to viſit him by the way, hearing of his Fame by the King of *Meſſanes*, and deſired him to grant them Victuals for the Commodities they had brought. The King bid them welcome, but told them, 'twas a Cuſtom there, for all Ships that came, to pay Tribute, and that he expected the like Acknowledgment from them. This the Ambaſſador poſitively refuſed, telling him, That his Admiral was the Servant of ſo great a King, that as he had never yet, ſo he wou'd not now begin to make that Acknowledgment to any Prince in the World : And withal, That if he wou'd Accept of Peace offer'd to him, well and good, if not, he ſhou'd quickly have his hands full of the War. A certain *Moor*, that ſtood by, told the King, That theſe were the *Portugueze* that had Conquer'd *Calecut* and *Malacca*, and therefore Adviſed him to have a care how he provok'd them. Upon this conſideration, the King concluded to refer the Matter to his Council, and to give them an Anſwer the next day, ſending them, in the mean while, Wine and Victuals. The King of *Meſſana*, who was a very potent Prince, went aſhore, and acted very Generouſly, on that behalf, with the King of *Zubut* : The effect of which was, That the King, inſtead of Demanding, was now almoſt ready to yield to pay Tribute himſelf ; which they not at all inſiſting upon, but only deſiring liberty to Trade, he cheerfully granted it, offering to Seal the Covenant of Peace and Friendſhip with his Blood. After this, the King of *Meſſana*, the King of *Zubut*, and his Nephew, came aboard the Admiral, brought him Preſents, and confirm'd the League. The Admiral perſwaded them to embrace the *Chriſtian Faith*, which they did with exceeding Joy and Pleaſure, being all afterwards Baptiz'd. This example of the great Ones influenc'd the whole Iſland, ſo that *Chriſtianity* was Univerſally receiv'd there. When they came to the City, they found the King in his Palace, ſitting upon a ſort of fine Mat made of Date-leaves, having no manner of Apparel but a *Bombaſine* Cotton about his Waſte. About his Head he had a Veil of Needle-work, and about his Neck a very coſtly Chain ; as alſo ſtately Jewels in his Ears. He had before him ſeveral *Porcelane* Veſſels, ſome with Eggs, and others full of Date-Wine. The Prince Entertain'd them likewiſe at his Palace, and for their Diverſion made his Daughters Sing and Dance naked before them. One of the *Spaniards* dying, they deſired leave of the King to bury him in his Land : To which the King reply'd, That ſince he, and all his moſt coſtly things, were at the King their Maſters devotion, much more ſhou'd a few Foot of his ground be ſo, in affording a Burial-Place to one of his Subjects.

A ſtrange Fowl that deſtroys the Whales.

The King, &c. Baptiz'd.

The Queen, &c.

Theſe People exerciſe Juſtice in their Dealings with one another, keeping cloſe to the Uſe of Weights and Meaſures. Their Houſes are made of Timber rais'd high upon Poſts, ſo that they go up by Stairs to them. They talk of a certain ſort of Water-Fowl in this Country, as big as a Crow, which they call *Lughan*, which the Whales ſometimes ſwallow down alive, and have their Hearts eaten up by this Bird ; by which means many of them are kill'd, and the Bird is afterwards found alive in the Carkaſs of the Whale. The Skin of this Fowl is black, but the Fleſh good. The *Spaniards* had very advantageous Bartering with theſe People, they giving them 10 *Peſo's* of Gold (every one of which is a Ducat and half) for 14 pound weight of Iron ; beſides, all ſorts of Proviſions for very inconſiderable trifles. The baptizing of theſe Princes (who had before embrac'd *Chriſtianity*) was perform'd with very great Solemnity, the Ordnance being all diſcharg'd ; which the Admiral told the King of beforehand, to prevent his being ſurpriz'd. The King of *Zubut* was named *Charles*, and the Prince *Ferdinando* ; the former of thoſe Names being the Emperors, and the latter his Brothers. The King of *Meſſana* was named *John*, and the great *Mooriſh* Courtier *Chriſtopher*. Beſides the Princes and great Men, there were 500 of a more Inferiour Rank baptiz'd at the ſame time. All their Idols were broken, and the Croſs ſet up in divers places, which the Admiral engaged them to pray very devoutly before, Morning and Evening. The Queen was baptiz'd too at the ſame time, with 40 of her Ladies, and her Daughter the Prince's Wife. She was young and handſome, her Body cover'd with a white Cloth, and her Head adorn'd with a ſort of a Triple-Crown made of Date-leaves. After Maſs was ended, the King and Court dined in the Admiral's Ship, in Honour of whom all the great Ordnance were diſcharged In 8 days time, moſt of the Iſland was become *Chriſtian*, except one Village of Idolaters, who wou'd not obey the King's command in this Matter ; the *Spaniards* therefore burnt the Village, and errected a Croſs upon the Ruines of it. And to ſhew the good and advantageous effects of *Chriſtianity* amongſt theſe People that had embrac'd it, they pretend a very miraculous cure was wrought upon the King of *Zubut*'s Brother upon his receiving Baptiſm. The Admiral, it ſeems, pawn'd his Head for his immediate recovery, if he wou'd ſubmit to this Sacred Rite, and break all his Idols. And they ſay, that the Admiral did ſave his Pawn, the Prince perfectly recovering of his Malady. And beſides this, that this Miracle brought in a vaſt number of Converts, and occaſion'd a fearful deſtruction of Heatheniſm, Altars and Idols, all about in the Iſland. The People of this Iſland, inſtead of Coin, pay the King their Stated Tribute in Victuals.

(o) *Mathan*.

The People.

Their Sacrifices.

Their Funerals.

Not far from *Zubut* lies the Iſle of *Mathan* (o), the Inhabitants of which go quite naked, except a ſlight Covering upon the *Pudenda* ; at which Part all the Males, both great and ſmall, do hang certain golden Rings, perforating the Skin for that purpoſe. They take as many Wives as they pleaſe ; one of which only has the Sovereignty of the Houſe. They uſe very odd Ceremonies in their Sacrifices to the Sun. They begin with ringing Bells ; then they ſpread a Cloth upon the ground, on which are ſet certain Platters with Honey, Rice and roaſted Fiſhes. The Sacrifice they offer is a Hog, and the Managers of the Ceremony are two old Women, who ſing and dance about the Animal, and ſound Trumpets made of Reeds. They mumble out certain Prayers to the Sun, and after ſeveral antick and ridiculous Geſtures, they pour out a Cup of Wine upon the Hog. One of the Venerable Prieſteſſes ſtrikes the fatal blow with a Lance, and then puts a lighted Lamp into the Creatures mouth, which continues burning all the time of the Ceremony. The other dips the Reed-Trumpet in the Blood, and with her finger beſmears her Husband's Forehead, and then the reſt of the Men that aſſiſt at the Sacrifice. When they have done, they diſrobe themſelves of their Prieſtly attire, and fall to eating the Honey, Rice and Fiſhes, in which only Women partake with them. As for the fleſh of the Hog, that is not to be touch'd till theſe two Witches have crav'd a Bleſſing upon it. As for their Funerals, their Ceremonies are almoſt as foppiſh and extravagant as thoſe of their Sacrifices. When a Man of Figure dies, all the chief Women go to his Houſe, and carry boughs, with pieces of Cotton in them, which they faſten all about the Corps. They ſit round about it cloath'd in white Cotton, fanning themſelves with branches of Palm, the Room being Incens'd with Myrrh and Storax all the while. Then a certain Perſon comes and cuts off the Hair of the Deceaſed by little and little ; and at the ſame time, his chief Wife lies upon his dead Body, with her Face, Hands and Feet, to his, crying and lamenting while his Hair is cut off, but ſhe changes her Funeral Notes into a Merry Song when the other ceaſes cutting. The Ceremony laſts five Days ; after which they encloſe the Corps in a Dormitory built of Wood, and made very faſt on every ſide.

This

Maglianes's Death.

This Iſle of *Mathan* was govern'd by two Kings; the one of which refuſing to pay Tribute to the King of *Spain, Maglianes* went out to reduce him. The *Indian* had between 6 and 7000 Men furniſh'd with Bows and Arrows, Darts and Javelins; which Army *Maglianes* attack'd with 60 of his *Spaniards*, arm'd with Coats of Mail and Helmets. The Battel was ſharp and tedious; but *Maglianes* his Heat and Courage carrying him in too far amongſt the *Barbarians*, he was there firſt wounded with a poyſon'd Arrow, and afterwards thruſt into the Head with a Lance, which ended the Life and Action of this Noble Commander. About 8 or 9 of his Men were ſlain, and about 15 of the Enemy, beſides many wounded; but *Maglianes*'s Body could not be redeem'd at any rate. They choſe two others to ſucceed him in his Charge, *viz. Odoardo Barboſa* a *Portugueze*, and *Johannes Serrano*; who was ſhortly after, with divers others, betrayed by the Interpreter.

(*p*) *Bohol.*

(*q*) *Pavilogbon Blacks.*

(*r*) *Chippit.*

A little before the Admiral's Death, they had tidings of the *Moluccas*, the great end of their Voyage: So that now leaving *Mathan*, they ſail'd to the Iſle (*p*) *Bohol*; and here they burnt the *Conception*, furniſhing the other two Ships with the Men and Ammunition of it. Directing their courſe from hence to the South Weſt, they came to the Iſle (*q*) *Pavilogbon*, inhabited by *Blacks*. From hence they came to *Chippit* (*r*), which is a large Iſland; it is about 50 Leagues from *Zubut*, in 8 degrees of North Lat. and about 170 degrees of Lon. from their firſt Stage. It abounds in Gold, Rice, Ginger, Goats, Hogs, Hens, &c. and the King of it gave them a friendly reception. In token of Peace, he mark'd his Body, Face, and the tip of his Tongue, with Blood, which he drew out of his Left Arm; and the *Spaniards* followed him in that bloody Ceremony. *Pigafetta* was entertain'd by him and his two Wives, but they ply'd him ſo hard with Brimmers, that he was forc'd to Excuſe himſelf from Pledging them, and take his Leave.

(*s*) *Caghaian.*

Sailing from hence about 40 Leagues, between the Weſt and South Weſt, they came to *Caghaian* (*s*), a very great Iſland, but not well inhabited. The People are *Moors*, Exiles from *Borneo*, rich in Gold, and for their principal Weapons uſe poyſon'd Arrows.

(*t*) *Puloan.*

Another Courſe of about 25 Leagues, between the Weſt and North Weſt, brought them to *Puloan* (*t*), a very fruitful Iſland, lying in $9\frac{1}{3}$ degrees of North Lat. and $179\frac{1}{3}$ degrees of Lon. from their firſt Stage. It yields much the ſame Products as *Chippit*, beſides very large Figs, Battato's, Coco's, and Sugar Canes. The like Ceremonies alſo were here uſed in token of Friendſhip, between the King and the *Spaniards*, as were at *Chippit*. The People go naked, uſe poyſon'd Arrows, and are fervent Lovers of the Sport of Cock-fighting. They make a ſort of Wine here of Rice, which is very intoxicating, but otherwiſe better than that of the Palm.

(*v*) *Borneo.*

* St. *Helen*, St. *Nicholas*, St. *Clare.*

Sailing about 10 Leagues from hence, toward the South Weſt, they had a ſight of the famous Iſle of *Borneo* (*v*); the beginning of which is full 5 Leagues diſtant from the Port. Here they met with a Tempeſt as they were entring the Port, which went off when the fires of the three Saints * appear'd upon the Cables. It is a very large and rich Iſland: It lies in $5\frac{1}{4}$ degrees of North Lat. and $176\frac{2}{3}$ degrees of Lon. from their firſt departure; the chief City contain'd no leſs than 25000 Houſes. The King was a *Moor*, a Prince of very great Power, and large Command, kept a magnificent Court, and was always attended by a mighty Guard. He ſent the Captains ſeveral Preſents, and order'd a couple of Elephants, Trapp'd with Silk, to be led forth, to bring the *Spaniſh* Meſſengers, and Preſents, to the Palace. He has 10 Scribes, or Secretaries, that write his Affairs in Barks of Trees. His Houſhold is govern'd all by Women, who are the Daughters of his chief Courtiers. His Subjects pay him their Reverence by lifting up their Hands, cloſed three times over their Heads: Then lifting up their Feet one after the other; and laſtly, kiſſing their Hands. They chew a great deal of the *Betele* in this Country, and drink a Rice Wine call'd by them *Arach*. The Country affords Camphire, which is the Gum of the Tree *Capar*; alſo Cinnamon, Ginger, Mirabolans, Oranges, Limons, Sugar, Cucumbers, Melons, plenty of Fowl and Beaſts; amongſt which are Elephants.

† Small Veſſels.

July 29. they were ſet upon by 100 of the Indian *Junks* †, of which they took 4; and in one of them a conſiderable Priſoner, Son to the King of *Lozon*, and General of the King of *Borneo*'s Forces, being then upon his return from the Sack of *Lae*, a great City in the Iſle towards *Java*: but the Pilot being Brib'd, let him make his eſcape; ſo that they loſt his Ranſome.

(*w*) *Cimbubon.*

A Senſitive Tree.

An odd Fiſh.

Leaving *Borneo*, they came to the Iſle *Cimbuben* (*w*), which lies in 8 degrees 7 minutes of North Lat. Here they ſtaid 40 Days caulking their Ships, and furniſhing them with freſh Water and Fuel; they were forc'd to Work barefoot, their Shooes being quite worn out, and there being none of the Gentle-Craft in *Cimbubon* to ſupply them with more. In the Woods of this Iſle they found a Tree, the Leaves of which, as ſoon as they fall on the ground, do move from place to place as if they were alive. They reſemble Mulberry-Leaves, and on the ſides of them there are certain Fibres produc'd, that ſeem like little Eggs. If they are cut, or broken, there's nothing like Blood comes forth; but if they are touch'd, they ſuddenly ſpring away. This *Pigafetta* tried, keeping one of theſe Leaf-Animals in a Diſh for 8 days. The Iſle affords Oſtriches, wild Hogs, and Crocodiles. They took here a Fiſh headed like a Swine, with two Horns; its Body all one entire Bone, and ſome thing like a Saddle on its Back.

(*x*) *Zolo*, &c.

Large Pearl.

They ſailed from hence by the Weſt, towards the South Eaſt Quarter, for the *Moluccas*, and in their way found the Sea full of Weeds and Herbs: This was near certain great Mountains. This Courſe brought them to the Iſles of *Zolo* and *Taghima* (*x*), which afford very rare Pearl. From hence 'twas that the King of *Borneo* got a couple of Pearl as round, and very near as big as a Hen's Egg.

Wild Men!

(*y*) Four Iſlands.

Sailing towards the North Eaſt, they came to *Mangandano*, a great City lying above the Iſles of *Buthuan* and *Caleghan*. Here they took a Canoe, with certain *Indians*, who gave them directions for the *Moluccas*; ſo that they chang'd their North-Eaſt for a South-Eaſt Courſe, on to a Cape of the Iſle *Buthuan*. Here they heard of a ſtrange ſort of Savages cover'd with ſhaggy hair like Beaſts, ſtrong and tall, having only weapons of Wood; they reported of them, that they wou'd eat the Hearts of their ſlain Enemies raw, with the Juice of Oranges and Limons for Sawce. Theſe Iſlands afford the beſt Cinnamon in the World; of which they had 27 pound in Exchange for two Knives. Being in 6 degrees 7 minutes North Lat. they ſtill kept their South-Eaſt Courſe, which brought them upon the Iſles *Ciboco* (*y*), *Biramboia*, *Sarangani*, and *Candinghar*.

(*z*) Eight other Iſlands in their way to the *Moluccas*.

Sanghir.

(*a*) The *Moluccas* in ſight.

Stories of the *Portugueze*.

October 24. they had a great Storm; and they ſay, that after their Prayers, the three Fortunate Lights appear'd as before; which once ſhewing themſelves, the noiſy Winds and Waves were commanded into a profound ſilence. They came to Harbour in the Iſle *Sarangani*, reported to yield both Gold and Pearl; and here they preſs'd two Pilots for their *Molucca* Voyage. They paſs'd the Iſles (*z*) *Ceana*, *Canida*, *Cabiaio*, *Camuca*, *Cabalu*, *Chiai*, *Lipan* and *Nuza*, and came to a fair Iſland call'd *Sanghir*, in $3\frac{1}{2}$ degrees of North Lat. which Iſle had 4 Kings. Having paſs'd 5 other Iſlands, they at laſt eſpied a ſmall Cluſter of 4 Iſlands, which their Pilots ſaid were the *Moluccas* (*a*); this was the 6th of *November*, and the 27th Month after their departure from *Spain*. They tried the depth of the Sea with their Plumbet all about theſe Iſlands, and found it no leſs than 102 Yards; which ſhews that the *Portugueze* deſign'd none elſe ſhou'd come thither but themſelves, when they told the World, That thoſe Seas were ſo ſhallow, that there was no Sailing there, beſides the other dangers of Rocks and Shelves, and continual Darkneſs.

* *A.D.* 1521.

(*b*) *Tiridore.*

Nov. 8. * before Sun-riſing, they enter'd the Port of *Tiridore* (*b*), which is one of the chief of the *Moluccas*. The King was a *Moor*, but notwithſtanding the prejudices of his Religion, ſo extremely fond of the *Spaniards*, and ſo much devoted to the Service of their Maſter, that he bid them come aſhore into their own Country and Houſes, call'd them his Brethren and Children; nay, in Complement to them, changed the Name of his Kingdom from *Tiridore* into *Caſtile*.

Cloves.

Theſe *Moluccas* are five in number; *Ternate*, *Tiridore*, *Mutir*, *Macchian* and *Bacchian*. Of all theſe, *Ternate* is the chief, and the King of it was once Lord of all the reſt. *Mutir* and *Macchian* were then Commonwealths, but *Bacchian* a Monarchy. The Clove-Trees here are very tall, and as big about as a Man; the Boughs large in the middle and ſharp at top, the Leaves like thoſe of Bay-Trees, and the Bark of an Olive colour. The Cloves grow in large Cluſters at the tops of the Boughs; at firſt they are white, red when come to maturity, and grow black by after drying. The Leaf, Bark and Wood, being green, is as ſtrong as the Clove it ſelf. They gather them twice a Year, in *June* and *December*; and if they don't take them in time they grow very hard. Every Man has his own peculiar Trees, but they beſtow but little Husbandry upon them. They have alſo in this Iſle a ſort of a Tree, the Bark of which being ſteep'd in Water, may be drawn out in ſmall Fibres, to the fineneſs of Silk; and of this the Women make a ſort of Aprons, which is all the Covering they make uſe of.

(c) *Gilolo* Iſle.

Gold.

The Water of Reeds.

Near *Tiridore* lies the great Iſle (*c*) *Gilolo*, which is parted between *Moors* and *Heathens*. The 2 Kings of the *Moors* have contributed themſelves very liberally to the Peopling of the Iſland, the one of them having 600, and the other 650 Children. The *Pagans* were more abſtemious in theſe Matters, as well as leſs Superſtitions in other regards, than the *Moors*; yet they report of them, that they adore the firſt thing they ſee in the Morning, ſo that an Aſs may be the Object of their Worſhip for that Day, as ſoon as a better thing. But how poor ſoever they are in Underſtanding, they are very rich in that which gets many a Fool the Reputation of a Wiſe Man, in theſe Parts of the World; they have good ſtore of Gold amongſt them, which notwithſtanding all their defects in Religion, was ſufficient to recommend them to the Eſteem of the *Spaniards*. In this Iſle there is a ſort of a Reed grows as big as a Man's Leg, and full of a very fine Limpid Water, which makes a wholeſome Drink. *Nov.* 12. a Publick Warehouſe was appointed in the City for the Sale of their Merchandize. The Exchange was thus: For ten Yards of good red Cloth, they had one Bahar of Cloves, every Bahar being four Cantars, and ſix Pound; and every Cantar 100 *l.* weight. For fifteen Yards of a meaner Cloth, they had in Cambie, one Bahar: For 35 Drinking-glaſſes one Bahar: For 17 Cathyls of Quickſilver, one Bahar. They brought all ſorts of Proviſions daily to their Ships, and a ſort of freſh Water, which ſprings out of the Mountains where the Cloves grow: It is hot when it comes out of the Spring, but very cold when it has ſtood a while in ſome other place.

Strange Birds

They receiv'd here a Comical Preſent for the King of *Spain*, from the King of *Bacchian*; which was a couple of dead Birds of the bigneſs of Turtles, with little Heads and Legs, long Bills, two or three long Feathers, party-colour'd at their ſides, inſtead of Wings, their whole Body elſe all of one colour, and that near a tawny. They never fly but when the Wind blows to help them. The *Moors* fancy they come from Paradiſe, and therefore call them the Birds of God.

Products of *Molucca.*

As for all theſe *Molucca's* in general, their Products are Cloves, Ginger, Rice, Sagu-bread, Goats, Sheep, Hens, Popinjays white and red, Figs, Almonds, Pomegranates, Oranges, and Lemons, and a ſort of Honey which is made of Flies leſs than Ants. Moreover, Sugar-Canes, Oyl of Coco's, Melons, Gourds, and a Fruit which they call *Camulicai*, which is extreamly cold. The Natives of theſe Iſlands were all Heathens, the *Moors* having not had footing there above 50 Years before the *Spaniards* came.

The Iſle *Tiridore* is in about 27 Min. North Lat. and 171 Degr. Long. from their firſt Meridian; and about 9½ Degr. from the *Archipelago*; in which is the Iſle of Thieves, and runs to the Quarters of South Weſt, and N. N. E.

Ternate is in 4 Min. of South Lat. *Mutir* is directly under the Æquinoctial. *Machian* is in 15 Min. of South Lat. And *Bacchian* in 1 Min. and this Iſle is the biggeſt of all the *Molucca's*.

When they departed from hence, they had the Kings of ſeveral Iſlands attending them in their Canoes; they were conducted by them to the Iſle *Mare*, and there this Royal Company took their Leaves of them, not without a great deal of Sorrow, as they pretended. In this Iſle they left a leaking Ship behind them, giving Orders, if it could be repaired, for its return into *Spain*.

Many Iſlands.

(d) Mallua.

Pepper.

From *Mare* they directed their Courſe to the S. W. being now no more in number than 46 *Spaniards*, and 13 *Indians*. They paſſed the Iſles of *Chacouan*, *Lagoma*, *Sico*, *Giogbi*, *Caphi*, *Sulacho*, *Lumatola*, *Tenetum*, *Buru*, *Ambon*, *Budia*, *Celarur*, *Benaia*, *Ambalao*, *Bindon*, *Zorobua*, *Zolot*, *Noceamor*, *Galian*, and *Mallua*, beſides many others poſſeſs'd both by *Moors*, *Heathens*, and *Cannibals*. They ſtay'd at (*d*) *Mallua* fifteen Days, repairing their Ship. It lies in 8½ Degr. of S. Lat. and 169 Degr. 40 Min. of Long. according to their Reckoning. There grows a vaſt deal of Pepper there, both long and round; the Leaves of the Tree like Mulberry-leaves, and climbing like Ivy. The People are perfect Cannibals; the Men wear their Hair and Beards put up in Canes; and for Weapons, uſe only Bows and Arrows.

* *A.D.* 1522.

(e) *Timor.*

January 25. * leaving *Mallua*, they arrived at *Timor* (*e*), which is five Leagues diſtant between the S. and S. W. Here they found Ginger, the Wood of White Saunders, divers Fruits and Beaſts, Gold, and plenty of all ſorts of Proviſions. The People of the *Molucca's*, *Java*, and *Lezon*, fetch their Saunders from this Iſland. It lies in 10 Degr. S. L. and 174 of Long. The Inhabitants are Idolaters, and have amongſt them, (which is alſo common to all the Iſles of this *Archipelago*) the Diſtemper we call the *French-Pox*.

(f) *Ende.*

Cinamon.

Sailing a long Courſe from hence, between the W. and N. W. they came to the Iſle of *Ende* (*f*), which yields great ſtore of *Cinamon*. In this Tract of Sea, there is a long Series of Iſlands, lying in order behind one another, as far as the Greater *Java*, and the Cape of *Malacca*. About half a League from this Greater *Java*, lies *Java* the Leſs; which is full as big as the Iſle of *Madera*.

* 1521.

* Modern Experience allows no ſuch great danger.

Feb. 11. * ſailing from *Timor*, they got into the Great Sea *Lantchidol*, and ſteer'd away between the W. and S. W. leaving the N. Coaſt on their Right-hand, taking care not to ſail too near the Shoar, leaſt the *Portugueze*, who were ſeated at *Malacca*, ſhou'd chance to ſpy them; and on this Account they directed their Courſe without the Iſle *Sumatra*. And that they might paſs the Cape of *Good Hope* more ſecurely, they ſail'd about 42 Degr. towards the S. Pole, waiting in thoſe parts ſeven Weeks for the Wind, fetching many a Compaſs with their full-ſpread Sails, having a W. and N. W. Wind in the Prow of their Ship, ſo that they could not eaſily get along. The Cape of *Good Hope* they obſerv'd to be in 34½ Degr. of S. L. and 1600 Leagues from the Cape of *Malacca*: They reckon'd it to be both the greateſt, and the moſt dangerous * Cape in the World.

They are in great diſtreſs.

The *Portugueze* keep them Priſoners.

But having now paſs'd all the Dangers of the Cape, being ſmartly pinch'd with Hunger, and Sick too, ſome of them were for putting in at *Mozambique*, for a little Refreſhment; but the major part of the Company concluding, that the *Portugueſe*, who were there, wou'd prove but untoward Phyſicians for their Diſtempers, they reſolv'd to ſail homewards. This they did, in a Courſe toward the S. W. for the ſpace of two Months, without touching at any part; in which time they loſt 21 Men of their Company, the remainder being juſt upon the point of ſtarving. They came in good time under this extreme Neceſſity, to St. *James's* Iſland, which is one of the Cape *de Verd* Iſlands; and here they were forc'd to throw themſelves upon the Mercy of the *Portugueze*: For in the Ship was Famine, and certain Death; and tho' aſhoar there were armed Enemies, yet here they had a Chance for their Lives, which in the other Circumſtance they had not. So that venturing aſhoar, they opened their miſerable Caſe to the *Portugueze*; who were ſo generous as to relieve them the firſt time, and ſo barbarous as to detain them Priſoners the next time they came for Food.

The Port of St. *Lucar.*

Thoſe in the Ship, finding their Companions (thirteen in number) ſtopp'd by the *Portugueze*, and having no mind to bear them Company in Priſon, tho' they had a Shipboard, made all the haſte they poſſibly could away; and ſo the Wind beſtowing it ſelf very liberally upon their Sails, they came *Sept.* 7. into the Haven of St. *Lucar*, near *Sevil*.

Having welcom'd themſelves home with a Volley or two of Shot, they went in Proceſſion barefoot, and in their Shirts, with a great Torch before them, to the Cathedral, to return their Thanks to Heaven, for the happy Concluſion of their Voyage.

Their other Ship returns.

Darien.

Their other Ship which they left behind to be repair'd, came home afterwards, ſailing by the afore-mention'd *Archipelago*, thro' the Great Sea, to the Coaſts of the *Weſt-Indies*, arriving at that part of it which lies oppoſite to *Darien*, where the *South* Sea of *Zur* is ſeparated by a narrow Neck of Land, from that Weſtern Ocean, in which are the Iſles of *Hiſpaniola*, and *Cuba*. The Streight in the South Sea which they paſſed, was called the Streight of *Victoria*, from the Ship in which the Admiral diſcover'd it, tho' afterwards it receiv'd a new Name from the Admiral himſelf, being call'd in Honour of the Diſcoverer, the *Magellanick* Streight.

* *A.D* 1529.

* *A.D.* 1548.

After they were come home, the *Portugueze* overthrew their Factory at *Tiridore*, took their Ship the *Trinity*, built themſelves a Fort at *Ternate*, and raiſed a Factory there, getting the whole Clove-Trade into their own Hands. And beſides theſe Enmities abroad, there were fierce Contentions at home, between the two Nations, each challenging the *Molucca's* for their own Right. But in ſhort, the *Portugueze* having taſted the Sweetneſs of the *Molucca* Trade, were reſolv'd never to quit it to the *Spaniards*; neither did they leave till they had engroſs'd all to themſelves. For the Emperor marrying the King of *Portugal's* Siſter, and wanting Money, he pawn'd * all thoſe rich Iſlands, and the whole Spice-Trade, to the *Portugueze*, for 350000 Duckets; and that without limiting any certain time for the Redemption of them again. And whereas *Cortes* * offer'd to lay down the Money, upon Condition of ſix Years Profits of the Trade, and yet to leave all after that to the Crown; the Emperor would not admit of it: So that the *Portugueze* ſtill kept their Prize; till they loſt both that and themſelves too, to the Crown of *Spain*.

Sr. FRANCIS DRAKE,

This Picture was taken from an Original Painting, Communicated
by the Honble Sr Phillip Sydenham Bart. Knt. of ye shire for Somerset.
To whom this Plate is dedicated
by the Publishers.

The Perſon that brought home the Ship *Victoria* from the *Molucca's*, was *John Sebaſtian Cabot*; whom the Emperor moſt Nobly Rewarded for his Service.

(g) See Ramus. Tom. I.
* A.D. 1524.

Before this Agreement between the Emperor, and King of *Portugal*, about the *Molucca's*, ſome of the *Portugueze* had attempted this Diſcovery out of *New Spain*, by the *South* Sea, but with ill Succeſs, as is related by *John Gaetan*, a *Spaniſh* Pilot (*g*). They ſail'd * from Port *Nativity*, in 20 Degr. of N. L. and came to the *Molucca's*; where the King of *Tiridore* entertain'd them well: But not being able to maintain their Ground againſt the *Spaniards*, they were forc'd to come to a Compoſition with them.

And thus have we ſeen the *Spaniſh* Ships putting a Girdle half round the Globe; we ſhall now ſee our *Engliſh* Ones finiſh what they had begun, making both Ends of it perfectly meet together.

CHAP. IV.

The famous Voyage of Sir Francis Drake, *the firſt General that ever Sail'd round the whole Globe.*

A. D. 1577.

THE Fifteenth of *November*, Sir *Francis Drake*, with a Fleet of five Ships and Barks, (in which were about 164 Perſons) ſet ſail from *Plimouth*, pretending a Voyage to *Alexandria*: But the Wind proving contrary, he was forc'd the next Morning to put in at *Falmouth* Haven, in *Cornwall*. Here a moſt violent Tempeſt had like to have made an univerſal Wreck, which yet produc'd no worſe effects, (as Providence was pleas'd to order the matter) than the loſs of the Admiral's * Maſt, and the driving of the *Marigold* aſhoar, which ſomething bruiz'd her. For the repairing theſe Damages, they return'd back to *Plimouth*; where having put all things to rights, and again prepared themſelves for the Dangers of the Sea; they ſet Sail the ſecond time, on the 13th of *December*.

* This famous Ship was call'd the *Pelican*.

(a) *Magador* on the Coaſt of *Barbary*.

On the 25th of the ſame Month, they fell in with Cape *Cautin*, on the Coaſt of *Barbary*. And on the 27th came to Iſle *Magador* (*a*), lying one Mile diſtance from the Main, between which and the Iſle, they found a very ſafe and convenient Harbour. Here the Admiral erected a Pinnace, having brought the Hulks of four ready fram'd from *England*.

While they were upon this Work, ſome of the Inhabitants came to the Water-ſide, ſhewing their Flags of Peace: Upon which the Admiral ſent out his Boat, to know their Minds. One of his Men ſtay'd as a Pledge amongſt them, and two of their Company were brought a Shipboard: They told him by Signs, That the next Day they wou'd furniſh his Ships with good Proviſions; which Civility he requited with ſome Linen Cloth, Shoes, and a Javeline, things very acceptable to the Barbarians, and ſo they departed.

Treachery of the Barbarians.

The next Day they came as they had promis'd; and one of the Men leaping out of the Boat amongſt them, thinking to have leap'd into the Arms of Friends, made himſelf the Priſoner of theſe perfidious Wretches; who threatning to ſtab him, if he made any reſiſtance, preſently mounted him a Horſeback, and carried him up into the Country.

The Pinnace being finiſh'd, they ſet ſail *December* the 30th, and Coaſting along the Shoar, they met ſome *Spaniſh* Fiſhermen; which giving Chace to, they took three of them: And a little further they met with a Booty of three Caravels.

Cape *Blanco*.

(b) They are call'd Canters.

January the 17th, they arrived at Cape *Blanco*; where they found a Ship at Anchor within the Cape, having only two Mariners in her: The Ship they took, and carried her into the Harbour, where they ſtay'd four Days; in which time the Admiral muſter'd his Men aſhoar, to prepare them for Land, as well as Sea-Service. Here they took of the Fiſher-men ſuch Neceſſaries as they wanted, and alſo one of their Barks (*b*) of about 40 Tun; leaving behind them a little Bark of their own.

(c) Mayo Iſle.
(d) Goats.

They left this Harbour *January* the 22d, carrying along with them one of the *Portugueze* Caravels, which was bound to the Iſles of Cape *de Verd*, for Salt; of which good ſtore is made in one of thoſe Iſlands. The Maſter of that Caravel aſſur'd the Admiral, That in one of the Cape *de Verd* Iſlands, call'd (*c*) *Mayo*, that there was good ſtore of dry'd *Cabrito's* (*d*), which were every Year made ready for ſuch Ships of the King's as call'd there. They came upon this place, *January* the 27th; but the Inhabitants would drive no Trade with them; the King's Orders having poſitively forbid it. Yet the next Day they went to take a view of the Iſland; the Admiral ſending out a Company of Men for that purpoſe. They march'd towards the chief place of the Iſle, and having travell'd thro' the Mountains for three Days, they came thither before Day-break. They found the Inhabitants all run away; but they came not to ſee them, but the Country: And this, by the Manuring, appear'd to be more fruitful than the other part.

Grapes ripe in Winter.

They reſted themſelves here a while, and banquetted upon the ſweet and lovely Grapes which were in their prime, even at that Seaſon of the Year, which is the Depth of Winter with us in *England*. This won't appear ſtrange, if it be conſider'd, that that Country lying in the Torrid Zone, ſees the Sun twice a Year in its Zenith, which makes a double Summer, and ſo enjoys a far greater ſhare of that Luminary's Influence and Preſence, than thoſe places that lie without the Boundaries of his Motion, and to which he is never Vertical: So that whereas in places ſeated in remoter Parallels, the mightieſt Influence and Action of the Sun, in its neareſt Approaches to them, is not of force enough to keep Nature in a blooming ſtate thro' the whole Revolution of the Year; nor can the weaker Rays of the Winter-Sun, ſo far renew its Vigour, or remove the deadly Chill which then oppreſſes all things, as to bring any Plant or Fruit to its due maturity. On the other hand, theſe Climates of the Middle Zone, are ſo throughly heated by the twice culminating Sun, and alſo have him ſtill, (by the Laws of his Motion) at ſo little a diſtance from them, that even in his fartheſt Receſs, there is, in many places, Warmth ſufficient for the ſpringing of Vegetables, and the ripening of Fruits.

Salt made by Nature.

Coco-Trees.

This Country is ſtor'd with Goats, wild Hens, and Salt, which Nature makes ready to the Inhabitants Hands. It is brought together in great Quantities upon the Land, by the flowing of the Sea, and the Heat of the Sun kerns it; the People have no more to do, but to gather it into Heaps, and ſell it to their Neighbours; which they do, making a good Trade of it. They found here alſo Coco-Trees, the Fruit of which, ſeems to be in all points, the ſame with thoſe before deſcribed, which the *Spaniards* found in the Iſle *Zubuan*. The Trees themſelves bear no Leaves nor Branches, but at the top the Fruit grows in Cluſters, and they are, each Coco, as big as a Man's Head. Having ſatisfied themſelves with theſe Fruits, they march'd farther into the Iſland, and ſaw great ſtore of *Cabrito's*, but they could take none of them; tho' if they had pleas'd, they might have furniſh'd themſelves with ſome that were old, dead, and dried, which the People had laid out on purpoſe for them; but not caring for that Refuſe of the Iſland, they return'd to their Ships.

(e) St. *Jago* Iſle.

A Prize taken.

January the 21ſt, they went from hence, and ſail'd by the Iſle St. *Jago* (*e*); in paſſing by which, the People diſcharged 3 Pieces at them, but without doing any miſchief. The Iſland is fair and large, inhabited by *Portugueze*; but the Mountains are poſſeſſed by the *Moors*: Who to deliver themſelves from Slavery, fled to thoſe places of Refuge, where they have fortified themſelves. Before this Iſland they ſaw two Ships under ſail, one of which they took, and found to be a good Prize, well laded with Wines. The Admiral retain'd the Pilot, but diſcharg'd the Ship and the Men, giving them ſome Victuals, a Butt of Wine, and their wearing Cloaths.

(f) Iſland *Fogho*.

(g) *Brava*.

The ſame Night they came to the Iſland *Del Fogho* (*f*), or the burning Iſland, which is inhabited by *Portugueze*. On the North-ſide there is a ſort of a Vulcano, that is continually belching out Smoke and Flame. On the South-ſide lies a (*g*) very delightful Iſland, beſet with Trees ever green and flouriſhing, and refreſh'd with cooling Streams, that pour themſelves out into the Sea. Here was no convenient Road for their Ships, the Sea being ſo deep, that there was no poſſible fixing of an Anchor thereabouts.

Flying Fiſh.

Leaving theſe Iſlands, they drew towards the Line, being ſometimes becalm'd for a long time together, and at others beaten with Tempeſts: They had continually great plenty of Fiſh, as Dolphins, Bonito's, and flying Fiſhes, ſome of which drop'd down into their Ships, and cou'd not riſe again, becauſe their Wings wanted moiſture.

From the firſt Day of their Departure from the Iſlands of Cape *Verd*, they ſail'd 54 Degrees without ſight of Land; and the firſt which they ſaw was the Coaſt of *Braſile*, in 33 Degr. of *South* Lat. *April* 5. The barbarous People aſhoar having diſcover'd the Ships, began to uſe their accuſtomed Conjuring Ceremonies, in order to raiſe a Storm to torment them, and ſink their Ships: For this purpoſe they made great Fires, and offered ſome Sacrifices to the Devil; but he was not able to ſerve them at that time; the Winds and Seas being kept in good order, by a Power ſuperiour to that of the Prince of the Air.

(h) Cape Joy.

April the 7th, They had Lightning, Rain, and Thunder; in which Storm they loſt a little Bark, the *Chriſtopher*; but the 11th Day they found her again; and the place where all the Ships that were diſpers'd in the ſearch of her met together, the Admiral call'd the Cape of (i) *Joy*; and here every Ship took in freſh Water. The Country hereabouts was fair and pleaſant, the Air ſweet and mild, the Soil rich and fruitful. The Inhabitants ſeem'd to be only ſome Herds of wild Deer, no others being to be ſeen; tho' they diſcern'd the Footſteps of ſome People, (and thoſe of a large ſize too) in the Ground. Having weigh'd Anchor, and run a little farther, they found a little Harbour between a certain Rock and the Main, where the Rock breaking the force of the Sea, the Ship rid very ſafely. Upon this Rock they kill'd ſeveral Sea-Wolves, (which we call Seols) keeping them for Food.

Seals.

(i) Rio de Plate.

Seols and Fowl.

Strange Humour of the People.

Their next Courſe being to 36 Degr. of *South* Lat. they entred the great River of *Plate* ( ), and came into between 53 and 54 Fathom of freſh Water; but finding no good Harbour here, they put out to Sea again. Sailing on, they came to a good Bay, in which Bay ſcattering about ſeveral pretty Iſlands, one of which was ſtock'd with Seols, and the others for the moſt part with Fowls, to a very wonderful degree of plenty: There was no want of any Proviſions, nor of good Water there. The Admiral being aſhoar in one of theſe Iſlands, the People came dancing and leaping about him, and were very free for Trade; but had a way not to take any thing from any other Perſon, without it were firſt thrown down upon the Ground. They were a comely ſtrong-bodied People, very ſwift of Foot, and of a briſk lively Conſtitution.

Vaſt Numbers of Seols. People of the Country.

The *Marigold*, and the *Chriſtopher*, (being ſent to diſcover a convenient Harbour) return'd with the happy News of one; into which they went with all their Ships. Here the Seols abounded to that degree, that they kill'd more than 200 in an Hour's ſpace. The Natives came boldly and confidently about them, while they were working aſhoar; their Faces were painted, and their Apparel only a Covering of ſome Beaſts Skins (with the Furr on) about their Waſtes, and ſomething wreath'd about their Heads. They had Bows an Ell long, but no more than two Arrows apiece. They ſeem'd to be not altogether deſtitute of Martial Diſcipline; as appear'd by the Method they obſerved in ordering and ranging their Men. And they gave ſufficient proof of their Agility, by ſtealing the Admiral's Hat off from his very Head; which was a brave Prize amongſt them, one taking the Hat, and another the Gold Band that was in it, neither of which cou'd ever be gotten again from them.

Port St. *Julian*

Having diſpatch'd all Affairs in this place, they ſet ſail; and *June* the 20th they harbour'd at Port St. *Julian*, ſo call'd by *Magellanicus*. Here they ſaw the Gibbet, in which *Magellanicus* had formerly executed ſome of his mutinous Company: And here alſo (as if the place were fatal to Mutiniers) did Admiral *Drake* execute one of his.

Auguſt the 17th, they left St. *Julian*'s Port, and the 20th fell in with the Streight of *Magellan*, going into the *South* Sea. The 21ſt they entred the Streight, which they found to lie very intricate and crooked, with divers Turnings; by which means ſhifting about ſo often, the Wind wou'd ſometimes be againſt them, which made their Sailing very troubleſome. And not only ſo, but dangerous too, eſpecially if any ſudden Blaſts of Wind came: For tho' there be ſeveral good Harbours about, and freſh Water enough, yet the Sea is ſo deep, that there is no Anchoring there, except in ſome very narrow River, or Corner, or between the Rocks. There are vaſt Mountains covered with Snow, that ſpread along the Land on both ſides the Streight; the tops of which mount up in the Air to a prodigious height, having two or three Regions of Clouds lying in order below them. The Streight is extreamly cold, with Froſt and Snow continually; yet do the Trees and Plants maintain a conſtant Verdure, and flouriſh, notwithſtanding the Weather.

Deſcription of the Streights of *Magel.*

At the South and Eaſt parts of the Streight, there are various Iſlands, between which the Sea breaks into the Streight, as it does in the main entrance. The breadth of it is from one League, which is the narroweſt to two, three, or four Leagues, which is the wideſt.

Pengwins.

Auguſt the 24th, they came to an Iſland in the Streights, where were a ſort of Fowl as big as Geeſe, that cou'd not fly; and they were in ſuch multitudes, that they kill'd 3000 in leſs than one Day.

September the 6th, they entred the *South* Sea at the Cape, or Head-ſhoar. And the 7th they were driven by a Storm back from that entrance, more than 200 Leagues in Lon. and one Degree to the South of the Streight. From the Bay they were driven back to the Southward of the Streights, in 57 Degr. of South Latitude, where they Anchored among the Iſlands, finding good freſh Water, and excellent Herbs. Not far from hence they entred another Bay, where they found a ſort of naked People, ranging from one Iſland to another, in their Canoes, to ſeek Proviſions: Theſe traded with them for ſuch Commodities as they had.

Sailing Northward again from hence, they found three Iſlands, *October* the 3d; in one of which was ſuch plenty of Birds, as is hardly credible.

Mr. *Winter* ſeparated by a Storm, and returns.

October the 8th they loſt the Ship, in which Mr. *Winter* was, which they imagin'd to be forc'd back by a Storm into the Streights; this Conjecture proved to be true, tho' they were miſtaken in their ſuppoſition of his being loſt. [He, after he came home to *England*, declared, That ſolemn Poſſeſſion was taken of the Streights, and the Territories adjacent, with Turf and Twig, after the *Engliſh* manner, and that by himſelf in the Name, and for the Uſe of Queen *Elizabeth*.]

Being now come into the height of the Streights again, they put away towards the Coaſt of *Chili*, which the General Maps place to the North Weſt; but they found afterwards to lie to the North Eaſt, and Eaſterly: So that thoſe Coaſts were either not fully diſcover'd, or at leaſt not faithfully deſcribed.

(k) *Moha* Iſland, in 38 Degr. 30Min. *M.S.*

Continuing their Courſe, they came *November* the 29th, to the Iſle *Moha* (k), where they caſt Anchor, and the Admiral with ten Men went aſhoar. The People that dwelt there, were ſuch as the extream Cruelty of the *Spaniards* had forced from their own Habitations to this Iſland, to preſerve their Lives and Liberties there. They carried it very civilly to the Admiral, and his Men, bringing them Potatoes, and two fat Sheep, promiſing further to bring them Water, for which they receiv'd ſome Preſents. The next Day two Men were ſent aſhoar, with Barrels for Water, and the Natives having them at an advantage, preſently ſeiz'd them, and, as 'tis probable, knock'd them on the Head. The Reaſon of this Outrage was, becauſe they took them for *Spaniards*, whom they never ſpare, when they fall into their hands.

They take a *Spaniſh* Ship.

Continuing their Courſe for *Chili*, and drawing near the Coaſts of it, they met an *Indian* in a Canoe; who miſtaking them for *Spaniards*, told them, That at St. *Jago* there was a great *Spaniſh* Ship laden from *Peru*. The Admiral rewarding him for this Intelligence, he conducted them to the place where the Ship lay at Anchor, which was Port *Val Parizo*, in 33 Degr. 40 Min. of South Lat. All the Men they had in her, were no more than eight *Spaniards*, and three Negroes; and they ſuppoſing the *Engliſh* to have been Friends, welcom'd them with the Beat of a Drum, and invited them to drink ſome *Chili* Wine with them. But they reſolving firſt to ſecure their Prize, and then drink afterwards, boarded the Ship, and laying all the *Spaniards* under Hatches, took poſſeſſion. One of the *Spaniards* ſeeing how they were ſerved, deſperately leap'd overboard, and ſwam to the Town of St. *Jago* to give them Notice of the *Engliſh*'s coming; upon which all the Inhabitants preſently quitted the Town, and ran away:

They take the Town of St. *Jago*.

Wine of *Chili*.

Which they might quickly do, there not being above nine Houſholds in the whole Town. The Admiral and his Men being entred, rifled the Town and the Chapel, taking out of it a Silver Chalice, two Cruets, and an Altar-Cloth. They found in the Town alſo a good Cargo of *Chili* Wine, and Boards of Cedar Wood; all which they carried to their Ships; intending the Boards for Firing, and with the Wine to drink the *Spaniards* Healths. The General having then ſet all the Priſoners aſhoar, except one whom he reſerv'd for his Pilot, he left St. *Jago*, and directed his Courſe to *Lima*.

Gold of *Baldivia*.

(l) *Coquimbo*.

Being now out at Sea, and having opportunity to examine the Particulars of the Booty taken at St. *Jago*, they found (beſides the Wine) 25000 Pezoes of very pure Gold of *Baldivia*; which amounted to more than 37000 *Spaniſh* Duckets. So continuing their Courſe to *Lima*, they put in at *Coquimbo* (l), which lies in 29 Degr. 30 Min. *South* Lat. Here the Admiral ſent fourteen Men aſhoar, to fetch Water: But the *Spaniards* happening to ſpy this ſmall Company, and being reſolved for the Glory of their Nation, to undertake a brave Revenge upon ſo notorious an Enemy; they did (tho' the Action was bold and hazardous) with an Army of 300 Horſe, and 200 Foot, attack theſe fourteen *Engliſh*; and after ſome Fight, by the help of their Guns, made a ſlaughter of one of them; the other thirteen coming back ſafe to the Ship. After this, the *Engliſh* going aſhoar to bury their dead Man, the *Spaniards* put out a Flag of Truce; but they thinking their Fidelity to be no greater than their Courage, did not care to truſt them, and ſo went off.

(m) *Tarapaxa* Port.

From hence they came to a Port called *Tarapaxa* (m); where being landed, they found a *Spaniard* aſleep upon the Shoar, with thirteen Bars of Silver lying by him, which came to about 4000 *Spaniſh* Duckets; they did not think fit to diſturb the *Spaniard*'s Repoſe, but taking the Silver, they left him to take out his Nap. Not far from hence, going aſhoar for Water, they met a *Spaniard* and an *Indian*, driving 8 *Peruvian* Sheep (which are as big as Aſſes) laden with very fine Silver; every Sheep having two Leather-bags, (containing 50 *l.* weight each) on his Back. They deliver'd the poor Animals from thoſe irkſome Burthens, and lodged the Bags in their own Ships: After which, the *Indian* and *Spaniards* were permitted to drive on.

(n) *Arica*.

They ſail'd hence to *Arica* (n), which is in 18 Degr. 30 Min. *South* Lat. And in the Port found three ſmall Barks, which being rifled, yielded them 57 Wedges of Silver, each weighing about 20 *l.* They took no Priſoners in the Barks, but thoſe valuable ones before-mention'd: For the Men that belong'd to them, fearing no Strangers coming there, were all gone aſhoar to make much of themſelves. They did not aſſault the Town, having not ſtrength enough for it: So that putting off to Sea again, they met with another little Bark laden with Linen Cloth, part of which the Admiral took, and ſo let her go.

They came *February* the 13th to *Lima*, which lies in 11 Degr. 50 Min. *South* Lat. and being entred the Haven, found there twelve Sail of Ships, lying faſt at Anchor, with all their Sails down, without Watch or Guard, their ſecure Maſters being all a Drinking and Carouzing aſhoar. Examining the Contents of theſe Ships, they found a Cheſt full of Rials of Plate, good ſtore of Silks and Linen; all which Plate they carried to their own Ships, and good part of the Silks and Linen.

Purſue the *Cacafuego*.

The Admiral here had Notice of another very rich Ship named the *Cacafuego*, which was gone towards *Paita*; which they purſuing thither, found her before their Arrival, gone for *Panama*. But however, tho' they miſs'd their intended Prize, another (which they took in the purſuit of her to *Panama*) paid them the Charge of their Voyage: For beſides the Ropes and Tackling for Ships which they found in her, ſhe yielded them 80 *l.* weight of Gold, together with a fine Crucifix of the ſame Metal, richly adorn'd with Emeraulds; all which, with ſome of the Cordage, they ſeiz'd. But reſolving ſtill to proceed in the purſuit of the *Cacafuego*, the Admiral, to encourage his Company, promis'd, That whoever firſt ſaw her, ſhou'd have his Golden Chain for a Reward: Which fell to the ſhare of Mr. *John Drake*, who firſt deſcried her about three a Clock. About ſix a Clock they came up with her, gave her three Shots, ſtruck down her Mizen, and boarded her.

They take the *Cacafuego*

They found her as rich and weighty as ſhe was reported to be, having aboard her thirteen Cheſts full of Rials of Plate, 80 *l.* weight of Gold, a good quantity of Jewels, and 26 Tun of Silver. The place where this Prize was taken, was call'd Cape *San Franciſco*, about 150 Leagues from *Panama*, and in 1 Degr. of *North* Lat. Amongſt other rich pieces of Plate which they found in this Ship, they met with a couple of very large Silver Bowls, gilt, which belong'd to the Pilot of her: The Admiral ſeeing theſe, told him, That he had two fine Bowls, but he muſt needs have one of them; which the Pilot yielded to, not knowing how to help himſelf: And further, to make it look leſs like compulſion, he preſented the other of them to the Admiral's Steward. This Pilot's Boy (when they went away) told the Admiral, That his Ship, and not theirs, ſhou'd now be call'd the *Cacafuego*, ſince it had gotten all the rich Lading of the *Cacafuego* in it: Which Jeſt of the Boys made the Company very merry.

After this, having entirely ranſack'd the *Cacafuego*, they caſt her off; and continuing their Courſe to the Weſt, they met with a Ship laden with Linen Cloth, *China*-diſhes, and Silks of the ſame Country. The Owner of it was a *Spaniard* there preſent; from whom the Admiral took a Faulcon wrought in Maſſy Gold, with a great Emerauld ſet in the Breaſt of it. Beſides this, chuſing what he lik'd of the Wares aboard this Veſſel, and ſeizing the Pilot for his own Service, he turn'd the Ship going. This Pilot brought them to the Haven of (o) *Guatulco*, the Town adjacent, which had but (as he ſaid) ſeventeen *Spaniards* in it. Having therefore put to Shoar, they marched directly into the Town, and ſo up to the Publick Hall of Juſtice; where they found the Court ſitting, and a Judge ready to paſs Sentence upon a parcel of poor Negroes, that were accus'd of a Plot to fire the Town. But the Admiral's coming chang'd the Scene of Affairs at the Court; for he being Judge himſelf, paſs'd Sentence upon them all, both Judges and Criminals, to become his Priſoners; which Sentence was preſently executed, and they all carried away to the Ships. Here he made the chief Judge write to the Townſmen, to keep at a diſtance, and not pretend to make any manner of reſiſtance; ſo the Town being clear'd, they ranſack'd it all over, finding no more valuable Plunder than about a Buſhel of Rials of Plate; only one of their Company took a rich *Spaniard* flying out of the Town, who paid him for his trouble in purſuing him, with a Gold Chain, and ſome Jewels. Here the Admiral ſetting aſhoar ſome *Spaniſh* Priſoners, and his old *Portugueze* Pilot, which he took at the Iſlands of Cape *de Verd*, departed hence for the Iſland *de Canno* (p). While they lay here, a certain *Spaniſh* Ship, bound for the *Philippine* Iſlands, came in their way; which they only lightned of a part of the Burthen of her Merchandize, and ſo diſcharged her.

China Silks, and Porcelſean.

(o) *Guatulco* Haven.

(p) Iſland *Canno*.

And now the Admiral thinking he had in pretty good meaſure, reveng'd both the Publick Injuries of his Country, as well as his own Private Wrongs upon the *Spaniards*, began to deliberate upon his return home. But which Way he ſhould take, was the Grand Queſtion to be reſolved: To return by the Streights of the *South* Sea, (beſides the Dangers of that Paſſage which he had already experienc'd) he thought, would be, to throw himſelf into the Hands of the *Spaniards*, who would probably there wait for him, with a far greater Strength than he cou'd now cope with: For he had at this time but one Ship left, tho' it was a very rich one. All things therefore conſider'd, he reſolved to go on to the *Molucca's*, and ſo follow the Courſe of the *Portugueze*, to get home by the Cape of *Good Hope*. But being becalm'd, he found it neceſſary to ſail Northerly, to get a good Wind; upon which deſign they ſail'd at leaſt 600 Leagues, which was all the way they made, from *April* the 16th, to the third of *June*.

A Bay.

June the 5th, being got into 43 Degr. of *North* Lat. they found the Air exceſſively cold, and the further they went the ſeverity of the Cold was more intolerable. Upon which ſcore they made towards the Land till they came within 38 Degr. N. Lat. under which height of the Pole they found a very good Bay, and had a favourable Wind to enter the ſame. Anchoring here, they had ſome Correſpondence with the People of the Country, whoſe Houſes lay all along upon the Water-ſide. They ſent the Admiral a Preſent of Feathers, and Cawls of Net-work; who entertain'd them with ſo much Kindneſs and Liberality, that the poor Wretches thought a Company of kind Angels were come from the other World to careſs them.

The Country and People about the Bay.

Tho' the Country be cold, yet they order the matter ſo in the framing of their Houſes, as to live out of danger of ſtarving: For they ſurround them with a deep Trench, upon the outmoſt Edge of which they raiſe up great pieces of Timber, which cloſe altogether at the top, like the Spire of a Steeple. Their Bed, is the bare Ground ſtrew'd with Ruſhes; and their Fire-place in the middle, about which they all lie.

The Men go naked; the Women wear a looſe Garment of Bulruſhes, dreſs'd after the manner of Hemp, which faſtned about their Middles, hangs down to their Hips; and upon their Shoulders they have a Deer-skin. But their very good Qualities make amends for their ordinary Dreſs and Figure; they being extreamly dutiful and ſerviceable to their Husbands.

The Admiral had quickly after another Preſent from them; which was Feathers, and Bags of Tobacco; a conſiderable Body of them waiting upon him at the ſame time. They were all gather'd together upon the top of a Hill, from whence their Speaker harangu'd the Admiral, who lay below in his Tent, pitch'd at the bottom of the Hill. When this was ended, they left their Weapons and came down, offering their own Preſents, and at the ſame time civilly returning thoſe which the Admiral had made them.

All the while the Women who remain'd above, poſſeſs'd with a mad Fury, tore their Hair, and made dreadful Howlings; which is the common Muſick at their Sacrifices;

crifices, ſomething of which Nature was then ſolemnizing. But whilſt theſe above were ſerving the Devil, the Men below were better employ'd, attending very diligently to Divine Service, then performed in the Admiral's Tent.

The King comes to the Admiral.

The News of the *Engliſh* being there, ſpreading about in the Country, there came two Ambaſſadors to the Admiral, to tell him, That the King was coming to wait upon him, and deſired a token of Peace to aſſure his ſafe Conduct. The Admiral having given this, the whole Train began to march towards them, and that in very good and graceful order.

In the Front came a comely Perſon bearing the Scepter before the King, upon which hanged two Crowns, and three Chains of a very great length: The Crowns were made of Net-work, and artificially wrought with Feathers of many colours; and the Chains were made of Bones. Next to the Scepter-bearer came the King himſelf, a very comely proper Perſon, ſhowing a good Air of Majeſty in his gate and deportment; he was ſurrounded with a Guard of tall Martial-look'd Men, who were all clad in Skins. Next to thoſe came the common People, having (to make the finer Show) painted their Faces, ſome white, ſome black, and ſome other colours, and all with their Arms full of Preſents, even the very Children themſelves not excepted. The Admiral drew up all his Men into order of Battel, and ſtood ready to receive them within his Fortifications. At ſome diſtance from him, the whole Train made a Halt, and kept a profound Silence; at which time, the Scepter-bearer made a Speech of half an hour long. This being ended, the ſame Officer, of a Speech-Maker, became a Dancing-Maſter, and at the ſame time ſtruck up a Song; in both which he was followed by King, Lords, and Common People, who came Singing and Dancing up to the Admiral's Fences. Being all ſet down, there (after ſome preliminary Complements) the King made a Solemn Offer of his whole Kingdom, and its Dependencies, to the Admiral, deſiring him to take the Sovereignty upon him, and profeſſing that he himſelf would be his very Loyal Subject. And that this might not ſeem to be meer Complement and Pretence, he did (by the Conſent of his Nobles there preſent) take off the Illuſtrious Crown of Feathers from his own Head, and fix it upon the Admiral's; and at the ſame time, Inveſting him with the other Enſigns of Royalty, did (as much as in him lay) make him King of the Country.

The King reſigns his Crown and Kingdom to Sir *Francis Drake.*

The Admiral accepted of this new offer'd Dignity, as Her Majeſties Repreſentative, in her Name, and for her Uſe; it being probable, that from this Donation, whether made in jeſt or in earneſt, by theſe *Indians*, ſome real Advantages might hereafter redound to the *Engliſh* Nation and Intereſt in thoſe Parts. The common People diſpers'd themſelves up and down every where amongſt the Admiral's Tents, expreſſing an admiration and value for the *Engliſh* to the degree of Madneſs and Profaneneſs, coming before them with Sacrifices, which they pretended to offer with a profound Devotion to them, till they, by force, kept them back from proceeding in thoſe Impious Ceremonies, expreſſing their utmoſt abhorrence of them, and directing them to the Supreme Maker and Preſerver of all things, whom alone they ought to Honour with Religious Worſhip. The Admiral and his Company travell'd to ſome diſtance up in the Country, which they found extremely full of Deer, which were large and fat, and very often 1000 in a Herd. There was alſo ſuch a vaſt plenty of Conies, that the whole Country ſeem'd to be one intire great Warren. They were of the bigneſs of a *Barbary* Coney, their Heads like thoſe in our Parts, their Feet like a Moles, and their Tail reſembling that of a Rat: Under the Chin, on each ſide, is faſtned a Bag, into which the Creature injects what Food it gets abroad, and preſerves it for a time of neceſſity. The fleſh of them is a valuable Diſh amongſt the Natives, and the Skins afford Robes for the King, and all the great Men.

Deer and Conies.

Gold and Silver.

Nova Albion.

The Earth of the Country ſeem'd to promiſe very rich Veins of Gold and Silver, there being hardly any digging without bringing up ſome of the Ores of them. The Admiral call'd it *Nova Albion*, partly in Honour to his own Country, and partly from the Proſpect of white Cliffs and Banks, which it yields to them that view it from the Sea. At his departure hence he ſet up a Monument, with a large Plate, upon which was Engraven Her Majeſties Name, Picture, Arms, Title to the Country, the time of their arrival there, and the Admiral's own Name.

In this Country the *Spaniards* had never ſet footing, nor did they ever diſcover the Land by many degrees to the Southward of this Place.

Iſlands in 8 degr. North Lat.

Setting ſail from hence, they loſt the ſight of Land till *October* 13. upon which Day, in the Morning, they came in with certain Iſlands in 8 degrees North Lat. from whence they met a great number of Canoes coming laden with Coco's, and other Fruit. Theſe Canoes were hollowed within with a great deal of Art, and look'd ſmooth and ſhining without like burniſh'd Horn. The Prow and Stern both yielded inwards, Circle-wiſe; and on each ſide of them lay out two pieces of Timber about a Yard and half long, more or leſs, as the Veſſel was bigger or leſs: They were of a conſiderable heighth, and for ſhew ſet off in the inſide with white Shells. The People that were in them, had the lower part of their Ears cut round, and ſtretched down a conſiderable way upon their Cheeks, by the weight of thoſe things they hang in them. They ſeem'd to deſign their Nails for Weapons, letting them grow a full Inch in length: Their Teeth are as black as Pitch, and they have a way to renew them, by eating of an Herb with a ſort of Powder, which they ever carry about them for that purpoſe.

Strange Canoes.

Iſlands.

October 18. they came to ſeveral other Iſlands, in ſome of which there was an appearance of Inhabitants, and continued their Courſe by the Iſlands of *Taquloda*, *Zelon*, and *Zevena*; the firſt of which had good ſtore of Cinnamon, and they were all of them Friends to the *Portugueze*.

Nov. 14. they fell in with the *Moluccas*, and intending for *Tiridore*, as they Coaſted along the Iſland *Mutyr*, which belongs to the King of *Ternate*, they met his Viceroy, who ſeeing the Admirals Ship, without fear came aboard him. He adviſed the Admiral, by no means, to proſecute his Voyage to *Tiridore*, but to ſail directly for *Ternate*, becauſe his Maſter was a very great Enemy to the *Portugueze*, and wou'd have nothing to do with them, if they were at all concern'd with *Tiridore*, or that Nation who were ſettled there. The Admiral, upon this, reſolv'd for *Ternate*, and early the next Morning came to an Anchor before the Town. He ſent a Meſſenger to the King with a Velvet Cloak, for a Preſent, and to aſſure him, That he came thither upon no Deſign, but purely that of Trading in his Country. The Viceroy alſo, by this time, had been with the King, and diſpos'd him to entertain a very favourable Opinion of the *Engliſh*; which wrought ſo far, that the King return'd a very civil and obliging Anſwer to the Admiral's Meſſage, aſſuring him, That a friendly Correſpondence with the *Engliſh* Nation was highly pleaſing to him; That his whole Country ſhould lie open to them, and whatever it yielded ſhould be at their Service. And more then that, That he was very ready to lay himſelf, and his Kingdom, at the foot of ſo Glorious a Princeſs as was the Queen, whom they ſerved, and to make Her his Sovereign as well as theirs. And in token of this, he ſent the Admiral a Signet, carrying it, beſides, with a very great reſpect to the *Engliſh* Meſſenger, who went to Court, and had been received there with much Pomp and Ceremony. The King having a mind to make the Admiral a Viſit a Shipboard, ſent beforehand four large Canoes, fill'd with ſome of the moſt highly dignify'd Perſons about him. They were all dreſs'd in white Lawn, and had a large Umbrella of very fine perfum'd Mats, (born up with a frame made of Reeds) ſpreading over their Heads from one end of the Canoe to the other. Their Servants clad in white ſtood about them; and without theſe were Ranks of Soldiers, placed in comely order on both ſides. Beyond the Martial Men, were plac'd the Rowers, in certain well-contrived Galleries, which lay three of a ſide all along the Canoes, and were decently rais'd one above the other, each Gallery containing 80 Rowers. Theſe Canoes were furniſh'd too with all Warlike Proviſions, and the Soldiers well Accoutred, having all manner of Weapons both Offenſive and Defenſive. Rowing near the Ship, they all paid their Reverences to the Admiral, in great order, one after another, and told him, That the King had ſent them to Conduct him into a ſafer Road than that he was in at preſent: Soon after the King himſelf came, attended by ſix Grave ancient Perſons; he ſeemed to be much pleaſed with the *Engliſh* Muſick, and much more with the *Engliſh* Bravery and Generoſity, which the Admiral expreſs'd to the full, in very large Preſents made to him and his Nobles. The King promis'd the next Day to come aboard again, and that ſame Night ſent them in ſtore of Proviſions, as Rice, Hens, Sugar, Cloves, a ſort of Fruit they call *Figo*, and *Sagu*, which is a Meal they make of the tops of Trees, melting in the Mouth like Sugar, but taſting like a ſowre Curd; but yet, when made up in Cakes, will keep ſo as to be very fit for eating at 10 Years end. The King came not aboard according to his promiſe, but ſent his Brother to excuſe him, and withal, to invite the Admiral aſhore, and to be a Pledge for his ſafe return: The Admiral refus'd to go himſelf, but ſent ſome Gentlemen of his Retinue, in company of the King's Brother, and kept the Viceroy till their return. They were receiv'd aſhore by

Iſland *Ternate.*

King *Ternate* offers his Kingdom to be at the Command of Q. *Eliz.*

Great Canoes.

They go aſhore to have Audience of the King.

another Brother of the King's, and ſeveral of the Nobles, and conducted in great State to the Caſtle, where there was a Preſence of at leaſt 1000 Perſons; the principal of which were the King's Council, to the number of 60 very grave Perſons, and 4 Turkiſh Leigers in Scarlet Robes and Turbants, who were there to negotiate in Matters of Trade between *Conſtantinople* and *Ternate*. The King came in guarded with 12 Lances, a glorious Canopy embroider'd with Gold being carry'd over his Head. He had a looſe Robe of Cloth of Gold hung about him; his Legs bare, but Shooes of Cordovan upon his Feet. He had Circlets of Gold wreathed up and down in his Hair, and a large Chain of the ſame Metal about his Neck, and very fair Jewels on his Fingers. A Page ſtood at the Right Hand of his Chair of State, breathing the cool Air upon him with a Fan two foot in length, and one broad, curiouſly embroider'd and bedeck'd with Sapphires, faſten'd to a Staff 3 foot long, by which the Page moved it. He kindly receiv'd the *Engliſh* Gentlemen, and having heard their Meſſage, ſent one of his Council to conduct them back to their Ships. He is a potent Prince, and has 70 Iſlands under him, beſides *Ternate*, which is it ſelf the beſt of all the *Moluccas*. His Religion, and that of his Country, is *Mahometaniſm*: They obſerve New Moons and Faſts, as the followers of *Mahomet* do; in which Faſts, tho' they mortify the fleſh by Day, yet they pamper it as much in the Night.

Shining Flies.

After this, the Admiral having diſpatch'd all his Affairs here, weighed Anchor, and put off from *Ternate*, ſailing to a little Iſland Southward of the *Celebes*, where they ſtaid 26 Days. This Iſland is extremely Woody, the Trees are of a large high growth, ſtraight, and without Boughs, except at top, and the Leaves ſomething like our *Engliſh* Broom. Here they obſerved a ſort of ſhining Flies in great multitudes, no bigger than the common Flies in *England*, which ſwimming up and down in the Air, between the Trees and Buſhes, made them appear as if they were burning.

Large Bats and Craw-fiſh.

Here are Bats alſo as big as Hens, and a Terreſtrial ſort of Craw-fiſh, which dig holes in the Earth like Conies; and are ſo large, that one of them will very plentifully Dine four Perſons.

* A.D. 1579.
Their danger upon a Rock.
They get free by a Wind.

Setting ſail from hence, they deſign'd to have run for the *Moluccas*; but having a bad Wind, and being amongſt a parcel of Iſlands, with much difficulty they recover'd to the Northward of the *Celebes*, where being not able, for contrary Winds, to continue a Weſtern courſe, they alter'd to the Southward again, which they found very hazardous, by reaſon of the Shoals that lie thick among the Iſlands. This they prov'd by a dangerous (and almoſt fatal) Experiment on *Jan.* 9. * when they run upon a Rock, in which they ſtuck faſt from 8 at Night to 4 *P.M.* the next Day. In this diſtreſs, they lightned their Ship upon the Rocks of 3 Tun of Cloves, and 8 Pieces of Ordnance, and ſome Proviſions: Very quickly after which, the Wind chopping about from the Starboard to the Larboard of the Ship, they hois'd ſail, and the happy gale, at that moment, entirely diſengag'd them from the embraces of the Rock.

(q) *Baratene* Iſland.
Linen Cloth good Merchandize.
The Products of the Iſland *Baratene*.

Feb. 8. they fell in with the fruitful Iſland *Baratene* (q), having in the mean time ſuffer'd much by Winds and Shoals. The People of it are of a comely Make of Body, but a far more beautiful Diſpoſition of Mind, being very Civil and Courteous to Strangers, and punctually Juſt in all their Dealings. The Men cover only their Heads, and the *Pudenda*, but the Women from the Waſte down to the foot: Beſides which, they load their Arms with great heavy Bracelets, ſome of Bone, and others of Braſs and Horn, weighing the leaſt of them two Ounces apiece; and of theſe they have on 8 or 10 at a time. Linen Cloth is a very good Commodity here, theſe People being fond of it, to make Girdles and Rolls for their Heads. The Iſland affords Gold, Silver, Copper, Sulphur, Nutmegs, Ginger, Long-pepper, Limons, Cucumbers, Coco's, Figu, Sagu, &c. particularly a ſort of Fruit, in bigneſs, form and husk, reſembling a Bayberry, hard, but pleaſantly taſted; and when boil'd, is ſoft, and of good eaſie digeſtion. In ſhort (except *Ternate*) they met with no place that yielded more plenty of all agreeable Comforts, for Humane Life, than this did.

(r) *Java Major.*
The Manners of the *Javans*.
Way of boiling Rice.

Leaving *Baratene* they ſail'd for *Java Major* (r), where they met with a Courteous and Honourable Entertainment likewiſe. The Iſland is govern'd by five Kings, who live in a perfect good Underſtanding with one another: They had once four of Their Majeſties a Shipboard at a time, and very often the Company of two or three. The *Javans* are a ſtout and warlike People, go well arm'd with Swords, Targets and Daggers, all of their own Work, which is very curious both as to the outward Form and the inward Temper of the Metal. They wear Turkiſh Rolls on their Heads; the upper part of their Bodies is naked, but from the Waſte downwards they have a *Pintado* of Silk, trailing on the ground, of that colour which pleaſes them beſt. They manage their Women quite at another rate than the *Moluccans* do, for theſe latter will hardly let a ſtranger ſee them; whereas the former are ſo far from that nicety, that they'll very civilly offer a ſtranger a Bedfellow. And as they are thus Civil and Hoſpitable to ſtrangers, ſo they are pleaſant and ſociable amongſt themſelves; for in every Village they have a Publick-Houſe, where they all meet, and bring their ſeveral ſhares of Proviſion, joyning all their Forces together in one great Feaſt, for the keeping up good fellowſhip amongſt the King's Subjects. They have a way peculiar to themſelves of boiling Rice; they put it into an Earthen Pot, which is of a Conical Figure, open at the great end, and all over perforated. In the mean time they provide another great Earthen Pot full of boiling Water, into which they put this perforated Veſſel with the Rice; which ſwelling, and filling the holes of the Pot, ſo that no quantity of Water can enter, is by this ſort of boiling brought to a very firm conſiſtency, and at laſt is Caked into a ſort of Bread, of which with Butter, Oil, Sugar and Spices, they make ſeveral very pleaſant Meals. They have got the *French* Diſeaſe amongſt them in this Iſland, but inſtead of fetching out the Poyſon by a Salivation, they do it by a ſort of Perſpiration thro' all the Pores of the Body; and that by ſitting naked in the Sun for ſome hours, whoſe ſcorching Rays do open thoſe Paſſages, and give free vent to the noxious Matter to diſcharge it ſelf by. The Admiral here had News of ſome great Ships that lay not far off, ſo not knowing what they might prove, he would ſtay no longer at *Java*. From hence they ſail'd for the *Cape of Good Hope*, which was the firſt Land they fell in withal; neither did they touch upon any other till they came to *Sierra Leona*, upon the Coaſt of *Guiney*. They paſs'd the Cape *June* 18. and by the pleaſure of their Voyage that way, found how much the *Portugueze* had abuſed the World, in the falſe Repreſentations of the Horrours and Dangers of it.

* *A.D.* 1580.

July 22. they arrived at *Sierra Leona*, where they found great ſtore of Elephants, and Trees that had Oyſters faſtned to them, upon which they liv'd and multiplied. Leaving this place *July* 24. they arrived in *England*, *Nov.* 3. * it being the third Year after this Noble, but Hazardous Voyage, was firſt undertaken.

CHAP.

CHAP. V.

The Proſperous Voyage of Mr. THO. CANDISH (*of* Trimly *in the County of* Suffolk, *Eſq;*) *and the Second of the* Circum-Navigators; *which Voyage was begun* July 1. 1586. *Written by Mr.* Francis Pretty *of* Eye *in* Suffolk, *his Companion in the ſame Voyage.*

THO' the *Engliſh* had led the way quite round the Globe, and it had been an Immortal Honour to have done it that once, leaving it for others to make the next Experiment; yet finding the reſt of the World lie ſtill, and none pretending to follow them in thoſe Glorious Enterprizes, they reſolv'd to be the Second, as well as the First, *Circum-Navigators*, themſelves.

* *A.D.*1586.

In purſuance of this Deſign, on *Thurſday*, *July* 21. * there ſet out of *Plimouth* 3 Sail, The *Deſire*, a Ship of 120 Tun; the *Content*, of 60 Tun; and the *Hugh Gallant*, a Bark of 40 Tun: In which three Veſſels were 123 Perſons, and ſufficient Proviſions for two Years, at the Charge of the Worſhipful Mr. *Candiſh*, of *Trimly*, in the County of *Suffolk*, Eſq; who alſo was Admiral of this little Fleet.

(*a*) *Sierra Leona.*

Auguſt 23. they made towards *Sierra Leona* (*a*), and the 25th fell in with the South-ſide of it, where they had 5 Fathom Water at the loweſt; and for about 14 Leagues in the South-Weſt, all the way running into the Harbour of *Sierra Leona*, they had from 8 to 16 Fathom. Here they ſpoil'd a Town of the *Negroes*, who had kill'd one of their Men with a poiſon'd Arrow.

September 3. ſome of them went up with the Boat four Miles within the Harbour, where they caught plenty of Fiſh; and going aſhore, they got ſome Limons, ſeeing ſome Buffes too as they were returning.

Buffes.

They leave *Sierra Leona.*

The 6th they went out of the Harbour of *Sierra Leona*, and ſtaid one Tide 3 Leagues from the point of the Harbours Mouth, the Tide there flowing (as they obſerved) South-Weſt.

(*b*) Cape*Verde* Iſland, or the Iſle of *Madrabumba.*

The 7th they departed from one of the Iſles of Cape *Verde* (*b*), which is 10 Leagues from the Point of *Sierra Leona*, and the ſame Day they Anchored two Miles off the Iſland, and Landing, found only Plantanes upon it.

The 8th, one of the Boats went out, and Sounded round about the Iſland, finding 5 fathom Water in a Sound at the Weſt-end; afterwards, for a Caſt or two, but two fathom, and then ſix, and ſo deeper and deeper. At the Eaſt-end was a Town, to which the *Negroes* reſort ſometimes, as their Proviſions left there did intimate. There's no freſh Water on all the South-ſide, but on the North there is in three or four places. The whole Iſland is a perfect Wood, except a few ſmall ſpots, where ſome Houſes ſtand, and theſe are encompaſs'd round with Plantane-Trees; the Fruit of which is excellent Food. The place is marvellouſly ſubject to Storms of Rain and Thunder in this Month of *September*.

(*c*) Cape *Trio* in *Braſile.*

They left this Iſland on the 10th, and the laſt of *October* ſailing W. S. W. about 24 Leagues from Cape *Trio* (*c*), in *Braſile*, they fell in with a great Mountain, which had a high round top ſtanding aloft like a little Town.

(*d*) St. *Sebaſtian.*

Nov. 1. they went in between the Iſland St. *Sebaſtian* (*d*) and the Main-Land, where carrying their things aſhore, and erecting a Forge, they built a Pinnace, and fitted up whatſoever was out of order; which Work detain'd them till the 23d.

Upon the 26th, they fell in with the Coaſt of *America* in 47 degrees of North Lat. from which place they ran along the ſhore till they came into 48 degrees of Lat. finding it a very ſteep Beach all along.

(*e*) *Port Deſire.*

Seols and Gulls.

Nov. 27. they came to an Harbour, into which the Admiral firſt entred, calling it, on that account, (from the Name of his Ship) *Port Deſire* (*e*). Near this Harbour there's an Iſland or two very full of Seols, and another as well Stock'd with grey Gulls: The Harbour it ſelf is very convenient for the Trimming and Graning of Ships, becauſe of the conſiderable ebbing and flowing of the Water there. Here the Savages wounded two of their Company with their Arrows, which are made of Canes headed with Flints. A wild and rude ſort of Creatures they were, and, as it ſeem'd, of a Gigantick Race, the meaſure of one of their Feet being 18 Inches in length. When any of them dies, he is buried in a Grave of Stone, upon the Cliffs, by the Sea ſide, all his Darts being faſten'd about his Tomb, and his Treaſures of Shells laid under his Head.

Great Cannibals.

They leave *Port Deſire.*

Decemb. 28. they left *Port Deſire*, and went to an Iſland lying three Leagues to the Southward, and kept along the Coaſt S. W. and by S. The 30th they came to a Rock (much like the Eddyſtone at *Plimouth*) lying about five Leagues from the Land, and in 48½ degrees of South Lat. and Sounding, they had 8 Fathom, rocky ground, within a Mile of it. They kept on Coaſting S. S. W. and found great ſtore of Seols all along the Coaſt.

* *A.D.*1587.

Jan. 2. * they fell in with a great white Cape, in 52 degrees, and had 7 fathom Water within a League of the ſhore. The 3d they fell in with another great Cape, in 52 degrees 45 minutes; from which Cape there runs a long Beach, about a League to the Southward, and reaches to the opening of the *Magellanick Streight*. Under this Cape they Anchor'd, and loſt their Anchor in a very great Storm, which raged violently for three Days.

They enter the Streights of *Magellan.*

Jan. 6. they put into the *Streights*, which they found in ſome places 5 or 6 Leagues wide, and in other places conſiderably more narrow. The 7th, between the Mouth of the *Streights*, and the narroweſt part of it, they took a *Spaniard*, who was left there with 23 more of the ſame Nation; and theſe were all remaining of 400 left three Years before in theſe *Streights*. The ſame Day they paſs'd the narroweſt of the *Streights*, where the *Spaniard* ſhew'd them the Hull of a ſmall Bark, ſuppos'd to be one left there by Sir *Francis Drake*. The Mouth of the *Streights* is in 52 degrees South Lat. and 'tis from thence, to the narroweſt paſs, 14 Leagues; and the Courſe is W. by N. Alſo from this narroweſt Paſs to *Penguin* Iſland is 10 Leagues, and the Courſe is W. S. W. and a little to the Southward. Here, (*f*) in *Penguin* Iſland, they Anchored the 8th Day, and kill'd and ſalted great ſtore of *Penguins*.

One of *Drake's* Barks call'd the *John Thomas.*

(*f*) Penguin Iſland.

(*g*) K. *Philip's* City.

Jan. 9. they left this Iſland, and ſailed S.S.W. to King *Philip's* City, built by the *Spaniards*. It had four Forts, and each Fort had one Caſt-piece in it, which were all buried, and the Carriages left ſtanding in their places; they dug for theſe Pieces, and recover'd them all. The City had ſeveral Churches in it, and ſeem'd to be well contriv'd, eſpecially as to its Situation, which was in the moſt happy place of all the *Streights* for the conveniences of Wood and Water. But miſerable was the Life which this forlorn Remnant of *Spaniards* had lived there, for the ſpace of two Years, having hardly any thing but a few Shell-fiſh to ſupport Nature withal, except they had the luck to take a Deer at any time, that came down from the Mountains to drink. Their deſign in coming to this Town, was to fortifie theſe *Streights*; ſo that all other Nations, beſides themſelves, ſhou'd be debarr'd of a paſſage into the South Sea: But Providence was pleas'd to animadvert, with ſome ſeverity, upon the Wickedneſs and Injuſtice of that proceeding, making this place of their intended Miſchief, to the reſt of the World, a Scene of direful Puniſhments to themſelves; for here the Earth with-held its common Products from them; the Plants wou'd not grow, nor the Trees bear Fruit; nor any of their Labours proſper. And beſides this rigour laid upon Nature, (which in thoſe Parts of the World is not ordinarily ſo very ſparing of her Bleſſings) the *Indians*, their moſt implacable Enemies, broke in upon them in a very violent manner: And by theſe means they were reduc'd to the laſt Extremities, all their Stores brought out of *Spain* being ſpent, and no more to be gotten abroad, the Country either not affording it, or the *Indians* falling upon them, and Hunting the *Spaniards* while they Hunted a few Deer, for the preſervation of their Lives; ſo that at laſt, they died like ſo many Dogs, in their Houſes, in great numbers, and the ſtench of the putrifying Carkaſſes infecting thoſe that ſurvived, they were forc'd to quit the Town with one conſent, and go rambling about up-

The miſerable State of the *Spaniards* at K. *Philip's* City.

on the Sea-Coaſts, living at a barbarous rate upon Leaves and Roots, and Sea-herbs, or what Animals they could at any time happily light on. They determin'd to march on to the River of *Plate*, and were in their miſerable Progreſs met by the *Engliſh*, as was before obſerved. The Admiral nam'd this place (for the ſcarcity of all Neceſſaries here) *Port Famine* (*h*). It lies in 53 Degr. *South* Lat.

(*h*) Port Famine.

(*i*) Cape Froward.

The 14th they left this place, and ran five Leagues South Weſt to Cape (*i*) *Froward*, which Cape is the Southermoſt part of the Streights, and lies in the Lat. of 54 Degr. From this Cape ſailing W. by N. five Leagues more, they put into a Bay which they call'd Muſcle-Cove, from the ſtore of Muſcles found there.

Muſcle-Cove

The 21ſt they left that place, and ſail'd N. W. and by W. ten Leagues, to a fair ſandy Bay, which the Admiral call'd (*k*) *Elizabeth* Bay.

(*k*) Elizabeth Bay.

The 22d they departed from *Elizabeth* Bay, and about two Leagues off found a good River, in which the Admiral rowed in the Boat for the ſpace of three Miles. There was a pleaſant Champaign Country that lay about the River; all elſe but this, near the Streights, being craggy and mountainous. But a very brutiſh ſort of Savages inhabited thereabouts, which had eat up many a *Spaniard*, and would fain have made a Meal upon *Engliſh* Fleſh too, but that they fail'd of bringing them into their Trap. The Admiral finding the Plot they had laid to betray him, made his Men pelt them with their Harquebuſſes, which did Execution upon ſeveral of them: So leaving that River, they ſail'd to St. *Jerome*'s (*l*) Channel, which was two Leagues off.

Cruel Savages

(*l*) St. Jerom's Channel

From this Channel they ſail'd Weſtward, about three or four Leagues, to a Cape which lies on the North-ſide of it; from which Cape to the Mouth of the Streights, the Courſe runs N. W. and N. W. by W. and the diſtance from thence to the entrance into the *South* Sea, is about thirty four Leagues; ſo that the Length of the whole Streights is ninety Leagues.

'Tis farther obſervable, that the Entrance of the Streights into the *South* Sea, is in near the ſame Latitude with the Paſſage out of the North Sea into the Streights, which is 52 ½ Degr. *South* Lat. And here between the fore-mentioned Cape, and the Mouth of the Streights, were they forced to lie in Harbour, till *February* the 23d: The Reaſon of which Impriſonment, was the ſtormy Winds, and exceſſive Rains, that poured down with ſuch fury from the Mountains, that they were brought into extream danger thereby, being no leſs diſtreſs'd for want of Food too; the badneſs of the Weather hardly permitting them to land and range the Country for a Supply. As they lay here in the Streights, they obſerved, (which had alſo been diſcover'd by the *Spaniards* before) that there were Harbours on both ſides the Shoar, at every Mile, or two Miles end.

They enter the South Sea.

February the 24th, they entred the *South* Sea, obſerving on the *South*-ſide of the Entrance, a very high Cape, with a low Point adjoining to it; and on the North four or five Iſlands (*m*), lying ſix Leagues off the Main, with much broken and ſunk Ground about them.

(*m*) The Iſlands *Las Anegadas.*

March the 1ſt, they had a great Storm at Night, in which they loſt the Company of the *Hugh Gallant*, being then in 49 Degr. *South* Lat. and 45 Leagues from the Land. The Storm continued three or four Days, and the *Hugh Gallant* having ſprung a Leak, and beaten by the Storm away from all help, was ready every moment to plunge to the bottom: However, ſhe made a ſhift to hold up her head (by the great Labour and Pains of her Men): And on the 15th in the Morning, ſhe came in between the Iſle St. *Mary*, and the Main, where ſhe met the Admiral, and the *Content*; which two Ships had, during the Storm, ſecur'd themſelves two Days at the Iſle *La Moha* (*n*), which lies in 38 Degr. *South* Lat. At this place ſome of the Company went aſhoar, where the *Indians* met them, and gave them a warm Reception with their Bows and Arrows, being yet at the ſame time very cautious of their Guns.

The Gallant in danger.

(*n*) *Moha.*

Theſe *Indians* were of the Country of *Aranco* (*o*), which being a Golden Region, and conſequently very tempting to the avaricious *Spaniards*, had been divers times invaded by them, but to no purpoſe; the Inhabitants having always ſo briskly defended themſelves, that their Enemies (tho' better provided than they) could never boaſt of being their Conquerours: And theſe Deſperadoes miſtaking the *Engliſh* for *Spaniards*, gave them that Entertainment which they always uſed to give the other. After this Skirmiſh they weigh'd Anchor, and ran under the Weſt-ſide of St. *Mary* Iſland (*p*), where they had good riding in ſix Fathom Water. The Iſland it ſelf lies in 37 ½ Degr. *South* Lat. and abounds in Hogs, Hens, and divers ſorts of Fruits. The *Indians* that live here, are in ſuch abſolute Slavery to the *Spaniards*, that they dare not ſo much as kill a Fowl, or a Swine for themſelves: And tho' the *Spaniards* have made them Diſciples, yet they uſe them more like Dogs than Men, or Chriſtians.

(*o*) *Aranco* rich in Gold, and not conquer'd by the *Spaniards*.

(*p*) St. *Mary* Iſland.

The 16th the Admiral went aſhoar with 70 or 80 Men, well arm'd: They were met and welcom'd by two *Indians* of Quality, who conducted them to a place where was a Chapel built by the *Spaniards*, round about which were ſeveral Store-houſes, furniſh'd with good Wheat and Barley, as clean and fair as any *England* it ſelf can produce. They provided themſelves out of theſe Stores, with ſufficient Quantities of Corn; and laid in beſides, good ſtore of Hogs, Hens, Potatoes, dry'd Dog-fiſh, and Maiz, which is a Wheat of *Guiney*. The Admiral invited the two principal *Indians* aboard to a Treat; and the Wine having opened their Eyes, to ſee clearly, that the Admiral and his Men were no *Spaniards*, (as they hitherto ſuppos'd them to be) they began to be very free with them, and to talk largely of the Gold Mines; telling them, That if they wou'd go croſs the Country to *Aranco*, they ſhou'd get as much Gold as they car'd for. But the Admiral not perfectly underſtanding the Information, it being given partly by Signs which were obſcure, proſecuted not that Adventure, but went on with his Voyage.

The 18th in the Morning they left this place, and ſail'd all that Day N. N. E. about 10 Leagues.

The 19th they run in with the Land at E. N. E. and anchor'd under an Iſland call'd the *Conception* (*q*).

(*q*) The *Conception*.

(*r*) *Quintero*.

The 30th they came into the Bay of *Quintero* (*r*), in 33 Degr. 50 Min. *South* Lat. And the laſt Day, a Company of 50 or 60 Men, well furniſh'd, march'd up into the Country ſeven or eight Miles. In their March they ſaw vaſt Herds of wild Cattel, wild Horſes, Dogs, Hares, and Coneys, Partridge, and other Fowl; many fine Rivers, well ſtock'd with all ſorts of Wild-Fowl. But having travell'd as far as they cou'd for the Mountains, and that without any Adventure, after refreſhing themſelves a while upon the Banks of a pleaſant River, they return'd in good order to their Ships that Night. Yet was there a Party of 200 Horſe abroad that Day to have taken them, and that upon the Information of the *Spaniards* that had eſcaped from them the Day before: But theſe valiant Soldiers, tho' they ſaw them, durſt not make any Attack, but kept at a diſtance, and ſo let them go off without any diſturbance.

They go aſhoar.

But the next Day, *April* the firſt, they were a little bolder: For ſome of the *Engliſh* being aſhoar, and very hard at Work, filling of Water, the *Spaniards* (who had watch'd the opportunity, and were then very eager to fight, when they ſaw their Enemies were buſie) poured down 200 Horſe from the Hills upon them, making a ſhift to kill ſome few of them, and take a ſmall number of Priſoners. But the glorious Victory of the *Spaniards* had a ſudden Period ſet to it, by the coming of 15 *Engliſh* more, who ſoon changed the Fortune of the Day, not only reſcuing their own Company, but killing 24 of the *Spaniards* upon the ſpot, and driving the reſt up the Mountains again. After this they rid in the Road, and water'd there in ſpite of the *Spaniards*, till the fifth Inſtant, when they left this Bay of *Quintero*: Putting in at a ſmall Iſland, about a League from the Bay, which is full of Penguins, and other Fowl, they provided themſelves with what ſtore they wanted, and ſo ſail'd away N. & N. by W.

24 Spaniards ſlain.

The 15th they came to *Moro Moreno* (*s*), which lies in 23 ½ Degr. South Lat. under the Tropick of *Capricorn*, and has an excellent Harbour; and is made ſo by a certain Iſland, which gives a Ship entrance at either end of it. Here the Admiral went aſhoar with 30 Men, and was met by the *Indians*, who brought freſh Water and Wood on their Backs. They are a ſimple ſort of People, and live after a wild and ſavage manner, and in very great awe and dread of the *Spaniards*. They brought the Admiral, and his Company, to their Houſes, which lay about two Miles from the Harbour: They were compos'd only of a few Rafters laid a-croſs, ſupported by two or three Forks ſtuck into the Ground, with Boughs ſpread over them. Their Beds were the Skins of wild Beaſts laid upon the Floor; and their Food little elſe but raw ſtinking Fiſh.

(*s*) *Moro Moreno.*

When any of them die, they bury them with all the Tackling that belongs to them, as Bows and Arrows, and their very Canoes. Theſe Canoes of theirs are very artificially made; being form'd of two Skins like Bladders, which are blown full at one end with Quills. A couple of theſe being made faſt together, with the Sinews of ſome wild Beaſt, and then put into the Water, do ſwell and puff up at that rate, that they are as firm and tite as can be: They make nothing of venturing to Sea in theſe Boats, and lading them with great Quantities of Fiſh; part of which goes for Tribute to the *Spaniards*, and part kept to ſtink for their own eating.

Strange Canoes.

Tribute paid in Fiſh.

Piſca Bay.

May the third, they came into a Bay, where are three little Towns, *Paracca*, *Chincha*, and *Piſca*; which latter place lies in 13 $\frac{1}{3}$ Degr. *South* Lat. They landed here, and took ſome Proviſions of Wine and Bread, Hens and Figs, out of ſome of the Houſes; but they could not get aſhoar at the beſt of the Towns, the Sea run ſo extreamly high.

Prizes taken.

They made themſelves Maſters of two rich Ships by this time, laden with Sugar, Moloſſes, Maiz, Cordovan Skins, *Montego de Porco*, Packs of Pintadoes, *Indian* Coats, Marmalade, Hens, &c. One of them, which had the beſt Lading, wou'd have yielded 20000 *l.* had there been opportunity to have made a Sale: And of all this they took as much as they cou'd conveniently beſtow in their Ships, burning the reſt with the Veſſels, and ſetting all the People in them aſhoar.

(v) *Paita* taken & burnt.

The 26th they came into the Road of *Paita* (v), which lies in 5 Degr. 4 Min. *South* Lat. The Town it ſelf is well built, very neat and clean in all parts of it, and contains about 200 Houſes. The Admiral landing here with 60 or 70 Men, had a Skirmiſh with the Inhabitants; the Iſſue of which was, that the *Engliſh* beat them quite out of the Town, and forc'd them up the Hills, from whence they play'd with their Small-ſhot upon them, but wou'd not venture a fair Battel out of thoſe Mountainous Refuges. When the *Engliſh* had poſſeſs'd themſelves of the Town, they march'd after the Enemy up the Hills; and after ſome Diſpute obliging them to retire ſtill further, till it came to a thorough and compleat Rout; they ſeiz'd all their Baggage which they had brought with them out of the Town, and lodged there for Security, up and down in the Mountains. Here was plenty of all ſorts of Houſehold ſtuff; Store-houſes full of all ſorts of Wares, and (to pay them for the trouble of their March up the Hills 25 *l.* Weight of Silver, in Pieces of Eight. They ſet the Town a-fire, and burnt it to the Ground, and alſo to the value of 5 or 6000 *l.* in Goods, together with a Bark lying in the Road: And ſo leaving the *Spaniards* the Blaze of their flaming Houſes and Goods, to light them down from the Mountains at Night, they went hence, directing their Courſe to *Puna*.

(w) *Puna* Iſland.

May the 25th, they arrived at the Iſle *Puna* (w), which lies in 1 Degr. *South* Lat. in the Harbour whereof they found a large Ship of 250 Tun, riding at Anchor, with all her Furniture, which they ſunk without any more adoe, and ſo went aſhoar. The Lord of this Iſland is called the Cacique of *Puna*: He was an *Indian* born; but having married a *Spaniſh* Woman, and being reſolv'd to be of his Wife's Religion, (that happening to be the Chriſtian) he embrac'd it too, making his Subjects follow his Example. He had a ſumptuous and well-contrived Palace near the Sea-ſide, with curious Gardens adjoyning to it, and fair Proſpects out of it, both to the Water, and up into the Country.

He keeps all the *Indians* of the Iſland in continual Drudgery, their Work being to make Cables; ſuch plenty of which is made by theſe labouring *Indians*, that the *South* Sea is moſtly furniſh'd from hence.

Its Products.

The Iſland is near as big as the Iſle of *Wight*, and has a good ſhare of the Bleſſings of Nature: For tho' it does not yield Mines of Gold and Silver, yet it affords thoſe things that are far more neceſſary for Human Life; there's excellent Paſture-land here, and variety of uſeful Animals to be maintain'd by it, as Horſes, Oxen, Sheep, fat and fair, Goats that are very tame, and yield abundance of Milk; beſides very good Fowl, Pigeons, Turkeys, and Duks of a large ſize. The Cacique has Orchards that yield moſt ſorts of uſeful Fruits, as Oranges, Limons, Figs, Pomegranates, Pompions, Melons, Cucumbers, Radiſhes, &c. with divers ſorts of odoriferous Plants, as Roſemary, Thime, &c. One of them is beſet round with the Trees that bear the Bombaſin Cotton; the tops of which grow full of Pods, out of which the Cotton it ſelf riſes. In the Cotton lies a Seed of the bigneſs of a Pea, and in every Pod there are ſeven or eight of theſe Seeds, which (if the Cotton be not gather'd when 'tis ripe) do drop of their own accord, and make a new Spring of the Plant.

Cotton Trees

May the 29th, the Admiral went to a little Iſland cloſe by *Puna*, into which the Cacique had convey'd all the valuable Furniture of his Palace, and other Movables, neceſſary both for Houſe and Ship: Theſe Stores being all diſcover'd, they took what Plunder they thought fit out of them, and convey'd it into their Ships. They burnt the Church alſo which ſtood hard by the Cacique's Palace, and brought away the five Bells that were in it.

Two Skirmiſhes with the *Spaniards*

June the 2d, 100 *Spaniards* aſſaulted them, killing and taking Priſoners twelve of the *Engliſh*, and loſing Forty ſix of their own Men in that Encounter. The ſame Day going aſhoar again with 70 Men, they met with a Party of 100 *Spaniards*, arm'd with Muskets, and 200 *Indians* with Bows and Arrows; and having entirely put them to flight, they made havock of their Fields and Orchards, and burnt four great Ships (that were building) upon the Stocks, as alſo the Great Town it ſelf, which they left a meer heap of Rubbiſh. This Town had no leſs than 300 Houſes in it; beſides which, there were two or three in *Puna*, that contain'd 200 Houſes each.

The Town burnt.

Rio Dolce.

June the 5th, they went out of the Road of *Puna*, and ſail'd to *Rio Dolce*, where they water'd. And the 12th paſs'd the Æquinoctial, continuing a Northerly Courſe all the reſt of that Month.

(w) *Nueva Eſpanna.*

July the 1ſt, they had ſight of *Nueva Eſpanna* (w), being four Leagues diſtant from the Land, and in 10 Degr. *North* Lat.

The 9th Inſtant they took a new Ship of 120 Tun, in which was one *Michael Sancius*, a very skilful Coaſter in the *South* Seas, whom the Admiral took for his Pilot; and he gave them the firſt hint of the great Ship *Anna Maria*, which they took afterwards coming from the *Philippine* Iſlands. They took all the Men, the Sails, the Ropes, &c. out of this Ship of *Sancius*'s, and then ſet her a-fire.

A Bark of Advice taken

The 10th they took a Bark that was going to give the Alarm all along the Coaſts, of the arrival of the *Engliſh*; but all the Men were got out of her.

(x) The River of *Copalita.*

(y) *Agatulco.*

The 26th they came to an Anchor in the River of *Capalita* (x); and the ſame Night, with 30 Men in the Pinnace, rowed to *Agatulco* (y), two Leagues from that River, and in 15 Degr. 40 Min. *North* Lat. they made a Deſcent upon them, and burnt both the Town and Cuſtom-Houſe, which was a large and fair Building. Here were laid up ſix hundred Bags of Anile (for the Dying of Cloth) and four hundred of Cacaos, every Bag of the former being worth forty, and of the latter ten Crowns. Theſe Cacaos ſerve amongſt them, both for Meat and Money: They are like Almonds, tho' not altogether ſo pleaſant; they afford both ſolid Food and Drink too, and paſs in Trade, inſtead of ready Money, 150 of them being as good as a Rial of Plate.

Cacaos paſs for Money in *Nuvea Eſpanna.*

The 28th they ſet ſail from *Copalita* (becauſe the Sea was ſo great there, that they could not fill Water) and reach'd *Agatulto* the ſame Night.

The next Day the Admiral went aſhoar with thirty Men, marching two Miles into the Woods, where they took a Meſtizo *, belonging to the Cuſtom of that Town, and a conſiderable parcel of Stuffs with him, and carried both the Maſter and the Goods away to their Ships.

* Meſtizo's are the Sons of *Spaniards* by *Indian* Women.

(z) *Puerto Nat.* Haven.

Auguſt the 24th, the Admiral, and thirty Men, went in the Pinnace to the Haven *Puerto de Natividad* (z), which lies in 19 Degr. North Lat. where *Sancius* had inform'd them, wou'd be a certain Prize; but before they came thither, ſhe was gone twelve Leagues farther to fiſh for Pearls. However, here they took a Mulatto, that was ſent to give Notice of the *Engliſh* all along the Coaſt of *Nueva Gallicia*, together with all his Letters, and burnt the Town, and two Ships of Two hundred Tun a piece, that were a building there, and ſo return'd to their Ships.

They burn the Town, and two great Ships.

S. *Jago* Bay and River, Pearl.

The 26th, they came into the Bay of St. *Jago*, where they water'd at a good River, that yielded them good ſtore of Fiſh, and ſome quantity of Pearls. This Bay is in 19 Degr. 18 Min. North Lat.

(a) *Malacca* Bay.

September the 2d, they left St. *Jago*, and the third Day came into the Bay of *Malacca* (a), lying a League to the Weſtward of Port *Natividad*, and is a very good place for Ships to ride in.

Acatlan burnt.

The ſame Day the Admiral, with about 30 Men, went aſhoar to an *Indian* Town call'd *Acatlan*, which lies two Leagues from the Road: It conſiſted of twenty or thirty Houſes, and a Church, which they demoliſh'd, and went aboard again that Night.

The 4th they left the Bay of *Malacca*, and ſail'd along the Coaſt.

(b) The Road of *Chacalla.*

The 8th they came to the Road of *Chacalla* (b), which is 18 Leagues from the Cape *de los Corrientes.*

The 9th in the Morning the Admiral ſent out forty Men, (with *Sancius* for a Guide) who marching two Leagues through the Woods, and Deſart Places, light of two or three Families, ſome of which were *Indians*, others *Spaniards*, and one *Portugueze*; all which they brought along to their Ships. The Admiral made the Women go fetch Plantanes, Limons, Oranges, and other Fruits; and for a Reward gave them all their Husbands again, except one *Spaniſh* Carpenter, and the *Portugueze*, whom he retain'd.

(c) Iſle St. *Andrew.* Serpents.

The 12th they arrived at the Iſland St. *Andrew* (c), a very woody place, and yielding vaſt ſtore of Fowl, and Seols, and a ſort of Serpents call'd *Iquano's*, which have four Feet, and a ſharp long Tail, but very good Meat.

(d) *Maſſatlan*

Leaving St. *Andrew*'s Iſland, they came the 24th into the Road of *Maſſatlan* (d), which lies under the Tropick of *Cancer*. The River is large within, but much barr'd at the Mouth; and upon the North-ſide of the Bar, there's good Water, but very bad filling of it, becauſe at low Water it is ſhoal'd half a Mile off the Shoar. The Bay affords good Fiſh, and the Country about it as good Fruits; ſome of which they purchas'd, though with danger.

An Iſland to the Northward of *Maſſathan.*

The 27th, they come to an Iſland a League to the Northward of *Maſſathan.* Upon a little Iſland hard by, they ſaw thirty or forty *Spaniards* and *Indians*, that kept Watch there, being ſent from *Chiametla*, which lay eleven Leagues up in the Country, as *Sancius* inform'd them. But they were like to have been in very great diſtreſs here for freſh Water, and muſt have gone back twenty or thirty Leagues to have fetch'd it, if a Spring had not been diſcover'd in good time. But one of their *Spaniſh* Priſoners putting it into their Minds to ſearch for Water under the Sand; they took that Method, and digging two or three Foot deep, they found good Water, and running ſo freely too, that they might have fill'd ſome Thouſands of Tuns, if they had wanted.

Freſh Water in the Sand.

(e) Cape St. *Lucar*, on the Point of *California.*

(f) *Aquada Segura.*

October the 9th, they ſet ſail for the Cape of St. *Lucar* (e), which is on the Weſt-ſide of the Point of *California*, to which they came on the 14th. It is very like the Needles at the Iſle of *Wight*; and within it there is a great Bay (*f*), into which falls a fair River, about which ſome *Indians* live. In this River they water'd, and lay off and on about the Cape St. *Lucar*, till *November* the 4th.

November the 4th, the *Deſire*, and the *Content*, went beating up and down upon the Head-land of *California*, which lies in 23 Degr. ⅔ North Lat. Upon which ſame Day in the Morning, one of the Company in the Admiral going up the Top-maſt, ſpied a Sail bearing in from the Sea with the Cape; which he preſently ſignified to the Company, with the joyful Exclamation of, A Sail, a Sail. The Admiral (having put all things in a readineſs) ſet forwards in the purſuit of her, and having chas'd her three or four Hours in the Afternoon, got up with her, and ſaluted her with a Broadſide, and a Volley of Small-ſhot. They found her to be the Noble Ship the St. *Anne*, belonging to the King of *Spain*, the Admiral of all the South Sea, and of Seven hundred Tun Burthen. Having boarded ſome Men upon her, they found all things were put into a good poſture of Defence; the Sails were laid cloſe upon the Poop, the Mid-ſhip, and the Fore-caſtle, all the Men ſtood cloſe under Fights, which the Captain had rais'd, provided with Targets, Javelins, Swords, and great Stones, which they threw into the *Engliſh* Ship, and at them that had boarded theirs, forcing them to retire with the loſs of two Men, and four or five wounded. But the Admiral making a freſh Onſet with his Great and Small-ſhot, raked them thorough and thorough, killing and diſmembring a great many of the Defendants, who yet ſtood very tightly to their Buſineſs. But the next Volley reduc'd them to the laſt extremity, ſhattering the Ship at that miſerable rate, and boring ſuch wide Holes for the Water to pour in upon them, that they muſt either yield this moment, or ſink the next. Whereupon hanging out a Flag of Truce, they deſired the Admiral to ſave their Lives, and they would yield up their Ship with all the rich Cargo into his Hands: This he granted, but commanded them preſently to ſtrike their Sails, to hoiſe out their Boat, and come aboard; which was accordingly performed by the Captain, the Pilot, and one of the chief Merchants.

The Fight between the Admiral and the Great St. *Anne.*

She yields.

They told the Admiral what they had aboard, to be the Reward of his Victory; which appear'd to be what was ſufficiently worth the defending on the one part, and the fighting for on the other. There was 122000 Pezo's of Gold, rich Silks, Sattens, Damasks, Musk, with divers other ſorts of Merchandize, and all manner of Proviſions.

A Pezo is 8 s.

This Prize thus gotten, *November* the 6th they put into the Harbour *Puerto Seguro*, where all the *Spaniards*, both Men and Women, to the number of 150, were ſet aſhoar; the Admiral having choſen a very fruitful Spot for them to live upon; and beſides given them good ſtore of Wine and Victuals, with the Sails of their Ship, and ſome Planks, to build them little Houſes in the Country.

The *Spaniards* ſet aſhoar.

The Owners thus diſpos'd off, the next thing was to ſhare the Booty they had brought: And here this ungrateful Work of Diſtribution quickly involved the Admiral in the ill Circumſtances of a Mutiny, every Man having a ſharp Appetite to the Gold, but no man ever thinking he had enough: Eſpecially did this Feud and Diſcontent appear moſt violently in the *Content*, their Vice-Admiral; which therefore from that time ſhould have loſt that Name, and had another: But all was quickly huſh'd up again.

A Mutiny.

November the 17th, being Her Majeſty's of *England*'s Coronation-Day, they diſcharg'd all their Ordnance, and Small-ſhot in both their Ships, and at Night continued the Celebration with Fire-works.

The Admiral reſerved of the Priſoners in the *Spaniſh* Ship, two *Japaneſe* Boys, and three that were Natives of the Iſle of *Manilla*: A *Portugueze*, that had been in *China*, and *Japan*: And a *Spaniſh* Pilot, of good Knowledge in all the Parts between *Acapulco*, and *Nueva Eſpanna*, to the Iſlands *Ladrones*. This *Acapulco*, is the Haven from whence they commonly ſet out for the *Philippines*, as the Iſlands *Ladrones* are their ſtated Watering-places.

November the 19th, the Admiral having diſcharg'd the Captain of the St. *Anne*, with a Noble Reward, and ſufficient Proviſion for his Defence againſt the *Indians*, fired the Ship it ſelf, having to the quantity of 500 Tun of Goods in her, and ſaw her burnt quite down to the Water.

And now the great Buſineſs being happily accompliſhed, which they had ſo long attended upon, they ſet Sail very chearfully for *England*. But they had the Misfortune to loſe the *Content*, their Vice-Admiral: She ſtay'd ſome little time behind them in the Road and they expecting ſhe wou'd have overtaken them, went on before, but never had her Company again. However, purſuing their own Voyage, they directed their Courſe to the Iſlands *Ladrones*; which are diſtant from this Haven of *Aquada Segura*, near 1800 Leagues: And this took them up about Forty five Days, *viz.* From *November* the 19th, to *January* the 3d. Upon this Day, early in the Morning, they had ſight of one of the Iſlands *Ladrones*, call'd *Guana* (*f*), which lies in 13 ⅔ Degr. North Lat. and ſailing with a gentle Gale before the Wind, came up within two Leagues of the Iſland. Here they met with ſixty or ſeventy Canoes, full of Savages, that brought Coco's, Plantans, Potato's, and freſh Fiſh, to exchange for ſome of their Commodities. They gave them ſome pieces of old Iron, which they hung on upon ſmall Cords, and Fiſhing-lines, and ſo let it veer to the Canoes; and by the ſame Method they got back to their own Ship, what the Savages offer'd in exchange. After all the Traffick was ended, they came crowding with their Canoes about the Ship, and thruſt in ſo cloſe ſome of them, that the Ship broke two of their Canoes; tho' the Savages themſelves were none of them drown'd, the Water being almoſt as natural to them, as to the Fiſhes that always lived there. And ſo they continued following the Ship, and wou'd not leave the Company of it, till the Harquebuzes were commanded forth and diſcharg'd at them; tho' tis ten to one if they kill'd any of them: For they are ſo very nimble, that they'll pop immediately into the Water, and dive beyond the reach of all danger, upon the leaſt warning in the World.

The *Content* loſt.

A.D. 1588.

(*f*) *Guana* one of the Iſlands *Ladrones.*

The Commodities of the *Ladrones.*

They were very large Men, extraordinary fat, of a tawny Colour, and wearing their Hair mighty long, for the moſt part, tho' ſome have it tied up in Knots upon the Crown, like the wooden Images that ſtood at the Head of their Canoes.

The People.

Theſe Canoes were very artificially made, conſidering that no Edge-tool was us'd about them. They are about ſeven or eight Yards in length, and half a Yard in breadth, and their Heads and Sterns are both alike: They are made with Raſts of Canes, and Reeds, on the Starboard-ſide, and have both Maſts and Sails; which latter are made of Sedges, and that either ſquare or triangular-wiſe. They have this excellent property, that they'll ſail as well againſt as before the Wind.

Their Canoes.

January the 14th, by Break-of-day they fell in with a Head-land of one of the *Philippine* Iſlands, call'd *Cabo del Spirito Santo* (*g*). The Iſland it ſelf is of large Dimenſions, high in the middle, and depreſs'd to the Eaſt and Weſt parts, and running a great way into the Sea Weſtward. It lies in 13 Degr. North Lat. and is diſtant from *Guana* 310 Leagues, and about ſixty from *Manilla*, which is the chief of the *Philippines*. It is a very woody Iſland, and its Inhabitants are principally Heathens. They ſpent eleven Days ſailing to this place from *Guana*, having ſome foul Weather, and ſcarce bearing any Sail at all for two or three Nights.

(*g*) *Cabo del Spirito Santo.*

(*h*) *Manilla* is planted with *Spaniards*, who live there to the number of Six or Seven hundred Perſons: It is an unwalled Town, and of no great ſtrength, tho' it has vaſt Riches in Gold, and ſeveral good Commodities, to defend from Adverſaries. It has a conſtant yearly Correſpondence with *Acapulco* in *Nueva Eſpanna*, beſides twenty or thirty Ships from *China*, and the Trade of the *Sanguelo's*, which is very profitable.

(*h*) *Manilla.*

Trade from *Acapulco*, and *China*, to *Manilla.*

Theſe *Sanguelo's* are *Chineſe* Merchants, very ſharp and ſenſible Men in all Matters of Trade and Merchandize; extremely Ingenious in Mechanical Contrivances, and the rareſt Embroiderers in Silk and Sattin that are in the whole World. They will Work any Form of Beaſt or Fowl, or Fiſh, in Gold, Silver, or Silk, with all the juſt proportion and colour in every Part, and giving it all the Life and Beauty that an excellent Painter, or that Nature her ſelf almoſt does in the living Original. And 'tis plain, that theſe Men muſt bring a very gainful Trade to *Manilla*, ſince they made no more of Gold than they did; for as they brought great quantities of that precious Metal along with them, ſo they exchang'd it there weight for weight for Silver.

Sanguelos exchange Gold for Silver.

The ſame 14th Day, in the Evening, they entred the *Streights*, between the Iſland *Luçon* and the Iſland of *Cambaia*.

(h) *Capul* Iſland.

The 15th, they fell in with the Iſland of *Capul (h)*, paſſing a very narrow *Streight* betwixt that Iſland and another, in which the Tide was conſiderably great, and a ledge of Rocks lay a one ſide of them off the Point of *Capul*, but they paſs'd without danger: Within the Point was a fair Bay, and a good Harbour, in 4 fathom Water, within a Cables length of the ſhore.

About 10 in the Morning they came to Anchor, and preſently a Canoe rowed up to them, in which was one of the ſeven chief *Caſiques* of the Iſland. They paſs'd for *Spaniards* with theſe People, who, according to their uſual way of Trading with them, came and brought their Coco's and Potato-Roots to the *Engliſh* in like manner. They gave them a Yard of Linen Cloth for 4 Coco's, and as much for about a Quart of Potatoes, which in that Iſland are very ſweet and excellent Meat, either Roaſted or Boil'd. The *Caſique* that came aboard them, had his Skin ſtreaked and figur'd full of very ſtrange Devices all over his Body; they kept him with them, and deſired him to ſend ſome of his *Indian* Servants, that managed his Canoe, to go and fetch his other ſix Brother *Caſiques* to the Ship too. The *Caſiques* very quickly came, according to their requeſt, and with them a large Train of the People of the Iſland, who had another as large of Hogs and Hens, and a whole Market of Coco's and Potatoes. And now the *Engliſh* had nothing elſe to do, for all that day, but to deal with theſe Huckſtering People, who ſold to them juſt as they did to the *Spaniards, viz.* 8 Rials of Plate for a Hog, and one for a Hen. Here a Juſt Execution was perform'd upon a *Spaniſh* Pilot, taken in the great St. *Ann*, who had Plotted to betray them into the hands of the *Spaniards*; for which he was Hang'd.

The *Caſiques* come aboard.

Cuſtoms of the People.

They lay about this Iſland of *Capul* for about 9 Days, being all the while well furniſh'd with freſh Victuals, good Water, and Wood. The People of the Iſland are all *Pagans*, and are ſaid both to Worſhip and Converſe with the Devil; they go almoſt naked, and are of a tawny Complexion. The Men wear a piece of a certain kind of Linen, woven out of Plantane-leaves, about their Waſtes, and another coming down from their Backs, and ſo under the Twiſt, which is faſten'd to their Girdles. The Rite of Circumciſion is in practiſe here amongſt them; beſides which, the Males undergo another operation, which is far from being common, and hardly practis'd any where elſe, except in *Pegu*. They make a perforation quite through the Glans of the *Penis*, with a Nail of Tin ſplit in the lower end and rivetted, which they order ſo as to take out and put in again as they have occaſion. They Invented this for a prevention of the unnatural Crime of Sodomy, which the Men of the Iſland were, it ſeems, horribly addicted to; and it was done at the humble Petition of the Women too, who laid the Caſe before the Magiſtrates, and obtained this Remedy.

On the 23d, the Admiral Summon'd all the *Caſiques* of this Iſland, and of 100 more, (which had paid him Tribute) to appear before him: And here he diſcover'd himſelf and his company to them, telling them that they were *Engliſh*, and the greateſt enemies the *Spaniards* had in the World. At the ſame time, he generouſly gave them back in Money, the value of all the Tribute he had receiv'd, and which was paid by them in Hogs, Coco's, Potatoes, and the like. This unexpected favour of the Admiral, ſurpriz'd the whole Aſſembly of *Caſiques* at a very great rate, they admired his Bounty and Generoſity, and engaged to aſſiſt him with all the Forces of their reſpective Dominions, whenever he wou'd begin a War with the *Spaniards* in thoſe Parts. And ſo no leſs pleas'd with finding them to be *Engliſh*, than with the kindneſs they had receiv'd from them, having row'd about the Ship awhile with their Canoes, to give them ſome Diverſion, they took leave, the Admiral giving them a Gun at their Departure.

They promiſe Aſſiſtance againſt the *Spaniards*.

The Iſland *Masbat*

Jan. 24. they ſet ſail, and ran along the Coaſt of *Manilla*, ſteering N. W. between that Iſland and the Iſland of *Masbat*. And in the Iſlands hereabouts, they perceived the *Spaniards* to keep a ſtrict Watch, making great fires, and diſcharging their Pieces all Night long, having taken the Alarm of their coming. The Iſland *Panama* (i) is a plain level Country in many places, affording very fair and ſtraight Trees for the making Ship-Maſts; and beſides, ſeveral Mines of very fine Gold, which are in the Cuſtody of the *Indians*. To the Southward of it lies the Iſland of *Negroes* (k), a very large Iſland, almoſt as big as *England*, and in 9 degrees North Lat. It appeared to be the moſt part of it low Land, and very fruitful; the People are neither Slaves to the *Spaniards*, nor any other Nation, but their own entire Maſters.

(i) *Panama.*

Mines of Gold.

(k) *Negro* Iſland.

They leave the *Philippines.*

Jan. 29. at 6 in the Morning, they ſet ſail, paſſing through the *Streight* between *Panama* and *Negro Iſland*; when having made about 16 Leagues, they found a fair opening of the *Streight* tending S. W. and by S. About this time their Boat, which they had ſent out before them in the Morning, came up to them again, in which the Admiral ſent a *Spaniſh* Priſoner aſhore, with a Meſſage to his Captain, who commanded a Ship that lay at *Panama* the Night before. The Meſſage was to this effect: *That he ſhou'd be ſure to provide good ſtore of Gold againſt the Admiral came that way again, for he intended to come and make him a Viſit at* Manilla; *which being a long Voyage would deſerve good Entertainment.* And farther, *That he had certainly come now, and weighed ſome of his Golden Bags in an* Engliſh *Pair of Scales, but that he wanted a bigger Boat to Land his Men upon him.*

(l) *Batochina*

Feb. 8. they ſaw in the Morning the Iſland *Batochina* ( ), which lies near *Gilolo*, and is in 1 degree North Lat. The 14th, they fell in with 11 or 12 ſmall Iſlands, flat and low, and almoſt quite ſunk in the Sea; they lie near the *Moluccas*, and are in 3 degrees 10 minutes South Lat.

March 1. having paſs'd the *Streights* of *Java Major* and *Minor*, they Anchor'd under the S. W. Parts of *Java Major (m)*, where they ſpied ſome People fiſhing in a Bay under the Iſland. The Admiral ſent out the Boat to them, in which was a Negro that cou'd ſpeak the *Moreſco* Tongue, which is much uſed in *Java*; but they being frightned at the coming of the Boat, got aſhore, and run away into the Woods. Yet one of them came to the Sea-ſide when the Negro called, and directed them to find freſh Water, and carried a Meſſage from the Admiral to the King, certifying him that he was come thither to Traffick for Victuals, or any valuable Commodities that his Iſland afforded.

(m) *Java*

Some of the King's Canoes bring them Proviſions.

March 12. there came 9 or 10 of the King's Canoes, as full laden with all ſorts of Proviſions as ever they cou'd ſwim: They brought them Oxen, Hogs, Hens, Geeſe, Eggs, Sugar, Coco's, Plantanes, Oranges, Limes, Wine and *Aqua Vitæ*. Two *Portugueze* that came to ſee them, and to enquire about their King *Antonio* then in *England*, gave them a large Account of the Manners and Cuſtoms of this People. The King of that part of the Iſland (they inform'd them) was a Man of whom his Subjects ſtood in exceeding awe, and who exercis'd ſo Abſolute a Power over them, and all they had, that no Man dar'd ſo much as make a Bargain without his leave; and if any did preſume to do it, he paid for it with his Blood. This Prince had to his own ſhare 100 Wives, (as his Son had 50) who may poſſibly be very happy as long as he lives, but cannot be ſo any longer: For he being dead, the Body burnt, and the Royal aſhes laid up in an Urn; within 5 Days after this, the Tragedy of his Wives begins and ends. They all of them go to an appointed place, where, when they are come, the Favourite Wife throws a Ball out of her Hand, which, where it reſts, marks out the Place of their Death. Being come thither, they turn their Faces to the Eaſt, and with their Daggers ſtab themſelves to the Heart: And taking out handfuls of their own Blood, beſmear their Bodies with it; and thus they die. This barbarous Sacrifice of themſelves, to the Ghoſt of their dead Husbands, are the Queens of *Java* oblig'd to make by the Cuſtom of their Country. The Men of this Iſland are very good Soldiers, hardy, valiant, and deſperate to the laſt degree: They'll ſtick at nothing that their King commands them to do, be it attended with ever ſo threatning a danger. Shou'd he bid them plunge a Dagger into their Breaſts, or leap off from a precipice, or into a Den of wild Beaſts, they'll immediately do it, becauſe the anger of their King is as certain Death as the point of the Sword, or the Teeth of the wild Beaſts.

The King's Wives kill themſelves.

The Natives Obedience to their King.

They are of a tawny Complexion like the reſt of the *Indians*, and go naked; but their Women are of ſomething a better hue, and ſhow more modeſty than the Men in the uſe of Apparel. After this Relation of the *Portugueze*, having contented the *Javans* for the Victuals they had brought them, and receiv'd a Promiſe from them of good Entertainment when they came again, they took their leaves of them, the Admiral making them a Preſent of three great Pieces of Ordnance at parting. The next day, *viz. March* 16. they ſail'd away for the *Cape of Good Hope*.

They leave *Java.*

Hope, and ſpent all the reſt of *March*, and the whole Month of *April*, in traverſing the vaſt Ocean between *Java* and the Main of *Africa*, making many Obſervations of the Stars, the Weather, the Winds and Tides, the Bearing and Poſition of Lands.

May 11. one of the Company ſpied Land, bearing N. and N. by W. and about Noon they ſaw ſome that bore Weſt, of them which they believed to be the *Cape of Good Hope*, they being then about 40 or 50 Leagues from it: But by reaſon they had a ſcanty Wind, they ſtood off to the S. E. till Midnight, and then the Wind coming fair they hal'd along Weſtward. The 12th and 13th Days they were becalm'd, and the Sky was thick and hazy, but on the 14th it clear'd up, and they ſaw Land again, which prov'd to be the Cape *Falſo*, which is ſhort of the *Cape of Good Hope* 40 or 50 Leagues.

Cabo Falſo.

This Cape *Falſo* is very eaſie to be known, for there lie right over it three very high Hills, but a little diſtance from each other; the higheſt of which is the middle-moſt, and the ground is much lower by the Sea-ſide. Beſides, the *Cape of Good Hope* bears W. and by S. from this Cape *Falſo*.

They double the *Cape Good Hope.*

May 16. they ſpied the *Cape of Good Hope*, obſerving the Head-land to be conſiderably high, and at the Weſterly Point, a little off the Main, two Hammocks appearing, and three others lying further off into the Sea, yet low Land between them towards the Sea. This *Cape of Good Hope* is made, in the *Portugueze* Sea-Charts, 2000 Leagues from *Java*; but by their Reckoning they found it to be but 1850 Leagues, which took them up juſt 9 Weeks to ſail it.

They Anchor at St. *Helena.*

June 8. by break of Day, they came within 7 or 8 Leagues of St. *Helena*, which they had juſt a glimpſe of; but having little or no Wind, they cou'd not reach it that Day, but ſtood off and on all Night. The next Day, having a pretty good Wind, they ſtood in with the ſhore, (the Boat being ſent before to the Harbour) and came to an Anchor in 12 fathom Water, in a good Bay, under the N. W. ſide of the Iſland, two or three Cables length from the ſhore. This Iſland lies in the Main-Sea, as it were in the midſt between the Main-Land of *Africk*, and that of *Braſile* and the Coaſt of *Guiney*: It is in 15 degrees 48 minutes South Lat. and between 5 or 600 Leagues from the *Cape of Good Hope*.

Here they went aſhore, and entred the Church which had a fair Cauſey leading to it, a Frame with two Bowls, and a Croſs of Free-ſtone adjoyning to it; within it was hung with painted Cloths, having an Altar with the Bleſſed Virgin, and the Story of the Crucifixion pictur'd in a Table. The Valley where the Church ſtands is extremely pleaſant; ſo full of rare Fruit-Trees, and excellent Plants, that it appears like ſome very fine and well cultivated Garden. There are long rows of Limon, Orange, Citron, and Pomegranate-Trees, Date and Fig-Trees, that preſent the Eye with Bloſſoms, Green Fruit, and ripe all at once. The Trees are very nicely trimm'd and dreſs'd, and diſtinguiſh'd by ſeveral curious Walks, which have the protection of their boughs, and are made cool and ſhady thereby. There is a ſweet Cryſtal Spring riſing at a diſtance, that diffuſes it ſelf in many pretty Rivulets all through the Valley, watering the ſeveral parts of it, and refreſhing each Plant and Tree. There is hardly any empty ſpace in this whole great Garden, for what places Nature has left unoccupied, Art has taken care to fill up to ſome advantage. The Iſland it ſelf affords great ſtore of Partridges and Pheaſants, which are much larger and fairer than ours in *England*: There are Turkeys too, both black and white, and with red Heads, about the bigneſs of ours, and their Eggs much the ſame, only quite white. Here is alſo great plenty of Cabritos, or wild Goats; they are as big as an Aſs, have a Horſes Main, and a Beard that reaches down to the very ground: They go ſometimes together in a Herd, that reaches a full Mile in length. Here are alſo vaſt Herds of wild Swine, that keep chiefly upon the Mountains, as the Cabritos do; they are fat, and ſo very wild, that a Man can never come at them, except they be aſleep, or rouling themſelves upon their Miry Beds.

The Fruits of St. *Helena.*

Partridge, Pheaſants and Turkeys.

Cabritos and wild Swine.

They leave St. *Helena.*

June 20. having taken in all Neceſſaries here, they ſet Sail for *England*, and haled away N. W. and by W. 'Tis to be obſerv'd, that the Wind is commonly off the ſhore at St. *Helena*.

On *Friday* the 23d of *Auguſt*, they ſailed E. and E. by S. for the Northermoſt of the *Azores*. The 29th, at 4 after Midnight, they fell in ſight of the Iſland *Flores* and *Corvo*, ſtanding in 39 ½ degrees North Lat. and ſo ſail'd away N. E.

Sept. 3. they met with a *Flemiſh* Veſſel that came from *Lisbon*, and told them the joyful News of the overthrow of the *Spaniſh* Armada. *Sept.* 9. having had the Winds farewel in a moſt violent Storm, that carried away moſt part of their Sails, they arrived at the very-much and long-deſired Haven of *Plimouth*.

CHAP. VI.

The Voyage of OLIVER NOORT, *&c.*

THE *Engliſh* Nation having had the Honour of the two firſt entire *Circum-Navigations* of the Globe, their Neighbours, the *Dutch*, put in for next ſhare, in a noble Attempt to the ſame purpoſe, and as happily accompliſh'd.

* *A.D.* 1598.

July 2. * the good Ships, the *Maurice* and the *Concord*, ſet ſail from *Rotterdam*, and reaching the Coaſts of *England*, ſtaid there till *Sept.* 13. for their two Companions, the *Henry Frederick*, and the *Hope*, which then came up to them. And 'tis to be obſerv'd, that tho' this Voyage was undertaken and perform'd at the Charge of the *Dutch* Nation, yet did the *Engliſh*, in ſome meaſure, ſhare the Honour of it with them, their chief Pilot being an *Engliſhman* †, and one that had before encompaſs'd the Globe with Mr. *Candiſh*.

† Capt. *Melis* Pilot in this, and Mr. *Adams* in the next Voyage. Capt. *Davis* alſo in their firſt *Indian* Voyages; all which were *Engliſh men*.

October 4. they met a ſmall Fleet of *Dutch*, *Engliſh* and *French*, which were coming out of *Barbary*, and gave them an Account of the horrible Peſtilence raging there, which had ſwept away 250000 Perſons in a very ſhort ſpace. On the 6th, they came between *Teneriff* and the great *Carie*.

Nov. 3. they had ſight of the Coaſts of *Guiney*. *December* 4. they came hard by Cape *Palma*, which lies in 3 ½ degrees North Lat. The 10th, they had ſight of *Princes* Iſland (*a*), which lies one and a half degr. North Lat. They ſent their Boats before to make ſome diſcovery of the Iſle, where having entred with a Flag of Truce, they were met by a *Negro* bearing the like Peaceful Sign. They demanded only a ſupply of Proviſions, which was granted in very fair and friendly Terms; but while they were ſettling this Point, a Party that lay in Ambuſcade ſurpriz'd them in a moment, and cut off ſeveral of them; amongſt which was the brave *Engliſh* Pilot, Captain *Meln*. The *Portugueze* purſued them to their Boats, which they very briskly attack'd, killing the Admiral's Brother, and very near taking all the reſt Priſoners. In Revenge of this Outrage, it was concluded (in a Council of War) that the Caſtle ſhould be Aſſaulted, which Experiment being tried, and found to prove too coſtly and hazardous, they took their Revenge in burning all their Sugar-Houſes: And ſo having provided themſelves with freſh Water, they ſet ſail the 17th.

(*a*) Iſland *del Prin.*

Treachery of the *Portugueze.*

The 25th they reach'd Cape *Gonſalvo* (*b*), where the Wind generally blows from the Land in the Night, and from the Sea in the Day. Here they found two *Dutch* Ships, which inform'd them of the misfortune of Captain *Cleerhagen*, who was loſt, with moſt part of his Company, upon *Princes* Iſland, as they had like to have been; as alſo of the Voyage of *Peter Veerhagens*, who had entred the River of *Congo*, and putting in at this place, had here buried 38 of his Company, and was gone ſome time before for *Annobon*.

(*b*) Cape *Gonſalvo.*

* *A. D.* 1599.

Jan. 1. * they paſs'd the Iſland *Annobon*, at which they found two degrees South Lat. and the 28th of the ſame Month they had the Sun in their Zenith. The 5th they reach'd Cape St. *Thomas*, (upon the Coaſt of *Breſile*) which lies in 22 degrees South Lat. The 6th they paſs'd the *Fair* Cape, and in the Evening Cape *Frio*. On the 9th, they came to *Rio Javere*. After ſome loſs of time, and company too, by the Treacheries of the Grand Enemy the *Portugueze*, they went to St. *Sebaſtian*, where the Comforts of a good Harbour, freſh Water, and plenty

Cape St. *Thomas*, *Frio*, *Fair Cape*, *&c.*

ty of Wood, attended them; but no Fruits were to be had.

March 14. a cruel Storm ſurpriz'd them, the fury of which parted the Vice-Admiral, and the *Hope*, from the reſt of the Fleet, but they had the good luck to meet them again on the 17th. And now the Scurvy encreaſing amongſt them, together with the approach of the Winter, made them reſolve to put in at St. *Helena*; but miſſing that, they concluded upon the *Aſcenſion*, or ſome other Iſland, that was capable of giving them a tolerable Entertainment. But hard Fortune brought them to a very Barren and Deſolate Iſland, in 20½ degrees South Lat. where they had nothing but a few Fowl, (call'd *Melle Mewen*) which they knock'd down with their Clubs. Having therefore quickly had enough of this Barren place, they put off to Sea again; and the 1ſt of *June*, thinking to have reach'd the *Aſcenſion*, they found themſelves on the Continent of *Braſile*. But the *Portugueze* not ſuffering them to land there, they ſail'd to Iſle St. *Clara* (c), which lies in 21 degrees 15 minutes South Lat. It's about a Mile * in compaſs, and as much diſtant from the Continent. The Iſland afforded them little elſe but Herbs; but what it denied them in Food, it paid in Phyſick, yielding a ſort of ſowre Plumbs, which in 15 Days cured all their Sick.

(c) St. *Clara*.

* By Miles underſtand *Dutch* Miles.

July 16. they ſet out for *Port Deſire*, in 47 degrees 40 minutes South Lat. which (after much bad weather) they reach'd *Sept*. 20. They furniſh'd themſelves with ſtore of Fiſh and Penguins, in an Iſland that lies three Miles to the South of this place: Of the latter ſort of Animals they took 50000 (which were as big as Geeſe) with a vaſt company of their Eggs, that proved good and refreſhing Meat to their ſick Company.

Penguins.

They went up the Rivers *October* 5. and going a Land, found Beaſts in the Country like Stags and Buffels, with a multitude of Oſtriches; one of whoſe Neſts they light on furniſh'd with 19 Eggs.

Beaſts like Stags and Buffels. Oſtriches.

The 20th, the Admiral went aſhore to obſerve the Country, leaving Orders with them that Guarded the Boats, not to ſtir a foot from their Charge; but they having a mind, it ſeems, to ſee the Country too, took a ſmall Ramble, and fell into an Ambuſcade of Savages, which kill'd three of them, and wounded the fourth.

Savages.

Theſe Savages were very tall portly Men, painted to the degree of Terrour, Arm'd with ſhort Bows and Arrows; which latter were headed with Stone.

(d) Cape *Virgins*.

The 29th they put off from hence; and *Nov*. 4. they made pretty near Cape *Virgins* (d), where the Land lies low and plain, and by its whiteneſs yields a proſpect like *England*. They made many Attempts to have entred the *Streights*, and were as often fruſtrated: They were beaten back by Tempeſts of Wind, Rain, Hail and Snow. They loſt their Anchors, broke their Cables; Sickneſs and Contention (worſe than any Diſeaſe) were added to all the reſt of their Calamities; and all theſe, in concurrence, retarded their progreſs ſo far, that 'twas well nigh 15 Months (from the commencement of the Voyage, before they could make any good way into the *Streights*.

But to return, They obſerv'd the Land to lie South-Weſt from the Cape *Virgins*, and the Mouth of the *Streights* to be about 14 Miles diſtance from it, and half a Mile in breadth.

(e) Cape *Naſſau*.

Nov. 25. they ſaw ſome Men upon two Iſlands that lay near the Cape *Naſſau* (e), who bid Defiance to the *Hollanders*, and ſhook their Weapons at them; but they Landing, notwithſtanding this Defiance, purſued the Savages to a Cave, which they ſtubbornly defended to the laſt Man, dying every one of them upon the ſpot. The *Dutch* being got in, found their Wives and Children in that dark Receptacle; and the Mothers, who expected nothing but preſent Death to themſelves and their Infants, cover'd the little ones with their own Bodies, reſolving to receive the firſt Stab themſelves. But the *Dutch* did them no more injury, than the taking of 4 Boys and 2 Girls of their number, from them, which they brought a Shipboard.

One of theſe Boys having learnt to ſpeak *Dutch*, gave them this Intelligence: That the greater of theſe two Iſlands was call'd *Caſtemme*, and the Tribe that Inhabited it *Enoo*. That the leſs Iſland was call'd *Talcke*, and that both were well ſtor'd with Penguins, whoſe Fleſh was their Food, and the Skins their Cloathing; and as for Habitations, they had none but Caves. That the adjoyning Continent abounded with Oſtriches; which alſo ſerv'd for Food. That they were diſtinguiſh'd into ſeveral Tribes, which had their ſeveral diſtinct Reſidences: The *Kemenetes* that dwelt in *Kaeſay*, the *Kennekin Karamay*, the *Karaiks* in *Morina*; all which People were of the common ſize, but broader Breaſted, and painted all over, the Men tying the *Pudenda* up with a ſtring, and the Women covering thoſe Parts with a Penguins skin, the former wearing long hair, and the latter ſhaven, but both ſorts naked, except a Cloak of Penguin-skins reaching to the Waſte. That there was alſo a fourth Tribe of them call'd *Tirimenen*, that dwelt in *Coin*; and theſe were of a Gigantick Stature, being 10 or 12 Foot high, and continually in Wars with the other Tribes.

Caſtemme and *Talcke* Iſland.

Giants, of which ſee more in *Sebaſtian de Weert's* Voyage.

The 28th they paſs'd to the Continent, and ſaw ſome Whales at a diſtance by the way: They encountred too a very pleaſant River, about which were delicate Trees, and ſtore of Parrots; upon the ſcore of this pleaſant proſpect, they call'd this *Summer-Bay* (f).

(f) *Summer* Bay.

(g) Port *Famine*.

The 29th they ſet ſail for *Port Famine* (g): Here the Land tends ſo far to the South, that the Iſlands *Pantagoms*, and *Terra Fulgo*, ſeem afar off to meet together. They found no remaining tokens here of the late famous *Philip*-City but a heap of Stones, to ſhew that once there had been a Building. The *Magellanick* Streight is diſtant from hence about 4 Miles, the Hills on both ſides of which are vaſtly high and deep, and all the Year long cover'd with Snow *. Here at *Port Famine* they cut down Wood to make them a Boat, and found the Bark of the Trees to be hot and biting like Pepper. Having no good watering here they left this place, (doubting indeed whether it were *Port Famine* or no) and after two Miles paſs'd found a good River: This was *Decemb*. 1. The next day they doubled Cape *Froward* (h) with ſome danger, by reaſon of unſafe Anchorage, and contrary Winds; ſo paſſing 4 Miles farther, into a large Bay, they Anchor'd there. Here was a Plant like Sneeze-wort, good againſt the Scurvy, and another as bad for Madneſs, making ſome that taſted it almoſt diſtracted for a time.

* See *Magellane's* and *Drake's* Voyages.

(h) Cape *Froward*.

Here they had a ſight of *Sebaſtian de Weert*'s Ship, who was one of *Verhagen*'s Company, which with another of the ſame Fleet, had been driven back out of the South Sea. He told them he had ſpent above 5 Months in the *Streights*, and had but 38 left out of 110 Men, and not being able to endure the Storms of the South Sea, was forc'd to put in there, while the reſt of the Fleet held on their Courſe.

* *A.D.* 1600.

(i) *Maurice* Bay, which has Ice all the Year long.

Jan. 2. * they ſet out again, directing their Courſe to *Maurice* Bay (i), which they obſerv'd to extend far Eaſtwards, and to receive ſeveral Rivers into it; in the Mouths of which was vaſt quantities of Ice, that ſeem'd never to melt all the Year round: For tho' this was near the *Midſummer* Seaſon in that Southern Climate, yet the Ice was ſo thick, that at 10 fathoms Sounding they cou'd not reach the bottom of it. The Land alſo ſeem'd to be a heap of broken Iſlands, which the heighth of the Mountains made appear like one firm and continual piece. Here they had the diſtreſſes of Hunger, and continual Rains, and the loſs of two of their Company, who were kill'd by the Savages as they were picking Muſſels, which were their chief Suſtenance.

(k) *Miniſte* Bay.

Gooſe Bay.

Having weather'd out many Storms which endanger'd them in *Meniſte* Bay (k), and ſome Encounters too with the Savages, they ſet ſail on the 17th, and were driven by a Storm into *Gooſe* Bay, 3 Miles diſtant, and receiving that Name from the multitude of that ſort of Fowl found there; of which they obſerv'd, that they cou'd both dive and ſwim very well, but not fly at all. Here the Vice-Admiral, for divers Crimes, was condemn'd by a Council of War to be turn'd aſhore, there to ſhift for himſelf, amongſt the wild Beaſts, and far wilder Inhabitants of the Country.

Feb. 1. they entred another Bay, which they call'd *Popiſh* Bay (l), perhaps becauſe their Proteſtant Ships were here ſo diſmally perſecuted with Thunder, Hail and Rain, and their Admiral like to be ſplit upon a Rock.

(l) *Popiſh* Bay.

The 27th, they ſaw at a diſtance a huge Mountain of Ice, in *Gooſe* Bay; but the next day, *viz*. the laſt of *February*, they bid adieu to all thoſe diſmal Proſpects, and paſs'd the Cape *Deſire* (m) into the South Sea. Their Company was now 147, but quickly leſſen'd by the loſs of the Vice-Admiral, whom they dropt *March* 12. Expecting her in vain, they ſail'd to the Iſland *La Mocha*, which is about 6 Miles from the Continent, and lies in 38 degrees South Lat. It is remarkable for a high Mountain in the middle of it, that cleaves it ſelf at top to make way for a Courſe of Waters into the Valley underneath it. Here they barter'd Knives and Hatchets for Sheep, Hens, Maize, Battulas, and other Fruit. They went to ſee the Town, which conſiſted of ſome 50 Houſes of Straw, where they were entertain'd with a ſowre ſort of Drink call'd *Cici*, which is made of Maize ſteep'd in water, and is the choice Liquor uſed at their Feaſts. Polygamy is much practis'd amongſt them, and they buy as many Wives as they can keep; ſo that a Man that has a good many Daughters, may chance to get an Eſtate

(m) Cape *Deſire*, by which they paſs into the South Sea. *La Mocha*.

Cici, a Drink.

The People of *Chili* have the ſame Cuſtoms too

Eſtate by them, eſpecially if they prove handſome. If one Man kill another, the Kindred of the murder'd Perſon are his Judges and Executioners, for they have no Laws, nor Publick Magiſtrates, to keep up any Form of Juſtice amongſt them; but yet a Man may poſſibly buy off his Puniſhment too, by making a Treat of *Cici*. They make their Cloaths of the Wooll of a very large ſort of Sheep, which Creatures they uſe to carry Burthens too: They wou'd not ſell any of theſe to the *Dutch*, tho' they did of another ſort, not much differing from the common.

(*n*) St. *Maries* Iſland.

St. *Maries* Iſland (*n*) lies 18 Miles from hence, in 37 degr. 15 minutes South Lat. Here they met with a *Spaniſh* Ship that was carrying Lard and Meal to *Aranco* and *Conception*, which they Chaſed, and took after a purſuit of 35 Leagues. The Pilot of this Ship told them, They could not get back to St. *Maries* Iſland becauſe of the South Winds, and that there was two Men of War waiting for their coming in *Arica*. Upon which Information, they concluded to ſail to *Val Paraiſo*, and by that means quite loſt their Vice-Admiral, which might otherwiſe have come up to them at laſt. Beſides, they concluded that ſhe miſs'd the Iſland St. *Mary*, upon the wrong placing it in *Plancius*'s Map as high as 38 degrees, when indeed it lies in 37 degrees 15 minutes. And this Errour they themſelves had fallen into, had not Captain *Melis*, the *Engliſh-man*, ſet them right by his Obſervations. And it farther confirm'd them in their Reſolutions not to ſail back to St. *Maries* Iſland, to hear of the misfortune of *Simon de Cordes* there, who was in friendly manner invited aſhore, and then Butcher'd by the *Indians*, together with 23 of his Men; the treacherous *Spaniards* endeavouring to get his two Ships into their hands, and ſending Intelligence to *Lima*, and all the Country about, of the arrival of the *Dutch*, and the Names of all their chief Men.

The help the *Dutch* had from the *Engliſh* in their Voyage.

Mr. *Adams* takes notice of this fight, who went to *Japan* in the ſame Ship.

(*o*) *Val Paraiſo*.

(*p*) St. *Jago*.

Sheep plenty.

Upon theſe Accounts they bent their Courſe to *Val Paraiſo* (*o*), where they took two Ships, and kill'd ſome *Indians*, but the *Spaniards* were all gone. This *Val Paraiſo* lies in 33 degrees South Lat. and up in the Country, about 18 Miles diſtant, lies St. *Jago* (*p*), a Town that affords good ſtore of Red-Wine and Sheep, which they kill only for the Sewet; with which they lade whole Veſſels. Here they received Letters from the Captain of the *Flying Hart*, one of *Veerhagen*'s Company, who was treacherouſly Aſſaulted, and Captivated by the *Spaniards*; which hard fate, he inform'd them, he had avoided, had he not been miſguided by the wrong placing of St. *Maries* Iſland in the Map aforeſaid.

Wars between the *Indians* and *Spaniards*.

At St. *Jago* they intercepted ſome Letters, which gave an Account of the Wars between the *Indians* and *Spaniards* in *Chili*: The former being, it ſeems, in Rebellion, (or rather ſtanding upon a Juſt Defence, or acting a Juſt Revenge) had Sack'd the Town of *Baldivia*, putting vaſt numbers of the *Spaniards* to the Sword, and carrying off many Troops of Captives. They burnt the Houſes and Churches, and ſtruck off the Heads of the Popiſh Images, crying, *Down go the Gods of the Spaniards*. They cramm'd their Mouths with Gold, and bid them ſatisfie themſelves with that, for the ſake of which their Votaries had made ſo many barbarous Maſſacres amongſt them.

Beſides all this, they laid cloſe Siege to the City Imperial, and almoſt ſtarv'd the *Spaniſh* Garriſon there. The Valiant *Indians* that undertook this Action, were about 5000; of which, 3000 were Horſe, 100 ſhot, and 70 Corſlets; all which Furniture was *Spaniſh* Plunder. They ſo mortally hate the *Spaniards*, that they rip up the Breaſts of all they Maſter, to have the pleaſure of tearing out their Hearts with their Teeth; and it adds very much to the pleaſure of their Liquor, to drink it out of a Cup made of a *Spaniards* Skull. They are for the moſt part very Stout and Skilful Soldiers, and commit all their Military Affairs to the Management of one Supreme General, whoſe Orders they devoutly obey. But their Method of Election to this Honour is ſomething odd, for they Chuſe a General as we wou'd a Porter: He that could carry a Timber Log on his Shoulders the longeſt time, and with the leaſt degree of wearineſs, was ſaluted General by the Army.

The fertility of *Chili*.

All this Country of *Chili*, from St. *Jago* to *Baldivia*, is one of the moſt fertile and delightful Spots in the World: There are all ſorts of Cattel and Fruits, Gold Mines in abundance, an Air ſweet and wholeſome to that degree, that it is it ſelf Life and Medicine, and excludes the uſe of all other Phyſick.

La Guaſer.

Morre Gorch.

Morre Morene.

April 1. they entred the Bay *La Guaſer*, and left it the 7th following. The 11th, they came into a great Nook called *Morre Gorch*, 10 Miles from which is *Morre Morene*, from which the ſhore runs to *Anica*; and all this Tract, up to St. *Francis*'s Hill, is very much ſubject to South Winds, tho' in the adjoyning Sea they are very variable and uncertain. The 20th, the Air was all darken'd with an Arenal, which is a Cloud of Duſt rais'd ſo thick, that a Man can't ſee a Stones Caſt from him; they are brought off from the adjacent Shores, and are very uſual in thoſe Parts. The 25th, they were within view of the famous City of *Lima*; and now they came to underſtand the vaſtneſs of the Treaſure which the malice of the *Spaniards* had Robb'd them off, and which otherwiſe they had found in thoſe Ships they took at St. *Jago*. For by the Pilot's Confeſſion, there were no leſs than 52 Cheſts of Gold thrown over-board, each Cheſt containing 4 Arobes and 500 Pots, and each Pot 10 or 12 Pound weight in Gold. And not only this publick, but every particular Man's private Treaſure, was as prodigally flung away, they not caring which way it went, whether to the bottom of the Sea, or the bellies of the Fiſhes, ſo the *Dutch* might be never the better for it. This Gold came from St. *Maries* Iſland, where 3 or 4 Rich *Spaniards* engroſs'd all to themſelves, keeping 2000 poor *Indians* continually ſlaving in the Mines. The 29th they ſpied two Sail, and chaſed them, but to no purpoſe, the Ships built for that Sea (where they ſail moſtly againſt the Wind from *Panama* to *Lima*) being too ſwift for the *Hollanders*. They intended now to have gain'd the Iſland *Coquos* in 5 degrees North Lat. but being fruſtrated in that attempt, the better to avoid the danger of the *Spaniſh* Men of War, they directed their Courſe, *May* 20. for the Iſland *Ladrones*, and ſo to the *Philippines*.

Gold from St. *Maries* Iſland.

(*q*) *Guana*, one of the *Ladrones*.

Sept. 15. they had ſight of the *Ladrones*, and the 16th came to *Guana* (*q*), which is one of them, an Iſland 20 Miles in extent, and yielding Fiſh, Coco's, Bonanos, Sugar-Canes, which the *Indians* brought in a great number of Canoes up to their Ships. Sometimes they ſhou'd ſee 200 of theſe Canoes, with 4 or 5 Men a-piece, which wou'd come all hollowing together, *Hiero*, *Hiero*, that is, Iron, Iron; and with very eagerneſs, run their Canoes upon the Ships, and overturn them Goods and all.

See *Magillan*'s and *Candiſh*'s Voyages, that report many other things of theſe People.

They were a very ſly, ſubtle ſort of People, extremely honeſt with good looking to; but otherwiſe, they wou'd ſell a Man a Basket of Coco-ſhells, with a little Rice at top, for a Basket of Rice, and whip a Sword out of a Scabbard, and ſo pop into the water, and away to the bottom, whither a Man muſt go after them if he meant to have ſatisfaction: And the Women were as good at theſe Rogueries as the Men, they wou'd ſteal as impudently, and dive as well to hide it.

The 17th they ſet ſail for the *Philippines*: On the 20th they met with Ice, yet were then in three degrees North Lat.

(*r*) *Bayla* Bay.

(*s*) Streight of *Manilla*.

(*t*) *Capul* Iſland.

The 16th of *October* they came to (*r*) *Bayla* Bay, a very fertile Land; at which place, by counterfeiting themſelves *Spaniards*, they got good ſtore of all neceſſary Proviſions for their Ships. The *Spaniards*, who are Lords here, make the *Indians* pay 10 ſingle Rials a Head for every one above 20 Years old: Theſe poor Creatures are moſtly naked, and mark their Skins with Figures, ſo deeply impreſs'd as will never wear out. Being diſcover'd here, and alſo having obtain'd their deſign, they ſet ſail for the Streight of *Manilla* (*s*); all the Tract approaching, to which they obſerv'd, was waſte, barren and rocky. Here a ſudden guſt of Wind, from the South-Eaſt, carried away their Maſts and Sails, and treated them with more fury than any they had before met with. The 23d, ſome of them went aſhore, and eat Palmitos, and drank good ſtore of Water; after which followed the Bloody-Flux. The 24th they entred the Streight it ſelf, and ſail'd by the Iſland in the midſt; and in the Evening paſs'd the Iſland *Capul* (*t*), 7 Miles within the Streight, near which they found Whirlpools, as far as they cou'd diſcover, bottomleſs.

They put on now for *Manilla*, which is 80 Miles from *Capul*, wanting both wind to carry, and good Maps, and a Pilot to direct them.

See *Candiſh*'s Voyage.

Nov. 7. they took a Junk of *China*, laden with Proviſion for *Manilla*. The Maſter of this Veſſel gave them this Intelligence, That there were then at *Manilla* two great Ships, that came every Year from *New-Spain* thither; and a *Dutch* Ship alſo that was bought at *Malacca*. That the Town was Walled about; and there were two Forts to ſecure the Ships that ride there. That there was a vaſt Trade from *China* thither, no leſs than 400 Ships coming every Year from *Chinchey* with Silk, and other valuable things, between *Eaſter* and *December*. And particularly, that two Ships were ſhortly expected from *Japan*, laden with Iron, and other Metals, and Victuals.

The 15th they took two Barks, laden with Hens and Hogs, which were the *Spaniſh* Tribute, but became Meat for the *Dutch*, as it happen'd, who ſent them a few

Bankingle, Mindore, and *Lou-bon,*

Linen Bolts in the room of it. They paſs'd the Iſlands *Bankingle*, and *Mindore*, right againſt which is the Iſle *Lou-bon*, at two Miles diſtance; and between them both is another leſs Iſland, by which there is a ſafe paſſage for Ships.

Luſſon Iſlands

The Iſland *Luſſon*, is bigger than *England* and *Scotland*, and has a Cluſter of ſmaller Iſlands about it: It is more beholding to Trade, than to the Happineſs of its own Soil for the Riches it enjoys. Lying at Anchor in 15 Degr. North Lat. in expectation of theſe *Japan* Ships, *December* the 1ſt, they took one of them: She was of 50 Tun Burthen, and had ſpent 25 Days in the Voyage. The Form of her was ſomething ſtrange, her fore-part being like a Chimney, and her Furniture very agreeable to her Shape, the Sails being made of Reeds, the Anchors of Wood, and the Cables of Straw: The *Japponeſe* aboard her were all bald, except one Tuft of Hair left behind; and this is the Mode of the Country.

The *Japan* Ships.

The 9th they took two Barks, one laden with Coco-Wine, and *Aqua Vitæ*, and the other with Hens, and Rice.

Fight with the *Spaniards*.

The 14th they met with the *Spaniſh* Ships returning home from *Manilla*, upon which meeting commenc'd a very ſmart Fight: The *Dutch* being over-powr'd with multitudes, were reduc'd to very ill Circumſtances, their Admiral being boarded once by the *Spaniards*, and almoſt got entirely into their poſſeſſion. She was juſt upon the point of yielding her ſelf to the *Spaniſh* Admiral, (who had preſs'd her very hard almoſt all the Day) when her own Admiral ſeeing all was loſt, without a very reſolute Puſh, threatned to blow up Ship, Men and all, if they did not beat the *Spaniards* off again, and fight at a better rate. The *Dutch* upon this, hurried on with Rage, Fear, and Deſpair, of preſerving themſelves any other way, fought to ſo good purpoſe, that in a little time they clear'd their own Ship, boarded the *Spaniſh* Admiral, and at laſt ſunk her.

The *Dutch's* Victory.

This Action coſt them no more than five Lives loſt outright, and Twenty ſix more endanger'd by Wounds; the whole Company left being now but Thirty five. But of the *Spaniards* there were ſeveral Hundreds that periſh'd, partly in the Fight, and partly drown'd and knock'd in the Head, after the Fight was over.

Dutch Pinnace taken.

The greateſt loſs the *Dutch* had, was that of their Pinnace, which encountred the *Spaniſh* Vice-Admiral, and was taken by her; which was no ſtrange thing, conſidering ſhe had but Twenty five Men, to maintain a Fight againſt Five hundred *Spaniards* and *Indians*.

From hence they ſet Sail for *Borneo*, the chief Town of the Iſle of that Name; which is 180 Miles from *Manilla*, and lies in 5 Degr. North Lat. as *Manilla* does in about 14 Degr. 40 Min. And in their way to it, paſs'd by *Bolutan* (*v*), an Iſland 180 Miles long.

(*v*) *Bolutan.*

(*w*) *Borneo.*

The 26th they came to *Borneo* (*w*), putting into a great Bay, three Miles in compaſs, where there was good Anchoring, as alſo good Fiſhing in a Neighbour River, and the Fiſher-men very ready to barter their Fiſh for Linen Cloth.

The Admiral, by a Meſſenger, crav'd leave of the King to Trade there: But he ſuſpecting them to be *Spaniards*, wou'd enter into no Terms with them, till his Officers had ſearch'd, and found to the contrary. So they Traded here for Pepper, with the *Patanees*, a ſort of People of a *Chineſe* Original: The *Borneans*, and they, were fond of the *China* Linen; but that which came out of *Holland*, was a meer Drug. In the mean time the *Borneans* laid a Plot to ſurprize their Ship; and to effect it, *January* 1.* they came up to them with a hundred Praws; and pretending to bring Preſents from the King, wou'd have boarded them: But the *Dutch* ſmelling what thoſe Preſents were, deſir'd them to keep off from their Veſſel, or they ſhou'd be obliged to make them do ſo with their great Shot; which Reſolution of theirs the *Borneans* ſeeing, without any more adoe, deſiſted from the Attempt.

* *A.D.* 1601.

This *Borneo* is the greateſt Iſland in the *Eaſt-Indies*, the Capital City bearing the ſame Name, contains Three thouſand Houſes, but ſtands in a dirty plaſhy Soil, ſo that they may go in their Praws from one Houſe to another.

The City.

The Inhabitants all go arm'd, from the Noble-man to the Fiſher-man; and the very Women have ſo much of the Soldier in their Compoſition, that if affronted, they'll preſently revenge themſelves with Sword or Javelin, upon him that gives it: This a *Dutch-man* had like to have prov'd to his Coſt, for having ſome way diſguſted one of theſe *Bornean* Virago's; ſhe ſet upon him with a Javelin, and had diſpatch'd him to rights, if ſhe had not been prevented by main force. They are *Mahometans* in the Matters of Religion, and ſo very ſuperſtitious therein, that they'll ſooner die than taſte any thing that comes from a Swine, neither will they keep any of thoſe Creatures about them. The better ſort of them have a Covering of Linen from the Waſte downwards, and a Cotton Turbant on their Heads; but the common People go all naked. They chew a great deal of Beetle, and *Arecca*, in this Iſland, which is alſo a mighty Faſhion in many other Parts thereabouts. The *Dutch* ſeeing little hope of profitable Trade here, ſet ſail for *Bantam*.

The People.

January the 4th, in the Night, four *Borneans* came to the Ship, with a deſign to have cut their Cables, and ſo to have brought the Ship a-ground; but being diſcover'd and pelted with Shot, they march'd off, leaving their Praw behind them, which the *Dutch* took inſtead of their own Boat loſt at *Manilla*.

The next Day they met with a Junk from *Japan*, bound for *Manilla*; which inform'd them of a great *Dutch* Ship *, forced by Tempeſts into *Japan*; all the Company of which (by Famine and Sickneſs) were dead to fourteen: That they came firſt to *Bongo* in 34 Degr. 40 Min. North Lat. and after by the King's Order, removed to *Atonza*, in 36 ½ Degr. That they were there in a ſafe Harbour, and had liberty to Trade, and build a new Ship, which done, they might diſpoſe of themſelves as they pleas'd.

*Mr. *Adams*, an *Engliſh-man*, was chief Pilot in this Ship, and liv'd near twenty Years in *Japan* But of him more hereafter.

By this Account they doubted not, but this Ship was *Verhagen*'s Admiral; ſo diſmiſſing the *Japeneſe* Veſſel, they went on, and paſs'd the Line a third time, ſailing in no little fear nor danger, for want of a Pilot, and good Charts.

The 16th they took a Junk of *Jor*, and in her a skilful Pilot, who came in good time to ſave them from Shipwreck, which otherwiſe, in all likelihood, had been their Fate in thoſe Seas: For now they had but one Anchor left, and the Cable of that almoſt worn out; and beſides, had ſo many Shoals and Iſlands about them on every ſide, that 'twas a very eaſie matter for a Ship, a Stranger there, to have miſcarried. Some of theſe Iſlands were *Binta*, and *Crincata*, which yield Diamonds that are ſold at *Malacca*.

Binta. *Crincata.* Diamonds.

The 28th they came to *Jortan*, upon the Iſle of *Java*, where they had News of *Dutch* Ships at *Bantam*. The City conſiſts of about a Thouſand Timber-Houſes; the King commands a conſiderable part of that end of the Iſland, and had lately conquer'd *Balambuan*, a little Iſland that lies juſt by to the South Eaſt of *Jortan*. They are ſaid to be *Mahometans*, all the Country hereabouts, tho' the *Pagods* in uſe ſtill, ſeem to argue ſome kind of mixture of the old *Indian* Superſtition with that of *Mahomet*, or at leaſt a Toleration of it in the whole, amongſt the common People. Their chief Prieſt is an Old Man of 120, who has a good round Family of Wives; and whether it be upon a Religious, or any other Conſideration, (if the World does not bely him) the mortified Old Man lives on nothing but the Milk which he ſucks from his Wives Breaſts: From whence 'tis plain, that ſome Care is taken by theſe pious Women, to keep a Supply of Milk in their Breaſts; and ſince there are ſo many of them, and the Circumſtances of the Old Prieſt's Age are ſuch as they are, 'tis probable ſome of his devout Brethren, and his Wives, do joyn together, to keep him from ſtarving.

Jortan.

Balambuan.

Sailing hence, they ſaw a great *Portugueze* Ship of 600 Tun, ſet faſt in the Shoals; ſhe was going to *Amboina*, upon a deſign of engroſſing all that Trade to her ſelf, and ſo was very juſtly ſtopp'd by the way.

February the 5th, they paſs'd the Streight between *Balamboa*, and *Baly*, and leaving *Java* North Eaſt from them, on the 11th they found themſelves in 13 Degr. South Lat. and then directed their Courſe to the Cape of *Good Hope*.

Balamboa, and *Baly* Streight.

On the 18th, they had the Sun Vertical at Noon, being then in 11 Degr. 20 Min. and here a Calm began, that laſted 11 Days.

March the 11th, they came into 24 Degr. 45 Min. and the 24th into 28 Degr. 10 Min.

April the 1ſt, they made 30 Degr. 50 Min. And the 19th, (having been conſiderably retarded between croſs Winds and Calms) they were forc'd to ſtint themſelves in their Meaſures of Water.

But the 24th at Night, they ſaw a Light like Fire about four Miles to the North Weſt, Land now being near; whereas they reckon'd themſelves 200 Miles from the Cape, and not being aware of their approach to any other.

The 25th they were in 34 Degr. 35 Min. And now the Calms gave them liberty to mend their Sails. At Night they ſaw another Fire, and the next Morning Land, bearing North Eaſterly.

The 27th they came into 34 Degr. 40 Min. and within ſix or ſeven Mile of the Land.

St. *Helena.*

May the 2d, they made 35 Degr. 15 Min. and the next Morning ſaw between the Eaſt and North, ſomething like the end of an Iſland, about ſix Mile off, by which they fancied themſelves near the Cape. And now they directed their Courſe to St. *Helena*, where they arriv'd the 26th, and refreſhed themſelves with good Water, Fiſh, and ſome Fleſh, but no *Cabrito's*, nor Fowl, (which are both hard to be taken) nor no Oranges cou'd they meet with here. They left this Iſland the 30th, and *June* the 14th paſs'd the Line the 4th time.

The 16th they met with ſix *Dutch* Ships bound for the *Eaſt-Indies*, *James Heemskirk* Admiral. Theſe had fought thirteen *Spaniſh* Ships, near the Salt Iſlands, and had loſt both their Pinnace, and Vice-Admiral; the former taken by the *Spaniards*, and the latter gone from them, but they hop'd ſecure.

A Weedy Sea.

July the 8th, they came into 27 Degr. North Lat. and met with ſtore of the Weed *Saragoſſa* floating in the Water.

The 13th, they were in 32 Degr. 30 Min. and then had fifteen Days calm, and a very Weedy Sea.

The 22d, they were driven to a very ſhort Allowance of Bread, and that Worm-eaten too, their Stock being almoſt ſpent.

Auguſt the 1ſt, they made 40 Degr. North Lat. and left the Iſland *Flores*, and comes about Forty five Miles to Weſtward.

The 18th, three Ships of *Embden* met them, and exchang'd Bread and Fleſh, for Rice and Pepper with them, and withal ſhew'd them, that they were not ſo near *England* as their Maſter had told them, who had promis'd to make the *Lizard* next Day.

The 19th, they had ſight of the *Sorlings*.

The 26th, they Anchor'd at *Amſterdam*.

Thus have we ſeen the *Dutch*, under the Conduct of the *Engliſh*, ſucceſsfully following their Example.

Sebald de Wert's *Voyage into the South Sea, &c.*

SOme mention being made in the laſt Voyage of *Veerhagen*'s Fleet, which paſs'd the Streights a little before *Noort*, it may be proper to add ſomething more particularly concerning that Voyage.

*A.D. 1598.

June the 27th, * the five following Ships ſet Sail from *Amſterdam*. The *Hope* Admiral, of 250 Tun, and 130 Men. The *Charity* Vice-Admiral, of 160 Tun, and 110 Men. The *Faith*, of 160 Tun, and 109 Men. The *Fidelity*, of 100 Tun, and 86 Men. The *Good-news*, of 75 Tun, and 56 Men, all furniſh'd with neceſſary Proviſions. The Admiral was Sir *Jaques Mahu*, *Simon de Cordes* Vice-Admiral, *Beuninghen*, *Bockholt*, and *Sebald de Wert*, were Captains of the other three.

This Fleet of Grace, after many Difficulties, made ſhift to reach the Iſles of Cape *Verd*; where the Admiral dying, *Simon de Cordes* ſucceeded in his room; a proportionable change being alſo made amongſt the other inferiour Captains. But here the undermining Practices of the *Portugueze*, and their own want of Proviſions, made them quickly think of a remove, which they reſolv'd ſhou'd be to the Iſle *Annobon*.

This Land was *Congo*.

Having therefore ſet Sail from hence, and ſpying Land much ſooner than their Reckoning would allow, in 33 Degr. South Lat. they determin'd to go to Cape *Lopo Gonſalves*, driving a ſmall Pedling Trade with the People of *Guiney*, as they paſt along.

Nov. the 10th, they ſet all their ſick Men aſhoar.

The Negro King.

The 23d a *French* Sailor came aboard them, and offer'd to do them ſome good Offices with the Negro-King; to whom Captain *De Wert* was ſent, in the Name of the Admiral: He found His Majeſty mounted upon a lofty Throne, near a Foot-high, with a Royal Carpet of Lambskin ſpread under his Feet. The Robes he had on, made him appear like ſome Footman; it being a perfect Livery of Violet-Cloth, with a gilded Lace: He had a party-colour'd Cloth about his Head, and a String of Glaſs-beads about his Neck; but no Shooes, Stockins, nor Shirt on. The Courtiers that ſtood about him, were dreſs'd up with Cock-Feathers; and the Room of State, where all this mighty Preſence ſhew'd themſelves, was much inferiour to ſome Apartments in a common Stable.

The Women brought in his Proviſion to him, which was Noble like all the reſt; a few roaſted Plantanes, and a little Smoke-dry'd Fiſh, ſerv'd up in Wooden-platters, together with a little Palm-Liquor, made up the whole Entertainment.

The *Dutch* Captain was here ſo hard put to it for a Dinner, that he was fain to call for ſome of his own Country-Proviſions, under pretence of ſhewing the King their manner of Diet. He drank to the King in *Spaniſh* Wine, who pledg'd him in the ſame ſo heartily, that he was fain to be carried to ſleep upon't. They got but little Proviſion here, the Country not being able to ſupply them, only a Boar, and two Buffels, they kill'd in the Woods, and a few Fowl.

Spring, an *Engliſh man*, aſſiſted in this Voyage.

December the 8th, they ſet Sail from hence; and the 16th came to *Annobon*. Here the Scurvy and Fever made ſome havock of their Men, carrying off about thirty of them, amongſt which was one *Spring* an *Engliſh-man*, of good Skill in Sea-Affairs: And here they got no more Proviſions, than what they poſſeſs'd themſelves of by force. At the beginning of the New Year *, they ſet ſail from *Annobon*, for the *Magellanick* Streights.

*A.D. 1599.

March the 10th, in 42 Degr. South Lat. they found the Sea appearing in a Sanguine Hue, by the vaſt quantities of little Red Worms, floating about in the Water, which when taken up, leap'd like ſo many Fleas.

April the 6th, they entred the Streights; and at *Penguin* Iſland, they ſtor'd themſelves with 13 or 1400 of thoſe Fowl.

The 18th they Anchored in the Green Bay, in 54 Degr. Lat. where they had good freſh Water, and large Muſcles. They ſtay'd here till *Auguſt* the 23d, having a moſt miſerable Stormy Winter, and the loſs of 100 of their Company.

May the 7th, they went out Southward, over-againſt the Green Bay, to take Gudgeons; but their Fiſhing was diſturb'd by the proſpect of ſome monſtrous Savages, that appear'd to be ten or eleven Foot high. Theſe huge Fellows having ſpied the *Dutch*, came upon them with horrible Outcries, and began to pelt them with Stones; but ſeeing four or five of their Company drop with the *Dutch* Shot, they retired to the Land, and tearing up ſome large Trees by the Roots, they rais'd a little Fortification, where they ſecur'd themſelves; the *Dutch* not being over-fond of attempting to beat them out. Yet afterwards theſe Savages, in ſome meaſure, revenged the Death of their Companions upon them, by killing three of the *Dutch*, whom they took ſeeking for Food; their Weapons were Darts, whoſe Heads were made like Saws; ſo that where-ever they pierced, they muſt be cut out.

The ſad Circumſtances of the *Dutch* in the South Sea.

The Green Bay they call'd *Cordes*'s Bay, and another the *Horſe* Bay; in which the Admiral, and ſix more of the chief Men, entred into a Fraternity, binding themſelves by Oath, to certain Articles, and leaving as a Memorial of it, their Names carv'd in a Table faſten'd on a high Pillar, to be ſeen of all that paſs'd that way. This they call'd, *The Fraternity of the Golden Lion*; but the Savages did not ſtick to deface that Monument; and beſides, to pull the dead *Dutch-men* out of their Graves, and diſmember them after a horrible manner.

September the 3d, they paſs'd out of the Streights, and kept together till the 7th, when they were unfortunately ſeparated; Capt *de Wert* was forc'd by a Storm to ſtay; and the *Faith* and *Fidelity* were alſo left behind, in all the diſtreſs, which Tempeſts, Hunger, Sickneſs, Leaks, and the loſs of their Maſters, cou'd bring upon them. And in this Condition, at the end of this Month, they entred the Streights again, where for the ſpace of two Months, they had not one fair Day to dry their Sails. Here they took a She-Savage, with two Children half a Year old, which had all their Teeth, and were able to go. And here 'twas that they met with Admiral *Noort*; who yet was not in Condition to give them any Relief.

*A. D. 1600

In ſhort, after a World of Hardſhips endured there, they ſet Sail, *January* the 22d *, and arrived in the *Maes*, *July* the 14th. In which Voyage the moſt remarkable Diſcovery they made, was of three Iſlands that lie without the Streights, homewards, in 53 Degr. 40 Min. and about 60 Miles from the Land, which they (in honour of their Captain) call'd the *Sebaldine* Iſlands.

CHAP. VII.

The Voyage of George Spilbergen, *Admiral of a* Dutch *Fleet of Six Ships.*

* *A.D.*1614.

TWas on the 8 th of *Auguſt* *, that this Fleet began to ſail from the *Texel*, and after much bad Weather gain'd the height of *Madera*, *October* the 3d.

The 10th they loſt ſight of the *Canaries*; and the 23d recover'd a Proſpect of the Iſlands *Brave* and *Fogo*.

From *October* the 30th, to *November* the 17th, they had a continual Calm, intermix'd with ſome Showers; and now their Drinking Water began to fail them.

December the 9th, they paſs'd the dangerous Sands of *Abrotlos*.

The 13th they had ſight of *Braſile*, when the Great *Sun* diſcharg'd ſome Pieces to warn the reſt of the Fleet, of the Shoals, and dangerous places about upon the Coaſts.

(*a*) Iſland *Grande*.

Crocodiles.

The 20th they came to the Iſland *Grandes* (*a*), where they anchor'd, and went aſhoar; taking beſides good ſtore of Fiſh, ſome young Crocodiles, of the bigneſs of a Man.

The 30th, (being ſtill at the Iſle *Grandes*, for the eaſe of their ſick Company) they heard the *Huntſman* (one of their Ships) let off ſeveral Guns; enquiring into the occaſion of which, they found her engaged in a warm Diſpute with five Barks of *Portugueze* and *Indians*, whom they aſſaulted too; but the Enemy being reliev'd by a freſh Supply that came in, they were obliged to give over.

A. D. 1615.

* *January* the 1ſt, a Conſpiracy of certain diſcontented Perſons was found out; two of the chief of which the Admiral preſented with Ropes for New-Year's-Gifts, and laid the reſt ſo ſafe in Irons, and ſo far aſunder, as to prevent their Plotting for the future.

Before they went from hence, they made a general Agreement amongſt them, That if any Ship loſt his Company, they ſhou'd ſet up an Inſcription in ſome common Landing-place, to tell how long they ſhou'd ſtay for each other, and after make to *La Mocha*, which ſhould be the place of their general Rendezvous.

(*b*) *S. Vincent*.

From the Iſland *Grandes* they ſail'd to St. *Vincent* Iſle (*b*), where they had ſome Experience of the *Portugueze* Subtlety and ill Intentions towards them.

The 26th they took a Bark, and in it eighteen *Portugueze*; whom they refus'd to exchange for a leſs number of *Dutch*, tho' ſeveral valuable Things taken in the Prize, were offer'd in to the bargain. The Bark it ſelf they burnt, as alſo ſeveral Buildings belonging to the *Portugueze*; and having freely diſcharg'd four of their *Portugueze* Priſoners, they proceeded in their Voyage from Iſle St. *Vincent*, in the beginning of *February*.

March the 7th, a terrible Storm riſe upon them in 52 Degr. South Lat. 6 Min. And the 21ſt, the more diſmal Storm of Mutiny and Rebellion, broke out in the Ships; but all was calm and quiet again, when ſome of the factious Mutiniers were laid a ſoaking in the Salt Water.

(*c*) *Magellan*. Streights.

The 28th they entred the Streights (*c*), but were forc'd out again by Wind and Tide.

April the 2d, they re-entred, and came to an Anchor, becauſe of the Shoals; one of which they ſounded, and found but five Cubits Water: Here they ſaw a Giant climbing the Hills, to have a full view of them, he being a Native of the Iſland *del Fuego*.

The 7th they went aſhoar, where they found no Men, nor any other Animals hardly, but two Oſtriches; only there was a good freſh River, and a ſort of pleaſant Blackberries to entertain them. On the South-ſide they found pleaſant Woods, full of Parrots; but the high Mountains cover'd with Snow; and this was in 54 Degr. South Lat. One place here they call'd *Pepper-Haven*, the Bark of a ſort of Trees that grew thereabouts, reſembling Pepper in taſte.

The 16th they traffick'd with the Savages, giving them Sack and Knives for a ſort of Pearl they had; but it ſeems, the Savages did not like either them or their way of dealing, for they quickly after ſurpriz'd a Company of them aſhoar; of which they kill'd two.

The 6th they paſs'd into the South Sea, not without ſome terrible Apprehenſions, on the account both of the dangerous Shoals and Iſlands, and the vaſt depth all thereabouts, that made Anchoring impoſſible. A fierce Storm bid them Welcome into this Sea, which they fear'd wou'd have ſplit them upon the *Sorlings* *, that lie a little without the Streights.

* Little Iſles like our *Sorling* Iſlands, and therefore ſo call'd.

The 21ſt of *May* they had ſight of *Chili*, and *La Mocha*; which Iſland is low and broad to the North, and very Rocky at the Southern parts.

The 26th they began a Trade with the People, who ſeem'd very glad both to find them Enemies to the *Spaniards*, and ſo well provided with Warlike Stores to maintain a Quarrel againſt them. They gave them Sheep for Coral, Hatchets, and ſuch like things, and brought every thing up to their Boats, not ſuffering them to come to their Houſes, out of a jealous fear of their Wives. The exchange was 2 Sheep for a Hatchet; and theſe Creatures were very large, with long Legs and Necks, hair-mouth'd, bunch-back'd, and ſo ſtout as to ſerve for carrying Burthens: They had ſtore of Hens here too, and other ſorts of Fowl.

Spaniſh Treachery.

The 27th they ſet Sail, and the next Day came near the Shoar, hard by the Iſle St. *Mary*, where they harbour'd the 29th. A *Spaniard* here that came aboard them, invited them to take a Dinner aſhoar; but as they were upon the way thither, they chanc'd to ſpy a Party of Soldiers making that way, which they ſuppos'd were deſign'd to attend them at Dinner; upon which they went aboard again, and kept their *Spaniſh* Gentleman Priſoner. Going aſhoar the next Morning, with three Enſigns, the *Spaniards* upon their approach, ſet their Church a Fire, and march'd off; upon which the *Dutch* ſet fire to their Houſes, to burn in Company with the Houſe of God: And in the little Skirmiſh that paſs'd between them, two of the *Dutch* were wounded, and four *Spaniards* kill'd. They took ſome Hens, and about 500 Sheep, with other Spoil, out of which they plentifully ſupplied their Neceſſities. Underſtanding here of three *Spaniſh* Ships, furniſh'd with 1000 Men, that had ſail'd from hence in *April* to find them out, they concluded to make them as little trouble as they could, by going in queſt of their Purſuers.

Auroca.

Accordingly *June* the 1ſt, they ſet Sail upon this Deſign, and paſs'd near *Auroca*, a Town in which the *Spaniards* had a Garriſon of 500 Men, and which was continually aſſaulted by the *Chiletians*.

Quiriquey-nam.

Conception.

The 3d, they approach'd the Iſle *Quiriqueynam*, near the Continent; and behind it came up to *Conception* Town, inhabited by *Indians* and *Spaniards*.

The 12th, they entred the ſafe Road of *Valpariſa*, where was a *Spaniſh* Ship, deſerted of her Men, and left a fire by them.

Quintero.

The 13th, at Noon, they came into 32 Degr. 15 Min. South Lat. and the ſame Day to the fair and ſecure Harbour of *Quintero*.

(*d*) *Arica*.

July the 2d, they came to *Arica* (*d*), which lies in 12 Degr. 40 Min. South Lat. to which place the Silver is brought from *Potoſi*, and from thence carried to *Panama*; but finding no *Spaniards* there, they went on.

The 16th, they took a ſmall Ship indifferently rich, whoſe valuable Commodities being taken out, they ſunk her.

Shortly after they were alarm'd with the ſight of the Fleet Royal of *Peru*, conſiſting of about eight Sail, which had both ſought, and was ſo heartily ſought for by them.

The Fleet of Per

This Fleet was commanded by *Roderigo Mendoza*, the Vice-Roy of *Peru*'s Kinſman, a noiſie, bouncing *Spaniard*, that pretended to reduce all *England* with two of his brave Ships; and therefore came with very great aſſurance of ſinking, and burning all thoſe *Dutch* Hens, as he call'd them, had they been twice as many more: Nay, he bound himſelf by a ſolemn Oath, never to return till they were all deſtroy'd or taken. He ſet out of *Callien*-Road, *July* the 1ſt, and the Ships that compos'd his Fleet, were theſe that follow: The *Jeſua Maria*, Admiral; with 460 Men, and 24 Braſs Guns: A Ship that ſtood the King in 158000 Duckets. The St. *Ann*, Vice-Admiral, with 300 Men, one of the faireſt Ships in all the *Indies*: She ſtood the King in 150000 Duckets, and had taken an *Engliſh* * Ship in the South Sea, but a little before. The *Carmen*, with eight Braſs Guns, and 200 Men,

* A Ship which S Rich. Haw kins ſerv

beſide,

beſides Commanders, and their Retinues. Then the St. *James*, and the *Roſary*, with 150 Men, and 4 Braſs Pieces. The St. *Francis*, with 70 Musketeers, and 20 Mariners. The St. *Andrew*, with 80 Musketeers, and 25 Mariners. The 8th Ship of the Fleet was ſent after the reſt, and what Furniture ſhe had is uncertain.

The 17th in the Evening the two Fleets coming near each other, the *Dutch* Admiral ſent to the *Spaniſh*, to let the Fight be deferr'd till next Day; but the *Spaniard* impatient till his Vow were fulfilled, gave the Onſet at Ten a Clock the ſame Night, thundering upon the *Dutch* Admiral with his Great Ordnance, who did not fail to anſwer in the ſame ſort of Language. The ſame brave Ship having raked the St. *Francis* through and through, ſhe was ſent down to the bottom by the *Hunter*, another *Dutch* Ship; which had quickly been hunted thither her ſelf by the *Spaniſh* Admiral, to have kept the St. *Francis* Company, had not her own Admiral, and Vice-Admiral, ſent out two Boats to her aſſiſtance. One of theſe Boats was ſunk by a Shot from the *Hunter*, miſtaking her for one of the Enemies.

The Fight between the *Dutch* and *Spaniards*.

The next Morning five *Spaniſh* Ships were endeavouring to get off, but the *Dutch* prevented the Admiral, and Vice-Admiral from doing ſo, attacking them ſo vigorouſly with their own Admiral, and Vice-Admiral, that the *Spaniſh* Vice-Admiral's Men quitted her, and leap'd off into the Admiral. But the *Dutch* ſtill preſſing hard upon them, they were forced to return back, and defend their own Ship; to be ſure with very little Heart, having before divers times, by a white Flag, offer'd to crave a Ceſſation of Arms; tho' ſome very ſtubborn *Spaniards* preſently pull'd it in again, chuſing Death before a diſhonourable Submiſſion. But after all, the *Spaniſh* Admiral not able to bear that hot Diſpute any longer, ſpread out her Wings, and fled away with all the haſte that an Adverſary perfectly ſcar'd and vanquiſh'd, may be ſuppos'd to make: However ſhe kept her Vow; for tho' ſhe did not bind all the *Dutch* in Chains, and beat their Ships in pieces with her great Guns, yet ſhe never came home again to tell of her ill Succeſs.

The *Spaniſh* Admiral flies and afterwards ſunk.

The Vice-Admiral alſo was entirely reduc'd into a poſture of Submiſſion by the *Dutch Æolus*, who it ſeems had puffed ſo furiouſly upon her, that her *Spaniſh* Courage was effectually cool'd by thoſe violent Blaſts. She ſunk that Night in the very Faces of the *Dutch*, who wou'd have prevented it, if poſſible: Her chief Commander died of his Wounds, and all her Men that were not killed in the Fight, nor devoured by the Sea, were diſpatch'd by the *Dutch* the next Morning, ſome few Perſons of Figure only excepted. The *Dutch* loſt in this Action about Forty Men, and about Fifty eight were wounded. The ſame Day they went for *Callion de Lima*; but were becalm'd by the way.

The Vice-Admiral ſunk.

The 20th they paſs'd by the Iſland, and ſaw 14 Ships near the Shoar, but cou'd not come at them for the Shoals; ſo they purſued their Courſe for *Callion de Lima*, thinking to overtake the *Spaniſh* Admiral; which they afterwards heard at *Guarme*, and *Peyta*, was certainly ſunk. The *Spaniards* here from the Land ſhot at them, and with a Ball of 36 *l.* out of one of their Great Guns, had like to have ſunk the *Hunter*. They had a great Army of Horſe and Foot aſhoar, the Vice-Roy himſelf being there in Perſon: But they kept out of the reach of danger from their Ordnance, and caſt Anchor at the Mouth of the Haven, waiting (tho' in vain) to take ſome of their Ships; yet on the 26th they took a ſmall Bark that had Salt, and Eighty Veſſels of Syrup aboard her.

(e) *Guarme.*

The 29th they came to the Road of *Guarme* (e), in 10 Degr. North Lat. a pleaſant place with a large Haven. They went aſhoar here, and found the Town clear'd of all the People, who had yet left ſome Proviſions behind them, which they brought to their Ships.

Auguſt the 3d, they paſs'd between the Continent and the Iſle *Loubes*, ſo call'd from a ſort of Fiſh found there; and here they diſmiſs'd ſome of their *Spaniſh* Priſoners.

(f) *Peyta.*

The 8th they caſt Anchor at *Peyta* (f), and the next Day landed 300 Men, to make an Attempt upon the City, which was ſo well defended, that they cou'd make no impreſſion upon it. However, they batter'd it with their Ordnance, and forc'd all the People up into the Mountains, with their Goods, ſo that when they landed they found nothing but bare Walls.

This City to the Sea-wards is extreamly well fortified: It had two Churches, a Monaſtery, and ſeveral good Buildings in it; and an excellent Haven, where all Ships bound for *Panama* uſe to put in, and then ſend their Cargo by Land to *Callion de Lima*, the Wind and Sea thereabouts being generally very unquiet.

In the Iſle *Loubes*, they took two Fowl, in Beak, Wings, and Talons, reſembling an Eagle, and Combs on their Heads like a Cocks; they were two Ells high, and three in breadth, from Wing to Wing, when ſtretch'd out. They took alſo an * *Indian* Ship, of a ſtrange Form, which ſupplied them with good ſtore of delicate dried Fiſh.

* See the Picture of it in the *Latin* Vol.

They had this following Account of the State of *Peru*, and the other Dominions belonging to the *Spaniards*, in that part of *America*, from *Pedro de Madriga*, of *Lima*; *viz.*

Relation of the Government of *Peru*

That Peru, Chili, *and* Terra Firma, *were under the Command of one and the ſame Vice-Roy; which Office is continu'd for ſix or eight Years.*

The Profits of it are 40000 *Duckets* per Annum; *with* 1000 * *Pezo's for the extraordinary Expences of Entertainments, at the Feaſts of* Chriſtmas, Epiphany, S. Spirito, *and* Eaſter; *and* 2000 *Pezo's* per Annum, *when he ſets out the Silver Fleet.*

*Pezo's of 12 half Rials.

The Vice-Roy lives in all the Pomp and State of a King, not ſtirring out without his Guard of Penſioners: And if he goes far, he is waited on by a Hundred Lances, and Fifty Muskets.

There are in Panama, Quito, Carlos, *and* Lima, *certain Courts erected, for the Judging of all Cauſes, Civil and Criminal; Appeal being made to the* Oviidores *in Civil Matters, and to the* Alcaids *in Criminal. Both which Offices are ſupported by a Yearly Stipend of* 3000 *Pezo's: And there is a Fifth Court of this Nature too, eſtabliſh'd in* Chili.

The City of Lima, *(call'd alſo the City of Kings) is honour'd with the Reſidence of the Vice-Roy, and the Arch-Biſhop: It ſtands in a pleaſant Valley, extended a Mile and half in length, and three quarters in breadth, and is reckon'd to contain* 100000 *Inhabitants, beſides Foreign Merchants. It has four large Market-places, and a* Cercado, *fill'd with* 2000 Indian *Artificers.*

It has plenty of Buildings dedicated to Religious, and other Pious Uſes: Here are the Churches of St. John, *St.* Marcellus, *St.* Sebaſtian, *and St.* Ann: *The Monaſteries of St.* Francis, *St.* Dominick, *St.* Auguſtine, *and of our Lady* De los Meriedes; *each of which have two Cloiſters of Friars of their own Order; and no leſs than* 250 *Religious within the Bounds of every conſiderable Monaſtery. Here are two Colleges of Jeſuites; the five Nunneries of the* Incarnation, Conception, Trinity, *St.* Joſeph, *and St.* Clare: *The Hoſpitals of St.* Andrew *for the Laity, of St* Peter *for the Clergy, of St.* Ann *for the* Indians, *of* Charity *for Women only, of* S. Spirito *for Sailors, of St.* Lazaro *for Incurables. There are likewiſe in the City two Colleges, the* King's *College, and that of St.* Torine: *In the former Twenty four are maintain'd by the King, and in the latter as many by the Archbiſhop. There are reckon'd* 200 *Doctors of all Faculties here,* 400 *Maſters of Art, and* 1000 *inferiour Students.*

Here is alſo the King's Contrattation-Houſe, with his Treaſury, and a Court of Inquiſition; beſides the grand Office of the Cruſada, *or Court of the Pope's Bulls, with Officers and Penſions proportional to the former. There are reckon'd in this City, and the Suburbs of it, above* 20000 *Slaves: And it is defended by a Garriſon of eight Companies of Foot, and as many of Horſe. It ſtands two Leagues from the Sea, and the Walls of it are waſh'd by a River, that ſometimes ſwells ſo by great Rains, as to carry away the Stone-bridge, which has Nine Arches.*

The Indians *that live here, are free as well as the* Spaniards; *only they pay every ſix Months, two Pezo's, a Hen, a Fenega of eight Rials, and a piece of Cotton, or Woollen Cloth.*

The next Port to Lima, *is* Callau, *in which are about* 800 *Inhabitants.*

Potoſi *is famous for its Silver Mines; and there's a good Trade thither from* Arica, *of Beaſts, Wheat, Meal, Maize, Axicoca, an Herb for chewing: And for Carriages they make uſe of a ſort of Sheep that are form'd ſomething like Camels. There is a Deſcent of* 400 *Steps down into the Mine; in which as dark and deep as it is, there are above* 20000 Indians *continually at work; and* 100 *more employ'd in grinding and carrying, and other things, relating to the Silver Trade. This place is ſo cold, that nothing will grow for four Leagues compaſs round about, but one certain Herb, which they call* Ycho. *'Tis reported too, that in* Potoſi, *(beſides the other Inhabitants) there are* 1500 *Gameſters, that live purely by their Wits, and are beholding to a Pack of Cards for their Maintenance.*

Not far from thence is Chuquiſaca, *adorn'd with Religious Houſes, like* Lima; *and has a Biſhoprick worth* 30000 *Duckets* per Annum.

At Seventy Miles diſtance, lies the Silver Mine call'd Eruco; *and about One hundred and eighty* Spaniſh *Leagues, is the fair Haven of* Arica, *in the way to which lie many Villages well inhabited.*

There's another Silver Mine, as cold as Potoſi, *that lies near* Pima, *call'd* Chocola Choea, *about which live* 5000 Spaniards.

Cuſco *has a Biſhop, Monks, and two* Colleges, *with ſome* 600 *Students, and* 6000 Spaniſh *Inhabitants.*

Areguippa *has about* 2000 *Inhabitants, and is honour'd with the Reſidence of a Biſhop and a Corrigidore.*

The chief City of Chili *is St.* Jago, *enrich'd with a Gold Mine.*

Baldivia *is celebrated for the ſame, and* Coquimbo *for its plenty of Braſs.*

Auroca *is no very rich Town, but 'tis defended with a Fort, in which a Company of* Spaniards *always lie in Garriſon.*

And this is the Sum of the Intelligence the *Dutch* receiv'd from the aforeſaid *Spaniſh* Priſoner; but 'tis time now to follow them to Sea again.

A Current.

Having refreſh'd here till *Auguſt* 21. they ſet ſail; but wanting a good gale of Wind, and having a ſtrong Current againſt them, they cou'd make no great riddance.

(g) Rio de Tumbe.

The 23d, they Anchor'd before *Rio de Tumba* (g), but not being able to enter there for the Tide, they directed their Courſe back to the Iſland *Coques*, in 5 degrees South Lat. but being continually perſecuted with bad Weather, which hardly ever intermitted, to *Sept.* 13. they loſt that Iſland, and with it the refreſhment they expected there.

Sept. 20. they had ſight of Land in *New-Spain*, and 13 degrees 30 minutes North Lat. with very tempeſtuous Weather.

(h) Aquapolque Haven.

Octob. 1. they ſaw a Country that yielded a very pleaſant Proſpect, but the violent working of the Sea hinder'd their Landing there; ſo they kept beating off and on till the 11th, when they came into the Haven (h) of *Aquapolque*, within ſhot of the Caſtle. Here a Flag of Truce being hung out, they dealt with the *Spaniards*, exchanging Priſoners for Proviſions: They were viſited too by Don *Hernardo*, the Vice-Roy of *New-Spain*'s Nephew, who muſt needs come aboard them, to ſee a Fleet that had triumph'd over the deem'd Invincible Fleet of *Peru*. The Caſtle here was well defended with 70 Braſs Guns, having had Intelligence of their coming 8 Months before.

The 18th they ſet ſail again, but being becalm'd, they did nothing of moment, except the taking a Bark, bound for Pearl-fiſhing, which they Mann'd, and took into the Attendants of their own Fleet.

(i) Port-Selagues.

Novemb. 1. they Anchor'd before Port (*i*) *Selagues*, in 19 degrees North Lat. Here they heard of a River that yielded variety of good Fiſh, and Meadows well Stock'd with Cattel, together with Citrons, and other Fruits; all which conveniences they wanted; but the Company they ſent, fearing a ſurprize by the *Spaniards*, return'd as they went.

After a ſmart Encounter with the *Spaniards* on the 11th, they ſet ſail for *Port Nativity*, where they furniſh'd themſelves with Neceſſaries; and from whence they departed the 20th.

The 26th, they had 20 degrees 26 minutes North Lat. and now they concluded upon the neareſt Courſe to the Iſlands *Ladrones*.

New Iſlands.

A dangerous Rock.

Decemb. 3. to their no little wonder, they ſaw two Iſlands at a great diſtance in the Sea, and the next day a mighty Rock, in 19 Degrees, and 50 Leagues from the Continent.

The 6th, they ſaw a new Iſland, with five Hills, that appear'd like ſo many diſtinct Iſlands. The new Year came on with Diſtempers, that prov'd fatal to many of their Company.

A.D. 1616.

(k) Manilles

Jan. 23. * they had ſight of the *Ladrones*, and the next day they Landed there: They ſet ſail for the *Manilles* (*k*) the 26th, where they happily Anchor'd *Feb.* 9. Here the *Indians* refuſed to Trade with them, becauſe they ſaid the *Dutch* were Enemies to the *Spaniards*; for which very reaſon, ſome others wou'd freely have proſtituted all the Trade and Riches of a Country to them.

But in *Capul*, to which they came on the 11th, the People were of a better temper, giving them brave Hogs and Hens for very trifles: This profitable Trade they left the 19th, paſſing from thence through the *Streights*, towards the *Manilian* Port or Bay.

Theſe *Indians* of *Capul* wear long Coats like Shirts, and are noted for the extraordinary Reſpects they pay to Clergy-men; before whom they'll proſtrate themſelves on the ground, and take it for a mighty Honour to be admitted to kiſs their Hands.

(l) Lucon Iſland.

The 19th, they Anchor'd before the Iſland *Lucon* (*l*) the principal of the *Manilles*, and in which is the City *Manilla* it ſelf. Here was a curious Fabrick artificially erected upon the tops of Trees, that look'd like a Palace at a diſtance; but what airy Creatures were the Inhabitants there they cou'd not examine.

Flaming Mountain.

The 28th, they paſs'd by the high and flaming Hill *Albaca*.

The 24th, they ſaw the other end of the *Streight*, but the Calm wou'd not allow them to paſs it.

The 28th, they Anchor'd before the Iſland *Mirabelles*, remarkable for its two Rocks, that lift their tops to ſo vaſt a heighth in the Air: Behind theſe the City of *Manilla* lies; and from hence they watch the coming of Ships from *China*, to Pilot them ſafe to the City, becauſe of the great danger of the paſſage.

March 5. they took ſeveral Barks that were diſpatch'd to gather in the Tribute paid to the City of *Manilla*, by the adjoyning places. They had now Intelligence of a Fleet of 12 Ships, and 4 Gallies, Mann'd with 2000 *Spaniards*, beſides *Indians*, *Chineſe* and *Japeneſe*; all which were ſent to the *Moluccas*, to drive out the *Dutch*, and reduce thoſe Iſlands to the Obedience of the King of *Spain*. Upon this News they diſcharg'd all their Priſoners, and reſolv'd to go after them.

The 11th, they got in amongſt ſo many Iſlands, that they hardly knew how to deliver themſelves again, but their *Spaniſh* Pilot brought them out ſafe the next day.

(m) Paney Iſland.

(n) Mindanao.

The 14th, they rid at Anchor all Night, before the Iſland *Paney* (*m*), by reaſon of the Shoals.

The 18th, they ſail'd cloſe by *Mindanao* (*n*), but in the Evening put off further into the Sea, becauſe of dangerous Shelves thereabouts.

The 19th, they came cloſe by the ſhore again, and bought Proviſions of the Iſlanders at very cheap rates.

The 20th they reach'd *Cape de Cudera*, the *Spaniard*'s Watering-place, in their way to the *Moluccas*. Till the 23d, they ſail'd no farther than juſt as the Tide forc'd them along, having a perfect Calm; but between *Mindanao* and *Tagimo*, a contrary Tide met and ſtaid them. The People here profeſs'd a great enmity to the *Spaniards*, and offer'd the *Dutch* the Aſſiſtance of 50 of their Ships in that Quarrel.

(o) Iſland Sanguin.

(p) Ternate.

The 27th they paſs'd the Iſland *Sanguin* (*o*), and the 29th came to *Ternate* (*p*), in which the *Dutch* poſſeſs'd the Town *Macia*, where theſe wandring Country-men of theirs were made very welcome by them. The Streight of *Bouton* they obſerv'd to be full of Shoals, without which the water is deep: On the Eaſt there's good freſh Water, and two Leagues to the Weſt lies a very rocky Shoal.

April 8. *Cornelius de Vianez* went for *Banda*, and the Soldiers landed there, after a very long and tedious Life a Shipboard.

(q) Macian.

May 2. they ſent 6 Ships to *Macian* (*q*), (to prevent the Enemies getting any Cloves) and Anchor'd there before *Maurice-Fort*. Here the *Engliſh* inform'd them of the ſucceſs of their Country-men, in taking *Coleway*, a fam'd place for Nutmegs; and the *Indians* expreſs'd their joyful ſenſe of it too, by entring into a new League with them upon it.

(r) Jacatra.

Sept. 15. they came to *Jacatra* (*r*), and repair'd their Ships; and here they were deliver'd from the fear of the *Spaniſh* Fleet, ſent before to the *Moluccas*, the Admiral of it being dead, and the Fleet it ſelf ſhamefully retired back to the *Manilles*, having done nothing after 4 Years Preparation. Here alſo they met 4 large Ships from *Holland*, with good ſtore of *Spaniſh* Rials; and another from *Japan*, with the ſame, and good a quantity of Silver, Braſs, Iron, and other Commodities, which were all taken from a *Portugueze* Ship bound for *Marico*.

Octob. 20. the *Concord*, a Ship of *Horn*, that came from *Holland*, *June*, *A. D.* 1615. came to *Jacatra*, and being not of the *Indian* Company, the Admiral annexed it to his Fleet.

Nov. 10. came the *Naſſau* to *Bantam*, from *Mocha* in the Red Sea, well furniſh'd with *Spaniſh* Rials, and *Turkiſh* Ducats.

A.D. 161

Decemb. 12. the *Amſterdam* and the *Middleburgh* came thither from the *Streights* of *Malacca*, with which Ships the Admiral *Spilberg* prepar'd to return. Accordingly, *Jan.* * 17. they reach'd the Iſland *Mauritius*, and by *March* 30. came up with St. *Helene*.

Sailing from hence, *April* 7. they came home to *Zealand* the *July* following, having pretty well ſeconded the *Engliſh*, both in their Proſperous Voyages, and Noble Triumphs, over the *Spaniards* in the Weſtern World.

CHAP.

CHAP. VIII.

The Sixth Circum-Navigation, *by* WILLIAM CORNELISON SCHOUTEN *of* Horne.

THE States-General of the *United Provinces*, having, in favour of their *Eaſt-India* Company, prohibited all others to paſs by the *Cape of Good Hope* Eaſtward, or through the *Magellanick Streights* Weſtward, there were ſome that began to think of another Paſſage, by the means of which the South-Sea might be viſited, as well as by the *Magellanick Streights*, which were now ſhut up from all but the Company. Such a paſſage was ſuſpected to lie ſomewhere South of the *Streights*: The Notion was ſtarted by *Iſaac Le Maire*, a Merchant of *Amſterdam*, and *William Corneliſon Schouten* of *Horne*, amongſt themſelves; and they reſolved to be at the Coſt of a Voyage, to prove whether there were any truth in it or no.

The hopes of this happy Diſcovery ſo quicken'd their Preparations, that in a ſhort time they Rigg'd out two Ships, the *Unity* of 360 Tun, of which *William Cornelifon Schouten* was Maſter and chief Pilot, and *Jacob Le Maire* principal Factor, having in her 65 Men, 19 great Guns, with Muskets, Slings, and other Ammunition; and beſides, two Pinnaces, and a Boat to ſerve her, together with good ſtore of all kinds of Tackling, both for her ſelf, and theſe her Attendants.

The other was the *Horne*, of 110 Tun, of which *John Cornelifon Schouten* was Maſter, and *Aris Clawſon* Factor; ſhe had 24 Men, 8 great Guns, with Slings, and other needful Furniture.

* *A.D.* 1615.

All things being ready, *May* 25.* the *Unity* ſet ſail, and came to the *Texel* the 27th; whither alſo her Companion the *Horne* came to her *June* 3.

They ſet out from the *Texel*.

The 14th they ſail'd out of the *Texel*, and the 16th paſs'd between *Dover* and *Callis*; and the 17th, Anchoring in the *Downs*, *Schouten* went aſhore at *Dover*, to get freſh Water.

(a) *Teneriff* and *Canaries*.

July 13. they ſailed between the Iſland (a) *Teneriff* and the great *Canary*, with a ſtiff N. N. E. Wind, and a ſwift Current.

About the 15th (the ſame Wind and Current following them ſtill) they paſs'd the Tropick of *Cancer*.

They paſs the Tropick.

(b) *Cape-Verd*.

The 20th in the Morning, they fell in with the North-ſide of *Cape-Verd* (b). At Sun-riſing the Cape lay W. and by S. from them, ſo that the N. N. E. Wind wou'd not ſuffer them to get beyond it, but kept them there at Anchor all that Night.

The 25th, the Mooriſh Alcaid came aboard them, with whom they agreed at the price of 8 States of Iron for a ſupply of freſh Water. They left the Cape *Aug.* 1. and the 21ſt of the ſame Month they ſaw the high Land of *Sierra Leona* (c), and alſo the Iſland of *Madrabomba*, which lies on the South Point of the high Land of *Sierra Leona*, and North from the *Shallows* of St. *Ann's Iſland*.

(c) *Sierra Leona*, and *Madrabomba*.

This Land of *Sierra Leona*, is the higheſt of all that lies between *Cape Verd* and the Coaſt of *Guiney*; ſo that the Point is very eaſie to be known. Here they wou'd have Landed, running up to the Point over the *Baixos* or *Shallows* of St. *Anns*, at 10, 9, 8, 7 and 5 fathom Water, it being ſtill deeper to the North, but ſhallower to the Eaſt; ſo that in the Evening they Anchor'd with a high Water at 4 Fathom and half ſoft ground, and at Night at 3 Fathom and half.

The 22d, *William Schouten*, in the *Horne*, led the way off the Shallows, ſteering N. N. E. with a N. W. Wind; by which Courſe, they were entirely diſengag'd from the *Baixes*, and got out into 18 Fathom water. From hence they went to the Iſlands of *Madrabomba*, which are very high, and lie all three on a row, S. W. and N. E. half a League from *Sierra Leona* to the Seaward. Here they had ſhallow water at 4 and 5 Fathom, and ſoft muddy ground: They Anchor'd a League from the Land, which appear'd to be very full of Bogs and Marſhes, and lay all over waſte like a Wilderneſs, ſcarce fit to entertain any other Inhabitants than wild Beaſts; and, indeed, not ſeeming to have any other.

Going aſhore the 23d, they found a River there, the Mouth of which was ſo ſtopp'd up with Sands, and Cliffs, and Rocks, that no Ship cou'd get into it, yet within the water was ſufficiently deep, and the breadth ſuch too as to give a Ship free ſcope to turn and wind her ſelf about, as ſhe ſhou'd have occaſion.

Barking Birds if the *Dutch* don't Lye.

Here they ſaw Tortoiſes, Crocodiles, Monkeys, wild Oxen, and a ſort of Birds which made a noiſe, Barking like Dogs. They met with no Fruit but Limons, ſome few Trees of which they found after a tedious ſearch; ſo that it ſeems as if Nature had intended this place for the only uſe of ſome Societies of Brute Animals, which ſhou'd here enjoy their native Freedom, and live out of the reach of the Tyranny of Mankind, for here they live ſecurely, and without diſturbance, being defended by the natural Poverty and Barrenneſs of the place, which are the Guard which Nature has ſet upon, and by which ſhe preſerves this Kingdom of Beaſts in a State of Liberty: And till that Guard be removed, and Nature, by her Bounty, gives a temptation to a Foreign Power, the Brutes will hold their own, and the Chaſtity of their free State will never be violated.

The 29th, about Noon, they got above the Iſlands of *Madrabomba* Weſtward, along to the North part of the high Land, till they had 12 and 15 Fathom water, and in the Evening got about the Point.

(d) *Sierra Leona* Road.

The 30th, *A. M.* driven with a ſtream and a South-wind, they came before the Village, in the Road of *Sierra Leona* (d), where they Anchor'd at 8 Fathom, a little from the ſhore, in a very ſandy bottom. The Village conſiſted of about 8 or 9 poor Houſes cover'd with Straw: The *Moors*, that dwelt there, deſired to come aboard, only demanding Pledges to be left aſhore, to ſecure their ſafe return; becauſe a *French* Ship, that came thither before, had perfidiouſly carried off two of them. So *Aris Clawſon*, the Merchant, went aſhore, and ſtaid there amongſt them, driving a ſmall Trade with them for Limons and Bananas, which they exchang'd for Glaſs Beads; and in the mean time they came aboard, bringing an Interpreter with them, who ſpoke all ſorts of Languages. Here they had a good opportunity to furniſh themſelves with freſh Water, which pouring down in great quantities from every high Hill, they had nothing to do but to place their Barrels under the fall of the Water to receive it. There were alſo vaſt Woods of Limon-Trees here, which made that Commodity ſo cheap to them, that for a few Beads and Knives they might have had 10000 or more.

Woods of Limon-Trees.

Sept. 1. they drove away before the ſtream, and Anchor'd that Evening at the mouth of the Sea, before a ſmall River. Here they took an Antelope in the Woods, with Limons and Palmitos; and had good ſucceſs in their Fiſhing.

The 3d, the Maſter brought in a great Shoal of Fiſh that were of the ſhape of a Shooe-makers Knife, and as many Limons as came to 150 for every Man's ſhare.

The 4th, they ſet Sail from *Sierra Leona* early in the Morning.

A ſtrange Sea-Monſter.

Octob. 5. they made 4 degrees 27 minutes South Lat. and the ſame day, at Noon, they were ſtrangely ſurpriz'd with a very violent ſtroke given to one of their Ships in the lower part of it. No Adverſary appear'd, no Rock was in the way to be encounter'd with; but while this amuſed them, the Sea all about them began to change its colour, and look'd as if ſome great Fountain of Blood had been open'd into it; this ſudden alteration of the Water being no leſs ſurprizing to them than the thumping of the Ship. But the cauſe, both of the one and the other, they were equally ignorant of, till they came to *Port-Deſire*, and there ſet the Ship upon the Strand to make her clean: For then they found a large Horn, both in form and magnitude reſembling an Elephants Tooth, ſticking faſt in the bottom of the Ship; a very firm and ſolid Body it was, and ſeem'd to be equally ſo all over, there being nothing of a large Cavity, or a light and ſpongy Matter, in the midſt of it, but all over as denſe and compact a Subſtance as that in the exterior Parts. It had pierced through three very ſtout Planks of the Ship, and raced one of the Ribs of her, ſo that it ſtuck at leaſt half a Foot deep in the Planks, and there was about as much that appear'd without the great hole, up to the place where 'twas broken off. And now the Riddle was compleatly Solved, this Horn being the ſpoil of ſome Sea-Monſter, that had thus rudely aſſaulted the Ship with that piercing weapon, and after the thruſt not being

ing able to draw it out again, had there broken it off; which was attended with ſuch a plentiful effuſion of Blood, as had diſcolour'd the Sea to that degree.

30

Having now Sail'd ſo far, that none in the Ships but the Maſters knew where they were, or whither they intended, upon the 25th they diſcover'd their Deſigns to the reſt of the Company, of going to find out a new Southern Paſſage into the great *Pacifick Sea*. This they had kept very cloſe to themſelves before, but now thought it time to reveal the Plot, there being no danger of defeating it; and the Company appear'd to be very well pleas'd with it, hoping to light on ſome Golden Country or other to make them amends for all their travel and danger.

The 26th, they made 6 degrees 25 minutes South Lat. Sailing the reſt of that Month moſtly Southward, till they had made 10 degrees 30 minutes.

Nov. 1. they had the Sun North of them at Noon. The 3d, P. M. they had ſight of *Martin Vad*'s Iſland, call'd *Aſcenſion* (e), under 20 degrees; and here they obſerv'd the Compaſs to vary to the N. E. 12 degrees.

(e) *Vad's Aſcenſion* Iſland. Variation of the Compaſs.

The 21ſt, they came under 38 degrees 25 minutes, and had a deep water, whoſe bottom they could not reach with their Lead: Here the variation of the Compaſs was 17 degrees to the N. E.

Dec. 6. they had a proſpect of Land not very high, but flat and white, and quickly after fell in with the North-ſide of *Port-Deſire* (f), and that night Anchor'd one League and half from the ſhore, in 10 Fathom water, with an Ebb that ran Southward, as ſtrongly as the Sea runs between *Fluſhing* Heads.

(f) *Port-Deſire.*

The 7th, keeping a South Courſe, at Noon they came before the Haven of *Port-Deſire*, which lies under 47 degrees 40 minutes: At the entry of it they had very high Water, neither did any of thoſe Cliffs appear which *Van Noort* had deſcribed, and which muſt be left Northward in ſailing into that Haven. If there were any, they were all under water; but the Cliffs lay open and viſible enough towards the South Point, which therefore, perhaps, might be them which *Noort* intended. Upon this ſcore they went on Southward, but ſailing ſo far Southward as to miſs the right Channel, they came into a crooked Bay, where, at High-water, they had but 4 Fathom and half, and at Low but 14 Foot; by which means, the *Unity* lay with her Stern faſt a-ground, and there wanted only a briſk Eaſt gale to ruine her, but the Wind blowing Weſt from the Land ſhe recover'd again. Here they found good ſtore of Eggs amongſt the Cliffs, and the Bay afforded them Muſcles, and Smelts of 16 inches length; upon which ſcore, they call'd it *Smelt-Bay*. Their Shallop went to the *Penguin* Iſland, and came back with 150 *Penguins*, and 2 Sea Lions.

Smelt-Bay.

The 8th, A. M. they ſail'd out of *Smelt-Bay*, and Anchor'd juſt before the Haven of *Port-Deſire*. The Shallop was employed beforehand to Sound the depth of the Channel, which proving to be 12 or 13 Fathom, they boldly entred, having a N. E. Wind to carry them along: But after a little more than a Leagues ſailing, the Wind began to turn about, and they Anchor'd at 20 Fathom, but the bottom they were upon being only ſlippery Stones, and the Wind now blowing hard at N. W. their Anchors cou'd not preſerve them from driving away with that rough Wind upon the Southern ſhore. And now 'twas by far more likely than not, that both theſe Ships ſhou'd be wrack'd together: The *Unity* lay with her ſide upon the Cliffs, but ſtill kept the water, and by the fall of the Sea was gradually ſhaden down lower and lower into it; but the *Horn* ſtuck ſo, as that her Keel was above a Fathom out of water, and a Man might have walk'd barefoot under it at Low-water. She was beholding awhile to the N. W. Wind, that, by blowing hard upon her ſide, kept her from falling over; but that ſupport being gone with the Wind that gave it, ſhe ſunk down upon that ſide at leaſt 3 Foot lower than the Keel; upon which ſight they gave her over for loſt. But yet the ſucceeding Flood, which came on with ſtill Weather, ſet her upright again, and both ſhe and her Companion got clear of the danger.

Their Ships like to be loſt in the Channel.

The 9th, they went farther into the River, and came to *Kings-Iſland* (g), which they found full of black Sea-Mews, and almoſt all cover'd over with their Eggs: A Man, without ſtraining to reach, might have taken between 50 and 60 Neſts with his hand; each of which ſhou'd have 3 or 4 Eggs apiece, ſo that they were quickly furniſh'd with ſome thouſands of them.

(g) *Kings-Iſland* cover'd with Eggs.

The 11th, the Boat went in ſearch of good Water lower down the River, on the South-ſide, but found it all of a brackiſh unpleaſant taſte: They ſaw Oſtriches here, and a ſort of Beaſts like Harts, with wonderful long Necks, and extremely wild. Upon the high Hills they found great heaps of Stones, under which ſome very monſtrous Carkaſſes had been buried: There were bones of 10 and 11 Foot long; in all probability they were (if of rational Creatures) ſome bones of the Giants of that Country. No Water was to be found here for ſeveral days together; ſo that tho' they had plenty of good Fiſh and Fowl, they cou'd meet with no Drink to waſh it down.

See the Account of the Giants in theſe Parts in *Magellan's* Voyage.

Here they loſt their good Ship the *Horn*, by an unhappy accident; 'twas her Fate, it ſeems, to periſh by Fire, after ſo many Triumphs over the dangers of the Wind and Water. For as they were burning Reeds under her, in order to her Cleanſing, the flame, by ſome paſſage or other, got into the Ship, and preſently gather'd to ſuch a head, that in ſpite of all they cou'd do, ſhe burnt down to the very water: They made a ſhift to ſecure her Guns, Anchors, and all her Iron-work, which was then beſtowed in the *Unity*, the only Veſſel they had left to proſecute their Diſcovery in.

The 25th, they found certain holes in the ground that yielded a white muddy ſort of Water; and this, for want of better, was their Ale at that time.

Jan. 13. * they ſail'd out of *Port-Deſire*, but having a Calm, they Anchor'd before the Haven, till the riſing of the Wind invited them to purſue their Voyage.

* *A.D.*1616.

The 18th, being in 51 degrees, they ſaw the *Sebaldine-Iſland* (h), which they obſerv'd to lie in that poſition and diſtance, from the Streight, that *De Weert* had determin'd.

(h) *Sebald's Iſland.*

The 20th, they ſaw *Steencroſs-drive*; and being then in 53 degrees, they obſerv'd the great Current that runs S. W. and now they counted about 20 Leagues Southward from the *Magellanick Streights*.

The 23d, they had an uncertain ſhifting Wind, and the Water appear'd white, as if they had been within the Land: They held their Courſe S. and by W. and the ſame day ſaw Land, bearing W. and W. S. W. from them, and quickly after to the South; then attempting by an E. S. E. Courſe to get above the Land, the hard North-Wind that blew then conſtrain'd them to take in their Topſails.

The 24th, A. M. they ſaw Land a Star-board about a Leagues diſtance, ſtretching out E. and S. with very high Hills all cover'd with Ice; and then other Land, bearing Eaſt from it, high and ragged as the former. They gueſs'd the Lands, they had in theſe two Proſpects, lay about 8 Leagues aſunder, and that there might be a good Paſſage between them, becauſe of a pretty briſk Current that ran Southward along by them. About Noon they made 54 degrees 46 minutes, and then began to make towards the fore-mention'd opening, but the ſucceeding Calm prevented it. Here they ſaw an incredible number of Penguins, and ſuch huge troops of Whales, that they were forc'd to proceed with a great deal of caution, for fear they ſhou'd run their Ship upon them.

35

Great numbers of Whales.

The 25th A. M. they got up cloſe by the Eaſt Land, which upon the North-ſide reaches E. S. E. as far as the Eye can follow it: This they call'd *States-Land*, and that which lay Weſt they gave the Name of *Maurice-Land* to. They obſerv'd, that on both ſides there were good Roads and ſandy Bays, good ſtore of Fiſh, Penguins and Porpuſſes, and ſome ſorts of Fowl; but the Land adjacent ſeem'd quite bare of Trees and Woods. They had a North-Wind at their entrance into this paſſage, and directed their Courſe S. S. W. ſo that going pretty briſkly on, at Noon they made 55 degrees 36 minutes, and then held a S. W. Courſe, having a good ſtiff gale to blow them forwards. The Land upon the South-ſide of the Paſſage, at the Weſt-end of *Maurice-Land*, appear'd to run W. S. W. and S. W. as far as they cou'd ſee it, and all very craggy uneven ground.

States-Land and *Maurice-Land.*

The new Streights, call'd the *Streights of Maire.*

* In the Evening, having a S. W. Wind, they ſteer'd Southward, meeting with mighty waves that came rouling along before the Wind; and the depth of the Water, to the Loofward from them, (which appear'd by ſome very evident Signs) gave them a full aſſurance, that the great South-Sea was now before them, into which they had almoſt made their way, by a paſſage of their own peculiar Diſcovery. The Sea-Mews hereabouts were larger than Swans, and their wings, when extended to their full length, ſpread above the compaſs of a Fathom: They wou'd come, and very tamely ſit down upon the Ship, and ſuffer themſelves to be made Priſoners, without any endeavours to fly away.

* *Note*, While our *Dutchmen* are here advancing towards a new Diſcovery, we are obliged to be ſo curious as to ſhew how the Wind blew them along every ſtep of their way, till they came into the new Streights.

The 26th they made 57 degrees, and were Entertain'd here with a Flying Storm out of the W. & S. W. the Water were alſo very high and blue: They ſtill held all this Day their Courſe to the Southward, but changing it at Night for a N. W. one; in which Quarter they diſcover'd very high Land.

The 27th, they were under 56 degrees 51 minutes, the Weather very cold, with Hail and Rain, the Wind W. and W. by S. They went a Southern Courſe, and then croſs'd Northward with their Main-Sails.

The 28th, they hois'd up their Top-Sails, and had great Billows out of the Weſt, with a Weſt, and then a North-Eaſt Wind, and therewith held their Courſe South, and then W. & W. by S. which brought them under 56 degrees 48 minutes.

(i) *Barnevels-Iſlands.*

(k) *Cape-Horne.*

The 29th, they had a N. E. Wind, and held their Courſe S. W. which gave them the Proſpect of two Iſlands beſet round with Cliffs, and lying W. S. W. from them; they got up to them at Noon, but cou'd not ſail above them, and therefore held their Courſe to the North. They gave them the Name of *Barnevels Iſlands* (*i*), and found their Latitude to be 57 degrees South. Taking a N. W. Courſe from hence, in the Evening they ſaw Land again, lying N. W. & N. N. W. from them; this was the high hilly Land, cover'd with Snow, that lay Southward from the *Magellanick Streights*, ending in a ſharp Point which the call'd *Cape-Horne* (*k*), and lying in 57 degrees 48 minutes. They held their Courſe now Weſtward, in which Courſe they found a ſtrong Current that ran that way too; yet had they the Wind in the North, and great Billows tumbling out of the Weſt upon them.

The 30th, the Billows and the Current ſtill ran as before; and now they gather'd a full aſſurance from hence, that the way was open into the South-Sea: This Day made the Latitude of 57 degrees 34 minutes.

The 31ſt they ſail'd Weſt, with the Wind in the North, and made 58 degrees; but the Wind turning to the W. and W. S. W. they paſs'd *Cape-Horne*, loſing all ſight of Land, and ſtill meeting the Billows working out of the Weſt; which, together with the blueneſs of the Water, made them quickly expect the Main South-Sea.

Feb. 1. a ſtorm blowing out of the S. W. they ſail'd with their Main-Sails lying N. W. & W. N. W.

The 2d, with a Weſterly Wind, they ſail'd to the Southward, and made 57 degrees 58 minutes, the variation being there 12 degrees Northward.

The 3d, they made 59 degrees 25 minutes, with a hard Weſt Wind, but ſaw no ſigns of any Land to the South; and the next day 56 degrees 43 minutes, turning to and fro, with very uncertain S. W. Winds, and finding 11 degrees of N. E. variation.

The 5th, by reaſon of a ſtrong Weſterly Current, and a hollow Water, they cou'd bear no Sail, but were forc'd to drive with the Wind.

They ſee the *Magellan-Streights* to the Eaſt of them.

The 12th, they plainly diſcern'd the *Magellanick Streights*, lying Eaſt of them; and therefore, now being ſecure of their happy New Diſcovery, they render'd Thanks to good Fortune in a Cup of Wine, which went three times round the Company. And now this New-found Paſſage had a Name given it, which was that of *Maire's Streights*, tho' that Honour (in Juſtice) ought to have been done to *William Schouten*, by whoſe happy Conduct the *Streights* were diſcover'd. And 'tis obſervable, that all the time of their Sailing through theſe *Streights*, and about the Southern *Newfoundland*, they had a ſettled Courſe of bad Weather, a thick and foggy Air, and ſtrong Currents; all which put together, did make their Sailing to be really in the *Streights*. But the Joy of this Diſcovery, and the Hopes of a farther Improvement of it, together with the Auxiliary Comforts of the Bottle, help'd to carry off the ſence of all that tedious Voyage, and the many mortifying Dangers of it.

The 27th, they made 40 degrees South Lat. having fair weather, and held their Courſe Northward.

The 28th, they determin'd for the Iſland of *John Fernando*, to give their ſick and weary Company a due refreſhment; and that Day they made 35 degrees 53 minutes. In the Evening they made but ſmall Sail, fearing to fall upon the Land; which effectually to avoid, they ſail'd N. E.

(l) Iſland of *Fernando.*

Fiſhing at the Iſland *Fernando.*

March 1. they ſaw the Iſland of *Fernando* (*l*) before them to the N. N. E. and about Noon got up to them under 33 degrees 48 minutes. Both theſe Iſlands are very high, the ſmalleſt lying moſt Weſtward, is a very barren and rocky place, but greater to the Eaſt; tho' it be full of Hills, yet is well ſhaded with Trees, and fruitful. The Iſland it ſelf affords plenty of Hogs and Goats, and all the Coaſt about it ſuch excellent Fiſhing, that the *Spaniards* think it worth their while to come hither; from whence they Tranſport vaſt quantities of Fiſh to *Peru*. The Road lies on the Eaſt Point of this Iſland, and they ſhap'd their Courſe not as they ſhou'd to the Eaſtern, but the Weſtern ſide of it; by which means, they were reduc'd to the inconvenience of not being able to get near enough the Land to Anchor. This made them Diſpatch their Boat to ſound the Depth, which gave them an Account of 30 and 40 Fathom, ſandy ground, cloſe by the Land, which leſſen'd ſtill to 3 Fathom, very proper to Anchor in. They told too of a very lovely Valley full of Trees and Thickets, refreſh'd with ſtreams of water running down from the Hills, and variety of Animals feeding in thoſe pleaſant places; all which they ſaw in this greater Iſland. They brought good ſtore of Fiſh along with them, moſt of them *Corcobadoes* and *Steenbraſſes*; and reported, that they ſaw a great many Sea-Wolves. The two next days ſucceſſively, they repeated their Attempt to come up and Anchor cloſe by the Iſland, but were ſtill fruſtrated, whatever endeavours they uſed to accompliſh it. But ſtill their Men followed the Fiſhing-Trade, which they managed ſo ſucceſsfully, that they took almoſt two Tun of Fiſh only with Hooks, in the ſmall time that ſome of the Company went to fetch Water. Finding the Iſland thus inacceſſible, they determin'd to purſue their Voyage.

The 11th, they paſs'd the Tropick of *Capricorn* the ſecond time, holding their Courſe N. W. Here they had the general E. & E. S. E. Wind, and held their Courſe N.N.W. to the 15th day, when they made 18 degrees; then they chang'd that Courſe, and ſail'd Weſt.

April 3. they made 15 degrees 12 minutes, and had then no variation of the Compaſs, but a conſiderable variation of the temper of their Bodies from a good ſtate of Health, by reaſon of the Flux, which had ſeiz'd the beſt part of the Company.

(m) *Dog-Iſland.*

The 10th, they ſaw a little low Iſland at 3 Leagues diſtance, which they got up to at Noon: Here they caſt out their Lead, but cou'd find no bottom, and therefore put out their Shallop. The Men that went aſhore found nothing for refreſhment, but ſome Herbs that taſted like *Dutch* Twinkars; but gave an Account of a very ſilent ſort of Dogs they had ſeen there, that wou'd neither Bark nor Snarl, nor make any noiſe at all; and for this reaſon they call'd it *Dog-Iſland* (*m*). It lies in 15 degrees 12 minutes; and they judged it 925 Leagues diſtant from the Coaſt of *Peru*. The ground is ſo low, that at High-water it ſeems, for the moſt part, to be overflown; and it has nothing round about it, but a ſort of a Ditch beſet with Trees, between which the Salt water breaks in in ſeveral places.

Another Iſland.

The 14th, they ſail'd W. & W. by N. and the ſame day, *P. M.* they ſaw a large, but low Iſland, reaching N. E. & S. W. a conſiderable way. At Sun-ſet, being about a League from it, an *Indian* Canoe advanced to meet them, the Men naked, with long black Hair, and their Bodies of a reddiſh colour. They made ſigns to the *Dutch* to come aſhore, and call'd to them in their Language; and tho' they anſwer'd them in their own, the *Spaniſh*, *Moluccan*, and *Javan* Tongues, yet the *Indians* underſtood them not; ſo that both ſides were in the dark as to each others Minds. When they got up to the Iſland, and Sounded, they found no bottom, neither was there any change of Water, tho' they were within a Musket-ſhot of the ſhore. Here the *Indians* and they had another unintelligible Conference, but they wou'd not be perſwaded to come up to the Ship by any ſigns the *Dutch* cou'd make to invite them to it, as neither wou'd the *Dutch* go aſhore to them, tho' ſtill they kept pointing and talking to one another, while neither ſide underſtood one word that was ſpoke by the other.

Thieviſh People like the *Ladrones.*

Leaving theſe People therefore to others that cou'd underſtand them, they ſail'd away S. S. W. to get above the Land: And having made that Night 10 Leagues, in a S. S. W. Courſe, the 15th, A. M. they ſail'd cloſe along by the ſhore, on which ſtood ſeveral of theſe naked People, calling to them (as they gueſs'd) to Land. Preſently after one of their Canoes came towards the Ship, but wou'd not come near it; yet ventur'd to the Shallop, where the *Dutch*, and theſe *Indians*, fell to their Myſterious Conferences again. The *Dutch* gave them Beads and Knives, and ſeveral things that pleas'd them; which kindneſs embolden'd them at laſt to come a little nearer the Ship, but ſtill they wou'd not go aboard her, but got back into the Shallop. Neither had they any great reaſon to be fond of their Company there, for they are a parcel of light-finger'd Fellows, and have much the ſame degree of Conſcience and Honeſty with them at the *Ladrones*. They love Iron as the *Ladrenians* do, and they love to ſteal it like them: The very Nails in the Cabbin-Windows, and the Bolts upon the Doors, cou'd not keep their places for them but they wou'd have them off; this they found to be true, by one of them, who had cunningly ſlipp'd into the Ship, and pull'd out all the Window-nails, which for ſecurities ſake he had ſtruck into his Hair. Nay, they are ſo very impudent, that whatever they lay Hands on is their own, (tho' the Owner look on all the while) if he does not recover his Right by force. When the *Dutch* gave them ſome Wine, they drunk the Liquor and kept the Cup; ſo when they threw out a Rope to bring them to the Ship, they wou'd neither uſe the Rope nor return it. And their Qualities are not more odd than the Figure they make; for (beſides that they are all naked, except the

Pudenda, which are cover'd with a piece of Mat) their Skin is all over figured with Snakes and Dragons, and ſuch like Vermine; which are very ſignificant Emblems of their own ſubtle and miſchievous Natures.

Iſlands without Ground.

The *Dutch* having a mind to try, if any thing were to be done with them, or to be gotten in the Iſland, ſent their Shallop with eight Muſketteers, and ſix Swords-men, beſides other Company of the Ship. They were no ſooner landed, but thirty of theſe People ruſh'd out of a Wood upon them, arm'd with great Clubs and Slings, and long Staves; they wou'd have ſeiz'd the Shallop, and taken away the Soldiers Arms; but the Muskets letting fly amongſt them, kept them from the Sin of Robbery at that time, and forced them to be honeſt whether they wou'd or no. This Iſland they call'd the Iſle without Ground, becauſe they cou'd not Anchor there: It is not broad, but ſomething long, and full of Trees, which they gueſs'd to be Coco's and Palmito's. It is a white ſandy Ground, and lies in 15 Degr. South Lat. and about a hundred Leagues from *Dog*-Iſland. Seeing nothing to be done here, they ſet ſail, and held their Courſe W. to the Seaward. Here having but a ſlight Water, and no Billows, as the Day before, out of the South, they gueſs'd that Southward there was more Land.

Water-Iſland.

The Sixteenth they came to another Iſland that lay Northward, and was about fifteen Leagues diſtant from the other. This appear'd to be all drown'd Land within, tho' on the ſides well ſet with Trees: And here alſo they found no bottom for Anchoring. It yielded them nothing for Food, but a few Herbs like thoſe in *Dog*-Iſland, with ſome Crabs, and other Shell-fiſh, which were well-taſted Meat; but it afforded them ſome good freſh Water, which they found in a Pit not far from the Shoar. The Pottage made of the Herbs they gather'd here, prov'd very ſerviceable to thoſe of their Company that were troubled with the Flux. They call'd this Iſland, *Water*-Iſland, becauſe it ſupplied them with Water; they left it preſently, and ſail'd Weſtward, making that Day 14 Degr. 46 Min. South Lat.

Wild Men.

The Eighteenth they came to another Iſland, lying to the South Weſt, about twenty Leagues diſtant from the laſt, and ſtretching out North Weſt, and South Eaſt, a conſiderable way. The Boat being diſpatch'd to ſound the depth, brought word, That they had found a bottom (by a Point of Land, from whence there came a gentle Stream of Water) at twenty five, and forty Fathom, about a Musket-ſhot from the Land. This News of Water made them ſend their empty Cask in the Boat, in hope to have it well fill'd. But after they had taken a great deal of pains to land, and had been a good while beating up and down in a Wood to find ſome Spring or other to ſupply them, the ſight of a wild Man frighted them away, and put an end to their enquiry after Water for that time: And quickly after they were got into their Boat, there came five or ſix more of thoſe Savages, and ſhewed themſelves upon the Shoar; but ſeeing they were gone off, preſently retired into the Woods.

Swarms of Flies.

But tho' they got clear of theſe more formidable Adverſaries, yet there were others very troubleſome, that ſtuck cloſe to them; of which they brought many Millions along with them out of the Woods. Theſe were a ſort of black Flies, of which there were ſuch prodigious Swarms thereabouts, that they came home cover'd over with them from Head to Foot; their Hands and Faces ſo beſet, that there was no ſeeing what Complexion they were of; their Cloaths entirely hidden by the Multitudes of thoſe Animals crawling upon them, which did themſelves compoſe another ſort of Apparel, and give the poor Men (ſhrewdly againſt their Wills) Coats, Breeches, Stockins, and Shooes, of Flies: Beſides, their very Boat, and Oars, were all over in the ſame Dreſs with themſelves. And out of this their Abundance, they did, when they came back, very liberally communicate to their Companions: And now the Plague of Flies began to rage in the Ship, and every Man was buſie to defend his Face and Eyes as well as he cou'd. 'Twas the beſt part of the Day's-work to be flapping the Flies away; and 'twas hard for a Man to open his Mouth, either to ſpeak, or to eat, without taking in a Mouthful of theſe Vermine at the ſame time.

Fly-Iſland.

This direful Perſecution laſted about three or four days, in which time the Flaps did ſuch execution, that their Sufferings were pretty well at an end, and few of the Flies were left alive, to torment them. They call'd this Iſland, with very good Reaſon, *Fly*-Iſland: And by the help of a good Gale of Wind, did fly away from it as faſt as they could.

The 23d, they were under 15 Degr. 4 Min. and there again had great Billows out of the South, which continued alſo the next Day. Here they concluded, that the *Terra Auſtralis*, which they ſought for, lay yet Two hundred and fifty Leagues further.

The 25th, the hollow Billows out of the South ſtill continued, ſuch as are commonly in the *Spaniſh* Seas, out of the N.W.

May the 3d, they ſail'd Weſtward, and made at Noon 15 Degr. 3 Min. And that Day they ſaw ſeveral great Doradoes, which were the firſt they had ſeen in the South Sea.

A ſtrange Bark taken.

The 9th they made 15 Degr. 20 Min. and gueſs'd they were then 1510 Leagues from the Coaſt of *Peru*. The ſame Day they perceiv'd a Bark coming towards them, which they went to meet, and gave her a Gun or two to make her ſtrike. But thoſe that were in her, either not underſtanding the Language of the Guns, or refuſing to do what they commanded, the *Dutch* ſent out their Shallop, with ten Musketeers, to reduce her; upon which ſhe endeavour'd to make her eſcape, but the Shallop intercepted her. Some of her Men, in a very great fear, threw themſelves overboard, and diſpos'd of their Goods the ſame way that they did their Bodies. When they had boarded her, thoſe that were left made no manner of reſiſtance, but quietly reſigned themſelves to the diſpoſal of the Conquerors, who uſed them very kindly; dreſſing thoſe that were wounded, and ſaving the Lives of ſome that had leap'd over-board, and entertaining all of them in their Ship. There were beſides the Men, eight Women, and ſeveral Children, ſo that the whole Number amounted to about Twenty three.

The People aboard her.

They were a cleanly neat ſort of People, of a reddiſh colour, quite naked, except the obſcene Parts, which were cover'd: The Men had long curl'd black Hair, and the Women ſhort like the Men in *Holland*.

The Bark.

The Bark they were in, was of a very peculiar Figure and Structure: It conſiſted of two Canoes faſtned together in the midſt of each of which were laid two broad Planks of Red-wood to keep out the Water, and ſeveral others went croſs from one Canoe to the other, which were made very faſt and cloſe above, and hung a good way over on both ſides. At the end of one of the Canoes on Starboard-ſide, there ſtood a Maſt with a Fork in the end of it, where the Yard lay; the Sail was made of Mats, and the Ropes of ſuch Stuff as the Fig-frails in *Spain* conſiſt of. They had no Compaſs nor Chart, nor any Furniture for the Seas, but only a few Fiſhing-hooks, the upper-part of which was Stone, and the other black Bone, Tortoiſe-ſhell, or Mother of Pearl. They had no need to lade their Veſſel with freſh Water, for they ſatisfied themſelves with the Liquor of a few Coco-Nuts; and when that was ſpent, they had recourſe to the great Ocean for a ſupply, themſelves, and their ſmalleſt Children, drinking the Salt-water very heartily. The *Dutch* ſent them all back to their Veſſel again; where the Women welcom'd their Husbands with joyful Embraces; and thus happily freed, they ſail'd away to the South Eaſt. But to our Diſcoverers.

The Tenth they held a W. and S. W. Courſe; and that Day ſaw very high Land on Larboard, lying S. E. and by S. about eight Leagues off; but tho' they had a good Gale, they could not reach it that Day.

The Eleventh A. M. they came up with a very high Iſland; and about two Leagues Southward with another much lower: And the ſame Day ſail'd over a Bank of fourteen Fathom deep, and a ſtony bottom, lying about two Leagues from the Land, which being paſt, they cou'd find no more Ground. About this time, another of the aforeſaid Barks came up to them, which had (as they generally have) a looſe Canoe in her, to put out upon occaſion. She ſail'd at that rate, that few *Dutch* Ships cou'd outſtrip her; her Men ſteer'd behind with two Oars, in each Canoe one; and when they had a mind to wind her, they row'd before: But all theſe Veſſels will wind themſelves, by only pulling the Oars out of the Water, and letting them go.

Coco-Iſland.

Sending their Shallop to ſound by one of theſe Iſlands, they were inform'd, that there was Ground, tho' ſhelvy, at twelve, fourteen, and fifteen Fathom, about a Cannon-ſhot from the Land; ſo they reſolv'd to Anchor there. The Negroes, indeed, by Signs directed them to go to the other Iſland, and ſail'd thither before them; but they anchor'd at the end of the former Iſland, at Twenty five Fathom, ſandy Ground, a Cannon-ſhot from the Land. This Iſland lies in 16 Degr. 10 Min. It is one entire Mountain, and looks like one of the *Molucca's*: 'Tis all over cover'd with Coco-Trees; for which reaſon they call'd it *Coco-Iſland*.

The other Iſland is much lower than this, but longer, lying E. and W. Being at Anchor, there came three Ships, and nine or ten Canoes (which had three or four Men apiece) about them, ſome of which had put out

White Flags, in Token of Peace, as they did the like. The Canoes were flat before, and ſharp behind, hewed out of one whole piece of Red-Wood, and wou'd ſail exceeding ſwiftly.

They trade with the Natives.

When they came near the *Dutch* Ship, they leap'd, ſome of them, into the Water, and ſwam to it, having their Hands full of Coco's, and Ubes Roots; which they barter'd for Nails, and Beads, giving four or five Coco's for a Nail, or a ſmall String of Beads; ſo that the *Dutch* traded that Day for One hundred and eighty Coco's. And this Trade bringing ſo many of them aboard, that they knew not how to ſtir their Ship; they ſent their Shallop to the other Iſland, to ſee for a more convenient place to lie in. But the Shallop being juſt got out, was preſently beſet by a huge number of Canoes, fill'd with a mad ſort of People, arm'd with great Clubs, that forthwith boarded her, and attack'd the Men. They firing their Muſkets upon them, were laugh'd at by the Savages, in that with ſo much noiſe, they had done ſo little harm; but the next touch, when one of them was ſhot through the Breaſt, they had done making ſport with the Muskets, and learn'd to keep their diſtance a little better for the time to come. They were luſty, well proportion'd Men, and good Swimmers; but naked, thieviſh, and very fantaſtical in the dreſſings of their Hair: Some were it ſhort, others long, ſome curl'd, and others plaited and folded up in ſeveral Faſhions.

The Twelfth they came in their Canoes again, laden with Coco's, Bananas, Ubes Roots, Hogs, and freſh Water. There was a great Contention amongſt them, who ſhou'd get firſt to the Ship; and thoſe that were behind, being ſhut out by them before, ſince they cou'd not leap over their Heads, they jump'd into the Water, and ſwam under the Canoes, holding Bunches of Coco's in their Mouths, and climbing up the ſides of the Ship like ſo many Rats, and that in ſuch Swarms, that they were forc'd to keep them off with Staves: The *Dutch* barter'd with them that Day for Twelve hundred Coco's, which made twelve to every Man's ſhare, they being Eighty five in all.

The Negro's wondred very much at the Strength and Greatneſs of the *Dutch* Ship; and ſome of them crept down under it, and knock'd upon the bottom of it with Stones, to try how ſtrong it was.

The Negro-King comes to the Ship.

The King of thoſe Barbarians ſent a black Hog to the Ship for a Preſent, charging the Meſſenger to take no Reward; and quickly after he came himſelf, in a large Ship of their faſhion, attended with Thirty five Canoes; when he was a little way from the Ship, he began to call and cry out aloud, and all his Company did the like; this being their way of bidding Strangers Welcome. The *Dutch* received them with Drums and Trumpets, which mightily pleas'd and ſurpriz'd them; and they to teſtifie their Sence of the Honour that was done them, us'd all their Ceremonies of bowing their Heads, and clapping their Hands together over them, which they are accuſtom'd to upon ſuch Occaſions. The King, out of his Ship, ſent them a Matien for a Preſent; which Kindneſs they requited with the Gift of an old Hatchet, ruſty Nails, Glaſs-Beads, and a piece of Linen Cloth; things which His Majeſty was highly pleas'd with, and made many a fine Bow for. He was not to be known from his Subjects, by any Tokens, but the Reverence they ſhew'd him; for as they were all naked, ſo he had no other Apparel, but that which Nature gave him. He wou'd not be perſwaded to come aboard, tho' the Prince his Son did, and was well entertain'd there.

The Thirteenth, A. M. the Ship was ſurrounded with a whole Armado of Ships and Canoes, the King himſelf being there in Perſon; and in the Twenty three Ships, and Forty five Canoes, that compos'd the Fleet, no leſs than Seven or Eight hundred Men.

They pretended at firſt to come only upon the Deſign of Trade; and told them by Signs, that they were their very good Friends; and wou'd fain have them ſail to the other Iſland, where they ſhou'd find a much better Accommodation in all Reſpects.

The *Indians* aſſault the Ship.

But notwithſtanding all theſe fair Pretences, they ſuſpected ſome Miſchief was hatching by theſe Barbarians. Neither were their Suſpicions unjuſt; for they quickly began to caſt themſelves all round the Ship, and encloſ'd it on every ſide, and then with a great Outcry, upon the Alarm of a Drum, they gave the Aſſault. The King's Ship was the fore-moſt in the Action, and ruſh'd in with ſuch a force at the *Dutch* Ship, that the Heads of the two Canoes before it, were daſh'd all to pieces, with the violence of the Shock: The reſt came on as well as they cou'd, and ſhower'd in great Stones upon them. But the *Dutch* threw in ſuch Quantities of Pellets amongſt them out of their Muskets, and three great Guns loaded with Musket-ſhot, and Nails, that all thoſe in the Canoes, that lay within reach, were glad to leave them, and ſeek their Refuge in the Water. Being thus put to the Rout, they diſpers'd themſelves, and ſhifted for their Lives as well as they cou'd.

Traytors Iſland

Theſe treacherous People were the Inhabitants of the lower of theſe two Iſlands; which therefore they call'd *Traitors Iſland.*

Hope Iſland.

They ſet ſail from hence the ſame Day, and held their Courſe W. and W. by S. And the Fourteenth came to another Iſland, about Thirty Leagues diſtant from the former. They call'd this *Hope Iſland,* becauſe they hop'd here to meet with ſome Refreſhment. But finding no Ground at the Iſland, they ſent out their Shallop to ſound along the Shoar; which return'd with the News of a ſtony bottom at forty Fathom, about a Musket-ſhot from the Shoar, ſometimes twenty five, and thirty Fathom; and at a little diſtance again, no bottom at all.

The *Indians* came here with ten or twelve Canoes, to barter: They brought a ſmall parcel of flying Fiſhes, for which they had Beads in exchange: And whatſoever the one gave, or the other receiv'd, was convey'd on both ſides, by a Rope let down from the Stern of the Ship. But theſe ſame *Indians* went from this Trade preſently to another which was worſe, *viz.* robbing the Shallop; which they found employ'd in ſounding, at ſome diſtance, from the Ship. They offer'd to board her, and drag her away; but they in the Shallop, with their Guns, Pikes, and Curtlaſſes, gave them ſuch an Entertainment, that having ſeen two of their Company kill'd, they were glad to hurry away as faſt as they cou'd: And while theſe were beaten and maul'd upon the Water, their Friends ſtood and cried for them aſhoar.

This Iſland was full of black Cliffs, that were green on the top; 'twas well ſtock'd with Coco-Trees, and ſeveral ſorts of Herbs: There were ſeveral Houſes along the Sea-ſide, and a great Village cloſe by the Strand. There was no convenient Anchoring here, it being extreamly rough near the Iſland; upon which ſcore they left it, and ſail'd away South Weſt, intending to purſue the Diſcovery of a Southern Continent.

The Eighteenth, they were under 16 Degr. 5 Min. where they had very uncertain W. Winds: And now they began to conſult about the future proſecution of their Voyage.

William Schouten, the Maſter, told them, That they were now at leaſt Sixteen hundred Leagues Eaſtward from the Coaſts of *Peru,* and as they had not yet diſcover'd any part of the South Land, ſo neither was there any likelihood of their doing it. That they had ſail'd much farther Weſtward than they firſt intended; and that going on in that Courſe which they had hitherto purſu'd, they ſhould certainly fall Southward upon *New Guinea,* where if they found no paſſage, they muſt unavoidably be loſt; ſince 'twould be impoſſible to go back Eaſtward again, by reaſon of the Eaſterly Winds that blow continually.

Upon theſe, and other Accounts, he propos'd it as the beſt way to alter their Courſe, and ſail Northward, ſo as to fall in Northward upon *New Guinea.*

They alter their Courſe, and ſail Northward.

This Propoſal back'd with ſo many good Reaſons, was embrac'd by all the Company, ſo that they immediately determined to hold a N. N. W. Courſe.

Other Iſlands

The Nineteenth, their Courſe Northward, they had 2 Iſlands at Noon, about 8 Leagues diſtance from them, lying N. E. and by E. and that ſeem'd to be a Cannon-ſhot diſtant from each other. Upon this they ſteer'd N.E. intending to ſail about the Land, having fair Weather, but a ſmall Gale to bring them along.

The Twentieth, they continued ſtill labouring to get to the Land.

The Twenty firſt, being about a League from the Land, they were viſited by two Canoes, to whom, tho' they gave no manner of provocation, yet they were rudely inſulted by ſome of them, who began to hollow, and threatned to dart their Wooden Aſſagayes at them. But upon the Diſcharge of the Guns from the Ship, theſe bold Hectors began to ſcamper, and that in no little haſte and confuſion, leaving behind them two of their Company dead, and a Shirt which they had ſtolen out of the Ship, and had now no Stomach to carry away with them.

The Twenty ſecond, there came more of them to the Ship, but upon very friendly and peaceable Terms, bringing Coco's, Ubes Roots, and roaſted Hogs, which they bartered for Knives, Beads, and Nails. Theſe People were all as curious in the Arts of Swimming and Diving, as thoſe in *Traytor's* Iſland, and as well vers'd in thoſe of Cheating and Stealing too; which they never fail'd to do, if an opportunity were given them.

Their Houſes ſtood all along the Strand, which were cover'd with Leaves at the top, and had a ſort of a Pent-

Houſe of the ſame to carry off the Water. They were 10 or 12 foot high, and 25 in compaſs, furniſh'd with nothing but a Bed of dry Herbs, an Angling-Rod or two, and a great Club: Theſe were all the Ornaments even of the Palace, and the King himſelf had no more. The *Dutch* found here good conveniences for watering.

They go a-ſhoar.

The 24th, they ſent 3 of the principal Men of the Ship to Eſtabliſh a Friendſhip with the *Indians*, and to be as Hoſtages amongſt them, having in their room 6 *Indians* of Quality aboard, whom they made very welcome there. And the *Dutch* aſhore had very great reſpect paid them by the King; he made them a Preſent of 4 Hogs, and if any of his People came but near the *Dutch* Boat to diſturb them, while they were fetching Water, he wou'd drive them away himſelf, or order ſome of his Men to do it. His Subjects all ſtood in very great awe of him, and were fearful of having any of their Crimes made known to him; for one of them having ſtole a Curtlaſs, and complaint being made to one of the King's Officers, the Thief was purſu'd, and ſoundly drubb'd, for the wrong he had done; and beſides, forc'd to make reſtitution. And more than that, the Officer ſignify'd that he came off very well too, for if the King had known it, he wou'd certainly have had his Head off. Theſe People were extremely frighted at the noiſe of the Guns, and upon any diſcharge wou'd fly like ſo many Mad-men: Yet the King having a deſire to hear one of the great Guns let off, and being ſet under his Canopy, with ſome of his Courtiers about him, in great order, upon the going off of the Gun, he leap'd out of his Seat, and ſet up a run into the Woods, with all his Courtiers after him, and no perſwaſions of the *Dutch* cou'd poſſibly ſtop them.

The 25th and 26th they went aſhore again, to Barter for Hogs, but could get none, the *Indians* being reduc'd to ſome ſtraights themſelves, having nothing but Coco's, Bananas, Ubes-Roots, and a few Hogs, left: Yet the King continued his wonted reſpect and kindneſs to them; and he and his Lieutenant pull'd off their Crowns from their own Heads, and ſet them upon the Heads of two of the Company, Theſe Crowns were made of white, red and green Feathers, which their Parrots and Doves do ſupply them with: The Doves are white upon the back, and black every where elſe, except the Breaſt; and every one of the King's Council has one of theſe ſitting by him upon a Stick.

Crowns of Feathers.

The 27th and 28th, they got all their Water aboard; at which time, the Maſter and the Merchant went aſhore, with the Trumpets, which prov'd a very diverting Muſick to the King. Here he told them of his Wars with them of the other Iſland, and ſhew'd them ſeveral of the Caves and Thickets where they us'd to place their Ambuſcades, and lay lurking for Advantages againſt each other. They plainly found that he was fearful they had ſome Deſign upon his Country, for to draw them off from thence, he wou'd fain have engaged them in a War with the King of the other Iſland; nay, he offer'd to hire them to be gone, telling them, That if they wou'd go in two Days, he wou'd give them 10 Hogs, and a good parcel of Coco's. Yet, notwithſtanding his Suſpicions, he made them a Viſit a Shipboard, Praying when he enter'd the Ship, and Praying in every Cabbin he came into; as alſo, he always did when any of the *Dutch* came aſhore to him. His Men carry'd it with a mighty deal of Submiſſion to them, kiſſing their Feet, and laying them croſs their Necks, with all the tokens of awe and fear that they cou'd expreſs.

The King of the other Iſland comes.

The 30th was made a Day of Solemnities, by the coming of the King of the other Iſland to Viſit the King of this. He came with a Train of 300 of his naked *Indians*, that had bunches of green Herbs ſtuck about their middles, of which they prepare their Drink: And that he might be ſure to be welcome, he brought 16 Hogs along with him too. When theſe two Princes were within ſight of each other, they began to bow and ſcrape, and mutter'd out certain Prayers to themſelves: When they met, they both fell down with their Faces flat upon the ground, and after ſeveral very ſtrange geſtures uſed, they got up upon their Legs, and walk'd away to the Seats provided for them; where, after they had chop'd out ſome more of their Prayers, and bowed very reverently to one another again, with much ado they ſate down under the King's Canopy. And now to make the ſtrange King the more welcome, a Meſſenger was diſpatch'd to the *Dutch* Ship, to get their Drums and Trumpets aſhore; ſo the Trumpets ſounded, and a March was beat up, to the very great Entertainment of the two Kings. After this, they prepar'd for a ſolemn Banquet, and in order to it, began to make ready their Liquor, which they did in this ſlovenly manner: There comes into the Preſence a company of Fellows, with a good quantity of Cana, (which is the Herb of which they make their Drink) each of which having cramm'd in a Mouthful of it, they began to chaw all together; having chaw'd it a while, they put it out of their Mouths into a large Wooden Trough, and pour'd Water upon it, and fell to ſtirring and ſqueezing on't, and having preſs'd out all the goodneſs, they preſented it in Cups to the two Kings. They were ſo civil likewiſe, as to offer the *Dutch* ſome of it, who were ready to Vomit at the ſight of the Preparation. As for the Eating part of the Entertainment, it conſiſted of Ubes-Roots roaſted, and Hogs dreſs'd after a very nice manner. They had ripp'd up the Bellies, and taken out the Guts of them; and then putting hot Stones into their Bellies, and ſcinging off the outſide Hair, without any farther dreſſing, or cleanſing, they were fit for the King's Table. They preſented two of theſe Hogs to the *Dutch*, with all the Form and Ceremony which they uſe to their Kings, laying them firſt upon their Heads, and then kneeling, with much humility, left them at their Feet. They gave them, beſides, 11 more alive; for which they receiv'd a Preſent of Knives, old Nails, and Beads, as pleaſing to them as far better things. Theſe People were of a dark yellow colour, ſtrong and well-proportion'd Bodies, ſo tall and big, that the largeſt amongſt the *Dutch* wou'd have been match'd by the leaſt of them. They wore their Hair, ſome curl'd, ſome frizl'd, ſome tied up in knots; ſome had it ſtanding bolt upright upon their Heads like Hogs briſtles, one quarter of an Ell high. The King, and ſome of his Courtiers, had long Locks hanging down below their Hips, bound up with a knot or two, but the Women were all cropp'd cloſe; and beſides, were very ugly Figures, being ſhort and ill-ſhap'd, and their Breaſts ſwagging down to their Bellies like Satchels. Both Sexes went naked all to the *Pudenda*: They ſeem'd to be a People wholly void both of Devotion, and all Worldly Care and Prudence, living juſt as the Inferiour Animals do, upon what the Earth it ſelf produces, without the ſolicitations of Art and Induſtry. They neither Sow nor Reap, Buy nor Sell, nor do any thing for a Livelihood, but leave all to the Care of Nature, which if it fails at any time they muſt ſtarve. And they have as little regard to the Laws of Decency and Modeſty too, as to thoſe of Civil Prudence and Policy, for they'll make uſe of their Wives openly, in the greateſt Aſſembly; ay, and before their King too, as much as they reverence him.

Their Ceremonies in Saluting each other.

Their Drink.

Their Meat.

The Manners of the People.

This Iſland they call'd *Horne-Iſland*, from the Name of the Town from whence they came; and the Bay where they Anchor'd, *Unity-Bay*, after the Name of the Ship. The Bay lies upon the South-ſide of the Land, in a Dock under 14 degrees 16 minutes.

Horne-Iſland.

Unity-Bay.

June 1. they ſet Sail from hence, viſiting no Land till the 21ſt, when they made towards a very low Iſland, that lay S. S. W. & W. from them, and in 4 degrees 47 minutes. Near it were ſeveral Sands that ſtretched N.W. from off the Land, as alſo 3 or 4 ſmaller Iſlands, and very full of Trees. Here a Canoe came up to them, of the ſame odd faſhion with thoſe before deſcrib'd, and the People in it much of the ſame ſort, only blacker, and Arm'd with Bows and Arrows, which were the firſt they had ſeen amongſt the *Indians* of the South-Sea. They told them, by Signs, that there was more Land, and good Conveniences for a Ship, to be had Weſtward, where their King dwelt; upon which Information, they held a Weſtern Courſe again.

The 22d, they ſail'd W. & W. & by N. under 4 degrees 45 minutes, and that Day ſaw at leaſt 12 or 13 Iſlands, one cloſe by another, lying W. S. W. from them, and reaching S.E. & N. W. about half a League, but they left them a Larboard.

Several Iſlands.

The 24th, the Wind S. they ſaw 3 low Iſlands a Larboard, lying S. W. from them, the one very ſmall, the other two each of them two Miles long, all very full of Trees. They call'd them the *Green-Iſlands*; the ſhore about was ragged and cliffy, and allowed no Anchoring. Another high Iſland preſented it ſelf with 7 or 8 Hovels forth right, lying W. & by N. which they ſail'd by the 25th, St. *John Baptiſt's Day*, and therefore call'd it St. *John's-Iſland*. At this time they ſaw very high Land to the S. W. which they thought to be the Point of *New-Guinea*; they reach'd it by Noon, and ſailing along by it, and finding no Anchoring, ſent the Shallop to Sound, but no bottom cou'd be diſcover'd. Here 2 or 3 Canoes of barbarous People aſſaulted the Shallop with their Slings, but the Guns carried the Day, and quickly diſpers'd them: They were very black, entirely naked, and ſpake a Language quite different from the former. They kept fires upon their Coaſt all that Night, and ſome of them in their Canoes came lurking about the Ship; and tho' the *Dutch*, when they had diſcover'd them, did all they cou'd to ob-

Green-Iſlands.

St. John's-Iſland.

lige them, yet they wou'd underſtand none of the Signs they made for Proviſions, but anſwer'd all with horrible noiſes and outcries. They Anchor'd this Night at 45 Fathom, uneven ground, in a Bay about the Point of the Land; the Country was high and green, and afforded a pleaſant Proſpect, and lay (as they gueſs'd) 1840 Leagues diſtant from *Peru*.

The 26th, *Ante Meridiem*, there came 8 Canoes up to the Ship, well fill'd with theſe *Barbarians*, and they as well Arm'd, after their manner, with Clubs, Wooden-Swords and Slings. The *Dutch* treated them kindly, and gave them ſeveral Toys to procure their Favour, or at leaſt Peace, and freedom from any diſturbance by them, but the Villains were not to be conquer'd by Kindneſs, nor taught by good Manners, by any thing but the great Guns, for preſently they aſſaulted the Ship with all their force, and continu'd it obſtinately till the Cannon-ſhot had gone through 10 or 12 of them: Then they began to fly to their old Refuge, the Water, to dive and ſwim for their Lives, but the Shallop purſuing them, knock'd ſome on the Head, took 3 Priſoners, and 4 of their Canoes, which made firing for the Ship. And now they cou'd underſtand Signs, and procure Hogs and Bananas, for thoſe of them that were Priſoners, to Ranſom themſelves, but before they did not know what the *Dutch* meant by their Signs. And tho' the *Dutch* were ſo Generous as to give one wounded Man his Liberty, yet they were ſo wiſe too as to ſet another, in a better condition, at ten Hogs Ranſom, which undoubtedly was the full value of him.

This Iſland afforded a ſort of Birds that were all red, and North of it lay another Iſland, of which they made no other Diſcovery, than only its poſition to this. They concluded theſe People to be Papoos, becauſe of their ſhort hair, and particular Diet of Betele mix'd with Chalk.

The 28th, *Poſt Merid.* they ſet Sail from hence, and the next Day held a N. W. & N. W. & by N. Courſe, with a ſhifting Wind till Noon, and then a Calm. They had the Point of the Iſland in view till the Evening, tho' they ſail'd along by the Land, which was very full of Bays and Turnings, and reach'd N. W. & N. & by W. and the ſame Day they ſaw 3 high Iſlands more, that lay Northward from the great one about 5 or 6 Miles, being then in 3 degrees 20 minutes.

Black *Indians* no better than the others.

The 30th, *Ante Meridiem*, ſeveral Canoes of the black *Indians* came up to them, and Boarding the Ship by permiſſion, brake Staves over the *Dutch* in Sign of Peace. Their Canoes were finer than the others, and themſelves appear'd more Civil and Modeſt, covering the *Pudenda*, which the others did not. They rubb'd their Hair over with Chalk, affecting to have their black Locks Powder'd: They pretended to be ſo Poor, that they came to Beg, and not to bring any thing to the Ship; yet thoſe four Iſlands, from whence theſe *Indians* came, afforded good ſtore of Coco's.

July 1. *Ante Meridiem*, they Anchor'd between an Iſland of 2 Miles long, and the firm Land of *New-Guinea*, and quickly were ſurrounded with 25 Arm'd Canoes of the ſame People, who, the Day before, in Token of Peace, had broke their Staves over their Heads, and now came intending to brake them upon them. The *Indians* were not tedious in their Ceremonies before they enter'd upon the work they came upon, 2 of them fix'd themſelves upon 2 Anchors that then hung out of the Ship, and with their Girdles began to tug the Ship, thinking to draw her aſhore; the reſt lay about the ſides of her, and gave a brisk Onſet with their Slings, and other weapons, but the everlaſting plague of the *Barbarians*, the great Guns, ſhatter'd Men and Canoes at that rate, that they were forc'd to retire, with the loſs of 12 or 13 kill'd, and a far greater number wounded. After this fight, they ſail'd peaceably along the Coaſts, having a good gale, and holding a W. N. W. and a N. W. & by W. Courſe.

The 2d they were in 3 degrees 12 minutes, and ſaw low Land a Larboard, and right before them a low Iſland; they ſail'd gently W. N. W. with a ſlight Current off to the Water E. N. E.

The 3d, they ſaw high Land bearing Weſt, about 14 Leagues from the other Iſland, and in 2 degrees 40 minutes.

The 4th, as they were paſſing by the 4 Iſlands aforemention'd, they had a ſudden proſpect of 23 others, great and ſmall, high and low, which they left the moſt of them a Starboard, and only 2 or 3 a Larboard. They were ſome of them a League, ſome a Cannon-ſhot diſtant from each other, and lay in 2 degrees 30 min. little more or leſs.

The 6th, with very variable, and ſome ſtormy weather, they had, *Ante Meridiem*, a very high Hill before them, bearing S. W. and this they thought to be the Hill *Gecmenapi* in *Banda*; but a nearer approach diſcover'd three Hills more like it, that lie to the North, about 6 or 7 Leagues diſtant, and this ſight determin'd that Hill not to be that of *Banda*. Behind it lay a large Tract of Land E. & W. and reaching E. S. E. of a very great extent, and very uneven; this they gueſs'd to be *New-Guinea*, but held off from it that Night.

Vulcan's Iſland.

The 7th, A. M. they ſail'd towards theſe mighty Hills they had in proſpect the day before, and found ſome of them to be *Volcanos*; for which reaſon they nam'd the Iſland *Vulcan*'s-*Iſland*, there being ſo good a repreſentation of his burning Forge. The Iſland was well Inhabited, and full of Coco's, but there was no conveniency of Anchoring there: The People were naked, and extremely fearful of the *Dutch*, and their Language ſo very different from all thereabouts, that none of the *Blacks* they had with them cou'd underſtand them. There appear'd more Iſlands to the N. & N. W. but they held their Courſe to a very low one that lay N. W. & by W. from them, which they reach'd that Evening. The Water here they obſerv'd to be of divers colours, green, white and yellow, which probably was the effect of the mixture of ſome Rivers, becauſe it was far ſweeter than the Sea-water, and was full of Leaves and Boughs of Trees; ſome of which had Birds and Crabs faſten'd upon them.

Deformed People.

The 8th, they held a W. S. W. & W. N. W. Courſe, having a Starboard a high Iſland, and another ſomething lower on Larboard: They reach'd the Land, *Poſt Merid.* the ſame Day, and Anchor'd at 70 Fathom, in a good ſandy bottom, about a Cannon-ſhot from the ſhore: This Iſland was in 3 degrees 40 minutes, ſeem'd to be an unhealthy place, and yielded nothing conſiderable but a little Ginger. 'Twas Inhabited by Papoos, whoſe ridiculous Fancies in the Matters of Dreſs ſuperadded to their own natural Deformity, made them appear little ſhort of Monſters in Humane Nature. There were hardly any of them but what had ſomething odd and ſtrange, either as to the bigneſs, or poſition of their Limbs; but then the Strings of Hogs-teeth, that hung about their Necks, and their perforated Noſes, with Rings faſten'd in them, together with ſhort frizled Hair, and very ill Faces, all put together, wou'd have offended an Eye not extremely curious. Neither was the beauty of the Houſes much greater than that of the Inhabitants, being all mounted up upon Stakes, 8 or 9 Foot from the ground.

Uncertain where they are.

The 9th, *Ante Meridiem*, they Anchor'd in a more convenient Bay, at 26 Fathom, in a Sandy bottom mix'd with Clay. There were two Villages of the *Indians* that lay near the ſhore, from whence ſome of their Canoes brought Hogs and Coco's, but held up both at ſo dear Rates, that there was no Bartering with them. And now, tho' they had Sail'd ſo long by this New Land, yet they were ſtill unable to reſolve themſelves whether it were *New-Guinea* or no: Their Charts did neither agree with one another, nor the Land they had in Proſpect, which for the moſt part run N. W. & by W. ſometimes more Weſterly, and ſometimes again more Northerly; yet for all this ſcruple, (which they cou'd not remove) they ſtill held a W. N. W. Courſe, along by the Coaſt, with a quiet, tho' dull ſort of Weather; and ſo by the help of the ſtream, that ſet them about the Weſt, (as it does all along that Coaſt) they made 2 degrees 58 minutes, the 12th at Noon.

The 13th and 14th, they kept Sailing by the Coaſt, having ſometimes very high, and at others very low Land, beſide them.

The 15th, purſuing the ſame Courſe, they reach'd two low Iſlands, about half a League from the Main-Land, about 2 degrees 54 minutes S. L. Here they had good Anchoring, from 5 and 6, to 40 Fathom; and ſeeing the Country well ſtored with Coco's, the Boat and Shallop, well provided for an Attack, were diſpatch'd, with Orders to Land and get ſome: But the *Indians*, it ſeems, had obſerv'd them, and accordingly prepared for their Entertainment when they Landed; and they gave them, perhaps, the warmeſt Reception, with their Bows and Slings, that ever they met with, wounding at leaſt 16 of them, and forcing them, notwithſtanding their Muskets, to retire.

The 16th, *Ante Meridiem*, they Sail'd in between both the Iſlands, and Anchor'd at 9 Fathom, in a very good place. The ſame Day they Landed upon the leſſer Iſland, burnt ſome of the *Indians* Houſes, and brought as many Coco's as made three to every Man's ſhare. The Barbarous People became more gentle, and good-natur'd, upon this Treatment, for the 17th they came to make their Peace with Offerings of Coco's and Bananas, Ginger, and yellow Roots uſed for Saffron; they yielded to truſt the *Dutch* ſo far as to come aboard their Ship, where the Quarrel was perfectly made up, and the Hearts of the *Indians* (won by a few Nails and Beads which they gave them) were intirely theirs.

Caſſanie-Bread.

Moa, Juſon, Arimoa Iſlands.

The 18th, they continued Bartering for Coco's, Bananas, Caſſanie and Papede; of the two former they got as much as came to 50 Nuts, and 2 Bunches of Bananas, a Man, of the two latter not ſo much. This Papede and Caſſanie are alſo *Eaſt-India* Commodities; and the latter, particularly, is admirably good in the *Weſt-Indies*, and far beyond that which they met with here. The People made all their Bread of it, and Bak'd it into large round Cakes for that purpoſe. They call'd the Name of their own Iſland *Moa*, which was the moſt Eaſterly, the other over-againſt it *Juſon*, and the farthermoſt (a very high one, and about 5 or 6 Leagues from *New-Guinea*) *Arimoa*. Theſe People had probably been Viſited by ſome *Europeans* before, for they had *Spaniſh* Jarrs and Pots amongſt them; they were not ſurpriz'd at great Guns, as the others uſually were, nor ſo curious in looking into the Ship, as abſolute Strangers to ſuch a thing muſt be ſuppos'd to be.

The 21ſt they Sail'd along by the Land N. W. and at Noon made 1 degree 13 minutes. The ſtream drove them to a cluſter of Iſlands. where they Anchor'd at 13 Fathom, with Storms of Rain and Thunder, that Night.

The 23d, *Ante Meridiem*, ſetting Sail from thence, ſix great Canoes overtook them a little from the Land, bringing dry'd Fiſh, Coco's, Bananas, Tobacco, and a ſmall ſort of Fruit like Prunes. *Indians* from another Iſland alſo brought Victuals, and *China*-Porcelane, to Barter.

Theſe People, like moſt of the *Barbarians*, were vaſtly fond of Beads and Iron-work; but they were remarkably diſtinguiſh'd from thoſe of the laſt Iſland, by their larger ſize, and more Orange-complexion. Their Arms were Bows and Arrows, and their principal Ornaments glaſs Ear-rings, of ſeveral colours; and by theſe, as well as by other Signs, it appear'd that the *Dutch* were not the firſt *Europeans* which theſe People alſo had ſeen.

Schouten's Iſland.

The 24th, being under half a degree, they Steer'd N.W. & W. & S.W. along by a very pleaſant Iſland, on which they beſtow'd their Maſters Name; and the Weſt Point of it they call'd the *Cape of Good Hope*.

The 25th, they ſaw a huge Tract of uneven Land on Larboard, lying S.S.W.

The 26th, they ſpied three Iſlands more, the Coaſt reaching N.W. & by W.

The 27th, they were under 29 minutes, and having a ſight of much Land to the Southward, ſome very high, and ſome as low, they paſt N.W. along by it.

Earthquake.

The 29th, at Night, they had an Earthquake, which ſhook the Ship at that rate, that the Men run frightned out of their Cabbins, expecting to find her run a-ground, or jolted againſt ſome Rock; but, upon trial, they found a depth of water that was unfathomable, and as plainly ſaw they were clear of all danger of Rocks and Shelves; ſo that 'twas manifeſtly the effect of a violent concuſſion of the Alveous and Submarine Regions, which caus'd and propagated a tremor all through the water, and thus diſturb'd the motion of the Ship.

Horrible Storms.

The 30th, they put into a great Bay, out of which finding no opening, they return'd to a Northen Courſe again: Here the Ship trembled again, with loud and horrible cracks of Thunder, and the Lightning was ſo like to ſet it a-fire, that in all probability it muſt have flam'd, had not the Clouds, that furniſh'd the pernicious fire, afforded water alſo, in prodigious ſhowers of Rain, for the extinguiſhing of it.

They paſs the Æquinoctial a ſecond time.

The 31ſt, with a Northern Courſe, in the Evening they paſs'd the Æquator a ſecond time; and being encompaſs'd with Land all round almoſt, they Anchor'd at 12 Fathom, good ground, near a deſolate Iſland that lay cloſe by the firm Land.

Auguſt 1. they made 15 minutes North Lat. and in the Evening, with a hard ſtream, went cloſe to the Land; and becauſe of the Calm, Anchor'd, tho' in a ſhallow water, and very rugged bottom.

The 2d, they drove along with the ſtream, W. & W. & by N. with very rainy weather.

The 3d, being ſtill becalm'd, they Steer'd as before, and found a Bank ſo far in the Sea, that they cou'd ſcarce ſee the Land, being in ſome places 40, in others 20, and ſo to 12 Fathom, ſandy ground; and the ſtream there went W. S. W.

The ſame Day they made 35 minutes North Lat. and ſaw ſeveral Whales and Tortoiſes, with two Iſlands lying to the Weſtward of them; and now they gueſs'd they were at the end of the Land of *New-Guinea*, having Sail'd 280 Leagues along by the Coaſt. The Rains and Calms ſtill continued.

The 5th, *Ante Meridiem*, ſeveral Canoes came up to them, bringing *Indian*-Beans, Rice, Tobacco, and two Birds of Paradiſe; they Barter'd for one of theſe fine Birds, which was all white and yellow.

Gilolo.

Theſe *Indians* ſpoke the *Ternate*-Language, and ſome of them the *Spaniſh* and *Malaian*; which latter Tongue, *Clawſon*, the Merchant, was well skill'd in. They were all of them finely Cloath'd about their Waſtes, ſome with looſe Silks, others with Breeches, and ſome Silken Wreaths about their Heads, which were the *Mahumetans* of the Company; all of them in general had Coal-black Hair, and good ſtore of Gold and Silver Rings upon their Fingers. They Barter'd with the *Dutch* for Beads, and other Toys, but had much more mind to Linen Cloth. They appear'd to be very fearful and ſuſpicious of them, to that degree, that they wou'd not tell them the Name of the Country; yet they judged that they were now at one of the three Eaſterly Points of *Gilolo*, and that theſe People were Natives of *Tidore*, which afterwards they found to be true.

The 6th, *Ante Meridiem*, they ſet forwards, holding a Northerly Courſe, intending to Sail about the Northern Point of *Gilolo*.

Moratay.

The 7th, they ſaw the North-Eaſt Point of that Iſland, called *Moratay*, which then lay S. S. E. from them.

The 8th, at Noon, they made 4 degrees 3 minutes North Lat. had there very ſtormy Weather, and a Current that run Northward.

The 9th and 10th, they had variable Winds and Weather, and made 3 degrees 50 minutes.

The 11th, they had a proſpect of the Point *Moratay* again, which they deſign'd to have reach'd, but the Current drove them off from the Land Northward.

The 13th, they made 2 degrees 58 minutes, the Winds continuing ſtill to ſhift about, and the Rains falling pretty plentifully; and ſo to the 17th.

This Day, with much toil and trouble, they got under the Land, and Sail'd along by the Coaſt with fair Weather; in the Night they ſaw ſeveral Fires upon the Land.

The 18th, with ſtill Weather, they continued driving along by the Land, and at Noon were Saluted by two Canoes of *Ternateens*; who, to ſhew their peaceable Deſign, had hung out a Flag of Peace, as a Symbol of it.

Soppy.

They inform'd them, that they came from the Village *Soppy*, where, very lately, had been an *Engliſh* Ship, as alſo a Pinnace of *Amſterdam*, that had lain there three Months, for a Lading of Rice; and that ſome of them wou'd Conduct them, the next Day, into the Road of *Soppy*.

The 19th, they Sail'd into the Bay, and Anchor'd at 10 Fathom, ſandy ground, about a Cannon-ſhot from the ſhore: They Barter'd here for Sagow, Hens, Tortoiſe and Rice.

Sept. 17. with a good gale, they directed their Courſe to *Ternate*, ſpying a good Sail making thither too, which, afterwards, they underſtood to be the *Morning-Star* of *Rotterdam*, a Ship of 300 Tun, and 26 Guns. Their Shallop had lain in the Creek of *Sabou*, with that Ship, three Nights, and from thence brought then an Account, That there were 10 *Dutch* Ships, very well furniſh'd, at the *Manillas*, that waited there for an opportunity to Attack the *Spaniſh* Fleet coming to *Ternate*: That *Peter Bot*, in his return homewards, with 4 Ships, was wreck'd upon *Mauricius-Iſland*, one Ship of the 4 only eſcaping the fury of the Storm.

October 28. they paſs'd by *Jacatra*, and Anchor'd without the Iſland: Here they found three *Engliſh* Ships, and three of *Holland*.

The next Night, Death (which had forborn them all this long and tedious Voyage, which neither by the Miniſtry of the devouring Waves, by infectious Diſeaſes, by the Darts of *Indians*, nor the far more cruel ſtroke of Famine, had as yet made any fatal Impreſſion upon them) now came and Viſited their Ship, and Summon'd one of the Company to begin a Voyage for the other World. 'Tis true, indeed, that two others had died out of the other Ship, the *Horne*, loſt long before, but the *Unity* ſtill kept its Company intire to this time, and now had it leſſen'd but by the number of its Name; which was very ſtrange, for Men who had Death ever before them, in ſo many Forms and Shapes, and cou'd not live (in their way of Life) out of continual danger of a ſurprize. But their own Country-men, it ſeems, were more ſevere in their treatment of them, than this the moſt formidable Enemy of Mankind: Death had Arreſted but one of the whole Company, and this to a poor Weather-beaten Traveller, fatigu'd with a long and toilſome Voyage, might poſſibly be a great kindneſs, but for Men to be ſtripp'd at once of all the Fruit of ſo many coſtly Labours, to ſail round the Globe for a ſmall parcel of Goods, to ſcape Rocks and Winds, and boiſterous Seas; and after all be ſwallow'd up by their own Country-men: This was worſe than Shipwreck; and to be thus diſappointed, a more horrible Puniſhment than dying. Yet this was the Fate of our worthy Diſcoverers: For Ship and Goods were all ſeiz'd, by Order from the Preſident of the *Eaſt-India* Company, who came from *Bantam* to *Jacatra*, while they were there. Their Complaints ſignified nothing, and 'twas in vain to alledge the Injuſtice or Diſhoneſty of the Fact; but they were told, if they found themſelves griev'd, they might go to *Holland* and ſeek their Satiſfaction there.

The baſe Uſage of the worthy Diſcoverers, by their own Countrymen.

'Twas obſervable here, that the Diſcoverers were a Day behind the other *Dutch*, in their Reckoning of the Days of the Weeks, ſo that when the latter counted *Tueſday* the Second of *November*, the former reckon'd *Monday* the firſt of *November*. And the Reaſon was, becauſe the Diſcoverers ſailing Weſtward from their own Country, and conſequently following the Sun while they ſurrounded the Globe, they had one Night, or Sun-ſetting, the leſs, for that Reaſon: As contrarily thoſe that ſhou'd ſail Eaſtward, ſhou'd thereby gain a Day more: The Space of Time being the ſame on both ſides, but the Computation of Day and Night different, on the ſcore of the one's going againſt, and the other with the Sun.

Having now loſt their Ship, they diſpos'd of themſelves divers ways; ſome entring into the Service of the *Eaſt-India* Company; and the reſt preparing for a Return to *Holland*, with two Ships that were going thither, *viz.* the *Amſterdam*, and the *Zeland*, under the Command of Admiral *Van Spilbergen*.

They ſet Sail from *Bantam* the Fourteenth of *December*; and the Thirty firſt their principal Merchant, *Jacob le Maire*, died.

January the firſt they loſt ſight of the *Zeland*.

The Twenty fourth they Anchor'd under the Iſland *Mauricius*, and refreſh'd there for ſix Days.

A. D. 1617.

March the Sixth they paſs'd the Cape of *Good Hope*, as they gueſs'd, but ſaw it not.

The Thirty firſt they were under the Iſland of St. *Helena*, and there found the *Zeland* at their Arrival.

The Sixth of *April*, having ſupplied their Ships with freſh Water, they ſet ſail together.

The Twenty fourth, they paſs'd the Equinoctial the third time.

And the Twenty eighth ſaw the North Star, which they had not ſeen in twenty Months before.

July the firſt, the *Amſterdam* came into *Zeland*, whither the Ship of that Name had come the Day before.

And thus they perform'd their Voyage in two Years, and eighteen Days; having made a Noble Diſcovery, and loſt their Ship and Goods for their Pains.

Navigations, and Voyages,
OF
ENGLISH-MEN,
ALONG THE
Coaſts of Africa, to the *Cape of Good Hope*;
And from Thence to
The RED SEA, the ABASSINE, ARABIAN, PERSIAN, INDIAN Shores, Continents, and Iſlands.

The Second Book.

CHAP. I.

Of the firſt Engliſh *Voyages to the* Eaſt-Indies, *before the Eſtabliſhment of the* Eaſt-Indian *Society. Of* Sighelmus, Mandevile, Stephens, Fitz, *and other* Engliſh-mens Indian *Voyages and Journeys.*

WE have ſeen the Ships of the moſt Celebrated Nations of *Europe*, piercing into the remoteſt Seas, and traverſing the unknown Parts of the Globe. We have followed the *Spaniſh*, *Engliſh*, and *Dutch* Circum-Navigators, through all the Parts and Steps of their ſeveral Voyages, and at laſt ſeen them put ſafely into their own Ports.

The Brave *Maglianes*, the Renowned *Drake* and *Candiſh*, *Van Noort*, *Spilbergen*, and *Schouten*, have drawn the Lines of a Complete Navigation before us, and mark'd out our way through the Northern and Southern Hemiſpheres.

But leaving them with thoſe ſeveral Characters of Glory, which their Diſcoveries have deſervedly fix'd upon them; we are now to enquire into the Performances of others: Which tho' they don't reach the Fame of thoſe firſt Diſcoveries, have yet been of as conſiderable Advantage to their reſpective Countries, as the others to the World in general. Thoſe that have open'd the rich Mines of *Guinea*, that have brought the Spices of the *Indies*, and the Jewels too, with the coſtly Drugs of the Happy *Arabia*, to their own Country; have made themſelves worthy to be taken Notice of, tho' they have not found out any new Iſlands, nor ſurvey'd the mighty Globe from one Pole to the other. And what other Nations have attempted of this kind (and how their Diligence has been rewarded) their own Hiſtories muſt teſtifie to their Praiſe; but we have now the Performances of the *Engliſh* Nation, peculiarly lying before us; which how profitable and ſucceſsful they have been, the following Book will in ſome meaſure diſcover.

'Tis true, that ſince the Eſtabliſhment of the *Eaſt-Indian* Company, in Queen *Elizabeth*'s time, the *Eaſtern* World has been more curiouſly ſearch'd, and the Advantage of a Correſpondence with it more effectually proved by Experience: But that Society did not make the firſt *Engliſh* Travellers, nor introduce our firſt Converſe with Foreign Parts.

Sighelmus (a) Biſhop of *Shireburn*, in King *Alfred*'s time, was ſent by that devout Prince, into the *Eaſt-Indies*, to viſit the Sepulchre of St. *Thomas*, by whoſe means the *Engliſh* Nation had an early View of the Riches of thoſe Countries, in the Spices and Jewels which the Father brought back with him.

Sighelmus's Travels to India.
A. D. 883.
(a) *Wil. Malm. de Geſtis Reg. Anglic.*

And after that, another (b) of our Nation, travelled almoſt over all the *Eaſtern* World, bearing the *Tartars* Company, in their many famous Expeditions. There's no need of mentioning Sir *John Mandevil*, and his many Years Travels through the *Eaſt*, ſince they are extant, written by himſelf, and the famous Geographer *Ortelius*.

(b) *Math. Par.*
A. D. 1243.
Mandevil.

And in thoſe times, while the Holy War was maintain'd againſt the *Saracens* and *Turks* (in which we know the *Engliſh* had a leading part), there's no doubt but ſeveral of them being drawn thither, did viſit other parts of the *Eaſt* beſides. But even in Queen *Elizabeth*'s time, before the forming of that Society, there were ſeveral *Engliſhmen* that perform'd very conſiderable Voyages.

Firſt we have that of *Thomas Stevens*, from *Lisbon* to *Goa*, by the Cape of *Good Hope*: Written by himſelf at *Goa*, and dated *Nov.* 10. 1579.

Stevens.

Then the Voyage of (c) *Ralph Fitz*, through *Syria* and *Babylonia*, to *Ormus*; and ſo to ſeveral other parts of the *Eaſt*. This was begun *A. D.* 1583. and continued to 1591.

Fitz.

Alſo the Voyage of *George Raymond*, and *James Lancaſter*, to divers parts of the *Eaſt-Indies*, with Three Ships, the *Penelope*, the *Merchant Royal*, and the *Edward Bonaventure*: Of which the ſecond was ſent back from *Soldanha*, near the Cape of *Good Hope*. And the other two were afterwards parted by a Storm, near Cape *Corientes*: So that the *Bonaventure* alone finiſh'd the Voyage.

A. D. 1591.
George Raymond.
James Lancaſter.

In the next place we may reckon thoſe *Engliſh-men* that accompanied the *Dutch*, in ſeveral of their Circum-Navigations; as *Timothy Shotten*, *Thomas Spring*, *John Caldwel*, with ſeveral others. And 'tis obſervable, that the *Engliſh* by frequent Viſits, had made themſelves ſo well known, and had procur'd ſo much Eſteem in thoſe *Ea-ſtern*

Engliſh-men in Dutch Voyages.

ſtern Parts; that the *Dutch*, in their firſt coming thither, thought fit to aſſume the Name of *Engliſh-men*: And ſo began to Trade upon the Stock of the *Engliſh* Fame and Reputation.

Beſides, we have *John Newberry*, another *Engliſh-man*, that beſides his Voyage with *Fitz* to *Goa*, had before that travell'd to *Ormus*; and then by Land through *Perſia*, *A. D.* 1580. *Media*, *Armenia*, *Georgia*, and *Natolia*, to *Conſtantinople*; and thence by the Banks of the *Euxine* croſs the *Danube*, and ſo through *Walachia*, *Polonia*, *Pruſſia*, and *Denmark*, into *England*.

Next to theſe, we are to look upon ſome others of a more Modern Date ſtill; which, tho' they follow'd in the ſame Generous Attempts, yet wanted (ſome of them at leaſt) the Succeſs and Good Fortune of thoſe that went before them.

CHAP. II.

The Unhappy Voyage of Mr. Benj. Wood, *into the* Eaſt-Indies.

A. D. 1596.

A Fleet of three Ships, equipp'd principally at the Charges of Sir *Robert Dudly*, was put under the Command of Mr. *Benjamin Wood*. The Ships were the *Bear*, the *Bear's Whelp*, and the *Benjamin*: And the Merchants employ'd in this Voyage, were Mr. *Richard Allot*, and Mr. *Thomas Bromfield*, of the City of *London*. Theſe Perſons intending to pierce into the remoteſt Parts of the *Eaſt*, and ſo viſit *China* before they came home, obtain'd Queen *Elizabeth*'s gracious Letters to the Great King of that Country, on their behalf. The Letter began in this manner: *Elizabetha Dei*, &c. ——But yet Her Majeſty's Recommendations cou'd not protect them from Dangers and Diſaſters abroad, nor make the Winds and Waves favourable to them; ſince not only the whole Fleet was miſerably loſt, but the particular Relation of thoſe Tragical Adventures miſcarried too. But yet ſome Light into this Buſineſs was afforded, by a Letter happily intercepted in its paſſage from the *Weſt-Indies*, written by *Licentiale Alcaſar de Villa Senor*, Auditor of the Royal Court of St. *Domingo*, Judge of Commiſſion in *Puerto Rico*, and Captain-General of *New Andaluſia*.

Letter writ to the King of *China*, by Q. *Elizabeth*.

This Letter was directed to the King, and the Royal Council of the *Indies*; an Account of which, as much as relates to the preſent Buſineſs, is here ſubjoyn'd: Tho' the thing is ſo imperfect, and the main Buſineſs of the *Engliſh* Fleet ſo obſcurely touch'd, that 'tis not eaſie to pick any thing ſatisfactory out of it. In ſhort, the Sum of the Story this *Spaniard* tells his Maſter, is this:

Account of a *Spaniſh* Letter about the *Engliſh* Ships.

That the three Engliſh *Ships before-mention'd, met with three* Portugueze, (then the King of *Spain*'s Subjects) *one of which Veſſels came from* Goa; *and had, amongſt other Rarities, a very fair Jewel, particularly deſign'd for that Prince, together with a vaſt deal of Money, and very valuable Goods.* All this Prey fell into the Hands of the *Engliſh*: The *Spaniards* ſay, *They robb'd the Ships*; and calls them *Thieves* for't: But he might have been more Civil in his Expreſſions: For *England* and *Spain* were then at War; and the Robbery was no more, than what all Nations in the World do allow and practice at ſuch times as that. After this, the *Engliſh* Fleet was ſo peſter'd with Sickneſs, that (as he relates) they all died to four; which ſmall number of Survivors, put themſelves, with all their valuable Plunder, into a Boat, and ſo came to the Iſle of *Utias*, three Leagues from *Porto Rico*, from whence the Letter was dated.

But what became of the three Ships, or how theſe Men bound for the *Eaſt-Indies*, came to wander to that Iſland in the *Weſt-Indies*, is left wholly in the dark; the beſt way is to make a Miracle on't, and ſay, That they were brought in there to be puniſh'd for the Sin of Robbing the Catholick Ships.

When they were come to *Utias*, they brought all their Goods aſhoar; but liv'd, it ſeems, in very ill Circumſtances there, and hardly knew how, or which way to diſpoſe of themſelves.

Going from thence to *Porto Rico*, for a Supply of Water, they left one of the Company behind them at that place; whether by chance, or out of Deſign, is uncertain; but however, he took it ſo ill, that his Fellows had abandon'd him, that he diſcover'd the whole Buſineſs to a certain Gang of *Spaniards*; and told them where they might find the three *Engliſh-men*, and all the King's Treaſure, upon the Iſle of *Utias*.

Theſe Loyal *Spaniards* reſolv'd not to loſe this opportunity of cheating their King, went directly thither, and having with falſe Pretences of Friendſhip, trepann'd the *Engliſh-men* into a Parley with them, they perſwaded them to reſign themſelves, with all their Booty, into their hands, which they took poſſeſſion of; and ſo dividing the Money amongſt them, they left the Jewels, the Gold, and the Plate, in a ſure Repoſitory under ground. But yet taking care to leave out ſome little matter of Silver Bars, and other Goods, to give a colour to their own Story; they firſt of all ſet upon the three *Engliſh*, contrary to their Promiſe given, murder'd two of them; but the third happily ſcap'd their hands: And to make all the ſurer, poyſon'd the fourth, that had given them the firſt Information, when they came back to *Porto Rico*.

Being come thither, they gave the Governour an Account of their Adventure at *Utias*; that is, as much of it as was for their purpoſe to diſcover. They ſwore they had found no more Treaſure than what they then came to tell of: And that they were forc'd to kill three *Engliſh-men* in fight, before they cou'd come to be Maſters of that.

They laid their Plot as deep, and manag'd it as cunningly as was poſſible: It wanted no help of Lying and Perjury; no Aſſiſtance from Subornation, Cheat, and Forgery, but what it had in abundance; never any Plot had a better Title to the Devil's Protection, for the bigneſs of it, than this; becauſe he never had more Concern in any. But all wou'd not do; and the ſurviving *Engliſh-man* was the means of their Ruine. He made a ſhift to ſwim a-ſtride a Timber-log, from *Utias* to *Porto Rico*, and there diſcover'd at large the Vertues of thoſe good Catholicks, who had murder'd his Companions, robb'd their King, put a trick upon the Government, forſwore themſelves ſo luſtily as they had done; and after all, had Braſs enough to ſtare the Evidence in the Face, and deny all. At leaſt they denied the moſt material Particulars of the Fact; and as they began with Lying and Perjury, ſo they went through-ſtitch with their Buſineſs, Lying and Swearing on to the end of the Chapter.

The Governour laid them in Irons, till all the Proofs that cou'd be pick'd up, were brought in againſt them; and ſome of them not thinking fit to lie there in Priſon till that time came, broke Jail, and left the Governour, to look his Priſoners where he cou'd: But whether the Villains fell into the Hands of Juſtice, and were hang'd afterwards or no, is not worth ones while to enquire. However, this paſſage is ſufficient to aſſure us, that the Queen's Letter to the King of *China* did miſcarry; and this firſt Fleet ſet out for the *Eaſt-Indies*, did not reach their deſired Port.

This Letter was dated from Porto Rico,
October 1. *A. D.* 1601.

Chap. III.

The Travels of Mr. John Mildenhall *into the* Indies, Perſia, *and the* Mogul'*s Country. Written by himſelf, in Two Letters, the valuable Remarks of which are here inſerted.*

Begun in *May, A. D.* 1600.

AFter the firſt of theſe Letters, the Reader cannot be long entertain'd here, ſince the Writer has not furniſh'd Materials for it. He only gives us in a very few Lines, a Scheme of his Journey from *Conſtantinople*, to *Candahor*. And ſince he either neglected making due Obſervations by the way, or at leaſt met with nothing that he thought worth his Obſervation, the Reader muſt be contented; neither is there any Courſe to find out the Cauſe of this defect, but by taking a Journey after him, and going his Road between *Conſtantinople* and *Candahor*, to ſee whether it affords any thing that deſerves Notice or no. He only gives us an Account of the great Lake of *Van* (a very ſtrong City in *Armenia*), which he ſays he himſelf has curiouſly ſurvey'd, and rowed all round about. The Lake is all Salt Water, ſo deep that 'tis Navigable, and nine Days Journey in its Circumference. Once a Year at the Deſcent of the Snow-water from the Mountains, one particular end of the Lake ſwarms with Fiſh; they regularly obſerve that Seaſon, and (as it ſhou'd ſeem, that place too) and then the Country People come down in great numbers from all the adjoyning places, to follow this Sport of Fiſhing, which turns to very good Account. Theſe Fiſh are about the bigneſs of a Pilchard; and being ſalted and dried, are kept all the Year round for a conſtant Proviſion. From this Lake of *Van*, in *Armenia*, Mr. *Mildenhal* is ſo ſuddenly ſlipp'd away to *Candahar* in *India*, doing no more than juſt telling the Miles upon the Road, that it appears to no purpoſe to follow him any further, but rather to find him out in ſome other place, where he may have ſomething more material to tell us.

Lake of *Van*.

Contents of the Second Letter. Dated from Caſbin, *in* Perſia, *Octob.* 3. *A. D.* 1606.

MR. *Mildenhall*, when he writ this Letter, was (as he ſeems to intimate) upon his Return for *England*; he had been at the Court of the Great *Mogul*, and was in his way homewards as far as *Caſbin* in *Perſia*; when he gave the World this Account of his Proceedings. The Letter is the more valuable, becauſe we have here the Relation of a very early Viſit made to the Great *Mogul*, and the Original, as it were, of our Correſpondence with that Country.

A. D. 1603.

He tells us, That being arriv'd at *Lahor*, he ſent a Diſpatch to the Court at *Agra*, to give Notice of his being there; as alſo, to deſire leave to come and treat with that Prince, about the Buſineſs that brought him into *India*.

Mr. *Mildenhall* goes to *Agra*.

His Letters were quickly anſwer'd, and Orders ſent to the Governour of *Lahor*, to provide him with a good Guard, and all other Neceſſaries, for his Journey to *Agra*. Within two or three Days after his coming thither, he had Audience of the Great *Mogul*: But this was no more than the making his firſt Complement, and delivering * a Preſent; a very neceſſary thing, in order to the ſucceſsful Management of Buſineſs in thoſe *Eaſtern* Courts. All that he pretends to, is the *Mogul*'s kind Acceptance of his Preſent, and the good Humour he expreſs'd upon that occaſion.

* The Preſent conſiſted of a parcel of fine Horſes, and ſome Jewels.

But he was quickly ſent for, to give an Account of his Buſineſs and Deſign in coming thither, to the King and his Council: Which having done in all the ſeveral Particulars of it, relating to Trade and Commerce; according to his Orders, he inſiſted upon the Grand Point between the *Portugueze* and us. He urged, That Her Majeſty of *England* having then Wars with the *Spaniſh* and *Portugueze*, deſired leave for her Subjects to treat them as Enemies in his Ports, as well as other where; that they might ſeize their Ships, and do all other things, in purſuance of a juſt War, without giving him any Offence.

All this was heard, and committed to writing, and an Anſwer promis'd in a ſhort time. But the Great *Mogul*, inſtead of conſulting with his Council, fell to asking the Jeſuite's Advice, about an Anſwer to Mr. *Mildenhall*'s Propoſals. This was undoing the Buſineſs to all intents and purpoſes; and it had been as good for the *Engliſh* to have had the King of *Spain* himſelf conſulted in the Caſe.

The Jeſuites Malice and Calumnies.

The Jeſuites, without ſcruple, told him, That the *Engliſh* were a People of a very bad Character, in the Weſtern World; that wiſh'd no Good to any Princes, whoſe Friendſhip and Correſpondence they courted: But in all Attempts of that Nature, ſtudied only their own Intereſt and Advantage; which they wou'd not ſtick to purſue by any Methods, howſoever prejudicial to the Countries where they came. Beſides, that this *Engliſh-man* now crept into his Court, was but a Spy upon him, ſent thither by his deſigning Country-men, to wheedle and inſinuate himſelf into His Majeſty's Favour, by that means to open ſome Door for them to enter into the Country by; which if they once did, he wou'd be put to a great deal of trouble before he wou'd be able to get rid of them again.

These Stories did the Buſineſs effectually; and the Jeſuites telling them with an Air of Serioufneſs, and a ſeeming Concern, that they were forc'd to make ſuch ill Reports of a Chriſtian Nation; it turn'd the *Mogul* quite out of the Road of kind Thoughts and Deſigns towards them, and produced this flat Reſolve, *The Engliſh Demands ſhall not be granted.* Yet all was carried very fair to Mr. *Mildenhall*; and tho' Matters were thus poſitively concluded againſt him, he had no Notice of it, but by the private Hints of his Friends at Court.

The *Mogul* ſour'd by the Jeſuites.

Sometime after this, the Caſe being call'd over again (and the Jeſuites, 'tis probable, not in the way to countermine thoſe favourable proceedings), the King order'd ſome Articles to be drawn up, and ſent to Mr. *Mildenhall*; which whatſoever Points of Privilege they contain'd (for he does not diſtinctly tell us) yet offered nothing as to the Main Concern about the *Portugueze*.

This Grand Omiſſion made him another Walk to Court, to demand the inſerting of thoſe other Articles too; the Subject Matter of which was equally a part of his Commiſſion with thoſe relating to Trade.

In Anſwer to this, he had good Words, and fair Promiſes: But the Council was to be conſulted again, before the Matter cou'd be abſolutely determined. In ſhort, the Council was ſo tedious and ſlow in coming to a Reſolve, that a vaſt deal of precious time was conſum'd in attending them: The Buſineſs was continually adjourn'd, and put off from one Seaſon to another; and ſo 'twas like to run on without ever coming to an iſſue. Yet in this Interval did the *Mogul* ſend once or twice for Mr. *Mildenhall*, and in a friendly manner, chide him, for not coming oftner to Court; telling him at the ſame time, that his Buſineſs ſhould at laſt be done to his Content.

Grants ſome, but not all.

The Favours that he had receiv'd all this time from this Prince, were but the common Preſent of Apparel, and about 500 *l.* ſent him in dry Money; which Sum wou'd go but a little way, in carrying a Man through the Expences of ſuch an Employment. Well, he had now once more a Proſpect of Succeſs; but ſtill it prov'd but a Proſpect: He liv'd ſix Months longer in the Faith of this Promiſe; but then his Vertue was Jaded, and wou'd carry him no further. Beſides, the Jeſuites had ſo circumvented him on every hand with their Policies, that he was not able to make one ſtep towards his Deliverance. They had fill'd the Hands of the Court-Officers with *Portugal*-Money, to that degree, that there was no room for *Engliſh* Coin, when he came to try that Method; but the worſt of all was, they brib'd his Interpreter, ſo charmingly too, that when the Buſineſs requir'd his Aſſiſtance, the Rogue fell out with him, and run away. Here was a Man left in a ſweet Caſe! His Buſineſs urgent upon him, his Adverſaries caballing and prating about his Ears, and himſelf ignorant of the Language he was to anſwer them in. This was almoſt as bad as cutting his Tongue out, or ſewing

The Jeſuites out-bribe him.

up his Mouth; nay, 'tis the ſame thing in this Caſe: For a Man without an Interpreter, can do no more than he that's gagg'd, or has loſt his Tongue.

Mr. *Mildenkall* had now but one way left to retrieve himſelf, and his declining Affair; and that was, to ſtudy the *Perſian* Tongue himſelf, under the Direction of ſome good Maſter, which he did very hard; and in ſix Months got ſo much Skill in it, as to be able to ſpeak it with a good meaſure of fluency. Now he ſtood in need of no other aſſiſtance, and the Jeſuites cou'd not prevent his ſpeaking, without they robb'd him of this Interpreter that he carried always about with him.

Thus furniſh'd with *Perſian* therefore, and able to ſpeak his own Mind, away he went to Court, and in as gentle Terms as he durſt, reproach'd the Great *Mogul* with his unkind Credulity, in believing the ſlanderous Reports of the Jeſuites; deſiring to ſtay no longer in the Country, than till he had given back the Lye to the Teeth of thoſe Men, in the Preſence of His Majeſty, and all the Court. So a Day of Audience was appointed; and there was a vaſt Aſſembly of Nobles, to hear this Controverſie managed between the *Engliſh-man* and the Jeſuites. In ſhort, Mr. *Mildenhall* made it appear, That the Jeſuites had abus'd the *Engliſh* Nation, in the Character they had given of it; in that they were not ſo baſe and deſpicable as they had repreſented them; nor ſo injurious to thoſe Princes and Countries where they were ſettled: And all this, by ſhewing the Correſpondencies the *Engliſh* kept abroad, and what conſiderable Princes both in *Europe* and *Aſia*, were fond of their Friendſhip, and ready to Court it. He added farther, That he wou'd eaſily prove the Jeſuites, (for all their Flatteries) to be no Friends to His Majeſty; as indeed to no other Princes, being Men of ſuch Principles, as no Government cou'd be eaſie with, that knew them perfectly well. And becauſe they ſeem'd to be ſo mighty careful of His Majeſty's Profit, he ask'd them publickly, What they had done, or procur'd that way? And how many Preſents had been made to the King, by them, or their Friends, in all the twelve Year that they had followed the Court? The Fathers cou'd make no Anſwer to this unhappy pinching Queſtion: But however the young Prince ſtep'd out, and anſwer'd for them at this dead lift, telling all the Company; It was moſt true, they had been a very barren Soil to His Majeſty, and had never yielded him in all this eleven or twelve Year, the leaſt Fruit, upon any Account whatſoever. The Jeſuites knew 'twas all Matter of Fact, and ſo held their Tongues, without ever offering to uſe them in their own defence; but all the Aſſembly was diverted with the ſport on't, and the King had now ſome profit by them in his Mirth.

A Day of Hearing fix'd.

Obtains his end at laſt in the King's Complete Grant.

To conclude, the King after ſome farther Conference, was ſo well pleas'd and ſatisfied, that he gave peremptory Orders for the immediate Diſpatch of Mr. *Mildenhall's* Affair, commanding the ſeveral Articles of Privileges he inſiſted upon, to be drawn up with all the Particularity and Exactneſs that cou'd be, and deliver'd to him without farther delay.

Having receiv'd theſe Writings (as he did in a few Weeks after), and now compleated his Victory over the Jeſuites, he went away for *Perſia*, and there writ his Succeſſes.

CHAP. IV.

The Voyage of Captain John Davis, *to the* Eaſt-Indies: *Pilot in a* Dutch *Ship. Written by Himſelf.*

A.D. 1598.

MArch the Fifteenth, we ſet out of *Fluſhing* with two Ships, the *Lion*, and the *Lioneſs*; the former of 400 Tun, and 123 Perſons aboard her, the latter of 250 Tun, and about 100 Perſons. The Owners and Adventurers were *Muſhrom*, *Clark*, and *Moneſ*, of *Midleburgh*: And our chief Commander was *Cornelius Houteman*, who had a Commiſſion from Grave *Maurice*.

The Twenty ſecond we anchor'd in *Torbay*, with very rough Winds.

April the Seventh we ſet ſail; and the Twentieth we had ſight of *Porto Santo*.

A. D. 1599.

The Twenty third we fell in with Iſland *Palma*; and the laſt we came to the Iſles of Cape *Verd*.

May the Firſt, we anchor'd at St. *Nicholas*, one of thoſe Iſlands, in 16 Degr. 16 Min. N. L. We water'd here the Seventh; and ſetting ſail the Ninth, we fell in with St. *Jago*.

June the Ninth, we fell in with the Coaſt of *Braſil*, in 7 Degr. South Lat. And not being able for the unſteady Winds, and bad Weather, to compaſs the doubling of Cape St. *Auguſtine*, we ſhap'd our Courſe for the little Iſland *Fernando Loranba* (a), in 4 Degr. South Lat.

(a) Iſle Fernando Loranba

The Fifteenth we anchor'd upon the North-ſide of it, in 18 Fathom.

This Iſland is very fruitful, and exceedingly well ſerved with all Conveniences for Life: Here is good Water, Beefs, Goats, Hogs, Hens, Melons, *Guiney*-Corn, plenty of Sea-Fowl and Fiſh. There's no ſcarcity of any thing but Inhabitants, who are wanting to taſte the Bleſſings and Pleaſures of the place, and to ſit down at the well-furniſh'd Table, which Nature has here ſpread. There were but twelve Negroes, eight Men, and four Women, to be found here; and theſe the *Portugueze* left to Till the Ground, and to do neceſſary Country Buſineſs.

Auguſt the Twenty ſixth, we left this Iſland; and the laſt of the Month we doubled Cape St. *Auguſtine* (b).

September the Firſt, we paſt our moſt apprehended Danger, the Sands *Abrolhes*: Theſe lie off from the Coaſt of *Braſile*, a good way into the Sea, and are in * 21 Degr. South Lat.

(b) Cape St. *Auguſtine*.

Abrolhes Sands.

* Between 18 & 20 Degr by ſome Maps.

November the Eleventh, we anchor'd in the Bay (c) of *Soldania*, in 34 Degr. South. Lat. and 10 Leagues from the Cape of *Good Hope*; and here we found three good Rivers. We traded with the Natives at very cheap and eaſie Rates, having fat Sheep and Oxen for old Nails and pieces of Iron, a Penny-worth of which Metal, would purchaſe the braveſt Ox in the Country. Theſe Animals have ſome Peculiarities in their make in this Country: The Oxen have a great Lump of Fleſh, (like the Bunch upon a Camel's Back) between the Shoulders; and the Sheep have no Wool, but long ſhaggy Hair, and mighty Tails (all entire Fat) which weigh twelve or fourteen Pounds. The Natives are of a dark Olive Complexion, their Hair black and curl'd, like the Negroes of *Angola*, their Faces painted with ſeveral Colours, and all naked, except a ſhort Cloke of Skins, and Sandals upon their Feet.

(c) *Soldania* Bay.

They are a ſtrong active People, and very ſwift Runners. Their way of ſpeaking is rude and ſtrange, and hardly Human: You hear nothing but a parcel of ungrateful inarticulate Sounds; and if one can compare it to any thing, it is like the Clocking of a Brooding Hen. Such as they are, they are Subjects to the Great King of *Monomotapa*; and ſeem to be as much unfurniſh'd of the Helps of Art for Soldiers, as they are ill made by Nature for Orators, having no Weapons at all but Wooden Darts, which notwithſtanding they can manage to ſome miſchievous purpoſes.

Some Accounts of the People of the Bay.

Tho' they are ſo very rude and brutiſh a People as they are, yet they are ſubtle enough to underſtand an Affront, and to lay a Plot to Revenge it, and conceal their Revenge too in a very deceitful manner, till they have a fit time to execute it.

One of the *Dutch* having ſome way diſguſted them, they abſented themſelves from us for three Days, and in the mean time gave the Alarm to the Country, by great Fires made upon the Mountains. The Plot being ripe for Execution, down they came in vaſt Multitudes from the Hills; and that we might not ſuſpect any ill Deſign, they brought huge Troops of Cattel along with them. Matters appearing thus with a Face of Trade, and not of War, and we buſie in viewing our Bargains of Cattel; they made a ſudden and furious Aſſault upon us, and threw in their Hand-darts ſo thick, that thirteen of our Company was loſt in a trice, and the reſt began to run away in great diſorder, the Barbarians purſuing them at the Heels. In this Hurry, our Captain, (who did not think fit to venture himſelf in the Skirmiſh) ſent us a parcel of Weapons from the Ships; Swords, Targets, Pikes, and Muskets: But not being able to ſend Courage along with them too, theſe Arms in the Hands of Cowards did

Their Revenge.

little good, and the Burden of the Action lay moſt upon one *Engliſh-man* more, and my ſelf. But at laſt the Rabble retired, and we went all aboard that Night; only our Maſtiff-Dog would not go along with us any more; as if the Generous Creature deſpis'd us, and was aſham'd of ſuch Cowardly Company.

The Country hereabouts has a good Soil, and a pleaſant Air; it abounds with uſeful Plants, as Mint, Calamint, Plantane, Ribwort, Trefoil, Scabious, &c.

The Twenty ſeventh, we ſet Sail, and the laſt of this Month we doubled the Cape of *Good Hope*.

(*d*) Cape *das Aguilos*, where the Compaſs varies not.

December the Sixth, we doubled the Cape *das Aguilos* (*d*), which is the moſt Southern Promontory of *Africk*. It lies in 35 Degr. South Lat. and here the Compaſs has no Variation.

Madagaſcar.

January the Sixth, we fell in with the Iſle *Madagaſcar*, ſhort of Cape *Remano*: We ſpent all the reſt of this Month in attempts to double that Cape; but not being able to do it, we bore room with the Bay St *Auguſtine* (*e*), on the South Weſt part of *Madagaſcar*, in 23 Degr. 50 Min.

(*e*) Bay St. *Auguſtine.*

The People of St. *Auguſt.* Bay ſhy, upon the Account of former Injuries.

February the Third, we anchor'd in the Bay, and upon our landing all the multitude of People that ſtood upon the Shore, preſently diſpers'd and fled. The occaſion of which avoiding of us, was, that our Captain in a former Voyage, had abuſed the People there, and put one of the Natives to Death in a very barbarous manner. Yet after ſeven Days waiting, and ſome means uſed to temper their Choler, ſo juſtly ſtirr'd up and enflam'd by that Outrage, they came ſome of them to us, with ſome Milk, and one Cow (which we bought), and then took their final leave of us.

Theſe People have ſtrong and well-made Bodies; their Skin is Cole-black, their Speech ſweet and pleaſing; they uſe no Clothes at all, nor any Weapons for defence; and all that they have for the offenſive part, are Half-pikes headed with Iron.

Tamarind Trees.

Chameleons.

The Country is ſufficiently fruitful, and produces great ſtore of *Tamarind*-Trees, and a ſort of Beans (that grow upon high Trees) the Pods of which are two Foot long, and proportionably big, and make a very good Food: As for Animal Rarities, the Chameleons are the moſt conſiderable; which are no Rarities here, by reaſon of their plenty. Having endured Diſtreſs here by Hunger, (the affronted Natives refuſing to come to us with any Supplies) we ſet Sail from *Hungry-Bay* (as we term'd it, with good Reaſon), ſhaping our Courſe to the North-ſide of the Iſland.

(*f*) *Comoro* Iſles.

The Twenty ninth of *March*, we came up with the Iſlands *Comoro* (*f*), which are five in number, *Magetta*, *Auſame*, *Maglieglie*, St. *Chriſtopher's*, and *Spirito Santo*, and lie between twelve and thirteen Degrees, South Lat.

A. D. 1600.

The Thirtieth we anchor'd at *Magotta*, cloſe by a Town, where we met with a very ſociable and friendly People, that were glad of our coming, and brought us Proviſions. Our Captain being invited aſhoar by the King, went with three Drums beating before him, and was met by the King with a fine Retinue, all richly dreſt in long Silk Embroider'd Garments, after the Turkiſh Mode. After many Civilities paſt, His Majeſty diſmiſs'd him with a Letter of Recommendations to the Queen of *Auſuame*.

(*g*) *Auſuame.*

April the Nineteenth, we anchor'd at *Auſuame* (*g*), before the City *Demos*, the Ruines about which beſpeak it to have been formerly a place of Strength and Grandeur: The ſmall Remains of it were as big as *Plimouth*, and all the Houſes built with Lime and Free-ſtone. Her Majeſty wou'd not honour us with a ſight of her, but yet uſed us with great Friendſhip.

The People are a ſort of Negro's, but ſmooth-hair'd like *Indians*: They are *Mahometans*; and the beſt provided for War of all hereabouts, having Swords and Targets, over and above the common Weapons of the Barbarians. Theſe Iſlands are pleaſant and fruitful, yielding Rice, Oxen, Goats, Coco's, Bananas, Oranges, Limons, and Citrons. All Iron Ware wou'd be a good Commodity here; and Paper alſo, which is a thing the Natives are extreamly fond of.

(*h*) Iſles *Maſcaranhas.*

(*i*) *Maldive* Iſlands.

The Twenty eighth we ſet Sail, and paſs'd by the Iſlands *Maſcaranhas*, and the Shoals *De Almirante* (*h*).

May the Twenty third, we fell in with the (*i*) *Maldive* Iſlands; which are ſo low, cloſe by the Water, and ſo cover'd over with Coco's, that nothing but a Face of green Trees appears. Being at Anchor here, we had many *Indian* Boats paſs'd by us, but none wou'd come up to us; which mov'd our Captain to give Orders for the taking one of them.

The Twenty fourth our Ship-boats brought in one of them a Priſoner: She was cover'd all over with Mats, like a cloſe Barge, and had in her two Perſons of conſiderable Quality, as appear'd by all the Ornaments of their Dreſs, but much more by thoſe of their Noble Deportment. Theſe Iſlands are reported to be no leſs than Eleven thouſand in number. Their plenty of Coco's brings them a good Trade, ſince they make Bread, Wine, and Oyl, Ropes, Sails, and Cables, of the ſeveral parts of that Fruit.

The Twenty ſeventh we ſet Sail, and happily ſtruck into the true Channel called *Maldivia*, which lies in 4 Degrees, 15 Min. North Lat. and where the Compaſs has 17 Degrees of W. Variation. There are vaſt numbers of Ships from all parts, that go through this Channel, which is the only ſafe Sailing, it being generally fatal for a Ship to miſs it.

June the Third, we fell in with the Coaſt of *India*, in 8 Degr. 40 Min. North Lat. near about *Cochin*; and coaſting this Shoar, we ſhap'd our Courſe for Cape *Camorin*, and from thence for *Sumatra*.

Anchor at *Achen* Bay.

The Thirteenth, we ſaw the Coaſt of *Sumatra*: And the Twenty firſt we anchor'd in the Bay of *Achen*. Here we found ſome Barks of *Arabia*, and *Pegu*, that came for Pepper; and three or four *Portugueze* from *Malacca*, that came (as we found afterwards) to fruſtrate our Intentions of Trade. Our Captain (having made the King a ſmall Preſent) was ſent for to Court, and a Nobleman left as a Hoſtage to ſecure his ſafe return. His Majeſty, beſides a very Civil Entertainment, made him the Promiſe of a free Trade, and gave him, as a Mark of his particular Favour, the Cryſe of Honour. This is a ſort of Weapon like a Dagger; it has no Croſs nor Hilt, but the Haft and Handle are of a Metal valued more than Gold, and richly ſet with Rubies: 'Tis Death for any Man to wear it, but as the King beſtows it; and he that has this Favour, has an unlimited Power to command, or do almoſt what he pleaſes.

The *Sumatran* Cryſe, a Mark of Honour and Power.

At his return he brought a Boat-load of Pepper along with him, and told us very ſtrange things of his own good Fortune, and kind Reception at Court; but at the ſame time made it appear, that he had done no good Offices for us *Engliſh-men* there, being hardly able to forbear abuſing our Nation to our own Face, and therefore to be ſure did not ſpare it behind our backs. Our Merchants went aſhore with their Wares, having a Houſe prepar'd by the King's appointment.

The King of *Achen's* Enquiry after *England* and *Engliſh-men.*

Not long after, the Captain being at Court again, the King diſcover'd the treacherous Deſign of the *Portugueze* to him; but gave him a ſure Promiſe to ſtand his Friend, and never to ſuffer any thing to be done by them, or any others, to his prejudice. He enquired whether he was an *Engliſh-man* or no; and when he told him, he was of *Flanders*; he replied, 'twas a Country he had never heard of; but the Fame of *England* had reach'd thoſe Parts for ſome time before. And when he heard that there were ſome *Engliſh-men* in the Ship, (tho' to the Diſparagement of our Country, 'twas ſaid, that we had our Education in *Flanders*;) yet to the Captain's further mortification he told him, that he muſt needs ſee ſome Men of that Country. As for the Buſineſs of Trade, His Majeſty made this Agreement with us at that time, That we ſhou'd aſſiſt him in his Wars againſt the King of *Jor*; and in conſideration of that Service, ſhou'd have a full Lading of Pepper.

Mr. *Davis's* Entertainment by the K. of *Achen.*

Auguſt the Twentieth, the King expreſs'd ſome Reſentments, that none of the *Engliſh* (eſpecially the Pilot, which was my ſelf) had yet been brought to wait upon him; and reproach'd the Captain, as if he intended to march off, and quit the Service he had covenanted to perform. Upon this I was preſently ſent for aſhore; and the Twenty ſecond waited upon the King, with whom I ſtay'd four or five Hours, in all the Pleaſures that a noble Banquet, and a very free Converſation, with ſo great a Prince, cou'd give. He made the Sabandar dreſs me after the *Sumatran* Mode, with a Roll of white Linen round my Head, and a Saſh of the ſame embroider'd with Gold about my Waſte, then an under Veſt of white, and over that one of red. The greateſt part of his Diſcourſe was about *England*, and our Queen; whom he greatly admired for her Wars with the King of *Spain*; which Prince he imagin'd to be abſolute Monarch of all *Europe*.

September the Firſt, we had Orders to take in Soldiers and Ordnance, and to prepare for the Battery of the City of *Jor*: And to colour the Deſign that was going on the better, the great Galleys were brought out of the River, and the Sea all about us was cover'd with Praws and Boats, loaded with armed Men. Some of the chief came aboard us, with a good Company of Soldiers, appointed with all ſorts of Weapons; and tho' they pretended only a Carouſe with the good Liquors they had brought, yet we ſuſpecting another ſort of Entertainment, prepar'd accordingly, filling our Tops with Stones, and making faſt

all

A poyſonous Seed.

all our Gratings, and in every reſpect put our ſelves into the beſt poſture of defence we cou'd. But theſe Infidels (who with all this pretext of Friendſhip, had reſolved to cut our Throats, and that with as much eaſe as was poſſible) had, in order to effect it, mixed all the Meat and Drink they brought aboard, with a ſort of Seed of a very noxious Quality; the leaſt Effects of which are to intoxicate and ſtupifie a Man, to damp his Vital Heat and Spirits, and turn him into a heavy ſenceleſs Lump; but if taken in a large quantity, it ſo powerfully locks up all the Senſes and Spirits, and abates the Vigour of every active part, that there is no recovering Nature (in this Caſe) from the diſtreſs. And we found the fore-mention'd Effects of it, by that time we had eat and drunk a little while; for we quite loſt the due management of our ſelves, and began to ſtare and gape upon one another like ſo many Fools. And now they had brought us into the Condition they deſired; and expecting we wou'd fight as well as play like Fools, upon a Signal given they ſet upon us, kill'd the Captain, and ſeveral others, and almoſt poſſeſs'd themſelves of the whole Ship. My Countryman and I, and one more, defended the Poop, and the reſt on the tops pelting them ſoundly with Stones, by degrees we clear'd the Ship of them, no ſmall number leaving their batter'd Skulls and Brains, and mangled Carcaſes, as ſo many Monuments of our bloody Victory. After this, we drave away as faſt as we cou'd to our other Ship, in which the ſame Villany had been acted, and which we found in the hands of our Enemies ready to be carried away, all the principal Men being kill'd: But we recover'd her by the help of our great Guns, which ſo awed the Galleys, that they dared not attempt to come within Shot, for the ſecuring their new-gotten Prize. Beſides the Hundreds of ſlain *Indians*, that we had the pleaſure of ſeeing float about in the Sea, we kill'd the Sabandar, and one of the King's near Kinſmen, and ſome others of the principal Managers of the Conſpiracy. But the News of this great loſs, ſo inflamed the Tyrannical Prince, that he cut off the Heads of all our Men aſhore, eight only excepted, whom he reſerved for Slaves. Our loſs amounted to Sixty eight Men, including thoſe that were under Confinement, beſides our two Pinnaces, and a Boat.

The Treachery of the *Sumatrans*.

Products of *Sumatra*.

During the time of our ſtay at *Achen*, we had gotten 140 Tun of Pepper aboard our Ships; but upon the Rupture, all the Money and Merchandize aſhore, as well as the Men, were loſt; by which means many young Adventurers were quite ruin'd, and I my ſelf did not come off much better.

Golden Mines and Jewels.

The Soil of this Iſland *Sumatra* is very rich and fertile; it produces variety of excellent Fruits, but no ſort of Grain but Rice, of which they make their Bread. Here are Mines of Gold and Copper, precious Balms and Gums, Rubies, Sapphires, and Garnets, with many other valuable Commodities: Particularly Pepper grows here in ſuch plenty, that they are able to lade twenty Ships every Year, and might many more, if they were induſtrious. It grows like Hops, from a planted Root, which by degrees winds it ſelf up about a Pole, till it comes to a great Buſhy Tree. The Pepper hangs in Cluſters three Inches long, and one about, each Cluſter having forty, or more, Corns in it. Beſides theſe Mineral and Vegetable Productions, it affords plenty of ſerviceable Animals, as Horſes, Oxen, Goats, Hogs, Elephants, Buffles; which laſt they uſe in the Ploughing their Ground. All theſe Advantages, together with a very wholſome and temperate Air in moſt places, the ſweet Dews, and fruitful Showers, that never fail to cool and refreſh the Ground, do make the place very charming and deſirable.

City of *Achen* deſcrib'd.

Achen, the Capital City of the whole Iſland, ſtands in a Wood, and is ſo entirely cover'd with the Trees, that an Houſe is not to be ſeen, till one is juſt upon it. 'Tis a very large rambling place, and the Houſes ſtand almoſt like the Trees, without any thing of Order or Uniformity: They are rais'd upon Poſts eight or nine Foot from the Ground, and have Walls and Coverings of Mats; ſo that conſidering the Structure and Situation of the Building, a Gunpowder Plot, effectually executed, would be a very fatal thing in *Achen*. Here's a vaſt Concourſe of People at this City, and the three great Market-places, yield every Day the Proſpect of ſo many Fairs. The Haven that leads to it is very ſmall, being but ſix Foot at the Bar; and it has one of the worſt, and moſt ill contrived Forts in the World: But there is a very pleaſant Road for Ships near it, in which (the Wind ſtill blowing from the Shore) a Ship may ride a Mile off in eighteen Fathom, and cloſe by in ſix and four Fathom; and here is not only good Riding for Ships, but excellent Materials too for the building of them, the Country all about furniſhing Timber, the beſt that can be for that purpoſe.

The King of *Achen*, and his Riſe to the Throne.

The King was originally no better than a Fiſher-man, tho' it ſeems a fortunate one, having the good luck to catch a Kingdom. His Valour and good Conduct in the Wars, recommended him to the Notice and Eſteem of the former King, and by degrees lifted him up to the Honour of marrying his near Kinſwoman. And tho' there was an undoubted Heir, the Grand-ſon of that old King, by his Daughter, married to the King of *Jor*; yet the Fiſherman (then Admiral of *Achen*, and by Marriage ſomething a-kin to the Crown) did by the Murder of the young Prince, and of a good part of the Nobility that oppos'd him, poſſeſs himſelf of the Royal Dignity. He is an abſolute Epicure, and does nothing but eat and drink all the Day long; and when he has gorg'd to that degree, that his Belly is ready to break, he falls to chewing Arecca, which makes a conſiderable evacuation by Spittle, and procures a freſh Appetite.

His whole Life is ſpent amongſt Women, and Women manage all his Concerns: They are his Attendants and Companions, his Counſellors, and chief Miniſters of State: Nay, a Woman is his Admiral, and gives Orders at Sea; ſuch a Confidence he has in the Prudence and Faithfulneſs of that Sex; tho' if the former King had been of that mind, 'tis certain he had never been what he is. Yet for form's ſake, and partly neceſſity too, he has five conſiderable Miniſters of the other Sex, who act in Subordination to the Female Sovereigns, and execute the Laws which they make. And theſe Laws are ſo cruel and tyrannical, that no Man can call any thing his own; Life and Goods are at the King's diſpoſe; and he is reckon'd to do no Injury, if he takes away both, or either, when he pleaſes. He does an Offender a Kindneſs, a very great Favour, if he kills him to rights; that is, tears him in pieces with his Elephant, or Impale him upon a Stake; otherwiſe a Man muſt have his Hands and Feet cut off, and ſo be baniſh'd into a deſolate Iſland, there to pine away the remainder of his miſerable Life in Famine, and extream Torments.

Manner of approaching the King.

His Palace ſtands half a Mile from the City, upon the River; 'tis built like the reſt, but only higher and ſtatelier, and more nobly furniſh'd with Gold, Velvet, and Damask, in the inſide. A Man muſt paſs three Courts of Guards, before he comes at him: And if he approaches the Preſence, he muſt come bare-legg'd and bare-footed, and claſp his Hands together above his Head, and ſo bowing with his Body, and repeating ſome Words of profound Reſpect, ſit down croſs-legg'd, as His Majeſty does: For 'tis thus that he and all his Company ſits; and 'tis only the Jewels he wears, and not his Poſture, that diſtinguiſhes him from the reſt, ſince they all ſit like a Company of Taylors.

This Prince has a great Strength of Elephants, which are indeed the principal part of his Land-Forces. He has good ſtore of Braſs Guns too, as large perhaps as any in the World; but they uſe them without Carriages, and diſcharge them upon the Ground.

His Galleys (of which he has a good number) are made like a Wherry, long and open, without Deck, Forecaſtle, Chaſe, or any upper Building; the Oars are like Shovels, which they uſe only with the Hand, not reſting them upon the Galley.

The People of *Sumatra*.

The People boaſt of an Original from *Iſhmael* and *Hagar*, and can compute the Genealogies of the Bible; they are *Mahometans* in Religion, and yet pray with Beads as the Papiſts do. They have ſeveral Schools for the Education of their Children, and Spiritual Dignities and Preferments, for the Encouragement of their Studies. All ſorts of Trade and Mechanical Arts flouriſh amongſt them, but their topping Buſineſs is that of Merchandize, to which they ſeem entirely devoted.

In their Burials every particular Family has its place to its ſelf, and the Corps is laid with the Head towards *Mecha*, a great Free-ſtone being ſet there, and another at the Feet: And the ſame Cuſtom is obſerved in the Burial of the Kings, only inſtead of Free-ſtone, they have two Maſſes of Gold of 500 *l.* Weight each. They have an Annual Ceremony of going in Proceſſion to meet the Meſſias, as they call him, (that is, the Impoſtor *Mahomet*) at his promiſed Return: This happen'd at our being there, ſo that we had the Opportunity of ſeeing the Management of it.

The King, and all the Nobility, are mounted upon Elephants, richly dreſs'd with Velvet, Silk, and Cloth of Gold: One ſpare Elephant is lead amongſt the reſt, with a Caſtle of Maſſy Gold upon his Back; and this is for the Meſſiah to ride upon. Thus they go on with Banners diſplay'd, with Drums and Trumpets ſounding before them to the great Church, where they look very formally in, as if theye xpected to find the Prophet in the Pulpit. But not finding him there (and no doubt they might have ſav'd them ſelves the labour of looking) after ſome Ceremonies uſed, they mounted again, (the King taking the place intended for the Meſſiah) and go back as wiſe as they came, to Drinking and Revelling, with which they conclude the Day.

The Trade, *&c.*

Here's a great Reſort of Merchants to this place, from all parts of the *Indies*, *China*, and *Arabia*. The Names of their Coin are Mas, Caſhes, Cowpan, Pardaw, Tayell. One Mas is 1600 Caſhes, and 400 Caſhes make a Cowpan; 4 Mas's make a Pardaw, and 4 Pardaws a Tayell. And compar'd with our Coin, a Mas is 9 *d.* $\frac{3}{5}$. They ſell their Pepper by the Bhar (which is equivalent to 360 *l.* *Engliſh* Weight) at the rate of 3 *l.* 4 *s.* and their Pound, which they call a Cett, is 21 of our Ounces. The Weight by which they ſell precious Stones, they call Maſſe, $10\frac{3}{4}$ of which make an Ounce of our Weight.

The Diviſion of *Sumaira.*

This Iſland is divided into four Kingdoms, all of which are Tributary to *Achen*: They are *Achen*, *Pider*, *Manancabo*, and *Arn*; and the five principal Cities are *Achen*, *Pider*, *Pacern*, *Dain*, and *Manancabo*.

But after this digreſſion, to return to the Affairs of our Voyage: The ſame Day that we had that Encounter with the *Achenees*, we ſet ſail for *Pider*, where we came to an Anchor.

September the Second, Eleven Gallies under Conduct of the *Portugueze*, attack'd us, one of which we ſunk, and diſpers'd the reſt. But being diſtreſs'd here for want of Water, we went to the Iſlands *Pulo Botum*, upon the Coaſt of *Quedia*, in 6 Degr. 50 Min. where we refreſh'd.

October the Twelfth, we came into the Bay of *Achen* again, with a deſign to recover our Men, if poſſible; but here we found ten Gallies provided to make us keep them Company in their Captivity; which after a ſhort Fight we obliged to retire.

Tanaſſarin.

The Eighteenth we directed our Courſe to *Tanaſſarin*, a City of very great Trade. And the Twenty fifth we anchor'd amongſt the Iſlands in the Bay, in 11 Degr. 20 Min. North Lat. But the bad Winds not ſuffering us to recover the City, which ſtands twenty Leagues within the Bay (and beſides, wanting Proviſions) we ſail'd away for the Iſlands *Nicobar*, where we anchor'd *November* the Twelfth. Theſe Iſlands lie in 8 Degr. North Lat. they are very low Ground, but fruitful enough, and have a very convenient Road for Ships. The People are baſe and ſlothful, living only upon Fruit and Fiſh, and not in the leaſt taking Care of the Culture of their Ground: They brought us Oranges, Limons, and ſome Ambergreece; which we purchas'd for a little Linen Cloth.

Iſles *Nicobar.*

The Sixteenth, we ſhap'd our Courſe for the Iſland *Zeilon*: And *Decem.* 6. took a Ship from the Coaſt of *Cormandel*, bound for *Achen*, with Rice, which admirably well ſupplied our Neceſſities at that timy. She gave us Intelligence beſides, of the great Spice-Trade at *Matecalon*, in *Zeilon*, of the richneſs of the whole Iſland in general, and particularly the plenty of Pearl, and Jewels there. Upon this, and ſeveral other Reports of the advantage we might make, by viſiting that place, we beat about upon the Coaſt ſixteen Days to recover it; but being fruſtrated in our Deſign, we diſcharged our Prize, and directed our Courſe homewards.

Matecalon, and *Tringuenamall*, places of Trade in *Zeilon.*

A. D. 1600.

March the Tenth *, we fell in with the Cape of *Good Hope*. And the Twenty ſecond we doubled it.

April the Thirteenth we anchor'd at St. *Helena*, where we had good Water, Figs, and Fiſh, in great plenty.

The Twenty third, we had ſight of *Aſcenſion*, where there's neither Wood nor Water, nor any green thing for the Support of Life; but 'tis all one great barren Rock of five Leagues breadth.

May the Sixth, we arrived at the Iſland *Fernando Lozinio*, where we water'd and refreſh'd.

The Thirteenth we ſet Sail, ſhaping our Courſe for *England*. And *July* the Twenty third, we put into the Port of *Middleburgh*; which was doubly Welcome to us, after ſo narrow an eſcape from the many Dangers and Treacheries we had met with abroad.

CHAP. V.

An Account of a Voyage to the Iſle of Japan, *through the* Magellanick *Streights; by Mr.* William Adams. *Taken out of his Two Letters written upon that Subject.*

THis *Engliſh-man* being the firſt, that we know of, that viſited the Great Iſland of *Japan*, we are obliged to give his Story a hearing, and let him come in amongſt the reſt of the Celebrated Sea-men of our Country, tho' his Voyage was not of any Publick Conſequence, as to Trade and Intereſt thereby procur'd in thoſe parts.

A. D. 1598.

In this Buſineſs he was not the Servant of his own Native Country, but of *Holland*; being an able Pilot, and very skilful in all Points of Marine Knowledge: He was hired by that People to go to Sea with them. His Poſt was that of Maſter-Pilot, the management of the whole Fleet, (which conſiſted of five Sail) being left principally to his Care and Prudence. They ſet Sail from the *Texel*, *June* the 24th, and made it the 21ſt of *Auguſt*, by that time they reach'd St. *Jago*, one of the Cape *de Verd* Iſles; here they ſtay'd almoſt a Month, ſo long that a good part of the Fleet was ſick, altogether with the baſe unhealthy Air of that place; and they found it true too, by Experience, (which before the *Dutch* wou'd not believe) that 'twas a very barren place, as to any manner of good Refreſhment.

Trouble in paſſing the Line.

September the Fifteenth, they paſs'd the Line, tho' with trouble, becauſe of the contrary Southerly Winds, that then diſtreſs'd them; and this was the effect of having loiter'd away too much time before they came to attempt it. They were now carried away to the Coaſt of *Guinea*, and coming up with Cape *de Lopo Gonſalves*, they landed their ſick Company there; but this place denied Relief as well as the former, and the ſick Men were forced to carry their ſeveral Wants and Diſtempers aboard with them again.

Dutch take *Annobon.*

At the Iſle of *Annobon* they met with a little better Entertainment; here were Beeves, Oranges, and other Fruits; but the Plague of an unhealthy Climate, imbitter'd the Comforts of this Refreſhment, and the bad Air made them ſick, as faſt as the good Proviſions made them well. The *Dutch* landed a Party of Men, and took the Town; a ſmall thing conſiſting of eighty Houſes, and like to be of as little Profit to the Conquerors, as it was Honour to them. 'Twas towards the middle of *November* before they got away from hence; ſo hard is it to leave a good Baiting-place, eſpecially when the next is ſo very uncertain, as 'tis in the caſe of Sea-men.

The Winds.

Between *Annobon*, and 4 Degr. South Lat. they had the Winds perpetually at S. by E. and S. S. E. but about that Parallel, they came up S. E. & E. S. E. & E. Their Courſe was now for the *Magellanick* Streights, and they made it five Months Sailing between them and the Iſle of *Annobon*. But the Miſeries they endured by Hunger in that time, were extreme and in the higheſt degree doleful, according to Mr. *Adams*'s Relation: For a good while they had, each Man, but a quarter of a Pound of Bread a Day, with a proportionally ſmall quantity of Wine and Water; but it came to that paſs at laſt, that they eat the very Skins that cover'd the Ropes of the Ships; and by this unnatural ſort of Diet, brought on ſtrange Diſorders and Feebleneſs of Body upon themſelves. Through all theſe Difficulties they made a ſhift, at laſt, to reach the *Magellanick* Streights, coming into the firſt Narrow of that Paſſage, *April* the Sixth. But this was but ſtill out of one difficulty into another; 'twas only altering the Scene of their Misfortunes, and coming to be miſerable in another place: For the Winter was coming on here apace, the Cold began to be ſevere and pinching, and the great Snows began too (to make the Circumſtance more completely diſmal). Many a time wou'd the Wind have ſerv'd to have carried them through the Streights, but the obſtinate General wou'd not embrace the Opportunity, at the Advice of thoſe that perſwaded it; and ſo was the occaſion of the miſerable Confinement of the Fleet here all the Winter Seaſon. Here was Firing indeed enough for them all, about the Streights, every place abounding with Wood; but there was a worſe Neceſſity amongſt them, which this wou'd

Come to the *Magellanick* Streights. *A. D.* 1599.

Their Miſeries there.

never ſupply, and the Cravings of the Belly were to be ſatisfied by another ſort of Proviſion. Here they continued conflicting with Hunger, Diſtempers, and bad Weather, till *September* ; ſo that they ſtood the Shock of the whole Winter at this place, and endured the Extremities of all the very worſt Months of the Year. Abundance of their Men dy'd, being downright ſtarv'd, and the reſt were as near it as they cou'd well be : And now the General having had enough of the Winter Pleaſures of the *Magellanick* Streights, very politickly concluded 'twas time to go away. His Men were half dead, and the remainder were almoſt famiſh'd, the diſmal Winter ſpent and gone, and the chearful Spring coming on with the returning Sun, he thought it high time to put out to Sea again, before the Comfort of the approaching Seaſon overtook them.

Go out into the South Sea, and are ſeparated by a Storm.

Come to the Coaſt of *Chili.*

So the latter end of *September*, they ſet Sail out of the Streights, and being got into the South Sea, were wretchedly toſs'd and beaten about in that turbulent Ocean. In ſhort, a luſty Storm ſcatter'd the whole Fleet, and drove them to ſeek their Fortunes, every one by themſelves. They had agreed before, in caſe of any ſuch Diſaſter, that they wou'd ſtay for one another, at ſome place upon the Coaſt of *Chili*, in the Latitude of 46 Degr. and if the reſt came not in a Month, then thoſe that were there ſhou'd go on. Hither Mr. *Adams*'s Ship came, according to the Agreement, and ſtay'd the appointed time. The Natives were civil and friendly to them at firſt, and barter'd Sheep and Potatoes for little Toys which they gave them ; but at laſt they fell off, remov'd up into the Country, and came no more at them.

Their Company not coming, they went away, touching as they paſs'd at the Bay of *Baldivia*, and the Iſle of *Mocha* ; but not coming to Anchor any where, till they did it at the Cape *Santa Maria*, which is about twenty Leagues from the Iſland of that Name to the Southward. Here they found a convenient Bay, and good Ground for Anchoring : There were conſiderable Numbers of People that appear'd upon the Shore ; but their Temper and Diſpoſitions, as they were unknown, ſo they were now to be tried. But they proved very croſs and untoward ; for at their firſt Attempt to land, the *Indians* looking upon them as Invaders of their Country, ſet themſelves to oppoſe them, and pour'd in a Shower of Darts and Arrows upon the Boats that came up to the Shore. But they being under the Pinch of Hunger, and driven by an abſolute Neceſſity, to endeavour ſome Means for the getting a Refreſhment, broke through the Weapons of the Barbarians, and landed their Men.

Indians oppoſe their Landing.

Now they made Signs of Peace on both ſides, and a Ceſſation of Arms being, as it were agreed on, they came to a Parley in that Language of Signs ; and the *Indians* underſtanding what they meant, brought them Wine and Fruits, for the little Commodities the others ſhew'd them ; and then ſignified to them, that they ſhould now return aboard again ; and if they came aſhore the next Day, they ſhou'd have a farther Supply of Victuals.

Treachery of the *Indians.*

Accordingly the next Day the Captain landed with a ſcore, or more, of Musketeers, and they had not march'd far, before a Party of *Indians*, to the number of a thouſand, that lay cunningly intrench'd, fell upon them, and cut them all off.

This was a terrible Misfortune upon all Accounts, particularly in that this Execution had ſcarce left them Men enough, to do the neceſſary Offices of the Ship. With this loſs they went away from the inhoſpitable Cape, and came to the Iſle of St. *Mary* it ſelf. Here they found their Admiral Ship, but in much the ſame diſtreſs'd Condition as themſelves ; the Natives of the Iſland of *Mocha* having given them the ſame rude Treatment, that thoſe at the Cape had given the others : Only of the two, the Admiral had the worſt on't ; for they had loſt more Men by the Darts of the *Indians*, and over and above that, their General himſelf.

Find their Admiral at Iſle St. *Mary.*

Their Stratagem to get Relief at St. *Mary* Iſland.

Now to get ſome Refreſhment at this place, was the great difficulty ; 'twas hard to lie ſtill and famiſh a Shipboard, and 'twas as hard to venture aſhore, becauſe they had not Men for't : In ſhort, theſe two Wants were ſo great, and ſo unhappily complicated in their preſent Circumſtance, that for all that appears, if an Accident had not reliev'd them, they muſt have concluded upon dying here without any more adoe. But a couple of *Spaniards*, that had a deſign to betray them, came aboard (in a ſeeming friendly manner) for that purpoſe ; and were ſo wiſe as to do it without Pledges, or making any Proviſion for their ſafe return. So when they had ſeen the Ship, and wou'd have gone back again, they told them, No, they were ſenſible of their ill Deſign, and would keep them Priſoners, (eſpecially ſince they came entirely of their own Heads too) unleſs they would promiſe to furniſh the Ship with ſo much Proviſion. One may eaſily imagine, the *Spaniards* were out of Humour upon't, to find themſelves taken in ſuch a Trap ; but 'twas all one, 'twas to no purpoſe to be in a Paſſion there, and they were forc'd to ſubmit to thoſe Terms of Deliverance, and glad to eſcape ſo too. The *Spaniards* brought in their Proviſion according to the Agreement, and now they were once more repriev'd from a miſerable Death.

Go for *Japan.*

After this, the two Ships ſet Sail in Company for *Japan* ; the reſt of the Fleet were given up for loſt, and one of them, they afterwards heard, fell into the Hands of the *Spaniards* at St. *Jago*. Beſides this, the King of *Spain*'s Fleet waited for them upon the Coaſt of *Peru* ; and had they light of them, 'tis very probable they had both follow'd their Companion in her Fate, ſince they were in ſo very weak and ſhatter'd a Condition.

'Twas *November* the 29th, that they left the Iſland St. *Mary*, upon the Coaſt of *Chili*, and having paſs'd the Line, had a good Wind, and fair Weather, for a good while, without any interruption by Storms and Tempeſts.

Anthropophagi

In the Latitude of fifteen or ſixteen Degr. N. they fell in with ſome Iſlands of Cannibals, or Men-eaters, as Mr. *Adams* calls them, without any ſcruple ; ſince eight or nine of their Men, he believes, were devour'd by them. Theſe Fellows being weary, it ſeems, of ſo long a Voyage, and willing to take up with the next Reſting-place, put themſelves into the Pinnace, and ſo run away ; but which way ſoever the Cannibals diſpos'd of them, 'tis certain they never came aboard more.

In the Latitude of 27 and 28 Degr. the Weather began to change upon them, and the Winds that had lien ſtill and quiet ſo long, rouz'd and blew with a prodigious Fury ; they had ſuch a Storm of Wind and Rain, that equall'd or exceeded the moſt violent any Mariner amongſt them had ſeen. In this horrible Confuſion of the Weather, they loſt one another, and the Admiral never came up to them more ; but they follow'd on their Courſe for *Japan* alone, being ſtill in hope to meet her in ſome part or other of that Iſland. Certainly, hardly ever any Men perform'd a Voyage in more diſtreſs : Our Pilot tells us, that they had, of all their number, but nine or ten left, that were able to ſtand or creep upon their Knees ; as for the Captain, and all the reſt, they were at the laſt Gaſp, as it were, and expected to die every Hour. And this was a very diſmal Caſe ; for Storms will make the poor Sea-men beſtir, and work themſelves to the purpoſe : But how ſhall Nature be ſupported in the mean time, and where ſhall Men have ſtrength to do thoſe toilſome Works, that have not Food to keep Life and Soul together ?

The Admiral loſt in a Storm. Her Pilot was an *Engliſh-man* too, that had ſail'd round the World with *Candiſh*.

A. D. 1600.

'Twas *April* the Nineteenth, before they had ſight of the Coaſt of *Japan*, and by that time there was but five of their Company that cou'd go, Providence ordering the matter ſo for them, that they had then a Proſpect of Relief, when things were run up to the higheſt extremity. 'Twas near to *Bungo* that they ſaw this firſt Land, and were then in about 32 ½ Degr. But Mr. *Adams*, by the way, aſſures us, That that Coaſt of *Japan* is falſly plac'd in all our Maps, Charts, and Globes ; for he ſays, it lies in 35 ½ Degr. which makes a conſiderable difference from the common Account given by them of its poſition.

Note, upon the North-part of *Japan*

At *Bungo* ſeveral Boats of the Natives came up to them, and aboard them too, as they had a mind themſelves ; and it cou'd be no otherwiſe, for there was no Body to make any reſiſtance ; the Sailors were all quite ſpent, and if the *Japoneſe* wou'd have plunder'd them, or knock'd them o'the Head, they might have done it without any trouble. Yet they did them no manner of harm, as to any Violence, or any ſort of Affront ; but they pilfer'd and ſtole all that they could lay Hands on ; for which ſome of them paid very dear afterwards.

They come to *Bungo*, and are well entertain'd.

The Vice-King of the place prov'd very kind and friendly to them, took them into his Protection, and ſent a Guard (as ſoon as they were come to an Anchor in the Port) to ſee that none of the Merchants Goods were ſtollen : This wou'd have done very well, had it come in good time ; but the Thieves were there before them. However, here they had good ſtore of Proviſions ſent them in, a Houſe provided on purpoſe for them ; and in ſhort, were made very much of, and began in ſome meaſure to enjoy themſelves, after all the Dangers and Fatigues of the Sea. But 'twas their ill luck to meet with *Portugueze* and Jeſuites here : They were forc'd to make uſe of them for Interpreters indeed ; but they had far better been without any, and choſe rather to have us'd the ſilent Language of Geſtures and Signs, than employ'd ſuch Interpreters as they were. For theſe Men gave that Character of them, that they commonly give of their *European* Neighbours (in all parts of the World where they meet them), That they were Spies, or Pirates, and not Trading Men, as they themſelves pretended : And this ſet the *Japoneſe*

Malice of the *Portugueze.*

poneſe ſo againſt them, that Mr. *Adams* tells us he was apprehenſive at one time that they ſhould have had the Fate of Pirates in that Country, which is to be ſet up upon Croſſes. Now when a Company of poor Sea-men came to throw themſelves upon their Mercy, as it were in a ſtrange Country, where they were not able to ſpeak for themſelves, and where their Liberties and lives depended entirely upon the Peoples good Opinion of them, to go and ſerve them at that rate, was an unpardonable piece of Villany, and an Action ſo very inhuman and baſe, as was only fit for *Portugueſe* and *Jeſuits* to be guilty of. But 'twas not long before the Emperor hearing of this Ship, ſent for Mr. *Adams* being the Pilot to come to him: The Court was then at *Oſala*, which is about 80 Leagues from *Bungo*. Hither came our *Engliſh* Man, not knowing whether 'twas to Life or Death, to Priſon and Puniſhment, or farther Favour and Enlargement.

Mr. *Adams* goes to the Emperor.

His talk with the Emperor.

The Emperor view'd him (he ſays) with a wonderful deal of Attention, but yet with his mild and favourable Countenance took off in a great meaſure from the dread his preſence might otherwiſe have excited. He ask'd by his Interpreters a world of queſtions about the Country Mr. *Adams* came from; the People, their Manners, their Affairs both to War and Peace, and products of it in Beaſts, Fiſh and Fowl, the Trade and Buſineſs, and Laws and Government, and in ſhort the whole Natural and Civil Hiſtory of it. More than this he purged him as to his Religion too, and would needs examin his Faith, asking him what 'twas he believed in; a queſtion which if a Man had not known the Emperors Religion wou'd almoſt have made him affraid the Jeſuits had ſet up an Inquiſition here, and that he was one of the *Tribunel*.

The Emperor defends him againſt the *Portugueſe*.

But Mr. *Adams* puzzl'd him ten times worſe, when he ſhew'd him the Magellanick Streights, in his Chart, thro' which he ſail'd to *Japan*: The Emperor perhaps had a pretty good opinion of him before; but now he thought him a downright Lyer; the myſtery of ſuch a Voyage was ſo incomprehenſible that he had no Faith to beſtow upon it, yet ſince Mr. *Adams* affirmed it, and he could not confute him, he entertain'd it as Men do all Points of pure Myſtery, with ſilent Admiration, and humble Submiſſion of their Reaſon, to the difficulty, tho' cramp'd and tortur'd with it at the ſame time, tho' his underſtanding was affronted by it, yet his good Nature was not, and he was very good Friends with Mr. *Adams* afterward, as appear'd by his holding him in talk till mid-night. He had ſeveral other conferences with the Emperor after this, but was for a conſiderable time, notwithſtanding kept in Priſon, tho' he had all neceſſaries allow'd him, and nothing like a puniſhment, but a large confinement. The *Portugueſe* made all the Intereſt at Court they cou'd poſſibly againſt him, and by their Agents were continually buzzing ſome ſcandalous reports of him, and his Country in the Emperors Ears; but all would not do, and the Prince was ſo juſt and Generous as to tell them that the *Engliſh* having done him no miſchief, it wou'd not be fair for him to ſee them receive any in his Country; and that 'twould be contrary to all the Laws of Juſtice and Reaſon for him to ſuffer an innocent Man to be executed, meerly becauſe his Country and yours were at War.

Mr. *Adams*'s Circumſtances now begun to mend, and grow more favourable; his Enemies were quite diſhearten'd, and the Emperor expreſs'd every Day more and more good liking to him. In the firſt place, he freed him from his Impriſonment, and gave him leave to go and ſee his Ships, and Company, who were ſurpriz'd with no ſmall Joy at his having heard ('tis probable from the *Portugueſe*, who intended it ſhou'd be ſo) that he had been executed ſometime before. But here he found the Ship abſolutely plundred, and all his Goods and Inſtruments gone, and all the reſt had loſt what they had as well as he; for being all Sick and Weak aſhoar, the Goods lay ready for a Prey to thoſe that cou'd be unjuſt enough to ſeize them. When this came to the Emperor's Ear, a Search was made, in order to the recovery of them; but being gone too far out of reach, he commanded 50000 Rials of eight to be given them in part of Satisfaction; and to make ſure that this Money ſhould not be either fraudulently detain'd by his Treaſurers, nor converted to any other uſe, he ſaw the payment of it himſelf, into the Hands of one who was appointed to have the managment of their Affairs, and to give it out to them in Parcels as they wanted. After this, the Court removing to *Edde*, about 122 Leagues from *Oſaca*, the Emperor Commanded Mr. *Adams* to move thitherwards with his Ship; and here they took the Liberty to Petition him that they might be perfectly Free, and purſue the deſign of their Voyage in going to Trade at ſome other parts; but this would not take, and the Emperor was not diſpos'd to part with them yet, ſo they got the remainder of their Money into their own Hands, and divided it amongſt themſelves, every Man his ſhare; and then they diſperſed themſelves about in the Country, chuſing thoſe places to ſettle in, that beſt ſuited their Fancies. But the Emperor ordered them beſides an Allowance of Rice, Two pound a Day for every Man, and over and above ſo much yearly as came to 11 or 12 Ducats; There was no diſtinction made between Captains, Pilots, and Common-Sailers, but they fair'd all alike.

His kindneſs to them upon the loſs of their Goods.

They ſettle in the Country.

Mr. *Adams* makes the Emperor a Ship.

Thus four or five Years went over their Heads, and they follow'd every Man his Buſineſs in the Country for a livelyhood; ſince 'twas determin'd, that there they muſt Live and Die. But when the term of Years was expir'd, the Emperor ſent for Mr. *Adams* to Court, and the buſineſs was, to make him a Ship; this was not his Trade, as he told the Emperor, and tho' he knew how to Guide a Ship at Sea, yet he was not uſed to the making of them; but he was ſo very urgent and preſſing to have it done, that Mr. *Adams* undertook the work, and made him a Ship of about 80 Tun. When he came aboard it, he expected a wonderful deal of Pleaſure in it, and t'was a piece of ſervice he valued ſo much, that the maker of it riſe mightily in his Favour by this very means, beſides ſeveral good Patents, his Penſion was encreaſed too, being made as much as came to 70 Ducats *per Annum*, over and above the former Allowance of Rice, and this well managed was a tolerable livelyhood for a ſingle Perſon in that Country.

Teaches the Emperor Mathematicks.

But that which recommended him moſt effectually to the Emperors eſteem, was his Skill in Mathematical Learning. Mr. *Adams* had a good ſhare of Knowledge, it ſeems, in the Practical Parts, and was now honour'd with having ſo great a Prince for his Scholar. He inſtructed him in ſeveral Points of thoſe uſeful Arts, and made him capable of ſolving to himſelf that myſterious problem of ſailing to *Japan* by the Magellanick Straits. He could pleaſe him at any time with deſcribing Geometrical Figures; the Emperor was plung'd in the Study, Charm'd and Conjur'd within the Circles Mr. *Adams* drew him. This latter uſed his Geometry to ſuch good purpoſe, that he diſcovered the true method of managing his Royal Pupil by it, and got the exact length of his Foot. His Word was all in all in any point of Diſpute and Controverſy; and whatever ſide Mr. *Adams* took, the Emperor was always of the ſame. He had ſo great a ſtroke now at Court, that even the Jeſuites themſelves were willing to make uſe of his Intereſt there, and courted him to be their Patron; and he declares, that by his means both *Spaniards* and *Portugueſe* received ſeveral Favours from the Emperor, which they were otherwiſe in no likely way of obtaining. Being in theſe circumſtances, he thought it not impoſſible to win upon the Emperor ſo far as to procure leave to return into his own Country; and for that purpoſe renew'd his old requeſt, promiſing to do his utmoſt for the bringing both an *Engliſh* and a *Dutch* Trade to *Japan*, if he might be ſuffer'd to go home.

The Emperor will not conſent that he ſhould go.

His preferment in the Country.

But the Emperor was too much pleas'd with his Company, to hearken to any propoſal about the loſing of it. Mr. *Adams* ſhould have conceal'd his Skill in Mathematicks, kept his Geometry and Navigation to himſelf, if he had intended to have ſeen his own Country again: He was too uſeful a Man to be parted with; and there was no hopes of his Liberty, till he had quite loſt the knowledge of all thoſe Acts that had ſo charm'd the Emperor. In ſhort there is no going for him, and his Wife and Children muſt be contented without him; yet he procured leave for the Captain of the *Dutch* Ship he came in, to go, and to make his life as eaſie and pleaſant as might be: The Emperor ſetled a Lord-ſhip upon him, in which he had a Compaſs of Land to manage, and a parcel of Slaves to the number of 80 or 90 appointed to do his Country work. And this was the Courſe of our Engliſh-man's Fortune in that part of the World, as he himſelf has deſcribed them.

Account of the Country.

As to the State of the Country, and its Affairs, he does not tell us much. He commends the *Japoneſe* largely, for their Courteſy, and Good Humour, Valour in War, Juſtice in their Civil Concerns, and the happy Conſtitution of the Government. He believes no People to be Maſters of better Politicks, than they in their Civil Government, nor have more ſuperſtition in their Religion. They have various Sects and Opinions amongſt them, and ſome of them had imbraced Chriſtianity at the time, the Friars and Jeſuits being very deligently at work to propagate it in ſeveral parts of the Iſland. So far they had gone in Mr. *Adam*'s time as to have ſome Churches, and Proſpect of a conſiderable increaſe of Convents. The Character he gives of Trade, is, that Silks and Cloths are very vendible Commodities there, and that for ready Money: And according to his Relation, the *Japoneſe* have wherewith to be very good Pay-maſters, and can afford to give the beſt Rates for a Commodity, having

Gold

A. D. 1609. and 1611.

Gold and Silver enough in their own Country: A very happy People, to be both Rich, and Wiſe, and Good, and have both thoſe advantages ſo eminently, Money and Wit, which do ſeldom meet together. He tells us the *Dutch* were admitted to a Free Trade there, and had very good acceptance with the Emperor; and had entred into an agreement with him, to ſend a Ship or two well laden thither every Year. To conclude as to the Geographical conſideration of the Iſland, he aſſures us, that the Northern part of it reaches to the Lat. of 48 Degr. and the Southern lies in 35. that it extends 220 *Engliſh* Leagues, E. & W. and 260 N. & S. and for it's Figure, he ſays it is almoſt a Square: Which account is the more credible, in that it is given by one, who did not juſt come and take a view of the Country, and then away again, but ſpent a good part of his Life upon the Spot; and rightly pretended to have as good an acquaintance with it, as the Natives of the Soil.

This Letter out of which the Account was principally taken, was Dated, *October* 22. A. D, 1611.

CHAP. VI.

The ſecond Voyage of John Davis, *with Sir* Edward Michelbourn, *&c.*

A. D. 1604.

December the 5th, we ſet Sail from *Cowes* in the Iſle of *Weight*, with the good Ship the *Tigra*, of 240 Tun, and a Pinnace nam'd the *Tigers-whelp*.

Teneriff.

The 23d, we came to *Teneriff*, in the Road of *Aratana*.

January 16th, we paſs'd the Equinoctial, and ſhap'd our Courſe for the Iſle *Loronna*, and having made ſome three Degr. S. Lat. we met with incredible numbers of Dolphins and Bonito's, of which we took ſo many, that we were perfectly tired as well with the eating as the catching of them. We had ſport enough too, with the Sea-fowl they call *Paskarabous* and *Alcatrarzes*: The former of theſe are eaſily taken at Night, at which time they lodge themſelves in great numbers about a Ship, and will perch upon ones Head, if it be held out to them. The others are a ſort of Hawks, that live entirely upon the Spoil they get out of the Water, and are equally the Perſecutors of the Flying-Fiſh, with the ravenous Dolphins. That poor Animal it ſeems, can live quietly in no Element, and neither the Air, nor the Water, will afford it a ſecure Harbour. The Dolphins and Bonito's are continually hunting them in the Sea; and when they have no way to avoid a miſerable Death, but by uſing their Wings, and taking a turn in the Air, then theſe unmerciful Birds are preſently upon them, and inhoſpitably devour the poor Strangers driven by perſecution out of their own Element.

Multitudes of Dolphins and Alcatrazes.

(a) Iſle *Loronna.*

The 22d, we came to an Anchor at the (a) Iſland *Loronna*. We found it very difficult here to get Wood and Water aboard, by reaſon of the violent breadth of the Sea, which makes the Landing extreamly hazardous. Our own Boat was twice overſet by the boiſterous Waves, and ſome of our Men drown'd in the Attempt; and not long before us a *Dutch* Man was worſe ſerv'd, his Boat, men and all being daſh'd in pieces upon the Rocks.

The Iſland has no Inhabitants, but a few *Negroes* whom the *Portugueſe* keep here as their Slaves: Their buſineſs is to kill and dry the *Cabrito's* againſt their Maſters arrival, who generally call here in their way to the *Eaſt-Indies*. And by this continual ſlaughter of theſe Beaſts and the Wild-Oxen in ſuch multitudes for the *Portugueſe* ſervice, the ſtock of the Iſland is almoſt exhauſted, tho' formerly it was very great. But tho' there's a ſcarcity of theſe Creatures, there's good ſtore of Fowls, as Turtle-Doves, Alcatrarzes, and many other ſorts, which are very delicious meat; beſides plenty of Maize, Wild Gourds, and Water Melons, and thoſe Trees on which grows the fine Bombaſt.

Its Products.

* *A. D.* 1605.

* *February* 12. we were in 7 Degrees 5 Minutes South Lat. and here we had the ſurpriſing ſight of a Sea ſparkling at a wonderful rate, and appearing as if all on fire; the Light was ſo clear and bright at Night, that one might have read the ſmalleſt Print by the aſſiſtance of it.

The 13th, we had ſight of the Iſland, or rather the great Rock *Aſcenſion*.

April the 1ſt, we ſaw Land, which bore off us S. S. E. tho' by our reckoning we were above 40 Leagues diſtance; but yet the varying of the Compaſs told us that we were toward Land 30 Leagues before we ſaw any.

The 2d, we were hard by the ſhoar, which lies 10 or 12 Leagues to the North ſide of the Bay of *Soldania*.

The 3d we ſail'd by a little Iſle, which we ſuppos'd to be that which ſtands ſome five or ſix Leagues from the Bay. This for the multitude of Conies found here, was call'd (b) Coney Iſle.

(b) *Coney Iſle.*

(c) *Soldania.*

The 8th we came to an Anchor in the Road of (c) *Soldania*, and the next day we went aſhoar. The Country we found ſuch, both for Plenty and Pleaſure, as ſeem'd to deſerve a far better ſort of Inhabitants than it had. The Plains and Valleys are every where watered with wholſom ſtreams, which the Springs upon the neighbouring Mountains do liberally impart to them. The champian Grounds are covered with Flocks and Herds, and Woods and Foreſts filled with all ſorts of wild Game. Here one may ſee moſt kinds of Animals, that are fit either for Food, for Service, or for Sport and Pleaſure; Deer, Sheep and Oxen, Antelopes, Foxes, Hares, and Coneys; and for excellent Fowl ſuch ſtore and variety, that that luxurious *Roman* Emperor, whoſe appetite could be ſatisfied with nothing but the Tongues and Brains of choice Birds might have feaſted here to his Hearts content. And beſides all the ſorts of Tame Fowls, and more common ones, of thoſe that are wild, frequenting either the Woods or the Water, or flying in the open Air; here are Oſtridges, Cranes, Herons, and Pelicants, amongſt all which we had ſufficient, both for Game and Proviſion too.

But the People that inhabit this excellent Country, are ſome of the moſt baſe and brutal in the whole Univerſe. Human Nature is here ſo rough and unpoliſh'd, ſo ſordid, mean, and unlike it ſelf, that 'tis hard to know it thro' the diſguiſe; and certainly if there be any where a mixt Animal, a compound of the Man and the Brute, 'tis at *Soldania*. Raw fleſh is their moſt niceſt and cleanly Fare, and when they eat this, they eat like ſome other Barbarous Nations; but when they feed like themſelves, they go ſome degrees lower, from the Fleſh to the Guts of Beaſts, which they lay to warm a little while upon the Coals, and then greedily devour with all the excrements in them, and the Aſhes and Durt that cleave to them.

See *Davis's* firſt Voyage about the Trade for Cattel, and the deſcription of them.

Having had a very agreeable refreſhment here, we ſet ſail again *May* the 3d; and the 7th we were 10 Leagues to the Southward of the Cape of *Good-Hope*, paſſing that Night the Shoals of Cape *das Aguilhas*.

Cape *Aguilhas.*

The 6th we had a fearful Storm, which raged for two Days and two Nights, at laſt a Flame of the bigneſs of a Candle appear'd upon our Main-top-maſt-head, after which the violence of the weather went off.

(d) *Diego Roiz Iſle.*

The 24th the Iſle *De Diego Roiz* (d) in 19 Degr. 40 Min. South Lat. and 98 Degr. Long, bare N. of us at eight Leagues diſtance. We bare room to have landed here, but the Wind growing very ſtiff, we alter'd our Reſolution: We ſaw about this Iſland great numbers of clean White Birds, which had only two long Feathers in their Tails.

June the 3d ſtanding for the Iſle *de Cirne*, we had another view of *Diego de Roiz*, which when we bare room again, thinking to ſtay for a good Wind, but finding that we cou'd not come to Anchor without very great hazards, upon the account of the Rocks and Shoals that lie about the Iſle, we reſolved now to ſtand for the *Eaſt-Indies*.

(e) Iſle *Baubes.*

June 15th we ſaw the Iſland *Des* (e) *Baubes*, which lies in 6 Degr. 37 Min. S. Lat. and 109 Degr. Long. Theſe Iſlands are very commonly placed in our common Charts, lying conſiderably too much to the Weſtward. They afford good ſtore of Fowl, Fiſh, and Coco's; but 'tis very hard to find a good Anchoring-place, there being no bottom to be met with in ſome places cloſe by the Shore, and in others ſo many ſharp Rocks, and ugly Shoals, that 'tis dangerous making the Attempt: This Inconvenience attending us, we proſecuted our Courſe to the *Indies*.

(*f*) *Diego Graciofa* Iſle.

June the Nineteenth, we had ſight of the Iſle *Diego Graciofa* (*f*), in 7 Degr. 30 Min. South Lat. and in 110 Degr. 40 Min. Long. by our Account. It appears to be about 10 or 12 Leagues long, and is ſo full of Coco-Trees, that looks like a perfect Wood. There's Fiſh and Fowl enough to be had, and if there be good Anchoring too (which we did not ſtay to examine) 'tis a very convenient place to refreſh at.

July the Eleventh we paſs'd the Equinoctial again; and the Nineteenth deſcried Land, which was a Cluſter of Iſlands lying under the high Land of *Sumatre*, and in about 2 Degr. North Lat. We cou'd not ſucceed in our Attempt of landing here, the Sea went with ſuch a violent Head upon the Shoar, tho' (as we fancied) the Natives invited us to it, and ſignified their Minds, by ſeveral great Fires made along the Shoar.

(*g*) *Bata* Iſle.

The Twenty ſixth we anchor'd within a League of the great Iſland *Bata* (*g*), in 20 Min. South Lat. This Iſland is wholly deſtitute of Inhabitants; yet 'tis well wooded, and water'd, and ſupplied with Fiſh. It produces abundance of Monkeys, and a kind of Fowl, which is reported to be the Bat of that Country. Theſe Creatures are larger than a Hare, and in ſhape very like a Squirrel, except only that from each ſide there hangs down two great Flaps of Skin, which are inſtead of Wings, and by the help of which they skip nimbly from one Tree to another.

Auguſt the Fourth, we weigh'd Anchor, and ſtood for *Priaman*.

The Tenth and Eleventh, ſtanding cloſe along the main Land, we deſcried ſeveral Praws riding over againſt *Tico*, in *Sumatra*, and were in ſome hope to find our Pinnace amongſt them, which we loſt in the Storm at the Cape. But tho' our Expectations were fruſtrated, yet we were in ſome meaſure comforted with the News they told us, of an *Engliſh* Ship that lay at *Priaman*, not above ſix Leagues diſtant from the Town of *Tico*. But while we went on to find her, we were like to loſe our ſelves, our Ship coming a-ground upon a Rock of White Coral; but having a briſk Gale of Wind, we happily got her off again, without any prejudice, in a very little time. Being come into *Priaman* (*h*) Road, (to our great Joy) we found our Pinnace there, and ſo came to an Anchor in five Fathom Water, and very good Ground. This City lies in 40 Min. South Lat. I had the Opportunity of ſeeing it, being ſent by our Admiral, with a Preſent to the Governour, and to examine the Rates that Pepper went at there. But no private Conference was to be had with the Governour, nor no Advances to be made in the Matters of Trade and Merchandize, by reaſon of the Wars then raging amongſt them. For the old King of *Achen*, having made his youngeſt Son King of *Pedir*, and nominated the elder to ſucceed himſelf in the Kingdom of *Achen*, keeping him at home with him for that purpoſe: The extravagant Prince (angry to ſee a Crown on his younger Brother's Head, while his own was without one) makes bold to depoſe his Father, telling the People he was too old to govern; and then having the Power in his hands, immediately fell upon his Brother, to the great diſturbance of the Peace and Trade of the Iſland: So that ſeeing little likelihood of doing any good here, and having gotten in all neceſſary Proviſions, the Twenty firſt we weigh'd Anchor, and ſtood for *Bantam*.

The Ship runs aground.

They find their Pinnace.

(*h*) *Priaman*.

The Twenty fifth, after a Diſpute of ſeven or eight Hours, we took a Ship of *Bantam*, bound for *Priaman*; her Lading being Salt, Rice, and *China* Diſhes; but conſidering the *Engliſh* had a Factory there, and that this Violence might poſſibly expoſe them and their Concerns to ſome Inconveniences amongſt ſo barbarous a People, we diſmiſs'd her in a civil and friendly manner, with all her Goods, which we did not diminiſh to the value of a Farthing.

Sillabar Road.

But a Ship of *Guzurate*, (which we took *September* the ſecond) did not ſcape us ſo well: She was about eighty Tun, and we ſecur'd her in the Road of *Sillabar*. That Road is in 4 Degr. South Lat. and is very much frequented for the Conveniences of Wood, Water, and many ſorts of Proviſions that are here to be had. Our Buſineſs held us here till the Twenty eighth, when we ſet Sail and proſecuted our Voyage towards *Bantam*.

Marrah Road.

October the Twenty third, we anchor'd in the Road of *Marrah*, in *Sunda* Streights, where are as good Accommodations for the eaſe and refreſhment of Sailors, as at *Sillabar*. The People here don't value Money ſo much as they do Callicoes, Pintadoes, and ſuch-like Stuffs. They are very fair in their Dealings, and will uſe you ſoberly, if you do the like by them; but then you muſt be ſure to look well to them, for their Conſciences never fly in their Faces for Stealing.

(*i*) *Bantam*

The Twenty eighth, we came within three Leagues of the City of *Bantam* (*i*), which lies in 6 Degr. 48 Min. South Lat. And here we anchor'd all Night. The *Engliſh* Fleet was gone before we came; but ſome of our Country-men, that were Factors there, came aboard, and told us of the baſe and diſhonourable Practices of the *Hollanders*, in blaſting the Reputation of our Nation at *Bantam*. They reported, That we were a leud Pirating ſort of People, that went abroad into the World, upon no other Deſigns, than Robbing and Cheating other Nations: And that we were ſuch Cowards, that we dared not come into the Road amongſt them, but would be ſure to keep at a diſtance, for fear of being beaten.

Miſchievous Reports of the *Dutch*.

Our Admiral was ſo provok'd at theſe ſlanderous Reflections, (and which the *Dutch* themſelves well knew to be Lies too) that he ſent them Word preſently, That he wou'd come and ride cloſe by their ſides; and if they dared but ſo much as to put out a Gun, or offer the leaſt Inſolence imaginable, either in Word or Action, he wou'd infallibly ſink every Ship they had, or ſink himſelf in the Undertaking. But they were ſo wiſe as to make no Reply to this Meſſage; and ſo cool and humble too, as to do what our Admiral commanded them in the point of Deportment towards us, and the reſt of the *Engliſh*; for tho' we anchor'd juſt under their very Noſes, they never ſtirr'd a Gun; nay, they hardly durſt any of them appear aſhore as long as we were there.

Novemb. 2. (having diſpatch'd our Buſineſs at *Bantam*) we held our Courſe for *Patane*: And in the way between the *Cherſoneſe* of *Malacca*, and *Pedra*, we met three Praws bound for *Java*, laden with *China* Diſhes, Pepper, Benjamin, and Storax. They ſtudiouſly avoided us, and refuſed to ſatisfie our juſt Demands of a Pilot, to conduct us to *Pulo Timaon*, and a Pilot we were not like to have, unleſs we fought for him, and purchas'd him by Conqueſt; this therefore being the Caſe, we attack'd them, and forc'd two of them to yield, and ſo furniſh'd our ſelves with a Guide for our Ships, which was all the Prize we then ſought after: This being done, we diſcharg'd them again, and held our Courſe for *Patane*.

Take ſome *Indian* Praws.

November the Twenty ſeventh, we ſaw certain Iſlands bearing N. W. from us, which neither we, nor our Pilots knew; we imagin'd them to be ſome of the broken Lands that lie S. E. from the Iſle of *Bantam*, for they were ſome of them quite ſunk under Water, nothing being to be ſeen of them, but the tops of Trees: And thoſe of them that are not plung'd, are a perfect Wilderneſs, and like for ever to be ſo, having neither Fruit, nor any ſort of Animal, for the ſupport of Life.

Deluged Iſlands.

Having water'd here, *December* the Second, we continued our Courſe for *Patane*, as well as we cou'd, with bad Winds, which at this time of the Year are generally at N. N. W. or N. E. hereabouts.

The Twelfth we took a Junck of *Pan-Hange*, laden with Pepper, Rice, and Tin, bound for *Bantam*: Our Admiral took only two Braſs Guns, and a quantity of their Rice (which yet he paid them nobly for), and a Pilot to bring him to *Patane*: The other two which we took before, tho' very unskilful, were paid for their time they had been with us, and ſo ſent back in this Junck into their own Country. Now we began to be very much troubled with contrary Winds and Currents: For in theſe parts the Sea always runs Southward, from the beginning of *November*, to the beginning of *April*, and back again Northward from *April* to *November*; and the Winds for the moſt part obſerve the ſame Time and Courſe too. All Ships from *China*, *Patane*, *Jor*, and other places, which lie to the Northward, come to *Bantam*, or *Palimbam*, when the Northerly Monſon is come, and they return with the Southerly, which Monſons come in the Months aforeſaid.

The Winds and Currents

The Monſons in theſe parts.

(*k*) *Pan hang*

The Country (*k*) of *Pan-Hange*, to which this Junck belong'd, lies between *Patane* and *Jor*, and reaches on the Sea-Coaſt as far as Cape *Tingeron*: This is a very lofty Cape, that makes a great Figure, and is the firſt Land-fall that the Veſſels of *China*, *Cambaia*, and *Macao*, do make, as they ſail for *Malacca*, *Java*, *Sumatra*, or any parts to the Southward. *Pan-Hange* is a very plentiful Country, has good ſtore of Shipping, and all Proviſions very cheap.

December the Twenty ſeventh, we met with a Junck full of *Japoneſe*, which had been Pirating along the Coaſt of *China* and *Cambaia*, and not daring to Land any where (for they are generally forbid coming aſhore with Weapons, throughout all *India*, they are ſo fierce and deſperate a People) they were now making the beſt of their way home to *Japan*. There were no leſs than Ninety of them, and they all appear'd to be Men of Quality, there being (one only excepted who was their Pilot) nothing that look'd like a common Sailor amongſt them. Several Civilities paſs'd between us, and we preſented and feaſted one another; ſome of our Men went aboard their Junck, and ſome of them, to the number of Twenty ſix, came into our Ship. But they having before concerted Matters, and order'd all the Particulars of the Plot, upon a Signal given, ſet upon our Men that were in their Junck, killing moſt part, and driving the reſt overboard. At the ſame time they ſet upon us in our own Ship, and being abſolutely deſperate, fought with an incredible Fierceneſs and Courage, madly thruſting themſelves on our Pikes, and laying about them like ſo many Furies. After ſome time, we forc'd them to retire from the Half-deck down into the Cabin, where they defended themſelves with great obſtinacy for the ſpace of four or five Hours, and reſolving to ſpare neither their own Lives, nor ours, they ſet the Cabin a-fire, and fought with all the Flames gathering about their Ears. In ſhort, ſeeing their Deſign to burn the Ship, and having them at this advantage in a cloſe Pound, where we might diſpatch them all at once, to put a ſtop to the progreſs of the Miſchief, which wou'd otherwiſe be remedileſs, we fired a couple of great Guns in upon them, loaded with Croſs-bars, Bullets, and Caſe-ſhot; which did ſuch fatal Execution upon them, that one only out of Twenty two eſcap'd, the reſt being torn and ſhatter'd all to pieces. Thus with much adoe, we freed our ſelves from this threatning Danger; but to do it coſt us the Lives of many of our Men; and particularly that of Capt. *Davis*, whoſe imprudent Conduct, in not ſecuring their Weapons at firſt, according to the Advice given, was very much the occaſion of it.

A deſperate Fight with the *Japoneſe*.

December the Thirtieth, we came to an Anchor by a little Iſland, where we were obliged to ſtay three or four Days to mend our Boat, and take in Wood and Water. Here we had Intelligence, by a Ship of *Patane*, of the *China* Fleet, ſhortly to come thither, and which we intended, if poſſible, to meet.

A.D. 1606.

January the Twelfth, we ſaw two Sail making towards us, which coming up to, after a ſhort Diſpute we boarded, and brought them to an Anchor. Theſe proved to be two of the *China* Ships; but were not the main Prize that we look'd after: They had Silks, and raw Silk aboard, and fifty Tun of *China* Silver; but becauſe we hoped to lade our ſelves to much better advantage, out of thoſe that were ſtill behind, we took little or nothing of this and ſo diſcharged them.

Two *China* Ships taken.

After this, we directed our Courſe back again to *China Bata*; but the contrary Winds wou'd not permit us to recover it; ſo that we put on for the Iſles of *Pulo Sumatra* (l), where we anchor'd *January* the Twenty ſecond.

(l) *Pulo Sumatra* Iſles.

February the Second, we met a Fleet of five *Dutch* Ships bound homewards, which gave us an Intelligence, that obliged us to take new Meaſures, and quit the Deſign we had upon the *China* Ships. Our *Engliſh* Merchants at *Bantam*, (they told us) were in very great danger, and expected every Day to feel the utmoſt Effects of the King of *Bantam*'s Anger and Reſentment; becauſe of our late taking the *China* Ships, by which means he had loſt his Cuſtoms.

And therefore, that no After-Events of our Voyage might procure any Danger or Diſaſters to our Countrymen, (tho' perhaps to have proſecuted it, would have ſignally advanc'd our own private Fortunes and Intereſts) we reſolved to ſet Sail for *England*; which we began to do, *February* the Fifth.

They return for *England*.

We had ſight of the Cape of *Good Hope*, the Seventh of *April*; and we arrived at St. *Helena* the Seventeenth, where we ſtaid refreſhing till *May* the Third.

The Fourteenth we paſs'd the Equinoctial.

June the Twenty ſeventh we arriv'd at *Milford*-Haven, in *Wales*.

July the Ninth, we anchor'd in *Portſmouth*-Road, having been out in this Voyage, full nineteen Months.

CHAP. VII.

A Priviledge for Fifteen Years, granted by Her Majeſty, to certain Adventurers, for the Diſcovery of the Trade for the Eaſt-Indies, *the One and thirtieth of* December, 1600.

ELIZABETH, *by the Grace of* GOD, *Queen of* England, France, *and* Ireland, *Defender of the Faith*, &c. *To all Our Officers, Miniſters, and Subjects, and to all other People, as well within this Our Realm of* England, *as elſewhere, under Our Obedience and Juriſdiction, or otherwiſe, unto whom theſe Our Letters Patents ſhall be ſeen, ſhewed, or read, Greeting.*

The Names of the Adventurers.

Whereas Our moſt dear and loving Couſin, George *Earl of* Cumberland; *and Our Well-beloved Subjects, Sir* John Hart *of* London, *Knight, Sir* John Spencer *of* London, *Knight, Sir* Edward Michelburne, *Knight*, William Candiſh, *Eſq*; Paul Banning, Robert Lee, Leonard Hollyday, John Wats, John More, Edward Holmden, Robert Hampſon, Thomas Smith, *and* Thomas Cambell, *Citizens and Aldermen of* London, Edward Barker, *Eſq*; Thomas Marſh, *Eſq*; Samuel Bachouſe, *Eſquire*, James Lancaſter, Richard Staper, Thomas Cordell, William Garway, Oliver Stile, William Quarles, Bartholomew Barnes, William Offly, Robert Chamberlayn, John Harvy, Richard Wiſeman, William Stone, Francis Cherry, Thomas Allablaſter, Richard Barret, John Swynerton, *the Younger*, Thomas Garaway, William Romny, James Deane, John Eldred, Andrew Banning, Edward Leaning, Thomas Jackſon, Nicholas Leate, John Wolſtenholme, Nicholas Peard, William Chamber, Rowland Bachouſe, Humfrey Smith, Robert Sandy, Henry Robinſon, Richard Poyntel, John Highlord, William Haryſon, Humphry Style, Humphry Robynſon, Nicholas Ferrer, Thomas Farryngton, John Combe, Robert Offly, Roger How, John Hewet, James Turner, Morrys Abbot, James Carrell, Robert Brooke, Richard Chamblyn, George Chamblyn, Leonard White, John Cornelius, Ralph Basby, William Genyngs, Giles Paſlow, Robert Bell, Thomas White, Nicholas Lyng, William Palmer, Ellis Crippes, John Merricke, Humphry Hanford, Thomas Symons, Robert Cox, William Wuſtall, John Humphry, Thomas Boſtocke, Bartholomew Holland, Richard Cox, William Walton, William Freeman, Thomas Southacke, John Friar, Francis Dent, Richard Bull, Richard Pierce, Roger Henyng, Robert Cobb, Robert Robynſon, Francis Evington, Francis Taylor, Thomas Weſtrow, John Midleton, Robert Gore, Ralph Gore, William Cater, George Cater, John Buſbridge, Thomas Horton, William Bond, *Mercvant-Taylor of* London, William Cotton, John Stockley, Roger Owfield, Auguſtine Skinner, Richard Wiſe, Robert Towerſon, Richard Taylbye, Robert Middleton, Robert Bateman, Richard Goſſon, Robert Waldore, Richard Wrag, John Wrag, William Dale, Laurence Waldo, Henry Brydgman, Samuel Armytage, Edward Haryſon, Edward Nicolſon, Clement Moſely, John Newman, Humphry Wallot, Thomas Richardſon, Thomas Boothby, John Coachman, Reinald Green, Richard Burret, Robert Myldmay, William Hyne, George Chandeler, Edward Lutterfoord, William Burrell, Stephen Harvy, Thomas Henſhaw, William Ferrys, William Alderſey, William Hewet, William Fiſher, Joſeph Salbancke, Nicholas Manly, Nicholas Salter, William Willaſtone, William Angel, Nicholas Barnſly, John Hawkins, Roger Dy, Richard Clarke, Thomas Hewet, George Whitemore, Henry Polſtee, William Greenwell, Robert Johnſon, Bartholomew Huggott, Humphry Baſſe, Robert Buck, Ambroſe Wheeler, William Hale, Richard Hull *Junior*, John Hodgſon, Alphonſus Foote, Edmund Spencer, Robert Dewſy, Richard Piott, William Bonham, Edward Barkeham, George Coles, Ralph Hammer, James Colymer, Samuel Hare, George Utly, Gregory Allen, Henry Archer, Jeffry Kerby, John Caſon, Richard Beale, Thomas Shipton, John Fletcher, Thomas Talbot, Robert Pennyngton, Humphry Milward, Richard Herne, Ralph Allen, John Brooke, Anthony Gibſon, Robert Kayes, Hugh Crompton, Richard Waſher, George Holman, Morryce Luellen, Richard Parſons, Francis Barker, William Tur-

George Utly Diſfranch'd the ſixth of July 1601 ner, John Greenwood, Richard Denne, Richard Ironſide, George Smithes, James Dunkyn, Edward Walter, Andrew Chamblayn, Robert Startford, Anthony Stratford, William Myllet, Simon Laurence, Thomas Lydall, Stephen Hodgſon, Richard Wright, William Starker, William Smith, John Ellacots, Robert Bayly, *and* Roger Cotton, *have of Our certain Knowledge been Petitioners unto Us, for Our Royal Aſſent and Licence to be granted unto them, that they at their own Adventures, Coſts, and Charges, as well for the Honour of this Our Realm of* England, *as for the Increaſe of Our Navigation, and Advancement of Trade of Merchandiſe within Our ſaid Realms, and the Dominions of the ſame, might adventure, might ſet forth one, or more Voyages, with convenient number of Ships and Pinnaces, by way of Traffick and Merchandize to the* Eaſt-Indians, *in the Country and Parts of* Aſia, *and* Africa, *and to as many of the Iſlands, and Cities, Towns, and Places thereabouts, as where Trade and Traffick of Merchandize, may by all likelihood be eſtabliſhed or had: Divers of which Countries, and many of the Iſlands, Cities, and Ports thereof, have long ſithence been diſcovered by others of Our Subjects, albeit not frequented in Trade of Merchandize.*

A Body Politick.
The Stile of the Corporation.

Know ye therefore, that We greatly tendring the Honour of Our Nation, the Wealth of Our People, and the Encouragement of them, and others of Our loving Subjects in their good Enterprizes, for the Increaſe of Our Navigation, and the Advancement of lawful Traffick, to the Benefit of Our Common-wealth, have of Our ſpecial Grace, certain Knowledge, and meer motion, given and granted, and by theſe Preſents, for Us, Our Heirs and Succeſſors, do give and grant unto Our ſaid loving Subjects, before in theſe Preſents expreſly named, That they, and every of them, from henceforth be, and ſhall be one Body Corporate and Politick in Deed, and in Name, by the Name of the Governour, and Company of Merchants of London, *Trading into the* Eaſt-Indies, *one Body Corporate and Politick in Deed, and in Name really, and fully for Us, Our Heirs and Succeſſors. We do erect, make, ordain, conſtitute, eſtabliſh, and declare by theſe Preſents, and that by the ſame Name of Governour, and Company of Merchants of* London, *Trading into the* Eaſt-Indies, *they ſhall have Succeſſion, and that they, and their Succeſſors, by the Name of Governour and Company, Trading into the* Eaſt-Indies, *be, and ſhall be at all times hereafter, Perſons, able and capable in Law, and a Body Corporate and Politick, and capable in Law, to have, purchaſe, receive, poſſeſs, enjoy, and retain Lands, Tenements, Priviledges, Liberties, Juriſdictions, Franchiſes, and Hereditaments, of whatſoever kind, nature, and quality, ſoever they be, to them and their Succaſſors. And alſo to give, grant, demiſe, aliene, aſſign, and diſpoſe all and ſingular other things, Lands, Tenements, and Hereditaments, by the ſame Name, that to them ſhall, or may pertain to do. And that they and their Succeſſors, by the Name of the Governour, and Company of Merchants of* London, *Trading into the* Eaſt-Indies, *may plead, and be impleaded, anſwer, and be anſwered, defend, and be defended in whatſoever Courts and Places, and before whatſoever Judges and Juſtices, and other Perſons and Officers, in all and ſingular Actions, Pleas, Suits, Quarrels, Cauſes, and Demands whatſoever, of whatſoever kind, nature, or ſort, in ſuch manner and form, as other Our Liege People of this our Realm of* England, *being Perſons able and capable, may, or can have, purchaſe, receive, poſſeſs, enjoy, retain, give, grant, demiſe, aliene, aſſign, diſpoſe, plead, and be impleaded, anſwer, and be anſwered, defend, and be defended, releaſe, and be releaſed, do permit and execute.*

A Common Seal.

And that the ſaid Governour, and Company of Merchants of London, *Trading into the* Eaſt-Indies, *and their Succeſſors, may have a Common Seal, to ſerve for all the Cauſes and Buſineſs of them, and their Succeſſors. And that it ſhall, and may be lawful, to the ſaid Governour and Company, and their Succeſſors, the ſame Seal, from time to time, at their Will and Pleaſure, to break, change, and to make new, or alter, as to them ſhall ſeem expedient. And further, We will, and by theſe Preſents for Us, Our Heirs and Succeſſors, We do Ordain, That there ſhall be from henceforth, one of the ſame Company, to be elected and appointed in ſuch form and manner, as hereafter in theſe Preſents is expreſſed; which ſhall be called the Governour of the ſaid Company, and that there ſhall be from henceforth, Four and twenty of the ſaid Company, to be elected and appointed in ſuch form, as hereafter in theſe Preſents is expreſſed, which ſhall be called the Committees of the ſaid Company, who together with the Governour of the ſaid Company, for the time being, ſhall have the Direction of the Voyages, of, or for the ſaid Company, and the Proviſion of the Shipping and Merchandiſes thereto belonging, and alſo the Sale of all Merchandiſes, of, or for the ſaid Company, and the managing and handling of all other things belonging to the ſaid Company:*

Tho. Smith, Alderman, the firſt Governour.

And for the better Execution of this Our Will, and Grant, in this behalf, We have aſſigned, nominated, conſtituted, and made, and by theſe Preſents, for Us, Our Heirs, and Succeſſors, We do aſſign, nominate, conſtitute, and make the ſaid Thomas Smith, *Alderman of* London, *to be the firſt, and preſent Governour of the ſaid Company, to continue in the ſaid Office, from the Date of theſe Preſents, until another of the ſaid Company, in due manner, be choſen and ſworn unto the ſaid Office, according to the Ordinances and Proviſions, hereafter in theſe Preſents expreſſed, and declared, if the ſaid* Thomas Smith *ſhall ſo long live.*

The firſt Committees for the Direction of the Affairs of the Company being 24.

And alſo We have aſſigned, nominated, and appointed, and by theſe Preſents for Us, our Heirs, and Succeſſors, We do aſſign, nominate, conſtitute, and make the ſame Paul Banning, Leonard Hollyday, John More, Edward Holmden, Richard Staper, Thomas Cordell, William Garway, Oliver Style, James Lancaſter, Richard Wiſeman, Francis Cherry, Thomas Alablaſter, William Romney, Roger How, William Chambers, Robert Sandy, John Eldred, Richard Wiche, John Highlord, John Middleton, John Combe, William Haryſon, Nicholas Lyng, *and* Robert Bell, *to be the Four and twenty firſt and preſent Committees of the ſaid Company, to continue in the ſaid Office of Committees of the ſaid Company, from the Date of theſe Preſents, for one whole Year next following.*

A Deputy to the Governour.

And further, We Will and Grant by theſe Preſents, for Us, Our Heirs, and Succeſſors, unto the ſaid Governour, and Company of Merchants of London, *Trading into the* Eaſt-Indies, *and their Succeſſors, that it ſhall and may be lawful, to, and for the ſaid Governour and Company, for the time being, or the more part of them preſent, at any Publick Aſſembly, commonly called, The Court holden for the ſaid Company, the Governour of the ſaid Company, being always one, from time to time, to elect, nominate, and appoint, one of the ſaid Company to be Deputy to the ſaid Governour; which Deputy ſhall take a Corporal Oath before the Governour, and five, or more, of the Committee of the ſaid Company, for the time being, well, faithfully, and truly, to execute his ſaid Office of Deputy, to the Governour of the Company; and after his Oath ſo taken, ſhall and may from time to time, in the abſence of the ſaid Governour, exerciſe and execute the Office of Governour of the ſaid Company, in ſuch ſort as the Governour ought to do.*

The firſt Day of July, or within ſix Days after the yearly Election of the Governour.

And further, We Will, and Grant, by theſe Preſents, for Us, Our Heirs, Executors, and Succeſſors, unto us the ſaid Governour, and Company of Merchants of London, *Trading into the* Eaſt-Indies, *and their Succeſſors, that they, or the greater part of them, whereof the Governour for the time being, or his Deputy, to be one, and from time to time, and all times hereafter, ſhall, and may have Authority and Power, yearly, and every Year, on the firſt Day of* July, *or at any time within ſix Days after that Day, to aſſemble, and meet together in ſome convenient place, to be appointed from time to time by the Governour, or in his abſence, by the Deputy of the ſaid Governour, for the time being. And that they being ſo aſſembled, it ſhall and may be lawful, to, and for the ſaid Governour, or Deputy of the ſaid Governour, and the ſaid Company for the time being, or the greater part of them which then ſhall happen to be preſent, whereof the Governour of the ſaid Company, or his Deputy for the time being, to be one, to elect and nominate one of the ſaid Company, which ſhall be Governour of the ſame Company for one whole Year, from thence next following, which Perſon being ſo elected, and nominated to be Governour of the ſaid Company, as is aforeſaid, before he be admitted to the Execution of the ſaid Office, ſhall take a Corporal Oath, before the laſt Governour, being his Predeceſſor, or his Deputy, or any ſix or more of the Committees of the ſaid Company for the time being, that he ſhall from time to time, well and truly execute the Office of Governour of the ſaid Company, in all things concerning the ſame, and that immediately after the ſaid Oath ſo taken, he ſhall and may execute and uſe the ſaid Office of Governour of this ſaid Company, for one whole Year from thence next following.*

Every Brother to take a Corporal Oath.

And in like ſort We Will and Grant, that as well every one above-named to be of the ſaid Company or Fellowſhip, as all others hereafter to be admitted, or free of the ſaid Company, ſhall take a Corporal Oath before the Governour of the ſaid Company, or his Deputy for the time being, to ſuch effect as by the ſaid Governour or Company, or the more part of them, in any Publick Court to be held for the ſaid Company, ſhall be in a reaſonable manner ſet down and deviſed, before they ſhall be allowed, or admitted, to Trade or Traffick as a Free-man of the ſaid Company.

The Four and twenty Committees to be yearly Elected, on the firſt of July, or ſix Days after.

And further We Will and Grant by theſe Preſents, for Us, *Our Heirs and Succeſſors, unto the ſaid Governour and Company of Merchants of* London, *Trading into the* Eaſt-Indies, *and their Succeſſors, that the ſaid Governour, or the Deputy of the ſaid Governour, and the Company and their Succeſſors for the time being, or the greateſt part of them, whereof the Governour, or the Deputy of the Governour from time to time to be one, ſhall and may from time to time, and at all times hereafter, have Authority and Power yearly, and every Year on the firſt Day of* July, *or at any time within ſix Days after that Day, to aſſemble, meet together, in ſome convenient place, to be from time to time appointed by the ſaid Governour of the ſaid Company, or* in his abſence by his Deputy. And that they being ſo aſſembled, it ſhall, and may be lawful, to, and for the ſaid Governour, or his Deputy, and the Company for the time being, or the greater part of them, which then ſhall happen to be preſent, whereof the Governour of the ſaid Company, or his Deputy for the time being to be one, to elect and nominate Twenty four of the ſaid Company, which ſhall be Committees of the ſaid Company, for one whole Year from thence next enſuing; which Perſons being ſo elected, and nominated to be Committees of the ſaid Company as aforeſaid, before they be admitted to the Execution of their ſaid Offices, ſhall take a Corporal Oath before the Governour, or his Deputy, and ſix or more of the ſaid Committees of the ſaid Company, being their laſt Predeceſſors for the time being, that they and every of them, ſhall well and faithfully perform their ſaid Offices of Committees, in all things concerning the ſame. And that immediately after the ſaid Oath ſo taken, they ſhall and may execute, and uſe the ſaid Offices of Committees of the ſaid Company for one whole Year from thence next following. And moreover, Our Will and Pleaſure is, and by theſe Preſents, for Us, Our Heirs and Succeſſors, We do grant unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and to their Succeſſors, that when, and as often it ſhall happen to the Governour of the ſaid Company for the time, at any time within one Year, after he ſhall be nominated, elected, and ſworn, to the Office of the Governour of the ſaid Company, as is aforeſaid, to die, or to be removed from the ſaid Office, which Governour not demeaning himſelf well in his ſaid Office, We Will to be removable at the pleaſure of the ſaid Company, or the greater part of them, which ſhall be preſent at any their Publick Aſſemblies, commonly called their General Court, holden for the ſaid Company, that then, and ſo often it ſhall, and may be lawful to, and for the reſidue of the ſaid Company, for the time being, or the greater part of them, within convenient time after the Death, or removing any ſuch Governour, to aſſemble themſelves in ſuch convenient place, as they ſhall think fit for the Election of the Governour of the ſaid Company; or that the ſaid Company, or the greater part of them being then and there preſent, ſhall, and may then and there, before their departure from the ſaid place, elect, and nominate one other of the ſaid Company, to be Governour of the ſaid Company in the place or ſtead of him, that ſo died, or was ſo removed; which Perſon being ſo elected, and nominated to the Office of Governour of the ſaid Company, ſhall have and exerciſe the ſaid Office for, and during the reſidue of the ſaid Year, taking firſt a Corporal Oath, as is aforeſaid, for the due Execution thereof; and this to be done from time to time, ſo often as the Caſe ſhall ſo require. And alſo Our Will and Pleaſure is, and by theſe Preſents, for Us, our Heirs and Succeſſors, We do grant unto the ſaid Governour and Company of Merchants of London, Trading into the Eaſt-Indies, and to their Succeſſors, that when, and as often as it ſhall happen, any of the Committees of the ſaid Company for the time being, at an time within one Year next after, that they, or any of them, ſhall be nominated, elected, and ſworn to the Office of Committees of the ſaid Company, as is aforeſaid, to die, or be removed from the ſaid Office, which Committees not demeaning themſelves well in their ſaid Office, We will to be removeble, at the Pleaſure of the ſaid Governour and Company, or the greater part of them, whereof the Governour for the time being, or his Deputy to be one, within convenient time after the Death, or removing of any of the ſaid Committees, to aſſemble themſelves in ſuch convenient place, as is, or ſhall be uſual and accuſtomed, for the Election of the Governour of the ſaid Company, or where elſe for the Governour of the ſaid Company, for the time being, or his Deputy to be one, being then and there preſent, ſhall and may then and there, before there departure from the ſaid place, elect and nominate one, or more, of the ſaid Company, to be Committees of the ſaid Company, in the places and ſteads, place or ſteed of him, or them, that ſo died, or were, or was ſo removed; which Perſon or Perſons ſo elected, and nominated to the Office, or Offices of Committee, or Committees of the ſaid Company, ſhall have and exerciſe the ſaid Office and Offices, for, and during the reſidue of the ſaid Year, taking firſt a Corporal Oath, as is aforeſaid, for the due execution thereof; and this to be done from time to time, ſo often as the Cauſe ſhall require. And further, We do by theſe Preſents, for Us, our Heirs and Succeſſors, Will, and grant unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and their Succeſſors, that they, and all that are, or ſhall be of the ſaid Company of Merchants of London, Trading into the Eaſt-Indies, and every of them, and all the Sons of them, and every of them, at their ſeveral Ages of One and twenty Years, or upwards: And further, all ſuch the Apprentices, Factors, or Servants of them, and every of them, which hereafter ſhall be imployed by the ſaid Governour and Company, in the ſaid Trade of Merchandice, of, or to the Eaſt-Indies, beyond the Seas, or any other the places aforeſaid, in any part of the ſaid Eaſt-Indies, ſhall, and may, by the ſpace of Fifteen Years, from the Feaſt of the Birth of our Lord God laſt paſt, before the Date hereof, freely Traffick, and uſe the Trade of Merchandioe by Sea, in, and by ſuch Ways and Paſſages already found out, or diſcovered, or which hereafter ſhall be found out and diſcovered, as they ſhall eſteem, and take to be fitteſt into, and from the Eaſt-Indies, into the Countries, and Parts of Aſia and Africa; and into, and from all the Iſlands, Ports, Havens, Cities, Creeks, Towns, and Places of Aſia, Africa, and America, or any of them beyond the Cape of Bona Sperancia, to the Streights of Magellan, where any Trade or Traffick of Merchandice may be uſed, or had, to, and from every of them, in ſuch Order, Manner, Form, Liberty, and Condition, to all Intents and Purpoſes, as ſhall be from time to time at any Publick Aſſembly, or Court held by, or for the ſaid Governour or Company, by or between them, of them of the ſaid Company, or Fellowſhip of Merchants of London, Trading into the Eaſt-Indies, or the more part of them for the time, being preſent at ſuch Aſſembly, or Court, the Governour, or his Deputy, being always preſent at ſuch Court, or Aſſembly, limited and agreed: And not otherwiſe, without any Moleſtation, Impeachment, or Diſturbance; any Statute, Uſage, Diverſity, Religion, or Faith, or any other Cauſe, or Matter whatſoever to the contrary notwithſtanding: So always that the ſame Trade be not undertaken, nor addreſſed to any Country, Iſland, Port, Haven, City, Creek, Town, or Place already in the lawful, and actual poſſeſſion of any ſuch Chriſtian Prince or State, as at this preſent is, or at any time hereafter ſhall be in League or Amity with Us, our Heirs or Succeſſors, and who doth not, or will not accept of ſuch Trade, but doth overtly declare and publiſh the ſame, to be utterly againſt his or their good will and liking. And further, Our Will and Pleaſure is, and by theſe Preſents for Us, Our Heirs and Succeſſors, We do grant unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and to their Succeſſors, that it ſhall and may be lawful, to and for the ſaid Governour, and Company, and their Succeſſors, from time to time, to aſſemble themſelves for, or about any the Matters, Cauſes, Affairs, or Buſineſs of the ſaid Trade, in any Place or Places, for the ſame convenient, during the ſaid Term of Fifteen Years, within our Dominions, or elſewhere, and there to hold Court for the ſaid Company, and the Affairs thereof; and that alſo it ſhall and may be lawful, to, and for them, or the more part of them, being ſo aſſembled, and that ſhall then and there be preſent, in any ſuch Place or Places, whereof the Governour, or his Deputy for the time being to be one, to make, ordain, and conſtitute ſuch and ſo many reaſonable Laws, Conſtitutions, Orders, and Ordinances, as to them, or the greater part of them, being then and there preſent, ſhall ſeem neceſſary and convenient, for the good Government of the ſame Company, and of all Factors, Maſters, Mariners, and other Officers imployed, or to be imployed in any of their Voyages, and for the better advancement and continuance of the ſaid Trade, and Traffick, and the ſame Laws, Conſtitutions, Orders, and Ordinances ſo made, to put in and execute accordingly, and at their Pleaſure to revoke, or alter the ſame, or any of them, as occaſion ſhall require, and that the ſaid Governour, and Company, ſo often as they ſhall make, ordain, or eſtabliſh any ſuch Laws, Conſtitutions, Orders, and Ordinances, in form aforeſaid, ſhall and may lawfully impoſe, ordain, limit, and provide ſuch Pains, Puniſhments, Penalties, by Impriſonment of Body, or by Fines, or Amercements, or by all or any of them, upon, and againſt all Offenders, contrary to ſuch Laws, Conſtitutions, Orders, and Ordinances, or any of them, as to the ſaid Governour, and Company, for the time being, or the greater part of them, then and there being preſent, the ſaid Governour, or his Deputy, being always one, ſhall ſeem neceſſary, requiſite, and convenient for the obſervation of the ſame Laws, Conſtitutions, Orders, and Ordinances, and the ſame Fines and Amercements, ſhall and may levy, take, and have to the uſe of the ſaid Governour, and Company, and their Succeſſors, without the impediment of Us, Our Heirs, or Succeſſors, or any of the Officers, or Miniſters of Us, Our Heirs, or Succeſſors, or without Accompt to Us, Our Heirs, or Succeſſors, to be rendred or made. All and ſundry which Laws, Conſtitutions, Orders, and Ordinances, ſo as aforeſaid to be made, We Will to be duly obſerved, and kept under the Pains and Penalties therein to be contained; ſo always the ſaid Laws, Conſtitutions, Orders, Ordinances, Impriſonments, Fines, and Amercements be reaſonable, and not contrary or repugnant to the Laws, Statutes, or Cuſtoms of this Our Realm. And foreſmuch as the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, have not yet Experience of the kinds of Commodities and Merchendizes, which are or will be vendible, or to be uttered in the ſaid Parts of the Eaſt-Indies, and therefore ſhall be driven to carry to theſe Parts, in their Voyages, divers and ſundry Commodities, which are likely to be returned again into this Realm: We therefore of Our eſpecial Grace, certain Knowledge, and meer Motion, for the better encouraging of the ſaid Governour,

The Committees ſhall take a Corporal Oath.

If the Governour die, or be remov'd a new one to be choſen.

If any of the Committees, new to be choſen.

Freedom for the Sons and Apprentices of ſuch, as are free of the Company.

The Place of the Freedom of this Company.

That the Company may aſſemble in any convenient place.

Authority to make reaſonable Laws, by the greateſt part of a Genera Aſſembly.

To puniſh Offenders either in Body or Purſe, ſo it be not contrary to the Laws of the Realm.

Freedom of Cuſtom of Goods outwards, for four Years.

and Company of Merchants Trading into the Eaſt-Indies, and for the Advancement of the ſaid Trade, do grant unto the ſaid Governour and Company, and to their Succeſſors, that they and their Succeſſors, during the four firſt Voyages which they ſhall make, or ſet forth for, or towards the ſaid Eaſt-Indies, ſhall or may tranſport, and carry out of Our Realm of England, and the Ports, Creeks, and Havens thereof, all ſuch, and ſo much Goods and Merchandizes, being Goods and Merchandizes lawfully paſſable, and tranſportable out of this Realm, and not prohibited to be tranſported by any Law, or Statute, of this Realm, as ſhall be by them, their Factors, or Aſſigns, ſhipped in any Ship, or Ships, Veſſel, or Veſſels, to be imployed in any of the ſaid four firſt Voyages, free of Cuſtom, Subſidy, or Poundage, or any other Duties or Payments to Us, or Our Succeſſors due, or belonging for the Shipping, or tranſporting of the ſame, or any of them. And yet nevertheleſs, Our Will and Pleaſure is, and We do by theſe Preſents ſtraitly Charge and Command, That all and every ſuch Goods and Merchandizes ſo to be tranſported out of this Realm, ſhall from time to time, during the ſaid four firſt Voyages, as is aforeſaid, ſhall from time to time be duly entred by the Cuſtomer, Comptroller, or other Officer of ſuch Port, Creek, or Place, where the ſame Goods, or Merchandizes, ſhall happen to be ſhipped, or laden, to be tranſported as aforeſaid.

Six and ſix Months time, for Payment of Cuſtom and Subſidy inward.

And alſo of Our further eſpecial Grace, certain Knowledge, and meer Motion, We do for Us, Our Heirs, Succeſſors, grant to and with the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and their Succeſſors, that when, and as often at any time during the ſaid Term, and ſpace of Fifteen Years, as any Cuſtom, Poundage, Subſidy, or other Duties, ſhall be due and payable unto Us, Our Heirs, or Succeſſors, for any Goods, Wares, or Merchandizes whatſoever, to be returned out, or from any the Iſlands, Ports, Havens, Cities, Towns, or Places aforeſaid unto the Port of London, or any of the Havens, Creeks, Members, or Places, to the ſame Port belonging, that the Cuſtomers, and all other Officers for the time being of Us, Our Heirs, or Succeſſors, for, or concerning Receipts of Cuſtom, Poundage, Subſidies, or other Duties unto whom it ſhall appertain, ſhall upon the Requeſt of the Governour, and Company of the ſaid Merchants of London, trading into the Eaſt-Indies, or any other their Agents, Factors, or Aſſigns, give unto the ſaid Governour and Company, their Agents, Factors, or Aſſigns, ſix Months time for the Payment of the one half; and after thoſe ſix Months ended, other ſix Months time for the Payment of the other half of their ſaid Cuſtom, Poundage, or other Subſidy, or Duties, receiving good and ſufficient Bonds, with Surety, to the Uſe of Us, Our Heirs and Succeſſors, for the true Payment of the ſame accordingly; and upon the receipt of the ſaid Bonds with Surety, from time to time, to give unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, for the time being, their Agents, Factors, or Aſſigns, their Cockets, or other Warrants, to take out, and receive on Land the ſame Goods, Wares, and Merchandizes, by Virtue thereof, without any diſturbance.

If Goods miſcarry outward the Value of Cuſtom ſhall be allowed in other Goods afterward ſhipped.

And that alſo as often as at any time, during the ſaid Term of Fifteen Years, any Goods, Wares, or Mercandizes, of the ſaid Governour, and Company, for the time being laden from Our Port of London, or any the Creeks, Members, or Places to the ſame Port belonging, to be tranſported to, or towards any of the Ports, Iſlands, Havens, Cities, Towns, or Places, aforeſaid, ſhall happen to miſcarry or be loſt, before their ſafe Arrival or Diſcharge in the Ports, for, and to the which the ſame ſhall be ſent, that then, and ſo often, and ſo much Cuſtom, Poundage, Subſidies, or other Duties, as they anſwer'd to Us for the ſame, before their going forth of Our ſaid Ports, Havens, or Creeks, ſhall after due proof made before the Treaſurer of England, for the time being, of the ſaid Loſs, and the juſt Quantity thereof, be by Virtue hereof allowed by the ſaid Governour and Company, their Agents, or Factors, by Warrant of the ſaid Treaſurer, to the ſaid Cuſtomers or Officers, in the next Goods, Wares, or Merchandizes, that the ſaid Governour and Company, or their Succeſſors, ſhall and may ſhip, for, or towards thoſe Parts, according to the true Rates of the Cuſtoms, Poundage, or Subſidies, before paid for the Goods, Wares, or Merchandizes ſo loſt, or miſcarrying, or any part thereof.

The Cuſtom of Goods being paid at coming into the Realm, it ſhall be lawful for any Natural Subject to ſhip it out again upon the firſt Cuſtom within thirteen Months.

And for that the ſaid Governour and Company of Merchants of London, Trading into the Eaſt-Indies, are like to bring into this Our Realm, a much greater quantity of Foreign Commodities, from the parts of the ſaid Eaſt-Indies, than can be ſpent for the neceſſary uſe of the ſame Our Realm, which of neceſſity muſt be tranſported into other Countries, and there vented: We for Us, Our Heirs and Succeſſors, of Our ſpecial Grace, certain Knowledge, and meer Motion, do grant to, and with the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and their Succeſſors, that at all times, from time to time, during the ſpace of thirteen Months, next after the Diſcharge of any the ſame Foreign Commodities ſo to be brought in, the Subſidies, Poundage, Cuſtoms, and other Duties, for the ſame being firſt paid, or compounded for, as aforeſaid, it ſhall be lawful for the ſaid Governour and Company, and their Succeſſors, or any other the Natural Subjects of this Our Realm, which may, or ſhall buy the ſame of them, to tranſport the ſame in Engliſh Bottoms, freely out of this Realm, as well ungarbled, as garbled, without Payment of any further Cuſtom, Poundage, or any further Subſidy, to Us, our Heirs, or Succeſſors for the ſame: Whereof the Subſidy, Cuſtom, Poundage, or other Duties, ſhall be ſo formerly paid or compounded for, as aforeſaid, and ſo provided, and the ſaid Cuſtomer, or other Officer or Officers, to whom in that behalf it ſhall appertain, for the time being, by Virtue hereof, ſhall upon due and ſufficient proof thereof, made in the Cuſtom-Houſe, of, or belonging to the ſame Port of London, give them ſufficient Cocket, or Certificate for the ſafe paſſing out thereof accordingly. And to the end no deceit to be uſed herein to Us, our Heirs, or Succeſſors, Certificates ſhall be brought from the Collector of the Cuſtom, Subſidy, Poundage, or other Duties inwards of Us, Our Heirs, or Succeſſors, to the Collectors of the Cuſtom, Subſidy, Poundage, or other Duties outwards of Us, Our Heirs, or Succeſſors, to the ſaid Goods, Wares, or Merchandizes, have within the time limited, anſwered their due Cuſtom, Subſidy, Poundage, or other Duties, for the ſame inwards.

That it ſhall be lawful in the firſt Voyage, to carry out in Foreign Coin procured by the Company, or Bullion, the Value of 30000 *l.* ſo as 6000 thereof be coined in the Mint.

And moreover, We of Our further eſpecial Grace, certain Knowledge, and meer Motion, have granted, and by theſe Preſents for Us, Our Heirs, and Succeſſors, do grant unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, that it ſhall and may be lawful for them, their Factors, or Aſſigns, in their firſt Voyage, or Fleet, which is now in preparing for their firſt Adventure to the ſaid Eaſt-Indies, to tranſport out of this Our Realm of England, all ſuch Foreign Coyn of Silver, either Spaniſh, or other Foreign Silver, as they have procured, prepared and gotten, or ſhall procure, prepare and get, as likewiſe all ſuch other Coyns of Silver, as they have procured, or ſhall procure to be coined in Our Mint, within Our Tower of London, out of ſuch Plate or Bullion, as it ſhall be provided for the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, their Factors, or Aſſigns, before the going forth of the ſame Fleet in theſe three firſt Voyages, ſo as the whole quantity of Coin or Moneys, to be tranſported in this their ſaid firſt Voyage, do not exceed the Value, or Sum of Thirty thouſand Pound Sterling. And ſo as the Sum of Six thouſand Pound, at the leaſt parcel of the ſaid Sum of Thirty thouſand Pound, be firſt coined in Our Mint, within Our Tower of London, before the ſame ſhall be tranſported as aforeſaid; any Law, Statute, Reſtraint, or Prohibition in that behalf notwithſtanding.

After the ſaid firſt Voyage, in all the reſt of the Voyages, they may carry out in every Voyage 30000 *l.* of ſuch Foreign Coin as they bring into the Realm, ſo as 6000 thereof be new coined in the Mint.

And in like manner, of Our ſpecial Grace, certain Knowledge, and meer Motion, We have granted, and by theſe Preſents do for Us, Our Heirs and Succeſſors, grant unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and their Succeſſors: That it ſhall and may be lawful, to, and for the ſaid Governour and Company, and their Succeſſors, after the ſaid firſt Voyage ſet forth yearly, for, and during the reſidue of the ſaid Term of Fifteen Years, to ſhip and tranſport out of this Our Realm of England, or Dominions of the ſame, in any their other Voyages, to, and towards any of the Parts aforeſaid, in form aforementioned, all ſuch Foreign Coin of Silver, Spaniſh, or other Foreign Silver, or Bullion of Silver, as they ſhall during the ſaid Term bring, or cauſe to be brought into this Our Realm of England, from the Parts beyond the Seas, either in the ſame kind, ſort, ſtamp, or faſhion, which it ſhall have when they bring it in, or any other Form, Stamp, or Faſhion, to be coined within our Mint, within Our Tower of London, at their pleaſure, ſo as the whole Quantities of Coin, or Moneys by them to be tranſported in any their ſaid Voyages, during the reſidue of the ſaid Term, do not exceed the Value or Sum of Thirty thouſand Pound in any one Voyage, and ſo as the Sum of Six thouſand Pound, at the leaſt parcel of the ſaid Sum, or Value of Thirty thouſand Pound, ſo to be tranſported as aforeſaid, be firſt coined within Our ſaid Tower of London, before the ſame ſhall be tranſported in any of the ſaid Voyages, any Law, Statute, Reſtraint, or Prohibition in that behalf in any wiſe notwithſtanding.

That the Trade ſhall be Traded, according to the Ordinances of the Company, and not otherwiſe.

And further, We of Our ample, and aboundant Grace, meer Motion, and certain Knowledge, have granted, and by theſe Preſents for Us, Our Heirs and Succeſſors, do grant unto the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and their Succeſſors, that they and their Succeſſors, and their Factors, Servants, or Aſſigns, in the Trade of Merchandize for them, and on their behalf, and not otherwiſe, ſhall for the ſaid Term of Fifteen Years, have, uſe, and enjoy the whole entire, and only Trade and Traffick, and the whole entire and only Liberty, Uſe, and Priviledge of Trading and Trafficking, and uſing Feat and Trade of Merchandize, to and from the ſaid Eaſt-Indies, and to and from all the Iſlands, Ports, Havens, Cities, Towns, or Places aforeſaid in ſuch manner, and form as is above-mentioned, and that the ſaid Governour, and Company of Merchants of London, Trading into the Eaſt-Indies, and every particular and ſeveral Perſon that now is, or that hereafter ſhall be of that Company, or Incorporation, ſhall have full, and free Authority, Liberty and Faculty, Licenſe and Power in Form aforeſaid, to Trade and to Traffick, to and from the ſaid Eaſt-Indies, and all and every the Parts thereof, in Form aforeſaid, according to the Orders and Manners, and Agreement hereafter to be made, and agreed upon by the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, and their Succeſſors, or the more part of them, preſent at any Court, or publick Aſſembly, of, or for the ſaid Company; the Governour of the ſaid Company, or his Deputy for the time being always preſent at ſuch Court or Aſſembly, and not otherwiſe.

That ſix Ships and ſix Pinnaces, ſhall be yearly permitted to go into the *Eaſt-Indies*, and five hundred Mariners, any reſtraint notwithſtanding; except the Navy Royal go forth.

And for that the Ships ſailing into the ſaid Indies, muſt take their due and proper times, to proceed in theſe Voyages, which otherwiſe, as we well perceive cannot be performed in the reſt of the Year following: Therefore we of our ſpecial Grace, certain Knowledge, and meer Motion, for Us, Our Heirs and Succeſſors, do grant, to and with the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, and their Succeſſors, that in any time of reſtraint ſix good Ships, and ſix good Pinnaces well furniſhed with Ordnance, and other munition for their Defence, and five hundred Mariners, Engliſh-men, to Guide and Sail in the ſame ſix Ships, and ſix Pinnaces at all times, during the ſaid term of fifteen Years, ſhall quietly be permitted, and ſuffered to depart and go in the ſaid Voyages, according to the purport of theſe Preſents, without any ſtay or contradiction by Us, Our Heirs or Succeſſors, or by the Lord High Admiral, or any other Officer or Subject, of Us, Our Heirs, or Succeſſors for the time being in any Wiſe, any Reſtraint, Law, Statute, Uſage, or Matter whatſoever to the contrary notwithſtanding. Provided nevertheleſs, that if We ſhall at any time within the ſaid term of fifteen Years, have juſt cauſe to Arm Our Navy in warlike manner, in defence of Our Realm, or for offence of Our Enemies, or that it ſhall be found needful to join to the Navy, of Us, Our Heirs or Succeſſors, the Ships of Our Subjects, to be alſo Armed for the Wars to ſuch a Number as cannot be ſupplied, if the ſaid ſix Ships, and ſix Pinnaces ſhould be permitted to depart, as above is mentioned, then upon Knowledge given to Us, Our Heirs or Succeſſors, or by any Admiral, to the ſaid Governour and Company, about the twentieth day of the Month of July, or three Months before the ſaid Governour and Company, ſhall begin to make ready the ſame ſix Ships and ſix Pinnaces, that we may not ſpare the ſaid ſix Ships and ſix Pinnaces, and the Mariners requiſite for them to be out of our Realm, during the time that our Navy ſhall be upon the Seas; That then the ſaid Governour and Company, ſhall forbear to ſend ſix ſuch Ships, and ſix Pinnaces for their Trade of Merchandize, untill that we ſhall revoke, or withdraw Our ſaid Navy for this Service.

A prohibition to all other ſubjects, not free of this Company, for trading into thoſe parts upon ſeveral pains, without the licence and aſſent of the Company.

And We of Our further Royal Favour, and of Our eſpecial Grace, certain Knowledge, and meer Motion have granted, and by theſe Preſents, for Us, Our Heirs and Succeſſors, do grant unto the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, and to their Succeſſors, that the ſaid Eaſt-Indies, nor the Iſlands, Havens, Ports, Cities, Towns, or Places thereof, nor of any part thereof, ſhall not be viſited, frequented or haunted by any of the Subjects of Us, Our Heirs or Succeſſors, during the ſaid term of fifteen Years, contrary to the true meaning of theſe Preſents.

Forfeiture of Goods and Ships.

And by vertue of Our Prerogative Royal, which We will not in that behalf have argued, or brought in queſtion; We ſtraightly Charge, Command, and Prohibit for Us, our Heirs and Succeſſors, of what degree or quality ſoever they be, that none of them directly or indirectly, do Viſit, Haunt, Frequent, Trade, Traffick, or Adventure by way of Merchandize, into, or from any of the ſaid Eaſt-Indies, or into and from any of the Iſlands, Ports, Havens, Cities, Towns, or Places aforeſaid, other than the ſaid Governour, or Company of Merchants of London, trading, into the Eaſt-Indies, and ſuch particular Perſons, as now be, or hereafter ſhall be of that Company, their Agents, Factors, and Aſſigns, during the ſaid term of fifteen Years, unleſs it be by, and with ſuch Licence and Agreement of the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, in writing firſt had, and obtained under their common Seal to be granted, upon pain that every ſuch Perſon or Perſons, that ſhall Trade or Traffick into, or from any of the ſaid Eaſt-Indies, other than the ſaid Governour, or Company of Merchants of London trading to the Eaſt-Indies, and their Succeſſors, ſhall incur Our indignation and forfeiture, and loſs of the Goods, Merchandize, and other things whatſoever, which ſo ſhall be brought into this Realm of England, or any the Dominions of the ſame, contrary to Our ſaid Prohibition, or the purport or true meaning of theſe Preſents, as alſo the Ship and Ships, with the Furniture thereof, wherein ſuch Goods, Merchandizes, or Things ſhall be brought, the half of all the ſaid forfeitures to be to Us, Our Heirs and Succeſſors, and the other half of all, and every the ſaid Forfeitures, We do by theſe Preſents of Our eſpecial Grace, certain Knowledge, and meer Motion, clearly and wholly for Us, Our Heirs and Succeſſors, give and grant unto the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies:

The diviſion of the forfeiture.

Impriſonment.

Entring into bond of a thouſand pound.

And further, all and every the ſaid Offenders, for their ſaid contempt, to ſuffer Impriſonment during Our Pleaſure, and ſuch other puniſhment, as to Us, Our Heirs or Succeſſors, for ſo high a Contempt ſhall ſeem meet and convenient, and not to be in any wiſe delivered, untill they, and every of them, ſhall become bound unto the ſaid Governour, for the time being, in the ſum of a thouſand pound at leaſt, at no time there after, during this preſent Grant, to Sail or Traffick into any of the ſaid Eaſt-Indies contrary to Our expreſs Commandment, in that behalf herein ſet down and publiſh'd.

How the Company may grant licence to others, at what time.

And further, for the better encouragement of Merchant ſtrangers, and others, to bring in Commodities, into this Our Realm, We for Us, Our Heirs and Succeſſors, do grant unto the ſaid Governour and Company of Merchants of London, trading to the Eaſt-Indies, that They and their Succeſſours may from time to time, for any Conſideration or Benefit to be taken to their own uſe, grant or give Licence to any Perſon or Perſons, to Sail, Trade, or Traffick, into, or from any of the ſaid Eaſt-Indies, ſo as ſuch Licence be granted or given before ſuch Goods, Wares, and Merchandizes be laid on Land, and ſo as ſuch Licence be made by the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies for the time being, under their Common Seal.

That Her Majeſty will not grant to any others to enter into theſe parts, during the term of 15 years.

And further of Our ſpecial Grace, certain Knowledge, and meer Motion, we have condeſcended and granted, and by theſe preſents for Us, Our Heirs and Succeſſors, we do condeſcend and grant unto the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, and their Succeſſors, that we our Heirs and Succeſſors, during the ſaid term of fifteen years, will not grant liberty, licence, or power to any perſon or perſons whatſoever, contrary to the tenour of theſe our Letters Patents, to ſail, paſs, trade, or traffique to the ſaid Eaſt-Indies, or into, or from the Iſlands, Ports, Havens, Cities, Towns or Places aforeſaid, or any of them, contrary to the true meaning of theſe preſents, without the conſent of the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, or the moſt part of them.

That the Company may admit others at their pleaſure into this Freedom.

And Our will and pleaſure is, and hereby we do alſo ordain, that it ſhall and may be lawful, to and for the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies, or the more part of them, whereof the Governour for the time being, or his Deputy to be one, to admit into, and to be of the ſaid Company, all ſuch Apprentices to any of the ſaid Fellowſhip or Company, and all ſuch Servants and Factors, of or for the ſaid Company, and all ſuch others as to them, or the moſt part of them preſent, at any Court held for the ſaid Company, the Governour, or his Deputy being one, ſhall be thought fit and agreeable with the Orders and Ordinances, to be made for the Government of the ſaid Company.

Proviſo, that if any named in the Patent do not bring in his promiſed adventure ſet down, it ſhall be lawful for the Company to diſfranchiſe him.

Provided always, that if any of the perſons before named, and appointed by theſe Preſents, to be free of the ſaid Company of Merchants of London, trading into the Eaſt-Indies, ſhall not before the going forth of the Fleet, appointed for this firſt Voyage, from the Port of London, bring in, and deliver to the Treaſurer or Treaſurers appointed, or which within the ſpace of twenty Days next after the date hereof, ſhall be appointed by the ſaid Governour and Company, or the more part of them, to receive the Contributions and Adventures, ſet down by the ſeveral Adventurers, in this laſt and preſent Voyage, now in hand to be ſet forth, ſuch Sums of Money as have been by any of the ſaid perſons, by theſe Preſents nominated to be of the ſaid Company, expreſſed, ſet down, and written in a Book appointed for that purpoſe, and left in the hands of the ſaid Tho. Smith, Governour of the ſaid Company, or of the ſaid Paul Bannyng, Alderman of London, and ſubſcribed with the names of the ſame Adventurers, under their Hands, and agreed upon to be adventured in the ſaid firſt Voyage, that then it ſhall be lawful for the ſaid Governour and Company, or the more part of them, whereof the ſaid Governour or his Deputy to be one, at any their General Court, or General Aſſembly, to remove, Disfranchize, and diſplace him or them at their wills and pleaſures;

The Company do promiſe to bring in after every Voyage returned within ſix months, as great a quantity of Silver, Gold, or Foreign Coin as they ſhall carry out, the firſt Voyage excepted.

And the ſaid Governour and Company of Merchants of London, trading into the Eaſt-Indies for them and their Succeſſours, doe by theſe Preſents covenant, promiſe, and grant to and with us, Our Heirs and Succeſſors, that they the ſad Governour and Company, and their Succeſſors: In all and every ſuch Voyage, as they at any time, or times hereafter during the ſaid Term ſhall make out of this Realm, by vertue of this Our Grant, and Letters Patents, the firſt Voyage only excepted, ſhall and will upon every return, which ſhall be made back again into this Realm, or any of our Dominions, or within ſix Months next after every ſuch return, bring into this our Realm, of England, from the ſaid Eaſt-Indies, or from ſome other parts beyond the Seas, out of our Dominions, as great or greater value in Bullion of Gold or Silver, or other foreign Coin of Gold or Silver, reſpectively for every Voyage, the firſt Voyage only excepted, as ſhall be by force of theſe Preſents, tranſported or carried out of this Realm, by them, or any of them in any kind of Silver above-ſaid, whatſoever in any of the ſaid Voyages, and that all ſuch Silver, as by vertue of this our Grant and Letters Patents, ſhall be ſhipped or laden, All Silver or Gold carried forth by the Company ſhall be ſhipped at the Ports of *London, Dartmouth*, and *Plimouth.* The Priviledge ſhall not extend into any place, being in the actual poſſeſſion of any Prince in league or amity with her Majeſty.

den, by the ſaid Governour and Company, or their Succeſſors, to be tranſported out of this Realm in any of the ſaid Voyages, ſhall from time to time at the ſetting forth of every ſuch particular Voyages be ſhipped or laden at the Ports or Havens of London, Dartmouth *or* Plimouth, *or at ſome of the ſame Ports and Havens, and at no other Port or Haven whatſoever within this our Realm, or the Dominions thereof, and that all and every ſuch Silver, as from time to time, ſhall be ſhipped and laden in the ſaid Ports of* London, Dartmouth *and* Plimouth, *or any of them to be by force of theſe Preſents tranſported out of this Realm, as is aforeſaid, ſhall from time to time, be duly entred by the Cuſtomer, Comptroller, Collector, or other Officer, to whom it ſhall appertain of every ſuch Port or Haven, where the ſame ſhall happen to be ſhipped or laden, in the Cuſtom Book, belonging to the ſaid Port or Haven, before ſuch time as the ſame ſhall be ſhipped, or laden to be tranſported as aforeſaid, without any Cuſtom or Subſidy to be paid for the ſame. And that in like manner, all and all manner of Gold and Silver whatſoever, which ſhall be brought into this Realm, or any of our Dominions, by the ſaid Governour and Company, or any of them, according to the true meaning of theſe Preſents, ſhall likewiſe be from time to time, duly entred by the Cuſtomer, Comptroler, or other Officer of every ſuch Port, Creek or Place, where the ſame Gold or Silver ſhall happen to be unſhipped, or brought to Land, before ſuch time as the ſame Gold or Silver, or any part thereof ſhall be unſhipped, or brought to Land, as is aforeſaid Provided always, nevertheleſs, and Our will and pleaſure is, that theſe our Letters Patents, or any thing therein contained, ſhall not in any ſort extend, to give or grant any Licence, Power, or Authority, unto the ſaid Governour and Company of Merchants of* London, *trading into the* Eaſt-Indies, *or to any of them, to undertake or addreſs any Trade unto any Country, Port, Iſland, Haven, City, Creek, Town or Place, being already in the lawful and actual poſſeſſion of any ſuch Chriſtian Prince or State, as at this preſent is, or at any time hereafter ſhall be in League, or Amity with us, Our Heirs and Succeſſors, and which doth not, or will not except of ſuch trade, but doth overtly declare and publiſh the ſame to be utterly againſt his, or their good will and liking, any thing in Preſent before contained, to the contrary thereof notwithſtanding. Provided alſo, that if it ſhall hereafter appear to Us, Our Heirs or Succeſſors, that this Grant, or the continuance thereof, ſhall not be profitable to us, Our Heirs and Succeſſors, and to this Our Realm, that then, and from thence-forth upon and after two years warning to be given to the ſaid Company, by Us, Our Heirs or Succeſſors, under Our or their Privy Seal, or Sign Manual, this preſent Grant ſhall ceaſe, be void, and determined to all intents, Conſtructions, and Purpoſes. And further of Our ſpecial Grace, certain knowledge, and meer Motion, we have condeſcended and grated, and by theſe Preſents for Us, Our Heirs, and Succeſſors do condeſcend, and grant to the ſaid Governour, and Company of Merchants of* London, *trading into the* Eaſt-Indies, *and their Succeſſors, that if at the end of the ſaid term of fifteen years it ſhall ſeem meet and convenient, to the ſaid Governour and Company, or any the Parties aforeſaid, that this preſent Grant ſhall be continued, and if that alſo it ſhall appear unto Us, Our Heirs and Succeſſors, that the continuance thereof ſhall not be prejudicial, or hurtful to this our Realm, but that we ſhall find the further continuance thereof profitable for Us, Our Heirs and Succeſſors, and for our Realm with ſuch Conditions, as are here in mentioned, or with ſome Alteration or Qualification thereof, that then We, Our Heirs or Succeſſors, at the inſtance and humble Petition of the ſaid Governour and Company, or any of them to be made unto us Us, Our Heirs and Succeſſors will grant, and make unto the ſaid Governour and Company, or any of them ſo ſuing for the ſame, and ſuch other Perſon and Perſons, Our Subjects, as they ſhall nominate and appoint, or ſhall be by Us, Our Heirs or Succeſſors newly nominated not exceeding in Number, four and twenty new Letters Patents, under the Great Seal of* England, *in due Form of Law with like Covenants, Grants, Clauſes and Articles, as in theſe Preſents are contained, or with Addition of either neceſſary Articles, or changing of theſe into ſome other parts, for and during the full Term of fifteen Years then next following. Willing hereby, and ſtreightly charging and commanding all, and ſingular Our Admirals, Vice-Admirals, Juſtices, Majors, Sheriffs, Eſcheators, Conſtables, Bailiffs, and all and ſingular other, Our Officers, Miniſters, Leadgemen, and Subjects whatſoever, to be aiding, favouring, helping, and aſſiſting unto the ſaid Governour and Company, and to their Suceeſſors, and to their Deputies, Officers, Factors, Servants, Aſſigns and Miniſters, and every of them in executing and enjoying the Premiſes as well on Land, as on Sea, from time to time, when you, or any of you ſhall thereunto be required, any Statute, Act, Ordinance, Proviſo, Proclamation, or Reſtraint heretofore, had, made, ſet forth, ordained, or provided, or any other matter, cauſe, or thing whatſoever to the contrary in any wiſe notwithſtanding. Although expreſs mention of the true yearly value, or certainty of the Premiſes, or of any of them, or of any other Gifts, or Grants by us, or any of our Progenitors, to the ſaid Governour and Company of Merchants of* London, *trading into the* Eaſt-Indies, *or to any of them before this time made, in theſe Preſents is not made, or any Statute, Act, Ordinance, Proviſion, Proclamation, or Reſtraint, to the contrary hereof, heretofore had, made, ordained, or provided, or any other thing, cauſe, or matter whatſoever in any wiſe notwithſtanding.*

If this Priviledge be found unprofitable for the Realm then within two years warning given under the Privy Seal, the ſame ſhall be void, but if it ſhall be found beneficial, then the ſame to be renewed with ſome additions.

In witneſs whereof we have cauſed theſe our Letters to be made Patents, Witneſs our ſelf at Weſtminſter, *the one and thirtieth of December, in the three and fortieth Year of Our Reign.* Per brevem Privato Sigillo. ſ. HUBERD.

Chap. VIII.

The firſt Voyage to the Eaſt-Indies, *for the Merchants of* London, *by Mr* James Lancaſter, *Admiral.*

A. D. 1600.

THE Merchants of *London*, having rais'd amongſt themſelves a Stock of 72000 Pounds in order, to the Eſtabliſhment of an *Eaſt-India* Trade, and having beſides, Her Majeſties Higheſt Encouragement, and Letters of Commendation to the moſt conſiderable Precepts of *India*; they ſet out a Fleet of five able Ships, to begin the Correſpondence with that part of the World. The Ships were the Dragon Admiral of 600 Tuns, the Hector Vice-Admiral of 300, the Aſcention of 200, the Suſan of about the ſame dimenſions, and the Gueſt a Victualer of 130. They had aboard them in all 480 men and were furniſhed with Ammunition and Victuals for 20 Merchants. We carried along with us to the value of 27000 pounds in Money and Goods, the other part of the Stock having been entirely ſpent upon the Ships, and the neceſſary Furniture of them.

They ſet out from Woolwich.

Being ready to Sail, we ſet out *February* the thirteenth from *Woolwich* upon the River of *Thames*, and being becalm'd in the *Downs*, made it *Eaſter-Day* before we reach'd *Dartmouth*.

April the eighteenth, we came to an Anchor in *Torbay*, where the neceſſary Orders and Inſtructions were given for our better Company keeping at Sea, as alſo what places to have recourſe to, in caſe any Ship were ſeparated from the reſt of the Fleet by Storms or any other accident.

May the Second, we ſail'd out of *Torbay* directing our Courſe to the *Canaries* (a) and the fifth, had ſight of *Alequanza* the moſt Northerly of thoſe Iſlands, and ſo holding our Courſe between *Forteventura*, and the Grand *Cautery*, at the South part of it we fell into the *Calms* For the ſpace of a whole Month afterward we were ſo diſtracted between Calms and contrary South winds, and ſometimes with ſudden furious Guſts and dreadful Lightnings, that we made but little way; and we had our Hands full of work to Guard our ſelves from thoſe dangers that we look'd in the Face for ſo long together

(a) *Canaries.*

Beating up and down at this rate with much ado, by *June* twenty firſt we got into 2 Degr. of the North ſide the Line; and as they commonly ſay, 'tis a bad Wind indeed that blows no body no Good, ſo the Winds though they had been hitherto extreamly Croſs and Contrary, yet were now ſo Favourable as to blow a good Prize into our Hands. She was a Ship of *Portugal* bound for the *Eaſt-Indies*, and ſhe afforded us 146 Buts of Butter, 176 Jarrs of Oil, 12 Barrels of Oil, and 55 Hogſheads of Meal. This was a very ſubſtantial Help to us in our Voyage; and now we found that the Winds had done us no great diskindneſs in not ſending us faſter along than they did.

A Prize taken.

They croſs the Equinoctial.

June the laſt, we paſs'd the Line, and loſt ſight of the North Star, and holding our Courſe S. S. W. we doubled the Cape of St. *Auguſtine* ſome 26 Leagues to the Eaſt ſide.

July the 20th, we made 19 Degr. 40 Min. South Lat. and here we diſcharged our Victualing Ship, the *Gueſt*, taking all her Maſts, Sails and Yards, and breaking down her higher building for Fire-wood, we left her floating in the Sea; holding our Courſe to the South-ſide.

They paſs the Tropic of *Capricorn*.

July the twentyfourth we paſs'd the Tropick of *Capricorn*, and becauſe we had been ſo long about the Line (as we were forc'd to do, the time being paſt for a quick Navigation) and many of our Men having contracted ſtill nearer, our Admiral gave orders to ſtand either for *Soldania* or St. *Helena*, that we might refreſh our ſick Company.

Auguſt the firſt, We came into 30 Degrees South Lat. and here we met with the South Winds, to the great comfort of us all, eſpecially thoſe that were diſordered. This Wind held us till we came within 250 Leagues of the Cape of *Good-Hope*, and then it blew directly to the Eaſt for 15 or 16 Days, which made a ſudden alteration in our Ship for the worſe, and encreas'd mightily Diſtempers amongſt us. Now all that were well and ſound before, took their turns to be ſick, and in this general Diſtreſs for want of other Hands, the Merchants themſelves were forc'd to work at the Helm, and do the Offices of common Sailors.

(b) They arrive at *Soldania*.

Remedy for the Scurvy at Sea.

But this calamitous Wind left us again, and another ſucceeded, which prov'd more favourable, brought us *September* the ninth into the Road of (b) *Soldania*. At our coming in here, we had very ſenſible Demonſtrations of the ſad Effects of a prevailing Scurvy, and other ſad Diſtempers amongſt us; for the Company of three of our Ships were reduc'd to that paſs, that they were not able out of a whole Ship to make up ſtrength enough to hoiſt out a Boat or let fall an Anchor. Our Admiral indeed ſcap'd pretty well, and moſt of the Men aboard her maintained a good habit of Body in all that ſickly time, which Preſervation was imputed to the Method the Admiral took with them; which was to give them all round three or four Spoonfuls of the Juice of Limons every Morning faſting, and not permitting them to eat till Noon. And this courſe is much more effectual if people together with it will content themſelves with a ſhort and ſpare Diet, and eſpecially (if the Circumſtances of Proviſion at Sea will allow it) abſtain from eating ſalt Meats. Our Admiral went aſhoar himſelf to find a proper reſting place, and ſome Materials for the refreſhment of the ſick Company; and meeting with ſome of the *Soldanians*, he oblig'd them with ſeveral Trifles brought for that purpoſe, and as well as he cou'd ſignified to them his deſire to trade with them for Cattle. But it being hardly poſſible ever to learn or ſpeak that Tongue, he was forc'd to uſe the Univerſal Language of Brutes, Moa for Oxen, and Baa for Sheep, and ſuch like rude Terms taken out of the mouths of the Beaſts themſelves, which was all very Intelligible to theſe People that were ſo near a kin to them. So ſeveral Tents being ſet up aſhoar, and ſome little Fortifications made for our own defence in caſe any violence ſhould be offer'd us, we expected the arrival of the *Soldanians* with their Sheep and Oxen.

Trade with the Natives.

* See *Davis's* Voyages.

The third Day after our coming, they came down from the Mountains with great troops of Cattle, * and we needed no Gold or Silver to go to Market with, as long as we had any old Iron left. Within ten or twelve Days we bought 1000 Sheep, and 42 Oxen of them, which we turn'd a Grazing upon the Hills about our Tents, and we purchas'd them at ſuch eaſy Rates, that I think half the ſtock of ruſty old Iron that is commonly ſeen in a Country Smith's Shop would make a Man here as Rich in Cattle as any of the old Patriarchs were. But I ſuppoſe that by the numbers of Sheep we bought they imagin'd we intended to Plant amongſt them, and ſet up for Farmers in the Country, for after this they would ſell us no more, and when we made ſigns to them for any, they wou'd point to the Flocks that ſurrounded our Tents, giving us to underſtand they did not know how we cou'd pretend to diſpoſe of what we had already, without we reſolved to dwell there and keep them, which they did not deſign we ſhould. But we having no need of any farther ſupply, did not preſs them much for more of their Cattle, and as for living amongſt them, we had other deſigns, and beſides had no very great Opinion of them for Neighbours. While we ſtaid here, what with the good feeding and the wholeſomneſs and clemency of the Air, all our feeble Company recovered their Health and Strength to ſuch a degree, that we thought our ſelves in better caſe than at our ſetting out from *England*, tho' we had loſt 150 of our men.

Iſle of Seols and Penguins by the Bay of *Soldania*.

Having beſtowed this time upon the neceſſary work of Refreſhment, *October* the 29th we put to Sea again, going out by a ſmall Iſle (in the mouth of the Bay) ſo full of Seols and Penguins, that a Ship might find very good Entertainment there, if the Country it ſelf afforded none. Over the Bay of *Soldania* ſtands a very high Hill, flat like a Table, and therefore bears that Name; 'tis a very good mark for finding a Harbour, there being nothing like it in all that Coaſt, and its Height making it very diſcernible at 17 or 18 Leagues diſtance upon the Sea.

They double the Cape.

(c) St *Lawrence* Iſle.

November the firſt, we doubled the Cape of *Good-Hope*, and the 26th fell in with the Iſle St. *Lawrence*, (c) to the Eaſt of Cape St. *Sebaſtian*: Here the varying of the Compaſs was about 16 Degr. and we obſerved in general, that the varying is of very great uſe in an Eaſt and Weſt Courſe, and particularly 'tis ſo in this Voyage to the Indies.

From this time to *December* the 15th we held the directeſt Courſe to the Eaſt ſide we could, intending to have reached the Iſle *Cirne* or *Diego Rederigues*, as 'tis called in ſome Coaſts; but parting from St. *Lawrence*, we had ever afterwards the Wind at E. & E.S.E. & E.N.E. ſo that we cou'd not get up with it. Upon this ſcore 'twas concluded that we ſhould Sail away into the Bay of *Antongils*, eſpecially ſince the Scurvy now creeping in again amongſt us, required us to furniſh our ſelves with Oranges and Limons, which we knew that place would ſupply us with.

(d) Iſle St. *Mary*.

December the ſeventeenth, we had ſight of the Southern part of the Iſland St. *Mary*, and the 18th we Anchored between it and the great Iſle of St. *Lawrence*, ſending the Boats thither, to enquire after the Phyſick we wanted for our Scorbutick Men. This Iſle of St. *Mary*, is very high Land, and full of Woods: It affords little but Oranges, Limons, and Rice, it has two or three good watering places on the North ſide of it, but they don't lie very conveniently for a Boat to come at them. The Natives are very Black, but tall and handſome; they ſeem to be well temper'd, ſociable, ſtout and valiant People, but like the reſt of their Complexion, make no ſcruple of going ſtark Naked.

(e) *Antongil* Bay.

Having little Encouragement here as to plenty of Proviſion, and the Country in uncertain ſtormy weather, we ſet Sail from hence *December* the third and the 25 came into the Bay of (e) *Antongil*, and here we Anchor'd in a very good Road, between the Small Iſland and the Main. Yet experience told us that there was better riding near the little Iſland, than that in the bottom of the Bay where the Admiral Anchored; for ſome of our Ships that lay under the protection of that Iſland, felt very little of a furious Storm that roſe there upon us, and drove along the reſt that lay more at a diſtance, with three Anchors a Head.

Trade with the People.

The 26th we went aſhoar upon the Main Iſland, and had the People of the Country preſently about us, who though they had but a ſmall Stock of Proviſion to diſpoſe of, yet afford to Barter with us, but at the ſame time held up all at the higheſt Rate imaginable. The Commodities they brought were but Oranges and Limons, Rice and Hens; but they made ſuch Prizes as if inſtead of Rice, we had had ſome very coſtly Grain; the Oranges had been Caſed in Gold, and the Hens like that in the Fable, had laid Eggs of the ſame Metal. Beſides they had ſo many Tricks and Artifices in their dealing, juggling together to hold all at the ſame Rates, and ſcrewing up the Buyer by little and little to an Advance in the Price, that ſome Days paſſed before we could bring them to any thing of a tolerable Trade. So that ſeeing the Humour of the People, and their ſubtle Impoſing ways, we reſolved to be at a certain lay with them, and to fix the Laws and Meaſures of the Exchange in ſuch a manner, that if they would come up to them they might, and if not we would have no dealing with them. Thus we determin'd how many Oranges, Limons or Plantans, or what quantity of Rice, ſhould be given for ſuch a number of Glaſs Beads or any other Trifles: and ſo holding tightly to this way, of dealing, every Man obſerving the ſame Rules, we traded with a great deal of eaſe and quietneſs, and had no words at all made about the Matter. And though we Barter'd for no leſs than 15 or 16 Tun of Rice, 50 Buſhels of Peaſe and Beans, beſides Oxen, Hens, and a great quantity of Oranges and Limons, yet having brought them to this way, we did all this with leſs noiſe and ſcolding than before perhaps we cou'd have bought a dozen of Oranges with. We loſt ſeveral Men here of the Flux, which we attributed to the Impurity of the Water we drank in that Country, it being a time of great Rains and Floods, and the Waters generally crude and unwholſome after that.

We ſet Sail from hence *March* the ſixth, and held on our Courſe for the *Indies*.

A. D. 1601.

(*f*) Regue-Pize Iſland.

The Sixteenth, we fell in with the Iſle *Regue-Pize* (*f*), in 10 ' Degr. South Lat. Here we cou'd find no ſafe Riding for our Ships, the Water all about being extreamly deep; but certainly had there been this Conveniency, this Iſland wou'd have been a moſt agreeable place for a Ships refreſhment. For by the delightful Scents that reach'd us, as we laid along by it, it diſcover'd what ſtore of odoriferous Plants, Flowers, and Shrubs, it produced; beſides, there was admirable good Fiſhing and Fowling there, and whole Woods of Coco-Trees, which do themſelves anſwer moſt of the Neceſſities of Human Life.

Dangerous Rocks.

March the Thirtieth, being in 6 Degr. South Lat. we were in conſiderable danger, by reaſon of a Ledge of Rocks we happen'd upon of a ſudden, which lay about five Fathom under our Ships; but preſently caſting about, we found eight Fathom, and ſo held on our Courſe Eaſtward. But all our Dangers of this nature were not over; for at ſome thirteen or fourteen Leagues diſtance from thence, we fell upon another Flatt of Rocks; and caſting about to the Southward, about twelve Leagues further we fell upon more; ſo that trying every way, we found our ſelves incloſed in a Pound of Rocks, tho' we had twenty, thirty, and in ſome places forty or fifty Fathom Water between the Flatts. And here we were ſhut up for near three Days, and knew not how to make our way out of this miſerable Confinement. At laſt, making the attempt Northward, in 6 Degr. 40 Min. we found a ſafe paſſage, and ſo following our Pinnace, which went ſounding the Depth before us, we regain'd the open Sea.

(*g*) Iſles of Nicubar.

May the Ninth we had ſight of the Iſles of *Nicubar* (*g*), we bore over to the South-ſide of the Channel, and anchor'd under a ſmall Iſland that lies near the Shore. We found the People of theſe Iſlands, very much addicted to Cheating and Cozening in their Trade; they impos'd pieces of Gum upon ſome of our ignorant Company, inſtead of Amber; and cou'd they have counterfeited the Coco Nuts too, no doubt they wou'd have done it, 'tis a Principle ſo rooted in moſt of theſe Eaſtern People to deceive and impoſe upon others, where-ever they have opportunity, or can do it to any advantage..

(*h*) Iſle Sombreros

April 20. We held our Courſe for *Sumatra*, but the Winds and Current being againſt us, we were forc'd to make towards the Iſle *Sombrero* (*i*), which lies ten or twelve Leagues to the Northward of *Nicubar*. The Inhabitants are of a tawny Complexion, and paint their Faces, with ſeveral Colours; they cover nothing but the obſcene Parts, which are bound up in a Linen Cloth, going about their Waſtes, and ſo between the Twiſt. They are exceſſively ſhy and timorous, and whatever we cou'd do to perſwade them, they wou'd none of them come aboard our Ships. Their Prieſts wear a ſort of ſtreight Cloths, that are made, as it were, for a Caſe, juſt to encloſe their Bodies, and no more: Their Faces are painted green, black, and yellow, and they have a large Pair of crooked Horns upon their Heads, that are colour'd in like manner, and a long Tail faſtned on behind, which hangs down between their Buttocks. They ſay, that the Devil appears in this Dreſs to them at their Sacrifices, and therefore that the Prieſts, who are his Servants, are oblig'd to conform themſelves to the Example and Humour of their Maſter, let him appear how he will. This Iſle affords extraordinary Timber for Ship-Maſts, the Trees being ſo large, tall, and perfectly ſtraight and even, that they are unexceptionable for theſe Uſes.

The Habit of the Prieſts.

Trees for Main-maſts.

A wonderful Vegetable.

But there is a Vegetable here, which tho' not for any known uſe, yet for its ſtrangeneſs deſerves equal notice and regard: 'Tis a little Twig, which riſes up amongſt the Land by the Sea-ſide, and by degrees grows to ſuch a bigneſs, as may make it be rank'd amongſt the ſmaller ſort of Trees. If you offer to pull it up, it contracts it ſelf, and ſhrinks down into the Ground, unleſs you draw ſo hard as to prevent it. But if you force it quite up above Ground, you find a great Worm lying at the lower part, and ſo cloſely united to it, as if it were a real part of the Vegetable, and conſtituted the Root it ſelf. 'Tis matter of Experience and Obſervation, that in the ſame proportion this Worm grows leſs and leſs, the Plant grows bigger and bigger; and that at laſt, when the former ſeems to be entirely conſumed, the latter begins to ſpread into Strings and Fibres, and roots it ſelf firmly in the Ground, drawing in its Nouriſhment by that *Apparatus* of Veſſels, in the ſame manner that other Vegetables do. But which is moſt ſtrange of all; if when its grown to maturity, you ſtrip off all the Leaves, and the outward Cortex, and ſo lay it a drying, the effect of it will be an abſolute Petrification; and inſtead of a Stick, you ſhall have a real Stony Body, hardly to be diſtinguiſh'd from White Coral. Of theſe wonderful Twigs we gather'd and brought home ſeveral.

(*i*) Achen.

May the Twenty ninth, we ſet Sail from *Sombrero*; and *June* the Fifth came to an Anchor in the Road of *Achen* (*i*), two Miles from the City. Here we found Ships of almoſt all the Nations of *India*, that came hither to Trade; and we had ſome Reaſon to believe, that our coming thither would not be ungrateful, ſince we were the Subjects of a Princeſs, whoſe Reputation was ſo well eſtabliſh'd abroad, and the Glory of whoſe Victories ſhone with ſuch a Luſtre, even into thoſe remote Parts of the World where we were. For as we were inform'd by ſome *Hollanders* that preſently came aboard us, the many Succeſſes of our Queen againſt the *Spaniards*, and particularly that ſtupendous Defeat of the *Armada*, had made ſuch a Noiſe in theſe Parts, and given ſuch a Character of the Bravery of our Country, that we might be ſure of a large ſhare of the King of *Achen*'s Favour upon that Account. The ſame Day therefore our Admiral ſent five or ſix Gentlemen of his Company to wait upon the King, to tell him of the Meſſage and Letters he had brought from her Majeſty of *England*, and to deſire the Favour of an Audience; together with his Majeſty's Promiſe for the Security of himſelf and Ships, the time they ſtay'd at *Achen*.

The Fame of Q. *Eliz.*

The King heard this Meſſage with a great deal of pleaſure, and order'd a ſplendid Banquet to be furniſh'd for the Entertainment of our *Engliſh* Gentlemen that deliver'd it. He promis'd all the Security that the Admiral deſired, and bid him come to his Audience with as much Aſſurance of good Reception, as if he were going into the Preſence of his own Queen. Beſides, at their departure, he gave the principal Perſon of them the Robe of Honour, and the Calico Tuck wrought with Gold; which the Kings of *Achen* never beſtow, but when they intend to expreſs an uncommon Degree of Favour and Reſpect.

The Admiral's Entry into *Achen*.

June the Eighth, our Admiral went aſhore with a handſome Retinue, and march'd towards the Court: Upon Notice of which, the King ſent ſix Noble Elephants, with Trumpets, Drums, and Streamers, and a good Guard of Soldiers to attend him. The largeſt of theſe Elephants, (which was a matter of fourteen Foot high) had a Caſtle upon his back (cover'd with Crimſon Velvet) in the middle of which was a Golden Baſon, and into this her Majeſty's Letter was convey'd with great Reſpect: The Admiral himſelf rode upon another of theſe Beaſts, and the reſt of his Retinue were diſpos'd of according to their Quality. Being introduc'd with a great deal of Ceremony into the King's Preſence, after Reverence done, according to the Cuſtoms of that Country, he began in a handſome Speech to open to him the Particulars of his Meſſage. But the King having heard ſome time, civilly interrupted him, telling him, That Buſineſs ſhould be done afterwards; and that now 'twas more proper for him, after ſo long a Voyage, to attend his own Refreſhment: Yet withal aſſur'd him, That for the ſake of his Queen, whom all the World admired, whatſoever reaſonable Demands he made, ſhou'd certainly be granted. Then was the Queen's Letter deliver'd to him, and the Preſent that came along with it; a Silver Baſon, with a Fountain in the midſt of it, weighing Two hundred and fifty Ounces; a ſtanding Cup of the ſame Metal, a rich Looking-glaſs, a Head-piece with a Plume of Feathers, a Caſe of fair Daggers, an embroider'd Belt, and a curious Fan of Feathers. The remaining part of the Day, after this, was devoted to Banquetting, Muſick, Dancing, and other Entertainments; in all which the Pomp and vaſt Riches of this Prince, and his great Reſpect to our Admiral, and his Company, did ſignally appear. He was inveſted in the King's Preſence with the Robe of Honour, a Girdle of fine Work was put about him, and a Pair of Creſſes hung on to his Sides. And as a more particular Favour, the King's Women, (which very few have the Happineſs of ſeeing) were ſent for out of their Apartments, to give him a Dance. Thus entertain'd with all the freedom and kindneſs that cou'd be, he took his leave of the King, and tho' invited to chuſe any Apartment in the City, he came aboard that Night again, expecting his Majeſty's Thoughts upon the Queen's Letter. The Copy of which is as follows:

The Queen's Preſent.

ELIZABETH *by the Grace of* GOD, *Queen of* England, France, *and* Ireland, *Defendreſs of the Chriſtian Faith and Religion.*

To the Great and Mighty King of *Achen*, &c. in the Iſland of *Sumatra*, Our Loving Brother, Greeting.

THE Eternal GOD, *of his Divine Knowledge and Providence, hath ſo diſpoſed his Bleſſings, and Good Things* *of his Creation, for the Uſe and Nouriſhment of Mankind, in ſuch ſort; that notwithſtanding they grow in divers Kingdoms, and Regions of the World; yet by the Induſtry of Man (ſtirred up by the Inſpiration of the ſaid Omnipotent Creator) they are diſperſed into the moſt remote places of the Univerſal World. To the end, that even therein may appear unto all Nations, his marvellous Works, he having ſo ordained, that the one Land may have need of the other. And thereby, not only breed Intercourſe and Exchange of their Merchandiſe and Fruits, which do ſuperabound in ſome Countries, and want in others; but alſo ingender Love and Friendſhip betwixt all Men, a thing naturally Divine.*

Whereunto We having reſpect (Right Noble King) and alſo to the Honourable, and truly Royal Fame, which hath hither ſtretched, of your Highneſs's Human and Noble Uſage of Strangers, which repair into that your Kingdom, in Love and Peace, in the Trade of Merchandiſe, paying your due Cuſtoms, we have been moved to give Licence unto theſe Our Subjects, who with commendable and good Deſires, ſail to viſit that your Kingdom: Notwithſtanding the Dangers and Miſeries of the Sea, natural to ſuch a Voyage, which (by the Grace of GOD) they will make, being the greateſt that is to be made in the World: And to preſent Traffick unto your Subjects. Which their Offer, if it ſhall be accepted by your Highneſs, with ſuch Love and Grace as we hope for, of ſo great and magnanimous a Prince: We, for them, do promiſe, that in no time hereafter, you ſhall have cauſe to repent thereof, but rather to rejoice much. For their Dealing ſhall be true, and their Converſation ſure; and we hope, that they will give ſo good Proof thereof, that this beginning ſhall be a perpetual Confirmation of Love betwixt our Subjects on both parts; by carrying from us ſuch Things and Merchandiſe as you have need of there. So that your Highneſs ſhall be very well ſerved, and better contented, than you have heretofore been with the Portugals *and* Spaniards, *our Enemies: Who only, and none elſe, of theſe Regions, have frequented thoſe your, and the other Kingdoms of the Eaſt. Not ſuffering that the other Nations ſhould do it, pretending themſelves to be Monarchs, and abſolute Lords of all theſe Kingdoms and Provinces: As their own Conqueſt and Inheritance, as appeareth by their lofty Title in their Writings. The contrary whereof, hath very lately appeared unto us, and that your Highneſs, and your Royal Family, Fathers, and Grandfathers, have (by the Grace of GOD, and their Valour) known, not only to defend your own Kingdoms; but alſo to give Wars unto the* Portugals, *in the Lands which they poſſeſs: As namely in* Malaca, *in the Year of the Human Redemption* 1575, *under the Conduct of your valiant Captain,* Ragamacota, *with their great Loſs, and the perpetual Honour of your Highneſs Crown and Kingdom.*

And now, if your Highneſs ſhall be pleaſed, to accept into your Favour and Grace, and under your Royal Protection and Defence, theſe our Subjects, that they may freely do their Buſineſs now, and continue yearly hereafter: This Bearer, who goeth chief of this Fleet of four Ships, hath order (with your Highneſs Licence) to leave certain Factors, with a ſetled Houſe of Factory in your Kingdom, until the going thither of another Fleet, which ſhall go thither upon the return of this. Which left Factors, ſhall learn the Language and Cuſtoms of your Subjects, whereby the better and more lovingly to converſe with them.

And the better to confirm this Confederacy and Friendſhip betwixt us, we are contented, if your Highneſs be ſo pleaſed, that you Cauſe Capitulations reaſonable to be made: And that this Bearer do the like in our Name. Which we promiſe to perform royally, and entirely, as well herein, as in other Agreements and Arguments, which he will communicate unto you: To whom we do greatly deſire your Highneſs to give entire Faith and Credit, and that you will receive him, and the reſt of his Company, under your Royal Protection, favouring them in what ſhall be Reaſon and Juſtice. And we promiſe on our behalf, to Re-anſwer in like degree, in all that your Highneſs ſhall have need, out of theſe our Kingdoms. And we deſire, that your Highneſs would be pleaſed to ſend us Anſwer, by this Bearer of this our Letter, that we may thereby underſtand of your Royal Acceptance of the Friendſhip and League, which we offer, and greatly deſire, may have an happy beginning, with long Years to continue.

The next time the Admiral went to Court, he found the King extreamly well pleas'd with the Contents of her Majeſty's Letter: He told him in general, as to the League which was mention'd, That he for his part, deſired nothing more heartily than ſuch an Union and Correſpondency; but as to all the Particulars of it, he wou'd leave thoſe Points to be ſetled by his two chief Miniſters, whom he had Authoriz'd to act in that concern. A Day therefore being appointed for this Buſineſs, the Conference began, which was managed in the *Arabick* Tongue; and for this our Admiral was very well provided, by the means of a Jew he brought with him, who ſpoke that Language perfectly well.

The Conference with the King of *Achen's* Miniſters.

In the Diſcourſe, as it came in his way, to make ſeveral Demands concerning the Freedoms of the Merchants, one of the Miniſters deſired him to lay before them, thoſe Reaſons which he thought moſt proper to perſwade the King to grant thoſe Demands that were made: In compliance with which Propoſal, the Admiral inſiſted largely upon theſe, and ſeveral Topicks of the like Nature:

That Merchandize and Trade, when they flouriſh'd in any Country, brought ſignal Advantages along with them; and that no Prince ever repented giving Encouragement to them.

That *England* was capable of furniſhing his Majeſty's Dominions with Varieties of very uſeful Commodities; and particularly could ſupply him with skilful Artificers of all ſorts, who might do him very conſiderable Service, and propagate thoſe Arts that were wholly unknown in that part of the World.

That her Majeſty was not only an Enemy to the Common Enemy the *Spaniard*, but was able alſo to keep him in Awe, and cou'd put a Bridle upon that exorbitant Power, which had ſwallow'd up ſo great a part of the Weſtern, and might poſſibly attempt to ſeize another Golden Prey in the Eaſtern World.

In ſhort, that ſome of the moſt potent Monarchs of the World, were her Confederates and Allies; and her Friendſhip was never offer'd to any Prince, that did not joyfully accept it, and eſteem it at a high rate.

Theſe things were deliver'd to the King in Writing, and he was pleas'd to conſider them to ſo good purpoſe, that at our Admiral's next going to Court, he told him, He would ſeal the League with her Majeſty, and hold it inviolably on his part: And as for all thoſe particular Articles and Demands, which were the Subjects of Diſcourſe in the Conference, he would take care for his complete Satisfaction therein, and order his Secretaries to ſend him all ratified and ſigned in his Name. But he was ſo kind as to give the Writings himſelf to the Admiral, in a very few Days; and that with abundance of ſoft and gracious Words, expreſſing his Good-Will to her Majeſty, and the whole Nation in general.

Privileges granted to the *Engliſh* at *Achen*.

In theſe Papers the *Engliſh* had the following Privileges confirm'd to them, *viz.*

1. Free Entry and Trade.
2. Cuſtom-free, whatever Goods were brought in, or carried out.
3. The Liberty of making Wills, and Diſpoſing of their Eſtates, where, and to whom they thought fit.
4. Full Security as to all Bargains and Payments, in both which reſpects the *Achenese* ſhou'd be tied to a punctual and ſtrict obſervation of all the Meaſures of Juſtice, and fair dealing.
5. Authority to inflict Puniſhments on their own Delinquents, without Appeal to the Civil Magiſtrate of the Country.
6. Aſſurance of Juſtice to be done in all caſe of Injuries from the Natives, upon Complaint made.
7. Freedom from all Arreſts upon Goods or Prizes.
8. Liberty of Conſcience, and the undiſturbed Exerciſe of their own Religion.

Theſe Points being thus happily ſettled, to our own Contentment, and the great Advantage of our Nation, the Merchants began to provide for a good Lading of Pepper: But herein we lay under a Diſappointment, by reaſon of the Barrenneſs of the laſt Year; the Quantities being ſo little, that we doubted ſome of our Ships muſt go back empty: And the Price too riſing ſo much above what Merchants had been made to believe, that whereas they were inform'd, it might be had at four *Spaniſh* Rials of Eight *per* C. it coſt us almoſt twenty. But underſtanding that we might poſſibly meet with a Supply (at leaſt enough to lade one Ship) at *Priaman*, which lies about 150 Leagues to the Southward of *Achen*; our Admiral gave Orders for the *Suſan* to make ready to go upon that Deſign.

Tho' it appear'd by our Entertainment, and the Favours ſhewn us, that we were very welcome to the King and People of *Achen*; yet there were others, to whom we were as ungrateful, and whom our good Fortune ſtrongly provok'd to hate us. The *Portugueze* were ſenſible, that we had with little trouble gain'd thoſe important Points of Favour and Privilege, which with all their Application and Courtſhip, they had never been able to procure. Beſides, they ſaw that our growing Intereſt and Reputation in thoſe Parts, was in all probability, like to be the undoing of theirs; and that if we went on, as we had begun, they had e'en as good quit their Pretenſions to any Concerns there, and leave the entire poſſeſſion of the Trade to our ſelves. There ſeem'd to be no Remedy to prevent this Danger, that ſo apparently threatned their Intereſt, but by a diligent Craft to undermine us ſome way or other: For as for open Violence, they dared not pretend to any ſuch Courſe, as well upon the account of our own Strength, as the Aſſiſtance the King of *Achen* would have given us in that Caſe.

Portugueze Treachery.

Their Embaſſador therefore at Court, curiouſly pried into all our Proceedings, and watch'd every Step we took; he did all that he cou'd to inſinuate things into the King to our diſadvantage, and to ſeaſon him with Prejudices againſt us; but it ſeems his Majeſty was too well fix'd in his good Opinion of us, to be chang'd by this Detractor, and he got no Credit nor Reſpect at all, by this invidious Undertaking.

He deſired leave of the King, to ſettle a Factory in his Country, and to erect a Fort at the entry of the Harbour, to ſecure the Merchants, as he pretended; but, indeed, to keep us *Engliſh* out. But neither wou'd this Project take; and the King, who very well underſtood his meaning told him, That his Maſter was as careful of his Country, as if his Daughter were to be Queen of it in time; and that he ſhou'd not need to be at the Charge of building a Fort for that uſe, ſince he wou'd furniſh the Merchants with a convenient Houſe, where all their Goods ſhould lie out of danger, both of Fire and Enemies too.

They take a Spy.

But beſides all theſe Endeavours, they ſet a Spy upon us in our own Houſe; an ingenious crafty young *Indian*, who came every Day to us with Hens to ſell; and under the diſguize of a Market-man, had an opportunity given him to make his Obſervations upon us, and our Affairs; which the *Portugueze* that ſet him a work, by this means hop'd to come to the Knowledge of. Our Admiral ſuſpecting this Perſon, and taking occaſion one Day to enter into a free Diſcourſe with him, by very kind Words, and charming Promiſes of Liberty and Reward, got the whole Truth out of him: And he told him plainly, That the *Portugueze* had not only employed him as a Spy upon the Domeſtick Concerns, but had alſo planted a very ſubtle one aboard their Ships; who being there wholly unſuſpected, had taken a perfect Draught of them, as to their Dimenſion and Furniture, and the Number of Men and Guns that every one carried. Beſides, obſerving how much their Men were weaken'd and diſcompos'd by Sickneſs, they intended to draw a conſiderable Force from *Malacca*, and ſo aſſault them as they lay in the Road. Our Admiral ſo preſs'd the Point, and manag'd Matters with this Spy, that he entirely came over to his Intereſt and Service, and inſtead of being a Tool to the *Portugueze*, he became a very uſeful Inſtrument to us, to diſcover all their Plots and Intrigues, and give us Notice of every important Affair that was carrying on in the Embaſſador's Houſe. Being ſent for to Court, the next Day, he diſcover'd all theſe Proceedings of the *Portugueze* to the King, what they had already done, and what they further intended to do; and therefore requeſted of his Majeſty, That he wou'd order thoſe Servants of the Embaſſador, that were going away from *Malacca*, to be Arreſted at ſome Port of his, where they wou'd be ſure to go in order to their paſſage; that ſo by ſeizing the Intelligence they carried, there might be a more complete Evidence, and fuller Account of their Deſigns.

The *Portugueze* Bark ſtay'd by the King's Order.

This the King very kindly promis'd to do, in caſe Notice were given him when they went: And accordingly when the time came, upon a private Intelligence from the Admiral, that the *Portugueze* Bark was gone, a Frigate was ſent after them, which gave a ſtop to their Voyage, and commanded them back to *Achen* in the King's Name. The Bark was ſearch'd, and all their Trunks and Packets were open'd, but the chief Prize, the Intriguing Letters that concern'd the *Engliſh*, were either loſt in the Hurly-burly, or ſecretly convey'd over-board.

Now the Year had paſs'd over us as far as *September*, and our Admiral began to think of putting to Sea again, in order to accompliſh his main Buſineſs. But hearing that the *Portugueze* Embaſſador had his Diſpatch, to be gone in a very few Days, (and it being on ſeveral Accounts expedient, that we ſhou'd be out at Sea before him) he went to entreat the Favour of the King to ſtay him for ſome time.

The King, who was always very eaſie of Acceſs, and ready to grant any Requeſt of the Admirals, receiv'd him with a great deal of good Humour, and pleaſant Jokes, upon what had paſt with the *Portugueze*, and at laſt told him merrily, That he wou'd do what he deſired, upon Condition, he wou'd bring him a fair *Portugueze* Girl, for a Preſent, at his Return. So taking leave of his Majeſty, and preſenting two of the chief Merchants to him, that were to ſtay behind to Trade, and whom he was pleas'd to take into his particular Protection. All things being now in a readineſs, we ſet Sail *September* the Eleventh for the Streights of *Malacca*.

They go for *Malacca*.

We had in our Company a *Dutch* Ship of 200 Tuns, that offer'd to bear a part in the Adventure; and by Agreement was to have an ⅛ of what was taken.

In the mean time the King did not fail to act his part, in detaining the *Portugueze* Embaſſador; and tho' he every Day urged his Diſpatch to be gone, yet ſtill he was delay'd and whil'd off, upon one pretence or another, which was a very great advantage to us; For had he ſet out before us, the Alarm wou'd have been given all about the Streights, and Care wou'd have been taken, that no Ships ſhou'd paſs that way, where 'twas likely that we ſhou'd ever meet with them; whereas now we had the opportunity of poſting our ſelves conveniently for a Prize, and lay undiſcover'd within Twenty five Leagues of *Malacca* it ſelf, in the very Streights.

A Prize taken.

October the Third, we deſcried a Sail, and thereupon ſpread our ſelves into a wide Compaſs, that ſhe might be ſure not to miſs one or other of us. She happen'd to fall in with the *Hector*; which preſently gave us Intelligence, by two or three Guns let off for that purpoſe, ſo that we drew altogether about her: We gave her ſeveral Shot, and ſhe reply'd pretty briſkly again; but the Admiral coming up, and with a Diſcharge from his Prow, ſtriking down her Main-yard, the Diſpute was at an end, ſhe not being forward to ſhoot any more; and we fearful, leaſt ſome unhappy Shot from us might ſink her, lighting between Wind and Water.

The next Morning the Captain of her came aboard the Admiral, and reſign'd his Ship and Goods into his hands: We took poſſeſſion by four of our Men, whom we ſent aboard as well to ſecure her, as to prevent the pillaging and rifling, which is very common upon theſe Occaſions, and unavoidable, when a Rout of common Sailors come where Plunder is to be had.

This Ship came from St. *Thomas*, in the Bay of *Bengala*, and was bound for *Malecca*: She was of 900 Tun Burthen, had 600 Perſons aboard her, and a Lading of 950 Packs of Calicoes, Pintades, and a great deal of other Merchandice, beſides Rice, and things that we made little account of. And now we were eas'd of that care and fear that was upon us, of returning home with empty Ships; and our greateſt concern, as the caſe ſtood, was more for room to beſtow what we had gotten, till the return of the Ships from *England*.

A Water-ſpout.

October the Twenty firſt, we ſet ſail out of the Streights of *Malacca*, for *Achen*; and in our paſſage were like to be overwhelm'd with one of the Water-ſpouts, that pour'd down very near our Ship. When theſe Spouts fall, 'tis almoſt as if a great River pour'd out of the Clouds into the Sea; it puts the Ocean into a violent Ferment, and makes it foam and boil again, with the exceſſive Irritation: They are ſometimes a quarter of an Hour in falling; and ſhou'd they light of a Ship, they wou'd infallibly ſink it. But we happily eſcap'd this Waſh, and proceeded in our Voyage to *Achen*.

October the Twenty fourth, we came ſafe into the Port of *Achen*, where we found all our Merchants, and their Affairs, in very good Circumſtances; and that the King, according to his Engagement, had been a faithful and careful Guardian to them in our abſence. And to make ſome Acknowledgment for this his Favour to us, the Admiral choſe ſeveral things out of the Prize we had taken, ſuch as we imagin'd wou'd be moſt pleaſing to him, and preſented them to his Majeſty, with his humble Deſire they might be accepted, as a Teſtimony of our Gratitude: This was highly obliging to him, and he expreſs'd a great deal of Satisfaction, not only in the Preſent it ſelf, but in the occaſion of it too, our Succeſs againſt the *Portugueze*.

We had not been here long, but our Admiral gave Orders to bring all the Lading of Spice (we had) aboard, and to make ready for our going to *Bantam*, where we were like to meet with a far greater Return of Pepper, and at more reaſonable Rates than we cou'd buy it at *Achen*. So going to Court, to take Leave of the King, after a long Conference, the following Letter was deliver'd him for her Majeſty, written in the *Arabick* Tongue.

The LETTER of the King of *Achen*, to the Queen of *England*.

The King of *Achen's* Letter.

GLory be to God, who hath magnified himſelf in his Works, glorified his Dominion, ordained Kings and Kingdoms, exalted himſelf alone in Power and Majeſty: He is not to be uttered by Word of Mouth, nor to be conceived by Imagination of the Heart, he is no vain Phantaſm: No Bound may contain him, nor any Similitude expreſs him: His Bleſſing *and his Peace is over all his Goodneſs in the Creature: He hath been proclaimed by his Prophet heretofore, and ſince that often, and now again by this Writing at this preſent, inferiour unto none. For this City, which is not ſlack to ſhew their Love, hath manifeſted it, in the Entertainment of that Society, which filleth the Horizons with Joy, and hath confirmed it to the Eye by a Sign, which bringeth knowledge of remembrance of it generally and particularly. And for that their Requeſt is juſt, with purpoſe for exchange; and they themſelves of honeſt Carriage, and their kindneſs great in doing good in general to the Creatures, helping the Creature in Proſperity and Adverſity jointly, giving liberally unto the Poor, and ſuch as ſtand in need of their abundance, preſerving the Creature to their uttermoſt with a willing Mind: Which for them now is extended unto* India *and* * Arach; *ſending forth the chiefeſt Men of Diſcretion and Note, calling alſo the beſt of the Creatures to counſel herein.*

* Or Carmania.

This is the Sultana *which doth Rule in the Kingdom of* England, France, Ireland, Holland, *and* Friezland: *God continue that Kingdom, and that Empire, long in Proſperity.*

And becauſe that he which hath obtained the Writing of theſe Letters, from the King of the Kingdom of * Aſhley, *who doth Rule there with an Abſolute Power: And for that there came unto us a good Report of you, declared and ſpread very joyfully by the Mouth of Captain* James Lancaſter, *(God continue his Welfare long.) And for that you do record that in your Letters, there are Commendations unto us, and that your Letters are Patent Privileges. Almighty God, advance the purpoſe of this Honourable Conſociation, and confirm this worthy League.*

* Or Achen.

And for that you do affirm in them, that the Sultan of * Afrangie *is your Enemy, and an Enemy to your People, in what place ſoever he be, from the firſt until now, and for that he hath lift up himſelf proudly, and ſet himſelf as King of the World: Yet what is he, beſides his exceeding Pride and haughty Mind? In this therefore is our Joy increaſed, and our Society confirmed: For that he and his Company are our Enemies in this World, and in the World to come: So that we ſhall cauſe them to die, in what place ſoever we ſhall meet them, a publick Death.*

* Or Spain.

And moreover, you do affirm, that you deſire Peace and Friendſhip with us. To God be Praiſe and Thanks, for the Greatneſs of his Grace. This therefore is our ſerious Will, and honourable Purpoſe truly in this Writing, That you may ſend from your People unto our * *Ports, to Trade and to Traffick; and that whoſoever ſhall be ſent unto us in your Highneſs's Name, and to whomſoever you ſhall preſcribe the time, they ſhall be of a Joint-Company, and of Common Privileges. For this Captain, and his Company, ſo ſoon as they came unto us, we have made them of an Abſolute Society: And we have incorporated them into one Corporation and common Dignities: And we have granted them Liberties, and have ſhewed them the beſt Courſe of Traffick: And to manifeſt unto Men, the Love and Brotherhood between us and you in this World, there is ſent by the Hand of this Captain, according to the Cuſtom, unto the famous* * *City, a Ring of Gold, beautified with a Ruby, richly placed in his Sett, two Veſtures woven with Gold, embroidered with Gold, incloſed in a red Box of* * Tzin.

* Or Bandar.

* Of London.

* Or China.

Written in * *Tarich* of the Year 1011. of *Mahomet*.
Peace be unto you.

* That is, by Computation of time.

The Preſent.

Together with the Letter, a Preſent was deliver'd too, conſiſting of three rich Pieces of Cloth, embroider'd with Gold, and a Ring with a very large Ruby: And the Admiral himſelf was preſented with another Ring with a fair Ruby in it. Before he went away, the King asked him, Whether we had the Pſalms of *David* extant among us? To which he replied, That we had; and did conſtantly ſing them in our Divine Service. His Majeſty then told him, That he and his Nobles there preſent, would ſing a Pſalm to God for their Proſperity and good Voyage; which they did: And afterwards the Admiral and his Company, did, at the King's Requeſt, do the like, to ſhew him the *Engliſh*-way of Singing: So after the Pſalm was ended, his Majeſty in great Order pronounc'd a Bleſſing upon us, and diſmiſs'd us with a Promiſe, that we ſhou'd find the ſame kind Entertainment, if ever we came into his Country again.

Pſalms of *David* amongſt the *Mahometans*.

November the Ninth, we ſet Sail with our three Ships for *Priaman*, and *Bantam*, the *Suſan* being gone towards thoſe Parts before, to get a Lading of Pepper.

They go from *Achen*.

In two Days time the Admiral diſpatch'd the *Aſcenſion* home for *England*, ſo that now we were but two in Company; and we held our Courſe along the Coaſt of *Sumatra*, hoping to meet with our Ship the *Suſan*, which was trading thereabouts. There are ſome very dangerous places along this Coaſt, certain very low Iſlands, encompaſs'd with Flats and Rocks, where we had like to have had a full Period ſet to our Voyage; but by a favourable Providence we got free from the danger. Having croſs'd the Equinoctial the third time, we arriv'd at *Priaman* (*k*), *November* the Twentieth, where we found our Ship, and that well towards a Lading too, being provided with Six hundred Bahars of Pepper, and Sixty ſix of Cloves. This Commodity coſt us much leſs here than at *Achen*, tho' it does not grow about *Priaman*, but is brought moſtly from *Manangcabo* (*l*), which lies eight or ten Leagues up in the Country; and is remarkable, not only for the Quantities of Pepper it yields, but the ſtore of Gold Duſt and Grains found thereabouts, which the great Rains waſh down from the Mountains.

Flatts and Rocks.

(*k*) *Priaman*.

(*l*) *Manangcabo*.

Priaman, tho' it lies ſo very near the Line (as being in 15 Min. South Lat.) yet is a very healthy place, and has a curious refreſhing Air; beſides, there's plenty of Proviſion, and good freſh Water there. The *Suſan* was order'd here, to get her Lading compleated, and ſo direct her Courſe homewards.

December the 15th, we entred the Streights of *Sunda* (*m*), and anchor'd under the Iſle *Pulopanſa*, three Leagues from *Bantam*.

(*m*) *Sunda* Streights. *Pulopanſa* Iſle

The Sixteenth we entred *Bantam* Road, and the Vice-Admiral went aſhoar, to certifie the King of our Arrival and Buſineſs, and to deſire his ſafe Conduct. The King was very glad of our coming, and ſent a Nobleman back with the Vice-Admiral, to bid the Admiral Welcome, and to conduct him to the Court. This Prince was not above ten or eleven Years old, being under the Tuition of a Protector, who managed the Affairs of the Kingdom during his Minority: He welcom'd the Admiral very kindly, and receiv'd the Queen's Letter and Preſent of Plate, with much ſatisfaction, referring all the Points of Trade and Buſineſs, to be adjuſted by his Council, from whom he deſired the Admiral to take his Anſwer. And the Reſult of the Conſultation was, that we ſhou'd come aſhore and trade, with all the freedom we cou'd deſire, and be as ſafe, in all reſpects, as if we were in our own Country. So we had convenient Houſing provided for us, and our Merchants brought Goods aſhore, and the Trade began, and proceeded to ſuch good purpoſe, that within five Weeks there was more ſold in Goods, than would have laded our two Ships; and that they brought away from thence 276 Bags of Pepper, weighing 62 *l.* a piece. Theſe coſt us 5 ½ Rials of Eight *per* Bag, beſides our Anchorage, and the King's Cuſtom; the former of which amounted in the groſs to 1500 Rials of Eight, and the latter was a Rial upon every Bag.

Their Reception at *Bantam*.

Trade begins

'Tis a Cuſtom always obſerved here, that the King is to begin the Trade, and furniſh himſelf with what Commodities he pleaſes, before any of his Subjects are ſerv'd; and this is no diſadvantage at all to the Merchant, ſince he gives a reaſonable Price, and is a very good Paymaſter.

Tho' the *Javans* are reckon'd ſome of the moſt thieviſh pilfering People in the World, yet we had a tolerable meaſure of quiet amongſt them, and they did not very much diſturb us by thoſe Knaveries, conſidering how horribly they are addicted to them. But then it muſt be own'd, that 'twas more our Care and Watchfulneſs that made them honeſt, than any thing of their own Inclination: And beſides, we had a Commiſſion from the King, to execute thoſe upon the ſpot, that we ſhou'd find about our Houſe in the Night, upon any ſuch Deſign; and after we had made four or five Examples, the reſt were better adviſed, and forbore troubling us.

While we were here, we loſt our Vice-Admiral, Captain *John Middleton*. But our Trade went on ſo briskly, that by *February* the Tenth *, our Ships had their full Lading of Pepper, and were ready to Sail. The Admiral before he went, diſpatch'd a Pinnace for the *Molucca's*, to begin a Trade there, and procure a Factory to be ſettled, againſt the next return of the Ships from *England*. He made proviſion too for carrying on the *Bantam*-Trade in his abſence, leaving a ſufficient number of Men and Factors, for the diſpoſing of the Merchandice that was left.

* *A.D.* 1603.

A Pinnace ſent to the *Molucca's*.

Factory in *Bantam*.

After this he went to take Leave of the King, and to return him his laſt Thanks, for the Favours and Privileges vouchſafed the *Engliſh* Nation in his Dominions. His Majeſty was pleaſed to make him the Bearer of a Letter, and a Preſent of very fair Bezoar Stones for the Queen, and for himſelf a Stone of the ſame kind, and a curious *Java* Dagger, which is a thing very highly eſteem'd amongſt them. This Ceremony ended, we had nothing now to do, but to get a Shipboard as faſt as we cou'd, and ſet out for our Native Country.

The Twentieth of *February* we ſet ſail for *England*, with a very chearful Heart, having ſucceeded in our Deſigns, for the

They ſet out for *England*.

the Service of our Country, to ſo good a Degree, and met with ſo many unexpected Advantages that had hitherto ſweetned our Voyage to us.

The Twenty ſecond, and Twenty third, we came into the Streights of *Sunda*; and the Twenty ſixth got clear of all the little Iſles that lie in thoſe Streights, and ſo holding a South Weſt Courſe, in two Days we made 8 Degr. 40 Min. South Lat.

March the Thirteenth we paſs'd the Tropick of *Capricorn*, keeping ſtill for the moſt part, a South Weſt Courſe.

April the Fourteenth, we were in 34 Degr. ſuppoſing the Iſle of *Madagaſcar* to be to the North of us.

A fearful Storm.

The Twenty eighth, we had a Storm ſo furious and violent, and the Sea ran ſo exceſſively high, that we had little hopes left of eſcaping a diſmal Burial, under thoſe Mountains of Waters that came ruſhing upon us. Yet all this was but the beginning of Sorrows, a Prologue to a more black and direful Scene of Miſeries, which began to open it ſelf to us on *May* the Third. Now the Sea beat ſo fiercely upon the Ships Quarter, that it ſhook all the Iron-work of the Rudder, and quickly broke off the Rudder it ſelf from the Stern, to the confounding of the beſt and moſt experienc'd of us all. The Sea that we were in, was one of the moſt tempeſtuous in the World, and here our Ships drive up and down like a Wreck, being entirely at the Winds diſpoſal, and not able in the leaſt to command, or direct her own Motions. Sometimes we ſhou'd be carried within three or four Leagues of the Cape of *Good Hope*; and then again driven out to almoſt forty Degrees Southward, into Storms of Hail and Snow, and miſerable ſleety Weather.

Once we attempted to take our Mizen-maſt, and put it out at the Stern-port, hoping by the help of that Device, to make a poor ſhift, till we cou'd reach ſome Harbour or other, where we might repair the Breaches of our ſhatter'd Veſſel: But when this was tried, we had no relief, but an increaſe of our Danger; for the Sea being ſomewhat grown with lifting up the Maſt, did ſo ſhake the Stern, and put all into ſuch a threatning a Condition, that we thought our ſelves happy when we had got the Maſt in again. And now all was deſperate, unleſs we cou'd make a new Rudder, and bring it to paſs that it ſhou'd hang faſt in the Sea; which conſidering the great Burthen of our Ships, the roughneſs of the Sea, and the loſs of moſt of our Rudder-Irons, was a Work of ſurprizing difficulty. Yet having made out of our Mizen-maſt as good a one as we cou'd, and faſtned it as well as our pitiful Tackling wou'd allow, having alſo the Comfort of a little fair Weather, we continued our Courſe homewards: But 'twas not long before the Sea took it off again, and put us to a great deal of trouble to ſave it; ſo that now our Fears were rais'd to as high a degree as ever. Yet after all theſe Diſcouragements, by the help of our other good Ship the *Hector*, we accompliſh'd the fixing it on once more, tho' it hung very gingerly, there being but two Hooks left to hold it. And in this Caſe we went on, directing our Courſe to St. *Helena*, the Wind falling ſo ſhort, that we cou'd reach no part of *Africk*; and we knowing that we had already doubled the Cape, by the Latitude we were in.

They arrive at St. Helena.

June the Fifth, we paſs'd the Tropick of *Capricorn* again; and the Sixteenth had ſight of St. *Helena*: Which after a proſpect of ſo terrible Dangers, as thoſe we had gone through, was not a little refreſhing to us. We bare cloſe along by the Shoar, the more conveniently to reach the beſt part of the Road, which is right againſt the *Portugueze* Chapel, in twelve Fathom Water. Here we fitted up our Ship, and having almoſt as much need of mending and repairing our ſelves, as our Veſſel, we allow'd ſome time for that neceſſary Work, to which the Iſland contributed pretty well, in the good freſh Water, Hogs, and Goats it afforded us.

Paſs the Equinoctial.

July the Fifth we ſet Sail, holding our Courſe N. W. and the Fifteenth paſs'd by the barren and deſolate Iſland of *Aſcenſion*. From hence we continued to hold our N. W. Courſe, till the Nineteenth, and then we croſs'd the Equinoctial.

The Twenty fourth we made 6 Degr. North Lat. being as we judg'd then, 150 Leagues from the Coaſt of *Guinea*.

Iſle Fogo.

We held a N. & W. by N. Courſe, till the Twenty ninth, at which time we ſaw the Iſle *Fogo*.

Auguſt the Seventh, we made 16 Degr. and the Twelfth paſs'd the Tropick of *Cancer*, ſteering Northerly.

The Twenty ninth we paſs'd the Iſle St. *Mary*.

September the Seventh, we had the Lands-end of *England* about 40 Leagues from us.

The Eleventh we caſt Anchor in the *Downs*, after all the Perils of this long and tedious Voyage.

CHAP. IX.

A Deſcription of Java, *and the firſt* Engliſh *Factory there: With divers Occurrents relating to the* Indian, Engliſh, *and* Dutch *Affairs. Written by Mr.* Edmund Scott, *containing a Hiſtory of thoſe Matters, from* A. D. 1602, *to* 1605.

Account of the Iſland it ſelf.

THis Iſland runs near 146 Leagues in length, E. and W. and is in the wideſt part about 90 in breadth, Northward and Southward. 'Tis comprehended between the 135th, and the 145th Circles of Long. and the 7th and 9th Parallels of South Lat. The Central Parts of it are generally very mountainous and rugged, yet not ſo as to hinder Travelling, and thoſe bordering upon the Sea, are low and marſhy: Together with which diſadvantage of Situation, they have an impure and unwholſome Air, which generally afflicts Strangers with many troubleſome Diſtempers; yet hereabouts all the principal Towns of the whole Kingdom lie, the chief places of Trade and Buſineſs, as *Bantam*, *Jacatra*, *Jortan*, *Chiringin*, and the reſt.

This Soil yields nothing worth the Trading for, but Pepper, which is brought in from all parts of the Kingdom to *Bantam*, and has rais'd ſuch a Trade there, that no Town in all that part of the *Indies* (not *Achen* it ſelf), can pretend to Rival it in that reſpect. And there uſed to be a good Stock of this Commodity brought in from divers other Countries too; but of late Years the *Dutch* have intercepted that Trade, and by buying it up abroad, prevented its coming to *Bantam*.

Bantam.

This Town is three *Engliſh* Miles in length, and as populous as moſt Towns of its bigneſs perhaps in *Aſia*. They are to enter here upon the Affairs of Trade, that they keep three Markets every Day; and there is ſuch a Throng of People at that in the Morning, that one wou'd think it rather a ſolemn Fair, in which Buſineſs was to be done but once a Year, than a common Market that occurs every Day.

There are two Diviſions of this Town, the one entirely taken up by the *Javans*, the Natives, and genuine Poſſeſſors; the other devoted to the uſe of Foreigners, and ſuch as come thither upon the Accounts of Trade and Merchandice.

The Javan Town.

The *Javan* Diviſion is for the moſt part very ſlightly built, the Houſes being generally fram'd with no ſtronger Materials than Canes; deſtitute of all Brick and Timberwork, except ſome very little, in a few places, where it adds neither Strength nor Beauty to the Building. 'Tis water'd with ſeveral ſmall Rivers, that run up and down about it; and there is one Branch that paſſes through the very middle of it up to the Court, which holds a conſtant Correſpondence with the Sea in its ebbing and flowing, and will bring up Gallies, and Junks, of great Burthen, to the very heart of the Town. It has the Convenience of a good Road for Ships too, and 'tis defended with a ſtout Brick Wall, with ſeveral Turrets and Bulwarks, ſo that it might be made a very conſiderable place, if the People had the Sence to underſtand their own Advantages.

The China Town.

The other part, which they call the *China* Town (with reſpect to the Building) makes a far handſomer appearance than this, the Houſes conſiſting moſtly of Brick, but rais'd after the *Chineſe* Faſhion, ſquare and flat at top, with Contrivances of Boards, and Canes cover'd over with Brick and Sand, to defend them from Fires, which together with the thieviſh People, are the everlaſting Plagues of Merchants Houſes in *Bantam*.

'Tis parted by a narrow River from the *Javan* Town; and 'tis here that all the Strangers, and Merchandizing People of other Countries do reſide; particularly here are the *Engliſh* and *Dutch* Houſes, which are ſome of the beſt and ſtatelieſt built in the whole Town.

The King, and his Government.

The King of this place is now reckon'd (ſince the depoſing of the Emperour of *Damack*) the moſt potent Prince of the whole Iſland. He Governs all by an abſolute Deſpotick Power; and the Laws upon which his Subjects Lives and Fortunes depend, are ſhut up entirely in his own Breaſt.

Adultery is here puniſh'd with preſent Death, in both Parties that are guilty of it; but as for Murther, the Law is to pay a Fine to the King: So that his Majeſty may have a conſiderable Revenue coming in by Blood, conſidering the revengeful and implacable Temper of the *Javaneſe*: For if the Friends of the murther'd Party, do kill the Murtherer, and his Friends again revenge it upon them, and ſo deſtroy one another by whole Families, there's no more to be done, but to pay their Fines; and ſo the King, tho' he loſes Subjects, yet gets Money by the Bargain.

The People of *Java*.

Their Temper and Qualities.

The People of this Country are exceſſively proud and ſlothful, and conſequently poor: They deſpiſe all manner of Labour and Employment, and think it beneath them to have a dependance upon any thing of that kind for a Livelihood. The Gentry themſelves are as poor as ever they can tell how to live; and 'tis certain, that they muſt be ſo, ſince (beſides their neglect of all Buſineſs) they keep ſuch vaſt Numbers of Slaves, that they are quite eat out by them, and their Rice and Pepper can hardly grow faſt enough, to maintain the huge Trains of Tenants they affect to draw after them. They are ſo tender of their Honour, that they are ready to meaſure the very Seats upon which they ſit, for fear one ſhou'd be higher than another; and no Man will endure another Perſon of the ſame Rank and Quality, to ſit one Inch more exalted than he does. They are horribly malicious and quarrelſome, and care not what they do to accompliſh the Revenge of an Injury; but they generally do it in a cowardly and clandeſtine way, and will ſooner diſpatch a hundred Enemies, with a private Stab or Thruſt, than meet one honourably in the Field. Stealing, Cheating, and Defrauding, ſeem to bear a part in their Conſtitution, as well as Sloth and Idleneſs; their Vertue is too weak to reſiſt the Temptation of the ſmalleſt Bribe, and their Conſcience ſo little, that they'll not reſign a Pawn, or a Pledge, or any thing they are truſted with; nor pay any Debt, if they can poſſibly help it. And yet their Laws are very ſevere in this Caſe; for the Creditor has Power, not only over the Goods, but alſo the Wife and Children of the Debtor, whom he may ſell for Slaves, if he pleaſes.

Their Religion.

As for their Religion, 'tis very hard to ſay what it is; and any other thing, relating to them, is ſooner accounted for than this. They have Temples amongſt them, but they ſerve more to adorn the City, than any thing elſe; for the *Javaneſe* very ſeldom ſee the inſide of them, upon any Religious Occaſion. They ſay, There is one God that made Heaven and Earth; but he being ſo very good, that he cannot poſſibly hurt them, they don't make ſo many Prayers to him, becauſe the fear and dread of Evil, is the main Ground of their Devotion. But as for the Devil, they ſay he is very wicked and miſchievous, and ready to do them all manner of Ill Turns, and ſo they ſerve him in their own defence, and by way of prevention. They have ſome Notion of Jeſus Chriſt, whom they acknowledge to be a Great Prophet: But their greateſt Diſguſt againſt Chriſtianity, is upon the account of its ſtrict Prohibition of Polygamy, and the Vices that relate to Women, which all the Eaſtern People are wonderfully addicted to.

Their Apparel and Dreſs.

The uſual Garb of the better ſort, is a Tuck on their Heads, and a fair Pintado about their Loins, and all the reſt of the Body naked: But ſometimes, upon extraordinary Occaſions, they wear a cloſe Coat of Cloth, Velvet, or Chamblet, according as they can purchaſe it. The meaner People content themſelves with a flat Cap of Taffita, or Callicoe, and about their Middles a piece of the ſame, a Yard broad, and commonly of two Colours. There is another ſort of Clothing ſometimes us'd by them, which is made of Cotton, and the Rinds of Trees; but by reaſon of their intolerable Lazineſs, there is very little of this made and worn. The Men take a great deal of Pride in their Hair, which is very thick and frizled, and go bare-headed, very often, a purpoſe to ſhew it: As for the Women, they always go bare-headed; the Genteeler ſort tying up their Hair in Bobs, as we do our fine Horſes Tails.

Their Weapons.

The Arms moſt in uſe amongſt theſe People, are Darts, Pikes, and Targets, and ſome few Guns, which they manage after a very awkard manner; this is their Furniture for the Wars; but the Weapon for common uſe and wearing, and which does moſt of the bloody Executions, (which are ſo very frequent there) is the Criſe, or Dagger, which is about two Foot long: The Blade of this is not ſtrait and even, but crooked and waved; and the Handles, which are of Wood, or Horn, are curiouſly carved, and wrought into ſeveral Figures, this being all the Work the *Javaneſe* pretend to, and the only piece of Ingenuity they can boaſt of. Theſe Weapons are generally tinctur'd with a Poiſon ſo very ſtrong and pernicious, that not One in Five hundred that's wounded with them, comes off with Life.

The *Chineſe* that live in *Java*.

Their Manners.

As for the *Chineſe* that live here, they are abſolute Maſters of all the Arts and Policies, that can any way ſerve to carry on the Deſign of thriving in the World, and growing rich. They make all the advantage imaginable, of the Dulneſs, Pride, and Sloth, of their *Javan* Maſters: They are the Perſons that manage the Concerns of Planting, Dreſſing, and Gathering the Pepper, and Rice; and as they do all the Work, ſo they ſuck up all the Profits, and leave the others little more than the bare Title to their Lands and Eſtates. They'll refuſe no Labour, how mean and hard ſoever, if they have but a proſpect of ſqueezing any advantage out of it; and they care not who they are Slaves to, nor what Drudgery they undergo, ſo they can but make their own Market, out of the Folly and Eaſineſs of their Maſters. And then in all Points of Trade and Bargains, let a Man that deals with them, have his Wits about him, ſince they are not to be held by any Bonds of common Honeſty and Juſtice, and are never ſincere and fair in their Dealings, but when a Plot to cheat and play the Knave happens to be diſcover'd, or can't be put in practice.

In the Matters of Religion, they are very near a-kin to the *Javens*, and have much the ſame Meaſures of Devotion, tho' with more fooliſh Ceremonies and Superſtition than they.

Religion.

The Doctrine of Tranſmigration of Souls, obtains greatly amongſt them; and they pretend to believe, that the Reward of good and vertuous Actions, when they quit theſe Bodies, ſhall be to come down again into better, and be born to great Eſtates, and high Preferments: But on the other hand, that if they live wickedly and baſely here, they ſhall, in the next Revolution of Souls, ſlip into ſome vile and deſpicable Bodies, be united to ſome Beſtial Carkaſe, and make their appearance in the moſt foul and horrid Shapes of the Creation.

But if the *Chineſe* do heartily believe this Doctrine, 'tis a great wonder they don't live more juſt and regular Lives than they do; ſince if it prove true, 'tis moſt certain, that there's not one in 500 of them, that can expect to be any better than a Toad, or a Viper, or ſome very loathſome Animal, the next time they ſhift their Bodies.

Cuſtoms.

They have a Cuſtom of Sacrificing every New Moon; and, they ſay, they do it to God Almighty; tho' their Neighbours affirm, 'tis to the Devil: But to which ſoever it is, the Ceremony is attended with Prayers and Singing, and at the end of every Prayer, they ring a little Bell. The Altar is furniſh'd with Fowl, and ſeveral ſorts of Fruits; but they eat up all this themſelves, and offer up nothing by Fire, but certain pieces of painted Paper, which they value at a great rate.

There are many of them pretty well ſeen in Aſtronomy, and keep a regular Account of their Years and Months: But they have no Diſtinction of Days amongſt them, as to any Religious Purpoſes; and never keep a Sabbath, but when they lay the Foundation of a Houſe, or ſtrike ſome great Bargain; any thing of which kind, ſanctifies a Day with them ever after.

When any of them are a dying, they ſet up Lights in the Room where they lie, four above, and three under the ſick Party: The Reaſon of which Ceremony, they are very backward to give an Account of; and ſay, That 'tis only the Faſhion of *China* ſo to do. When they are dead, their Bodies are burnt to Aſhes; which is put up into cloſe Jars, and ſo ſent home to *China*.

Plays.

They delight very much in Muſick, Plays, and Interludes; which latter are not fram'd purely for Diverſion, but have ſome Characters of Religion and Devotion upon them, as appears by the pretence and concern of the Prieſts in the matter, the Actions of Kneeling, and Kiſſing the Ground, and the Sacrifices which are offer'd in the beginning of the Drama. Beſides the uſual time for Acting theſe Plays, is, when their Ships go out, and come in; which Circumſtance ſeems to intimate, as if they did ſomething in thoſe Entertainments, either in hope and expectation of happy Succeſs in their Affairs, or at leaſt in a way of Gratitude, and thankful Acknowledgment for it.

They have, beſides their ordinary Prieſts, a ſort of Men amongſt them, whom they commonly call Southſayers; Southſayers. who are in mighty eſteem, as pretending to very great matters, by a kind of Inſpiration; and (they ſay) able to accompliſh them. Theſe Fellows are ſometimes poſſeſs'd with a ſudden Fury, under the Tranſports of which, they appear and act like ſo many *Bedlams*, running up and down the Streets with drawn Swords, tearing their Hair, beating themſelves againſt the Walls, and rowling upon the Ground. While this Fit laſts, the *Chineſe* ſay, they can unriddle the darkeſt Myſteries, foretel future Events, ſhew the Succeſs of any Buſineſs or Affair that is in hand, and performs things far above the reach of other common Mortals. And as they very frequently conſult them upon all theſe Accounts, ſo they ſay, their Predictions are always juſtified by the Event: And, indeed, conſidering the horrid Impieties of that People, 'tis not impoſſible that ſome of them may have Credit enough with the Grand Enemies of Vertue and Goodneſs, to be of his Council, and to be made Partakers of ſome of his Secrets.

The *Chineſe* are ſome of the moſt effeminate, mean, and daſtardly Spirited People in the World: And as they have not the Tones, ſo neither have they the Faces of Men; being for the moſt part quite ſmooth, at leaſt very little of a Beard to be ſeen.

Their Habit is a long Gown with a Kirtle under it, Their Garb. which hangs below the Gown: Upon their Heads they wear Cauls of Silk, and the Nobility a ſort of Hoods made of divers Faſhions; but all of them have their Hair, which is very long, tied up in a Knott, upon the Crown of the Head.

Their way at *Bantam*, is, to buy Women-Slaves, by whom they have what Children they have there (becauſe they bring no Women with them out of *China*), and ſo when they go into their own Country for good and all, they ſell the Mothers again, and carry the Children with them. But if they cut their Hair when they are abroad any where, they muſt never pretend to go back into *China* more, their Cuſtoms not allowing it: And if they die at *Bantam*, all their Goods are forfeited to the King, by the Laws of the place; tho' they commonly take care to prevent the King's growing rich that way, by ſending their Effects out of his reach, home, into *China*.

CHAP. X.

The Dangers the English *went through, by means of the Falſhood and Treacheries of the* Javans.

'TIS related before, how Admiral *Lancaſter* had laid the Foundation of a good Factory at *Bantam*, and provided for the encouragement and carrying of the Trade, by ſeveral Merchants left there for that purpoſe.

Orders alſo were given, for the ſending of a Pinnace to the *Molucca's*, upon the ſame Deſign; which accordingly A. D. 1603. ſet Sail *March* the Sixth, with a Lading of Fifty ſix Cheſts and Fardels of Goods, but meeting with contrary Winds, after ſhe had ſpent two Months beating up and down at Sea, ſhe came back again to *Bantam*.

But in this ſpace of time, we that reſided there, had a very difficult part to play, to defend our ſelves from the Troubles by the *Javans*. fatal Effects of the Malice and Wickedneſs of the *Javans*. There being ſomething of a Feud broken out between us and them, (which was before our Ships departed) they made it their Buſineſs to ſtudy all Methods of Revenge imaginable, and were never eaſie, but when they were attempting ſome miſchief or other upon us. They wou'd ſhoot flaming Darts and Arrows in the Night, into the Houſe where our Goods were ſecured, hoping to fire it that way; and even in the Day-time, if we brought out any quantity of Goods to Air, they wou'd ſet the Town a-fire to the Windward of us, not caring what Miſchief they did, ſo we might be involv'd in the ſame.

Quickly after the going out of our Pinnace, we addreſs'd to the Work of building a convenient Publick Houſe, according to the Liberty given us: We deſign'd it Seventy two Foot in length, and Thirty ſix broad, and proceeded ſo far as to lay the Foundation, but by reaſon of ſome Changes made at Court, and the ſetting up a new Protector, a ſtop was put to this Affair for a time; and it coſt us not a little Trouble and Money too, before we cou'd remove all Impediments.

March the Twenty firſt, the Town was accidentally The Town fired. fired, and ſeveral Houſes fill'd with Goods, were entirely conſumed. We had a conſiderable ſhare in the Loſs and Damage done by it too; for amongſt others, the *Dutch* Houſe was burnt to the Ground, and there we had no leſs than Sixty five Fardels of ſeveral ſorts of Goods (which all became Fuel irrecoverably), beſides 190 Sacks of Pepper loſt in another place. But we reckon'd that Providence was very favourable to us, in permitting us to come off at ſo cheap a rate as we did, and eſteem'd it little leſs than a Miracle, that both our Houſes were preſerv'd; eſpecially one of them, which the raging Flame advanc'd within three Yards of, and threatned in a very frightful manner, yet went off at laſt in a ſurprizing and unaccountable way, doing no other harm than ſcorching the Walls and Windows, and a little diſcolouring it in the outſide.

In the time of this general Confuſion, we were forc'd to be very nice and ſtrict in our Watch; for all the pilfering Villains of the Country, almoſt, were got together about us, waiting for the Fire to make a Breach, and very ready to ſhew it the way, by throwing Firebrands themſelves. And we had ſo much to do to defend ourſelves from the Treacheries of theſe raſcally People, that we thought them almoſt as bad a Plague as the Fire it ſelf: They were everlaſtingly either plotting new Miſchief, or promoting ſome already begun; we had them continually fluttering about our Houſes, like ſo many Birds of Prey about a Carkaſe, ſtill waiting for the good time to fall on and devour us.

And then ſo aſtoniſhingly bold and impudent in the Proſecution of their leud Deſigns too, that no Creature in the World, I think, can have more Braſs in the Complexion of it, than a *Javan* has. 'Twas a ſmall thing with them, to come and ask us, What Strength we had, and how many to guard the Houſe? This was Modeſty at *Bantam*, tho' 'twou'd be reckon'd a piece of Impudence any where elſe; but they wou'd come and examine the Doors, and look upon all the Locks and Bolts, to ſee how ſtrong they were, and ſearch about, to try if they cou'd find any Defects; and all this before our very Faces. And being thus haraſs'd as we were, what with continual Pains and Wearineſs, and Over-watching in our own Defence, againſt this barbarous Crue, we contracted ſeveral Diſtempers, particularly that of the Country, which is the Flux, and which two of us never recover'd.

April the Nineteenth, there came into the Road Nine A. D. 1603. Dutch Ships come to Bantam. Sail of *Hollenders*, under the Command of Admiral *Warwick*, which were diſpers'd abroad into ſeveral parts of the *Indies*: We receiv'd ſeveral Civilities at his hands, and he was very obliging to all *Engliſh-men* in general; having formerly been reliev'd in very great Extremities at Sea, by the timely aſſiſtance of ſome of our Nation.

A little after this, we loſt one of our principal Factors; and about the ſame time, our Pinnace return'd from her fruitleſs and unhappy Voyage for the *Molucca's*.

We were now forbid going on any further with the Work of our Houſe; perhaps, becauſe the new Officers that were come into play at Court, had not yet been brib'd for that purpoſe; however, upon Application made to the Admiral of *Java*, (who is, as it were, the common Father and Protector of all Strangers) he order'd matters ſo with the reſt of the Nobility, that we had a freſh Permiſſion to proceed; and ſo we finiſh'd our Houſe in a little time.

Our Company was ſtill farther diminiſh'd, by the loſs of our chief Factor, and Manager of the Trade there, in *Bantam*.

In the Eleventh of *July*, we had ſome Loſſes by Fire, which were kindled by the Villany of certain *Javans*; who thinking to get ſome Spoil out of the *Chineſe* Houſes, took that Method to accompliſh their Deſign; and as it happen'd, ſome of the Sufferers being in Debt to us, they were by that means totally diſabled from paying.

Loſſes and Danger by Fire.

But the ſucceeding Month we had like to have ſuſtain'd a far greater prejudice than the former; for having brought out ſeveral Packs of Goods to air, one of theſe *Javan* Birds ſet Fire to a Houſe juſt by us; but we diſcover'd it ſoon enough, to prevent the intended Miſchief, and had the Actor of it laid cloſe in Irons for his pains. The truth on't is, we cou'd hardly ever be at reſt, or do any thing free from diſturbance by theſe People: 'Twas our Cuſtom at Night, when we ſet the Watch, to ſing a Pſalm together, in which Exerciſe we had once like to have had our Brains knock'd out, and the Houſe it ſelf, as we thought, beat down, by a Company of thoſe Rakes, which were got together into a Yard by us, and poured great Stones ſo faſt in at the Windows upon us, that happy was he that cou'd get out of the way.

Inſincerity of the *Hollanders*

But they were not the only Enemies we had to do with, (tho' conſidering what barbarous ones they were, they were bad enough) for we began to diſcover ſome undermining Practices of the *Hollanders* againſt us; who tho' they carried it with a fair Face of Friendſhip outwardly, yet by ſome falſe and degrading Stories which they raiſ'd of us, made it manifeſt, that they bore us no hearty Good Will.

The new Protector too, pretended a great deal of kindneſs towards us; but he was a great Maſter of Diſſimulation and Flattery, and did it only to wheedle a Sum of Money out of us.

But neither did all thoſe that were Enemies to us, agree very well amongſt themſelves: For as we and the *Javans* were always at Daggers-draw, ſo did the *Chineſe* and *Javans* perpetually wrangle, and the *Dutch* often ſcuffle with them both; ſo that between one ſide and the other, there was everlaſting Scolding and Contention. Tho' the truth of it is, the *Dutch*, by their uncivil Carriage, and looſe diſorderly way of living, did procure themſelves far more trouble and enmity than they needed to have done; and at the ſame time make the Chriſtian Name very odious amongſt thoſe Heathens, who ought to have had better Examples of the Purity of it ſet before their Eyes.

Lampones Enemies to the *Javans.*

But as if we had not Plagues enough in *Java*, and Enemies ſufficient to exerciſe our Vertue there, we had, *September* the Fifth, a new Sett that came from the Iſle of *Lampon*, in the Streights of *Sunda*, to torment us. 'Tis true, they came upon the ſcore of the old Enmity and Grudge between them and the *Javans*; but we being there at that time, had a ſhare in the trouble as well as the reſt.

Theſe People are ſo like the *Javans*, that they are hardly to be known from them; and this is an advantage to them in their Deſigns of Miſchief and Revenge, ſince they often paſs for the Natives of the place, and ſo ſcape the Puniſhment they wou'd otherwiſe meet with: Their way is to get into the Houſes, and cut off the Heads of all they can light of, as they did by ſeveral at that time; and had a great mind to have had ſome of ours too, at leaſt our Goods, if not our Heads, tho' we prevented them by our diligent Watch.

Cruelty of the *Javan* Women.

The Reaſon why they are for a Spoil of Heads ſo much, is, becauſe the King gives them the Reward of a Woman, for every Strangers Head they bring him; and the Rogues do very often cheat their King in this ſort of Commodity, by opening the Graves, and cutting off the Heads of them that are newly buried. But the *Javan* Women are ſo kind, as to ſupply them with ſome of their Husbands Heads ſometimes, which they take the opportunity to whip off when they are aſleep, and they ſell them at very good rates to the *Lampones*.

But our Miſeries and Dangers (like the Waves of a ſtormy Sea, rowling in one upon the back of another) were after a very ſhort interval, revived again: For now we were inform'd by ſome of our Friends, that there was a ſolemn Combination made, for the deſtroying our Perſons, rifling our Houſes, and ſwallowing up all we had; and this not by the more ſordid rakiſh part of the Country, but Perſons of Figure and Power, who had great numbers of Slaves to aſſiſt them in the Deſign. And accordingly they did encompaſs the Houſe, and march'd round about two or three times; but ſeeing the Illuminations we had made, and the good Guard we kept, they durſt not make the attempt. However, being fruſtrated here, they turn'd their Arms upon the *Chineſe*, and aſſaulted them with the Rage and Fury of ſo many Devils; and their Houſes being at that time full of our Goods, we were oblig'd to protect and ſtand by them; and we did them very good Service with our Guns: For the ſinging of a Bullet is as terrible to a *Javan*, as the Cry of a Pack of Hounds to a poor frightful Hare. But ſtill, of all the Alarms that daily confounded us, the moſt ſcaring was that of Fire: The fear of it had made ſuch an impreſſion upon us, that that very word pronounc'd in the Night, tho' with a ſoft whiſper, wou'd frighten us out of our Sleep, and make us run to our Arms. 'Twas ſo common a Calamity in the place where we were, and had ſo often threatned us, that the horrible Idea was always freſh in our Minds, and ready to preſent it ſelf upon all Occaſions. Yet tho' the Town was fired no leſs than five times in the ſpace of three Months, and the *Javans* play'd all the Tricks imaginable, to drive the Flames down upon us; Providence ordering it ſo, that the Wind generally favour'd us, we ſcap'd the Ruine they plotted to involve us in.

Sly Practices of the *Hollanders.*

But the ſly and crafty Proceeding of the *Hollanders* was not the leaſt of our Troubles, under all the other ill Circumſtances that attended us: For they having at their firſt coming into thoſe parts, made bold to uſurp the Name of *Engliſh-men*, and pretending all along behind our backs, that they were really of that Country, had by that means ſo poſſeſs'd the common People, that they confounded them and us together, and believ'd us to be all one Nation. And by this means they run us into a great deal of danger; for they being generally of ſo rude a Behaviour, ſo apt to affront and abuſe the Country People; and doing all this under the Notion and Character of *Engliſh-men*, they incens'd the Mobb againſt us to that degree, that we had great reaſon to fear, we ſhou'd feel the Effects of their Rage and Fury; that we ſhou'd chance to pay ſome of the Scores they had contracted; and that tho' the pretended *Engliſh-men* had committed the Crimes, yet the true and real ones wou'd go near to ſuffer for't: For matters were come to that paſs, that we cou'd not walk the Streets, nor go into the Market, but the People wou'd be all in an uproar, curſing and railing at us bitterly; tho' all the while they meant the *Hollanders*, and intended all theſe coarſe Complements for them.

They diſtinguiſh themſelves from them.

To prevent the miſchief therefore that might follow upon this Miſtake, ſo induſtriouſly propagated by the *Hollanders*, and for ever to diſtinguiſh our ſelves from them, *November* the Seventeenth, our Queen's Coronation-Day, we ſet up St. *George*'s Banner upon our Houſe, diſcharg'd our Ordnance and Small-ſhot, and march'd up and down with our Drum, and the little Muſter of Men we cou'd make, in Scarfs of White and Red Taffata. The Reaſon of this Ceremony we told to all the People that came about us: And when they ask'd, Why the *Engliſh* at the other Houſe did not do the like, (by whom they meant the *Dutch*) we told them, They were not *Engliſh-men*, but of another Country, and under another ſort of Government, and had abus'd both us and them, in making thoſe Pretences they had made. By this means we were ever after diſtinctly known from them, and the People began to diſcover publickly their different Sentiments of us: Now the very Children wou'd run after us in the Streets, crying, *Oran Engree, Sayk, Oran Hollanda inbad*: The *Engliſh* are good, and the *Hollanders* ſtark naught.

Our Troubles and Confuſions were ſo many, and ſo very frequent, that Trade went on but dully, and the Year was ſpent without any Matters of great Importance done that way.

Dutch cheated by the *Chineſe*, in their buying of Pepper.

Effects of the Heat of Pepper.

The *Dutch* Ships came in and out ſo often, that we were oblig'd to make what haſte we could to buy up all the Pepper that was good and ſaleable, which was not to be gotten neither in any great Quantities: For the *Chineſe* (thoſe honeſt and fair-dealing People) had got a way of mixing Dirt and Water with their Pepper, to help ſpin out the Commodity a little farther; and this Traſh went off very well with the *Dutch*, for they were conſtant Chapmen, and ſo greedy of Trade, that they refus'd nothing almoſt that was ſet to Sale. Let the Wind blow out of what Quarter it wou'd, it brought ſome Ship or other of theirs for Pepper; inſomuch, that the People of *Bantam*, aſtoniſh'd with the Quantities they ſwallow'd up, jeeringly ask'd them, Whether they beat Pepper into the Mortar and Plaiſtering of their Houſes, to keep them warm, in order to ſave Firing. But the truth on't is, a Houſe may be heated, and that to a very offenſive degree too, by the meer Steams of the Pepper, where there's a good Stock of it: And we found by our own Experience, that ſeveral of our Men were very much diſorder'd by the hot ſuffocating Fumes ariſing from thence, in the Houſe where we us'd to Mill and Shute our Pepper.

Thus this Year paſs'd over us, which had brought along with it ſuch a Train of Miſeries and Perplexities, that one might reaſonably have hop'd the Scene wou'd now change, and Fortune look with a more favourable Countenance upon us for the future. But the New Year

began

A. D. 1604. * began as uncomfortably as the Old had ended ; and the firſt Scenes were hardly any thing but Murther, Fire, Wars, Plots, and damnable Intrigues : We had firſt of all, the Affliction of loſing more of our Company, and being reduc'd to a very ſmall number, ſo that of the Factors that were left for theſe Parts, we were now but two in that Quality, and no more than ten in all. Our Trade had a conſiderable Bank by the dearneſs and ſcarcity of Rials, and the cheapneſs of Caſhies ; for upon this account we cou'd not vent a piece of Stuff at half the value that it went off at at our firſt coming. But theſe were ſmall things, in compariſon of our ſucceeding Calamities ; for we narrowly eſcap'd loſing our ſelves, Houſe and all our Wares and Furniture, and that at one ſtroke, by the Treachery and Helliſh Contrivance of ſome of our Neighbours.

Javans and *Chineſe* undermine the *Engliſh* Houſe.

A Crue of theſe Villains had carried a Mine quite under the Foundation of our Houſe ; and their Deſign being to open themſelves a way into the Warehouſe, the Boarding of which hinder'd and ſtopp'd them ; not being able at once to cut their way through, becauſe they might poſſibly have been diſcover'd at their Work, they reſolv'd to accompliſh it by Fire, which wou'd clear the paſſage, and make no noiſe. But by that time the Fire had burnt through the Planks, and got to the Mats and Packs, of which the Warehouſe was full, it rais'd ſo terrible a Smoak, and diffus'd ſuch a Scent all about, that the Miſchief quickly betray'd it ſelf, and gave us the Alarm. And under the Conduct of a favourable Providence, we made ſhift to put a ſtop to the progreſs of it, and diſcovering where it had its Riſe, with all the Depths of the Plot, we took effectual Care to prevent the return of the Danger that threatned us.

We were ſo lucky too, as to diſcover and apprehend the principal Managers of this barbarous Contrivance, perhaps ſome of the moſt ſullen, ſtubborn, and obdurate Wretches, that ever that Country bred. But as they ſhew'd nothing of Pity, or common Humanity to us, ſo we had no Mercy at all on them, but with the free Conſent of the Government executed them, and that in a very ſevere and exemplary manner.

And the truth on't is, as we endeavour'd to carry it in the moſt juſt, equal, and inoffenſive manner that we cou'd, towards theſe People, and were ready to do them Kindneſſes, when they were any thing tolerable ; ſo we never fail'd to make them feel the Effects of our Indignation and Reſentment, when they gave us a juſt and ſufficient Provocation thereto. To be ſure, they never miſt a good Baſting for their little pilfering Tricks, if we catch'd them in the Fact : But as for the more flaming Outrages they ſometimes committed upon us, we either wounded them ſeverely, or as it happen'd, ſometimes kill'd them upon the ſpot, or elſe had them executed in a more formal way, for a Terror to others.

The *Engliſh* make no Bones of puniſhing the *Javans*.

But hardly any Nation dared take the Liberty we took ; and we cou'd ſtab a *Javah* at a much cheaper rate than a *Dutch-man* cou'd give a Box on the Ear. And this was a common Obſervation among all the Foreigners at *Bantam*, and the matter of their very great wonder too, that that deſperate, rough, unmanageable People, ſhou'd ſtand ſo much in awe of us as they did, and ſo tamely endure the Correction we gave them for their Villanies. They have often ſaid (when they have ſeen us doing Juſtice upon thoſe Fellows), That 'twas hardly ever known, that any *Javan* was ſo much as ſtruck in *Bantam*, before we came thither ; and that we in doing it, did that which none durſt pretend to but our ſelves.

In *September* the Town being accidentally fired, the Upper-work of our three Houſes was entirely conſumed, to our very great danger, coſt, and trouble : For now we were laid open to all the Enemies that had any Inclination to attempt us ; and 'twas very probable, that they who had ſo often ſought to make their way into our Houſe, now the Fire had made it to their Hands, wou'd not fail to enter. However, the *Dutch* being in better Circumſtances than we (as having ſcap'd the bad Effects of the Fire, lent us a ſtrength of Men to guard our Goods ; this, together with ſome of the King's Officers, which were alſo order'd to attend us in that extremity, was ſufficient for our Security, till we had repair'd our Buildings, and to do the *Dutch* Juſtice, we muſt own that (the Matters of Trade ſet aſide, in which they are apt to undermine, and practiſe againſt their Rivals) they were in all other Caſes very much our Friends, diſcover'd a Generous Pity and Concern for us, in any Misfortunes, and were ready to contribute to our aſſiſtance and relief.

Dutch Kindneſs.

Towards the latter end of the Year, we were altogether employ'd in providing a Quantity of Pepper, againſt the time our Ships came in from *England*, which now we began to look very impatiently for, and wiſh'd ſome happy Gale wou'd ſend to us with as much ſpeed as cou'd be.

Admiral *Middleton* comes to *Bantam*.

'Twas not long before our Deſires were ſatisfied, and we had the chearful ſight of our *Engliſh* Ships coming into the Road : 'Tis true, both they, and we too, were in uncomfortable Circumſtances, by reaſon of the Sickneſs, and dying Condition of many of our Men ; but yet having been ſo long condemned to barbarous Faces and Manners, to meet with our Country-men was a Refreſhment, tho' it had been but to ſee, and then die together. This was *Decemb.* 22.

The laſt Day of that Month, our Admiral went aſhore with all the Company, that Sickneſs wou'd give leave to attend him, to wait upon the King, and deliver the Letter and Preſents now brought from *England*. Theſe were ſent in the Name of His Majeſty King *James* the Firſt, then upon the Throne, our glorious Queen having left this World ſome time before ; the News of her Death producing a no leſs general Mourning abroad, than the Actions of her Life had Admiration and Eſteem.

K. *James's* Preſent to the King of *Bantam*.

The Preſent conſiſted of a large Baſon and Ewer, two fair Standing-Cups, and ſome Spoons, all of Silver, guilt ; ſix Muskets, with their Furniture ; which the King very kindly receiv'd.

All the principal Officers of the Court were preſented too by the Admiral ; we having found by many Experiences, that Gifts in the Hands of theſe topping Men, are of very great advantage, and have a peculiar Influence upon the Succeſs of Buſineſs, whenever we have occaſion to make uſe of their Intereſt. Beſides, the preſent King being a Minor, and conſequently entirely under the Movement of Courtiers, by whoſe Eyes he ſaw, and by whoſe Motions all his were form'd ; not to ſet them right, had been to neglect the principal Springs, upon whoſe favourable Motions, all the happy Events of our Affairs depended.

By that time the Admiral had been with us a little while, and we had debated all neceſſary Points, we came to this Reſolution concerning the future diſpoſal of the Ships we had here, *viz.* that two of them ſhould be diſpatch'd to the *Moluccaes* ; and the other two ſhou'd take in the Lading of Pepper we had gotten, and ſo go for *England*.

*A.D. 1605. Two Ships ſent to *Banda*.

Accordingly *January* the Eighteenth *, the two Ships ſet Sail for the *Moluccaes*, and the Iſles of *Banda*, in bad caſe enough, for want of ſtrong and healthy Men ; but the others that were bound homewards, (what by the loſs of their Captains and Maſter, and of a conſiderable number of the common Sailors) being thereby reduc'd to great Straits for Men, were detain'd till *March* the Fourth. Neither cou'd they then have got out upon that very account (ſuch havock had the Diſtempers of *Bantam* made of our Company), if we had not hired a Sett of Guzeratts, and *Chineſe* Sailors, to aſſiſt in the Voyage, to our very great coſt and charge. And now we had (tho' againſt our Wills) a pretty long Vacation from all Matters of Trade and Buſineſs, the whole Country almoſt being taken up, in Preparations for the Triumphs and Shews, that uſually attend the Ceremony of the King's Circumciſion.

Two more for *England*, laden with Pepper.

The King of *Bantam's* Circumciſion and Publick Shews at that time.

The firſt Scene that entertain'd the Eyes of the Spectators (and which is indeed but preparatory to the reſt), is a lofty Pageant, brought out into the Green before the Court-gate, in which are plac'd three Chairs of State, the middlemoſt, and moſt rais'd, for the King ; the other two for the next Heirs to the Crown.

All round the Rails that encompaſs the Green, are plac'd the King's Guards, both Shot and Pikes, to the number of Six hundred, or more ; and here they entertain the People with Martial Exerciſes, for ſeveral Days together, before His Majeſty appears.

And at this time, having an opportunity to make a more nice Obſervation of their Diſcipline and Furniture, it may not be amiſs to add a few Remarks to that purpoſe.

Javan Diſcipline.

The *Javan* Soldiers, when they ſtand drawn up in a Body, are regularly placed in Files, according to the Method us'd in other parts of the World ; but when they march, they don't obſerve the uſual ways of going ſo many Men a-breaſt, but march one by one in a ſingle Line, carrying their Weapons bolt upright. Their Pikes are tolerably good ; but they are very unſkilful in the Management of Fire-Arms : And therefore to Grace this Solemnity the more, the Protector borrow'd Shot both of us and the *Dutch*.

Their Drums are huge great Pans, made of a ſort of Metal they call *Tombegs*, and yield as pleaſant a Noiſe as one may imagine a Porridge-pot, or the Bottom of a good ſounding Tub wou'd do.

Their ordinary Colours do reſemble ours, but their Standards and Ancients differ much : For the Stuff of the

Ancient is very high, and bends at the Top like a Bow, from whence the Colours which are hardly a Yard in breadth, hang down with a long Pendant. But to return to the other Circumſtances of the Shows.

The Order of the Show.

After all things were made ready to render the Appearance as ſtately as they could contrive, the King was brought forth (tho' me thoughts in ſomething an indecent manner) ſitting aſtride upon a Mans Neck, and in that poſture was carried up to His Chair of State in the Pageant. Being plac'd, the ſeveral Companies that Compos'd, the Show began to ſet forward.

Firſt a parcel of Shot, then the Pikes, in the midſt of which were ten or twelve Tombagas, which being rais'd a Note each above the other, made that ſort of Muſick, more like ringing of Bells than beating of Drums.

After theſe came a Company of Targetiers and Dartsmen, which were follow'd by a ſhow of Beaſts and Fowls, partly alive, and partly the work of Art; but ſo curiouſly done, and ſo much to the Life, that Art and Nature were very hardly to be diſtinguiſh'd in that Appearance.

The next was a crew of Dancers, Vaulters, Tumblers, and Players; at the Heels of which advanc'd an Army of Women, diſpos'd and led on by ſeveral grave motherly old Souldiers, whoſe buſineſs was to order the March, and ſee that every one kept their aſſigned Places. Theſe Women had their Hands all full of Preſents, but ſuch as were of an inferiour Degree; for after them came all the Rich and Noble Offerings made by the Courtiers, and all the Lords and conſiderable People of the Country; who always (ſuch is the Cuſtom) preſent the King at the Ceremony either of a Coronation or Circumciſion.

The Party that brought up the Rear, were the Sons of thoſe great Men, that had made the Preſents dreſſed and attended after the manner of the Country, to the higheſt Degree of Pomp and Bravery.

Theſe young Nobles all came up to the King's Pageant, and made their Reverences to him, and then caſting their Preſents at is Feet, ſate down themſelves upon Mats ſpread upon the Ground for that purpoſe.

The Engliſh Preſent.

After this all the Muſick begins to ſtrike up, which is intermixed with ſeveral Volleys of Shot; and in the mean time the Tumblers and Dancers perform their ſeveral parts of Activity, and the Martial-men do all their Exerciſes before the King. We alſo (to comply with the Cuſtom) made our Preſents to the King, which tho' not for the richneſs and coſtlineſs, yet at leaſt for the prettineſs and ſingularity of it, was very grateful to him and the Company, and it was brought along in this Order.

Firſt march'd a couple of Javan Pikes, which were followed by 30 of the comlieſt Boys we cou'd get dreſt, in very rich Apparel; immediately after them was brought upon a Carriage a curious Pomegranate-Tree, taken up all entire by the Roots, and placed in a large handſome Frame. About the Roots were laid green Turfs of earth, ſo that it look'd as if it were ſtill growing, and all the Branches of it were laden with Fruit, ſome fully Ripe, ſome Green, and ſome yet in the Bud. Amongſt the Boughs ſate ſeveral little pretty Birds, which we had faſtned there, and notwithſtanding their confinement chirp'd as merrily as if they had been rambling in the open Air. At the bottom there were ſeveral Milk white Coneys, that ſate nibling the Graſs and Plants that grew upon the Turfs, and ſome furious Serpents, that look'd as if going to ſeize a Prey; which though not Natural, were yet ſo nicely made by the *Chineſe*, that any eye might have been deceiv'd unleſs upon very good examination. This ſcene of ours in which Art and Nature were both conſider'd, and to the beautifying of which, they contributed their ſeveral Shares, prov'd as Entertaining as any part of the ſhow; and I don't know but we came off as well as the beſt Lords in *Java*. In ſhort the King accepted it, he was pleas'd with it, and tho' other things of ſome value went along with it (as pieces of rich Cloth and Stuff, and Caſes of Piſtols) yet this beſt ſuted his puerile Fancy and Temper; and 'tis no matter for his being but a Child, for he was a King, and that was enough to give our Performance a Reputation.

The King of *Jacatra's* Show.

The King of *Jacatra* a Tributary to him of *Bantam*, came ſhortly after to do Homage to his Sovereign, and to make his Preſents too upon the ſame occaſion. This Ceremony was performed with a great deal of State and Magnificence on the part both of the King that received, and the King that did Homage. The Shows preſented, were very agreeable and fine, the Guards and Attendance numerous, the Preſents coſtly and valuable; but ſome things there were which being extraordinary to us, deſerve a more particular Mention.

The *Matchan* ſtrange Beaſt.

Beſides many ſtrange ſorts of Fowls, and as many of Beaſts, which were brought in their Order: There was one Beaſt which they call a *Matchan*. This Creature is ſomething bigger than a Lion, and every whit as proud and ſtately; it has a noble Skin, full of Red and White ſpots, intermixed with long black Strakes, which run down from the Back quite under the Belly. It is extreamly fierce and ravenous, and a very ſtrong and ſprightly Creature withal, and will (which I have been an Eye-witneſs to) leap more than 18 Foot at one ſingle leap after a Prey. They are very often hunted by the King and Court; but conſidering how eaſie 'tis for a Creature that Jumps at that rate, to leap upon a Man's back in the middle of his Sport, it ſhould appear to be one of the moſt dangerous Games in the World: and it ſeems they do very often make a Breakfaſt upon the Javans, when they catch them ſtragling out in the Woods.

For works of Art preſented at this time, there was a Giant of 30 Foot high, and a horrible Devil of much the ſame ſize.

An Artificial Garden.

But the moſt entertaining Pageant of all, was that of a Garden, adorned with all ſorts of Plants and Flowers; in the middle of which was a lovely Pond, where various ſorts of Fiſhes were to be ſeen playing about; and beſides this, all the kinds of Fiſh both great and ſmall which are known in thoſe Countries were brought in, either in Life, or the proper artificial Repreſentations.

After all theſe Shows were over, His Majeſty was carried (upon a Friday, which is their Sabbath) in his own Pageant to Church, and there Circumcized according to their way. And now 'twas time for Sport and Diverſion to give way to Trade and Buſineſs (which on thoſe Occaſions had been long neglected) to be reviv'd again.

In order to which (very happily) our Admiral came into the Road *July* the 24th from his *Molucca* Voyage, having gotten a good quantity of Cloves towards a lading, we not much doubting in a little time to furniſh him with the reſt. And we had gone on in the Courſe of Trade to much better purpoſe than we afterwards did, if ſome unhappy Differences with the *Dutch* had not given us a Diſturbance. Many times before, quarrels had riſen between us, but things never came to that Extremity that they did now, and in which poſture they laſted good part of the time of our ſtay at *Bantam*. They cannot themſelves charge us as being the Aggreſſours, ſince 'twas manifeſt to the whole City that they themſelves were ſo.

Frayes with the *Dutch*.

The firſt thing that gave occaſion to our after rough handling of them, was the abuſe of ſome of our Men, who came home bleeding to us, and by their Wounds gave ſufficient Proof of the Violence the Dutch had uſed towards them. Upon this our General ordered a ſmall Party to Arm themſelves, and go out into the Street to give thoſe rude Fellows a little Correction, which was ſo effectually performed by us, that the Streets were quickly clear'd of them, and they were oblig'd to retire to their own Houſe. The *Dutch* Merchants came to enquire into the Reaſon of this Proceeding on our part, but underſtanding, that their own Men were the Aſſailants, they ſeem'd to be eaſie, and we parted very good Friends. But when this News came to Court they had ſo little Pitty there, that when ſome about the King told that ſome of the *Dutch* Men were killed, Anſwer was made again, It had been no matter if they had all gone the ſame way. Yet all this paſſed off, and the Friendſhip and good Correſpondence between us was as great as cou'd be deſired. The *Dutch* Merchants invited our whole Company to a Dinner, and no People could underſtand one another better than we did. The Quarrels always begun amongſt the raſcally underling People of both ſides; the better ſort had more Sence and Prudence than to fall out, becauſe their drunken Sailors went together by the Ears.

But made up again.

A new Quarrel managed with Violence on both ſides.

September 22d our General ſent to Compliment the *Dutch* Admiral lately arrived at this place from the Iſles of *Banda*, and this very Day on which the Civilities were at the higheſt, the Squabbles and Feuds were unhappily ſo too. The miſchief was begun by a drunken *Dutch* Man, whom, if his Liquor had laid up faſt aſleep in the Rack-houſe, it had been better both for us and them. Our General was ſitting at the Door diſcourſing with a Man of ſome Faſhion, when this Gentleman of the *Nether-lands* comes by pretty well blown up with the Fumes of the Rack, that the World ſeem'd to go round in his Head, and being no ſmall Fool in it in his own Conceit; he very fairly comes to take his place accordingly, and ſo claps down upon the Bench between the General and the other Perſon. The General to expreſs his diſlike of this ſaucy familiarity, gave him a Box on the Ear and puſh'd him away, which his Company reſolved not to put up, preſently drew their Knives and Sables and came Hectoring about the Gate in a moſt furious manner. Being thus beſieg'd, our Men were oblig'd to endeavour to raiſe it, and ſo breaking out upon them, after a ſhort and ſharp diſpute, the *Dutch* gave ground, and retired for ſhelter to their old place the Rack-houſe; hither our Men purſued them, and tho' they had fortified themſelves, yet we burſt open the Doors, and having dealt ſome blows among them, brought away ſome Priſoners to our General. But we were quickly beſet by another party of them, who came to the others reſcue, and now the point was tried by Club-Law again, and the broken pieces of Pikes, Halberds and Faggot-ſticks flew about the Streets like wild. This hot Work continued as long as the other party thought fit to ſtay by it, but they did not run to the Rack-houſe now, but to their own Houſe, which was in no Danger of being broke open. The truth on't is, the Confuſion and Noiſe was great, and ſome Blood ſhed of both ſides, tho' that that was, came moſtly from broken Pates, there being no Hearts pierc'd, or Bodies dangerouſly mangled in this encounter. Tho' 'tis certain they abſolutely concluded upon the Ruin of us all, and one of their Factious Ship-maſters went about from Ship to Ship, to raiſe Company and provoke them to land their whole force upon us. And they had at that time ſeven ſtout Ships in the Road, and we but two, ſo that the *Javans* thought us next kin to Mad-men to pretend to ſtand upon theſe Terms with the *Dutch* that had ſo formidable a Power at that time at *Bantam*.

And the Buſineſs was carried ſo far amongſt them in the Fleet, that Orders were actually given to kill all the *Engliſh* they could light of either a-Ship-board or aſhoar; which notwithſtanding wou'd not have been ſo eaſily put in Execution, ſince we had a conſiderable Force of Men, at leaſt ſuch as wou'd Fight luſtily, and late Experiences had taught us that our Enemies were not Invincible. But we are certain (whether they'll acknowledge it or no) that they were greatly beholding to us for letting them come off at ſo cheap a rate as they did in the laſt Battle, for 'twas manifeſtly in our Power to have cut off a great number of them, and the Blood of all the *Engliſh* was ſo throughly ſtirred at that time, that if our General had given but the leaſt word to that purpoſe, it had infallibly been done.

At the latter end of the buſineſs, the *Dutch* Admiral came with all his Company towards our Houſe, and was met by ours in like manner attended. When the matter was fairly ſtated and opened to him, he was ſo far from taking the part of his own Men, that he highly commended what ours had done: And whereas ſome of his Officers objected, That we complain'd, but their ſide bore all the Blows, as might appear by their broken Heads and Shoulders: He replied, That they were rightly ſerv'd, and for the future ſhould be made to practiſe better breeding.

Dutch and Engliſh part Friends.

This worthy Commander and our *Engliſh* General had all this while a perfect good underſtanding of one another, and ſo likewiſe all the *Dutch* and *Engliſh* Merchants and Officers ſhook Hands and parted in a very friendly manner. And afterwards by mutual Feaſtings and Entertainments, we endeavour'd on both ſides to perſwade each other as much as was poſſible, that we were heartily reconcil'd.

More Fires at Bantam.

Several Fires happen'd in the Town before we cou'd get away. One of them almoſt deſtroyed the *Dutch* Houſe, the Flame coming upon it with the Advantage of the Wind; and ours tho' out of that Danger, yet was not preſerved without a prodigious deal of Labour and Trouble. Twice the *Javans* (thoſe everlaſting Incendiaries) brought us into the extremity of Danger, and as often did we by the Bleſſing of Heaven, and the unwearied care of our Men, eſcape the Miſery they deſigned for us.

Theſe people are as troubleſome while they live, as they are bold, obdurate and daring when they are to Die. They count it the greateſt Glory to receive the fatal Stroke without any marks of Fear or inward Reluctancy: And certainly they do in this as far as 'tis poſſible for Fleſh and Blood to do, and ſome People can't be leſs concern'd at the paring of their Nails, than theſe *Javans* are (to the Eye) at the loſing of their Heads. This we had particular Opportunities divers times of ſeeing both in Men and Women, and amongſt the reſt, at an Execution perform'd a little before we came off, upon a couple that had ſtolen ſome of our Goods.

October the 4th, The General, and all the Merchants went in a Body to the Court to take leave of the King and Protector.

Sail for England.

The 7th we ſet Sail for *England*, which we did with no little ſatisfaction, conſidering what a place of Horrour and Confuſion *Bantam* had been to us almoſt all the time of our being there.

CHAP. XI.

The Second Voyage ſet forth by the Company, with four Ships, the Red Dragon *Admiral, the* Hector *Vice-Admiral, the* Aſcenſion *and the* Suſan, *under the Command of Sir* Henry Middleton, *Admiral. Taken out of Mr.* Claybourn*'s large Journal.*

WITH this good Fleet every way equipp'd for ſuch a Voyage, we ſet Sail from *Graveſend*, *March* 25th *A. D.* 1604. and the ſame Day of the ſucceeding Month, we came up with the Iſle of *Maio*, and went aſhoar there. The Natives were ſo rude to us as to make away with one of our Merchants, whom though we fought with a good Force up and down the Iſland, yet we could not recover him. He ſome how accidentally fell into their Hands, and they having him faſt, betook themſelves to their ſecret lurking places, where 'tis impoſſible for any Strangers to find them out. This Iſle and *Bonaviſta* bear S.W. by S. about 12 Leagues diſtance. The N. & N. N. W part of *Maio* is all very bad and foul Ground, and 'tis dangerous attempting to Ride there. Full North, from the high Hammocks there's a great ledge of Rocks from the Lands, ſome five or ſix Miles off, and a Mile without them you have 20 Fathom Water. On the Weſt ſide of the Iſle, you may borrow in 12 or 15 Fathom, till you come into the Road, where you may chuſe your depth.

Iſle Maio, the People uncivil.

Sick Men recovered at Soldania.

Having paſs'd the Line, we came to Anchor in the Bay of *Soldania*, *July* the 17th, we brought hither a great many ſick feeble Men, but carried them all away again ſound and perfectly recovered. The benign Air of the place, with the good refreſhment it affords, generally proves a Cure for moſt of our Marine Diſeaſes.

Arrive at Bantam.

We made a ſtay of five Weeks here, upon the Account of which long reſting time, t'was the latter end of *December* ere we got to *Bantam*. Here we found a *Dutch* Fleet in the Road, which at our Arrival made us the Civil Complement of their Guns as we did the like to them; and nothing paſs'd either between the Admirals or Seamen on both ſides but what was very friendly and good natur'd. Our Admiral went aſhoar to deliver His Majeſties Letter, and Preſent to the King of *Bantam*, which was receiv'd with a great deal of Ceremony. Our Fleet parted Company at this place, the *Hector* and *Suſan* were left here to lade Pepper, while the *Dragon* and *Aſcenſion* ſet out upon other Voyages; the Admiral in the *Dragon*, to the *Molucca*'s, and the *Aſcenſion* to the Iſles of *Banda*.

King's Letter and Preſent deliver'd to the King of Bantam.

We that made the latter of theſe Voyages, Arrived at the Iſles of *Banda*, *February* the 21ſt, and made a ſtay there of 21 Weeks. The buſineſs done was not conſiderable, but we have theſe few Obſervations to make relating to Geography and Sailing. The Lat. of theſe Iſlands is about 4 Degr. 40 Min. S. the chief Town of all is *Nero*. From the South part of *Amboina* hither, the Courſe is E. by S. to the South ſide 30 Leagues, and the going in is to the Weſt ſide. There's a high Hill in Proſpect which is alſo a Volcano, and continually belches out Smoak and Flame: This is a very good Mark, and to Sail right, this burning Mountain muſt be left on the Lar-board ſide, and the other great Iſland on the Star-board. The Entrance

is

Nautical Obſervations about *Banda* and *Amboina.*

Pulerin and *Puloway.*

is ſtrait and narrow, and not to be diſcover'd till you come within half a Mile of it. There's no Danger at all in ſtanding with the Iſle that has the Volcano upon it, even till you come within two Cables length; but on the contrary, Experience proves it to be the beſt way ſo to do, for at that diſtance you ſhall have 20 Fathom water, and ſo continuing to ſtand along ſtill about a Cables length, you ſhall have eight, ſeven, ſix Fathom, to the very narroweſt of all, where 'twill be five Fathom, and that laſt depth holds till you come into the very Road. If a Ship obſerves this Method, ſhe may go in without Danger; 'tis true 'tis ſomething ſhallow on the Star-board ſide in the narrow of the entrance, but this will eaſily Diſcover it ſelf. There are two ſmall Iſles that lie about three Leagues to the Weſt ſide of the going in, but there's no Danger near them but what a Sailor that has his Wits about him may perceive and avoid well enough; beſides they may be left on which Hand a Man pleaſes, either going in or coming out.

The Winds.

About theſe parts we found the Wind very uncertain, and ſhifting from the middle of *March* to the middle of *April*, and then they lie between the E. & S. E. full four Months, and ſometimes (as the People ſay) five Months; then they blow as long between the W. & N. W. and then two Months again variable; and in this manner do they fill up the Revolution of the Year. And farther as to the weather, we obſerved, That in the dark Moons 'tis moſt commonly very rainy and guſty, and a fair Day is reckon'd no other than an interruption of the uſual and ſetled Courſe of the Weather at that time.

An Account of Sir. *Henry Middleton's* Voyage to the *Molucca's.*

Dutch and *Portugueze* Fight at *Amboina.*

Dutch get the Caſtle.

Wars between *Ternate* and *Tydore.*

Engliſh protect the King of *Ternate* and the *Dutch* Merchants.

'Twas the 21ſt of *Auguſt A. D.* 1605, that we came back into *Bantam* Road from the Iſles of *Banda*: Our Admiral who had been at the *Moluccas* met us here again, and the moſt material Circumſtances of that Voyage were to this purpoſe. When they came to *Amboina*, they found all things involved in the Confuſions of a War, which was going on between the *Dutch* and the *Portugueze*. The *Portugueze* at that time were Defendants being poſſeſſed of the Caſtle, and the *Dutch* were endeavouring to drive them out and imploy a good Force for that purpoſe. The Defendants had certainly the diſadvantage of it in one reſpect very greatly, for all the Country people were violently ſet againſt them, and heartily wiſh'd their Ruin, and as much encouraged the *Dutch* in their undertaking. Indeed they ſent for them to come to their Aſſiſtance, and promis'd if they wou'd expel their inveterate Enemies the *Portugueze*, to reſign all into their Hands. In ſhort the *Dutch* gave their Summons to the other party to yield up the place, and they as obſtinately refus'd it; they made ſeveral Attempts to win it by ſtorm, but were ſtill repuls'd; yet at laſt they came to a Compoſition, and the Caſtle was ſurrendred to the *Dutch*, by that good Fortune become the Lords of *Amboina*. Upon this Account there was no Trade to be gotten by the *Engliſh* there, and the Governour of the Town (by the Command of the *Dutch*) poſitively refus'd us. So our Admiral proceeded in his Voyage to the *Molucca's*, where Affairs were in as troubleſome a poſture as they had been in at *Amboina*. There had been a War of a long ſtanding between the Kings of *Ternate* and *Tydore*, and it raged at this time with as much fury and violence as ever. Each party was back'd with a potent Aſſiſtance from abroad; the *Dutch* eſpous'd the King of *Ternates* Intereſt, and the *Portugueze* ſtood by him of *Tydore*. A very ſuitable Match in every reſpect, the Seconds being as hearty Enemies as the Principals; and beſides this new Quarrel having one of their own of a very ancient Date to ſet them on with the more eagerneſs. When our Ship was got up under the Land of *Tydore*, they ſpied two *Ternateen* Gallies coming with great ſpeed towards them, and making ſigns to them to ſtay; in the foremoſt of them was the King of *Ternate* himſelf, and ſeveral of his Nobles and *Dutch* Merchants all in a mortal Fear and Conſternation, upon the account of a parcel of *Tydorian* Gallies that were making out after them. They moſt earneſtly implor'd the Admirals Aſſiſtance in that Extremity, and deſired him to undertake their Defence againſt thoſe Adverſaries, into whoſe Hands if they fell, they muſt expect no Mercy. And tho' all was done that cou'd be done of a ſudden, and our Ship play'd upon the *Tydore* Gallies with her Ordnance, yet thoſe Deſperate Fellows wou'd not loſe their Prey, but got up with the hindmoſt *Ternate*, boarded her even within reach of our Guns, and put them all to the Sword in a moment. This horrible Execution ſtruck a deeper Terror into them than before; and now they promis'd that if our Admiral wou'd but be their Protector till they were out of Danger, they wou'd furniſh him with a mighty quantity of Cloves and other Commodities at *Ternate*. But theſe great Words came to little, as the event afterwards proved; and the vaſt Spicy-Mountain in promiſe, ſunk down to the dimenſions of a Mole-Hill in performance. And 'twas a good paſſage enough of the King of *Ternate* (who was by this means more beholding to us than we to him) that when he came aboard our Ship in that horrid Fright the *Tydore* Gallies had put him into, he ſhook and quiver'd at a moſt violent rate like a Man that was pinch'd with the extremity of weather; the Admiral thinking he ſhook for co'd (not imagining all the while 'twas his Fear) put a rich Damask Gown over his Shoulders to give him a little Comfort; and truly 'twas ſo comfortable that the King e'en kept it on (when 'twas on) for good and all, and carried away the Gown without taking any notice of making the leaſt offer to reſtore it.

Comes to *Tydore.*

Reports of the *Engliſh.*

The Admiral having at preſent taken leave of this Noble Prince, went away directly to the Iſle of *Tydore*. Here he met with a cold Entertainment, and little proſpect there was of doing Buſineſs that was any thing conſiderable. At the *Portugueze* Town, the Governour of the Fort ſent him word that the King of *Ternate* and the *Dutch* both had given the *Engliſh* a very ſcandalous Character, which for his own part he pretended to believe to be falſe and unjuſt. And at the King's Town he found the *Dutch* Admiral at his Arrival, who huff'd and made a noiſe that we had aſſiſted the *Portugueze* in their Wars againſt the *Ternateans* and them. This the Admiral prov'd by Witneſſes ſufficiently credible to be a Lye, and the other party was both convinc'd and aſham'd of the Slander. But the King of *Ternate's* Civility and Gratitude was very great indeed, if he join'd with the *Dutch* in giving that baſe Character of the *Engliſh* Nation, who had deſerv'd ſo well of him. One wou'd have expected it ſhould have been a little obliging to have a good warm Gown thrown over him in a cold ſhaking fit; or if not that, yet to be deliver'd out of the Hands of the *Tydorians*, who wou'd have cut His Majeſties Head off as ſure as ever it had a Crown on. But we can't poſitively charge him, tho' there is hardly any thing of a ſincere friendſhip to be expected from theſe little *Indian* Princes as far as their Intereſt will let them go; they may practice ſome little Matters of it, but they are entirely govern'd by that, and they'll ſtrike in with every Wind and Tide that ſerves their turn.

Dutch threaten the King of *Ternate*, if he Trades with the *Engliſh.*

However whether he really was or no, the *Dutch* thought him to be pretty much enclin'd to us, and therefore threatned at a barbarous rate, how they wou'd deſert his Intereſt, and join with the King of *Tydore*, if ever they found him, diſpos'd to grant us a Trade or Factory in his Country. And to diſſwade him by all the proper Motives they could think on; they told him a parcel of wretched Stories of the *Engliſh* Nation and at the ſame time magnified the Greatneſs and Power of their own King (as they call him) above all the reſt of the Princes of Chriſtendom put together. This was always their way to make People abroad believe they had a King in *Holland* and (to greaten the Idea of it) repreſent their Government as a Monarchy. There's no tolerable Reaſon to be given for this, and it muſt be acknowledged to be a downright Trick. 'Tis a piece of Vanity to ſay that they had no other Terms ſo proper as that of King to expreſs their meaning by to the *Indians* where they came, or that they cou'd not ſo well underſtand any other Account of their Government. The *Indians* know the difference between a Monarchy and a Commonwealth as well as they do, and wou'd have underſtood it if they had told them which theirs was. Was not there the Example (if there had been no other) of the Iſles of *Banda* before their Eyes, which were as abſolutely Commonwealths as the United Provinces? Why cou'd not they have told them plainly, without any thing of Fraud that their Government was ſuch as that of thoſe Iſlands? And then 'tis manifeſt beyond all Exception, that the *Indians* have words enough to expreſs any difference of Governments or Governours by. Their Language is not ſo barren, and if there be but honeſt People to ſpeak it, there need be no complaints for want of more Scope or Variety, nor no pretences of not being underſtood. Amongſt the *Mahometans* beginning with the ſupreme Title *Sha*, there follows *Sultan*, *Mirze*, *Immirze*, *Chan*, and ſeveral others; and amongſt the Gentiles or *Pagans*, there's the *Rajas*; the *Pangrans*, the *Sabandars*, the *Orancajus*, and other Terms, enough to give a juſt Idea of the Degrees of any perſons Power and Authority in the Government one ſpeaks of. And the *Indians* knowing all theſe Differences perfectly well in the ſeveral Frames of their own Conſtitutions, wou'd eaſily and naturally have underſtood the Proportions of them in other Foreign Governments, if they had given them a ſincere and ingenuous Information.

The Noble States General would not allow or bear them out in ſuch Practices.

But the *Dutch* as much as they hate a King at home are very fond of having one abroad, and not only ſo *, but they preſume to exalt him to a vaſt height above all his Neighbours, and make all other Princes very inconſiderable puny things, in compariſon to him. Yet however, to ſhew that notwithſtanding all their endeavours to leſſen the Reputation of the *Engliſh* Nation abroad, the Princes of thoſe parts did not think our King and Country ſo very contemptible, theſe following Letters to His Majeſty from the Kings of *Ternate* and *Tydore*, (which our Admiral brought with him) may be conſider'd.

The King of *Ternate*'s Letter to the King.

Fame of Sir *Franc. Drake.*

HEaring of the good Reports of your Majeſty, by the coming of the great Captain Sir Francis Drake, *in the time of my Father, which was about ſome thirty Years paſt: By the which Captain my Predeceſſor did ſend a Ring unto the Queen of* England, *as a Token of remembrance between us: Which if the aforeſaid* Drake *had been living, he could have informed your Majeſty of the great Love and Friendſhip of either ſide: He in the behalf of the Queen, my Father for him and his Succeſſors; ſince which time of the departure of the foreſaid Captain, we have daily expected his return, my Father living many Years after, and daily expecting his return. And I after the Death of my Father, have lived in the ſame hope, till I was Father of eleven Children: In which time I have been informed, that the* Engliſh-men *were Men of a bad Diſpoſition, and that they came not as peaceable Merchants, but to diſpoſſeſs us of our Kingdoms; which by the coming of the Bearer hereof, we have found to the contrary; which we greatly rejoice at. And after many Years of our expectation of ſome* Engliſh *Forces, by the Promiſe of Captain* Drake, *here arrived certain Ships, which we well hoped had been* Engliſh-men, *but finding them contrary, and being out of all hope of Succour of the* Engliſh *Nation, we were enforced to write to the Prince of* Holland, *to crave Aid and Succour againſt our ancient Enemies the* Portugals; *and according to our Requeſt, he hath ſent hither his Forces which have expelled the* Portugals *out of all the Forts which they held at* Amboina, *and* Tydore. *And whereas your Majeſty hath ſent to me a moſt kind and friendly Letter, by your Servant Captain* Henry Middleton; *that doth not a little rejoice us: And whereas Captain* Henry Middleton *was deſirous to leave a Factory here, we were very willing thereunto; which the Captain of the* Hollanders *underſtanding, he came to challenge me of a former Promiſe, which I had written to the Prince of* Holland, *That if he would ſend me ſuch Succours as ſhould expel the* Portugals *out of theſe parts, that no other Nation ſhould have Trade there, but only they: So that we were enforc'd againſt our likings, to yield unto the* Holland *Captains Requeſt for this time, whereof we crave Pardon of your Highneſs; and if any of your Nation come hereafter, they ſhall be welcome. And whereas the chief Captain of the* Hollanders *doth ſollicit us not to hold any Friendſhip with your Nation, nor to give Ear to your Highneſs Letters, yet for all their Suit, if you pleaſe to ſend hither again, you ſhall be welcome: And in Token of your Friendſhip which we deſire of your Majeſty, we have ſent you a ſmall Remembrance, a Bahar of Cloves, our Country being poor, and yielding no better Commodity; which we pray your Highneſs to accept in good part.*

Quis tulerit Gracchos de ſeditione querentes?

A Friend at a pinch.

TERNATE.

The King of *Tydore*'s Letter to the King's Majeſty of *England*.

THIS Writing of the King of Tydore *to the King of* England, *is to let your Highneſs underſtand, That the King of* Holland *hath ſent hither into theſe Parts, a Fleet of Ships, to join with our ancient Enemy the King of* Ternate, *and they jointly together, have over-run and ſpoiled part of our Country, and determined to deſtroy both Us and our Subjects. Now underſtanding by the Bearer hereof, Captain* Henry Middleton, *that your Highneſs is in Friendſhip with the King of* Spain, *we deſire your Majeſty that you would take pity of Us, that we may not be deſtroyed by the King of* Holland *and* Ternate, *to whom we have offered no wrong: But they by forceable means, ſeek to bereave us of our Kingdom. And as great Kings upon the Earth are ordained by God, to ſuccour all them that be wrongfully oppreſſed; ſo I appeal unto your Majeſty for Succour againſt my Enemies; not doubting but to find Relief at your Majeſty's Hands: And if your Majeſty ſend hither, I humbly intreat that it may be Captain* Henry Middleton, *or his Brother, with whom I am well acquainted. God enlarge your Kingdom, bleſs you and all your Counſels.*

TYDORE.

Now all Buſineſs was diſpatch'd, and we were ready for a Voyage homewards. But the Admiral taking his Leave at Court before he came away, a Letter was deliver'd for His Majeſty, (with a Preſent of Bezoar Stones) the Copy of which is here ſubjoyn'd.

The King of *Bantam* to the King of *England*.

A Letter given by your Friend the King of Bantam, *to the King of* England, Scotland, France, *and* Ireland; *deſiring God to preſerve your Health, and to exalt you more and more, and all your Counſel. And whereas your Majeſty hath ſent a General,* Henry Middleton, *he came to me in Health, I did hear that your Majeſty was come to the Crown of* England, *which doth greatly rejoice my Heart: Now* England *and* Bantam *are both as one. I have alſo received a Preſent from your Majeſty; the which I give you many Thanks for. I do ſend your Majeſty two Bezoar Stones, the one weighing Fourteen Maſſes, the other three: And ſo God have you in his keeping.*

BANTAM.

Our other two Ships the *Hector* and *Suſan*, had got their Lading of Pepper, and were gone away in *February*; and we ſet out to follow them the enſuing *October*.

Sail for *England.*

About the Cape of *Good Hope* we found the *Hector*, in a lamentable diſtreſs'd Condition: She was driving up and down the Sea at random, her Men all dead but ten, her Companion, the *Suſan*, loſt for three Months before, and was never heard of afterwards. Having refreſh'd ſome time in the Bay of *Soldania*, we all three ſet Sail for *England*, and came to an Anchor in the *Downs*, *May* the 6th, *A. D.* 1606.

CHAP. XII.

The Third Voyage ſet forth by the Eaſt-India *Company, with three Ships, the* Dragon, Hector, *and the* Conſent. *Capt.* William Keeling *chief Commander. Taken out of his, and Mr.* Finch (*Merchant*) *his Journal.*

The firſt part of the Voyage as far as *Sierra Leona*, we have no Account of.

[*The Voyage made by the* Conſent, *comes afterwards by it ſelf.*]

August, *An. Dom.* 1607.

'TWas to *Sierra Leona*, that we came back with our Weather-beaten Ships for ſome Refreſhment after the ſeveral Toils and Croſſes of the former part of our Voyage. Here we found the Comforts we wanted, and pleaſant Experience told us, we took the wiſeſt Courſe in coming hither.

Sierra Leona.

The King of the Country keeps his Reſidence in the bottom of the Bay; he is a mighty Prince amongſt the Negroes, and has ſeveral other petty Princes in Subjection to him; one whereof lives at a Town within the Second Court, and another on the other ſide the Bay. His Dominions ſtretch at leaſt forty Leagues up into the Land; and his Tribute is paid him in Cotton Cloth, Elephants Teeth, and Gold: Himſelf, with ſome of his principal Men, decently clothed in Fuſtian Jackets and Breeches, and ſome with Hats: But the Commons nothing but a Cotton Cloth

The King of the place, and his Dominions.

Cloth about their Waſtes, and hanging down before, and the Children ſtark naked.

The Natives and their Cuſtoms.

The Men and Women do all in general race and pink their Skins, in all parts of their Bodies: They do it with a great deal of Curioſity and Fancy, and 'tis the only Ornament that belongs to them. Their Fancy is not quite ſo good in the management of their Hair. The Men indeed have no certain Faſhion for theirs; ſome wear it in Tuffs and Bunches, others cut it away in ſeveral long Paths and Roads, running this way and that way, quite croſs their Heads. As for the Women, they have but one Faſhion amongſt them, and that is to cut it all clever off, and keep it ſhaved cloſe to the Skin: They pull off all the Hair from their Eye-lids, and file their Teeth ſo ſharp and picked, that I think they could go near to conquer a Bone, and might diſpute that point with ſome of their four-footed Domeſticks.

Their Diet.

They feed much upon Roots and Fruits, planting about their Houſes, Gourds, Potatoes, Pumpions, Plantanes, and *Guinea* Pepper: Herbs too are a part of their Fare, together with Cockles and Oyſters, which they get upon the Rocks by the Sea-ſide; and conſidering their Teeth, may eat Shells and all, without the trouble of opening. They have alſo ſome little Crops of Rice; but of this no more than juſt what's neceſſary for the Service of their Families, and that juſt by their Houſes too. Their Bread they make of a little Seed, or Grain, they call *Pene*, not much unlike the Seed of Winter-Savoury.

As for Fleſh they have very little of that, all the Varieties of this kind being only a few Hens, and a piece of wild Veniſon ſometimes from the Mountains, when they can get it. Fiſh indeed they have pretty good ſtore, and they are ingenious enough in Contrivances for Angling, after their way.

Taking Tobacco.

Tobacco is as much to them as half their Livelyhood; and the Women are as violent Smoakers as the Men. They preſs the Juice out of the Leaves, when they are green and freſh, and then lay them a drying upon a Sheard over the Coals, and ſo cut them for uſe: For they intimated by Signs to us, that the Tobacco would make them drunk, if they took it with all its ſtrength remaining in the Leaves. The Bouls of their Pipes are made of Clay, and very large; and in the lower end of them they ſtick a ſmall hollow Cane, of a Foot and half long, thro' which they draw the Smoak: And this they are not contented to let come only into their Mouths, but they muſt have it down in their Stomachs too, and ſo drink Tobacco in the ſtricteſt Sence.

Towns and Houſes.

Their Towns conſiſt of about thirty or forty Houſes, ſet together all in a Cluſter, cover'd with Reeds, and incloſed with Mud-Walls, as our Hogſties generally are. They have a Mat hung up inſtead of a Door, a parcel of Billets laid croſs one another, and cover'd with Mats for Bedſtead and Featherbed; and theſe Mats are alſo the Hangings of their Rooms. The Particulars of their other Houſhold-ſtuff, is quickly reckon'd up. Two or three Earthen Pots, to keep Water, and boil Meat in. *Item*, One Gourd for the fetching of *Palmito* Wine, and another for a Quaffing-Cup. *Item*, A few Earthen Diſhes for their Loblolly. *Item*, A Basket or two to gather Cockles. And Laſtly, A Knapſack made of the Rinds of Trees, to carry the Provant, with Tobacco and Pipes.

Their Weapons.

But their Martial Furniture ought to come into the Account too; which is a little ſhort Sword hammer'd out of a piece of Iron by themſelves, a Bow and Quiver of Arrows, headed with Iron, and poiſoned, or elſe a Caſe of Javelins pointed in like manner, and ſometimes both.

They are a ſtrong, big, well-made People, have ſome ſhare of Spirit and Courage too; and for ſo rude an Education as they have, tolerably Civil, and Well-carriaged. They are very honeſt and juſt in their Dealings, puniſh Theft with preſent Death, and are more temperate than moſt People in the Love of Women, keeping for the moſt part to their own Wives, of whom they are extreamly jealous.

Conditions and Religion.

Their Religion lies ſomething more in the dark, and I could not ſee enough of it, to know what it is; I queſtion whether they do themſelves. It ſeems to be a Hotchpotch of Chriſtianity, Judaiſm, and Heatheniſm; for they have *Portugueze*-Jeſuites amongſt them, and a Chapel; yet are they circumciſed, and keep Idols of Wood in their Houſes: Which of theſe three is the prevailing Ingredient in the Compoſition, I know not; only this I find, that the Jeſuites have taught them to obſerve ſome Holidays, and given them at leaſt ſome general Notion of a Supreme Almighty Being, which they ſeem'd to expreſs, by lifting up their Hands to Heaven, and other devout Actions of that kind.

The Products of their Country.

Limons and Palmitoes.

The Country yields a delightful Variety of very excellent Fruits, and theſe Trees grow here wild, and by whole Wood-fields, that would be eſteem'd mighty Rarities, and have a great deal of Nurſing and Attendance in other Parts of the World. Orange-Trees indeed are not ſo very plentiful; but Limons, and Palmito's, are like Oaks and Elms in other Countries; and there's a vaſt long Wood of the former, juſt by the Watering-place, near the Town.

The Palmito-Wine is the Strong Drink, (for the Small is Water:) And this the Men are ſo Good-natur'd as to drink themſelves, giving very little, or none to the Women.

Their way of climbing the Palmitoes.

They are wonderfully nimble and dextrous in running up the Trees; and I think, no Cat can climb better than they: For tho' there are no Boughs, nor Branches, upon thoſe Palmito's, nor any thing for a Man to hold by, except juſt at the top, being beſides of a great height and bigneſs, yet they mount up with a ſtrange ſwiftneſs, and come down again with their Gourd of Wine, with as much ſteddineſs and good order. All the aſſiſtance they have for this piece of Dexterity, is a Withey, which they faſten about the Tree, and their own middle, and then bearing their Body a little back, they raiſe up that part of the Withy that goes about the Tree, and ſo by the help of their Feet lift themſelves upwards, after a very clever manner, as eaſie to them as it appear'd ſtrange to us.

Plumbs.

Manſamilio's.

Beningenions.

Beguils.

Other Fruits.

Poyſonous Beans.

They have ſeveral ſorts of Plumbs in the Country, ſome very good and agreeable to the Taſt, of a Black and Wheaten Colour; the Black are the more eſteem'd, as being not only the larger, but the more Aromatick Flavour. Other Fruits are the Manſamilio's, reſembling a Wheaten Plumb, but containing a Fruit that proves very fatal to the Eyes, if any of it be accidentally ſpurted in, as is alſo that of the Boughs of the Trees. Beningenions, about the bigneſs of a Limon, and having a kind of a reddiſh Rind, a very wholſome Fruit. Beguils, as big as Apples, with a rough knotty Skin, which pared off, the Fruit eats like a Strawberry, and is like it alſo in Colour and Grain. Wild Grapes, of which there is great ſtore in the Woods; and they have a woody bitter Taſt. Beſides theſe, we obſerved a ſort of Fruit of a dark yellowiſh Colour, growing in Cluſters of ſeven or eight together, as long and big as a Man's finger, ſomewhat ſoft and downy, and having within the Rind, a Pulp of a ſweet and pleaſant taſt, but how wholeſome I dare not aver. But the moſt remarkable of all was the poyſonous Beans, growing upon great Trees in the Woods, almoſt like Beeches: We took Notice of three kinds of theſe, very different from one another. The firſt large and tall, bearing a Pod like a Bean, which contains four or five ſquare Beans, almoſt like the Seed of a Tamarind, incloſed with a hard Peel like a Shell, within which lies a yellow Kernel, which is a very dangerous Poyſon, and us'd by the Negroes for poyſoning their Darts; they call this Fruit *Oyou*. The ſecond ſort is leſs, the Pod crooked, of a very thick Rind, and ſix or ſeven Inches in the bending, and half as much in breadth, it incloſes five Beans an Inch long each. The third has Leaves like the former, but the Food much bigger, ſtanding on a ſtrong woody Stalk, thick and maſſy, a little indented on the ſides, nine Inches long, and five broad, within which are five Beans longer than the other, and called by them *Quenda*; and thoſe they ſay are alſo venomous.

Beſides theſe Beans, I have ſeen there Trees like Willows, which bear a Fruit like Peas-pods.

Fruit Gola.

Up further in the Country they have a Fruit, to which they give the Name of *Gola*; 'tis of the bigneſs of a Walnut, hard, reddiſh, bitter, jagged, and full of Corners, like that, and incloſed in a hard Shell. This is a thing mightily ſet by in the Country, and ſerves the two grand purpoſes, both of Money and Meat too; neither have they any other but this, which does as well amongſt them as Gold and Silver in other parts of the World. The other way they make uſe of it, is by Chewing, which they do, mixing it with the Rind of a certain Tree, which they are mighty fond of upon that account. One Man takes a mouthful, ſucking and turning it about for a while; and then he puts it into the next Man's Mouth, who plays his part with it in the like manner; and ſo it goes as far as 'twill go, all round the Company: They don't ſwallow down any part of it, but every Man is obliged to give it as entirely to his Neighbour, as he receives it himſelf, for Quantity at leaſt, whatever it be for Quality and Virtue.

Cotton.

In the inner parts of the Country, they have pretty ſtore of Cotton, of which they make a tolerable good Cloth, about a Quarter broad, for that little Covering they have before them.

Cambe.

There is a Wood too called *Cambe*, which dyes a good Red, and they uſe it about their Purſes, and Mats, for that purpoſe.

It may not be amiſs, beſides this general Scheme of the Vegetable Variety of theſe parts, to give a more particular Deſcription of thoſe more noted common Fruits, and their reſpective Trees, which are alſo of an equally conſiderable Uſe and Service to Mankind.

Deſcription of the Limon Trees.

The Limon-Tree much reſembles the Crab in ſeveral points, is very full of Prickles, and carries a ſlender Leaf like a Willow; it yields very plentifully, as the Crab-Trees do, the Fruit begins to ripen in *Auguſt*, and hold on upon the Tree till *October*.

Plantans.

That which they call the Plantan-Tree, ſeems to be an annual Plant, and in my Opinion, ought rather to be reckon'd amongſt the Reeds than the Trees. It is of a moderate height, and about the bigneſs of a Man's Thigh; it is not of a denſe, compact, woody Subſtance, but ſeems to conſiſt of ſeveral Orders of Leaves, or Skins, wrapped cloſe upon one another, almoſt in the manner of an Artichoke, it has nothing of Branches, but the Leaves ſhoot immediately out of the Trunk it ſelf, throughout the whole length of it, and are for the moſt part two Ells long, and one broad, having one long Rib going through the middle of them. The Plantans themſelves hang in Cluſters of ten or twelve together, each a Span long, and almoſt as thick as a Man's Wriſt, ſomewhat crooked, and bending inward; at firſt it looks very green, and then turns yellow as it ripens; and if you take them then and ſtrip off the Rinds, you'll find the Pulp within of the ſame colour, and a very pleaſant taſte. Beneath the Fruit on the ſame Stalk, hangs down a leafy Tuft ſharp pointed, which ſeems to have been the Flower; but whether there's any thing of a Seed or no, I am not certain; they give this Fruit the Name of Bannana's, and have good plenty of them. They are ripe in *September* and *October*, and will, if they are gathered green, ripen of themſelves, ſo as to be fit for eating in about ſix Weeks time, as we found by Experience.

Of the Guinea-Pepper.

Guinea-Pepper, a Fruit this Country ſhews too amongſt the reſt, tho' in no great plenty, grows wild in the Woods; the Plant is a ſmall thing, almoſt like Privett, or Prickwood, adorned with little ſlender Leaves, and bearing a Fruit reſembling Barberries in form, and of the ſame colour too, when ripe, only they don't hang in Bunches as Barberries do; but here and there two or three together about the Stalk; their Name for it is *Banque*.

Of the Pene.

The *Pene* ſpoken of before, of which they make their Bread, is a ſmall ſlender Plant like Graſs, the Stalk full of Seed, not encloſed in any ſort of Husk. This ſeems to be the ſame with what the *Turks* call *Cuſcus*, and the *Portugueze*, *Tſunde*.

Of the Palmito.

The *Palmite*-Tree is very ſtraight, high, knotty in the Rind, of a ſoft and yielding Texture within, wholly without Boughs, except at the top, and thoſe rather like ſo many Reeds than real Boughs, being all Pith in the inſide, only cover'd with a rough Rind; the Leaf is long and ſlender, in manner of Sword-graſs, or the *Calamus* Flags; and thoſe Reedy Boughs on which they ſtand, are beſet on both ſides with ſharp and ſtrong Prickles, ſtanding like the Teeth of a Saw, but much longer; the Fruit is about the bigneſs of a Cheſnut, it being a tough, hard, inſipid Kernel, incloſed in a much harder and more compacted Shell, ſtreaked with Threds on the outſides; the People call the Tree it ſelf *Toball*, and the Fruit *Bele*; which is indeed good for little, tho' they eat them roaſted. When they draw the Wine of this Tree, they cut off one of the Branches, with a Span of the Head, and making ſomething of an Inciſion, they faſten the Mouth of a Gourd to the Orifice, which in the ſpace of Twenty four Hours will be fill'd with a clear whitiſh Water, of a grateful reliſh, and ſtrong enough to make the Negroes drunk.

Oyſter-trees.

I ſee nothing in theſe parts like the celebrated Plant that has gotten the Name of Senſitive: But here is a Tree that ſhews a Fruit, which deſerves to be call'd ſo, ſince it really is ſo without diſpute; 'tis indeed all the Fruit the Tree can pretend to, tho' not to be imagin'd the natural and genuine product of it. The Tree is ſomething like a Willow in make and ſize, but the Leaf very broad, and almoſt as thick as Leather, bearing ſmall Knops like thoſe of the Cypreſs. The Boughs of this hang down a good way into the Water; for they ſtand all about the Bays, and are quite overflown, as it were, by the Tide; and thus together with the Mud and Slime that ſticks to them, the young Oyſters bred thereabouts faſten on to them too, and that in ſuch vaſt numbers, that one can hardly ſee any thing almoſt but long Ropes of Oyſters.

Animals; Fiſh, Fowl, & Quadru Peds.

Having taken a View of the Vegetable Productions of this Country, we may now look upon the Animals, beginning with the Fiſh; ſince the Oyſter-Trees, in which Plant and Fiſh are united, make that Tranſition juſt and natural: Here then we find Mullets, Rays, Thornbacks, Old-wives, Garfiſh, Cavallio's, like Mackarel, Pikes, Sword-fiſh, with Snouts a Yard long, Toothed on both ſides like a Saw; Dog-fiſh, Sharks, and Sharks which are like a Shark, but have a flat broad Snout like a Shovel; Shoemakers, having on each ſide the Mouth Pendants like Barbel, and making a grunting Noiſe like Hogs.

Their Fowl, are Pelican, white and as large as Swans, with a mighty long Bill; Hearns, Curlews, Boobies, Ox-eyes, with ſeveral other ſorts, whoſe Names we know not. Only their grey Parrots are not to be forgotten, as alſo their *Guinea*-Hens, a very beautiful Fowl, of the bigneſs of a Pheaſant, and party-colour'd.

As for Beaſts, the Mountains are full of Lions, Tygers, and Ounces; and the Woods of Monkeys, leaping about from Tree to Tree. And there ſhould be Porcupines too by the Quills of them, which the Negroes ſhew, tho' we ſaw none. Elephants are ſcarce here about the Bays, but up in the Country they are plentiful enough.

A ſtrange Beaſt.

The Natives told us alſo of a ſtrange Beaſt, which the Interpreter rendred a Carbuncle, very often ſeen by them, but only in the Night-Seaſon. This Creature, they ſay, has a Stone of an incredible Luſtre in his Forehead, ſo bright, that he is not only thereby rendred viſible in the darkeſt Night, but ſees alſo by the help of that Natural Torch, to find out and manage his Provender. It is a very ſhy, jealous, and timorous ſort of Creature, and furniſhed by Nature with ſo good Ears, that it takes the Alarm of the ſmalleſt Noiſe, being always in a liſtning attentive poſture. It has a kind of a Muſcular Film, or Skin, that plays forth and back over that lucid Stone, ſo that 'tis managed juſt of all the Word like a Candle in a Dark-Lanthorn, open or ſhut, as the Creature pleaſes; and this is the way of it when it hears any Noiſe, immediately the Filmor's clapp'd over the Stone, and the Light's loſt, and ſo the Animal preſerves its Liberty, by blundering its Purſuer, and leaving him in the dark.

This Account the Negroes give, with all imaginable aſſurance: And if there be ſuch a Luminous Stone as this, 'tis certain, that ſince 'tis impoſſible it ſhould ſhine by any Reflection of an external Light, that it muſt be from the Texture, Diſpoſition, and Inteſtine Motion of the Parts of that Stone, or ſome more active fiery Corpuſcles, tranſmitted into it from the Body of the Animal, and reſiding in its Pores, which upon the turning aſide of the Film, diſcovers ſuch a Phœnomenon as the Phoſphorus (or *Bolinian* Stone), expos'd to the open Air.

The Trade of the Country.

The principal Commodity of the Country, that can any way ſerve to invite a Trade, are Gold and Elephants Teeth, which the *Portugueze* have made ſometimes very advantageous Barter for; bringing only meer Toys, and Trifles, as Beads, Bells, Knives, Glaſſes, Copper, and Iron Veſſels, &c. But in this part of the Country, about the Sea-Coaſts, they will not part with their Gold at theſe rates, tho' they do up in the Heart of it, where the People live more out of the way of Converſe and Traffick, and leſs underſtand the Value of their own Commodities; here they will barter Victuals for your Toys; but I ſee no proſpect of procuring any thing elſe, that's very much to advantage.

See *Mair* and *Schouton's* Voyage.

The Point, or Cape, of *Sierra Liona* it ſelf, lies ſomething low and depreſſed; but the Land over it riſes extreamly high, and may be ſeen in a clear Day 14 or 15 Leagues off.

Land of *Sierra Leona*. The Rock to the Weſtward.

To the Weſtward of the Cape, ſtands the great Rock, which makes a Figure remarkable enough; you have no leſs than ſixteen, fifteen, ten, or nine Fathom Water, North and South with the Rock, at a Mile and half diſtance; and within half a Mile you have ſeven Fathom very good Shoaling between your Ship and the Rock; paſſing the Rock there's twenty Fathom, and Shoaling to eighteen, ſixteen, twelve, and ten Fathom, all the way into the Roads bordering very near the South Shore, for there's a conſiderable Sand that lies about two Miles from the Northern Shore, where the Sea breaks. We found very convenient Riding in ten Fathom Water, and good Ground, the Point of *Sierra Leona*, bearing W. by N. the N. point of the Bay bearing N. W. and the aforeſaid Breach, or Sand, N. N. E. * 'Tis to be obſerv'd alſo, That coming in we were N. & S. with the Rock, it bare with the S. Point, and with *Ilha Verd* N. by W. and S. by E. which *Ilha Verd* (by the way) is a very round Spot, and a particular Mark for all that are bound thither from the Southward.

A Sand on the North Shoar.

Note.

Obſervations on the Varia

'Tis remarkable, that all the Obſervations of the Variation, ſince our coming from 2 Degr. North Lat. to *Sierra Liona*, proved very erroneous; and we found, in order to ſet this matter to rights, that thirty Leagues muſt be added to each Diſtance, when we have reference to any Meridian Eaſterly of that Diſtance, and ſo many ſubtracted from it, when we refer to a Weſterly Meridian.

Experience taught us the Practice of this Rule hereabouts, and this a Man muſt make his ſureſt Guide, and not lay too much ſtreſs upon his Inſtruments, which may deceive the moſt skilful Obſerver.

Watering.

The Watering all hereabouts is very good and convenient, tho' the beſt Watering-place, as alſo the beſt Road too, is the Fourth Bay, to the Eaſtward of the Point of *Sierra Leona*. There the Courſe of the Water is pretty near to the W. S. W. and in the Spring-Tide it riſes at Flood at the leaſt twelve Foot.

Tides.

Latitude and Variation at *Sierra Leona.*

When you have the *Ilhar Verd* bearing from you, S. E. ½ Southerly, and the Point of *Sierra Leona*, N. E. by E. ½ Eaſterly, and about three Leagues from you, you ſhall in that Diſtance and Poſition, find a ſtrong Tide ſetting N. E. by N. The Road of *Sierra Leona* (by the beſt Obſervation we had opportunity of making) lies in 8 Degr. 36 Min. North Lat. and the Point bears near W. from it, and is about a League or four Miles diſtant. The Variation here alſo, as far as we cou'd find, was 1 Degr. 50 Min. N. E. our Courſe from hence being to the Bay of *Soldania*, we obſerved as follows: That the *Sugarloaf* and *Penguin* Iſlands bear S. by E. and N. by W. from one another, the Weſtermoſt South Iland, and the Point of the *Sugarloaf* bear S. S. W. and N. N. E. Between the Iſland and the Shore, 'tis at leaſt ſeven Miles, and about half a League from the Iſland to the E. S. E. is a conſiderable Breach, as alſo another to the South, at a Mile diſtance from it: Neither is that Flatt to be forgotten, which lies half a Mile from the Weſt Point of the Bay.

We refreſhed a few Days at *Soldania*, and then proceeded for St. *Auguſtine*'s Bay. In which Courſe, when by obſervation we were in 34 Degr. 4 Min. South Lat. by the Computation of our Ships Reckoning, we ought then to have been in 33 Degr. 14 Min. ſo that we were 50 Min. more to the South, than our Rules would allow of. And this was evidently the effect of the Current that we fell into thereabouts; from whence 'tis plain, that thoſe that depend upon their dead Reckoning, and the meer Rules of Art, without due reſpect had to the Currents, and the Allowances to be made on that ſcore, muſt needs fall into intolerable Errors; and this ſeems to be very good Reaſon why the Current ſhould be of greater force here, where we made this obſervation, becauſe the Land goes away with a very ſudden fall, N. E. and S. W. and we happening to open the Gut, were ſo far influenced by the ſtrength of it, as is before related; and there's as much Reaſon to ſuppoſe, that as a Ship goes more Eaſterly paſt the middle of the Gut, ſo the force of the Current will be proportionably diminiſhed.

Variation in 23, 37 Min. South Lat.

In South Lat. 23 Degr. 37 Min. the Variation was 15 Degr. 30 Min. But by a ſucceeding Obſervation more nicely made it came but to 15 Degr. 26 Min. This laſt Obſervation was made over the Land half a Degree high, otherwiſe the Variation would have been more; and theſe, eſpecially the laſt, or ſecond, ſeem to be ſuch, as a Man may repoſe a conſiderable degree of Confidence in.

Tides thereabouts.

The Tide here flows directly with the Eaſt; you have from ten, twelve, to twenty Fathom, between this and the Bay, but coming near the Point in the height of the Bay, you have no Ground at a hundred Fathom, till you come a great way in, and then there is from thirty to eight Fathom, tho' 'tis to be obſerved, that the deepeſt Water is upon the South ſide, the other being made much ſhallower in proportion, by reaſon of the Mud and Sand brought in by the Rivers which are on that ſide.

Depth to the Bay.

Cape *Auguſtine.*

The Tide at St. *Auguſtine*'s Bay, flows pretty near E. and riſes to a great heighth. It is indeed generally called Cape St. *Auguſtine*, but it is moſt certainly a Bay, and not a Cape, ſince it has no Point or Neck of Land, that bears out more than the reſt about it. There are Breaches on both ſides of it, lying about a League W. S. W. from the Main, which makes it very eaſie to be diſcerned.

Note, The Author of this Journal hath ſaid a great deal of *Soldania* too: But that place being ſo commonly ſpoken of, by almoſt all that go thoſe Voyages out of whom the moſt remarkable things of it have been obſerv'd already, we therefore omit his Account.

In the bottom of the Bay there are two Rivers running, the Stream of which is ſo violent, that the Flood never overcomes it, tho' it flows at leaſt two Fathom: And the Land all about theſe Rivers, is broken, low, ſandy Ground. There's very good Fiſhing at this place for Smelts and Shrimps; of the former of which we catched ſome that were a Foot, and of the latter ten Inches in length: And the beſt place for this ſort of Sport is on the Sandy Shore of the low Land, where all the Natives do ply with their Nets.

In the low Land, within the Woods, we found vaſt plenty of Water-Melons, which afford good Refreſhment: But the River yield us nothing at all, the Water of them is not good; and thoſe that go to try to fiſh in them, are in danger of having their Sport ſpoiled by Allegators. The Proſpect of the Country for a Mile or two about the Bay, is homely and unpleaſant, appearing rough, ſtony, and in ſome places over-run with ſmall Woods: It does not ſeem neither to be over-ſtocked with Inhabitants, we never ſeeing above twenty of them together. They are a tall, luſty, well-ſet People, not of ſo ill Features as many Blacks are; nor are they ſo unpleaſing to thoſe that converſe with them, as moſt of that Complexion are, by reaſon of that Musk-ſcent they carry along with them. Their black Hair is decently plaited, and frizled upon their Heads, and it is reaſonably long; they have no other Covering upon that part beſides their Hair, as alſo none for any other part of the Body, except a ſort of a Girdle made of Rinds of Trees, adorned all behind with ſome of their Trinkets, and other odd things, which are faſtned on with Allegators Teeth, and hang there partly for ſhew, and partly for occaſional uſe.

The Natives of the Country about Cape St. *Auguſtine.*

See *Davis's* firſt Voyage, and Captain *Keeling's*.

Beſides their Darts and Launces (which are their principal Weapons), they wear about them certain great Knives, like Butchers Knives, whether for common Service only, or the uſe of Fighting beſides, I am not certain; however, they are all (as well as the other Inſtruments) of their own making, and there are ſome Diſcoveries of Art, and ingenious Fancy, in the Contrivance of them.

They are a ſubtle ſort of People in the Matters of Trade, and were not to be charmed with pieces of old Iron, as other Barbarians were. They made us pay a conſiderable Rate for the Cattel we had of them, in compariſon to what we gave at *Soldania*, and other places: And then they would take no Payments in any Metal below Silver, do what we could. We gave them for three Kine, two Steers, and four Calves, no leſs than 19 *s.* the Value of which in old Iron, would have purchas'd Cattle enough at *Soldania*, to have ſtocked two or three good Farms: But then 'tis certain, that the Cattle here are far better than at *Soldania*, tho' the make of them is much the ſame, having Bunches on their Backs like Camels, as they have, only theſe ſtand a little more forwards. But beſides the ordinary ſort of Cattle, as Sheep and Cows, which are in this Country very large and good, there are ſome which it boaſts of, as its own peculiar Rarities. The Woods afford great ſtore of thoſe Creatures, which for their Lovelineſs are called by ſome the Beautiful Beaſt; 'tis about the bigneſs of a Monkey, has a ſmall Head, and a very long Tail; the Furr of it is extreamly fine, aſh-colour'd, and ſtreaked with black and white. We killed ſome of them with our Guns, not being able to take them alive.

Beaſts, and other Creatures.

The Beautiful Beaſt.

The Camelion.

The Camelion is alſo a Native of this Country; and the Experience we had of them aſſures us, (if there were not other Reaſons for it), that the Vulgar Notion of them as Creatures that live upon the fluid Air it ſelf, without any other Suſtenance, is falſe, as well as ridiculous: We quickly found one of them, that we kept, a hunting after Flies, and as ſoon as ever he had the deſired Prey in his Eye, he ſuddenly darted ſomething out of his Mouth; what, I know not, unleſs 'twere his Tongue, but of a very ugly figure and appearance, and ſtruck the Fly, and eat it; and all this with ſuch ſpeed and nimbleneſs, that one can't imagine any cunning Spider, to ſurprize with more violence and ſuddenneſs than the Camelion do.

Fowl.

There are Bats here almoſt as big as Conies, headed like a Fox, and a thick hairy Furr: In all other Points like Bats: We meaſured the Wings of one that we killed, and found them, upon a full ſtretch, to be an Ell in length.

We ſaw here alſo good ſtore of Baſtard-Hawks, Herns of ſeveral colours, white, black, blew, and mix'd of divers together: And a ſort of Birds, whoſe Names we knew not, of as many Colours as one can well imagine, and tufted upon their Head like Peacocks.

Lizards.

Inſects.

Lizards are very common here; and a ſort of Inſect that has a great number of Legs, almoſt like our Crabbs, and hangs about upon the Trees, encloſed within a double Cod of white Silk. In the Trees upon the Hills are abundance of large Spiders, that carry their Webs from one Tree to another; and ſpin very ſtrong ſubſtantial Silk, of a yellow Colour, and that as good a Yellow as if made ſo by the fineſt Dye.

Vegetables.

Strange Plants.

As for Plants, beſides the Tamarinds, and the *Semper-vive* which yields the Aloes, here's a Plant ſomething ſtrange and peculiar; which, according to the beſt Judgment I can make of it, imagine to be a wild Coco-Nut: 'Tis of a ſhrubby Nature, and comes up with ſeveral prickled Stalks, very near two Yards long, and at the end of each ſtands a Leaf, indented half round like Sword-graſs, and as big as that of a Cabbage: Out from the tops of theſe Stalks, amongſt the Leaves, ſhot forth great numbers of woody Branches, as thick ſet with Fruit as ever they can ſtand one by another, of the colour and bigneſs of a large *Catharine* Pear, and like a Sheeps-bell in form, with a Rind bearing forth near the Head; flat at top, and ſmooth within, which Rind is hard Cortex, almoſt like the Coco ſhell, and within that the Kernal, which tho' it be hard, yet it may be eaten, and contains about a Spoonful of a pleaſant, cool, limpid Water, pretty much reſembling that of Coco. Here's a Tree too, as large and as big as a Pear Tree, very thick ſet with Boughs and Leaves like thoſe of the Bay Tree, bearing a mighty great Fruit as round as a Ball, and hanging on a ſtrong Stalk divided by Seams through the whole length of it into four parts. The Rind is vaſtly thick and being cut when 'tis Green, it yields a ſort of viſcid Matter like a Turpentine; it contains a Kernel, of a darkiſh Colour, hard, bitter and every way ill taſted. And thus much for the Products of this Country.

The Phœnomenons of the Water here were pretty odd and ſtrange, it being at high Water very Freſh, and at low extreamly Salt again at high Water Freſh on one ſide of the Ship, and Salt on the other.

Note, that all along the Low-land from Eaſt to Weſt lies a ledge of Rocks half a Mile from the Shoar, you have two or three Fathom Water, proper for Landing, and as good Fiſhing as can be deſired. Beſides this ledge of Rocks there's a Branch four Miles from the North Point of the Bay, bearing S. S. E. and then in the Road it ſelf the Water is very deep in moſt places, and the Ground foul and full of Pits, ſo that all things conſidered, this Bay ſeems to be no place for Ships to Refreſh at.

We ſet Sail from *Auguſtine* Bay to *Zoctoare*, and in South Lat. 15. Degr. 42 Min. by the difference of the way really made, and what in Judgment might here be allowed, we found the influence of the Current, which runs pretty ſwiftly there, and as it ſhould ſeem leſs to the S. W. than to the S. For the Reaſon of this Current 'tis probable that the deep Bay between Cape *Corientes* and *Mozabigue* makes an Indraught or Eddy of ſome Streams coming either from the N. E. or more Eaſterly in at the N. E. of St. *Lawrence*, and ſo along the Land to Cape *Corientes*: Or elſe that ſtream which is reported to ſet from St. *Lawrence* N. W. meeting at the Land of *Mozombigue* may be the falling away of the Land ſo drawn that way, which ſuppoſition if it be true, then 'tis an errour for any Ship to fall with the Land before ſhe is got nearer the North of *Mozombigue* Point. And 'tis to be obſerved upon this Principle that if ſhe does not fall too much Weſterly and bring the ſaid Cape too nigh her Meridian, ſhe will feel very little or nothing of this Stream.

Zocatoria. See after in this about the making the Aloes, as what the Practice and Trade for it, and other Commodities of the Iſland not here mentioned.

After ſome difficulties, we reached the Iſle of *Zocatora*, very well known in the World (and as much celebrated) for the Aloes it produces; the Fruitfulneſs of the Soil in the production of Dates is alſo no contemptible part of the Character of this Iſland. They have two Harveſts of this Fruit in a Year, the one of which fell in the Month of *July* at the time of our being there. When they are throughly Ripe, they are laid together upon Skins, and the Liquor which Diſtills from them, is that which they call Pate-wine. The Dates being thus drain'd, to Preſerve them they take out the Stones, and pack them up titely in a Skin; or at other times they cut them and take out the Stones before they are quite Ripe, and ſo lay them a drying, which is by far the better way, and makes them eat as if they were Candied: But they muſt be open'd at ſome time or other, for whole they will not keep. When the Harveſt of Dates comes, there's a Deputy of the Kings, that's appointed to preſide over the Concerns of every Valley, ſee all be clean gathered and brought into a certain place, and till this Affair be over, no Man dare touch a Date upon pain of Death. Then when all is carried in, the whole produce of the Iſland is divided into three equal parts, Firſt for the King, another for the *Arabs*, and the Third for the *Caffars*: But tho' they make the Diviſion equal, they don't make the Diſtribution, but Arbritrarily as they pleaſe. On the Strand there grows Cotton plants in ſome places; as alſo amongſt the Stones a ſhrubby Plant call'd Eſhac; it bears a thick round Leaf as broad as a Shilling, and Fruit like a Caper, which is of uſe in Sallets, and pretty much in requeſt for that purpoſe.

Products of *Zecatora*.

There are ſome Oranges too, but thoſe ſcarce and (like Butter and other Eatables) at *Zecatora* exceeding dear.

Strange Trees.

But the moſt remarkable of all next to the *Sempervivum*, or Aloes plant, is a large Tree of the height of a Man, or ſomething better: 'Tis very groſs and thick about the Root, and grows ſo very taper upwards, that at the top 'tis almoſt compleatly picked; the Trunk is all along very ſmooth, and has no Bark to cover it, nor no Branches but at the top, and thoſe void of Leaves; but they yield a reddiſh Flower, out of which a green Fruit diſcovers it ſelf in form and bigneſs not unlike a Date, and containing ſeveral ſmall white Kernels of a bitter Tart; the Branches alſo are very bitter, and are full of a reſinous Subſtance; whether this may be the Mirtle Tree or no, thoſe that have ſeen both may do well to determine: about the Shoar there are ſeveral delicate ſorts of Shells to be found, particularly your fine Pearl Oyſter-ſhells, as alſo the common ſort in abundance, and yet not one Oyſter to be had all over the Iſland, ſo that it is plain they are driven thither by Sea.

Civet Cats.

The Animals that deſerve the moſt notice, here are the Civit-Cats, which are taken in a Trap upon the Mountains; they are very numerous, and the Country people will ſell them at any time for twelve Pence a piece.

This Iſland is in the Hand of the King of *Tartach* or *Cuchem* in *Arabia Felix*, and has been in that ſtate of Subjection about 100 Years. The ſame Prince being alſo Maſter of the two *Irmans* and *Abladelcuria*.

The Government and Inhabitants

The Inhabitants are conſequently of two ſorts, the *Arabian Mahometans*, and the *Caffars* (or *Infidels* as they call the others). The old Poſſeſſours of the Iſle the *Arabs* are well proportioned Men, Tawny, wearing their Hair long, and a Turbant or linen Cloth wrap'd about their Heads, and no other Apparel, but another about their Middles. Their Legs and Feet quite bare too, except a ſorry pair of Sandals. They have ſome few Shot amongſt them, but their Weapons elſe are only a crooked Dagger and a Target.

The *Arabs*

They are Induſtrious, Diligent, Fair and Civil enough in their Behaviour, though not altogether ſo Honeſt in their Dealing. They are mighty lovers of Tobacco, and they love as well to Spunge it, where they may be permitted. The better ſort of Men or the Courtiers will throw a Pinſado over their Shoulders, in the manner of an *Iriſh* Mantle, and ſome make them Skirts of white Calicoe, as others alſo a pair of Linen Breeches like the Guzerats; but this is a high pitch of Dreſs, and not the common Mode of the Country. The Women wear Calico Shifts, Red, Blew, or Dark coloured, hanging down to the very Ground, covering their Faces with a ſort of a Veil, pretending a deal of Modeſt behaviour and ſhieneſs to be ſeen, tho' at the ſame time their Tempers are jolly, open and waggiſh enough. They are much better Complexioned than the Men in general, and take not a little care to ſet off the gifts Nature has endow'd them with, by all the Advantages of dreſs and finery. All that their Husbands are worth almoſt is laid out on their Backs, the Money that ſhould be in the others Pockets is all about the Arms and Necks of thoſe extravagant Women in Chains and Rings, Carkanets, and Mavillias, and no Body knows what Gambols beſides. They load themſelves ſo with theſe things that they can't ſtir, but make a noiſe and gingling like ſo many Morice-Dancers. And I believe that one of them take her with all her Particulars, would be near enough to furniſh an ordinary Toy-ſhop. I have ſeen one of them, and that none of the beſt ſort neither, and conſequently not ſo well ſet out with theſe Fopperies, that had in each Ear at leaſt a dozen Silver Rings as big as Curtain Rings, and thoſe larger ones had as many of a ſmaller ſize hanging to them, two Chains of Silver and one of Gold Boſſes wreathed about her Neck; ten or twelve Mavillia's of Silver, each as big as ones little Finger about her Wriſts; Plates of Silver almoſt like Horſe locks upon the ſmall of her Legs, and every Finger covered with Rings; ſuppoſing all this, 'tis no wonder that the Men are poor, and want Money to buy Tobacco, eſpecially conſidering that three, four, five or ſix of theſe chargeable Creatures fall to the ſhare of one Man to maintain, or perhaps more, according to their quality, for their Religion lays no reſtraint upon them in that point. A Man had need have his Wives ſent home to him ready furniſh'd and rigg'd, and if there be no other Portion in the caſe, her Parents ſhould dreſs her at leaſt, or if the Husband muſt do it at firſt for Cuſtom, he ſhould have the liberty of undreſſing her afterwards for Conveniency, and not pinch for want of Money, when his Wife has a load of Silver upon her Back. They do indeed want a little lightning in this Sence, tho' perhaps they may want a Grain or two of a juſt weight in another.

The Dreſs of the Women of *Zocatora*. Children.

Their Husbands are very Jealous of them, but they don't ſeem to be Jealous of their Husbands, nor ſo ſowre Tempered as they are neither. They'll turn up their Veil and glance freely upon a Stranger they like, and if he be a Merchant, and brings them Cryſtal, Amber, and Coral Beads, they'll Barter with him as long as he pleaſes, provided it be a good ſecure Place, where their Husbands may not come to ſpoil their Trade.

Children.

Their Children (except ſome few of the beſt ſort) go quite Naked, till they come to ſome years, for ought I know to Years of Marriage, for they Marry them here at ten or twelve Years old. Theſe People, like the *Turks* and other Eaſtern Nations, eat all their Victuals upon Mats or Carpets ſpread upon the Ground, uſing neither Knives nor Forks, but Fingers, which were made before both. Their Liquor at their Meals is only fair Water: Neither have they any other but Date-Wine, with which too they'll be ſoundly Drunk in Private, as Zealous *Mahometans* as they are.

Way of Eating.

For Entertainment, they have a thing they call *Coho*, which is a black bitter Drink they make of a Berry like a Barberry, brought from *Mecca*, this they ſup off very hot, and 'tis reckoned good for the Head and Stomach.

Coho a Drink.

As for the *Caffers*, they are People that live in all the Miſeries and Calamities of a ſervile State. The *Arabs* won't ſuffer them to have any Arms, nor are they allowed to kill any ſort of Beaſt for their Suſtenance, ſo that they chiefly live upon Fiſh, and that ſhare of the Dates, which the Conſciences of the *Arabians* will allow them. The Men are more Swarthy than the *Arabs* are, they wear nothing upon their Heads, and their Hair is exceeding long, and only a courſe Cloth of Goats Hair or ſome other Woollen about their Middle, except ſomething on their Feet in the nature of Scandals. They have a very rough barbarous Aſpect; and look always ſtaring as if they were Frighted.

The *Caffers*.

The Women have nothing about their Heads, but wear the long Calico Shifts like the *Arabians*, and ſtrain as far as ever their horrid Poverty will let them to be fine like them, and to ape them in all their Faſhions; thus they get Mavillia's of Iron, or ſome ſuch baſe Materials inſtead of Imitation of the Silver Mavillia's, and the other Womens Beads inſtead of Carkanets, and to make up for the want of other Ornaments they paint their Faces up and down in Patches with Black and Yellow, which makes them appear very frightful Figures. Their Language is different from the *Arabick*, which yet being the Tongue of the Conquerour they moſt of them learn.

As for their Religion they are meer Heathens as the *Arabians* ſay, and have all the Women in Common, obſerving nothing of Matrimonial Rites or Ceremonies, and beſides letting out their Women to Hire without any ſcruple to thoſe that will drive a Bargain with them for that purpoſe. How true all this is I am no judge, but this I know, that they have a Church, and there's an Altar, and two Croſſes in it, and 'tis certain that before the coming of the *Arabs*, the Religion of the Iſland was Chriſtian or Popiſh at leaſt, and that the coming of ſuch a People as the *Arabs* are amongſt them, ſhould make them Heathens, is no very ſtrange thing. I can't avouch any thing for their Religion, but I believe be it what it will, it can't be much leſs than that of their *Mahometan* Maſters.

Some think them originally to be a part of the Chriſtian Jacobites.

They have alſo one Town too (whether more or no I know not) to themſelves; the Houſes were built with Stone, covered over with Rafts and Palm-branches, ſecured with Doors and wooden Locks, pretty Artificially made.

At our firſt Landing thy ran all away at the ſight of us and left their Town at our Diſpoſal; the Reaſon was, becauſe they took us for *Portugueze*, who had made ſome Inroads upon them formerly, and carried away ſome of them Priſoners.

In ſhort as Matters now ſtand, they are a very unhappy People, and unleſs the Arabs would be ſo juſt as to quit the Poſſeſſion of the Iſland to them again, they can't do them a greater Kindneſs than to knock them all on the Head.

The Moors *at* Delisa *give us theſe following Inſtructions,*

That upon the Coaſt of *Mombaze* and *Magadexa*, there are ſome Years to be found lumps of Amber-grice, of an incredible Bigneſs and Weight.

* *Deliſa* a Road on the North of *Socotora* Iſle, in the *Arabian* Seas, where they were forced to ſtay till the *Monſon* freed them.

They reckon that the Monſon of the Southerly Winds commences yearly with the Month of *May*, and continues about 100 Days. The moſt Boiſterous Wind is in *June* and *July*, and a little way in *Auguſt*, for about the tenth or twelfth of that Month it begins to abate its Force; and ſoon after that, the North Wind comes on, with a great deal of Rain, which generally holds for three or four Months more. About this time 'tis that they prepare moſt of their *Aloes* at *Socotora*, which Drug is only the Juice of the *Sempervivum* put in Goat Skins to be dried. We gave at the rate of 150 Dollars for 125 *l.* neat of this Commodity, and traded for near 2000 *l.* weight of it.

* *Sempervivum*, the Plant from which they make their *Aloes*.

They reported farther that both the Weſterly and Eaſterly Monſons do return each Year ſucceſſively eleven Days later than the Year before, ſo that they make a compleat Revolution in the ſpace of 33 Years, beginning then the very ſame Day of the Month preciſely that they did ſo many Years before; ſo that knowing the time of their ſetting in any one Year, by the Allowance of the aforementioned number of Days, it may be computed for any other Year; but this Doctrine of the *Moors* ſeems hardly credible.

The Laws of the *Monſons*.

That as the Weſtern Monſon blows here all South, ſo the Eaſtern blows all North.

That after the 25th of *September*, no Ships can go from the *Red-Sea* to the Eaſtward, and that no Rain (commonly at leaſt) falls on the Coaſt of *Arabia* till the 70th Day of the Eaſt Monſon. 'Tis with this Monſon that they begin the Computation of their year: It holds between five and ſix Months, and when theſe Eaſterly Winds have ſo done their parts, after the ſhort interval of three or four Weeks calm and fair weather. The Weſterly Winds begin to come on, ſo that theſe two Monſons (with the little Intermiſſion between) do fill up the Compaſs of the Year. That in both Monſons there is an extream conſtant Sea-Gate upon the Coaſt of *Arabia*; and the Currents alſo conform themſelves to the Winds.

Note, that at *Deliſa*, the two Ships parted Company: Captain *Hawkins* in the *Hector* going for *Surat*, and Captain *Keeling* for *Bantam* in the *Dragon*.

That *Burrom*, *Mekella*, and *Cayxem* are good Harbours for both Monſons on the Coaſts of *Arabia*, but no places for Trade; on the other Hand that *Xae* is no Harbour for either Monſon, but drives a Trade for Iron, Lead and ſuch like Commodities. That 'tis very bad Riding at the entrance of *Surat* in the Weſterly Monſons, and contrarily here at *Deliſa* extreamly good for that very Seaſon, tho' two Miles either Eaſt or Weſt from the Road, there's always ſuch a Guſt of Wind, that no Ship can hold to Ride there: And this our Experience juſtified the Truth of.

Harbours on the Coaſt of *Arabia*, proper or not for the *Monſons*.

As for other places of Trade they informed us, That *Chaul*, *Dabul*, and *Danda Ragee puree*, were very rich trading Towns, and good ſafe Ports upon the Coaſt of *India*: As likewiſe that at *Saada*, *Ilbockee*, *Auzoane*, *Mootoc*, four of the Iſlands of *Comora*, there's abundance of Rice cheap and good, and the People by a kind Temper and Diſpoſition fit to be Traded with; whereas at *Jughezeegee* and *Malale*, two more of the ſame knot of Iſlands, both the People and the Commodity too, are ſo bad, that neither deſerves any regard. Theſe were their Accounts: For the Truth of which univerſally, we cannot avouch our own Experience, tho' as to ſome Particulars we know they are in the right, and may be ſo in all the reſt.

Trading places.

We ſet Sail from *Zocotora* in *July A. D.* 1606. directing our Courſe to * *India*. About 4 Degr. 2 Min. S. Lat. we had a proſpect of three Iſlands the moſt Northerly of which is a large high and woody Iſland, and between the two Southmoſt there lies a very dangerous Beach about the middle way; to ſcape which, the beſt way is to ſteer about two Leagues from the middlemoſt Iſland, where you have a very good Paſſage and keep the Breach near three Leagues to the South of you.

* Note that ſome of the Company were ſet down at *Surat*, whoſe Relations follow after.

Notes of the Iſland to Sea-board of *Priaman*.

To determine it more exactly for Cautions ſake, it lies (from the Eaſt end of the moſt Northerly of the two South Iſlands) full S. E. half a Channel over; and of thoſe two Iſlands the Weſtern part of the moſt Northerly and the Eaſtern Point of the moſt Southerly do bear juſt N. & S. 10 Leagues diſtance from each other.

Dangerous Beach.

We obſerve the two Hummocks of *Tecu* upon the Coaſt of *Sumatra*, with the High-Lands over them, to bear from each other N. and by W. and S. by E. half a Point Eaſterly, and the three Iſlands of *Priaman* to lie S.S.E. and N.N.W. being diſtant from each other about a Mile. Our Rates for Pepper at *Priaman* were 22½ Dollars the Bahar beſides 6 *per Cent.* Cuſtom. This Town and ſome of thoſe adjoyning will yield 2500 *Bahars* of Pepper yearly, and might be bought cheap enough if the Factory were ſettled there for the taking of it in at the beſt Rates all the Year round. Their Harveſt is only in *Auguſt* and *September*, and the moſt part of it is fetched away by the *Achenees* and the *Javans*, the *Guzurats* being prohibited Trading there by the King of *Achen*'s expreſs Order. It ſeems very reaſonable upon good Conſideration, that if our Ships put in at *Surat* and brought ſome quantities of Calicoes, fine Pintadoes, ſtriped and chequered Stuffs to *Priaman*, that there might be a very advantageous Trade driven with theſe Commodities, ſuppoſing (as was hinted before) that a Factory was ſettled there.

Priaman Iſlands.

From hence we proceeded to *Bantam*, ſetting out the latter end of *Septemver*. The Salt Iſland in the *Streights* of *Sunda* between *Sumatra* and *Java* lies (by our Obſervation) in 6 Degr. 6 Min. South Lat. This Iſland with the Point including the whole Bay, in which is *Bantam* Road

Salt Iſland.

lie E. N. E. and W. S. W. But the ſame Iſland with the higheſt South Land of *Sumatra*, and the N. W. Point of *Java*, do bear E. S. E. and W. N. W. The *Hummock* of *Sumatra*, and the Point of *Java* being about twenty Leagues diſtant.

The Streights of *Sunda*.

The Streights of *Sunda*, in which *Salt* Iſland lies, are properly made ſo by certain Rocks, and ragged Iſlands, ſeated in that paſſage between *Java* and *Sumatra*, which otherwiſe of it ſelf wou'd allow a Ship ſcope enough to paſs, without ſo much Caution as now is requiſite. The two main Rocks bear North and South of each other, and there's at leaſt four Miles between them: The Southermoſt is very near *Java*, and the Northermoſt more than half way, ſtanding between the Point of *Bantam*, and another low ragged Iſland bearing W. S. W. with that Northermoſt Rock. They are both of them remarkable for the Trees that cover them; and 'tis between theſe two, that you are to ſteer your Ship in your paſſage from *Sumatra* to *Java*.

We got to *Bantam* the beginning of *November*. Here we found the *Dutch* before-hand with us, having when we came, two Ships laden with Cloves, and two more ready to be laden with Pepper.

At this place alſo the Embaſſador of *Siam* gave us to underſtand how glad the King his Maſter wou'd be, to hold a Correſpondence with His Majeſty of *England*; and to what good purpoſe a Trade might be maintain'd in that Country. He aſſerted, That a Thouſand Red Cloths wou'd go off there in a Day or two, all their Horſes and Elephants having their Coverings and Trappings made of it. Beſides, by his Report they are full of Gold and precious Stones there; and it's ſeldom unfortunate or diſadvantageous, to have to do with a Country that affords ſuch Commodities.

Our Ship the *Dragon* was diſpatch'd from this place for *England*, whil'ſt we went on with the *Hector* for the *Banda* Iſles.

Dangerous Beach.

In this Courſe we found a very dangerous Sand, lying off the Weſtern Point of the Iſle *Jacatra*; and it's neceſſary, in order to ſail quite clear of it, for a Ship to borrow ſomething of the Iſland that ſtands oppoſite to the ſaid Point.

If you obſerve the Bay of *Jacatra*, you'll find the two Points that make it to bear E. S. E. and W. N. W. four Leagues diſtant from each other.

About ten Leagues from *Java*, lies an Iſland which we find not ſo much to the Eaſt, as the Maps do place it: But in order to the Deſcription of its Poſition as near as may be, 'tis enough to ſay, that the great Shoal call'd *Los Hermannos*, three Leagues from *Java*, lies N. and S. with this Iſland.

Noſſaſeres and _Celebes_.

The Iſland *Noſſaſeres* has 5 Degr. 30 Min. South Lat. and runs two or three Leagues in length N. W. and S. E. From hence to the *Celebes*, we reckon about Seventy ſix Leagues: As alſo between *Bantam* and the *Celebes*, we judge the common Computation of the diſtance, *viz*. Two hundred and thirty five Leagues to be pretty near the truth.

Deſolam Streights.

The higheſt South Land of the *Celebes*, and the Weſtern Point of the Iſle *Deſolam*, bear N. N. W. twelve Leagues diſtant, and the Weſt-end of *Deſolam*, with the low Eaſt Point of the *Celebes*, (which is the narroweſt of the Streights) bears South by Weſt, twelve or fourteen Leagues diſtant.

The Coaſt of *Deſolam* runs neareſt to the S. W. and the E. end of that, and of the *Celebes*, with the Iſlands that make the Streight, do lie in a right Line to the Eye, pretty near N. and S.

Cambina W. Point. *Buttone* Head-lands.

The Weſtern Point of *Cambina* is remarkable, as being a very high and round Hill: And the Iſle of *Buttone* no leſs, for the three or four conſiderable Head-lands which it makes.

Amboina bears from the Iſland *Buno*, E. by N. twelve Leagues, and lies ten Leagues long to the E. and from the Eaſterly part of it, the High-land of *Banda*, bears E. by S. ½ Southerly, 25 Leagues diſtant.

The Cuſtom at *Banda*, is, before we begin to Trade, to agree with them upon the ſeveral ſorts of Duties and Payments, as the *Rooba*, the *Serepinang*, the *Piſtelin*, which are paid either in Money alone, or partly Money, and partly Commodities. The Weights uſed here, are chiefly the *Cattee*, which poizes about 5 Pound 14 Ounces, *Averdupoize* Weight.

Under-hand Practices of the *Dutch*.

We made an Agreement with them of *Puloway*, for a Factory to be ſettled in that Iſland, which the *Dutch* ſet themſelves to oppoſe and hinder, with all the Art and Intrigue imaginable; notwithſtanding our Trade there ſucceeded in ſome meaſure, and we receiv'd from thence 225 ¼ *Cattees* of Mace, and 1307 ½ of Nuts, in *April*, *A. D.* 1609. But having Information that the *Dutch* had a Deſign to erect a Fort at *Banda*, and knowing what the Conſequences of that wou'd be, I propos'd to the chief Men the formal Delivery of *Banda* to us, in the Name, and for the Uſe of His Majeſty of *England*, before the *Dutch* began their intended Work. This Propoſal they ſeem'd to like very well, but yet deferr'd the coming to a final Reſolution upon the Point ſo long, that we had Reaſon to ſuſpect ſome under-hand Practices with the *Dutch*; and the preference, or at leaſt a ſecret Encouragement given them in their Deſign of Trade: Yet at the ſame time did theſe hollow-hearted Infidels, carry it with all the ſpecious Pretences of Friendſhip and Kindneſs to us in the World. They told us, we ſhou'd have the whole Spice-Trade at *Puloway*, *Pulorin*, and *Ayre Putee*: That it ſhou'd be Death for any Man to ſell ſo much as a ſingle *Cattee* of Spice to the *Hollanders*; and that if we wou'd not buy it, it ſhou'd all rot upon the Trees for them; for they wou'd rather die than be obliged to trade with the *Dutch*.

Treachery of the Natives.

The Inſolency of the *Dutch* at *Banda*.

But whether this was the Effect of a feign'd or a real Diſlike or no, 'tis no matter, ſince we are ſure, that not long after the Feud was real, and the Spleen and Hatred on the ſide of the *Bandaneſe* very ſtrong and inveterate. 'Tis to be granted, that they are a faithleſs inconſtant People: But then the *Dutch* carried it at a rude and inſolent rate amongſt them; and to all the reſt, added that of the building of a Fort; an encroachment upon their Liberty, that the *Bandaneſe* wou'd never pardon. And not only ſo, but they profaned their Sacred Ground too, defaced the Sepulchres of the Dead, and carried up their Fort juſt by the Moſque, or Temple; all which are the higheſt Degrees of Abomination amongſt theſe ſuperſtitious *Mahometans*. And as they did highly reſent it, that the *Dutch* had taken theſe Liberties with them, ſo they did by a ſevere Revenge taken upon them, make them know, that they wou'd not endure it: For having drawn the *Dutch* Admiral, with all his Council, into a convenient place in the Woods, upon pretence of conferring there, about Matters in diſpute between them, they fell upon them with a conſiderable Power of Men, and put every one to the Sword; and had not the Admiral's Soldiers, that attended at a little diſtance, been upon their Guard, they had ſerv'd them the ſame Sauce with their Maſter. Beſides this, the People ſeveral times conſpired the cutting off all of them that were there in *Banda*; nay, they did actually riſe upon them, and the Plot had been executed to the utmoſt rigour, had not we *Engliſh-men* interpos'd on their behalf. Many a time did we reſcue them out of the hands of the furious Mobb, and ſecure not only their Perſons, but their Goods and Effects too; for which Civility we were afterwards very handſomely rewarded: For theſe Tumults were in the Month of *May*, and 'twas but in *June* that they began to entangle us in our Trade, and lay I know not what Reſtraints upon us in our Dealings with the People of *Puloway*, and *Labatacca*; as that we muſt carry no Proviſions nor Ammunition with us thither, and that our Ships muſt lie open to be ſearched by them. And this, after a great deal of Conteſt, we were forced to ſubmit to, we being but Sixty two to above a Thouſand of them; and beſides, their Fort commanding all at that rate, that if we fell out with them, they cou'd, by the Terror of that, debar us from lading our Ships at *Banda*.

***Dutch* Admiral ſlain.**

Kindneſs of the *Engliſh* to the *Dutch*.

Their ill Requital.

Engliſh commanded out of *Banda* Road.

But theſe things ran a great deal higher in the ſucceeding Month of *July*, for then we had an Order ſent us in writing, ſigned by the Vice-Admiral, and all the reſidue of the Council, commanding us to withdraw our Ship out of the Road of *Banda*, within five Days after the Date thereof. Indeed, they had expreſs'd a great uneaſineſs under our Company ſeveral times before, and had offer'd to take our Debts there upon themſelves, and ſo diſcharge us, provided we would be gone, tho' we had not near our Lading: But now it ſeems they were come to a Point, and were reſolv'd we ſhou'd ſtay no longer: For they pretended (in their Order), that being determined to carry on a bloody War againſt the *Bandaneſe*, in Revenge of the Barbarities committed upon their Admiral, and his Company, they wou'd not have their Enemies ſtrengthned by *Engliſh* Powder and Shot; which they had good Reaſon to believe they wou'd, if we were ſuffer'd to lie there while the War laſted: Beſides this, they abſolutely forbid us Anchoring at *Nera*, *Labatacca*, or any other Roads belonging to places in their Power, during the Breach between the *Bandaneſe* and them. However, ſhortly after a Peace was concluded between theſe two Parties, ſo violently ſet againſt each other, and the *Bandaneſe* having no preſent Remedy, tamely endured the encroachment of the Fort.

Peace between the *Dutch* and *Bandaneſe*.

The *Dutch* and we too came to an Agreement about the Time of our Stay, and the Payment of our Debts at *Banda*, *da*, which by this Contract were payable to us at *Bantam*; we having Letters of Credit from the *Dutch* for that purpoſe.

Factory at *Bantam.*

Having diſpatch'd theſe Concerns, and gotten all the Lading of Spice and Nuts we cou'd get from the treacherous People we dealt with; we ſet Sail for *Bantam*, where by the time of our coming, the Factors had made ready 3481 Bags of Pepper. Here we reſolv'd to appoint a Factory, which we happily accompliſh'd; and adjuſting all things relating to it, addreſs'd for our Voyage for *England*, *October* the Third.

We ran about 650 Leagues in 24 Days, after our ſetting out from *Bantam*; and then we had 25 Degr. South Lat. and 24 Degr. Variation.

* Note.

* We find an Obſervation of *Linſchott*'s to be very true, *viz.* That generally your Eaſterly Winds coming about to the Northward, if it prove Rainy, the Wind preſently changes to the W. S. W. and blows there.

Donatal.

At the Weſtern-part of *Terra Donatal*, the Variation was about 8 ½ Degr. and South Lat. 31 Degrees, 27 Min.

Mauritius Iſle.

We had from ſome *Hollanders* this Account of the Iſland *Mauritius*: That there are two Havens there, the N. W. in 20 Degr. South Lat. the S. E. in 20 Degr. 15 Min. That the Iſland is between thirty and forty Leagues in compaſs, and the Variation 21 Degr. and N. W. That it is a very healthful place, and yields abundance of Turtles, Manatees, Fowl, Goats, and Hogs, tho' the latter not in ſuch plenty as the former, the Goats having been but lately tranſported thither by the *Dutch*.

* Note.

Near Cape *Agalhas* we have very little Variation, and the Latitude there is about 35 Degr. 26 Min. * A Man bound home upon this Coaſt, and finding no Weather for obſerving either Latitude or Variation, may ſafely truſt himſelf in Sixty Fathom Water, and Shelly Ground: When he finds it Ouzy, he may conclude he is very near this Cape *Das Agalhas*; and if he loſes Ground at 120 Fathom, 'tis certain he is paſt it, provided he be within the Latitude of 36 Degr.

We finiſh'd this Voyage *May* the Tenth, *A. D.* 1610; it being none of the leaſt remarkable Circumſtances of it, that as we went out, ſo we came in, with all our Company entire, neither Death nor Sickneſs (tho' both ſo often look'd in the Face, in the various Climates we had paſs'd through) having made any Breach upon us.

CHAP. XIII.

A Relation of Mr. Finch, *Merchant, concerning his Trade and Travels in the Mogul's Country; with an Account of the moſt remarkable Roads and Places of Trade in that mighty Empire.*

* This was part of the Company that was landed at *Surat*, while the Ships went on to the *Banda* Iſles, *&c.* as is before related. See the Particulars as to the Succeſs of the Factory, in Capt *Hawkins* Relation that follows.

* BEing come to *India*, we went all aſhore at *Surat*, where we hoped to have an *Engliſh* Factory ſettled in time. 'Twas our ill luck notwithſtanding, to meet every-where with People of baſe and perfidious Principles, to find a Knave almoſt in every Poſt and Place of Truſt, from the Court to the Cuſtom-Houſe, from the loftieſt Viſier, to the meaneſt Officer, 'twas all alike; there were Places and Titles of Honour to diſtinguiſh Men from one another, but Honeſty and Conſcience made no difference.

Decemb. Jan. February.

The *Portugueze* (the proud Uſurpers of Sovereignty in theſe parts, and very troubleſome Neighbours to the *Great Mogul*, as well as other *Indian* Princes) had about this time their ſhare of Calamities, as well as we. The *Mogul* indeed hardly dares pretend to chaſtiſe them, (ſo far from that, that he is forc'd to yield to all their Impoſitions upon his Ships, and not one can ſtir any way to Trade, but is obliged to take their Paſs, and pay for't) but the *Mallabars*, and the *Dutch*, between them, do pretty well pay thoſe Scores, and mortifie the Power of that inſolent ambitious People, which without ſuch Adverſaries to check it, one does not know what heighth it wou'd grow to. The *Mallabars* deſtroy'd, ſunk, and took, no leſs than fifty of their Frigats, in a very little time: And the *Dutch*, who were for playing higher Game with them, addreſs'd themſelves to the Siege of *Malacca*, with thirty ſtout Ships. In defence of this important place, the Vice-Roy of *Goa* has made all the Force that's poſſible; and what will be the Event of ſo great an Action as is like to be between them, is yet uncertain. But 'tis certain, that the laſt Year that place was fatal to them, and they receiv'd a moſt diſmal Overthrow by the *Dutch* then.

March, A.D. 1609. *Malacca* beſieg'd by the *Dutch.* As alſo the laſt Year.

The Account of that Action.

The Matter was thus: That the *Dutch*, with ſome of the *Indian* Princes, their Confederates, had laid a very cloſe Siege to *Malacca* both by Sea and Land; the Vice-Roy of *Goa* immediately came to relieve the place, and meeting with the *Dutch* Fleet, there was a long and bloody Fight between them, and great damage done on both ſides; inſomuch, that both Fleets thought enough done for the preſent, at leaſt till they had fitted up themſelves for a freſh Trial.

The *Portugueze* however (according to their Vain-glorious boaſting way) made a huge Noiſe of Victory, and thinking that they had quite cool'd the Courage, as well as ſpoil'd the Undertaking of the *Dutch*, fell to Feaſting and Revelling aſhoar, leaving the Fleet to look to it ſelf.

The *Dutch*, in the mean time, having ſtopp'd their Leaks, and new rigg'd at *Jor*, return'd with a Reſolution to try the Fortune of a Second Battel with them, and came in good time to ſurprize them in the midſt of all their Triumphs; ſo without any more adoe, falling upon the Fleet, they burnt and ſunk every Ship that was there, making beſides a cruel Slaughter: And if five or ſix of their Ships had not by chance been ſent away before, the whole Fleet that came upon this Deſign had entirely periſh'd. Beſides, quickly after this, a Sickneſs in that City ſwept away moſt of the *Portugueze* there, and the Vice-Roy amongſt the reſt; ſo that their Pride and Greatneſs by all theſe Strokes, was conſiderably humbled.

Achen ſaved from the *Portugueze.*

And 'twas very well for the King of *Achen*, and his Country, that the *Dutch* at that time attempted the Siege of *Malacca*, and gave the *Portugueze* ſo fatal a Blow as they did; 'twas the moſt ſeaſonable thing for them that cou'd poſſibly have happen'd, and no leſs perhaps than the Redemption of the whole Country out of the hands of thoſe Devourers: For the King of *Portugal*, who had before reſolv'd to drive the *Dutch* out of the *Indies*; as alſo, ſeverely to chaſtiſe all thoſe *Indian* Princes and States that had given Countenance and Encouragement to them (of which 'tis probable he reckon'd the King of *Achen* to be one) gave Orders to his Vice-Roy to go and begin with that Prince, and then proceed to the King of *Jor*, and ſo to the *Malucca's*, and about. And the *Portugueze* Fleet (wonderfully ſtrong and well furniſh'd) was at that very time before the City of *Achen*, ready to execute the King's Commands, when the News came, that the *Dutch* were aſſaulting *Malacca*, and all was like to be loſt there. This News drew off the whole Power of the Fleet, and deliver'd *Achen*; the Vice-Roy had no time (as well as Commiſſion) to attend the making of new Conqueſts, when old ones were ready to be loſt, and the Intereſt was ſinking in another place.

And 'tis not utterly improbable, that there were ſomething more than meer lucky Chance and Contingency in this matter; and that the *Dutch* (for ſome Obligation or other to the King of *Achen*) might ſtudiouſly give his Adverſaries this very ſeaſonable Diverſion: But however, 'twas, the *Portugueze* had the worſt on't, and came off with the loſs both ways.

The *Mallabars* ſpoil the *Portugueze.*

The *Mallabars* were a horrid Plague to them this ſame Year too, and took or ſunk of them, at ſeveral times, better than ſixty Sail.

The *Portugueze* Fleet coming into the *Indies*, loſt.

Add to all this, the loſs of the beſt part of their new Fleet, ſent out of *Portugal* to carry on the War againſt the *Dutch*: They were in all nine brave Men of War, and ſix Ships Attendants; they were ſcatter'd with bad Weather, about the Coaſts of *Guinea*, and never met together afterwards. About five of them did make a ſhift to get to *Goa*, and another of the Company was ſet afire by her own Men, to avoid her falling into the Hands of the *Dutch*, that then rode at the Bar hectoring and challenging the *Portugueze* Admiral to come out and fight.

Theſe ſame *Dutch* had fired two more of this Fleet a little before at *Mozambique*, (where alſo they had aſſaulted and batter'd the Caſtle, tho' they could not take it) and from thence they came directly for *Goa*, hoping to find the reſt; which Deſign being fruſtrated, they endeavour'd to provoke the *Portugueze* to a Battel; but they were wiſer than to accept of the Challenge at that time, and for all the Inſults of the *Dutch*, wou'd not ſtir out of their Port.

But they continue ſtill to make further Preparations on both ſides; ſo that in all probability, it won't be long before the Grand Controverſie depending between thoſe two Nations, in theſe Parts of the World, will be decided: The Buſineſs of *Malacca* is now in hand, which will ſerve only for an Introduction to greater things.

May.

Wars between the *Mogul*, and K. of *Decan.*

But the *Dutch* and *Portugueſe* were not the only Scufflers in this Country; for the *Great Mogul*, and the King of *Decan*, were carrying on a very hot and violent War. News came now, that this Prince, with a flying Army of 22000 Horſe, had beſieg'd the City of *Aurdanegar*, once the Metropolis of that Kingdom, and conquer'd by the brave *Ecbar*, this *Mogul*'s Father. But it ſeems, the Gevernour of that place was too cunning for the King of *Decan*; for pretending that he wou'd deliver up the City into his hands, upon Condition of withdrawing his Army ſome four or five Coſe diſtance, that they might march out with Bag and Baggage more ſecurely; inſtead of that, he aſſaulted them to rights (taking the advantage of their Security and Unprovidedneſs), and preſs'd ſo very cloſe upon them, that the whole Army was routed, and that with conſiderable loſs too.

* A Coſe is a Mile and half *Engliſh.*

But 'tis not much doubted, but the King of *Decan* will pay this Debt with Intereſt before it be long; for he's a very potent Prince, and his Subjects are ſome of the beſt Soldiers in the *Indies*; and have as good a Character for Land-Service, as the *Mallabars* have for that of the Sea.

July.

On the other ſide the *Great Mogul* went on with his Preparations, great and mighty, in proportion to his vaſt Deſign: He was now reſolved not to ſit down contented with the Conqueſt of the Kingdom of *Decan* only, but to take in all the Countries in the Southern part of *India*; he wou'd carry his Victorious Arms all through the Continent, and fix the Bounds of his Empire at Cape *Comori*.

To break the force of this mighty Storm, the Three mighty Kings, of *Decan*, *Viſapor*, and *Golconda*, with all their Powers, prepare to ſet themſelves in the way of it, intending to receive the firſt Shock; they reſolve to ſtand as Barriers between the *Mogul*, and that part of *India*; ſo that he ſhall not break in there, before he has broke through all their Armies. They are now on both ſides in their Tents in the Field, ready for Action, and expect only the breaking up of the Winter to begin it.

December.

We had alſo our ſhare of Troubles at *Surat*, occaſion'd by the Rumour of a certain Adverſary's approach, very formidable in theſe Parts: It was one *Raja Badur*, a kind of an Outlaw, that very often made great Spoil in that Country, marching up and down with a Body of Horſe, and taking his Plunder where he found the Towns moſt liable to a Surprize.

Badur, a great Outlaw.

He was a Deſcendant from the Kings of *Cambaya*, and had been King himſelf, if the Arms of the *Mogul* had not wreſted that Kingdom away from his Family: So that 'tis probable he turn'd Rapparee in Revenge, and took that Courſe to make himſelf Satisfaction, for the Wrong the *Mogul* had done him.

About two Years before this, he plunder'd and ſack'd the Great City of *Cambaya*, and was now coming to do the ſame to *Surat*; which put all the City into a moſt wretched Confuſion: But having Intelligence of the Strength of Men and Arms got together for the Defence of it, he went off, and did not make the Attempt.

But to leave theſe Affairs, I ſhall give an Account of my own Journey to *Agra*, and through the moſt remarkable Parts of *India*, together with the principal Places that occur in thoſe Roads, with the moſt ſerviceable Obſervations relating to them.

January. *Surat* deſcrib'd.

Surat, from whence I began my Journey, may alſo begin the Character. It ſtands ſome twenty Miles up in the Country, upon the Bank of a very fine River; 'tis a City of the middle ſort for bigneſs, very populous, and full of Merchants. About three Miles from the Mouth of the River, is the fam'd Bar, where Ships ride and unlade: Over this the Channel is very fair to the City-ſide, and able to bear Veſſels of 50 Tun Burthen.

This ſame River runs directly to *Bramport*, and as you come up it on the Right-hand ſtands the Caſtle, conſiderably large, well wall'd and moated, and as well defended and provided with Military Furniture.

Before the Caſtles lies the *Medon*, which is a ſpacious pleaſant Green, with a tall *May*-Pole in the midſt, about which they make their Paſtimes on Feſtival Days. The City lies all open on the ſide of the Green; but in all other parts 'tis ditch'd and fenc'd, and has three conſiderable Gates; without one of which is a fine Grove of *Mango*-Trees, where the Citizens uſe to go out and Banquet. There is a good *Alphandicar*, or Cuſtom-Houſe, and a Market-place for Horſes and Cattle; with ſeveral other Conveniences, better to be taken by Sight than Report and Deſcription.

The moſt conſiderable Things without the Gates, are (beſides the Grove of *Mango's*) the fair Pond not far off it, three Quarters of a Mile in compaſs, and ſurrounded on every ſide with Stone-ſteps, and beautiful Tombs, with a large pav'd Court, and great Trees, with an Arbour rais'd in it, where the *Indian Fokeers*, or Holy Men, ſit and ſhew their Piety in State.

Ranell.

Croſs the Water ſtands a ſweet little Town call'd *Ranell*, the Inhabitants of which are quite a different People, and ſpeak another Language; they are all of them Seamen by Employment, and go there by the Name of *Naites*, which may be very well deriv'd from *Nautæ*, and makes their Name and Buſineſs agree perfectly together. The Streets here are narrow, but the Houſes graceful and well built, with very high Steps before every Door: But 'tis the pleaſant Gardens that charm the Citizens of *Surat*, and invite them to come over and paſs away ſo many Hours as they do at this place. I know of nothing to abate the Pleaſure of theſe lovely Walks, but the infinite Number of great Bats that take up their Lodging in the Trees; there they hang by the Claws in the Boughs, in ſuch vaſt Cluſters, as wou'd ſurprize a Man to ſee; but the Noiſe and Squeeling they make is ſo intolerable, that 'twere a good Deed, to bring two or three Pieces of Ordnance, and ſcour the Trees, that the place might be rid of ſuch a Plague as they are to it. The Winter begins at *Surat* about the beginning of *June*, and holds to the latter end of *September*; but not with continual Rains, as 'tis at *Goa*; but with great uncertainty, and as much variety of Weather, Wind, Rain, and Thunder. It always takes its Farewell of them with a cruel Storm, which they call the *Tuffon*; which is alſo uncertain as to the degree of its Violence and Fury; but for the moſt part, obſerves this ſtated Courſe to come with extremity every two or three Year.

Multitude of Bats.

The Weather and Seaſons.

The Monſons for the South ſerve here in *April* and *September*; for the *Red Sea*, in *February* and *March*: Ships come hither from the *South*, in *December*, *January*, and *February*: From the *Red Sea*, in the beginning of *September*, after the Rains: From *Ormus* in *November*.

Nacampore.

Let us remove the Scene now from *Surat* to *Nacampore*, one of the firſt Towns of great Note in my way to *Agra*. In this Road begins that long Ridge of Mountains that runs from *Amadavar*, croſs this part of the Country, and amongſt which *Badur* the troubleſome Rebel has ſeveral Strong-holds, and has fortified himſelf ſo well, that all the Forces of the *Great Mogul* are not able to injure him; and this Series of Mountains continues it ſelf as far as *Bramport*.

Dayta.

Badur.

The next great Town is *Dayta*, encompaſs'd almoſt round with a River, ſtanding like an Iſland in the midſt of a moſt delicious Country that lies about it; and *Badur* its next Neighbour of Note, a Town as unpleaſant as the former was agreeable; a Dirty Hole, a Den of Thieves, and remarkable for nothing elſe, but its Dirt, and Dirty People; except the Quantities of Wine made here, of the Fruit they call *Mewa*. This is a very ſweet and luſcious Fruit, the Wine of it pleaſing enough; but my own Experience prov'd it not wholſome, unleſs well burn'd.

Mewa Wine.

An *Indian Raja*, and his Strength.

Several of theſe Towns that lie hereabouts, are under the Command of a certain Gentile *Raja*, who acknowledges the Sovereignty of the *Great Mogul*; but upon Courteſie as it were, and juſt as it pleaſes him. He lives indeed, at preſent, in Peace and Amity with him, and ſends his Annual Preſents; and beſides, leaves one of his Sons at *Bramport*, for a Pledge of his Friendſhip: But then if he ſhou'd do otherwiſe, the *Mogul* can't help himſelf; for the *Raja* has ſuch a Guard of inacceſſible Mountains about him, that he may bid Defiance almoſt to all the Armies in the World. Beſides, tho' he may be beſieg'd in thoſe Mountains, yet they can never ſtarve him there; for there's abundance of good Paſture, Grain, and Fountains of Water, upon the higheſt part of them, ſo that if he did fall out with the *Mogul*, and take up Arms, he had Nature of his ſide, and the Fruitfulneſs of his own Territories wou'd ſupport him in his Rebellion. But then did he let an Army paſs undiſturb'd, to the very Foot of his Mountains, they cou'd never get up to him; for all the Paſſes to his two principal Cities, are prodigiouſly fortified (there's eighty Forts at leaſt ſcatter'd up and down to ſecure them), and then they are ſo narrow, that no more than two Men can march a-breaſt: The Names of theſe two Cities are *Saliere* and *Muliere*, each of which have two mighty Caſtles to defend them.

Saliere and *Muliere.*

Ecbar Sha, this *Mogul*'s Father (a Soldier as capable of managing an Enemy to good purpoſe, as moſt *India* has had), found this Mountaneer too ſtubborn for him; he ſpent ſeven Years a beſieging him, and at laſt was forc'd to compound, giving him ſeveral Towns, upon Condition of ſome poor Acknowledgment of Sovereignty to him, and his Succeſſors: And this was the wiſeſt part of his Conduct in the whole Affair: For in ſhort, without this Agreement, his Merchants cou'd never have had any Security in paſſing along this Country.

Bramport.

My Journey from theſe Towns to *Bramport*, was troubleſome enough; partly upon the Account of Thieves that infected the Roads, and an ill Diſtemper (the Bloody-flux) gotten by drinking the Water of *Sindkeny* River, a Town that lay in the Road.

February.

The *Decans* alſo (who had juſt beat the *Mogul*'s Forces, and taken a ſtrong Town from them, and extreamly brisk upon that Succeſs) were abroad in Parties, making all the Spoil they cou'd in the *Mogul*'s Dominions; ſo that 'twas impoſſible to travel with any Safety, without a Guard; and this Comfort I accidentally met with, in a good Body of Horſe, that convoy'd me ſecurely to *Bramport*. This is a very great City, but has a baſe, low, unpleaſant Situation, a very unwholſome Air, and as bad Water about it: It has a large and well fortified Caſtle, ſtanding upon the Bank of the River which comes from *Surat*, which is the only conſiderable Ornament of that kind, the City has to ſhew. The Vice-Roys Gardens are indeed very fine and curious, but they lie ſome two Coſe out of the City.

Cloſe by the Caſtle-ſide, in the River, ſtands an Elephant carv'd in Stone, with ſo much of the Life, as well as all the exact Proportions of that Beaſt; that another Elephant that came down one Day to drink there, miſtook it for a real Animal, like himſelf, and accordingly running againſt it with all his force, broke both his own Teeth by the Aſſault, but cou'd make no Impreſſion upon his Adverſary.

The City was at this time as full of Soldiers as ever it cou'd hold, and the Vice-Roys Camp lay between this and *Badurpore*, extending a matter of two Coſe in length; on the other ſide, about twenty Coſe diſtance, lay the the Army of the *Decanees* encamp'd, conſiſting of at leaſt 50000 Men, threatning *Bramport*, and demanding the Surrender of it. And 'tis certain, that this place muſt have been yielded up to them, if Sultan *Pervis* (the Prince) had not come in the nick of time, with a ſtrong Army, to prevent it.

Bramport like to be loſt.

Their Forces about this place, all joyn'd together, are as good as 60000 Horſe, and 1500 Elephants; ſo that they match the *Decanees* in number; yet before I went from hence, News came, That a part of the Army was entirely routed.

We had Intelligence of a freſh Loſs the *Portugueze* had at Sea by the *Mallabars*: Their Fleet conſiſting of fifty Frigats, and two Gallies, being upon the *Mallabar* Coaſt, and in ſome meaſure diſorder'd and diſpers'd there by bad Weather: The *Mallabars* eſpying that advantage for an Onſet out of their Lurking-holes, purſued it preſently, and ſo fired, ſunk, and took the whole *Armado*.

March.

Under the Protection, and in the Company of the Governour of this place, I continued my Journey to *Agra*. Our Way lead us croſs the great Ridge of Mountains that comes from *Amadavar*; not far from which paſſage ſtands the vaſt and mighty Caſtle of *Haſſere*. It's ſtrongly ſeated upon the tops of the Mountains, has Paſtures and Ponds about it; and is it ſelf (by Report) big enough to entertain above 40000 Horſe. Were it not for one unhappy thing, it would be abſolutely invincible, and a Man that had the Defence of ſuch a Strong-hold as this, need not fear being thrown out by any Force, except that of Lightning, or an Earthquake, ſhou'd do it. It muſt infallibly tire any Adverſary in the World, if it had but the advantage of good Water; but the want of this Neceſſary will not allow it to hold out a Siege ſo ſtubbornly, as its own Strength wou'd eaſily do. 'Twas by this means that it came into the Power of *Ecbar Sha*, who elſe in all probability had never taken it: It had at that time 600 Pieces of Ordnance; and the Old *Mogul* was almoſt weary of his long Siege: But the Water bred Worms, and other Inſects, in ſuch multitudes, that the Defendants had a grievous Mortality amongſt them, by drinking of it; and ſo they were forc'd to come to a Compoſition, and deliver up the Caſtle.

Caſtle of *Haſſere.*

This Progreſs in the Mountains, brought us to the Ruines of the ancient City of *Mandow*, three Coſe of the way up to which, is vaſtly ſteep and ſtony, and ſo narrow, that 'tis as much as a Coach can do to preſs along. On the top, at the very edge of the Mountain, ſtands the Gate, or Entrance, of this old City, over which is a handſome Fort, and a Houſe of Pleaſure, the Walls running all along the ſide of the Mountain, for many Coſes together.

Ruines of old *Mandow.*

The Ruines beſpeak the City to have made a Noble Appearance when it was in its Glory; amongſt which there are ſeveral pieces of ſtately Walls, Tombs, and Moſkites, ſtill remaining. It was four Coſe long N. and S. and at leaſt ten or twelve, E. and W. and yet to the Eaſtward of all, lies good Paſture Ground, for the length of ſeveral Coſes. There are a great many fair Ponds that lie ſcattering up and down in the Mountain about the City, and Forts, too well ſituated and diſpos'd.

The preſent City.

The preſent City is but ſmall, in compariſon with what the former was; but the Buildings of it are admirably ſtrong, beautiful, and uniform, all of Stone; and the Gates ſo very high, that I believe there's nothing like them in all Chriſtendom. It has a Noble Palace, and right againſt that as fine a Moskit, in which are the Tombs of ſeveral *Indian* Kings, who lie very pompouſly interr'd there.

The Turret that ſtands by, is 170 Steps high, built round with Galleries and Windows to every Room, beautified with ſtately Ports, Arches, and Pillars, and the Walls all inlaid with a green Stone.

The main Gate is exceeding ſtrong, and has a ſteep Aſcent to it: Without it are ſix other Gates, all very ſubſtantial, and Courts of Guard between Gate and Gate.

The Wall runs all along the edge of the Mountain, with Flankers in ſeveral places up and down, and yet is the Aſcent ſo very ſteep of it ſelf, that 'tis hardly poſſible for a Man to climb up to any part of it on all Four.

This City was taken by the preſent *Mogul*'s Grand-Father, *Hamown Sha*; from *Sha Selim*, one of the *Indian* Kings of *Delly*, whoſe Anceſtors had enjoy'd it for above 400 Years: There was, 'tis true, Force in the Caſe; but if Treaſon and Policy had not given a good ſtroke towards it, the Race of the Old *Indian* Kings might have had their Dwelling here ſtill.

And ſince the Perſons here mention'd, were ſome of thoſe that were then upon the Stage, when that remarkable Revolution happen'd, that brought this Family into the Imperial Throne of *India*; it may be proper to give an Account of that Affair, in which the Fortunes of ſo conſiderable a Country as this is, under-went a Change ſo very great and ſurprizing.

The Story of the Conqueſt of India, by the Moguls.

The preſent *Great Mogul*, is the Great Grand-Son of *Babur* King of *Cabul*, a *Tartarian*; and as upon the Death of the mighty *Tamerlane*, that vaſt Empire had a great number of Heirs amongſt his Sons, and was divided into ſeveral petty Kingdoms and Governments; ſo 'tis probable, that this of *Cabul* was one of the Fragments of that broken Empire; and conſequently *Babur*, either directly deſcended from *Tamerlane*, or at leaſt had ſome of that Blood in his Veins. However, upon this Account it is, that the *Great Mogul* boaſts ſo highly of his Pedigree, and calls himſelf the Off-ſpring of *Tamerlane*; pretending too, that he is the Ninth, in a direct Lineal Deſcent from him.

The Old *Indian* Kings making *Delly*, for the moſt part, their Royal Seat, this *Babur*, with thirty or forty of his Nobles, diſguis'd like *Fokeers*,, came to the King *Secandar*'s Court, 'tis probable, either as Spies, or in order to attempt ſomething towards the Conqueſt of the Country. They were quickly diſcover'd there by their Countanances, tho' the *Indian* King had them fully at his diſpoſe, yet he ſpar'd them, and gave them their Liberty, upon Condition of *Babur*'s Oath, not to make War during that King's Life.

Babur kept his Oath while *Secander* liv'd; but when his Son was in the Throne, thinking himſelf then diſcharg'd from it, he ſent *Hamown*, (this *Mogul*'s Grand-Father) with a mighty Force, and ſeiz'd upon the whole Kingdom.

But the Conquerour was hardly ſettled in his Throne, before *Selim*, an *Indian* Prince of the Royal Family, took up Arms to drive him out again: And the Matter coming to be fairly tried by Battel, the *Indian* got the Day, and the *Tartar* was forc'd to fly, and take Sanctuary in the King of *Perſia*'s Court. But having obtain'd a good Army of that King, he came back again into *India*, and then by the help of his *Perſians*, carried all before him, and ever after that ſat free from diſturbance.

The *Tartar* being now poſſeſs'd of the Imperial Seat again, *Sha Selim* retir'd to the ſtrong City of *Mandow*, juſt now deſcrib'd, and there fortified himſelf, holding it out againſt all the Power of *Hamown*, 'till Treachery (againſt which there is no Guard) work'd his Ruine. But yet, tho' beaten out thence, he maintain'd his Liberty all the Reign of *Hamown*, and a good part of his Son *Ecbar*'s too, ſtill retiring from one Mountain to another, and defeating all the Plots of his Enemies laid to take him.

This City of *Mandow*, is ſaid to be built above a Thouſand Years ſince, by one of the Old *Indian* Princes; and 'tis worthy of remembrance, as having been the Scene of ſuch important Actions.

Malva.

From hence we paſs'd through the pleaſant and fertile Country of *Malva*, where there's alſo a vaſt deal of Opium. They give the Heads of Poppies two or three ſcratches, from whence diſtils a Tear, which at firſt is white, but afterwards congeal'd by the Cold, turns of a reddiſh Colour; but 'tis a great deal of Pains they beſtow in this Buſineſs, for a ſmall Matter of Profit; for the Heads are ſmall, and drop their Tears very ſparingly.

Between this and *Gualere*, are theſe Places of Note and Trade:

Sarampore.

Sarampore, adorn'd with a fine Caſtle, and Town-Houſe, a large place, and famous for Turbants, and good Linen.

Cuckra.

Cuckra, abounding with all ſorts of Grain, Victuals, and *Mewa*-Wine.

Syrange.

Syrange, remarkable for its Betele-Gardens.

Norwar.

Norwar, a City of large Dimenſions, and handſomely built; its Caſtle ſtands upon a ſteep ſtony Mountain, with a very narrow Cawſey leading to it, of more than a Mile's Aſcent, defended with four ſtrong Gates, and Courts of Guard to every one of them, beyond the fourth and laſt of which no Stranger is permitted to enter, without ſpecial Orders from Court. The Towers and Flankers, and other Contrivances for Defence, render it invincible by any thing but Treaſon; indeed, the whole Ridge of the Mountain upon which the City ſtands, and is five or ſix Coſes in compaſs, is fortified both by Art and Nature, to a wonderful degree. This was formerly the Boundary, or Gate of the Kingdom of *Mandow*, and was in thoſe Days much ſtronger, as well as more ſplendid than 'tis now.

Gualere.

Gualere is a City as beautiful, and in many Reſpects more remarkable than the former. The ruggy Cliff upon which the Caſtle is ſeated, is at leaſt ſix (ſome ſay eleven) Coſes in compaſs, and all incloſ'd with a very ſtout Wall: And here is the like narrow Cawſey, with Gates, Barricadoes, and Courts of Guard, as at *Norwar*; and the ſame Caution uſ'd in the Admiſſion of Strangers. The Governour's Lodging has a great deal of Pomp and Curioſity about it; it has abundance of high Turrets gilt at the top, and the Walls all inlaid with green and blew Stone, ſuch as I think is hardly to be ſeen any where but in *India*.

Priſons for Noblemen.

This place is one of the three fam'd Priſons for Noblemen, and all of high Quality, that fall under the Prince's Diſpleaſure; the other two are at *Rantimore*, a place not very far from hence; and at *Rotas*, a Caſtle in the Kingdom of *Bengala*.

Thoſe that are ſent to *Rotas*, are ſuch as are condemned to perpetual Impriſonment, out of which there's very ſeldom any Redemption: But all that go to *Rantimore*, have the Black Mark for Execution ſet upon them, and never none come back from that fatal place.

And their Execution.

When the Criminal has been there about ſome two Months, the Governour of the Caſtle brings him up to the top of the Wall, and gives him a Diſh of Milk, which after he has drunk off, he is thrown down upon the Rocks.

There's abundance of fine Ground, and Ponds, about this Mountain of *Gualere*; as alſo delicate Meadows, and Gardens of Pleaſure, encloſ'd with a ſtrong Wall at the foot of the Hill, which Meadows are for the ſecure feeding of Horſes in time of War. There are ſeveral Houſes too on the Town-ſide, entirely cut out of the main Rock, in which a part of the Trading People live; and what prodigious Labour, as well as Art and Skill, ſuch a Work muſt require, to hew and form the vaſt irregular Cliffs, into convenient Habitations, a Man can't eaſily imagine. Hereabouts were, formerly, the Frontier Lines of the Kingdom of *Delly*, bordering on that of *Mandow*, as thoſe of *Mandow* it ſelf, about *Gualere*, on that ſide.

April A. D. 1610. Doulpore.

Between this and *Agra*, lies the Town of *Doulpore*, the next remarkable Stage in our Journey: It has running by it the River *Cambere*, as large and broad as the *Thames*; and ſhews a Caſtle encompaſs'd with four mighty Walls, one within another, the way between each exceeding ſteep, and all pav'd with Stone; and 'tis at leaſt three quarters of a Mile in a direct Line through, from one Gate of it to the other, on the oppoſite ſide.

I muſt confeſs, I believe, hardly any Country in the World, can ſhew prouder Buildings of all ſorts, Palaces more magnificent, Forts and Caſtles more ſurprizingly ſtrong, and a greater Variety of all theſe, than *India* can. To ſee all the Inſtances of its unbounded Riches and Greatneſs, and State and Grandeur of its ancient Kings, in thoſe Monuments, and rare Pieces of Antiquity, remaining to this Day; together with all the Demonſtrations of admirable Art and Contrivance in thoſe illuſtrious Buildings, which it preſents to a Travellers Eye, is enough to convince him, that the Country was as much wrong'd, as it muſt be little known, to have the Character of Barbarous ſo long given to it.

Agra deſcrib'd.

This tedious and hazardous Journey, had now a Period ſet to it, by our happy Arrival at *Agra*: Here I found Captain *Hawkins*, in no ſmall Favour and Figure, at this Court, and with not a little Work upon his hands; of countermining the Jeſuites, and breaking the Meaſures taken by them, and their Party, for the Deſtruction of the *Engliſh* Intereſt and Trade in this Country.

The City of *Agra* (tho' now it has ſcarce a Rival in all *India*) has riſen but very lately to this degree of Greatneſs and Fame; it is now an Imperial City, but 'twas an ordinary Village in *Ecbar*'s time, who removed his Court from *Felipcſe* hither. 'Tis vaſtly large, and populous, beyond meaſure; but the Streets for the moſt part narrow and dirty: There are ſome that may be call'd ſtately, as the great *Bazar*, and a few more; but the biggeſt part of the City is far from coming up to that Character. It lies in the form of a Half-moon, bearing out to the Land-ward ſome five Coſe in length, and as much by the River-ſide; this is the River *Gemini*, which is as broad as the *Thames* at *London*, and runs with a very ſwift Current, diſcharging it ſelf into the *Ganges* at laſt.

The Caſtle.

Upon the Banks ſtand the lofty Palaces of the Nobility, and the admirable Caſtle of this place, reckon'd beyond moſt of that kind in the whole Eaſtern World. It is between three and four Mile in compaſs, encloſ'd with a Wall of ſtrong ſquare Stone, about which is caſt a large Ditch, with ſeveral Draw-Bridges; beſides this, 'tis defended with various Bulwarks, and regall'd with a Counterſcarp without, ſome fifteen Yards broad: And as if this was not Guard enough, there are two more as ſubſtantial Walls as this within it. The Gates, and Courts, and Buildings belonging to it, are too many for a tranſient Deſcription; the mighty Caſtle of *Agra* is a Subject ſufficient for an almoſt entire Volume by it ſelf.

To return to the City: Altho' it has the Defence of ſix very ſufficient Gates, yet it has no Walls to complete the Strength of it, but only a Ditch, and that not broad neither, nor full of Water; but on the contrary, quite dry: Without this, lie all the Suburbs, which are very large, the City and they making one Way ſeven Mile in length, and three in breadth. The Houſes of all the conſiderable People are built with Brick and Stone (with flat Roofs); but thoſe of the Commonalty are of Wood, and have Mud-Walls, and thatch'd a great part of them; by which means Fires once kindled, do make horrid Work in thoſe Parts of the City. And this was the Caſe at my being there; for a good while together the Fire was hardly ever out in one place or other; ſo that ſeveral Thouſands of Houſes were conſum'd, beſides a great number of Inhabitants and Cattle that periſh'd too.

May, June. Fire at *Agra*

July.

This Court was now alarm'd with News, of the ill Succeſs of the War managed againſt the *Decanees*: *Amdavanger*, a Town in thoſe parts, was fallen into their hands; the vaſt Army of the *Mogul*, which was upon the March to relieve it, being forc'd by Drought and Famine, to retire back to *Bramport*, by which loſs of time the place was loſt.

The fighting part of the Army was at leaſt 100000 Horſe; but then take in all the Attendants, and Hangers-on, the Managers of Elephants and Camels, (of which there was an incredible number) and 'tis reckon'd, that the whole Body of the Camp, amounted to 500000, if not ſix. They eat and drank up the Country as they paſs'd along, the largeſt Stores were exhauſted, and the Rivers not able to ſupply them with Drink; a ſmall quantity of Water was ſold for a Roupie, and not enough to be had neither.

In the mean time, the cunning *Decanees* march'd about ſpoiling the Country before them, cutting off all Intercourſe between them and places of Supplies; and ever now and then, vexing them with falſe Alarms, Skirmiſhes, and one Stratagem or other; ſo that in ſhort, the whole Army was in a very dangerous and declining State. Thus inſulted by the Enemy, and beſides half-ſtarv'd in to the bargain, they were forc'd to leave the City for a Prey, and march back to *Bramport*; but well leſſen'd in their Numbers by that time they got together, having loſt above 70000 Horſe, beſides Elephants, Camels, and other Cattel.

This is the Fruit of ſuch monſtrous, unconſcionable, great Armies: A Prince had far better forbear thoſe needleſs Demonſtrations of Pomp and Power, in ſuch vaſt Preparations as theſe are, than conſult his Grandeur in the giving of them, when it is likely to be attended with ſuch fatal Conſequences. So huge a Body muſt needs be ſlow and heavy in its Motions, leſs capable of Order and Government; and whether they fight or no, and do Service to the Country, muſt ſtill be devouring it where they are.

Potana ſack'd.

The *Mogul*'s Affairs went croſs in other places too, beſides *Decan*, about this time: For *Potana*, a conſiderable City in the Kingdom of *Porrop*, was taken, and ſack'd, and the Caſtle, with all the Treaſure of it, ſurpriz'd by the Rebels: The Citizens fled, and left the King's Treaſure to look to it ſelf; for which Expreſſion of their Care and Loyalty, ſome of them were ſent hither to *Agra*, to receive the Rewards of it; which was to be ſhaven, dreſſed in Womens Attire, and carry'd about the Streets upon Aſſes, and the next Day to loſe their Heads.

The King, this Month, made a great Noiſe about Chriſtianity, commending it in Publick, before his Nobles; and at the ſame time railing at *Mahomet*, and the *Alcoran*, as good as calling the one a Cheat, and the other a Pack of Lyes and Fables.

Perhaps his Loſſes put him into this Pett with his Religion, the Goodneſs of which he meaſured by the Succeſs of his Arms, and the Sharpneſs of his Sword, as the firſt Planters of that Impoſture did. However, he was ſo far fallen out with *Mahomet*, that he wou'd make three young Princes (his Brother's Sons) of another Flock; and therefore put them into the Hands of the Jeſuites, to be inſtructed in the Chriſtian Religion, in order to Baptiſm, which was afterwards adminiſtred in a very ſolemn manner.

But all this while, (to ſpeak the plain truth) here was no Quarrel between him and his Prophet, nor no Love to the Chriſtian Religion: The Jeſuites perhaps might poſſibly expect another good Chriſtening, and think of having the *Mogul* himſelf at the Font in a little time (who if it had been ſo, cou'd have had no leſs than the Pope for a Godfather); but they were very much miſtaken in him, and all their fond hopes of his Concern about their Religion. If they have a mind to ſubmit to the Rites of his Religion, and be circumciz'd, they may; but I'll engage (for all his Raillery upon the Alcoran) that he'll never be baptiz'd. This Action of his, was only a politick Contrivance for his own Security; he made theſe young Princes Chriſtians, to make them odious to the People, and cou'd not have taken a more effectual Courſe to do it: 'Tis infallibly certain, by this means he has made it impoſſible for them ever to come into the Throne, or ſo much as to riſe to ſuch a degree of Popular Eſteem and Intereſt, as to be likely to do him, or his Children, any miſchief.

October.

The *Portugueze* continued to be upon the loſing Hand in theſe parts ſtill; thirty of their Frigates being now caſt away at the Barr of *Surat*: This was the Effect of their Over-eagerneſs to get out, (before the Winter was over) to catch ſome of our *Engliſh* Ships; thoſe of them that eſcap'd the Fury of the Sea, were afterwards forc'd to crave Relief at our Doors, whom they were going to plunder and deſtroy.

November.

The Affairs of Trade at this time, obliged me to make a Journey from *Agra* to *Byana*; my chief Buſineſs being to buy Indico, which Commodity that place abounds with. All along this Road from *Agra*, as far as *Aſmere*, (which is 130 Coſes) are Stone-Pillars erected at every Coſe-end; and ſeveral fine Moholls, or Summer-Palaces, richly furniſh'd and fitted for the Entertainment of the King and his Women, when they pleaſe to come to any of them.

Fetipore.

The firſt place of great Note I came to, was the famous City of *Fetipore*, deſervedly call'd ſo, tho' yet an unfiniſh'd, and partly a ruinous City. It was the Noble Deſign and Work of *Ecbar Sha*, who removed his Court from hence to *Agra*, becauſe the Water hereabouts proved brackiſh and impure, and bred Diſtempers amongſt thoſe that drunk it: So the City now almoſt ready to vie with any in *India*, was left condemn'd to undergo the Decays of Time, and to moulder away into Ruines. The Wall and the Gates, hold out pretty well; but the Buildings are very much loſt in the middle, and a good part of it is turn'd into Gardens.

Jam Seges eſt ubi Troja fuit.

And here one may ſee whole Fields of Indico, and other Grain, where the Auguſt Buildings of *Fetipore* once lifted up their heads.

The King's Palace and *Moholl*, (now wearing out apace) were once every way worthy the Magnificence of the Builder, if one may gueſs by what Time has ſpared: And the *Bazar*, or Market-place, half a Mile long, paved with broad Stone, and encircled with Buildings, made no leſs fine an Appearance.

But the Perfection of all, for rare Workmanſhip, and Ornament, both within and without, is the Moskit, which had it been finiſh'd, 'tis believed, 'twould have been ſuperiour to moſt of the glorious Buildings of the *Eaſt*. Hardly any thing of that kind is rais'd higher than the Gate of it, having a matter of thirty Steps of Aſcent up to it; which together with the Loftineſs of the Building it ſelf, makes it eaſie to ſee the top of it at eight or ten Miles diſtance; and there's ſcarce another Gate that yields ſuch a Proſpect in the World beſides.

The Area of the paved Court within, is full ſix times as large as that of the Exchange at *London*, and the Piazza's more than twice as broad, and as many times as high as thoſe of the Exchange; and which is the more remarkable, all the Pillars are of one entire Stone.

The Builder of this rare Fabrick, was not King *Ecbar*, but a Mooriſh Kalender, or Votary, that lies buried here: Beſides a large Stock of Piety (which they ſay he had) he had ſo much of the Bleſſings of this World, as to afford to build ſuch a Church as this, and to lay himſelf in a Noble Sepulchre; which beſides the rich Paintings, and other Ornaments of it, is all inlaid with Mother of Pearl. This City was at firſt call'd *Sykany*, which ſignifies *Seeking* or *Hunting*; but afterwards 'twas chang'd to *Fetipore*, that is as much as to ſay, *A Place of Content*, or *Hearts Deſire obtain'd*. The Reaſon of which ſhall be given, when we come to ſpeak of the Town of *Aſmere*, from whence the Cauſe of it is to be deriv'd.

The Fruit Hermodacts deſcribed.

Without the City is a very large Pond, which together with a deal of excellent Fiſh, and Wild-Fowl, affords great Quantities of that Plant which bears the Hermodactyles; and 'tis very common in all the Ponds about *Agra*, running all over the Surface of the Water. The Fruit before 'tis ripe, is ſoft and tender, white, and of a mealiſh taſte, very much eaten in *India*, but certainly of a very cold Nature: 'Tis inclos'd in a woody hard Shell, three-corner'd, having at each Angle a ſharp pricking Point, and is ſomewhat indented on the ſides.

Camolachacheries.

Here was another ſort of Fruit too, in the manner of a Goblet, flat on the top, of a ſoft greeniſh ſubſtance on the outſide, and within containing ſix or eight ſmall Fruits, like Acorns, each inclos'd in a peculiar Membrane, taſting like an Acorn, or Nut, and at firſt of a greeniſh Colour; in the midſt is a ſmall green Sprig, of a malignant Nature: The *Indians* call theſe *Camolachachery*, as they do the *Hermodacts*, *Syngana*.

Cannewa; Ouchen.

Between *Fetipore* and *Byana*, are two other Towns, *Cannewa*, and *Ouchen*, of ſome Note, for the Quantities of Indico they make yearly, eſpecially the latter, which is exceeded by none in the Production of this Commodity, unleſs it be *Byana* it ſelf.

Byana. December.

This City is call'd *Biany*, in *Selbank's* Journey, where the Indico is ſlightly deſcrib'd, but here more particularly, and at large.

This has formerly been a beautiful City, and of great bulk, but now lies for the moſt part in Ruines. 'Twas the Seat of one of the *Petane* Kings; and in its flouriſhing State, had its Walls extending at leaſt eight Coſe in length along the Cliffs, being defended in other places by a Natural Fortification of Rocks, ſo high and cragged, that 'twas impoſſible for any Adverſary to ſcale them. The Inhabitants are a poor ſort of People, that feed Cattel, and make Butter and Cheeſe; they live up and down amongſt the Ruines, minding only their Dairies, and other Country Affairs.

This place, like many others, affords plentiful Inſtances of the Magnificence of the Old *Indian* Kings, in the Tombs, Monuments, ruin'd Palaces, and other Pieces of Antiquity here to be ſeen: But the Ruines are not only the Effects of Time, but partly of the conquering Power of *Ecbar Sha*, who beat out from hence that *Indian* Prince *Selim* (before-mention'd) and demoliſh'd moſt of the Fortifications of it, as he did at *Mandow*.

Indico deſcrib'd.

The vaſt Quantities of Indico (for which this place is ſo famous), come off from a Spot of Ground not above twenty or thirty Coſe long. And here it may not be out of the way, to run over the Natural Hiſtory of this Commodity, to ſee it in its firſt Riſe, and by what Steps of Management 'tis brought into that Form in which it appears to us.

It is the Product of the Herb Nill: This Plant grows in Form not much unlike our Chich-Peaſe, having a ſmall Leaf ſomething reſembling that of Sena, yet ſhorter and broader than that, and ſet upon a very ſhort Stalk, the little Branches that ſhoot out of which, are hard and woody, like thoſe of Broom. It uſually grows not above a Yard high; and the Stalk, which comes to its greateſt bigneſs the third Year, is never much thicker than a Man's

Thumb. The Seed is incloſed in a ſmall round Cod, about an Inch long, bearing ſome reſemblance to that of Fenugreek, except that it is blunter at both ends; it's ripe about *November*, and then gather'd. It carries a ſmall Flower like that of Hearts-eaſe.

The Seed once ſown, holds for three Years, and produces three ſeveral ſorts of Indico, differing much from one another in goodneſs and perfection. That of the firſt Year is call'd *Notee*, and is a reddiſh weighty Indico, ſinking in Water, and not yet advanc'd to its beſt and moſt mature ſtate. That of the ſecond Year (which they call *Cyree*) is rich and fine, of a pure Violet Colour, and ſwims upon the Water. The *Catteld*, which is that of the third Year, is groſs, black, and weighty, by much the worſt of the three; the Plant being now impoveriſh'd, and in a declining Condition.

The making of Indico. The time for cutting the Herb, is in the Months of *Auguſt* and *September*, after the Rains; which Work being done, 'tis thrown into a long Ciſtern, where it's preſs'd down hard with Stones, and then cover'd over with Water, and ſo lies ſteeping there for ſome Days, till the Water is well tinctur'd with the Virtue of the Plant, and has got the purer part of its Subſtance into it. This Water they let run forth into another Ciſtern, where they ſtir it about well with Staves, and then when 'tis ſettled, they skim off the clear Water at top. This Operation they repeat ſo often, 'till there's nothing but a thick Sediment remains at the bottom of the Ciſtern; this they take out, and ſpread upon Cloths, ſetting it to dry in the Sun; and when 'tis a little hardned, they make it up into little Balls, and lay them to dry ſome time farther in the Sand. They chuſe to take this Courſe to dry it now, becauſe any thing elſe but Sand wou'd drink up the beautiful Colour of it. So alſo, if the Rains fall upon it, as it lies there, it certainly loſes its Gloſs and Colour; and thus deprav'd they give it the Name of *Aliad*.

The beſt Indico ought to be only that of the ſecond Years growth, tho' there are ſome that mix the Crops of all the three Years, and lay them a ſteeping in the Water together; which is a wrong both to the Cuſtomer, and the Commodities. Theſe things are required in that which pretends to be the beſt Indico, and may ſerve to diſtinguiſh it by: A pure Grain, a Violet Colour, a good Gloſs in the Sun, to be light and dry; to yield a fine blew Vapour when 'tis burn'd, and leave but a ſmall quantity of Aſhes.

The Character of good Indico.

January. From *Byana* I return'd to *Agra* again; the News was now freſh, that the *Decanees* had ſued for Peace, and offer'd to reſtore all that they had taken from the *Mogul*; who yet was reſolv'd to carry on the War againſt them, and rais'd more Forces for that purpoſe.

Goes for *Labor*. I had not reſted long here, at *Agra*, before I was obliged to undertake a Journey to *Labor*, as well to recover Moneys there owing, as to put off part of our Indico gotten at *Byana*, which there was ſome hope of doing to advantage.

Acabarpore. In this Road, the firſt place of Note was *Acabarpore*, an illuſtrious City in Ancient Times, and ſtill famous for the Antiquities of the *Indian* Gobins, or Saints.

A little ſhort of it are ſeveral large Vaults, fill'd with Pagods, monſtrous and frightful Images of Stone, much reſorted to by the *Indians*, and as much ador'd and honour'd with Varieties of Offerings.

The City of *Della* was the next remarkable Stage: This ſtands in a delightful Plain, encompaſs'd with curious Gardens and Monuments; 'tis a matter of two Coſe in length from Gate to Gate, and has the Fate of a great many other Noble Cities of *India*, to lie partly in Ruines. In this place the Imperial Crown is ſet upon the Head of the *Great Mogul*; and the Ceremony muſt (by the Laws of the Country) be perform'd here; otherwiſe the Prince is look'd upon as no better than an Uſurper. Here are the Tombs of at leaſt twenty of the Old *Potan* Kings, very fair and ſtately; and that alſo of *Hamown*, the preſent King's Grandfather, together with ſeveral others of his Wives and Children, that lie buried about him.

The Ruines of the Old *Delly* lie a little diſtance from hence, ſeparated by an Arm of the *Gemini*, over which is a Stone-bridge of eleven or twelve Arches. Particularly there appears amongſt theſe Ruines, the Carkaſe of that ancient Building call'd the *Caſtle*, that had to the number of Fifty two Gates; a thing of ſurpriſing Glory and Statelineſs in its time, but now worn out and disfigured to the laſt degree. There's ſaid to be no leſs than four Cities of this Name, and all within five Coſe of one another; of which three were built by the ancient *Potane* Kings, and the other (where the Tombs are) by *Selim* before ſpoken of.

A little beyond *Delly* are the Relicks of a ſtately Hunting-houſe, built by an ancient *Indian* Monarch, which has very great Curioſities of Stone-work about it. * Amongſt the reſt there's a Pillar all of one entire Stone, ſome Twenty four Foot high, and as many under Ground (as the *Indians* ſay) having a Globe, and a Half-moon at top, and divers Inſcriptions upon it; this, according to the Tradition of the Country, a certain *Indian* King wou'd have taken up and remov'd; but was prevented in his Deſign by a multitude of Scorpions that infeſted the Workmen. But 'tis certain, that there are a great many of thoſe huge Pillars fix'd thus deep in the Ground, up and down in *India*; and 'tis not long ago, that there was one found buried near *Fetipore*, that was a hundred Cubits in length, which the King order'd to be remov'd to *Agra*; but 'twas broke by the way. And 'tis remarkable, that moſt of the *Indian* Quarries (eſpecially thoſe about *Fetipore*) do afford a Stone of that nature, that may be wrought almoſt any way by the Workman, either cleft like Logs, or ſawn like Planks into vaſt great pieces, ſo as to ſeil Rooms, or cover Houſes with it, if they had a mind.

* Some ſay, that the Inſcriptions are *Greek*, and that this Obelisk was plac'd there by *Alexander* the Great.

Tanaſſar, its Sal Armoniack Pits. About *Tanaſſar* begins a long Ridge of Mountains, extending towards *Labor*, the tops of which are all cover'd with Snow: This City is remarkable chiefly for its Pagods, reverenc'd through all *India*; and its Sal Armoniack Pits, at a little diſtance from it.

Surinam is celebrated for the delicate Garden the King has there, which is more than four Coſe in compaſs, yields all the Varieties of rare Plants, Flowers, and Fruits, and is rented for 50000 Roupies *per Annum*. The two main Croſs-walks of it, are full forty Foot broad, and eight high, planted on both ſides with Cypreſs's, and Water in neat Stone-Channels, running along the middle. In the Centre of it ſtands an Octagonal Mohol, the Centre of which is a fair Pond alſo, about which all the Lodgings of the Mohol are pleaſantly diſpos'd: The Building is of a fine *Indian* Stone, and very pompouſly ſet out with Painting and Carving in the inſide.

February. Comes to *Labor*. Having eſcap'd not a few Dangers in the way, by means of the Thieviſh People that lie abroad for Spoil in theſe parts, I arrived at *Labor*, the more Northern Metropolis of this vaſt Empire. This certainly is one of the greateſt Cities of the Eaſt; and perhaps, when all is done to it that this King deſigns, it may be one of the fineſt. It takes in near Twenty four Coſe in Circuit; and the City and Suburbs is ſix Coſe thorough: There is a Ditch now caſting up round the whole Circumference, and 'tis deſign'd ſhortly to be incloſ'd with a Wall too. The Streets are fair, and well-pav'd, the Buildings lofty, moſtly of Brick-work, and ſet out with all Curioſities of Carving about the Doors and Windows.

Its Deſcription.

The Caſtle ſtands upon the River *Rawee*, which falls into the *Indus*, and carries Boats of ſixty Tun, and upwards: It has twelve Noble Gates, nine opening to the Land-ſide, and three to the River. 'Tis inhabited chiefly by Trading People, *Bannians*, and Handicraft-men; but all the White People of any Note, generally take up their Lodgings in the Suburbs.

As for the Rarities of the Caſtle, or Palace, they are by far too numerous, as well as too glorious, to be juſtly repreſented by a ſhort Deſcription: The Mohols, the Courts, the Galleries, the Rooms of State, are almoſt endleſs; and to give an Idea of the extravagant Richneſs of the Furniture of theſe, it may be ſufficient to ſay, that in the King's Lodgings, the very Walls and Ceilings are all overlaid with the pureſt Maſſy Gold; and the others are as prodigally rich and ſumptuous in their proportion. There's a vaſt number of ſtately Pictures hanging up and down in the Galleries, and Publick Rooms, all drawn at full length. Here's the whole Royal Family, down from *Babur*, that made the Conqueſt of *India*, to this preſent *Mogul*. And beſides theſe, all the principal Noblemen of the preſent Government, the *Mahometan Emirs* and *Cans*, and the *Gentile Raja's*, or Native *Indian* Princes, that are of any great Power or Figure about the King. For Curioſities without Doors, the King's Garden may be reckon'd amongſt the chief: Here *India* and *Europe* ſeem to lie together in the ſame Spot, which preſents the Eye with the Vegetable Varieties of both. And, indeed, the Country almoſt all along, on the further ſide of the River, is extreamly pleaſant in this reſpect, yielding ſuch a fine Proſpect of Gardens, and charming Walks, that hardly any thing can be more agreeable.

The more Northern Parts of *India*, about *Calul*, were very much diſquieted at this time; the *Patans*, that ſhelter themſelves in the Mountains, came down with a great Force, and ſack'd that important place, carrying off a great Booty. They are a ſort of People that live in perpetual Defiance to the *Mogul*, and all his Power can't tame them perfectly; but ever now and then, they will ſally out from their Strong-holds in the Mountains, and ſpoil and ravage the Country.

Mar. *A. D.*

The Wars between the *Turks* and *Perſians*, put a ſtop at preſent too to the Trade about *Candahar*; the latter had raz'd the famous City of *Taurus*, and ſpoil'd the Country about, ſtopping up the Wells of Water, and laying all waſte, to hinder the progreſs of the *Turkiſh* Army; upon which account the Merchants were nonplus'd, and dared not paſs on beyond *Candahar*.

Account of other places of Note.

Having given this Account of my Journeys to theſe two principal Cities of *India*, with the moſt remarkable Obſervations of the chief places I viſited as I paſs'd; it may be requiſite to ſubjoyn the Characters of ſome other Places of Note and Fame in this mighty Country, which lie in the great Roads to *Agra* and *Labor*, as they run from ſeveral parts of the Kingdom.

Surcrood.

From *Labor* Northwards to *Cabul*, are few places of great note or ſignificancy: *Surcrood*, a ſmall place in that Road, has a Medicinal River running along by it; the Water looks not of the ordinary Colour, but red; and being drunk, has the Reputation of procuring a good Appetite.

Haſſanabdal.

In your paſſing between *Labor* and this place, you may take Notice of the Ponds at *Haſſanabdal*: No Drops of Morning-Dew, are, in compariſon clearer and purer than this Water; but the pleaſanteſt Spectacle is that of the Fiſh, which have Golden Rings hung in their Snouts, and may be very eaſily ſeen with thoſe Ornaments playing up and down, by reaſon of the perfect Tranſparency of the Water: This was the Frolick of *Ecbar Sha*; who, it ſeems, was reſolv'd, that Ponds ſo rare and fine, ſhou'd have Fiſh every way as extraordinary.

Cabul.

Cabul (the firſt Seat of the *Mogul*'s Family) is a large and fair City; but ſeems to come ſhort of the Character of the ſtately Cities of *India* already deſcrib'd.

Tarthaun.

'Tis reckon'd between two and three Months Journey by Caravan, from hence to *Caſcar* in *Tartary*: This is a large Kingdom, and the chief City of Trade in it is *Tarchaun*, or *Tarmancan*, from whence comes Silk, Porcelan, Musk, Rhubarb, and other Merchandize; but it comes thither from *China*. The Merchants always pitch their Tents without the Gate of this City, and lie there with their whole Cargo, ſending ſome ten or fifteen into the City to do Buſineſs; for the *Tartars* will not permit any great Numbers to enter at once.

But to return from this little Walk into *Tartary*, to the more ſafe and pleaſant Roads of *India*.

Caſſimere.

You go almoſt directly Northward from *Labor*, to the fair and fruitful Country of *Caſſimere*: The principal City bears the Name of the Province; a ſtrong place ſeated on the River *Bahat*. The Country about it abounds with Varieties of Fruits, Grain, Saffron, and (which are not to be forgotten, amongſt its other excellent Products) very fine and beautiful Women: Here are made alſo the rich Pomberries, which go up and down all *India*. This Country is cold, and ſubject to great Froſts and Snows, in that part of it which borders upon *Tartary*: 'Tis ſeparated from it by a Fence of Mountains, ſo ſteep and rugged, that no Caravans can paſs this way. Yet ſome People a foot make a ſhift to climb the Mountains, and deal with the *Tartars* for Musk and Silk, tho' they are forced to carry on their Trade by the help of Engines, letting down, and drawing up their Goods to one another, from the tops of the Precipices.

Another way from *Agra* to *Surat*.

When I made my Journey to *Agra*, I went the more direct and ſtraight way from *Surat*, to that place: But there is another Road between theſe two Cities, that goes ſomething more about to the Weſtward, and takes in theſe conſiderable places not hitherto deſcrib'd.

The Tomb of *Hodgee Mundee*, the Great *Indian* Saint.

Aſmere, ſeated on the top of a prodigious ſteep Mountain, ſtrengthned with mighty Walls, and a Fort almoſt invincible. It ſhews ſeveral remarkable Pieces of Antiquity, but the moſt celebrated of all, is the Tomb of a famous *Indian* Saint who lies buried here. 'Tis viſited with almoſt as much Devotion and Reverence by the *Indians*, as *Mahomet*'s is by the *Turks* and *Arabs*: Pilgrimages are made to it, Vows and Prayers liberally pour'd out over it, ſo great is the Reputation of this Holy Man amongſt them.

The Great *Ecbar*, in a Fit of warm Affection, went his Pilgrimage hither a Foot, from *Agra*; the Walk was at leaſt 130 Coſe, but his Buſineſs was urgent, and the Favour great that he had to ask. He was at that time wholly without Children, and no proſpect of filling the Imperial Throne of *India* with one of his own Blood, after his Deceaſe; and therefore to procure an Heir, he took the probable Courſe of viſiting the Sepulchre of this Saint. And it ſeems it was to very great purpoſe; for now in a little time three Princes came to Town, and the Succeſſion in his own Line, was put out of doubt. The preſent King was one of the Fruits of that Devotion, and a part of the Bleſſing of the Pilgrimage; but little did the old Prince imagine what a Bleſſing was put into his hands when he came. Cou'd he have foreſeen things, no doubt (as much as he wanted an Heir) if he cou'd have had no other, he wou'd not have trudged almoſt 200 Mile a Foot, to pray for a Son that ſhou'd afterward endeavour to ſend him out of the World before his time. However, 'twas upon this occaſion, that that Prince, to expreſs his Joy and Content, gave the Name of *Fetipore* to that place now call'd ſo; and ſet up a Row of ſtately Pillars all along the Way from *Agra* to *Aſmere*, the place that had been ſo fortunate to him: At every Coſe-end is one of theſe Columns, and at every eight Coſe diſtance, is a fine Mohol erected.

The Sepulchre, with the Buildings about it, is a very Noble Thing; 'tis as rich and fine as a prodigal blind Zeal and Superſtition, might be ſuppos'd to make a thing, which it declares the higheſt Reſpect for. You paſs three large Courts before you come to it, the firſt of which is near an Acre of Ground, and is paved with Black and White Marble; the others are proportionally large, but the nearer to the Sepulchre, the more extravagant the Pomp and Glory of them. There is ſuch an Opinion of the Sanctity of all theſe Places adjacent to the Tomb, that no Perſon dares walk here, but with a naked Foot; you muſt be quite bare, or not pretend to tread any part of theſe hallow'd Courts.

The Caſtle of *Gelour*.

Proceeding in this Road, the ſurprizing Caſtle, or Fort of *Gelour* lies in your way. This is call'd the Frontier of the Kingdom of *Guzurat*, upon which it borders, and is for Strength it ſelf almoſt equivalent to a Kingdom. The whole Building is no leſs than eight Coſe in Circumference, and the Steep of the Mountain on which it ſtands is about three Coſe; the Cauſey broad enough for two Men to paſs a-breaſt, is wall'd on both ſides, and guarded with Gates and Portcullis's, and all the Contrivances for Defence that can be.

'Tis now in the hands of the *Great Mogul*; but 'twas Treachery, and not Force, that did the Buſineſs; and he might, by far, ſooner have built, than taken and conquer'd ſuch a Caſtle as this, with all the Strength of his Empire. It has a great Pond cut down a vaſt depth in the ſolid Rock, the *Indians* ſay 'tis fifty Fathom deep, very clear, and good taſted Water.

A monſtrous Snake.

They affirm too, that there's a Snake that lies about in the Buſhes, and woody part of the Mountain, that is Twenty five Foot long, and as big as a Man's Waſte; which becauſe it does no hurt to Man or Beaſt, it receives none from the Country; nay, they wou'd be angry if it ſhou'd be kill'd, becauſe they eſteem it a Token of good Fortune.

This may not be altogether improbable, ſince 'tis known that *India* does afford Creatures of this kind, that are very large: However, 'twas my good Fortune, to avoid the Demonſtration of the Truth of this particular Story, in the actual ſight of the Monſter it ſelf.

Amadabat.

I omit the particular mention of many ſtately Ruines of ancient Cities, Walls, and Palaces, the Monuments of *Indian* Kings, and other agreeable Entertainments, to a curious Traveller, which occur in this way; and paſs on to *Amadabat*, or *Amadawar*, a remarkable City of *Guzurat*. It's ſeated on a fair River, and has as good a ſhare of Strength and Proviſions for Defence, in its Caſtle, Gates, and ſtrong Walls, as it has of Beauty in its other Buildings, which are in this reſpect comparable to thoſe of moſt Cities in *Aſia*. 'Tis a place of vaſt Trade and Dealing, entertains abundance of rich Merchants, and excellent Artificers, for Carving, Painting, Inlaying, and Embroidery.

There is ſome Quantity of Indico made hereabouts, which they call *Cickle*, of a Town at a little diſtance; but 'tis not near ſo good as that of *Biana*: But tho' the Trade be ſlight upon that Account, yet 'tis ſo great in other Points, that there's Two hundred Coaches laden with all ſorts of rich Merchandize, that go every ten Days hence for *Cambaya*. From *Gelour* to this City, the Way lies all through a horrid Deſart, full of Lions and Tygers, Thieves and Outlaws, which may well be reckon'd amongſt thoſe Creatures of Prey, and are, by far, the worſt Beaſts of the number.

Cambaya.

The next Neighbour of Note to this, is *Cambaya*, the Grand Mart of *Guzurat*. 'Tis a graceful, ſubſtantial, well built City; ſtands by the Sea, and has a topping Trade for all ſorts of Cloth, and rich Drugs: *Cambaya* Cloths are a Commodity well known, and as much valued all over the Eaſt. It has a very large Bay, but extreamly dangerous, by reaſon of the violent Tide, which ſinks abundance of Ships: In the Neap Tides there's the leaſt danger; but it always requires a skilful Pilot to manage a Ship hereabouts.

Bay dangerous.

This place is very much infeſted with two ſorts of Creatures, which are both alike troubleſome, if not dangerous to People that come here. If you go but croſs the Channel, 'tis ten to one but you fall into the hands of the Pyrating People, unleſs you are very well provided indeed; and then your Goods muſt either be loſt, or by a long Diſpute you may be betray'd into the Danger of the Tide, which comes ſo very furiouſly, that 'twill be an exceeding hard matter to bring your Ship off clear. Within the Town the Monkeys are as great a Plague as the Pyrates are upon the Water: You ſee prodigious Numbers of them climbing up and down upon the Houſes, frolicking and leaping about from one Houſe to another; and if they wou'd be contented with playing theſe Tricks only, they wou'd make but good Sport; but they are for uncovering the Houſes, picking the Stones and Bricks out of the Walls, rattling down the Tiles upon Peoples Heads as they paſs along; ſo that a Man hardly knows when he is ſafe, or where to go, upon the account of theſe Vermine, that are every-where ready to pelt him with Stones, Tiles, and Brick-bats.

Troubleſomneſs of the Monkeys.

'Tis pity, the Quiet and Order of ſo fine a City, ſhou'd be diſturb'd by Monkeys; and if there were not more beſides theſe upon the Houſes, the place wou'd be better managed than 'tis. You ſhall often ſee a Fleet of Two hundred *Portugueze* Frigats riding here at a time, 'tis a place ſo mightily haunted by that People, as well as by the others laſt mention'd.

Baroche.

Baroche (between this and *Surat*) is ſeated in a River twice as broad as the *Thames*; 'tis famous for a Mine of Agats, and the rich Baffata's made here, much ſurpaſſing the *Holland*-Cloth in Fineneſs; it goes at fifty Roupies *per* Booke, which are not Three Quarters broad, and contain about fourteen Yards *Engliſh*.

To *Surat* you have now only the pleaſant and fertile Country of *Wariaw* to paſs through, abounding with vaſt Numbers of the wild Date-Trees, from whence they draw their Liquor they call *Tanie*: But theſe Trees are no Rarity here, for they are plentiful in all, or moſt of the Sea-Coaſt parts of *India*.

From *Agra* to *Jounpore.*

I ſhall now give ſome Account of the principal Places in the great Road from *Agra*, to *Jounpore*, by the way of *Cannowa*; and back from thence to *Agra*, by that of *Alabaſſe*.

Cannowa.

To begin with *Cannowa* it ſelf, which lies to the Eaſtward of *Agra*, a large City, but not like the reſt of the *Indian* Cities, for prodigious Strength and Defence. The *Ganges* anciently took his Courſe along by the Foot of this City; but now has broken it ſelf a paſſage through the Valley ſome four Coſe diſtant, ſo that but a ſmall Branch of it now comes up to *Cannowa*. This famous River is Three quarters of a Mile breadth in its own proper Channel here at this place, but upon great Rains ſwells to far greater Dimenſions, and overflows the Valley for ten Coſe about. It has eighteen Branches, and receives the Water of thirty Rivers of conſiderable note. It produces Allegators in ſuch ſurprizing numbers, that if it yields good Fiſh in proportion, it muſt be one of the richeſt Rivers in the World.

Lacanow.

Lacanow is a place of mighty Trade in this part of *India*; but the chief Commodities it deals for, are Linen Cloths.

Oudee.

Oudee, a City of an ancient Character, the Seat of ſome of the *Potane* Kings, but much defac'd by Time and Wars.

The Ruines of *Ranichand* Caſtle, contribute the largeſt ſhare of the Fame it has now-a-days. The Bramens that live in theſe Ruines, record the Names of all thoſe *Indians* that come and waſh in the River hard by. It ſeems 'tis reckon'd a piece of Religion amongſt them ſo to do, and there's a great Reſort from all parts of *India* for that purpoſe. The Bramens encourage the Practice by the Argument of Antiquity; and tell the People, that it has been maintain'd for four Lacks of Years, which is 394500 Years before the World was made, according to the *European* Chronology.

There's abundance of Gold got out of the Ruines of the Caſtle; but the place yields a Commodity which is ſet at a higher Rate than Gold or Jewels either: It is the Horn of ſome Beaſt, but what I know not, nor the *Indians* hardly themſelves; tho' ſome ſay they are the true Unicorn's Horn. The more ordinary ſort of them are a Commodity mightily traded for at this place, the *Indians* apply them to the Uſes both of the Houſe and the Field, making Bucklers, and ſeveral kinds of Drinking-Cups out of them.

A rare Horn.

Bonarce.
Jounpore.

In this Road to *Jounpore*, lies *Bonarce*, the principal Mart for all *Bengala* Commodities. *Jounpore*, it ſelf, has no Rarities for Building, but Monuments, and ſeveral other Relicks of Antiquity to ſhew; but for Trade, it has ſome that are conſiderable: From hence come great Quantities of ſweet-ſcented Oyls, rich Carpets, Hangings embroider'd with Silk, and all ſorts of fine Linen.

From *Jounpore* back to *Agra*, by the way of *Alabaſſe.*

Now to return back to *Agra* from hence, by the way of *Alabaſſe*; this place is the firſt that deſerves mention, and 'tis all an entire Foreſt hither. The Caſtle is reckon'd one of the Wonders of the Eaſt, and 'twas one of the mighty Undertakings of *Ecbar Sha*; and that after many fruſtrated Attempts of the ancient *Potane* Kings to the ſame purpoſe: It's pleaſantly ſeated, and has the River *Gemini* running on the South-ſide of it. It may be gueſs'd what a ſtupendious Building it will be when perfected, when 'tis told of it, that it did for many Years employ the conſtant Labours of 20000 Workmen, and has of late Years had more than 5000 engaged about it, and yet (tho' it has been forty Years in hand) no Body knows when 'twill be finiſh'd. 'Twas in this Caſtle that the preſent *Mogul* ſhelter'd himſelf, when he rebell'd againſt his Father; and he cou'd not have choſen a more Auguſt Building to ſet up for King in than this.

Alabaſſe.

A remarkable Pillar.

In a certain Court of it there ſtands a Pillar of Stone fifty Cubits above Ground; but how far it goes downward, there's no diſcovering, it ſtands ſo deep: By the Diſcourſe of the *Indians* it ſhou'd ſeem to have been plac'd there by *Alexander* the Great, or ſome other Conquerour, that was here ſtopp'd in the Courſe of his Victories by the *Ganges*, which runs but a little way off, and into which the River *Gemini* here falls.

Pagods.

Here are to be ſeen in a low Vault, the Sculptures of *Adam* and *Eve*, *Noah*, and ſeveral others, both of the Antediluvian, and Poſtdiluvian Patriarchs in Stone; which are viſited by great Numbers of Votaries from all parts of *India*. Before they approach theſe Images, they waſh their Bodies in the *Ganges*, and ſhave their Heads, laying a great ſtreſs upon this performance, for their Purification from Moral Defilements. They are of the Opinion, that this was the place where Man was firſt created; or at leaſt, that he liv'd in his Paradiſiacal State, for ſeveral Years hereabouts.

A ſtrange Tree.

They ſhew a Tree that ſtands in the King's Mohol, to which they give the Title of the Tree of Life, and honour it accordingly. And the truth on't is, if their Reports be true, it may well enough be call'd the Tree of Life, ſince 'tis of ſo ſtubborn a Nature, that 'twill live in ſpite of all Endeavours to deſtroy it. It is a ſort of a wild Fig-Tree, which having once rooted it ſelf there, wou'd continue growing there, whatever Courſes were taken to the contrary: Take away the Earth from about it, ſtock it up, manage it how they cou'd, yet ſtill ſome ſpreading Roots or other which cou'd not be reach'd, wou'd ſend up a freſh Tree; and at this rate it held out, ſo that ſeveral of the *Potane* Kings, and of this Family too, who try'd at it, were forc'd to give it over as an impoſſible Work. The preſent *Mogul* has taken a Turn at it; but finding he is able to do no good, he cheriſhes, and makes much on't.

When the great Froſts are paſt in *October* and *November*, Boats may go from hence down the *Ganges* to *Bengala*; but the paſſage is not ſo ſafe.

Chappergat.

Between this and *Agra* you come to theſe other places of ſome Character: *Chappergat*, which ſhews a *Saray*, (or Publick Inn) which has very few, if any in all *India*, to ſtand in competition with it: 'Tis ſufficient to give Entertainment to a thouſand Men, and the Lodgings are all very neatly built and contriv'd beſides.

Itay.

Itay, where the *Indians* perform a Solemn Worſhip to the Effigies of a Man's Face, carv'd in Stone, at the entrance of the Caſtle; the principal Ceremony of which is, the pouring out a great Quantity of Oyl upon it: This is the Practice; as for the Riſe and Reaſon of it, I have no Information.

Amedipore.

From hence to *Amedipore*, is a plentiful Country, and full of fine *Saraies*, for the Conveniency of Caravans: There's much of a groſs ſort of Indico, call'd *Cole*, made in theſe Parts, which is either all ſpent in *India*, or carried into *Tartary*, to *Caſcar*, *Samercand*, and thoſe places, none of it going into *Europe*, except it be mix'd with that of *Biana*. From hence you have but a ſhort ſtep to *Agra* again.

An Account of the *Indian Raja's.*

I ſhall now conclude this Diſcourſe of *India*, with an Account of ſome of the moſt conſiderable of the *Indian Raja's*, that lie about in the Country; the moſt of which maintain their Liberty againſt the *Great Mogul*, and all his vaſt Power, and will neither be ſubject to, nor hold Correſpondence with him.

Gurchite Caſtle.

And we may firſt look upon *Raja Rana*, that has his principal Seat in the impregnable Caſtle of *Gurchite*, ſtanding upon the Mountains of *Marna*, that run up towards *Amadavar*. This Prince is the chief in eſteem of all the Gentile *Raja's*, or *Resbouts*, as they are called. He is amongſt the *Indians*, what a Pope may be in Chriſtendom for Authority, or a Caliph amongſt the old *Arabians*: His Power is not ſo very formidable perhaps as ſome others may be; but he is look'd on as the Father, or chief Patron of the ancient *Indian* Religion and Rites; and on that ſcore highly reverenc'd by all. His Country is 150 Coſe in length, and 200 in breadth ſome ways, in which he has ſeveral fine Cities and Caſtles: But his greateſt Strength is the Fortifications he has about him, partly in the Work of Nature, in long Ridges of inacceſſible Mountains; and partly the Fruit of Art and Induſtry, as in all places where Nature has left a Gap for an Enemy. 'Tis upon this Account, and that of the Character he bears, that he remains unconquer'd, and is like to do ſo ſtill: The mighty and fortunate *Ecbar*, that had tam'd ſo many unruly Adverſaries, cou'd make nothing of this Prince; his Fortune here was at a ſtay, and cou'd not carry him over the Walls of *Gurchito* Caſtle, tho' he puſh'd it on with all the Vigour in the World. But then the moſt part of the *Raja's*, even thoſe that are in Friendſhip with the *Mogul*, don't care to meddle with him for the ſake of his Character; and therefore if ſent againſt him, find ſome ſhift or other to avoid hurting him, or making any Spoil in his Territories.

'Tis believ'd by ſome, that this Prince is the true and undoubted Succeſſor of the Noble *Porus*, celebrated in Antiquity; that the *Indian* Blood is here preſerv'd untainted and pure; and in a word, that all the genuine Remains of the old *India*, are here more than any where to be found: This is grounded upon the appearing Impoſſibility of making a compleat Conqueſt of the Country. However, 'tis reported now abroad, that the *Mogul* has courted him into a ſort of a ſlight Acknowledgment of his Sovereignty; perhaps as much as a ſmall Tribute may come to, which alſo he can withold without danger when he pleaſes.

Others about *Guzurat*. About the Country of *Guzurat*, lie three more of theſe *Raja's*, that ſtand upon their own defence, againſt the *Mogul*.

One of them is that *Badur* before-mention'd, that makes ſuch havock up and down in the Country: This Prince has ſometime appear'd with a Bady of 100000 Men; as particularly when he plunder'd *Cambaya*.

The other two do (as he does) lie out of the reach of the *Mogul's* Forces, either in impregnable Forts and Caſtles, or inacceſſible Mountains, or elſe in impaſſable Wilderneſſes and Deſarts.

One of them is reported, to have a Breed of Horſes that is not to be match'd again in all the Eaſt; they are valued each at 15000 Roupies, and are ſaid to be far before the *Arabian* Horſes for ſwift Running; and not only ſo, but they are ſtrong to hold it too; ſo that a Man may ride one of them almoſt a full ſpeed, a whole Day, and never draw Bit: The *Raja* has (they ſay) 100 Mares of this Breed.

Others towards *Labor*, and thoſe parts. All along the River *Ravee*, Eaſterly, lies the Country of another great *Raja*, whoſe chief City is *Tem-mery*: He is a very mighty Prince, and as it happens, a Subject to the *Great Mogul*: Out of his Country come vaſt Quantities of the fine *Indian* Drugs, Spikenard, Turbith, Miras, Kebals, Gum-lack, Turpentine, Coſtus, &c.

But his next Neighbour, another *Raja*, as potent as himſelf, and more ſecure by his Fence of Mountains, equally deſpiſes both the Power and the Friendſhip of the *Mogul*. His chief City is *Negercoat*, fam'd for an Idol in great requeſt, that ſtands there: Multitudes of People come hither for the Redreſs of their Grievances, which they pretend to receive to their entire Satisfaction, at this place: But beſides their other Offerings, they do (in the Tranſports of that wicked Zeal which acts them) make an Effuſion of their own Blood, barbarouſly mangle their Bodies, and ſometimes proceed ſo far as to cut their own Throats, which is indeed a full Solution of all Doubts, and Period of Trouble and Miſery.

To the Eaſtward of theſe, lies another *Raja*, whoſe chief Seat is at *Calſery*; his Country 500 Coſe in length, Northward and Southward, and 300 broad; and he is able to bring 500000 Foot into the Field upon occaſion. His Dominions are rich and fruitful, but keep all ſhut up within themſelves, communicating with none of the adjacent parts of *India*.

Farther ſtill to the Eaſtward, between *Gemini* and *Ganges*, ſtretches out the Country of another of theſe *Reſboot* Princes, 300 Coſe long, and 150 broad, the principal City of it *Serenegar*. This *Raja* is vaſtly rich in Gold, and is ſaid to have all his domeſtick Furniture of that valuable Metal. The Country is fertile, and happy enough in its Soil, but not altogether ſo in the Temper of its Climate, the Winter here being extreamly ſharp, and the Snows ſo violent upon the Mountains, that the People, at that Seaſon, are forced to remove down into the Valleys.

On the further ſide of the *Ganges* lies another *Raja*, whoſe Territories are ſo large, that 'tis not agreed where to fix the Bounds of them: *Camow* is his Capital City; but his Country runs (ſome ſay) Eaſtward, almoſt as far as *China*; however, few allow him leſs than 400 Coſe in length, and as many in breadth. It yields a great deal of Musk, and is as liberal in the Production of Grain; it has no Force of Elephants, nor not much of Horſe in compariſon; tho' thoſe it does afford are of a Noble Breed for Uſe and Service, and the beſt Mountain-climbers in the World: So that this Prince's main Force conſiſts in his Foot, and therein perhaps may not be much inferiour to the *Mogul* himſelf. Horſes call'd Gunts.

To the Southward of this laſt, a-thwart the Streams of *Ganges*, you come into the Country of a *Raja* vaſtly powerful, both in Foot, Horſe, and Elephants. He has the greateſt Rarity and Treaſure in his Dominions that *India* affords, which is the Old Rock of Diamonds, of which he makes no ſmall advantage. Diamond Rock.

And below him, amongſt the Streams of *Ganges*, is ſeated a *Potane* Prince, of the Race of the ancient *Delly* Kings; who puts the *Mogul* to the conſtant Charge and Trouble of maintaining a Frontier Army; and all this but juſt for his own Defence: For he is not able to reach this *Raja*, who is as well defended againſt him by the Iſlands and Branches of the *Ganges*, as the others are by their high Walls of Mountains.

From hence all along to the Mouth of the *Ganges*, the *Mogul* commands without Controul or Diſturbance; only at the very Mouth it ſelf, there's a Gang of *Portugueze* Outlaws, that have the Protection of a Fort, that value no Prince, nor no Law, nor no People; but bidding Defiance to all, do what Miſchief they can, as they have opportunity.

CHAP. XIV.

A Diſcourſe of the Affairs of India, *and of the Proceedings at the Court of the* Great Mogul. *Written by Capt.* William Hawkins, *and Directed to the* East-India *Company.*

I Kept Company with Captain *Heeling* in his Voyage as far as *Deliſa*, a Road in the North of *Socotora* in the *Arabian* Sea, at which place we parted, he purſuing his Voyage in the *Dragon* for *Bantam*, and my ſelf in the *Hector* for *Surat*.

*Capt. Hawkins comes to *Surat*, A. D. 1608.

I came thither *Auguſt* the 24th *; and having informed the Governour of my Arrival, and the Character I came in of his Majeſty's Embaſſadour, I receiv'd his Compliment and ſolemn Invitation to come aſhoar, and had at my Landing an Entertainment, that if all the reſt had been agreeable, would have given me no cauſe to complain.

'Tis to be obſerved that the Management of the Affairs of *Surat* lay in the Hands of two great Men; the one Viceroy of the King of *Decan*, who had cognizance of all Cauſes that related to Land Buſineſs and Civil Government; the other Viceroy of *Cambaya*, who preſided over the marine Affairs. This was the perfidious *Mecrebchan*, into whoſe Hands, Merchants. and Sailors, and all that are any thing a Kin to the Sea, muſt of neceſſity fall; without whom no Trade can be eſtabliſhed, nor any Factory be ſetled in thoſe parts, and who does in all theſe Matters juſt what pleaſes himſelf, and is agreeable to his own Covetous and Ambitious Humour. No Man ſeemingly ſtudies more his Princes Honour and Intereſt than he, and none minds it leſs; no Man to appearance more Loyal, Honeſt, and Sincere, and none that dares Practice theſe Vertues leſs; a Man that can be Wiſe, Real, True and Juſt to himſelf alone, and in ſhort remarkable only for his Preferments and extraordinary ill Qualities. My Concerns falling under his Cognizance, and he being at *Cambaya* when I Landed, I was forc'd to wait till Orders came from him before I cou'd proceed in any Buſineſs, tho' in the mean time I had very civil Treatment from the other Viceroy, and the Promiſe of his beſt Endeavours with *Mocrebchan* on my behalf. When ſome twenty Days were expired, a Meſſenger came with a Letter from this great Man, wherein he gave me Licence to land the Goods I had brought, as alſo to buy more for my lading this preſent Voyage; but as to the Point of a future Trade and the ſetling of a Factory he could ſay nothing to that till he had further Orders from Court. And then at the ſame time he wrote to the chief Manager of the Cuſtoms under him at *Surat*, to bring all my Goods into the Publick Cuſtom houſe, and ſecure them there till his Brother came; to chuſe out ſuch Parcols as were moſt fit for the King as he pretended, tho' 'tis nothing leſs than the King's Profit they deſign by all thoſe Practices with Foreigners.

English Barks taken by the *Portugueze.*

The Plot of *Mocrebchan* and the Jeſuits.

The *Portugueze* refuſe to give Satiſfaction.

Their Deſigns upon his Life.

However having this Liberty I brought my Goods aſhoar, getting in ſome conſiderable quantities of Money, I began to lay it out upon ſuch Commodities as are vendible at *Bantam* and *Priaman*, and which the *Guzurats* with a great deal of Profit came thither for every Year. I accompliſh'd the lading of two Barks with this ſort of Merchandize in a little time, tho' not without ſome Noiſe and Grumbling from the Merchants of the Town, who now began to make publick Complaints of me, as a Perſon that had undermin'd them in their moſt profitable Trade, and craftily ſnatch'd a good part of their Advantage out of their Hands. But for all this having Licence from the higher Powers to Ship and Goods I had bought, I made bold to ſend them away, tho' as it prov'd, in the moſt unlucky time in the World for my ſelf, and the moſt proper to gratifie the Spite and Malice of the Merchants. For the next Day I had news that both the Barks were taken with all the Men and Goods by the *Portugueze*, and that not without ſeveral Grounds of Suſpicion that the chief Men I had intruſted in them, were guilty of a treacherous Correſpondence with the Enemies. But the truth of the Matter was, That an abſolute Plot was form'd for the betraying of them into the Hands of the *Portugueze* by *Mocrebchan*, and the Pious Jeſuites of his Club; and the Reaſon why I was delayed ſo long before I could have Orders to lade and diſpatch, was, That the Veſſels might hit to go out juſt at that time that the *Portugueze* were ready to ſwallow them up. And under this Misfortune 'twas in vain for me to make Complaints, or ſo much as attempt to ſeek any redreſs. Shou'd I apply my ſelf to *Mocrebchan*? He was the firſt Spring and grand Author of the Miſchief; and to ask there for help, had been courting a Knave to right the Wrongs done by himſelf, and beging a Plaiſter from the malicious Hands that gave the Wound. As for the *Portugueze* themſelves that did the Injury, when I demanded Satisfaction, I had nothing but ſcorn and ſpite, ill words and railing to make me amends. It was to no purpoſe for me to alledge His Majeſties Authority and Commiſſion, by which I was empower'd to act in thoſe parts, with the bad Conſequences of ſuch Acts of Hoſtility as theſe were in producing a War between the two Nations. For as for His Majeſties Commiſſion they valued it not a Farthing, and they affirm'd he ought not to have ſent his Subjects there without leave from the King of *Portugal*, who was the rightful Lord of thoſe Seas; and then with all the Manners and good Breeding peculiar to that civil People, they expreſs'd themſelves concerning my Prince at ſuch a rate, as if he had been indeed little better than one of thoſe Fiſhermen, of whom they ſcandalouſly ſaid that he was King. This was their Character of the *Engliſh* Men, becauſe they live in an Iſland; but there is ſtill a better Reaſon (tho' no good one to them) why the *Engliſh* ſhould be call'd Fiſher-men; and that is, becauſe they have generally ſuch good Fortune upon the Waters, and drag ſo many *Spaniſh* and *Portugueze* Ships within the reach of their Nets. And the only courſe that I cou'd take under thoſe Affronts to vindicate the Honour of my Prince, and Country (ſince I cou'd not do it in a more publick way) was to offer to do it by my own Sword, and to return the Traytor and the Villain to the Teeth of the inſolent *Portugueze* Captain, with a Challenge to anſwer me in the Field. But they it ſeems had more mind to diſpatch me without any thing of the Ceremony of a formal Combate, and thought it a ſurer way to Piſtol or knock me 'othe Head in the next place they met me, than leave the Matter to the Iſſue of a Duel. And that this was their Deſign is evident, becauſe all the ways were continually beſet by them, ſo that I hardly dared to ſtir out of doors; and 'twas impoſſible for me to obey the call of Buſineſs without the manifeſt Hazards of my Life, by that barbarous Crue, that waited for an opportunity to Sacrifice me. They were ſo mad upon this Deſign, that they came a whole Body of them in open manner to a Feaſt, (where I was Invited) asking for me in plain Terms, intending without all doubt to have my head to bring up the rear of Diſhes at the Table. But here was an *Indian* Captain that ſtood my Friend with his Company to ſuch good Purpoſe, that the *Portugal* Buff-Coats were glad to make off with ſome haſt, and for ought I know, it had been the laſt Feaſt ſome of them wou'd ever have been at. Nay, they did not bluſh to beſet formally, and aſſault the Houſe where I lived; and as if I had been ſome very odious Perſon, whom the Church had curs'd and conſign'd over into the Hands of the Executioners of her Sentence, they came with a Prieſt at the Head of the Troops, to crave a Bleſſing upon the Attempts, to inſpire the Souldiers with Courage and Reſolution, and take care of the Souls that ſhould be ſent away in this godly Enterprize. And to give thoſe Pious Fathers their due, they had their Hand and peculiar Influence in every Plot that was form'd againſt my Life and Liberty. When the reſt of my Adverſaries were dull and indifferent, they wou'd infuſe new warmth and vigour into them, rouze up their ſleeping Malice and Revenge, and prompt them to Action with the utmoſt Diligence. And if they hapned to be at a dead lift for a Plot, the never failing Invention of the Jeſuits wou'd be ſure to help them out with one. What between the heat of the Climate, and the inward Fire of their own Rage and Jealouſie, their Wits were throughly warmed, and their Brains crowded with brisk volatile Spirits fit to work upon the fine Arts of Intriegue. They are not dull in any part of the World, nor ever to be charged with Poverty and Barrenneſs of Fancy in Matters of this kind. But here their Elevation was extraordinary, their Flights fine and rapturous beyond Compariſon; they did not think, but were tranſported into happy Thoughts and Contrivances, they plotted by Inſpiration.

The Villany of *Mocrebchan.*

I found it a very hard task to eſcape all the Snares and Ward off the ſeveral Blows theſe Men and their Inſtruments made at me. There were ſo many that pretended to my Life one way or other, that 'twas become a very difficult matter to keep it, and I had defended it ſo long, that now I began to grow weary. But beſides all theſe things the Injuries I ſuſtain'd by *Mocrebchan* in the Matters of Trade and Dealing were ſo foul and unprofitable, that I thought it high time to repair to Court and ſeek for Juſtice and Redreſs (as well as the diſpatch of my Buſineſs) at the Kings own Hands, ſince 'twas impoſſible to have either from this vile Miniſter, for he took what Goods he pleas'd, and at what Rates he pleas'd, and wou'd pay me for them when he thought fit, and as long as any thing choice and good laſted, I had ſome of his Flatteries and diſſembling Smiles, but afterwards cou'd get neither good Words nor Money. Upon this ſcore I ſay I reſolved for *Agra*, and therefore in plain Terms demanded his Licence and Letter to the King for that purpoſe. This was a Requeſt which he cou'd not for ſhame deny, and therefore was forc'd to yield to it; yet to ſhew his good Will to me in the Caſe, he refus'd to let me have any Guard to conduct me thither, that ſo it might be the eaſier for me to be knock'd in the Head by the way. Whoſe friendly Advice this came about by may eaſily be gueſs'd, and will appear by after Circumſtances; but however with or without his Guard, to *Agra* I reſolved to go, and for *Agra* I prepared.

Captain *Hawkins* ſets out for *Agra, Feb.* 1. *A.D.* 1609.

Having in purſuance of this Deſign entruſted one of my Company with the overſight and management of Buſineſs at *Surat* in my abſence, I procured a Troop of Horſe of ſome 40 or 50 (beſides ſome Shot and Bows which I hired) from one of the Vice-roy of *Decan*'s Captains.

Pattans good Souldiers.

Province of *Craly* between *Daman, Guzarat* and *Decan.*

Dayta Province.

The Horſe I had were all *Pattans* who are a very valliant People and much feared in thoſe parts; And 'twas very well that I was ſo provided, ſince alſo in all likelyhood I had been intercepted in my Journey. For the *Portugueze* had laid a Trap for me in the Province of *Craly* by an *Indian Raja* who Commanded there, and was ready by their Inſtigation to have fallen upon me with 200 Horſe: But the Terrour of my *Pattans* kept him at a diſtance, ſo that we paſs'd without any diſturbance. In the Province of *Dayta* (thro' part of which I paſs'd next) I eſcap'd a more formidable becauſe a more ſecret and hidden Danger; and the Inſtrument of my Preſervation was my drunken Coachman tho' ſhrewdly againſt his Will. This fellow was hired to Murther me by the way, and had in all probability acted his Deſign, had not the good Liquor made him tell Tales of himſelf; but being brim full of the Plot and of ſtrong Drink too, according to the Temper of thoſe Men, he let his Tongue run ſo far before his Wits that out came the Plot before he was aware. This drunken Fit of his was very luckily tim'd for me, ſince the thing was to have been Executed the next Morning early, when we began our Travel, which is always two Hours before Day. But tho' the little Villain would not diſcover the great ones that had engaged him in this Work, as my Truchman or Broker did, confeſſing that he alſo was a Tool employ'd upon the ſame Deſign, and had undertaken to accompliſh that by Poiſon, which the other had promis'd to do by a Stab. That *Mocrebchan* had hired them to do it, but the Jeſuite *Pineiro* had put this Deſign into his Head to prevent my Complaints at Court, ſince they could not (becauſe of my Character) pretend to ſtop me any other way. And I doubt not but the Father wou'd have been very liberal to theſe Men, had they executed their Deſign, ſince he bid an extraordinary Price for me once before; no leſs than 40000 Rials of 8 to have me ſent away Priſoner to *Daman*; a Rate far beyond that which the Chief Prieſts and Phariſees ever pretended to give for innocent Blood

Deſigns to Murther him by the way.

But after all theſe Difficulties under the good Conduct of the *Pattans*, who clear'd the way before me, and did me very faithful and commendable Service. I arrived ſafely at *Bramport* the then reſidence of the Vice-roy of *Decan*, by whom I was nobly entertained. I had his very kind Letter of Commendation to the King, and all needful Aſſiſtance for my Journey to *Agra*; to which place a favourable Providence and good Guide, brought me thro' many Dangers and threatning Miſchiefs, after near a Months Travel in the Proſpect of them.

Comes to *Bramport, Feb.* 18.

My entrance into the City was not (nor could not it ſeems be) ſo private, but notice was preſently given to the King; and whereas I had a Deſign to be incognito for a time, till I had put my ſelf into a poſture for a more publick Appearance, I was utterly prevented, His Majeſty ſending ſeveral Troops of Horſe and Foot to find me out, and bring me to Court in the moſt Pompous manner that could be.

Comes to *Agra, April* 16.

Being introduced to his Preſence (tho' I came without any Preſent worth his acceptance, his good Servant *Mocrebchan* having robb'd me of what I deſign'd for this purpoſe) I was receiv'd with uncommon Honours and degrees of Reſpect, ſuch as I cou'd no way have conceited or hoped for.

His Reception at Court.

My Prince's Letter he received from me with his own Hands, reaching it out to that end a conſiderable way from the ſtately Throne he ſate on; and tho' an old Knave of a Jeſuite that ſtood there by to interpret it, pretended to find fault with the ſtyle of it as not reſpectful enough, yet he himſelf was very well pleas'd, and took no notice of what was inſinuated by the ſlanderous Prieſt. In ſhort he proteſted in a moſt ſolemn manner that he wou'd grant all the Contents of the King's Letter, and more too if it were demanded. That as he underſtood that *Mocrebchan* had abuſed me, ſo he wou'd take care I ſhould have Satisfaction, and ſome courſe ſhould be taken to prevent the like ill Treatment of me or any of my Nation for the future.

And in purſuance of this, he preſently diſpatch'd a Courier to that perfidious Miniſter at *Surat*, giving him a ſtrict charge to deal Juſtly and Favourably with the *Engliſh*, and as he valued his Favour, or pretended to any Duty and Loyalty to him, that he ſhould take care to ſhew it, particularly by a punctual Obedience to this Command.

The *Mogul's* Letter on the behalf of the *Engliſh*.

But beſides theſe Favours, upon the publick Account, I had the good Fortune to enjoy many very ſignal ones upon my own private Score. After I had once been at Court, I could hardly ever be at reſt for Meſſengers to bring me thither: For His Majeſty underſtanding very well the *Turkiſh* Tongue, and finding me to ſpeak that freely, 'twould be his Delight to ſit and talk with me both Night and day; and none had more of his Company than I, except his Miſtreſſes.

We went over all the Affairs of *Europe*, and particularly of *England*, and the adjoyning Countries; and after that into the *Weſt-Indies*, which he had heard ſome reports of, but never receiv'd any compleat Satisfaction, till he had it from me who had been in thoſe parts. Theſe things pleas'd him to that degree, that he began to plot how to engage me to him for ever, and in order to it, made me the moſt tempting Offers he could poſſibly think on. I ſhould have a certain Stipend of 3200*l. per An.* for my firſt encouragement, and this ſhould be encreas'd together with his Favour every Year. But farther (and which was the moſt perſwaſive Argument to a Man that valued the Good of his Country before his own particular Fortunes) if I would yield to ſtay with him, he would grant me all the Privileges I could deſire with reference to a Factory, and this Grant he vowed ſhould never be repeal'd. And upon theſe Conſiderations both out of Duty to the Publick, and Reſpect to my ſelf, I thought it neceſſary to comply with his Deſire. But notwithſtanding I was thus (to all appearance) ſecurely poſted under the Protection of ſo great a Prince, and in ſo high a Degree poſſeſs'd of his Favour too; I found by many unpleaſant Experiences I was not got beyond vexation and diſturbance, nor out of the reach of Enemies. For now the *Mahometans* began to ſwell with rage and envy that a Chriſtian ſhould be placed ſo near the King; and the *Jeſuites* and *Portugueze* were no leſs then ſtark mad that I had flown above all their Toils and Snares into ſo ſoft and eaſie a Neſt in the very Centre of the Court. The News that it was ſo, ſpread all about the Country, to *Goa*, to *Surat*, and wherever there was any of that Cattle to be found. And this ſet them all moſt buſily at work; the Jeſuites neglected their Devotion and rack'd their Brains Night and Day, they made Confederacies, they ſent Diſpatches from one place to another, they conſulted Hell to remove me and work my overthrow. They brib'd *Mocrebchan*, their old Friend and Brother in theſe Villainies, to write a Letter to the King upon this Subject; to repreſent to him the dangerous Conſequences of the Liberties and Favours he had vouchſafed to the *Engliſh*, and the Reports that went current abroad of the Deſign we had of ſeizing ſome of his Ports when our Shipping came. But the King (as yet kind and conſtant) giving no credit to this Letter (tho' 'twas ſeconded with another to the ſame purpoſe from the Vice-roy of *Goa*) they fell into the laſt extremity of rage and madneſs at the Diſappointment; and now concluded, ſince I was the main Obſtacle, and nothing elſe cou'd be perform'd to remove me out of the way by the old Catholick Method of Poiſoning. They began with ſome of my Servants, one of which they ſent into the other world; and finding by my own growing indiſpoſition, that was ſo like to follow quickly after, I plainly told the King the Circumſtances of extream Danger I was in. Upon this he preſently ſent for the Jeſuits and bid them look to it, ſince if I died by any thing of an extraordinary caſualty that afforded the leaſt ground for Suſpicion, they ſhould every Man pay for't with their Lives. After this being at ſome quiet, I ſolicited the compleating of His Majeſty's Favour, with reference to our Trade and Factory at *Surat*, whither I had obtain'd leave to go in Perſon with his Commiſſion now ready for me. But the chief Vizier, an implacable Enemy to all Chriſtians, and in the ſame Intereſt with *Mocrebchan* and the Jeſuits, inſinuated to the King ſeveral Inconveniences and Dangers, which he pretended wou'd certainly follow my going thither; by which means my Journey was ſtopp'd, and the Commiſſion was ſent by another Hand, tho' as full and effectual to all the Purpoſes of our Buſineſs as could poſſibly be deſired.

His liberal Offers to Captain *Hawkins*.

The Endeavours of his Enemies to remove him from Court.

The King's Commiſſion ſent to *Surat*.

A little before it came, our Ship the *Aſcenſion* was unhappily caſt away there, and the Men tho' ſaved were forbidden by the Barbarous *Mobrebchen* to come into the City of *Surat*, where only they could expect to find Friends and Relief in their Diſtreſs. But his Majeſty upon my Complaint ſent freſh Orders to that ill natur'd Man, whoſe carriage now he began highly to reſent, to take all thoſe poor Seamen into the City and uſe them kindly, and not only ſo, but to uſe his beſt endeavours to ſave all the Goods of the Ship too if it were poſſible, Beſides this being ſurrounded on every ſide with the Cries and Complaints of his Subjects upon the horrid Injuſtice and Tyranny of that Miniſter, he could no longer defend himſelf againſt them, but was forc'd to ſend for him up to Court, there to anſwer the Crimes laid to his Charge. And tho' he made his Appearance there with all his ill gotten Goods and Wealth, the Effects of many Years Extortion, Oppreſſion and Cheating, amongſt which alſo I ſhew'd the King the things I deſign'd for a Preſent to his Majeſty; yet by the induſtrious Care and Application of his Friends, he got clear again, being only confin'd for a time and ſo oblig'd to pay his Debts and make Reſtitution. It had been happy for the *Engliſh* Nation had this Traytor (then in ſo fair a way for't) been brought to a deſerved Puniſhment; but inſtead of that he was reſtor'd to his old Place and Preferments again, and reſerv'd as it ſeems for a farther plague to us in overturning the faireſt Proſpects and Deſigns that perhaps ever will be form'd in that Country.

Mocrebchan Commanded to Court upon Complaints made againſt him.

But to proceed with our Affairs, tho' the King's Command had oblig'd *Mocrebchan* (very much againſt his own inclinations) to be Juſt and Honeſt to his Creditors, yet I cou'd not be ſo happy as to obtain the Benefit of that

Order in the full payment of the Debt owing to me. His late Diſgrace and Danger had not ſweeten'd nor mollified him one jot, and he came out of Priſon the very ſame deſigning Knave and Cheat that he went in. He wou'd neither pay me my Money nor reſtore me the Goods that he had taken from me; neither cou'd I ſee any proſpect of Satisfaction to be made me, unleſs a few Heatheniſh Promiſes and Flatteries wou'd have ſerv'd the turn. And 'tis certain that this muſt have been all, if I had not demanded Juſtice of the King, and got a poſitive Order for payment; notwithſtanding which the Infidel cut off a good part of my Bill, and abated me 12500 *Mamedies*.

New Deſigns carried on.

But this was a very inconſiderable Damage in compariſon with that which quickly followed after. For now *Mocrebchan* being at full Liberty again, the Jeſuits, the *Portugueze* and he fell to the old Trade of Plotting with the utmoſt Vigour and Diligence. And that now they might have all deſired ſucceſs, and at one ſtroke carry their Point for ever; the Matter was ſo order'd, that a Letter ſhould come from the Vice-roy of *Goa* to complain of his Majeſties encouraging the *Engliſh*, and to ſhew how ill the King of *Portugal* took it at his Hands. And at the ſame time ſome Merchants were made to come in and give their Evidence how much they had ſuffer'd in their Trade and Buſineſs upon the Account of the *Engliſh* that were in his Majeſties Ports, for whoſe ſake the *Portugueze* wou'd not permit them to have free egreſs and regreſs at theirs.

The King revokes his Grant to the *Engliſh*.

Theſe malicious Inſinuations back'd by a charitable Speech of *Mocrebchan's* to the ſame purpoſe ſo effectually wrought upon the King that he quite loſt his Conſtancy; repeal'd his former Grant, and gave Orders that the *Engliſh* ſhould be forbidden his Ports for ever. But 'twas not long before a better Humour and more cool and ſober Thoughts produced an Order quite contrary to this again; re-eſtabliſh'd us in the enjoyment of our former Privileges, and made the King as much our Friend as he was at firſt. This was a ſudden tho' a comfortable Change; and as 'twas only the Effect of the Abſence of our Enemies, and a ſlight Preſent I made him, ſo I doubted the Foundation and Cauſe, was too mean and poor to produce any thing of a noble and laſting Effect. And my Preſages were juſt and true; for the King being now got into this changeable Humour, did nothing elſe but alter his Mind and go from one Reſolution to another.

His Inconſtancy.

When the Jeſuits writ to him and preſented him, then he wou'd be for turning us out of his Kingdom, and calling in the Commiſſion for our ſettlement of Trade: And perhaps the next time I offer'd to petition him, all ſhould be right and well again, and the *Engliſh* the moſt welcome People to him in the World. No leſs than three or four times were our hopes thus rais'd, and as many times ſunk into the loweſt deſpair: thus often did he do and undo; ruin and recover us, ſuffer ſentiments of Kindneſs and Diſpleaſure towards us to rule and act him by turns. However at laſt our indefatigable Adverſaries carried the Day from us; the Poiſon of the Jeſuites ſcour'd him beyond all Recovery by Preſents or any other Means. His laſt Reſolutions were againſt our Trade and Settlement in his Country; and I my ſelf ſo courted and careſs'd by him was left to my Liberty either to go or ſtay, as I pleas'd. And the Truth on't is, that as my great Temptation to ſtay there, was the Hopes and Proſpect I had of doing my Country ſome good Service; ſo when I had loſt thoſe Hopes, I had no ſmall Reaſon to be glad of a Diſcharge. For beſides the continual Dangers that threatned my Life in a Country where ſo little Honour, Honeſty or any ſort of Vertue was pactiſed; I had no Charm at all to bind me to this place from the Honours and Profits which his Majeſty promis'd to heap upon me. 'Tis true, I was called the *Engliſh* Chan or Lord, but the Title wanted a proportionable Revenue to ſupport the Grandeur of it; and the *Engliſh* Lord without the *Indian* Penſion to maintain him, was but a very poor thing.

He determines againſt the *Engliſh* finally.

And this was punctually matter of Fact, that out of all that honourable Stipend which was at firſt aſſur'd to me, ſo much *per Ann.* I could never receive the full Value of 300*l.* the reſt being devour'd by the hungry Courtiers, or injuriouſly detain'd by the Intrigues of ſome of my Enemies.

A little before Matters came to this paſs with me at Court, I had the happy News of three *Engliſh* Ships at the Bar of *Surat*: Theſe were under the Command of Sir *Henry Middleton*, and with them I reſolv'd to ſet Sail for *England*. And indeed I found it not ſo hard a matter by far to go away in quiet, as to live there in Peace, and without Diſturbance. For tho' I make no queſtion but the Jeſuits and the reſt of my Adverſaries wou'd have been very glad to have prevented me by ſome fatal Plot, cou'd they have had a fair opportunity for the Execution of it: yet not having that, they were glad to be rid of me upon any Terms, and counted it a conſiderable Point gain'd to have removed out of the midſt of them a Perſon likely to do them ſo much Miſchief as I was.

Three *Engliſh* Ships come to *Surat*.

So taking my leave, I ſet out from *Agra*, *November* the 2d and went directly to *Cambaya*. From hence I purſued my Journey towards the place where the Ships lay, to which I came with all my Effects, *January* the 26.

A. D. 1611.

We ſet Sail out of this Harbour the 11 of *February*, and arrived at *Dabul* the 16 of the ſame Month. Here we took a *Portugueſe* Ship and Frigat, and in them ſome quantities of Goods, tho' too little to make Compenſation for the Wrongs we had received in *India* by their Means. We directed our Courſe from *Dabul* for the Red-Sea, having a juſt Quarrel with the *Turks*, and that ſort of People to call us thither, and whom we intend now in ſome meaſure to make ſenſible of the Diſpleaſure our Nation had ſo juſtly conceiv'd againſt them. Here we had the good Fortune to meet with three Ships of our own Country, which as we found ſo we alſo left there, directing our Courſe back again towards *India*, diſpatching ſome Buſineſs at *Teca* in *Sumatra*, and from thence to *Bantam*, by which time the Year had almoſt finiſhed it's Revolution, it being now the Month of *December*.

A. D. 1612. He comes aboard the *Engliſh* Ships.

Dabul.

A *Portugueſe* Ship taken. Come to the Red-Sea.

Teca.

Sir *Henry Middleton* being oblig'd to ſtay here by the Neceſſities of Trade, I embark'd in another *Engliſh* Ship, *January* the 13th for my own Native Country, from which I had been abſent five or ſix Years.

Goes for *England*. *A. D.* 1613.

CHAP. XV.

The Voyage of the Conſent, *a Ship of the laſt Fleet, Commanded by General* Keeling. *Perform'd by Captain* David Middleton, *Brother to Sir* Henry.

WE have ſeen already the Performances of the other Ships of this Fleet, in thoſe ſeveral parts of the *Indies* to which they went: But the *Conſent* being out of the Company of the reſt, has hitherto ſcap'd our Notice. We muſt now enquire what was done by her abroad; what Advancement of Trade, what Diſcoveries, what kind or ill Treatment from Foreigners, ſhe brings us News of.

A. D. 1607.

Cap. *Middleton* came into the Bay of *Soldania*, a conſiderable time before the reſt of the Fleet; it was the Sixteenth of *July*, and they did not reach it till the ſucceeding *December*. They ſtaid here, it ſeems, but a little time, being uncertain when their Company wou'd come; however, they did make a ſtop for a few Days, to enjoy the Pleaſures of this place, and the Diverſions of its near Neighbour, *Penguin* Iſle. This Iſland is famous enough for the Production of thoſe Fowls from whence it has its Name; but they give us more ſtrange Accounts of the Multitudes of them, than what we commonly have: That you may drive them along before you, Five hundred, or more in a Flock; and the Seols in far greater numbers all about upon the Shoar.

But

Pengwin Iſland, a good place for Fowl.

But beſides theſe, you have wild Fowl of ſeveral ſorts, good Geeſe and Ducks, Pelicans too, and many others, which they don't give us the particular Names of: So that no Man can want ſport, that goes thither for it; unleſs the too great plenty of Game prove ſomething of a hindrance, and loſes the pleaſure of ſearching out, and purſuing, which is indeed all the Life of the Exerciſe.

From hence they went on for the Coaſt of *India*, in all which Courſe we have nothing remarkable, as far as the

The Eugano.

Iſland *Juganas*, or *Eugano*, as ſome call it. This Iſland they place in 5 ½ Degr. South Lat. and make the Variation there to be four Degr. 13 Min. It lies Eaſterly S. and W. and by N. and is five Leagues in length, or thereabouts; the Eaſt-end is much the higher Land, and the Weſtern is woody and full of Trees.

Go to the *Molucca's*

They went away firſt of all for *Bantam*, where they diſcharg'd their Burden of Lead and Iron, and took aboard in the room of it other Merchandiſe proper for the *Molucca's*.

Theſe rich Iſlands were next to be viſited by them, in order to which they ſet Sail from *Bantam*, *Decem.* the 6th. They had terrible Thunder and Lightning in this paſſage, Rain, and all ſorts of ill Weather; rough and boiſterous Winds excepted. But that was their advantage, they had no Trouble nor Danger upon that ſcore; but ſail'd on through all that Fury of the Weather, very merrily and well contented, that the Wind, the moſt dangerous Enemy of all, did not engage together with the reſt againſt them. 'Twas ſo kind and favourable at that time, as to be of their ſide, affording them all along a brisk ſteddy Gale, by the help of which they reach'd the *Molucca's* in the beginning of *January*.

The Account we have of their Proceedings at thoſe Iſlands, is very ſhort and imperfect. In general, we find that near two Months was ſpent in meer Ceremonies and Complements between them, the *Spaniards*, and the *Moluccan* Princes.

'Tis true, this was better than Fighting and Wrangling all that while; and at firſt ſight it appears ſtrange, that the *Spaniards* ſhould be guilty of ſo much Civility and good Breeding towards the *Engliſh*, whom they uſed to

Deſign of the *Spaniards* to hinder our Trade at the *Molucca's*.

treat after another manner. But 'tis to be conſider'd, that in this long Interval, they were concerting Matters amongſt themſelves, to ſend them packing from thence. They were reſolv'd the *Engliſh* ſhou'd not Trade there; but yet were unwilling to uſe violence, or turn them away rudely. And therefore ſome plauſible Pretence muſt be made for their Diſmiſſion, or ſuch Conditions propos'd in order to their ſtay, that they not being able to agree to, might upon a Denial be the more handſomely turn'd off. Now this being the Caſe, 'twas as good to fall a Complementing in the mean time, as not; there's no Charge in a few flattering Words, or a little diſſembling Carriage; but there's ſomething of advantage in it, becauſe 'tis a compleat Cover for an ill and treacherous Deſign. The *Spaniards*, with all their Gravity and Formality, tell our Men, They can't admit them to Trade, till the Camp-Maſter has given leave.

And why does not the Camp-Maſter then determine the Matter, and ſay Yes, or No, plainly, without farther delay?

Why, becauſe he is contriving to do it more neatly and genteelly; that is, with more *Spaniſh* Ceremony and Circumlocution: 'Tis much the better way to query and propoſe, to offer and make Conditions (no matter how impoſſible), than to come out with a peremptory Denial, and ſay bluntly, You ſhall not Trade here.

Now the Circumſtances of theſe Iſlands at that time, furniſh'd Matter enough for this way of proceeding: For the *Dutch* and they were up to the Ears in Broils and Quarrels, and nothing cou'd be better, than to propoſe to the *Engliſh* to come into the Quarrel too, and take their parts againſt the *Dutch*. This they might eaſily gueſs was what their Commiſſion wou'd never allow them to do, nor bear them out in; but upon that Account 'tis to be ſuppos'd they made the Propoſal. In ſhort, Captain *Middleton* poſitively refus'd it; and the *Spaniards* at the ſame time deſired to be excus'd from granting him the Liberty of Trade. This was the Upſhot of the Buſineſs: And 'twas a pretty Concluſion, to be uſher'd in with ſuch a Train of Complements and Careſſes, and to lie upon hand, from the beginning of *January* to the middle of *March*. 'Tis true indeed, a free Trade was permitted at the beginning of *March*; but that Liberty expired in a very few Days again; thoſe favourable Orders were countermanded, and the *Engliſh* urged to be gone.

People privately Trade with them.

However, the Natives had more kindneſs for them than this came to; for they made ſhift to drive a Trade with them out of the *Spaniards* ſight; a ſign what they wou'd have done, had they had the Liberty to chooſe their own Cuſtomers. 'Twas impoſſible to do this by Day, and therefore they did it under the Protection of the Night; the *Spaniards* all the while ſuſpecting nothing of theſe dark Cabals, but frolicking it very pleaſantly with the *Engliſh* in the Day-time, as Perſons that were capable of doing them no miſchief. Thus they went on, doing ever now and then a Jobb in private with the Natives, till about the middle of *March*, when the laſt Orders for their Removal came forth.

Having left the *Molucca's*, they ſought for Buſineſs ſome where elſe, entring the Streights of *Bangaya*, *March* the Twenty third. The People hereabouts were very

People about the Streights glad to Trade with the *Engliſh*.

fond of a Correſpondence with them, and by all the obliging Behaviour that cou'd be, endeavour'd to procure it. They came with at leaſt a Hundred Praws up to them, and brought good ſtore of Proviſions, Hogs, Hens, Fiſh freſh and dry, Plantanes, Caſſatho Roots, and ſeveral ſorts of Fruits beſides. They were very eaſie and reaſonable in their Terms of Dealing, and deſired only coarſe Cloth, and *China*-Diſhes in exchange for what they brought.

The King of *Botun* himſelf ſent them a Refreſhment, and earneſtly deſired leave to come aboard. He had never ſeen any *Engliſh-man* in his Life, and now having a fair Opportunity, crav'd a Permiſſion to improve it for that purpoſe.

King of *Botun* comes aboard.

This Requeſt the Captain eaſily granted, and the King quickly came up in his Carracol, rowed with at leaſt a hundred Oars, carrying with her four hundred Men, well arm'd, and ſix Braſs Pieces. She had five more attending upon her, which had in all a thouſand Men more aboard them. The King was treated and preſented to his very great Satisfaction and Content a Shipboard: In Return of which Kindneſſes, he made the Captain a Preſent of ſome of his Country Cloth, and very civilly invited him to *Botun*, promiſing to ſend a Pilot to guide the Ship thither.

In the mean time, one of the *Engliſh*, who had been ſent aſhoar to get Proviſions, return'd with the News of his Entertainment by another *Indian* King, a Neighbour

The King of *Colina*.

to him of *Botun*. This Prince had never ſeen any *Engliſh* neither; and ſome of his Subjects having brought this Perſon to him, he was wonderfully pleas'd at the ſight of him.

The poſture our *Engliſh-man* found him and his Nobles in, was ſomething odd, and ſufficient to ſtrike a Terror into the Mind of a Stranger: They were Carowſing and Drinking very hard together, and the Room all about them was beſet with dead Mens Heads. Theſe were the Trophies of a Victory newly obtain'd, and they were at that time (as it were) juſt come out of the Field, reeking with the warm Blood of their Adverſaries. However, the *Engliſh-man* had no farther occaſion for ſad Thoughts, than what the horrid Spectacle gave him; the King did not offer to ſet his Head up amongſt the reſt; but after a kind and gentle Treatment, ſent him away in ſafety.

The King of *Botun*'s Pilot being come, they ſet Sail for that Town, and came to an Anchor before it, *April* the Twenty ſecond. *A. D.* 1608.

Come to *Botun*.

Here the King came out to bid them Welcome, with his whole Fleet of Carracols, gallantly ſet out with Colours and Pendants; and on both ſides the Small-ſhot and Ordnance were briskly diſcharg'd. The Captain was invited aſhore to Dine with the King, where every thing was done in the beſt manner, according to the Faſhion of the Country. The Meat was ſerv'd up in great wooden Chargers; but tho' the Diſhes were homely and coarſe, yet the Proviſions themſelves were fine; and which was better than all, the Welcome very hearty and ſincere. Their Liquor was only *Irea Pote*, a Drink of a very agreeable pleaſant taſte; not heady and intoxicating, but ſufficient to revive the Spirits, give them a due Elevation, and anſwer all the Ends and Purpoſes of Drink.

And as the Captain was feaſted aſhore, ſo the King (indeed the whole Royal Family) was again a Shipboard. They were ſeldom without one or other of them; ſo greedy were they of the Company of a People they had ſo long deſired, but cou'd never ſee till then.

There was another neighbouring petty King, that hearing the News of the Arrival of the *Engliſh* at *Botun*, came with his whole Family to be a Spectator too. He rowed round the Ship in his Carracol, and view'd it and them moſt attentively: But with all their kind Entreaties, and the Example of the King of *Botun* before his Eyes, he wou'd not be perſwaded to come aboard them.

Trade at *Botun*.

As for the Buſineſs done here, the main part of it ſeems to be the getting a good Lading of Cloves. This was an accidental Bargain; they were brought into *Botun* by the *Javan* Veſſels, and the *Engliſh* being there at the time, happily ſecur'd them for themſelves.

The King of *Botun* had before told them of ſome Quantities of Pearl he had by him, which they ſhou'd have the Refuſal of. They don't tell us, they bought them of him; nor yet that he bought any of their Cloth, tho' by the Account they give of his looking over that Commodity, and liking it very well, 'tis probable there was ſome Dealing betwixt them.

Having finiſh'd all Buſineſs here, they took their leave of this Prince (one of the faireſt and juſteſt we have had any Dealings with in thoſe Parts), and ſet ſail for *Bantam*. They reach'd it *May* the Twenty ſecond; and left it again *July* the Fifteenth, ſailing then for *England*.

Sail for *England*.

The reſt of the Voyage homewards, is both barren and tedious; upon which Account we ſhall excuſe the Reader from the trouble of it, and without any further Attendance upon the Ship, take one good Step quite croſs the Sea from *Bantam* to *England*.

CHAP XVI.

An Account of the Fourth General Voyage to the Eaſt-Indies, *with the two Ships, the* Aſcenſion, *and the* Union, *under the Command of Capt.* Alex. Sharpey: *Together with the Diſcoveries in the Red Sea, by the* Aſcenſion. *Writ by Mr.* Tho. Jones.

* *A.D.* 1607

WE weigh'd Anchor at *Woolwich*,* *March* the Fourteenth, with the two good Ships, the *Aſcenſion*, and the *Union*; which latter Ship, had ſhe made good her Name, and not unhappily wander'd from us, our Voyage might have been more fortunate than 'twas.

* *A.D.*1608. Beginning the Account of the New Year, from the 25th of *March*.

Having ſpent ſome Days in refreſhing, at the Iſland *Maio*, we parted from thence the Sixth of * *May*, in order to croſs the Line. Being got out into South Lat. we quickly found the Influence of the General Trade-Wind, which blows continually between the S. E. and S. E. and by E. And we obſerve, that the farther we ſail to the Southward, we find the Wind ſtill more Eaſterly.

July the Thirteenth brought us to an Anchor in the Bay of *Soldania*; and here we ſtaid till the latter end of *September*, at which time the Weſterly Monſons have done blowing, and the Wind comes about more between the S. and S. E.

Comora Iſle.

Now 'twas, that (being out at Sea again) the Union between us and the Ship of that Name, was diſſolved; and the Winds (which blew away our Companion from us) toſs'd us up and down the Great Waters, till the latter end of *October*; at which time we bore up with the Iſlands of *Comora*, between St. *Lawrence*, and the Main. The King of the People where we put in, were Civil to us beyond the common Rates of the Civility of Barbarians; we had Limes, Hens, and Coco's of them; but freſh Water is a Bleſſing they have little or ſcarce any of themſelves, and therefore cou'd not impart it to us.

Pemba Iſle.

Treacherous People.

We fell in next with the Iſle of *Pemba*, in 6 Degr. South Lat.; tho' our deſign was for *Zanzibar*, where we knew there was good Watering. This Iſland is Hell, for the Malice, Barbarity, and Treachery of the Inhabitants: They enticed us aſhore with all the Familiarity, and ſeeming Good Nature in the World; but did all in purſuance of a Plot to cut our Throats. They laid an Ambuſh of Two hundred Men about the place where we fill'd our Water, and when we were at work, they broke out upon us. Here, tho the Odds of Number and Strength were very great on their ſide, yet that of Courage and Reſolution was not ſo; theſe treacherous Barbarians had not Hearts brave enough to fight well; and we made a ſhift to carry off our Water with flying Colours. We left 'tis true, a more valuable Liquor (ſome of our Mens Blood) in the room of it: But our loſs was ſmall, and we felt it not.

3 Mooriſh Barks taken.

Moors Revenge.

But the *Moors* of *Melinda* were like to do us a far greater miſchief: For it being our Fortune (after we had parted from *Pemba*) to light upon, and take three Barks of theirs; we brought all the principal Men aboard us, to the Number of fifty. They let us take them (it ſeems) with the more eaſe, and ſubmitted themſelves more quietly into our hands, in hope of working their Revenge, and taking their advantage of us the better afterwards: For being amongſt us, of a ſudden they all drew their long Knives, and ſtabb'd two or three of the Company (tho' not all of them, mortally) and were going on as faſt as they cou'd, to ſerve the reſt of us in like manner; which Violence once begun on their part, was ſo continued and carried on by us, that of the fifty *Moors*, we ſent more than forty away, to make their Complaints to the Prophet in the other World. The reſt we ſent home to *Melinda* to carry the News; which, as we afterwards heard, introduc'd a General Mourning into the Country.

The Perſons we had ſlain, were Gentlemen of the beſt Quality in *Melinda*, and many of them of the Royal Blood. 'Twas high time for us now to get out of thoſe Seas; and 'twas not conſiſtent with our Safety, after this Action, to ſtay any longer within the reach of *Pemba* and *Melinda*, or any other place that might pretend to a Concern in the Revenge of theſe *Moors* Death.

Deſolate Iſlands.

The Month of *December* was going off apace, when this Circumſtance happen'd, and the Winds (unfavourable to us) kept us toiling and beating up and down at Sea, till the ſucceeding *January* was far ſpent; then we fell in with a Cluſter of Iſlands, as ſecure a Retreat for us as was poſſible, and where we had no fear of Enemies to examine or forbid us entrance: For here indeed were no Inhabitants at all, not a reaſonable Creature, civil or barbarous to be found, in all the whole Number. And yet the Iſlands, upon many Accounts, very well deſerving the pretence of fixed Inhabitants, as well as the frequent Viſits of Travellers and Sea-men: For they are like ſo many Groves of Coco and Palmeto-Trees; the Rivers are full of delicate Fiſh; ſuch Numbers of Turtle-Doves, every-where fluttering about, and withal ſo very tame, that a Man may take twenty Dozen a Day only with his hands. They are at leaſt twelve or thirteen in number, and being wholly deſtitute of Inhabitants, we call'd them the Deſolate Iſlands.

A. D. 160

Aden.

The uncertain Winds, which hinder'd our brisk Progreſs at Sea, continu'd till *March* the Thirtieth, when the Weſterly Monſons began to blow, by which means we got up with the Iſle of *Socotora*, and from hence directed our Courſe to *Aden*, in the Road of which we caſt Anchor, *April* 8.

This City acknowledges the Sovereignty of the Great Turk, and it is the Key that lets him into all the Treaſures and Sweetneſſes of the Happy *Arabia*. Our General coming hither in a Publick Figure, and having His Majeſty of *England*'s Letters to the Baſſa, was receiv'd with ſutable Honours, both by the Captain of the Caſtle, and the Governour.

Entertainment by the Baſſa.

The King's Letters were ſent to the Baſſa, whoſe Reſidence was at *Zonan*, fifteen Days Journey up into the Country from *Aden*: And ſhortly after two of our Merchants, with a parcel of Cloth, were ſent after them. The Baſſa was extreamly kind and civil; but becauſe they had not the Grand Seignior's Patent, he told them, He cou'd not now give them leave to ſettle a Factory; however, they ſhou'd be permitted a free undiſturb'd Trade, both for buying and ſelling, and ſhou'd pay no Cuſtom: In Conſideration of which Favour, he wou'd take that Cloth they brought with them, for a good Handſel.

Moha.

The Turk having been ſo civil to them, they were forc'd to let him be thus civil to himſelf; the Point of a Free Trade at *Aden*, which was gain'd, being a Conſideration valuable enough to make amends for the Cloth. So leaving theſe Merchants to their future Succeſſes in that place, we ſet Sail from *Aden* for the City of *Moha*, whither we came *June* the Eleventh.

This lies up higher upon the Red Sea, about forty Leagues from *Aden*: 'Tis the Grand Staple for all *Indian* Trade; whatſoever *Cairo*, and *Alexandria*, and all thoſe Parts are furniſh'd with, coming from hence.

The General was treated here in a very courteous and reſpectful manner, and our Occaſions obliged us to lie in this Road till the latter end of the next Month. Then our Reſolutions being fix'd for *Cambaya*, in *Guzurat*, we ſet out in proſecution of that Deſign, and putting in at *Sokotora* again, (where we had very troubleſome Experiences of the ſtrong S. W. Winds, that blow there at this Seaſon of the Year) we made it *September* the Second, by that time we reach'd the Coaſt of *Din*. And now 'twas that we were guilty of that fatal Miſtake, that proved ſo great a Detriment to the Noble Company, as well as an entire Ruine to all the Merchants and Mariners concern'd in the Ship.

Our General was inform'd (tho' the Informer was a *Moor*, and therefore perhaps not credited) that there were ſome particular Dangers of Sholes and Lands attending us, which required great Skill and Acquaintance with thoſe places, as well as Care and Diligence to avoid. Beſides, he was offer'd for a ſmall matter, to have a skilful Pilot, that ſhou'd infallibly conduct his Ship into the Port he intended for.

The Ship loſt upon the Sholes of *Cambaya*.

But unluckily for us, this good Offer was rejected, and our head-ſtrong Maſter deſpis'd the aſſiſtance of a Foreign Pilot; and ſo we did (as it was foretold of us) run our Ship upon thoſe Sholes, to the undoing of us all. We ſaved all the Men indeed in the Boats, tho' they were loaded to a high degree, and we had eighteen Leagues to the Shoar: But all the Goods and Treaſure, and the Ship it ſelf, were irrecoverably loſt.

Their eſcape.

Providence took care of us in this Diſtreſs, and prov'd a far better Pilot to us, than (as we had laid our Deſign) we had been to our ſelves: For we did all we cou'd, to fall in with the River of *Surat*; which if we had done, we had been ſwallow'd up of the *Portugueze*, that lay ready with five Frigats at the Bar of *Surat*, to catch us when we came. But now inſtead of this Courſe, we ſlip'd inſenſibly into the River of *Gaudever*, ſome five Leagues to the Southward of the Bar; the Governour of which Town, a *Bannian*, gave us a very comfortable Entertainment.

From hence we travell'd by Land to *Surat*, where we had a Factory, and a Friend of our own Nation (Captain *Hawkins*), of a conſiderable Intereſt in the *Mogul*'s Court, tho' at *Agra* at the time of our Arrival.

The General, and the beſt part of the Company, took a Journey to *Agra*, intending from thence to ſtrike into *Perſia*, and ſo go home that way. As for my ſelf, and two or three more, we had the good Luck to fall in with an honeſt *Portugueze* Prieſt, who (not at all tainted with the common Prejudice and Spite of his Nation againſt ours) very generouſly undertook to provide us a ſafe and good paſſage to *England*, or at leaſt to *Portugal*; which he as faithfully perform'd.

So after the Toil and Labour of two Years and half, (but to how little purpoſe, is plain, by the foregoing Circumſtance) we recover'd the ſight of our Native Country again, *Sept.* 17. *A. D.* 1610.

C H A P. XVII.

The Circumſtances of the unhappy Voyage of the other Ship the Union, *in her way to* Priaman. *Written by* Henry Morris, *at* Bantam, *Sept.* 14. *A. D.* 1610.

WE have heard before, how the two Ships, the *Aſcenſion*, and *Union*, were parted by a violent Storm; after which they each of them ran their ſeveral Courſes of Adventures; but on both ſides plunged into very great Misfortunes.

The *Union* comes to St. *Auguſtine's* Bay.

Goes to *Zanzibar*.

The *Union* having loſt all hopes of meeting her Companion again, to ſecure her ſelf from the fatal Effects of the Storm, put into St. *Auguſtine* s Bay, at St. *Lawrence*. After a Refreſhment here for ſome twenty Days, they made away to *Zanzibar*; where they had much the ſame Entertainment by the People of that Iſland, that the other Company had at *Pemba*: Firſt kindly uſed, and then an Ambuſh laid to knock them o'the Head. Some of the Company were loſt in this Skirmiſh, and the reſt with much difficulty recover'd their Ship again.

Land of *Madagaſcar*.

After a conſiderable time ſpent at Sea, and little or no way made, (and beſides a good part of the Men quite down with the Scurvy) they ſteer'd back again to the Iſle of St. *Lawrence*, intending to ſtay there till their Men were recover'd; and the contrary Monſons that were then blowing, had finiſh'd their ſtated period. They fell in upon the Weſt-ſide of the Iſland, into a very large and ſpacious Bay, call'd by the Natives *Canquomorra*, the Country all about which is very fruitful and pleaſant to the Eye.

Natives beſet them.

Here the Captain, and ſome others, ventur'd to go aſhore upon a Viſit to the King of that part of the Iſland, and they had this encouragement to it; that many times before the *Engliſh* Merchants had done ſo, and had met with very Courteous Entertainment. But that little Stock of Civility and Good Manners, which was amongſt theſe Barbarians, was, it ſeems, quite ſpent before they came: For the Natives had taken effectual Care to make them Priſoners, and they were no ſooner landed, than they found themſelves betrayed. And tho (as deſperate Men in ſuch an extremity) they uſed their utmoſt Efforts to break thro' the ſurrounding Snares, and get back to the Ship, in which Attempt they happily ſucceeded; yet the Danger that threatned, ſtill purſued them; and thoſe that were juſt before like to be taken out of the Ship, were now in ſome danger of being taken in it, Ship and all together: For by that time the Ship had taken the Alarm, and put it ſelf into a little poſture of defence, ſhe was preſently encompaſs'd with ſuch Swarms of Praws and great Boats, and thoſe ſo boldly making up to them, that they thought they muſt immediately have been taken without any more adoe. But the great Guns quickly ſcatter'd this Fleet of the Natives, and made the Ship more room; eſpecially after ſome of their Boats were ſunk, and the Men that fill'd them were tore in pieces with the Shot. This ſtruck ſuch a Terror into the reſt, that they accounted it as much Prudence to keep out of the way for the future, as good Fortune to have eſcap'd the paſt danger.

They aſſault the Ship, and are repuls'd.

They ſtaid fourteen Days in the Bay after this Fight; in which time the Natives made a ſecond Attempt, follow'd with the like ill Succeſs; which diſhearten'd them to that degree, that now they wou'd not try their Fortune any more in that kind; but took their Revenge with ſtanding all aſhore and gazing upon the Ship. And they aboard ſeeing them in this fit poſture to receive a Farewel, brought the Ship a little nearer the Shore; and ſo giving them a whole Broadſide, which broke into the thickeſt Ranks, and made a horrible wide Lane amongſt them, they took their Leave and went off.

They go from St. *Lawrence*. *A. D.* 1608.

Come to *Achen*.

Their Trade there with the *Guzurats*.

Being out at Sea, the Winds prevented their reaching *Sokotora*, and the Winterly Monſons being come, for that, and other Reaſons, they reſolv'd not to ſteer for *Cambaya*: They concluded therefore to direct their Courſe to *Achen*, where they arrived the Twenty ſeventh of *July*. The King here was made their Friend by diligent Application, and good Preſents; but the *Hollanders*, who aſpire to the univerſal Trade of the *Eaſt-Indies*, made a conſiderable oppoſition: Yet Matters were ſo compos'd between the *Hollanders* and them, that they drive a pretty handſome Trade with the *Guzurats*, trucking our *Engliſh* Lead and Cloth for the white and black Buffes, or *Guzurat* Cloth.

Go to *Priaman*.

Some time ſpent here this way, they went to *Priaman*, upon the ſame Iſland of *Sumatra*; where they fell into a Trade ſo fine and flouriſhing, that the Happineſs of their Settlement there, did ſeem to make ſufficient Amends for all the paſt Misfortunes of the Voyage.

All Buſineſs ended here, and a good Lading of Pepper got into the Ship, they ſet Sail out of this Port for *England*; but with ill Succeſs, and Repetition of the former, or worſe Diſaſters.

CHAP. XVIII.

Mr. Salbank's *Journey* (*after the* Aſcenſion *was caſt away*) *through* India, Perſia, *and part of* Turky, *and* Arabia, *A. D.* 1609. *Written to,* &c.

Gandeve.

OUR Ship the *Aſcenſion* being unhappily loſt upon the Sholes of *Cambaya*, we made the beſt of our way in Boats to the Shore, and put in at the Town of *Gandeve*: This place has the advantage of a very fair and commodious Haven, which is generally fill'd with good ſtore of Shipping, ſo that it ſeems to be a place of no ſmall Trade and Buſineſs.

Sobay, and its Callicoe-Trade.

From hence we came to *Sobay*, remarkable for the Quantities of Cotton and Callicoe Cloths made there; there being indeed hardly any other Trades flouriſhing in the whole place, but thoſe of Spinning and Weaving, and what relates thereto.

Nabon.

Surat was our next Stage, a City ſufficiently known; from whence (intending a Journey to *Agra*) we went on to *Nabon*, whoſe chief Commodities are all ſorts of Grain, Cotton-wool, and Sugar, which grows here in great abundance.

Daytaot Drugs, Callicoes.

Then to *Daytaot*, where there's a great Market for Drugs, Pintadoes, and Callicoe-Lawns.

Netherberi Materials of Braſs, Armour, *&c.*

And from thence to *Netherberi*, that deals as much in all ſorts of Braſen Ware, and Suits of Armour; beſides its Drugs, Pintadoes, Cotton-yarn, and Wool; in which it comes not behind its Neighbour *Daytaot*. The coarſeſt Cloth bears a conſiderable Price here; and therefore 'tis very probable, that that particular Commodity wou'd turn to good Account, if brought hither.

Bramport. Armour and Cloth of Gold and Silver, *&c.*

Paſſing two or three Towns of no great Importance, we made our next ſtop at *Bramport*. This is a mighty City, and the Trade of it as big and conſiderable as the Dimenſions: All ſorts of Armour and Weapons, are very ſaleable here: As alſo Cloths of Gold and Silver, Velvets, Broad-Cloths, and Bayes: For the City is vaſtly ſtock'd with Gentry, and People that affect the Gallantry of Apparel.

Cannow.

Cannow, which lay next in our way, is a large City too, and vents a great deal of Armour, and Harneſs, and all ſorts of Colours for Dyers. The Temper of the Climate will certainly make our *Engliſh* Cloths a good Commodity here; for the Cold pinches pretty hard in the Three Months of *January*, *February*, and *March*.

Croſs the *Ganges.*

A Day's Journey from hence, we croſs'd the celebrated River *Ganges*; which riſes out of the North, and diſcharges it ſelf into the Gulf of *Bengala*: And now a Journey of eleven Days, through a moſt charming fruitful Country, lay between us and *Agra*. This City is very large and populous, the Streets wide and handſome, the Houſes, for the moſt part, built of Stone. Here's a great reſort of Merchants out of *Perſia*, and all parts of *India*, trading for Silks and Cloths, and all ſorts of Jewels.

Agra.

The Diamonds are the genuine Product of the Country, and are found about *Agra*, *Delly*, and *Biſnagar*; but a great part of the Rubies, Saphires, *&c.* come from *Pegu*.

Without all doubt, our *Engliſh* Silks, Velvets, and Cloths, of the richer and finer ſorts, will go off here to great adventage; becauſe of the communication between this place and *Labor*, *Fetipore*, with many others of the like importance; which latter City *Fetipore*, (by the way) is not above twelve Miles from *Agra*, and is every whit as big as *London*.

Biamy, or *Biana*, as 'tis call'd before, lib. 2. ch. 13.

From *Agra* we ſet out for *Hiſpahan*, the Capital City of *Perſia*, and that by the way of *Biamy*, this being but two Months Journey; and that by *Labor* being four. This *Biamy* is the great Storehouſe of Indico to the whole Country; no place in all the *Eaſt-Indies* coming near it, for the Meaſures of this Commodity annually produced. The Indico it ſelf is a Vegetable Production: The Plant which yields it, is a ſort of a ſmall Buſh, or Shrub, and bears a Seed almoſt like that of a Cabbage. When the proper Seaſon is come, it is all cut down, and left in heaps upon the Ground to rot, for half a Year; then the Seeds are trod out from the Stalks by Oxen, and afterwards ground very fine, and ſo boil'd in a Furnace; which done, 'tis ſorted out into ſeveral parcels, according to the different degrees of fineneſs.

The making of Indico ſomething different from that before. *Ibidem.*

Between *Biamy* and *Candaha*, we paſs'd through theſe chief Towns: *Merta*, noted for its three weekly Markets of Indico, Cotton-Wool, Yarn, and Cloths.

Merta.

Reuree.

Reuree, a Town of Merchandiſing Husbandmen, who together with the Affairs of Agriculture, do with no ſmall Induſtry equally promote thoſe of Trade and Merchandize.

Buckar.

Buckar, where Sword-blades are ſo good a Commodity that one worth but a Noble in *England*, will eaſily bring 10 *l.* there.

Rivers, *Damiadee* & *Sinde.*

Cloſe by the City runs the River *Damiadee*, which empties it ſelf into the River of *Sinde*; which is Navigable by Barks of 40 and 50 Tun; by which means a Communication is open'd between divers of the adjacent parts of *India*.

Suckar.

Laſtly, *Suckar*, ſeated on an Iſland in the midſt of the River, inhabited moſtly by Dyers and Weavers, which ſerve all the Country round about.

Candahar.

'Tis twenty Days Journey between this place and *Candahar*, and the way not a little difficult and dangerous, becauſe of the vaſt Woods and Deſarts to be paſſed thro'. This City is govern'd by a Vice-Roy, and is much frequented by Merchants out of *Perſia*, *Turkey*, and all parts of the *Indies*.

'Tis five Days Journey from hence to *Grees*, the firſt Town upon the Frontiers of *Perſia*, after you are paſs'd the River *Sabaa*, which divides theſe two great Empires one from another.

River *Sabaa* divides the *Perſian* and *Mogul.*

Between this place and *Hiſpahan*, we paſs'd through *Vea*, noted for plenty of Felts and Carpets; *Parra*, *Pabanani*, and *Godana*, for the Quantities of Raw Silk they produce. To which alſo ought to be reckon'd *Gora*, a very handſome Town, which drives a mighty Trade in Raw Silks, Quilts, Carpets, and the like.

Hiſpahan.

We came next to *Hiſpahan*, a City of great Extent, Trade, and Fame, and now of late, the uſual Reſidence of the Kings of *Perſia*. The People are wonderfully curious in making Velvets, Sattins, Damasks, *Ormuzine*, and *Perſian* Carpets, Girdles, and Saſhes. Here's a continual Trade of Drugs, Spices, Jewels, Silks wrought as well as raw. Cou'd our Ships lade with ſafety in the *Perſian* Gulf, a profitable Trade might be planted here: For no leſs than Fifty in the Hundred may be gain'd from *Ormus* to *Hiſpahan*, and that in eighty Days Travel. The Commodities to be brought from *England* hither, ſhould be Tin, Copper, Braſile; Kerſies for the common People, and Broad Cloth for the Merchants and better ſort: Camlets, Velvets, Cloths of Gold and Tiſſue, with fine Linen for the King's Sultans and Nobility. Beſides all kinds of Warlike Furniture, which the *Perſians* will be very good Cuſtomers for.

Commodities for *Perſia* to be brought out of *England.*

Bagdat.

We went from this famous City to *Bagdat*, a Town two Miles in compaſs, and ſeated on the River *Tigris*. 'Tis very populous for the bigneſs of it, and a Man never fails meeting vaſt Crowds of Strangers and Travellers here, it being a common Road into *Turkey*, *Perſia*, *Arabia*, and all thoſe parts.

Balſora.

Here we embark'd for *Balſora*, a Town planted near the *Perſian* Gulf, ſtrengthned with a good Garriſon, and a conſiderable Power of Shipping, and is very near as big as *Bagdat*. It muſt needs be a profitable City to the Great Turk, in whoſe hands it is; for the Country about it is vaſtly fruitful, and the Trade thither ſo great, that there comes into that Port from *Ormus* alone, every Month, ſeveral great Ships, furniſh'd with all ſorts of *Indian* Merchandize.

Baharem Pearls.

We proceeded in our Voyage from *Balſora* to *Catiffa*, on the Coaſt of *Arabia Fœlix*; and from thence to the famous Iſland *Baharem*, in the mid-way between *Balſora* and *Ormus*. Here 'tis that they fiſh for Pearl, in the Months of *June*, *July*, *Auguſt*, *September*; and thoſe found about this Iſland, are reckon'd ſome of the nobleſt and beſt in all the Eaſtern World.

Calara.

Having viſited *Calara*, a Town on the Coaſt of *Arabia Fœlix*; and ſo paſs'd by Land to *Shirrif Din*, my Deſign was to have gone for *Aman*, to Sir *Henry Middleton*; but underſtanding of his barbarous Uſage at *Moha*, and that he was carried in Chains to the Baſſa of *Sinan*, a conſiderable

Lima.

Soar where he is taken Priſoner by the *Portugueſe.*

ſiderable way up in the Country, I turn'd off to *Lima* on the *Perſian* Gulf, where I embarked for *Zocotora*, but was driven by a parcel of Pyrates to land at *Soar*, a Coaſt-Town not far from *Lima*. But this was but out of the Frying-pan into the Fire; an eſcape out of the Hands of Raſcals at Sea, into the power of worſe Knaves at Land: For here the *Portugueze* inform'd the Governour againſt me, and having made him believe I was a Spy,. got me to be deliver'd into their hands; and a Man's greateſt Enemies cou'd hardly wiſh him in worſe, ſuppoſe him out of the Devils.

Muſcat.

Having me in their power, they ſent me to *Muſcat*, a ſmall Iſland, where they have a Garriſon, and ſome Shipping; and here I muſt have lain in everlaſting Bondage, had not an honeſt *Engliſh* Jeſuit I met there, procured my Releaſe from thence.

Ormus.

From *Muſcat* I was ſent in Chains to *Ormus*, croſs the Mouth of the *Perſian* Gulf: This Iſland is about thirty Mile in circuit, and is certainly the drieſt Iſland in the World. All their Water, Wood, and other Neceſſaries, are brought out of the adjacent parts of *Perſia*, which is not above twelve Mile from thence. It's famous for the Quantities of Salt it produces, and the Fiſhery of Pearls: There is indeed a very great Trade driven there for all ſorts of Merchandize almoſt, Spices, Drugs, Silks, fine Tapiſtry, Pearls, Horſes, which are from hence tranſported into *India*. The *Portugueze* have a Caſtle, and a good Garriſon here.

Sinde, And the Trade of it.

After ſome ſtay here, I was ſent away for *Goa*; in our paſſage, to *Sinde*, between the Countries of *Guadel* and *Guzurat*. The Commodiouſneſs of the River which runs by this place, with reference to Trade, was hinted before; and there is another particular Conveniency belonging to it, which I will not omit, and that is, that the *Portugueze* have no Fort all along this River, nor cannot accompliſh it, perhaps, if they attempted it, the Country People hereabouts keeping them in very great awe and ſubjection. The Commodities that the place does vent, are Cloths of all ſorts, (eſpecially light Colours) Tin, Lead, Iron, Spices, particularly Pepper and Cloves; then all your Calicoes, Pintadoes, Quilts, Carpets, *&c.* go off here in great Quantities, and at very reaſonable rates. The Country yields and makes ſo many of theſe ſort of Commodities, that they are extreamly cheap, and a little Stock will keep a ſubſtantial Trade of this kind going on here. Beſides, you may ſtore your ſelf with ſeveral very good Drugs here; and a Ship-load of Opium almoſt (the Soil is ſo natural and kind to that Drug in particular) which wou'd be a very good Commodity at *Bantam*, and the parts thereabouts, as well as the Stuffs mention'd before.

Diu.

Leaving the Coaſt of *Sinde*, we came to *Diu*, in the Kingdom of *Cambaya*; 'tis the ſtrongeſt Town the *Portugueze* have in all this Province, and ſends out every Year a great number of Ships laden with Varieties of Merchandice, for *Ormus*, the *Red Sea*, and other parts.

Goa.

From hence we paſs'd to *Goa*, the end of the preſent Voyage, and the place of my doleful Captivity.

The *Portugueze* have no more important place, no ſecurer Retreat, no finer Spot in all the Eaſtern World than this. It ſtands in an Iſland thirty Miles in compaſs, as pleaſant, convenient, and fit for Command, as any thing can do. 'Tis ſurrounded with ſeveral Villages, intermix'd with Gardens, Orchards, and delightful Woods; but all the while 'twas my Priſon, which was ſufficient to caſt a Horror upon the moſt charming Appearances in Nature.

CHAP. XIX.

The Voyage of Mr David Middleton, *to* Java *and* Banda. *Taken out of a Letter written by himſelf to the Company, this being the Fifth Voyage ſet out by them.*

Set Sail *A. D.* 1609. Come to *Soldania.*

WE Sail'd out of the *Downs* the 24th of *April*, in the good Ship the *Expedition* of *London*; and with a mixture of foul and fair Winds, which blew in their turns, we reach'd *Soldania* by the 10th of *Auguſt*.

Arrive at *Bantam.*

We paſs'd from hence to *Bantam*, without any remarkable Occurrent by the way, and 'twas in the beginning of *December* that we got thither. We found the State of Affairs alter'd here for the worſe from what it had formerly been; the preſent Governour being a very troubleſome, covetous, exacting Perſon, encroaching upon our Privileges, and not allowing us the Liberties that uſed to be granted.

Goes for the *Molucca's.*

Bengaia The People deſert the Iſland for fear of the *Dutch.*

Having provided in the beſt manner I cou'd for the Quiet and Security of our Factory under that diſtemper'd Circumſtance, I ſet Sail for the *Molucca's* the 18th of the ſame Month, putting in at the Iſle of *Bengaia* in the Proſecution of this Voyage, we found the Country quite empty of Inhabitants, the King and all the People with one Conſent were run away, whatever Danger it was that had frighted them. And all things conſidered, I concluded 'twas for fear of the *Dutch*, who wou'd (it ſeems) have broke in upon them, and built a Fort in the Country againſt their Wills; but they choſe rather to quit the Iſland and leave them the whole Dominion entirely to themſelves, than live under their Command, and endure the Bondage a Fort wou'd bring them into. Looſing from hence we had the Wind and Stream ſo powerfully againſt us, and we labour'd with our Ship to ſo little purpoſe, that we were oblig'd to alter our purpoſe for the *Molucca's*, and ſo bear up the Halm for the Iſles of *Banda*, towards which we were carried away a main.

Alter their Courſe for *Banda.*

Tyranny of the *Dutch.*

Lautor kind to the *Engliſh.*

When we came thither (which was in the beginning of *February*) we found all things under the Command and managed according to the Pleaſure of the *Dutch*. No Sail came into the Road but they wou'd take as much of the Lading as they pleas'd, and either not pay at all, or pay at their own time and price according to their own Conſciences, which made it indeed next to no payment at all. And then there muſt be no correſpondence with the People of the Country, and if a Ship brought Commodities ever ſo vendible there, and attempted but to land them, theſe impudent maſterful *Hollanders* wou'd immediately play the Ordnance of the Caſtle upon them; and by this Means they had gotten ſeveral Juncks of conſiderable burthen into their Power, which came thither upon an honeſt deſign of Trade. The Inhabitants of the Town of *Lautor* were very willing to deal with me, and ſell me their Spice, but they cou'd not do it without the leave of the *Dutch* with whom they were then link'd in a friendſhip, and to whom I muſt go to beg a Trade if I meant to have any. However I underſtood that they were at War with the Iſlands of *Puloway* and *Puloria*, who therefore wou'd not ſend me to ask leave of the *Dutch* to buy their Spices.

But then the great Difficulty, was, to manage the Trade with them without provoking the *Dutch* to acts of open Violence and hoſtility. I had now received an expreſs Commandment from the Governour of the Caſtle, and the Vice-Admiral to come in with my Ship, and not to ride in the Road where I did; which Command I did in as peremptory a manner refuſe to obey, having the Examples of ſeveral Ships unjuſtly detain'd there before my Eyes. And farther I put my ſelf into the beſt poſture of Defence in caſe of an attack, which I had reaſon to expect. Yet that all things might be manag'd as fairly and inoffenſively on our ſide as might be (eſpecially ſince Intereſt and Policy required it to be ſo) I yielded ſo far as to write a Letter to know whether they wou'd deal with me themſelves or let the People of *Lautor* do it; and if not that, then whether I might without offending them Trade with the Iſlands of *Puloway* and *Puloria*.

The baſe Proceedings of the *Dutch*.

They were ſo civil as to return no Anſwer to this Letter, but inſtead of that made preparations to come and try their Fortune in order to the taking of my Ship. Upon notice of this Deſign, I went immediately my ſelf to the Caſtle, and carried my Commiſſion along with me, being reſolved to let them ſee the Authority that empower'd me to act; as alſo to do all that might be done fairly (without a baſe Submiſſion) before it came to a down right Battle. The ſight of the Commiſſion with His Majeſties broad Seal to it made ſome Impreſſion upon them, and this together with the offer of 1000*l.* over and above for the lading of my Ship, procured me not only a civil Treatment, but a promiſe alſo to ſatisfie my Deſires with reference to a Trade Yet after this they fell back from their Word, ſo ſurely paſs'd and gave it me as their laſt Reſolution, that I muſt pretend to buy no Spice there. This made me fix my Purpoſe for *Puleway*, whither I purpos'd to go in ſpite of the *Hollanders* and all their Force, and ſent the Governour word plainly that I wou'd do ſo, let him do his worſt to prevent me. And the *Dutch* it ſeems did not think fit to try to ſtop me, for thither I came without any oppoſition with my new Pinnace the *Hopewell*, which I fitted up on purpoſe for a Lading at that Iſland. Here I agreed for my Spice at the ſame rates as Captain *Keeling* had done before me, and got my Pinnace laded with Mace and a good large Junck with Nutmegs. And all the Spice that we bought here was carried (as faſt as we cou'd lade theſe Veſſels) to our Ship which lay in the Road of *Geicgula* at the Iſle of *Ceran*, about 30 Leagues from *Banda*.

Comes to *Puloway*.

Ceran Iſle. Cannibals.

This Iſland by report of the *Indians* is Inhabited by a ſort of *Cannibals*, that lie in wait to catch the Paſſengers and Fiſhermen that come upon that Coaſt, whom they infallibly Devour like ſo many hungry Beaſts of Prey. Eſpecially if they take any Chriſtians they beſtow a good dreſſing upon them, and lay them down to the Fire to roaſt alive. The cauſe of which barbarous Treatment, they ſay is (and 'tis very likely) ſome Injuries which theſe creatures have receiv'd from the *Portugueze*, for whoſe ſakes they handle all others thus ſeverely that they get into their Clutches.

By the Month of *September* we had pretty well accompliſh'd the lading of our Ship, which done (and the Matters of our Company ſetled that were to ſtay behind for the Proſecution of the Trade) we ſet Sail from *Puloway*, and directed our Courſe to *Bantam*, where we arrived *October* the 9th. When we came hither we found two of our principal Factors dead, and almoſt all the Goods we left there, as that ſhut up in the Ware-houſe; very little or none having gone off, eſpecially of our Cloth which lay all upon our Hands. However 'twas tollerable good Fortune to have ſucceeded ſo well at *Puloway*; to have out run the *Dutch* in the point of Trade there this Year, and brought off a good lading of Spice ſo handſomely, before their very Faces, while they themſelves cou'd not get a pound. This was ſo great a Pain and Mortification to them to ſee us ſtill paſſing to and fro with our laded Ships, that they reſolved to take any Courſe to put an end to it. They thought of coming to take the whole Iſland, and ſo make but one buſineſs on't, to plunder us of our Spice, and revenge themſelves upon the People for ſelling it to us. And they actually brought up their Ships in order to make the Attempt, but providence fought againſt them in the contrary Tide, which ſet their Ships to the Weſt ſide of the Iſland, and wou'd not let them Land. So that for all this and their many other Plots to catch me by the way, I brought the Effects of my Trade at *Puloway* to *Bantam* in ſafety. The whole Amount of my Lading was 139 Tun, 6 Cathays, ¼.12*l.* of Nutmegs; and 622 Suckets of Mace, which makes 139 Tun, 9 Cathrges, ¼ 2*l.* of Mace; beſides which, I left with one of the Factors, 24 Tun, 7 Cathages, ½ 8*l.* which coſt with Charges 25071 ¼ Rials.

Arrive at *Bantam*.

I left Orders with ſome of our Factors to put in for a ſhare in the Trade of Diamonds at *Succadania* in *Borneo*, and having ſettled that Concern as well as all others that detain'd me there, I ſet Sail from *Bantam November* the 16th and had a good Paſſage to *Soldania*, where I Anchored *January* the 21ſt, and from whence I made all imaginable Diſpatch for *England*.

Chap. XX.

The Sixth General Voyage ſet forth by the East-India *Company, with the three good Ships, the* Trade's Increaſe, *Admiral, of* 1000 *Tun; the* Pepper-Corn, *Vice-Admiral, of* 250 *Tun; the* Darling *of* 90; *and a Victualling-Bark of* 180. *Extracted out of the Letters and Journals of Sir* Henry Middleton, *Admiral; and Mr.* Nich. Dounton, *Capt. of the* Pepper-Corn.

May, *A.D.* 1610.

Coming to an Anchor in the Road of Cape *Verd*, we ſtaid there ſome time, to lay in a Recruit of freſh Water, and repair what was defective in our Ship-Tackling; having had ſome little Miſfortunes of that nature by the way. And indeed, all things conſider'd, I know not a more convenient Road for theſe purpoſes, and all others almoſt that may invite a Ship, than this of Cape *Verd* is: For beſides the plenty of good freſh Fiſh, and the advantage of Watering here, 'tis very fit for the Diſpatch of Buſineſs, and it is not at all out of the way.

Cape *Verd* Road very good.

As for our Courſe from hence to the Line, we concluded with one Conſent, to Sail S. S. W. for about ſixty Leagues, then to ſteer S.S. E. till we grew near the Line, and ſo to hale over Eaſterly.

July.

By the latter end of *July* we made the Bay of *Soldania*, where we found the People as beaſtly and brutiſh as they have ever uſed to be repreſented, but not near ſo free and ready to Trade as they formerly were. 'Twas a very hard matter to perſwade them to bring any Cattel at all to us (we were forc'd to bribe and court them to it), and then thoſe they did bring were ſo old, ſo tough, and ſo lean, that 'twas almoſt as bad as faſting, to be obliged to eat them.

Soldania Bay The People not for Trade as formerly.

Beſides, Old Iron was now no current Money amongſt them, and thoſe brave Trading Days were over, when a Man cou'd purchaſe a fat Ox, or two or three good Sheep, for an Iron Ring, or a few Hobnails. Copper was, at this time, all in all amongſt them, and they wou'd take nothing but pieces of this Metal, cut three or four, or ſix Inches ſquare; and one of theſe was the Price of a Sheep, which conſidering what they were, was dear enough.

What the Reaſon of this alteration ſhou'd be, is uncertain: Whether thoſe plentiful Markets of Cattle they us'd to bring down from the Mountains, were Spoils taken from one another in Wars, and ſo they put them off to others, as they took them themſelves: Which if 'twere ſo, then 'tis probable, that the Reaſon why they ſo highly valued Iron in thoſe Days, was its uſefulneſs to them in their Wars, for heading their Darts and Launces, and conſequently that it grew out of Requeſt amongſt them, when a General Peace was made, and their murdering Weapons laid aſide. Or 'tis poſſible, that the *Dutch*, by their over-great Liberality, may have poſſibly help'd to ſpoil the Trade here: For as 'tis their Humour, to conſider only their own preſent Occaſions, without conſulting the Advantage or Intereſt of any that are to come after them; ſo 'tis very likely, that they by giving theſe People ſome extravagant Rates for their Commodities, may have taught them how to expect and inſiſt upon the ſame with all other Cuſtomers. They have more than once ſpoil'd the Trade ſo, in other places abroad in the World, and 'tis not incredible that they ſhou'd do ſo here.

We reckon this Bay of *Soldania* to lie ſome fourteen Leagues N. N. E. from the Cape of *Good Hope*, and ten Leagues N. by W. from Cape *Falſo*; both which Capes may be ſeen pretty plainly out of the Bay. But the two Capes are parted alſo by another great Bay beſides, which is diſtant from that of *Soldania* about three Leagues; and all the Ground between is low, marſhy, and plaſhy, the effect perhaps of the Water brought off from the Mountains that ſtand of either ſide. Let a Ship, when ſhe comes in for the Bay of *Soldania*, bring the Northern Point of it to bear W. N. W.—N. W. and by W. thwart of the

The Diſtance and Bearing of the Cape of *Good Hope*, and Cape *Falſo*, with *Soldania*.

Ledge of Rocks, near the Shore, (which will then be laid in the Swamp, as it were between the Table and the Sugar-Loaf) and ſhe may find good Anchor-hold, and ride ſafely in four, five, or ſix Fathom, according to her Draught.

'Tis worthy of Obſervation too, that the Main-Land, tho' it be thirteen Leagues diſtant, yet runs away ſo to the W. and by W. that there is little more than Three Points open to let in the N. W. Sea, which is always here the moſt ſtormy and troubleſome. There's good Fiſhing about the Bay for Millets (or a Fiſh very like them) Smelts, Thornbacks, Dogs, and a ſmall ſort of Whales: And all about the Rocks, Limpets, and Muſcles in abundance. We obſerv'd a ſort of Tree growing hereabout, that bears a Fruit in bigneſs and form reſembling a Pine-Apple; the Seeds of which were all entirely eaten out of the Husks by the Birds, and the Husks left ſtanding in their Natural Order upon the Tree. Theſe Husks were more ſoft and ſpongy than thoſe of a Pine-Apple, tho' otherwiſe like them: The Tree it ſelf is low, and ſpreads into a conſiderable breadth at top, and the Leaves of it are like our *Engliſh* Houſleek, only not quite ſo thick.

Auguſt. See other Accounts differing from this in Mr. *Davis's* Voyages, *&c.* Trees with a Fruit like Pine-Apples.

I believe, with ſome good Reaſon, that the Country might be cultivated into a very excellent Plantation for all ſorts of Herbs and Trees; and that our *Engliſh* Garden-Plants wou'd thrive to much higher degrees of Perfection here than at home, to the very great advantage of all that ſhou'd refreſh here; if any wou'd be ſo generous as to begin and make the Experiment. In ſhort, Nature has done ſo much to our hands, in order to the making the whole Country a Garden, that Art has but a very little left to perform, to make it as perfect as need be deſired.

Madagaſcar. September.

We ſet Sail from hence, directing our Courſe to the Iſle of *Madagaſcar*, and came to an Anchor in St. *Auguſtine*'s Bay. The People of the Country carried it to us juſt as they of *Soldania* did; and but that 'tis pretty certain, that there is no intercourſe between them, one wou'd otherwiſe have thought, that they had made a Bargain together to ſtarve all the Chriſtian Ships that come into the Roads. They are a ſtout hardy People, fit for the Wars, and 'tis reported of ſome Skill in Martial Diſcipline; but withal exceſſively treacherous and falſe; ſo that whoever comes amongſt them, muſt be ſure to ſtand well upon their Guard.

* Beſides the Tamarind-Trees, which the Country yields in great plenty, here's a ſort of Tree whoſe Timber is as hard and firm as *Lignum Vitæ*, and very white, but carries a ſmall brown Pith in the middle of it; whether any kind of White Saunders, or no, I cannot tell. Here's alſo a Plant very like a *Sempervive*, and for all I know, might yield as good an Aloes as that does: There's a great deal to be found of it in thoſe parts, tho' the Savages have hardly any knowledge of the Uſe and Virtue of it.

* See *Davis's* Voyages for a farther Account of this place too. Trees and Plants about Cape St. *Auguſtine.*

Sailing from hence towards the Line again, we met with ſeveral Currents, which put us out conſiderably in the Reckoning of the Ships way and motion. Sometimes a Current ſetting to the Southward affected us, which as 'twas againſt us in our Courſe, from the more Southerly Latitudes of *Madagaſcar*, to parts nearer the Line; ſo made us fall ſhort in our true way by ſome Leagues, of what in Judgment might have been allowed. Again, ſometimes a powerful Current ſetting to the Northward, reach'd us of a ſudden; which going along with us, as much diſturb'd our Reckoning, by making us run more Leagues than the true Courſe of the Ship in ſuch a time wou'd amount to.

Currents.

October.

The former of theſe Currents was the moſt diſcernible for the two next Days, after our ſetting out from St. *Auguſtine*'s Bay, when we were about 21 Degr. South Lat. but the latter, which ſet to the Northward, kept with us continually even to the Line, and after we had croſs'd the Line, till we were in more than 5 Degr. North Lat. at which time we loſt the Current, and again began to find the force of another ſetting to the Southward. This Current followed us for ſome three or four Days; and then in about 7 Degr. North Lat. another ſetting to the Eaſtward, ſucceeded in its room, the Effects of which were more or leſs diſcernible from that Latitude, till we were almoſt come up with the *Duas Irmanas*. Theſe are two little Iſlands, which bear W. by S. and E. by N. of each other; and are diſtant about 7 ½ Leagues from the Weſtern Point of *Zocotora*.

Duas Irmanas

We came to an Anchor in a certain Sandy Bay in the Iſle of *Zocotora*, about the latter end of this Month; and here, to our very great Comfort and Refreſhment, we met with ſuch plenty of Fiſh, as gave all our whole Fleet ſome Meals, and wou'd have given more, cou'd we have preſerv'd what we took ſweet and good.

Good Fiſhing at *Zocotora.*

Tamerin.

We put out of this Bay into the Road of *Tamerin*, the principal City of the Iſland, and ordinary Reſidence of the King. 'Tis ſeated at the Foot of ſeveral high ragged Hills, 'tis adorn'd with a Caſtle, and the King's Palace ſtands upon the top of one of the Hills overlooking the Town. The Latitude here is 12 Degr. 30 Min. the Variation of the Compaſs 19 Degr. 18 Min. and the Road lies all open between E. by N. and W. N. W. I ſent ſome of my Men aſhore, with a handſome Preſent to the King; which he very kindly accepted, and to expreſs his Gratitude ſent me back a Preſent of Goats, with an hearty Welcome to his Country, and Invitation to come aſhore and ſee him.

General *Middleton* ſends a Preſent to the King of *Zocotora.*

When I landed, I was receiv'd with a Diſcharge of his great Guns, and conducted in the beſt ſort to his Court, where I believe every thing was contriv'd to make as good a Shew, and to give me as great an Idea of the Grandeur of this little Prince as might be. The Entertainment I had there, was as good as the ſuddenneſs of the occaſion wou'd permit. But as for his Deportment towards me, I muſt ſay, that it was very free, civil, and obliging; conſidering the violent Prejudices of the *Mahometans*, for the moſt part, (and the *Arabians* eſpecially) not only againſt the Principles, but the very Perſons and Converſation of Chriſtians.

Goes aſhore, and his Entertainment.

I cou'd procure no Aloes of him, for that was all ſent away before (as he alledged) to his Father, the King of *Tartack*, in *Arabia Felix*; under whom indeed he was no more than a Vice-Roy in this little Kingdom of *Zocotora*. He granted us free Liberty to take what Water we had occaſion for here, and (which is a Favour not granted to other Nations without paying for't too. But as for Wood, it ſeems, 'tis a very ſcarce Commodity in thoſe parts, and there he cou'd not furniſh us, without ready Money; nay, if we wou'd have any, we muſt give a very great rate.

The truth on't is, the whole Iſland is nothing but a Lump of Rocks and Cliffs, and there's hardly any room for Timber-Trees to grow, 'tis all ſo fill'd up with Stones, and a hard barren Earth, almoſt unfit for the Nouriſhment of any ſort of Vegetable. I know of none of any ſignificancy growing there, but the Plant that yields the Aloes, and the Shrub, or Tree, whoſe Tear is that Drug, which we call in *Europe* the *Sanguis Draconis*; and then the Date-Trees, which afford them indeed their chiefeſt Suſtenance. The Date-Trees, 'tis true, are pretty numerous, for they make the beſt of their Bread of that Fruit: As for the others, the whole Iſland affords no more than about a Tun of Aloes in a Year, and a very inconſiderable quantity of *Sanguis Draconis*.

Products of *Zocotora.*

The Animals that are here, are ſcarce worth a mention, except it be for the fewneſs and meanneſs of them; they are as ſorry as the Country that breeds them, and ſhew the Poverty of the Soil they live on, by the Dwarfiſhneſs of their own Bulk and Stature: And yet they are dear Pennyworths to them that will undertake to buy them, for a Cow goes at twelve Rials of Eight, a Goat at one, Sheep and Hens each at half a Rial apiece. As for the Dates, there's no having them under twelve Rials *per* Hundred; and a parcel of Wood, as much as an ordinary Man's Burden is valued at 1 *s.* and wou'd certainly inſtead of that be at 1 *l.* if *Zocotora* with that ſcarcity of Wood lay as far from the Line as *England* does.

The King ſees the ſelling of all Commodities himſelf, that any Strangers Trade for upon this Iſland; 'tis he that ſets the Price, and drives the Bargain, not leaving it to the Fidelity of any of his People, but paſſing all through his own hands. Nay, none of his Subjects dare hold any Correſpondence with Foreigners, or ſo much as ſpeak to them, till he has had Intelligence of them, and began the Correſpondence himſelf. Indeed, he has little to do with any but the *Arabs*, who compoſe his Guard, his Court, his Nobility, and are all in all about him; for as for the old Inhabitants of the Iſland, they are Slaves to the domineering *Arabs*, and live skulking up and down where they can find a ſure Retreat, like ſo many Outlaws, or Perſons baniſh'd, even in their own Country. But neither *Arabs*, nor any other, dare begin any Diſcourſe, much leſs a Trade with Strangers, till he has had Notice of their Arrival, and performed the Ceremony of bidding them Welcome.

King of *Zocotora*'s Care and Policy in Trade.

He highly commended to us the Trade of the *Red Sea*, and the People of *Aden*, and *Moha*, for their Civil Carriage to Strangers, and Fair Dealing in all their Traffick. And this was ſo far a Motive to us (that having loſt our Seaſon for going to *Cambaya*, becauſe the Eaſterly Monſon was already come, we concluded to go and viſit theſe Trading Towns upon the Coaſt of the *Red Sea*, and make ſome Experiment of the Good Humour of the People: Tho' as Matters afterwards fell out, we had better have taken his Word for't, than have gone thither to try our ſelves. Whether this *Arabian* had any Deſign upon us or no, I know not; however, 'tis certain, that his Accounts of theſe places were all falſe and wrong, and that in purſuance of his Advice, we fell into the greateſt Miſeries that perhaps any Chriſtians ever endured in thoſe parts.

Go from *Zocotora* for *Aden*. *Abba del Curia*, and the two white Rocks. *November*. Cape *Guadarfui*.

Having bid Adieu to *Zocotora*, we had not ſail'd far, before we had ſight of the towering Rocks and Mountains of *Abba del Curia*. This is a narrow ragged Iſland, ſome five Leagues in length E. and W. ſubject to the King of *Zocotora*, remarkable for the two great White Rocks that ſtand near one another, at the Northern part of it; and which raiſing up their Heads to a mighty heighth above the reſt, diſcover themſelves a good way off at Sea. We reckon'd fourteen Leagues from the Weſtern Point of *Zocotora*, to the Eaſtern Point of this Iſland *Abba del Curia*; and from the Weſtern end of that, fifteen Leagues more to Cape *Guadarfui*, which is the Eaſtern Point of the Kingdom of *Adel*, which lies on the *African* ſide.

City of *Aden* in *Arabia Felix*.

The ſtrength of it.

A few Days Sailing in this Month, gave us a proſpect of the Coaſt of *Arabia Felix*, which appear'd barren, mountainous, and rugged, without ſhew of Woods, or Fields, or any delightful Green. And whereas we now quickly expected to have a proſpect of the City of *Aden*, a Current ſet us ſo far out of our way, that when we fell with the Land, we found our ſelves no leſs than ſixty Leagues ſhort of that place; but yet ſail'd along the Coaſt without danger, having from Eight to Twenty five Fathom Water, till we came up with it. The City it ſelf ſtands in a bottom, under the covert and protection of a Mountain; yet notwithſtanding that diſadvantageous Situation makes a pretty handſome appearance. 'Tis encompaſs'd with a good Stone-Wall, defended in many places with Forts and Bulwarks; and if well furniſh'd with Ammunition, and ſtock'd with bold reſolute Soldiers, is a place certainly capable of maintaining its Liberty againſt a very great Power. It may ſeem indeed to lie ſomething open to the Seaward, it being quite dry there at low Water; but then Nature and Art have both conſulted to keep out the Danger that threatens to come that way: For there are a couple of Rocks lying there, one of which is bigger than the Tower of *London*, and ſo horribly ragged and full of Cliffs and little Precipices, that 'tis impoſſible to be aſcended, but in one particular part of it alone; and there the Path is ſo very narrow, and ſo ſteep too, that half a Dozen Men may defend it againſt a whole Army.

But then add to the Strength and Impregnableneſs of theſe two natural Forts, the Improvements that Art and Induſtry has made, in Forts and Batteries rais'd about them, which are very well furniſh'd with all ſorts of Ammunition; and the place appears to be ſo well guarded, as not much to need the help of the Sea to ſecure it on that ſide. This City is ſupplied with Proviſion partly from the neighbouring parts of *Arabia*, and thoſe of *Africk*, oppoſite to it on the other ſide the Streight. There's a continual Trade and Correſpondence between it, and the Town of *Barbora*, which ſtands juſt over againſt it in the Kingdom of *Adel*: And from hence they bring to *Aden*, Cattle, Fruit, Incenſe, Myrrh, and ſome better Commodities too, tho' as yet to be conceal'd, till better Information gotten of the truth of it.

Coſmographical Obſervations of *Aden*.

The Latitude at this place, I reckon to be 12 Degr. 35 Min. Northerly, the Variation of the Compaſs twelve Degr. 40 Min. Weſterly. The Water riſes at the Port ſix or ſeven Foot upright upon the Change-Day, and a S. E. by E. or N. W. by W. Moon, makes a full Sea. Here we had News of Capt. *Sharpeigh*, who was at this place the Year before, and traded both here and at *Moha*; and whatever Entertainment he had, we were made believe ours ſhould be extraordinary. They told us, if we were *Engliſh-men*, we were moſt heartily welcome thither, and ſhou'd meet with as kind and civil uſage in theſe parts, as at any other place where our Nation traded. That the Baſſa that govern'd here at preſent, was a more eaſie and affable Man than the former: And as for a Trade, we needed not at all queſtion it, eſpecially at *Moha*; where there was a great Merchant reſided, who wou'd himſelf (if other Cuſtomers fail'd) take off all the Goods we had brought.

Sir *Henry Middleton* prepares for *Moha*,

They were very deſirous to have one of the Ships left in the Port to trade with their Town, while the other two went to *Moha*; promiſing to buy all ſhe had aboard, let it be ever ſo much: Which upon Conſideration I yielded to, leaving the *Pepper-Corn* there, and took the *Darling* to bear me Company to *Moha*.

The Town of *Aden* refuſes him a Pilot,

I was forc'd to attempt this paſſage without any Pilot to aſſiſt me in it; becauſe I plainly ſaw they had no mind I ſhould have any; and 'twou'd have been to no purpoſe to have ſpent time in waiting upon a Pack of Miſcreants, that value no Promiſes they make, and think of their Words no longer than they are in their Mouths a ſpeaking. I ſuppoſe they had a mind I ſhould fall foul upon ſome Rocks or Sands, in my paſſage to *Moha*, that ſo being ſwallowed up of the Sea, they might with the more Eaſe and Security ſwallow up the rich Ship left in the Port. It cou'd be for no other Reaſon but this, that they ſhou'd ſo often (as they did) promiſe me a Pilot, and yet never take care to ſend me any.

Streight of *Babelmandel*. Their Courſe to and thro' it.

Now the greateſt difficulty we had to encounter, was that in paſſing well the Streight of *Babelmandel*, which is about thirty Leagues diſtant from *Aden*. We ſteer'd along the Land ſometimes W. S. W. and W. by N. in 28 and 30 Fathom Water, obſerving all the Coaſt as we paſs'd to be very high Ground, and ſhooting out into the Sea with many Head-lands. We continued moſtly the ſame Courſe, haling along the Land all that Night, and the next Day betimes ſaw the great Head-land running into the *Red Sea*, riſing up like an Iſland, and about Noon we got a-croſs the Streight. It is not above three Mile broad, and the Depth between eight and eleven Fathom; on the North-ſide lies an uneven ragged Land like an Iſland; and on the South a flat low Iſland, call'd *Babelmandel*, which gives the Name to the Streight; to the Southward of which Iſland there ſeems to be a broad Entrance, or Channel.

Arrive at *Moha*.

The Admiral a-ground, & got clear again.

The ſame Day we had ſight of the Town of *Moha*; and preſently thereupon (as if our Misfortunes muſt begin with the very proſpect of that place, afterwards ſo fatal to us) my Ship was run a-ground: Whether by the Unskilfulneſs, or the Treachery of my two *Arabian* Pilots, I cannot tell; for I had pick'd up a couple out of a ſmall Village by the way, near the Streight of *Babelmandel*, and under their Conduct (poſſibly by their contrivance) this came to paſs. However, if 'twas a Plot to ruine me, it did not take effect; for as it pleas'd Providence, we brought the Ship off again ſafe and ſound, to our very great Comfort. Being come hither, we had all the kind Salutations, and joyful Welcome imaginable. The Aga ſent to Complement me aboard, and gave me full Aſſurance of as free, quiet, and good Trade here, as at *Aleppo*, *Conſtantinople*, or any other part of the *Turks* Dominions.

His Reception at *Moha*.

I was earneſtly deſired to come aſhore, to have better Proofs of their Civility and Reſpect, than I cou'd have at that diſtance; and at my landing was receiv'd by all the great Men of the Town, and conducted with Muſick, and other Expreſſions of Pomp, and Publick Joy, to the Aga's Palace.

Here I deliver'd His Majeſty's Letter and Preſent for the Baſſa, and alſo one to the Aga himſelf; upon which, (after a ſolemn Renewal of the Promiſes before made, relating to our Trade and Security there) I had the rich Veſt of Crimſon and Silver put upon me, as a Mark of the Grand Seignior's Favour and Protection. In that Dreſs I was carried through the Streets on Horſeback, ſet out with a very ſplendid Equipage, and ſo triumphantly deliver'd in at the *Engliſh* Houſe in that Town.

The horrible Barbarity & Treachery of the *Turks*.

Yet in all the heighths of this Careſs (as it appear'd by the ſequel) they acted in the greateſt Contrariety that cou'd be, to their own inward Thoughts and Sentiments. But the *Turks*, who are inferiour to none in the Arts of Diſſimulation, did do all with ſuch an Air of Friendſhip, and Cordial Love; they acted their Parts ſo very finely, that 'twas impoſſible for the moſt diſcerning Eye to ſee any thing but Sincerity, in that outward Deportment. But 'twas not long before they threw off the Diſguiſe, and appear'd like themſelves: They quickly paſs'd from one Extream to the other, from the heighth of Complement and flattering Reſpect, to the laſt degree of Outrage and barbarous Inſult. Without any the leaſt appearance of a foregoing Coldneſs and Indifference, any ſuſpicious Token, or Symptom of ſuch a change; and I am very ſure, without the leaſt occaſion from us, they riſe upon us with one Conſent, beſet our Houſe, and fell to knocking on the Head thoſe of us that were without Doors, as faſt as they cou'd. I my ſelf felt their Fury amongſt the reſt, being left for dead upon the Ground in the Scuffle; and beſides pillag'd of all the Money, Rings, and valuable Matters I had about me.

At the ſame time that they aſſaulted us aſhore, they made an Attempt upon one of our Ships, which was moſt within their reach; but tho' they made a ſhift to get their Cut-throat *Turks* aboard her, yet they cou'd not keep poſſeſſion of her, our Men blowing them up with a Barrel of Gunpowder, without any prejudice to themſelves.

We that had eſcaped with our Lives were manacled like ſo many Slaves, and ſo led in that baſe and diſgraceful manner away to the Aga, by whom I had been receiv'd with ſo much Pomp but juſt before. And now the *Turk* had put on another Face, and his Stile was alter'd too

as

The *Agelmanes* for the Admiral to be yielded to him.

Admiral *Middleton* put into a Dungeon. *December.*

as much as his Looks. Now inſtead of a ceremonious Welcome, and a ſet of high flown *Turkiſh* Compliments, I was roughly demanded what I had to do to come thither; and how a polluted Chriſtian durſt be ſo bold as to offer to ſet his Foot upon that Country, where the City of their Holy Prophet ſtood? But the Burthen* of the Song was, that I ſhould write to my Men aboard the great Ship to perſwade them to come all aſhoar, and yield themſelves and the Ship into his Hands, and he wou'd let us have the leſſer Ship to carry us home again. But as I had proof enough of his Conſcience and Courteſie to be a ſufficient Security for my ever truſting to either again; ſo I did by a ſcornful rejecting of his Propoſal, give him to underſtand that I thought it as Ridiculous, as I did him Impudent, for the making of it; and that I wou'd never purchaſe my freedom from his Chains, with the loſs of my Honour and Honeſty to thoſe which had entruſted me. 'Tis true, he enforc'd his Perſwaſions with an Argument very cogent in ſome Circumſtances, but in my unhappy State it was of no power at all: He threatn'd if I did not comply he wou'd take away my Head; but the loſs of that was not great enough to move me, having loſt that which is more valuable than Life before. So I was carried out of his Preſence loaden with great Fetters and Iron Shackles, to a filthy Dungeon where the vileſt Malefactour wou'd hardly have been beſtowed, and into which 'twas as bad as an Execution to go. But at the Interceſſion of the Conſul of the *Bannians* my lodging was changed; and I had the Favour to be removed into another Hole, where I had a dry tho' a hard Floor for my Bed, a great Stone for my Pillow, and good ſtore of Rats and Mice to keep me Company.

In this Diſtreſs I was very often viſited by the *Aga*, whoſe Buſineſs being to tempt me to betray my Truſt, made his Preſence more hateful to me than any of the Vermin of the Dungeon.

'Twas a great Mortification to him to hear our Ships were ſo well provided with Victuals, and that they had ſtock enough for two Years; for he expected that Neceſſity wou'd have brought them into his Hands, ſince they cou'd not have a Wind to go off till the ſucceeding *May*; but I knew that it was Matter of Fact, and 'twas no ſmall Comfort to me in my Misfortunes that they were ſo happily out of the treacherous Villains reach. My Men aboard too had the Comfort to hear I was alive, contrary to the firſt Report ſpread about of our being all cut off.

Sent for by the *Baſha.*

There was ſome intercourſe betwixt us alſo to our mutual Satisfaction, by the good Conduct and Courage of one of them, who boldly ventur'd his Life and Liberty to come and ſee me, and was permitted by the *Turks* ſo to do, hoping to make their own Advantage out of it. Now whilſt I lay here continually expecting the laſt Scene of my Tragedy to come on, ſome Officers came to the Town from the *Baſha* with Orders to bring me up to him. This I knew to be but a Remove from one Dungeon to another, and only a change of Place but not of Condition and Circumſtance to me. The *Baſha* was a bigger Man than the *Aga* in his Quality and Figure, but of the ſame ſize exactly as to Conſcience and Honeſty; and as to the Point of good Uſage, it was not a Farthing matter whether I were in the Hands of the Knave the Maſter, or the Knave the Servant. However to breath, the ſweet and pure Air, after the noiſom Stench of a Dungeon was ſome Advantage; and 'twas better to be upon the Road for a few Days, than to lie immur'd the ſame time in a receptacle of Vermin.

Go from *Moba* to *Zenan.*

Ties.

Extream Cold between *Ties* and *Zenan.*

We ſet out from *Moba* the latter end of *December*, being 35 of us in all, who were to make our Appearanoe before the *Baſha* at *Zenan*. This City is the Principal one of that part of *Arabia Felix*, diſtant 180 Miles from *Moba* to the N. N. W. and (according to my Obſervation made when there) in 16 Degr. 15 Min. N. Lat. ſeveral of our Friends amongſt the *Turks* and *Arabians* themſelves, who had expreſt a generous Compaſſion for me in my Confinement, and daily refreſh'd me with their Kindneſs, did at our departure expreſs the like by their friendly Farewels, and hearty Wiſhes for our good Succeſs at *Zenan*; and particularly by their Letters to the great Men about the *Baſha* on our behalf. Nay one of them (the Conſul of the *Banniams*) went thither a little before us, on purpoſe to mollifie the rough Temper of the *Baſha*, and act the part of a Mediator for us. The moſt remarkable Obſervations that occurr'd in our way to *Zenan*, was that of the Cold we felt; which was indeed ſo extream and piercing, that I think we had been all ſtarv'd to Death, if we had not been well provided with Fur-Gowns. The Air was pretty tolerable and temperate till after we had paſs'd the City of *Ties*, which is four Days Journey from *Moba*; but between that and *Zenan* it was ſo ſevere, that being forc'd to lie upon the bare Ground too, had it not been for the Defence of our Cloathing, I believe the Cold wou'd have made us too ſtiff to have ſhewn our *Engliſh* breeding, in bowing and ſcraping to the *Baſha* by that time we got to him. And in *Zenan* it ſelf we had every Morning the Ground covered with a hoary Froſt, and Ice of a Finger thick in one Nights freezing; and all this while we were in the *Torrid Zone*, and tho' 'tis true that the Sun was then on the other ſide of the Line in the South half of the *Torrid Zone*, yet I ſhould ſcarce have believ'd that the Cold was ſo extream in theſe parts that lie ſo directly in his Road, if I had not by both theſe Sences had ſuch convincing Demonſtrations of it.

The *Turks* led us into *Zenan* with a great deal of Triumph, and the *Aga* march'd by us in a very ſtately manner, as if he had done ſome very Heroick Action in betraying and leading us Priſoners, that had neither Arms nor Warning to defend our ſelves againſt his Treachery. As if we had been the Relicks of ſome conquer'd Army, and were brought out of a bloody Field, where the Fate of a whole Kingdom had been determin'd by the Valour and Conduct of this mighty Man; ſo were we brought into the City, and ſtar'd at by the Mobble of *Turks* and *Arabians*. And the *Baſha* to contribute his Part too, to the gracing of this fooliſh Scene, ſent out Shots, Drums, and Trumpets to meet us; lin'd all the way to the Caſtle with Souldiers, and got all his great Men together about him: No leſs than the whole Divan being ſummon'd together upon this Occcaſion.

Sir Henry Middleton brought to the *Baſha.*

Sent to Priſon.

When I came into the Room of Preſence (which was a ſtately long Gallery, ſpread from one end to the other with *Turkie* Carpets, and as full of Grave Councellors as ever it could hold) I found the haughty *Turk* ſitting in Kingly State at the upper end of it, threatning no leſs than Death to me and all my Company in his terrible ſurly Looks, and Eyes ſparkling with Fury and Indignation againſt us. His Stile and Diſcourſe was no leſs Lofty and imperious than his Looks; and I had little from him but ſuch ſort of rude and barbarous Queſtions, as I had from his good Servant the *Aga*. He told me however at laſt, that the *Aga* had done what he did by his Orders, and that they came directly from *Conſtantinople*; and 'twas the *Grand Seignior*'s Pleaſure that all Chriſtians that came into thoſe parts ſhould be treated in this Manner; and therefore ſince we were come upon that Forbidden Ground, our Lives and Fortunes were at his Maſters diſpoſal, and we muſt wait till Orders came from Court either to Execute, Enſlave or Diſcharge us. This was our Sentence, which when paſt we were order'd to our ſeveral places of Confinement; my Men to the common Priſon, and my ſelf to one a little better, in the Keeper's Houſe. 'Tis true the *Baſha* was not ſo great, his Air ſo ſtern and ſour, nor his Words ſo ſcaring; but I had Preſence enough to Interpoſe and Argue what I thought convenient, as well in our own Defence, as Reflections upon the ſcandalous Treachery of *Agra*. But Innocence cou'd be no Protection here, as well as breach of Faith and Truth no Crime; and the *Baſha* and his *Aga* were ſo cloſely link'd together in the Villainy, that one muſt of neceſſity defend what tother had done. Yet I think they ought both to have ſpar'd the *Grand Seignior*'s Reputation, and not to have brought him in for ſnacks in the Scandal of their own private Knaveries. They muſt rob Ships, cut Throats, pillage, plunder and impriſon Strangers, and violate all the Laws and Cuſtoms of Nations, even thoſe that are ſacred amongſt the moſt Barbarous; and then upon the Pretence of our being Chriſtians, thro' all upon the *Grand Seignior's* Orders; which is to Compliment him with the Title of Patrone to Thieves and Villains, and make him ſo much worſe than themſelves as his Character and Figure is greater. And I make no Queſtion at all, but that (we being at that time join'd in a ſtrict League of Friendſhip with the Port) the barbarous Orders to uſe us ſo, wou'd have been publickly diſown'd there, if the Matter had been fairly repreſented; and theſe Actions would have coſt the proud *Baſha* his Place and Honour if not his Head.

Friends about the *Baſha* endeavour his Diſcharge.

January.

Now while we continued in theſe Circumſtances at *Zenan* there were divers of the great Men about the *Baſha*, which continually did us very good Offices with him, and labour'd moſt heartily for our Releaſe. The moſt conſiderable of theſe were the *Cayba Baſſa* or Lieutenant General of the Kingdom, the Conſul of the *Banniams*, and one or two more *Arabian* Merchants; to every one of whom I muſt acknowledge a particular Obligation. Theſe gave me to underſtand (by that time we had been ſome 8 or 10 Days here) that when the reſt of our Company now expected were come up to *Zenam*, we ſhould all be ſent back again to *Moba*. And after the Arrival of this part of our Company, the *Baſha* himſelf

(be-

They are to be ſent back to *Moha.*

(before whom I was order'd to appear) confirm'd this News to me, and told me we ſhould all return to *Moha*, and part of us ſhould go abroad preſently, but my ſelf and 29 more ſhould be detain'd till all the Ships of *India* were come in, and then we ſhould have our full Diſcharge too.

As for our Goods he alledged he cou'd not make a Surrender of them, for they were all put up to the *Grand Seignior*'s Account, and ſo was our Pinnace too, and therefore out of his Power to redeliver; but all other things belonging to us ſhou'd be reſtored, and our Liberty ſhould be infallibly ſure when the time he had fixed for our ſtay was expired.

February.

About the middle of the ſucceeding Month, the time came on for our departure to *Moha*, and I went to take my leave of the *Baſſa*, but a little before exalted to the high Place and Dignity of a Vizier. His Pride being encreaſed together with his Honour, he commanded me in a very imperious manner to look to it, that neither I nor any of my Nation came any more into thoſe parts; and 'tis certain that he might have ſav'd himſelf the Trouble of giving that Command, ſince no Man that had once been there and ſo entertain'd, could ever be fond of coming the ſecond time amongſt a pack of ſuch inhuman Barbarians as they were. But when I begg'd on the behalf of my Nation, that (if any of their Ships ſhou'd happen to come into thoſe parts before notice cou'd be given to *England* for the Prohibition) they might not be betrayed as we had been, but plainly told that they muſt not come there, that they might know what to truſt to: He poſitively refuſed that they ſhould have any ſuch warning; which I think was a ſufficient Proof of a baſe Deſign, and that he intended more the Plunder of Ships, than to ſhew his Reſpect to the *Grand Seignior*'s Orders, which were to keep them from coming to Trade there.

Deſcription of *Zenan.*

This City of *Zenan* is conſiderable for it's largeneſs, being ſomething bigger than our City of *Briſtol*, and ſtrongly built for the moſt part with Stone and Lime. The Wall that ſurrounds it, is indeed of Earth, but 'tis ſtrengthen'd with Turrets in every part of it, by which means 'tis made a ſubſtantial Defence to the City. Beſides there are two good Caſtles, one to the North ſide, ſeated upon a Hill, which overlooks the Town, and defends that part from the wild Mountain People, that uſe to annoy it from thence; and another to the Eaſt ſide, which is the *Baſſa*'s Palace, and incloſ'd with ſeveral Walls with Turrets and Battlements. 'Tis ſeated in a barren ſtony Valley, and has not a drop of Water, but what's fetch'd out of Wells, and that they dig extreamly deep for too: And then for Wood, 'tis as ſcarce and dear here as 'tis at *Sokotora*, whereas the pinching Cold I am ſure requires no little Plenty all hereabouts. Adjoining to the Wall of the *Baſſa*'s Caſtle, is a large and ſpacious Yard, where abundance of Women and Children are kept as Pledges and Securities for the good and peaceable Behaviour of their Husbands and Parents under the *Turkiſh* Government.

General *Middleton* goes back for *Moha.*

Within ſight of this place was my Priſon too, which now I was ſo happy as to take my leave of, and ſet out with my Company for *Moha*. The *Turks* have erected ſeveral publick Houſes or Inns for the Reception of Travellers upon the Road; there's five or ſix of them between *Zenan* and *Moha*, and they are built and maintain'd altogether at the *Grand Seignior*'s Charge. The moſt remarkable places that we paſs'd thro' in our Journey (for now we had a little more heart as well as leaſure to make Obſervations than the firſt time we went this Road) were theſe that follow,

Damare.

Damare, which is about 40 Miles from *Zenan*, a Town prettily built of Lime and Stone and divided into five ſeveral parts, which ſtand at ſome diſtance from one another like ſo many diſtinct Towns. This place is ſituated in a ſweet and fruitful Plain, and has the Bleſſing of Water and all ſorts of Grain in great plenty, being a kind of Store-houſe of the neceſſary Proviſions of Life, from whence the poorer Neighbouring Places draw the beſt part of their Suſtenance.

Tayes or *Ties.*

Tayes, is a conſiderable City too, being half as big as *Zenan*, and wall'd with a Mud-Wall, as moſt of the Cities of *Arabia* (I have ſeen) are: 'Tis hemm'd in on every ſide with very high Hills, one of which has a fair and ſtrong Caſtle upon the top of it. 'Tis good Travelling hereabouts, all ſorts of Proviſion being very cheap; and the Country has the Reputation of yielding ſome quantities of *Indico*, but how much, or of what goodneſs I cou'd not learn.

Eufras *March.*

Eufras is a little Town not far from *Ties*, remarkable only for the Honour of affording a Burying place to ſome celebrated *Arabian* or *Turkiſh* Saint, whoſe Tomb here is viſited every 5th of *January* by a vaſt multitude of devout Pilgrims and People of all ſorts. This Superſtitious Company after they have performed ſome certain idle Ceremonies here, do all jog away together to viſit the Holy City of *Mecha*.

Mouſa.

Mouſa is a Town not great but very populous, about a Days Journey from *Moha*, the Country about which, likewiſe yields ſome ſtore of *Indico*. And indeed all the Country our Travels led us thro' was very populous, and thoſe Towns that wanted good Houſes were far from wanting Inhabitants to fill them. The *Arabs* do dwell with the *Turks* in all the plain and open Country; and the *Turks* are Maſters in moſt of thoſe places as well as in the Maritime Towns: But in the Hilly Country the *Arabs* are abſolute Lords; they deſpiſe the *Turkiſh* Power, and ſcorn the Yoke laid upon the reſt of the Country, and a *Turk* dares not Travel there without a Paſs from the *Arabian* Governour, in whoſe Territories he is.

They Arrive at *Moha.*

Our next Stage was from this Town of *Mouſa* to *Moha*, a place too well known to us, in reſpect of our many Diſtreſſes we underwent there. The common ſort of People did in general diſcover a very great Satisfaction at our ſafe return; and the diſſembling *Aga* himſelf, who thought he cou'd do no leſs than congratulate us upon this Occaſion, did it with all the counterfeit Joy and Proteſtation of his innocence that could be imagin'd. He treated us, careſs'd us at all the publick Feaſts, fawn'd and flatter'd as he us'd to do; ſwore upon the Alcoran before a numerous Aſſembly, that his Heart was ever clear of all Malice and Prejudice, and ever ſhould be fill'd with true Love and Kindneſs for us.

Deſcription of *Moha.*

This Town of *Moha* which is one of the *Turkiſh* Keyes to *Arabia Felix*, is not above one ſixth part ſo big as *Zenan*. 'Tis a very populous Town, but wholly without the Defence of Walls, and has an ugly ſituation in a Salt, Sandy, Barren Soil, cloſe by the Sea ſide. All Boats that bring any Goods aſhoar, are enjoin'd to Land at the Key cloſe by the Governour's Houſe, where they are overlook'd and watch'd, ſo that there's no ſtealing of Cuſtom. Juſt by this Key there's a Platform, upon which are planted about a Dozen Braſs pieces, and at the Weſtern end of the Town, there's a Fort furniſhed with the like number of Ordnance, and for all that, I find this is all their ſtrength.

General *Middleton* puts Part of his Men aboard.

April A. D. 1611.

Quickly after our return to *Moha*, the *Darling* came into the Road and brought me News of the good Condition of my other two Ships; and now according to the Agreement made with the *Baſha*, I ſhipp'd all my Company appointed for that purpoſe aboard the *Darling*. I my ſelf and 29 more were to ſtay behind till the *Indian* Ships were all ſafe come into the Road; which they doubted would be endanger'd by us, ſhould they ſend me away to Sea before.

Aſſab Road.

The *Darling* having got her Company, Sail'd off to the other two Ships of our Fleet, which lay in a good ſecure Road upon the *Abaſſinean* Coaſt. This Road they had found out in the time of my Impriſonment at *Moha*; the Name of it was *Aſſab* Road, and it afforded them as much Wood and Water as they could ever need or deſire, and that at no dearer rate than their labour in fetching it.

The Ships Trade with the People on the Coaſt of the *Abaſſine* Country.

The People of the Country thereabouts are as black as the Negroes of *Guinea*; and they are *Mahometans* on the Sea-Coaſt, but up in the main Land Chriſtians, and Subjects to *Preſter-John*. As for theſe Borderers on the Sea, they go all naked, except a ſmall Cloth about their Waſtes. They were mighty free and forward to Trade with our Ships, (tho' the *Turks* did what they cou'd to prevent their mutual Correſpondence) bringing great Numbers of Oxen, Sheep, and Goats, which they ſold at very reaſonable Rates; firſt for dry Money, and afterwards for coarſe Callicoes, by way of Truck; which Commodity they were more fond of, than Money it ſelf. Tho' the better ſort of them do both ſpeak and write the *Arabick* Language, yet their own Vulgar Speech is vaſtly different from it, and not at all underſtood by the *Arabians* their Neighbours.

Rabaita.

Their King has his ordinary Reſidence at a Sea-Coaſt Town call'd *Rabaita*, lying to the Southward, towards the Streights of *Babel mandel*. He ſent ſome of his principal Men with Preſents to our Ships, and to make them the Offer of any thing his Country afforded, which cou'd any way procure their Satiſfaction. I was very glad (as I had good Reaſon) that my Ships were in ſo good Circumſtances, and lay ſo ſecurely at that little diſtance from me; as alſo, that the Work of our Deliverance was ſo far gone on, as that a part of my Company was actually at liberty aboard their own Ship.

But now I began to think ſeriouſly and heartily how to accompliſh my own eſcape alſo together with the Remainder of my Company) out of this Neſt of barbarous Infidels. 'Tis true, by the Baſſa's Order we were to ſtay till the Ships of *India* were come in; but that was, if we cou'd not get away before: And I had no Scruple of Conſcience at all in the matter, of attempting to make my Eſcape before the time came, that he prefix'd and forc'd me to agree to. For as 'twas the higheſt degree of Violence and Injuſtice in him, to ſeize and detain me in that manner; ſo 'twas juſt and natural for me, or any Man in that Circumſtance, to endeavour to free himſelf from the Wrong and Injury that's done him as ſoon as he can. Liberty is a Privilege granted by Nature, and I enjoy it as a Man, and to aſſert the Rights that belong to me in that Capacity, is to act agreeably to Reaſon and a Natural Law.

But the Difficulties of bringing this Project to perfection, were far harder to be removed out of the way, than any Scruples of Conſcience concerning the Probity of it: And if I cou'd but once have accompliſh'd the thing, I wou'd have prov'd it to have been juſt and righteous afterwards. Beſides, I was the more obliged to look to my ſelf, becauſe I was inform'd by ſome of the Baſſa's intimate Friends, that nothing but fear wou'd make him honeſt and true to his Word, and that if he cou'd break it without danger, he wou'd certainly do it. So that conſidering this; beſides the Kindneſs I ſhou'd do my ſelf by eſcaping, 'twou'd be (I found) a piece of Charity to the Baſſa too, becauſe hereby I ſhou'd put it out of his power to play the Knave, and falſifie his Word and Promiſe.

May.
Sir H. Middleton prepares for his Eſcape.

Being upon the wait for an Opportunity to put this Plot in Execution, I had a very fair and promiſing one put into my hands, by the abſence of the Aga, who went out one Day with all the Great Men of the Town, to make merry at his Gardens, that lay at ſome little diſtance from it. And to render the Opportunity more complete too, the Sub-Baſſa, our Guardian, and all the inferiour Officers, went to a Racky-houſe, and got drunk that Day; which Debauch of theirs, as they tim'd it, was the moſt kind and favourable thing to our Buſineſs that cou'd be.

Our Ship the *Darling* was the Day before come into the Road, and lay there waiting for Intelligence from us, who were Priſoners in the Town; which was alſo permitted and allow'd of by the *Turks*, not imagining any more than an ordinary Correſpondence. Matters were thus agreed on between me and my Company, that I ſhould by ſome very Politick Method be convey'd into the Boat, that was to carry our Letters (as was uſual) to the *Darling*, and in that Boat take up ſuch a part of the Company as it would conveniently hold; and the reſt ſhould go and poſſeſs themſelves of another Boat, that lay ready fitted for their Service at one end of the Town, and ſo all make towards the Ship as well as we cou'd. And this was not extreamly difficult to be put in practice, ſince my Orders obſerv'd of their not going all together in a Body, but diſperſing themſelves by two and three in a Company, there wou'd be no manner of ſuſpicion of any ſuch Deſign, becauſe they had all their free Liberty to walk up and down about the Town at pleaſure. As for my ſelf, I cou'd not ſtir without a Guard to attend me, ſo that 'twas impoſſible for me to go to work that way; and there was no means for me to get aboard, but by putting ſome very fine Trick upon my Keepers. And all things conſider'd, I cou'd light of no better a one than this, to put my ſelf into an empty Cask, and ſo amongſt other Lading be tumbled into the Boat. 'Tis true, I had here a very cloſe and ſtraight Priſon on't; but yet as ſtifling as 'twas, it was better than that at *Moha*; becauſe here was ſome hopes of coming out again. So into my Barrel I went, and being out upon the Water, I forc'd out the Head on't, to have liberty of Breathing, and Providence guided me ſo happily, that I came without Impediments to the place where my Company attended me, and took them in.

The General's Contrivance to get away.

The other Party alſo managed their Buſineſs ſucceſsfully, and got out to Sea without diſturbance, and we all met aboard the *Darling*. A ſmall Number indeed of our Company by their own negligence, delay, and ill management, gave ſuch an Alarm to the Town, that they were diſcover'd and intercepted in their paſſage to the Boat where they ſhou'd have been taken in; and ſo being carried back Priſoners, were like to have loſt their Heads by the extravagant Fury of the Aga; who now return'd from his Diverſion, was like to run mad with the Confuſion and Trouble which this Eſcape gave him. However, to add to his Eaſe and Contentment in this Juncture, I ſent him a Meſſage to this effect: *That if he did not ſpeedily ſend me the reſt of my Men, and make Satiſfaction for Damages receiv'd, I wou'd fire all the Ships in the Road, and batter the Town about his Ears.*

Comes aboard.

Demands Satiſfaction for the Wrongs receiv'd.

And as Circumſtances now happen'd, I had Opportunities enough to take my Revenge; for there were ſome conſiderable Ships in the Road already, and others that came freſh in, whilſt I lay in that threatning poſture before the Town. Now all the Merchants and Great Men of the Town that before deſpis'd me, complemented and courted me, addreſs'd me in the moſt humble manner imaginable, for the ſake of their Ships, and labour'd earneſtly with the Aga to bring him to Terms with me. A Day hardly paſs'd too, without ſome Preſent or other from him, to keep me quiet, and to ſtop the Mouths of my great Guns, which were now ready to ſpeak a Language to him he did not care to underſtand. Even the Baſſa himſelf (now forc'd to be honeſt whether he wou'd or no) ſent me his Commendations, and aſſur'd me he was ſorry I was gone away in ſo obſcure a manner, becauſe he had deſign'd to have diſcharged me in a way more honourable and beſitting my Quality and Character.

June.

I heard all this *Turkiſh* Diſſimulation with Scorn, but having it now in my power to right my ſelf, I gave them my laſt Reſolutions ſo to do; and as the Wrongs I receiv'd there were real and ſubſtantial, ſo in ſhort, I let them know, that I wou'd have another ſort of Reparation than by Flattery and Careſs. My Demands were to have all my Men return'd ſafe aboard to me; to have my Pinnace (which they had ſeized) reſtored; and 70000 Rials of Eight, in Conſideration of the Loſſes I had ſuſtain'd, by the means of the Treachery and Violence there offer'd me.

The two firſt Particulars were eaſily agreed to and perform'd; but the latter (of the Payment of ſo much Money) wou'd not go down with them. However, at laſt, after many Conferences and Debates on both ſides, I yielded to take 18000 Rials, and ſo a Peace was concluded betwixt us and them for two Years, from the Port of *Moha*, to that of *Cananor*, upon the Coaſt of *India*; but this for our better Security I wou'd have confirm'd by a Writing under the Baſſa's own Hand and Seal, which was promis'd, but never perform'd: And this was a Proof clear enough, that tho' neceſſity had compell'd them to make a Peace with us, they intended to break it as ſoon as they had opportunity.

Peace and Agreement made.

July.
Come into *Aſſab* Road.

Having thus diſpatch'd all our Concerns at *Moha*, we ſail'd away for the Road of *Aſſab*, where our Ships had met with ſo good Entertainment before, and where when we now came, we had plenty of Proviſions brought in by the Country People, and Meſſengers from the King, to congratulate our ſafe and happy Eſcape from *Moha*.

Here we paſs'd the time in a pleaſant Correſpondence, and mutual Acts of Kindneſs and Civility between theſe People and us, till the latter end of this Month, when we rouz'd, to go look after a *Turkiſh* Prize; a rich Galleon that comes yearly from *Sues* to *Moha*; which I had the more mind to take, becauſe the Baſſa and the Aga were conſiderably concern'd in her. But in this purſuit, having the Wind very much againſt us, and running into ſome Dangers, which our want of a Pilot expos'd us to, we were oblig'd to give over that Deſign.

Go on for *India.*
Auguſt.

We went on now to the Streights of *Babelmandel*, in proſecution of our *Indian* Voyage. And here in this paſſage we detected at once the Falſhood and the Deſign of that Report, made by the *Turks* and *Arabs* concerning this Streight, *viz.* that the Southern Paſſage between the Iſland and the Coaſt of *Africk*, is not navigable for Rocks and Shoals, and other terrible things; and that a Ship that will go into the *Red Sea*, muſt go the Northern Paſſage between the Iſland and the Coaſt of *Arabia*, or not at all.

No danger in the Southern Paſſage of *Babelmandel.*

I doubt not but the *Turks* do wiſh 'twere unnavigable, or wou'd make it ſo if they cou'd; but that Nature has actually made it ſo, is as falſe, as to affirm no Paſſage at all that way.

Our *Darling* went between the Iſland, and the Coaſt of *Africk*, and found the Paſſage at leaſt three Leagues wide, and forty Fathom Water for ¾ part of the way, and not the leaſt appearance of danger in the whole paſſage. But the *Turks* wou'd make the World believe the contrary, becauſe the other Streight is not a Mile and half over; which may be ſo fortified, that no Ships ſhall come into the *Red Sea*, without either asking them leave, or ſtanding the Shock of their Ordnance.

Septemb.

The beginning of the next Month brought us into the Road of *Deliſha*, in the Iſle of *Zocotora*, where I furniſh'd my Ships with Water, and traded with the King for what Aloes he had; which I think he made me give dearer for than ſome of our Nation before, that had dealt with him for the ſame Commodity. A few Days ended what Buſineſs we had to do here; and ſo holding our Courſe for *Surat*, we came (without any remarkable Occurrence in the way) to an Anchor in *Swelly* Road, the latter end of the ſame Month.

Arrive at *Swelly* Road.

The Tides in *Swelly*-Road.

According to our Obſervation here, the Water flows E. N. E. one quarter N. and W. by S. one quarter S. by the Moon, and by this time the Flood holds five Hours, and the Ebb ſeven: The Reaſon of which difference is from the abundant Rains which do help to ſtrengthen the Current of the River, and ſo far overcome and ſhorten the Flood-ſtreams; whereas at other Seaſons, tho' the Streams do ever go ſtrong, yet the Flood and Ebb are equally ſix Hours apiece.

The *Portugueſe* oppoſe their Landing.

Here we had Intelligence, that a whole Fleet of *Portugueze* Frigats, to the number of twenty, and very well provided with all things, as well to offend us, as defend themſelves, lay waiting for us at the Bar of *Surat*. Theſe had, it ſeems, Notice of our being in the *Red Sea*, and of our Deſign for *India*; and therefore came out with a Reſolution to diſpute the Point with us, and, if poſſible, to hinder our Trade either at *Surat*, or any where elſe, upon that Coaſt.

We now found our ſelves in a Circumſtance of ſome Difficulty and Diſtreſs; go back and loſe our Voyage we wou'd not, and we ſaw no probability of getting into *Surat*, without forcing our way through the whole *Portugueze* Fleet. They kept ſo ſtrict a Watch, that no Boat cou'd either go to, or come from the Shoar, with Intelligence to us but they muſt of neceſſity fall into their hands; and if they had any thing worth the taking, to be ſure were plunder'd. And upon this pretence they took occaſion to rob divers Ships, and Boats, alledging, (whether they did or no) that they held a Correſpondence with their Adverſaries, and were bringing Supplies to us, upon which ſcore all their Lading was confiſcated and ſeiz'd. All Communication between us and the Land being thus cut off, and no Proviſion poſſible to be brought to us, our Men began to grow very weak and diſtemper'd, and Matters grew to ſuch a paſs, that 'twas neceſſary for us in a very little time to break this Chain, or reſolve all to ſtarve or be eaten out with the Scurvy a Shipboard. I did therefore deſire, by Letters directed to their Admiral, that theſe Matters might be amicably compos'd and adjuſted, and that I might not be compell'd to have recourſe to violent Methods, to procure that Liberty which I had as great a Right to in that place as themſelves; both by the Authority of the King from whom I came, and of the King to whoſe Country I came, who had very kindly entertain'd our Nation there, upon the Deſigns of Trade. But as for them who value no Laws, either of Nature or Nations, nor no Authority but that of their own Prince, they inſiſted upon the old Topick of the King of *Portugal*'s Prerogative in thoſe Seas, and concluded that I ſhou'd not be admitted to come there, without I ſhew'd an Order from him. This, with many baſe Reflections upon our Country, and other Expreſſions of Scorn and Contempt, was all the Anſwer I cou'd get from them.

Gen. *Midd.* ſends to the *Portugueze* Admiral.

His Anſwer.

October.

And 'twas not only in the Matters of Trade that we were thus inſulted by them; but they barbarouſly denied us thoſe common Liberties, which might have been ſafely granted us, without any prejudice to themſelves: For whereas we had ſeveral of our Country-men and Merchants aſhore, whom I wou'd have taken aboard, they wou'd not allow this; but told us ſcoffingly, they wou'd carry them to *Goa* along with them, where they ſhou'd have as good Uſage as any *Jews*, and *Turks*, ever had among the *Portugueze*: And from thence they wou'd ſend them home as they ſaw fit.

The Inſolence of the *Portugueze*.

The Governour of *Surat* ſends to the General.

I had ſhortly after a Civil Meſſage from the Governour of *Surat*, who offer'd all the Kindneſs he cou'd do for us; but complain'd that the *Portugueze* were an Impediment in his way, that he cou'd not do what he deſired and intended; but withal, adviſed me to ſail out of this Road to *Goga*, where I might ride nearer the Shore with my Ships, and the *Portugueze* Armado cou'd not hinder my landing; and beſides, 'twas nearer to *Cambaya*, where I ſhou'd find much greater advantage for Trade than here. But as I had for ſeveral Reaſons no Inclination to follow this Counſel, ſo I was the more particularly determin'd againſt it, by an Advertiſement which came from ſome of our Country-men aſhore, by which (amongſt other things) I underſtood, that Capt. *Sharpigh*, with ſome others, were coming from *Cambaya* to *Surat*, in order to go along with me. Thus neither to deſert my Country-men, nor give my Adverſaries an occaſion to reproach me, with flying out of an apprehenſion of their Power, I continued in that Road, and anchor'd near the North Point, a-thwart the Bar, at the entrance of the River of *Surat*. Being now reſolv'd to Command my Landing, in ſpite of the *Portugueze*, we put on for the Shoar with our Ships, in the beſt order that might be: The *Portugueze* likewiſe advanc'd in Order of Battel, and ſtood in between us and the Shore. 'Twas not long before ſome of their Frigats began to make the Onſet, which were follow'd by the whole Power of the Fleet; and 'twas as little a while before our Shot (which we beſtow'd pretty liberally amongſt them) obliged them to retire further from us, and leave us not only the Liberty of the Shore, but the poſſeſſion of one of their Frigats, which we took in the Skirmiſh.

General *Middleton* defeats the *Portugueze* Fleet,

Now we had a free paſſage open'd between our Ships and the Land; and tho' the *Portugueze* laid ſeveral Ambuſcades to cut off our Retreat when we went aſhoar, we had the good Luck to avoid the danger of them all, and convoy ſafely aboard all the Company we expected from *Surat* and *Cambaya*.

And takes all the *Engliſh* aboard.

But the greateſt Concerns, which were thoſe of Trade, lay all this while unminded; the Difficulty and Trouble made us by the *Portugueze*, having hitherto rendred any progreſs in thoſe Matters impoſſible. But now the Governour of *Surat* (who had given me a Meeting once or twice on the Shore) aſſured me, That *Mocrebchan*, the Governour of *Cambaya*, wou'd come to confer with me about thoſe Points, in a little time; and in the mean ſpace the Country ſhou'd be order'd to bring in their Proviſions for the Supply of our Ships.

Novemb.
A Market upon the Strand.

So a Market was kept upon the Strand, by *Swelly*-Road, to which the *Indians* brought in Beaſts, Fowl, Butter, Cheeſe, all ſorts of Fruits, dried Fiſh, and Palmito-Wine. Beſides, the more common Fruits which we meet with every Day, they had a ſort of Peaſcod, which they call *Paupery*, and a Fruit as big as a ſmall Crab, of a grateful taſte, mixt of ſweet and ſour, having one ſmall round Stone in the midſt of it, to which they give the Name of *Gindus*.

This part of the Promiſe perform'd, was very quickly follow'd with the accompliſhment of the other, (ſo much did the Fidelity of the *Indians*, at this time, tranſcend our expectation;) for now *Mocrebchan*, with a mighty Train, came to the Conference I ſo earneſtly deſired. Having paſt the firſt Complement aſhoar, I invited him to go aboard my Ship, where I deliver'd His Majeſty's Letter directed to him, and careſſed him in the beſt manner the ſhort Warning we had of his coming wou'd allow. But as for his part, his great Buſineſs when he was there, was to ſearch and look all about the Ship, to find out all the little Toys that pleas'd him, and to beg them when he had done. There was not a Cheſt, nor a Box in the whole Ship, that cou'd ſcape him, but he wou'd have it open'd; and if he took a liking to any thing he ſaw, he wou'd either ask for't, in plain Terms, or ſignifie his Mind by ſuch broad *Innuendo's*, that I cou'd not avoid giving it him. And thus he went picking up of Toys and Gambols from one Ship to another, without ever coming to the Main Buſineſs in hand; and if I offer'd to propoſe any thing of that kind to him, he wou'd put it off with one Excuſe or another; ſo that I plainly ſaw, he had no Mind to do any thing. To do him Juſtice however (tho he did us ſo little) he was our Chapman for ſome Commodities; as Knives and Glaſſes, and ſome Cheſts of Sword-blades: But no Money paid, nor no Time prefix'd when it ſhou'd be ſo; and yet at the ſame time that we muſt give him this Credit, he was pleas'd to repoſe ſo little Confidence in our Honeſty, as not to truſt us with the keeping of his Bargain till he was got aſhoar, but wou'd ſee all ſent away before he went himſelf.

Mocrebchan comes to the General, and goes aboard.

Mocrebchan's baſe Dealing with Sir *H. M.*

And to make himſelf the better Cuſtomer to us, he pick'd out of the Parcels of Sword-blades we ſold him, all that were very fine and good, and ſent me back the reſt without the Money too, or any Conſideration for that Diſadvantage; tho' I had let him have a much cheaper Pennyworth upon that very account, that he took all one with another.

Thus having got what they cou'd out of us, they remov'd their Goods and Tents, both he and the Governour of *Surat*, and went away; and not only ſo, but made Proclamation, That no Proviſions ſhould be brought to us, and that under a very ſevere Penalty (the loſs of the Noſe) to be inflicted upon the Delinquent in this Caſe. Yet at the ſame time that I was thus abus'd in my Commodities, and they were endeavouring to force me away by Famine from the Country, did this covetous, ſordid-ſpirited Infidel, ſend a Meſſenger to beg a fine Spaniel-Dog, and my Perfumed Jerkin off from my Back; as he had but a few Days before begg'd my Bever-Hat off from my Head, and wou'd then fain have had the other too. Which I mention not for the Value of the things given him, which were inconſiderable, but to ſhew what ill Circumſtances a Man is in, that deals in theſe Countries, with People of ſuch inſatiable Avarice, of ſuch griping, ſqueezing Tempers, that will never leave a Man by their Good Will, as long as he bleeds one drop of any thing that's agreeable to them.

December.

But they had a mind, it ſeems, to more of our *Engliſh* Commodities, and therefore after a few Days paſs'd came

down

Decemb. Traffick with the *Indians.*

down again with ſeveral Packs of *Indian* Cloths, and other Goods. They pretended they wou'd deal with us for our Lead, Quickſilver, Vermilion, and Velvets, which latter *Mocrebchan* had a very great Inclination to; but then they wou'd Trade upon ſuch Terms, that they wou'd gain Fifty in the Hundred, tho' our Commodities were brought to their own Doors, and we were at the Charge and Trouble of ſo tedious a Voyage to come to theirs. However, at laſt, we agreed upon the Prices, and ſome part of the Goods were deliver'd, and the Lead, and the reſt, were brought aſhore as faſt as we cou'd, in order to their weighing.

Difference between their Weights and the *Engliſh.*

But here a freſh Difficulty was ſtarted, which had well nigh put all in Confuſion again: For they were for weighing with the Weights and Beam of their own Country, and we inſiſted upon the uſe of ours; and there appear'd upon Trial ſo much difference between them, that had we gone by their Beam, they had pinch'd us at a very fine rate; for in every five Pigs there was ten or eleven Maunds difference, every Maund being Thirty three Pound *Engliſh* Weight.

And upon our refuſing to comply with their Humour in this matter, the old Governour of *Surat* flung away in a Rage, and declared we ſhou'd pay for his Goods, half in Money, and the other in our Commodities, or elſe the Bargain ſhould be void, and he wou'd turn all we had landed upon our Hands again.

And I doubt not, but had we been left entirely to his Mercy, we ſhou'd have come off conſiderable Loſers; but as it fell out, we were able to make our own Terms with him, and bring him to a reaſonable Concluſion: For I had at this Juncture, two Men of very great Figure aboard my Ship, one of which was the new Governour of *Surat*, whom (tho' they came upon a Civil Viſit) I made bold to detain, (with all the Entertainments my Ship cou'd give them) till I had brought the Matters of Trade into a better Condition. And I think we were beholding to theſe Pledges for ſo fair and reaſonable a Concluſion of the Buſineſs as we did come to; for after this we went on without any more of thoſe Diſputes and Brangles that we had before; and we bargain'd for a matter of forty Packs more of their *Indian* Cloths.

Mocrebchan and *Hoia Naſſan* turn'd out of their places.

'Twas about this time, that an Order came from Court to turn out *Mocrebchan* from his Government of *Cambaya*, and *Hoia Naſſan* from his of *Surat*: This latter was he that held that Poſt at our firſt coming hither, and that managed the Trade ſo unfairly with us, putting us to ſo much trouble, as to keep thoſe two Perſons before-mention'd in ſafe Cuſtody, till we had done Right and Juſtice to our ſelves. And whatever the timely removing of this Perſon wou'd have ſignified, I believe, if *Mocrebchan* had been remov'd ſome Years before, the Intereſt of our *Engliſh* Nation in thoſe Parts wou'd have fared much the better. For as he was a Man that valued not the Service of his Prince, or Profit of his Country, any farther than either was conſiſtent with, or made for his own private advantage; ſo he was a particular Hater of our Nation; he was a Friend to the *Portugueze*, their greateſt Enemies; did all their Buſineſs, and carried on all their Deſigns at Court, which were directed to the utter overthrowing of thoſe happy Beginnings of a Trade and Factory in this Country, under the Conduct of Capt. *Hawkins*.

January.

All the *Engliſh* go away from *Surat.*

And come aboard.

And 'twas at this time, that that worthy Perſon, and faithful Agent for his Country, having ſeen the fruſtration of all his Hopes and Deſires, partly by the Inconſtancy of the *Mogul* himſelf, the Malice and Diligence of the Jeſuits, the Bribes of the *Portugueze*, and eſpecially the invidious Repreſentations made of our Nation by *Mocrebchan*, was preparing to return to *England*, no more Service being to be done here. A Factory was abſolutely and peremptorily denied, and all *Engliſh-men* were commanded to be gone out of the Country, being not allowed ſo much time as Juſtice and common Honeſty wou'd have allotted them for the gathering in of their Debts. This being the Caſe, I ſent to all our Country-men to repair as faſt as they cou'd, with their Goods, to our Ships, that we might go all together, and leave a People ſo fickle, baſe, and inhoſpitable, for ſome other that might give us better Entertainment. And they very readily taking the Alarm, being now as weary of the Country, as the Country was of them, in as little a time as their Affairs wou'd allow, came down with all their Effects, bringing the Two Captains, *Sharpeigh*, and *Hawkins*, along with them.

February.

We now underſtood the Reaſon of this ſo very ſudden a change, and why our People were expell'd the Country in ſuch a hurry, not being permitted ſo much as to call upon their Debtors before they went away. The Jeſuits, it ſeems, had ſent a Letter to *Mocrebchan*, wherein they ſignified, That if they receiv'd the *Engliſh* into a Friendſhip and Trade in thoſe Parts, the *Portugueze* wou'd come and burn all the Towns upon the Sea-Coaſt, and rifle all their Ships they met any where abroad. Such a degree of Pride and Inſolence, is that rude and domineering Nation now come to, that they muſt pretend to govern the Countries of other Princes, preſcribe their Intereſts and Alliances to them, and fix the Bounds of their Trade and Correſpondence as they think fit.

We had, to our very great diſadvantage, worn out no leſs than One hundred thirty eight Days in this Country; all which time was fill'd up with nothing on the part of the *Indians*, but Tricks and Delays, and Breach of Promiſe; and on ours with vain and fruitleſs Expectations of a profitable Trade.

Go to *Dabul.*

Being therefore, on all accounts, high time to be gone, we ſet Sail for *Dabul* about the beginning of *February*, and came thither the middle of the ſame Month. I had ſome hopes of doing ſomething to the purpoſe here; however, at worſt, 'twas but ſhooting one Arrow more, after ſeveral others loſt before.

I reckon the Latitude about the Bar of *Dabul*, to be between 17 and 18 Degr. N. and the Variation at the ſame place to be 15 Degr. 34 Min. W. So I make by my Account and Obſervation, near 4 Degr. in Latitude, and about 1 Degr. in Variation, leſs, at this Bar of *Dabul*, than at that at *Surat*, or in *Swally* Road, within the Bar.

Trade at *Dabul.*

The Governour of the place ſent me a Preſent at my Arrival, and promis'd a very Friendly Correſpondence, and a Free Trade: Upon which the Merchants were ſent aſhore, with ſeveral ſorts of Commodities. But tho' they made a Noiſe at firſt of fine Cloths, Indico, and Pepper, which they wou'd barter for our Wares, yet we cou'd find nothing of that forth-coming; and all that they dealt with us for, were ſome of our Broad Cloths, and Kerſies, of the beſt and lighteſt Colours, and ſome Quantities of Lead in Bars.

Take a *Portugueze* Ship and Frigat.

While we lay here, the *Portugueze* made us ſome ſmall part of an Amends for the many Damages they had done us, by bringing (tho' againſt their Wills) a good Ship and Frigat of theirs within our reach.

The Ship was of 300 Tun Burthen, belonging to *Cochin*, and bound for *Chaul*, and her Lading was Coco's, Tin, Sugar, Racka Nuts, *China*-Diſhes, Spices, Wax, Alom, and baſt Ropes.

The Frigat was of 60 Tun, bound for *Ormus*, and laden with Rice and Tamarinds; out of all which we took what we thought convenient, and cou'd well beſtow in our Ships. We wou'd fain have found their Bills of Lading, if poſſible; but they had either none at all, or elſe had ſecur'd them, where we cou'd not come at them.

March.

And now we began to think of leaving *India*, and ſailing back again towards the *Red Sea*. We were induc'd to this Courſe, upon Conſideration of the Opportunities we might there meet with, of putting off thoſe Goods which ſtill lay upon our hands, to thoſe Ships of *India* we ſhou'd find thereabouts: Partly to take ſome further Revenge upon the *Turks* of *Aden* and *Moha*; as alſo to prevent the Danger which threatned a Ship of our Country gone a Year before into thoſe parts; of which we had Notice when we were at *Surat*.

Set ſail for the *Red Sea*. Come to *Zocotora.*

So diſcharging the *Portugal* Ship and Frigat we ſet Sail from *Dabul*, directing our Courſe towards the Coaſt of *Arabia*. And the latter end of this Month brought us to the Iſle of *Zocotora*.

From the Coaſt of *India*, to this Iſland, we continually found our ſelves carried farther to the Southward, than by our Courſe we cou'd expect; eſpecially when we were thwart the entrance of the *Perſian* Gulf; which I impute to the Influence of ſome Current ſetting thence to the Southward.

As we coaſted along by Cape *Guadarfui*, and *Monte Felix*, the Country People came to us with Sheep and Goats, and ſome parcels of Olibanum, and Gum-Arabick, which we bought of them at reaſonable Rates.

But this Civil Correſpondence and Traffick with us, was all over the fruit of a miſtake; for they ſtill took us for *Mahometans*: And had they known us to have been otherwiſe, 'tis very much to be doubted, whether they wou'd not have been for giving us the ſame Treatment that their *Arabian* Neighbours did.

April, A. D. 1612.

Being now come into theſe parts, that we might the better accompliſh the Deſigns we came for, both of ſecuring our own Country Ships that ſhou'd come that way, and taking Satisfaction from all *Indian* and *Turkiſh* ones, for Wrongs received; I ſet one of my good Ships, the *Pepper-Corn*, to guard the Paſſage towards *Aden*; and my ſelf, with the other, went to keep the Paſſage of the

Captain *Saris* gone into the *Red-Sea* ſome time before General *Middleton* Arrived.

Streight of *Babelmandel.* And I had now Intelligence from *Zocotora*, that Captain *Saris* Commander of a Fleet of three *Eaſt-India* Ships, notwithſtanding the Writing I had left at that place ſome time before, to adviſe him to the contrary, was already gone into the *Red-Sea* to Trade, hoping for better Entertainment than I had found there, becauſe of the Protection of the *Grand-Seignior*'s Paſs which he had gotten. This Advice I had by our own Ship the Darling, which we had diſpatch'd a little before the reſt of our Fleet to *Zocotora* in our coming hitherwards to enquire concerning any *Engliſh* Ships that had come that way; and there our People ſaw the Letter left by Captain *Saris*, giving an Account of his paſt Voyage, and future intended Progreſs to the *Red-Sea*.

Two *Indian* Ships ſiez'd.

We had not been long expecting in the Streights, before ſome ſcattering Prizes fell into our Hands: First a Ship of *Baſano*, and then a Ship of *Din* bound for *Moha*: I forc'd them both to come to an Anchor by me, and took out of them whatſoever Goods were for our purpoſe.

Captain *Saris* comes with his Ships.

My Letters directed to Captain *Saris* at our firſt putting into the *Streights*, were it ſeems honeſtly deliver'd, tho' a *Turk* was the Poſt; for he quickly came with all his Ships to Anchor by me upon the News of my Arrival; ſo that our Force in the *Red-Sea* by this conjunction of the two Fleets was pretty conſiderable. The Captain told me that my coming thither in that hoſtile manner had ſpoil'd his Trade at *Moha*, which he believ'd otherwiſe would have been very good, becauſe of the *Grand-Seignior*'s Paſs. For my part I believe that Paſs would have ſignified little in the latter end, and that ſuch arrant Villains as thoſe *Turks* of *Moha* are, would have found ſome way or other to have eluded it when 'twas for their Advantage. Beſides we were now in a Condition to do our ſelves and our Nation more Service by other Methods, than falling into a Trade with the baſe and knaviſh People of *Moha*, or *Aden*, or any other Town upon thoſe Coaſts. And Opportunities of this Nature came thick and threefold upon us, and we had almoſt as much work in ſieizing and ſtopping Ships as we could well manage. For before the end of this Month, we had gotten no leſs than 11 or 12 *Indian* Ships more into our Power, which were all bound for *Moha* and *Zidda*, and laden with Pepper, Rice, and other *Indian* Commodities; ſome of them were very large Ships too, as particularly the *Rhemy* of *Surat* (belonging to the old *Mogul* Empreſs) of 1500 Tun, and others of 600, 400, 200, *&c.* but none of them all inconſiderable either for their burthen or their lading. So that now we were in a capacity of forcing the *Turks* to make us ample and compleat Satisfaction for the many Injuries and loſſes we had ſuſtain'd from them; and they dared not refuſe coming even to our own Terms, ſince we had 13 good Ships in our Hands, in which the Town of *Moha* was ſo deeply concern'd, and whoſe loſs would have been no leſs than a breaking to the whole place.

More *Indian* Ships taken.

May.

But this was not the whole of our Succeſs neither, for the *Pepper-Corn* left to guard the Paſſage to *Aden*, had her ſhare in this kind of Sport too, getting three or four good *Indian* Ships within her reach, out of which ſhe furniſhed her ſelf with ſome quantities of uſeful Commodities. This Ship having done her work, came to us in *Aſſab* Road, which was the common place of Rendezvouz, whither our united Fleets, and all our Prizes repair'd, after we had done our Buſineſs in the Province we had undertaken.

Here we receiv'd a ſolemn Viſit from the King of *Rabita*, who came ſplendidly attended with all his Guards and Nobility to bid us welcome and congratulate us upon our Succeſs.

The *Turks* come to compound with General *Middleton*.

June.

And now alſo Commiſſioners came from *Moha* to treat with us about the Redemption of the Ships, as the Sabander or Governour, the Captain of the Gallies, and an *Aga*, who were order'd by the *Baſha* to come to a Conference with us upon that Subject. My Demands were (as at firſt) 100000 Rials of Eight, a Sum they did not well know how to accompliſh the Raiſing of, and beſides could not agree to till they had heard the *Baſſa*'s Reſolution upon the Matter. This concern was a long time a debating, and the Captains of the *Indian* Ships being horribly diſguſted that their Ships were thus arreſted upon the *Turks* ſcore, and conſequently backward to advance any thing towards the payment of their Debt; it came to no head, and a whole Month was conſum'd to little purpoſe. And all this while our People were buſie in romaging the *Indian* Ships, opening and packing of *Indian* Cloths fit for our turn, and giving them Engliſh Commodities in lieu of them. This was the leaſt Juſtice we could do our ſelves as to them, conſidering the foul dealing we had met with in their Country, and many tricks put upon us in Trade, and the Debts claimable there, which we had reaſon to look upon as deſperate, if in this Juncture we ſhould neglect the Opportunity of doing our ſelves right. As for the *Turks* we plainly ſaw by their Delays, and refuſing to come to a poſitive Concluſion, that they intended to abuſe us farther, and ſhuffle us out of Payment, if we did not by ſome method ſpeedily compel them to it.

July.

Go from *Aſſab* Road towards *Moha*.

And therefore moving with the whole Fleet out of *Aſſab* Road towards *Moha*, I ſignified to the *Indian* Commanders, that the *Turks* not being minded to make me that juſt and full Satisfaction which I demanded, I had no other way at preſent to be revenged of them ſo effectually as to ſpoil their *Indian* Trade. And therefore tho' I had done what I thought fit in conſideration of the Injuries received in *India*, yet I muſt carry all their Ships away with me out of the *Red-Sea*, to cut off all Commerce between the *Turks* and them for this Year, that the latter might not receive any Benefit by them.

The *Indians* agree with General *Middleton* for their Trade.

August.

The *Indians* who ſaw this Seaſon would be wholly loſt to them, if their Ships ſhould be thus forc'd away, and being unwilling to carry back what Commodities they had again into *India*; they reſolved to compound for their Trade this Year, and pay every Ship ſuch a Summ of Money that they might not be diſturb'd in the free Vent of their Merchandize amongſt the *Turks*. And this Offer of theirs upon deliberation I accepted of, leaving the fuller Satisfaction due from the *Turks* till another time; ſo every Ship paid in its Quota, the great *Rehemy* of *Surat* allowing for it's part 15000 Rials of Eight, ſhe being equal in value to four other good Ships.

This Affair thus adjuſted (which was the Occaſion that brought us to and detain'd us in theſe Seas till this time) we were now ready for the purſuing of Buſineſs in other parts of the World.

They all go out of the *Red-Sea*.

Captain *Saris* having firſt diſpatch'd one of his Ships, in a few Days ſail'd away himſelf out of the *Red-Sea*; and we ſtaid no longer behind than the middle of this Month of *Auguſt*.

General *Middleton* goes for *Tekoa*.

September.

We had ſent away our Ship the *Darling* as long ago as *May* for *Tekoa* in *Sumatra*, in which Voyage ſhe was preſently after follow'd by the *Thomas*, a Ship of Captain *Saris*'s Fleet, and now my ſelf with the other two, the *Trade's Increaſe* and the *Pepper Corn*, ſet Sail in proſecution of the ſame Voyage. After we had paſs'd the Straits of *Babelmandel* the *Currents* (which we then lay open to) began to render our ſailing ſomething doubtful and perplexed. While we were yet within proſpect of the *African* Coaſt, a Current ſetting to the S.W. did conſiderably abuſe us in our reckoning; afterwards, when farther out at Sea, we were moſt ſenſible of one ſetting the contrary way, *viz.* towards the N. E. We eaſily diſcover'd our approach towards the Coaſt of *India*, by the numbers of Snakes which we met ſwiming in the Sea, this being a never failing Token of it, as the Experience of all Sailors do juſtifie. Theſe creatures in a fair and calm Seaſon are a very common ſight in the Water about theſe parts, but there are hardly any of them to be met with, if the weather be any thing foul and boiſterous. As we ſail'd along the Coaſt of *India*, we obſerved the Sea for the moſt part thick and muddy, but ſometimes intermixt with ſpots of clear tranſparent Water, ſo that here it look'd like dirty puddle, and there bright and pure, as if without any defiling mixture; and this change from one extream to the other was ſudden and all at once, without any thing of an orderly Tranſition from one Degree to another, or finding any Tokens of ſuch an alteration as appear'd.

Snakes ſwiming in the Water, a ſign of being near the Coaſt of *India*.

October.

Come to *Tekoa*.

The Month of *October* was more than half gone by that time we came to our deſired Port of *Tekoa* in *Sumatra*. Here we found our Ship the *Darling* and her Companion the *Thomas*, but little Buſineſs done by either of them, the quantities of Pepper they had gotten being very inconſiderable, and no more to be had till the next *April* or *May*.

Sir *Henry Middleton* goes to *Bantam*.

This Diſappointment made me think of a Remove from hence to ſome other place, where ſomething might be done worth my ſtay and attendance; for I plainly ſaw that the Civil Wars (which raged in this place at the time of our being here) would be an invincible Obſtruction in the way of our Trade.

So after a few Days I ſet Sail from this place for *Bantam* in the *Pepper-Corn*, leaving my own Ship the *Trade's Increaſe*, to finiſh the little Buſineſs that was yet to be done there, with Orders to repair to *Bantam* as ſoon as thoſe concerns were over.

Stays at *Bantam* till his Admiral Ship is mended.

This Ship having a Misfortune to receive ſome prejudice by a Rock in her way, was ſo diſordered when ſhe came to *Bantam*, that I found it moſt adviſable to diſpatch the *Pepper-Corn* away for *England* to give ſome Satisfaction to the Adventurers, till ſhe had received a new ſtrength for the Voyage her ſelf, and cou'd bring me to give a fuller Account of thoſe Matters.

APPENDIX *to the former Journal, extracted from Captain* Downton's, *concerning thoſe Particulars of the Voyage which happen'd in his ſeveral Partings from Sir* Henry Middleton: *Commencing from the time of their Separation at* Aden, *where he was left by the Admiral, who went with the other two Ships from thence to* Moha.

November.

We had not been long in the Port of *Aden* before the General enticed by the falſe and flattering Accounts given here of the Trade and People of *Moha*, ſet ſail for that place leaving me to manage the Buſineſs at *Aden*, and that not without the very earneſt intreaty of the Governour and Inhabitants for my ſtay amongſt them. And they ſoon made it appear for what Reaſon 'twas they deſired our Company there; they could not contain themſelves long without beginning to expreſs the Fondneſs and Kindneſs they had for us. The very next Day after the Generals departure, three of our Merchants going aſhoar to treat with the Governour about the points of Trade, were very fairly detain'd there, and not ſuffer'd to come back to the Ship. This was the firſt Inſtance of their Humanity and vertuous Diſpoſition, and they had no Pretence nor Colour for this Proceeding, but only to ſecure the payment of Anchorage and other Duties, which as they were in no Danger of loſing by us, ſo they needed not have taken this Method to have been ſure on't. The Spring of Knavery and Treachery thus once open'd, run on amain, and held it's Courſe for the whole time of our abode at this place; and after their Hands were once in, by this initiating ſtroke, they did nothing elſe but juggle and put Tricks upon us. Their great Deſign was, to draw us to land our Goods, which no doubt they would have made as welcome, as they did our Merchants.

Engliſh detain'd aſhoar at *Aden*.

But if their former deceitful dealing with the General had not been enough to have prevented my truſting of them, theſe latter Abuſes wou'd have done it; and I ſhould never have queſtion'd their Robbing me of my Goods, that had in ſo villainous a Manner robb'd me of my Men. Beſides I had my general poſitive Orders not to venture any Concerns amongſt them, but make them come and pay for what they had a Ship-board or not deal with them, he had ſeen ſo much of them before he went, and had entertain'd (not unjuſtly) ſo good an Opinion of their Conſcience and Vertue. However they labour'd mightily to court us into a Compliance with their Deſigns in this Point, told me they would ſend to the General at *Moha* for his Permiſſion to land our Goods, which once done the Merchants would pour in from all parts of the Country to buy them up, and we ſhould have our Hands as full of Buſineſs as we cou'd deſire. And to make us believe that they were a People of very great dealings in the World, and their Town much frequented on that ſcore; whenever any Strangers came, they told our Men they were all Merchants that waited for their *Engliſh* Commodities, when for the moſt part theſe Merchants were no other than Souldiers and cut Throats drawn thither from the adjoining places to execute the Plots they had laid againſt us.

They would have the *Engliſh* bring their Effects aſhore.

Their Stratagems for that purpoſe.

And indeed as for their Pretences to Trade and Buſineſs, a little Survey of the Town it ſelf was a ſufficient Confutation of them. For tho' formerly it has had a good ſhare of concern with Merchandizing People, yet at this time 'twas in a very low and poor Condition; there were no conſiderable Shops in any part of the Town, nor none hardly to be ſeen that deſerved the Title of Merchants. But their Ignorance of Money made the matter much plainer ſtill, for when our People offer'd to change a Rial of Eight amongſt them, they gave it about from one to another and ſtar'd upon't as a ſtrange thing they had never ſeen before; which is a very ill ſign in a Town that pretends to Trade and Dealing. Our Men under confinement were at firſt very kindly dealt withal, even to compliment and careſs it ſelf: they hoping by this Means to work themſelves into our good Opinion and Eſteem, and by a ſoft Chain of Flatteries to draw our Ship a little nearer to them. But afterwards they began to give them a finer *Turkiſh* Entertainment; and when they found we were not charm'd and taken with the Bait, they made our poor Priſoners feel the ſharpneſs of the Hook with which they fiſh'd for us. They did not proceed to the inflicting of any corporal Puniſhments, but they order'd it ſo, that they ſhou'd be pinch'd in the Matters of Proviſion; they were hardly allow'd a Belly-full, and forc'd to pay the Meſſenger (every time they eat) as much for bringing their Victuals, as the things themſelves coſt.

Aden in it's decayed ſtate.

The *Engliſh* Priſoners us'd hardly.

The treacherous Governour endeavour'd by good Words to keep them in Heart, telling them that as ſoon as the Trade open'd they ſhou'd have their Liberty without the payment of any Money in conſideration either of that, or any Duty or Cuſtom formerly demanded. But ſtill all the Civility promis'd was made an Introduction to a farther propoſal of ſending to the General about landing the Goods.

December.

I had indeed ſent ſome Letters to him at *Moha* (tho' I was well aſſur'd he would never alter the Method he had reſolved to purſue in dealing with the People of *Aden*) but theſe Letters were either not delivered, or the Anſwers to them by the juggling *Turks* ſtopt and intercepted. And now more of my Men unluckily fell into their Hands, and went to bear their fellows Company in a doleful Impriſonment at *Aden*.

The *Turks* take more of the *Engliſh* Priſoners.

I had craved leave of the Governour for ſome of them to do a little Buſineſs belonging to the Ship in ſafety in a convenient place under the Town Wall; which Requeſt was granted with all the eaſe in the World, and Security from all Treachery faithfully promis'd. But in the mean time he ſet his Smiths a work to make Shackles for them as faſt as could be, and ſo ſeiz'd them in the midſt of their Buſineſs, laying them all faſt in Irons, and beſides grievouſly abuſing them ſeveral other ways. 'Twas no leſs than 20 that they took all together at this time, amongſt which were ſome of the moſt uſeful and neceſſary Men in the Ship, whoſe Company and Aſſiſtance there I dearly wanted.

The Inconvenience of *Aden* Road in the Winter.

But it being impoſſible for me to right my ſelf and redeem them at preſent, and no hopes of ever coming to a fair Trade with theſe People, I found it to no purpoſe to ſtay here any longer. Beſides 'twas dangerous upon many Accounts; for if we ſtaid till we wanted Water, we could not go aſhoar to get that without loſing our ſelves; and then in this Seaſon the Wind and Sea are both ſo troubleſome there, and the Shoar of *Aden* lies ſo low, without any thing of a Fence from the Violence of the Billows, that a Ship would be forc'd from the Road into ſome Shelter near the Town, and ſo lie at the Mercy of their Ordnance.

Goes for *Moha*.

Upon theſe Conſiderations I ſet ſail for *Moha*, hoping when I came to find my Generals Entertainment there better than mine had been at *Aden*. I paſs'd the Streight of *Babelmandel* between the Iſle and the Coaſt of *Arabia*, where I found a ſtrong Tide ſetting thro' the middle, and about ten Fathom Water; there is a good broad Channel on the other ſide of the Iſle, between that and the *African* Coaſt; but the Water is deep, and not ſo fit for Anchoring.

When I came to *Moha*, I found our *Admiral* Ship there, and underſtood too ſoon of the horrible Misfortune befallen us, in the loſs of our General by the Treachery of the *Infidels*. Preſently after my Arrival came in the *Darling* too, which by the Generals Order had been diſpatch'd towards *Aden*, to give me information of all theſe Matters, and to prevent my coming to *Moha*, tho' the bad weather had hindred her Voyage, by which means I was kept in the dark as to theſe Accidents, till I came to inform my ſelf.

January. They find a good Road on the *Abaſſine* Coaſt.

Being now all together, we ſet ſail out of *Moha*-Road, intending to ply up towards *Babelmandel*, or ſomewhere that way, as well to find out a convenient Watering-place, and a Road where we might lie ſecurely, as in hope to meet the *Indian* Trading Ships, whom we reſolv'd to ſtop, till the *Turks* had releas'd the General, and made us Satiſfaction for all Injuries. So ſtanding over to the *Abaſſine* Coaſt, after ſome ſearch, we happily found out the convenient Road of *Aſſab*, where we had all the Security and Advantage for Water and Proviſions that we cou'd deſire.

The Country People were very friendly to us, and ſo honeſt and ingenuous, as to confeſs, That the *Turks* had put them upon knocking us in the Head, if we came there, giving them their Example and Warrant for that Practice. But as they found no Reaſon from our Carriage amongſt them, to offer us any ſuch violence, ſo they entertain'd us after a very different manner from what the *Turks* encourag'd them to. Whether they knew us to be Enemies to the Superſtitions of *Mahomet*, (which they embrace all hereabouts, and how 'twould have been with us then, I cannot ſay;) but as Matters were, they carried it fairly and civilly to us; we paid them Money, and had our Bargain punctually, and without deceit.

Crab Iſle, by *Aſſab* Road.

Near this Road where we lay (perhaps ſome three Leagues diſtance) lies an Iſland, which we call'd *Crab-Iſland*, for the multitude of great Crabs we found there. We wanted nothing where we had poſted our ſelves, but the Preſence of our General, and the reſt of our Company under Confinement with him. And this, after a multitude of wicked Delays on the *Turks* part, and as many fruſtrated Expectations on ours, was happily accompliſh'd by his own Contrivance and Reſolution, in the Month of *May*, after we had lain in this Road more than four Months.

The General having now brought himſelf and his Company all off clear, went away to *Surat* and *Dabul*, whither I accompanied him; and from thoſe Parts I came back with him again into the *Red Sea*, where we arreſted the *Indian* Ships, in order to bring the *Turks* to a Compoſition.

This Affair ended in the *Red Sea*, we went away with both our Ships for *Tekoa*, in *Sumatra*; at which place we found ſo ſmall Encouragement for Trade, that the General wou'd not ſtay there, but went, changing Ships with me, to *Bantam*; whither I had Orders to follow him, as ſoon as I had diſpatched at *Tekoa*.

Cheating in the Pepper at *Tekoa*.

Here I was moſt horribly abuſed by the raſcally Natives, in the Pepper I bought; for when I came to weigh it, we had ſeveral Bags of rotten decayed Pepper; and in ſome there was Paddy, Rice, ay and great Stones cramb'd in too, to help make up the weight. But there was no Remedy for this Miſchief, and ſo we were forc'd to abide by the loſs.

The Ship runs upon a Rock.

Sailing from hence for *Bantam*, we were like to have been all undone by the ſetting of our Ship upon a Rock, into which danger the Current helped to bring us. We made a ſhift, by God's aſſiſtance, to get her off again, and ſet her afloat; but yet that Encounter had done her ſo much prejudice, that we were obliged (as the ſurer Courſe) to return back again to *Tekoa*, to ſtop her Leaks, and repair the other Defects of her.

December. Comes to *Bantam*.

But our Attempt at the ſecond ſetting out, proved more ſucceſsful, and we came without any more ſuch Encounters, in ſafety to *Bantam*.

Goes for *England*.

The General ſtaid here till his Ship (injured in the Voyage from *Tekoa*) was new careen'd; whilſt my ſelf in the *Pepper-Corn* was diſpatch'd from thence for *England*; my Voyage commencing in *February*, and ending (without any conſiderable Adventure) the following *October*.

CHAP. XXI.

The Seventh Voyage ſet forth by the East-India *Company, with the* Globe, *under the Command of Capt.* Anthony Hippon; *extracted out of the Journals of* Nath. Marten, *Maſter-Mate, and* Peter Williamſon Floris, *Cape Merchant.*

A. D. 1610.

WE ſet ſail out of the *Downs*, in the good Ship the *Globe*, the Fifth of *February*, and came into *Soldania* Bay (a place frequently viſited by our *Engliſh* Ships) the Twenty firſt of *May*. 'Twas then Winter in this part of the World, the Sun being taking his appointed Turn on t'other ſide the Equator. The Mountains were cover'd over with Snow, the Trees naked and bare, the Fields in all the Rudeneſs of a Winter-Dreſs; the whole Face of Nature (here at other times ſo charming and bright) appeared with a ſullen gloomy Air; the Heavens were dark and cloudy, and the Earth ſeem'd to mourn at the abſence of the chearful Sun. Little good Entertainment was to be had from the Country at this Seaſon of the Year, and the Rains that fell made it ſo bad travelling, that we cou'd not go far to get what it wou'd have afforded us.

A. D. 1611. Come to *Soldania*. *May*.

The Root *Niugim*, at *Soldania*.

We took ſome pains to find out the Root *Niugim* at this time, and our Labour muſt have been quite loſt, if we had not receiv'd ſome Inſtructions in that matter; becauſe the new Leaf was now but juſt peeping out of the Ground, and the Plant does not come to its perfection till the depth of our Winter.

Here were two or three *Dutch* Ships that came to make the ſame enquiry, and one of them firſt diſcover'd this Root here; whether by chance, or any foregoing Information, I am not certain, nor is it much material. The *Soldanians*, in their barbarous and brutiſh Speech, call this Root *Canna*, by which Name it muſt be enquired after amongſt them; tho' 'tis poſſible they may be ſo ſpiteful and ill-natur'd, as to refuſe to put Strangers in the way of finding it.

Auguſt. *Ceylon* Iſland. Miſtake in placing of *Negapatan*, in the Maps, and *Punta de Gal.*

We left the *Dutch* in the Bay, bartering for Skins and Hides, and making Train-Oil, and ſail'd away for the *Indies*, getting ſight of the Iſle of *Ceylon* the firſt of *Auguſt*, and ſo coaſting along towards *Negapatan*, upon the Land of *Coromandel*.

'Tis worth our while to correct ſome Miſtakes commonly made in Maps, as to the Situation of ſome remarkable places hereabouts, by the Obſervation we have made of them.

Punta de Galla, the moſt Southern Point of the Iſle of *Ceylon*, is ordinarily placed in 4 Degr. North Lat. whereas indeed it lies in 6 Degr. neither is the Iſland ſo broad as 'tis often drawn in the vulgar Maps.

Then *Negapatan* is not much leſs than 28 Leagues diſtant from that Situation we gueſs'd it to have had; and as the *Dutch* have been blunder'd by this Miſtake as well as we, ſo 'tis fit it ſhou'd be taken notice of, becauſe the Effects of it may be dangerous to a Ship ſailing by contrary Meaſures.

Lanagupatan

Majapor.

Coaſting along by *Coromandel*, we paſs'd the Town of *Lanagupatun*, (where the *Dutch* have a Factory, but are weary of holding it, they have ſo little Buſineſs to do; and then *Majapor*, which is eaſie to be known by the remarkable Token of a very high Hill.

Paleacatte.

We came next to *Paleacatte*, where we hoped to meet with ſome Trade; and accordingly having a ſafe Conduct from the Sabander, we landed Men for that purpoſe: But we quickly found our good Fortune here ſpoil'd and prevented by the Intereſt and Footing the *Dutch* had got in this place; and it ſeems they were ſo well fix'd, that the Sabander highly pitied us for the Miſchance of our coming hither; as ſo much unprofitable loſs of time, and endeavour to no purpoſe. The *Dutch* Preſident very fairly deſired us to be gone; and for that purpoſe ſhew'd us an Inſtrument in Writing, given them by the King of *Narſinga*, wherein the *Dutch* only were allow'd to Trade upon all that Coaſt; all others beſides them, or ſuch as cou'd not produce Prince *Maurice* his Patent, being ſtrictly prohibited attempting any thing of that nature. We who thought the King of *England*'s Patent as good and ſufficient as Prince *Maurice*'s, were willing however to have tried what we cou'd have done; but the Intrigues of the *Dutch*, and the Influence they had upon the People, were ſuch Obſtructions in our way, that we muſt have hazarded the loſs of the Monſon for *Patane*, and ſo mightily prejudiced our main Concerns, to have ſet about the removing of them.

Privilege granted to the *Dutch*, by the King of *Narſinga*.

The *Engliſh* can't Trade at *Paleacatte*.

The Town of *Paleacatte* lies in 13 Degr. 30 Min. North Lat. The Variation has been obſerved here to be 1 Degr. 15 Min. tho' about the Road it has been made 13 Degr. 10 Min. a very great and ſurpriſing difference. The

Marks for finding this Road, are the Round-Hill, and the *Hollanders* Fort. About two Leagues to the South ſide of the Town there's a Shoal, but if you keep in 10 or 12 Fathom, there's no fear of running over any part of it.

Trade at *Petapoli.*

Being able to do nothing here, we ſet ſail for *Petapoli*, where we found room to come in for a little ſhare of Trade. We agreed with the Governour for ¾ *per Cent.* Cuſtom, and ſo ſent our Goods aſhoar: We left two of our Factors to carry on the Trade at this place, and went on with the Ship for *Maſulipatan*, where there was a better Road. The varying obſerv'd at *Petapoli* was 12 Degrees, 27 Min. and the Mark to go in over the Bar, is a Set of Palmito-Trees, on the Bank on the Northern end of the high Cliff.

'Tis to be obſerved, that ſix Leagues from the High-land of *Petapoli*, you ſee another High-land before you, which is a Pagod. You may, if you will hale in with it into five Fathom, when the Hill is N. N. W. but then you muſt go off E. for it. And beware (in going off) of a lowneſs of Sand, and come no nearer it than twelve or thirteen Fathom, till you are certainly paſt it.

Maſulipatan.

A fine Fetch of the Governour's to juſtifie his Knavery.

At *Maſulipatan*, the Governour bids us Welcome to a Trade; but as it appear'd, 'twas becauſe he had a Deſign to cheat us, if he cou'd. We agreed with this Man for Cuſtom at 4 *per Cent*; and yet contrary to the moſt expreſs and plain Terms of the Bargain, he wou'd have it, that we concluded upon 12 *per Cent*: And he had no other Reaſon to prove it by, but this, That he was a Deſcendant from the Prophet, and had the Blood of *Mahomet* running in his Veins; and therefore his Race being ſo pure and holy, his Word ought to be taken before that of a Chriſtian, and eſteem'd more juſt and true. But notwithſtanding the Sanctity of his Pedigree, we wou'd not lie at the Mercy of his Conſcience; and if 'twas true, that he was a Branch from ſuch a Root as *Mahomet*, he was the more likely to be a cheating Knave, and not fit to be truſted; and upon that Score we threatned him into a compliance with us, upon fair and reaſonable Terms.

December. Obſervations of the Sun and Stars. *January.*

The Geographical Obſervations we made at *Maſulipatan*, and *Petapoli*, were theſe: The Variation of the Compaſs at *Maſulipatan*, is 12 Degr. 22 Min. the Point is in 15 Degr. 57 Min. North Lat. and the Road in 15 Degr. 36 Min.

The Town of *Petapoli* lies in 15 Degr. 49 Min. the Star call'd the Ships Stern, we had in 21 Degr. 29 Min. the Foot of the Croſiers in 12 Degr. 54 Min. the Flank of the Centaur in 15 Degr. 32 Min. and the Foot of the ſame in 14 Degr. 41 Min.

Go for *Bantam.* *February.* *April,* *A. D.* 1612.

Having clear'd all Accounts at theſe two places, and invited by the opportunity of a good Monſon, we ſet ſail from theſe parts for *Bantam*, where we happily arrived the latter end of the ſucceeding Month of *April*. When we came hither, we found the *Dutch* ready to march away for *Jacatra*, not being able to endure the new and unwonted Exactions of the Governour; neither cou'd we ſettle Matters with him without a great deal of Diſpute and Jangling; however, at laſt we agreed with him for 3 *per Cent.* Cuſtom.

Factory at *Succadania*, in *Borneo.*

We had ſome Account at this place, of the Factory firſt ſettled at *Succadania* in *Borneo*, by Capt. *David Middleton*, and that the Management of Affairs there, at this time, was not ſo fair and regular as cou'd be wiſh'd, in order to the Publick Benefit.

Our Concerns at *Bantam* being not great, we had no occaſion for a long ſtay there: Our Courſe from hence lay to *Patane* and *Siam*, places not ſo frequently viſited by our *Engliſh* Ships, and where we now went to make our Nation's firſt Court for a Trade. We took care in this Courſe to come no nearer the Point of *Mompyne*, than 3 ½ or four Leagues, becauſe of a Ledge of Rocks that lie two Leagues off the Eaſtermoſt Point of *Sumatra*, being the ſeventh Point of the Streights; this Ledge of Rocks bears pretty near E. and W. with the two ends of it; and when you have got *Mompyne* S. E. of you, then you are clear of all danger from the Rocks.

June. Go for *Patan* and *Siam.* Note.

We came into the Road of *Patane* before the end of this Month, and having gotten Information of the Manners of the Country, we went aſhore in a full Body, with as much State and Greatneſs as we cou'd, to deliver His Majeſty's Letter, and a Preſent to the Queen.

Go aſhore at *Patane.*

The Letter was carried in a Baſon of Gold, upon a Noble Elephant, uſher'd along with Flags and Muſick to the Court; the Preſent amounted to the Value of 600 Rials of Eight, and no ſmall Preparation was made at Court for the Reception of both theſe. We had not the Honour of ſeeing the Queen at this time; however, we were handſomely treated by Her Majeſty's Order; but the beſt part of our Entertainment, was the doing the great Buſineſs that we came about, accepting His Majeſty's Letter, and granting us a Free Trade there, paying only the ſame Duties that other People did. The moſt hard dealing we had here, was in the Price they made us give for the Ground of a Publick Warehouſe, which was 4000 Rials of Eight; but this Impoſition we ſubmitted to, in hope of making more advantage than that came to afterwards.

Free Trade allowed at *Patane.* *July.*

There's a great Enmity and Heart-burning between the *Japeneſe* and the People of this place; and the former do never fail to take all the Opportunities that can be to ravage and ſpoil the Country: Within leſs than the ſpace of ſix Years, they have come up twice to the Town of *Patane*, and ſet it a-fire.

Auguſt.

The Factory being eſtabliſh'd, ſome of us ſtay'd to mind the Affairs of Trade at this place, whil'ſt the Ship, with the reſt of the Company, went away for *Siam*, to try the Temper and Inclination of that People to a Correſpondence with us. In the mean time we had a very ill Market for moſt of our Commodities, (eſpecially our Lawns) at *Patane*; whereas ſome few Years ago there has been ſo quick a Vent, that there was more fear of Diſadvantage by wanting Stock, than by having any part of it lie upon one's Hands. And the Reaſon of it is, the *Portugueze* bringing in ſuch Quantities to *Malacca*, and the *Dutch* filling *Bantam* and the *Molucca's*, together with the Trade of the *Moors* at *Tanaſſerin* and *Siam*; then the *Guzurats*, and thoſe from *Negapatan*, together with our ſelves, do all help to cloy and over-do the Market.

Dull Trade at *Patane.*

Reaſons of it.

September.

At this time we cou'd not make 5 *per Cent*, when it was eaſie ſome time ago, to make in the ſame Market, four of one.

Some part of the Country was involved in the Troubles and Calamities of War too; the Kings of *Jor* and *Pahan* (both upon the ſame Continent with *Patane*) being together by the Ears, burning and deſtroying one another's Territories, and Trade never thrives in a Country peſter'd with Wars and Factions.

October.

The Inconſiderableneſs of Buſineſs here, was an Incitement to us to attempt to find better ſomewhere elſe; for which purpoſe we ſent away a Cargoe of Goods for *Macaſſar*.

A Cargoe ſent to *Macaſſar.*

November. An Account of the *Globe's* Succeſs at *Siam.*

Our Ship the *Globe* having now been abſent three Months, return'd from the *Siam* Voyage, making but eight Days in her paſſage between that place and *Patane*, and ſhe brought us the following Account of her Voyage, Entertainment, and the State of Affairs in that Kingdom.

Having caſt Anchor in the Road of *Siam*, they gave Notice of their Arrival to the Town, which lies ſome thirty Leagues up along the River. The King ſent two Men of conſiderable Figure to bid them Welcome, to receive His Majeſty of *England*'s Letter, and to bring them to Court.

When they came into his Preſence, he heard with pleaſure the Account of their Buſineſs and Deſign, and without any delay promis'd a free Trade; adding beſides as a Token of his Favour, the Gift of a piece of Cloth, and a little Cup of Gold to every one of them. But as the Courts of all Princes are troubled more or leſs with a ſort of hungry covetous Officers, that are for ſelling their Princes Favours as dear as they can, and taking all unjuſt Methods to make a Purſe for themſelves: So here the Mandarins muſt be gratified and brib'd to give their Conſent to what the King had freely promis'd; and thinking we had our Privilege too cheap, wou'd pretend to oblige us to drive a Bargain with them. To find a Remedy in this Caſe againſt the Extortion and Oppreſſion of theſe inſolent Courtiers, our People made their Application to the King, openly complain'd of the Injuſtice of the *Mandarins*, and crav'd His Majeſty's Protection from them. This ſucceeded ſo well, that the Mandarins were curb'd and ſilenc'd, and all our Goods carried peaceably to the Publick Houſe appointed for them; with an Order for all thoſe Perſons to forbear moleſting us, that had pretended either to take any Bribe from, or impoſe any Burden upon us.

The covetous Mandarins oppoſe the Liberty granted to the *Engliſh.*

The King's Order to ſecure it.

But notwithſtanding all this Encouragement given to Trade, it went but poorly on at this time; and tho' the Prince had bid it Welcome into his Country, that was not ſufficient to make it flouriſh. And the reaſon is, becauſe the Country was all embroil'd in the Miſchiefs of War, Faction, Treaſon, and Rebellion; the preſent King was young, hardly well fix'd in his Throne, and ſome of his revolted Tributaries combining together to pull him out of it.

Trade low at *Siam*, and the Reaſon of it.

How matters came to this paſs, will be ſeen in the following ſhort Account of the State of that Kingdom, and the ſeveral Riſques of Fortune it has run for ſome Ages paſt, which it may not be altogether ungrateful or uſeleſs to ſet down.

Siam

Story of Siam.

Siam was once a very large and potent Kingdom, giving Laws to the greateſt part of its Neighbours round about, and bearing an abſolute Sway, far and wide, in the *Indian* Continent, on that ſide the *Ganges*. This Imperial Glory had ſhone bright at *Siam* for ſome time; when by the powerful Diſpoſals of him who deſtroys one Kingdom and ſets up another at his pleaſure, it began to fade and darken there, and diſcover its Luſtre in another place. *Pegu* of a ſudden becomes a Rival to *Siam* in Power and Pretenſions to Command, and quickly from a Rival became its Miſtreſs, obliging *Siam* to wear its Yoke.

And as 'tis uſual for the Sons of Tributary Princes to be kept in the Court of the Grand Sovereign as Hoſtages, or Securities for their Father's Duty and Obedience; ſo were the Sons of the King of *Siam* carried to receive at once their Education and Confinement in the Court of *Pegu*.

But the Scene was quickly ready to change, and *Pegu*, ſo ſuddenly riſen to the Heights of Fortune and Glory, muſt ſink down again, and relapſe into its former State and Vaſſallage.

The old King of *Siam* dying, left two Sons behind him, bred up in the King of *Pegu*'s Court; the eldeſt of which, upon his Father's Death, made his eſcape into his own Country, and by the help of the *Portugueze*, got into the Throne.

The *Peguan* preſently attacked the new Prince with a formidable Army, which was entirely routed by the other, and the young Prince of *Pegu* ſlain in to the Bargain; in Rage and Madneſs for which loſs, the King ſacrificed a vaſt number of his Lords and common Soldiers, not at all guilty of any Treachery againſt him.

This ill Succeſs in his Wars, and cruel uſage of his Subjects conſequent upon it, put his whole Government into a Confuſion, and made his Tributary Princes (of which he had no leſs than twenty) fall off from him every Day. And the *Siameſe* apprehenſive of the advantage this Diſorder gave him, now requited the King of *Pegu*'s former kindneſs, carrying the War into the Bowels of his Country; ſhutting of him up, and almoſt ſtarving him in his Capital City of *Pegu*.

The Siege was broke up after two Months continuance, and the King of *Siam* having done no more than the Pounding of his Adverſary, return'd into his own Country; however, the *Peguan* was ſo far weakned, that he was forc'd to put himſelf under the Protection of the King of *Tangu*; eſpecially to avoid the Danger threatned by the King of *Arracan*, who now broke into the Country too, and laid all waſte before him.

Theſe two Kings of *Tangu* and *Arracan*, agreed together to ſhare the King of *Pegu*'s vaſt Treaſures and Dominions amongſt themſelves; and alſo (to be eaſie and quiet) they ſent him out of the way by a violent Death.

Amongſt other things that fell to the King of *Arracan*'s part, was the King of *Pegu*'s * White Elephant, look'd upon as one of the greateſt Curioſities in the World, and valued by him almoſt as much as all his other Treaſures.

* Some of our *Engliſh* ſaw this Elephant at *Arracan*.

Thus was the famous Empire of *Pegu* ſwallowed up, and *Siam* deliver'd from ſo powerful a Rival, began now to ſwell again into the Bulk and Dimenſions of an Empire; † reducing the Kingdoms of *Cambodia*, *Lanianh*, *Jagomai*, *Patane*, *Teneſerin*, and divers others, into its Subjection.

† *A.D.* 1600. or thereabouts.

That Prince who firſt threw off the *Peguan* Yoke, dying without Iſſue, left his Brother to ſucceed him; who was call'd the White King, as the other had the Title of the Black. The White King left ſeveral Sons behind him, but the Eldeſt being murder'd by a Villainous Plot of a certain Lord of *Siam* (who intended to have aſpired to the Crown himſelf), the Second Son of the White King was inveſted with the Regal Dignity; and this was he then in the Throne when our Ship was there. But from hence ſprung up horrible Confuſions and Diſſenſions; for the preſent King revenging his Brother's Death upon that fore-mention'd aſpiring Traytor; all his Slaves preſently run to Arms, broke into the Court, got the King into their hands; and having forc'd him to ſign a Writing with his own Blood, they ſpar'd his Life, but went off with a deal of rich Plunder, in ſpite of all Oppoſition, and contrary Endeavours of the King's Guards.

This Tumult at Court gave riſe to many others abroad in the Kingdom; the Countries of *Lanianh* and *Cambaya* immediately broke out into a Rebellion, and the other Tributary Princes, began to think of following their Example. So ſpreading was the Contagion of thoſe baſer Slaves Treaſon, and ſuch a notable Precedent did it prove to thoſe of a greater Figure, who thought ſcorn any longer to obey a Sovereign, that had been inſulted and trampled on by the Dregs of his Court. And 'tis ſaid, that ſome of theſe petty Princes now broke looſe from the Bonds of Duty and Subjection, have reſolv'd to joyn their Powers together, and come and viſit the King of *Siam*, with a very numerous Army, the next Spring. For all which Combinations and Leagues, he may ſit ſecure and eaſie enough in his Throne, if domeſtick Treaſon and Contention does not ſet in with the Endeavours of a Foreign Power to accompliſh his Ruin.

This was the State of Affairs at *Siam*, when our Ship was there; and being ſo, 'twas our Misfortune to come in ſo troubleſome a time, when the whole Nation living in expectation of a ſudden War, had little Diſpoſition to mind Trade and Buſineſs.

They Winter at *Patane*. December.

Upon this Account we determin'd to ſpend our Winter here at *Patane*, to do what might be done at this place, and alſo to be ready to hold a Correſpondence with *Siam*, if any favourable Opportunities ſhou'd invite us to it. While we lay here, we ſaw the Queen, and had Conference with her ſeveral times. She was a comely, grave, majeſtick Perſon, ſo handſome and ſtately, in ſpite of her Old Age, that we ſaw very few *Indians* that came up to her Meaſures of Beauty.

Floods riſe about *Patane*.

This Winter Seaſon the Rains were ſo violent, and the Floods riſe ſo high hereabouts, that one might truly ſay, this part of the *Indies* was deluged: The Cattel in the Fields were waſh'd away, the Houſes beat down in many places by the ſtrength of the Torrent, and a great deal of harm done in many reſpects.

January.

In *January* we had good News from *Siam*, that our Factor left there, had ſold off the better half of his Goods, and that the King himſelf had taken a conſiderable quantity: And hereupon, to follow theſe flattering Beginnings of a Trade, we diſpatch'd the *Globe* away in *March* for that place, with a freſh Supply.

March. The Ship goes for *Siam* again.

The *Hollanders* about this time ſuſtain'd a great Loſs at *Paleacatte*, by the Violence of the *Portugueze*, who came with a Power from St. *Thome*, took their Houſe in that Town, kill'd all their Men, and carried away their Goods.

The Country hereabouts too was all in War and Confuſion; the King of *Jor* falling upon him of *Pahan*, and the *Acheneſe* upon the King of *Jor*; and the King of *Borneo* preparing alſo to ſupport the King of *Pahan*, while thoſe of *Achen* diſtreſs'd his Adverſary.

On the other ſide the Queen of *Patane* ſtruck in with the Enemies of the King of *Pahan*, her Neighbour, and Brother-in-law; the Ground of the Quarrel being only this, That he had married her Siſter; and whereas ſhe had often requeſted, by ſolemn Embaſſies, to ſee her at *Patane*, her Husband wou'd never let her come. This was taken ſo very ill by the Queen, who was reſolved to bring her Siſter by force, ſince ſhe cou'd not by fair means, that ſhe ſent out her Fleet againſt the King of *Pahan*, and did all ſhe cou'd to ſpoil the Trade of his Country, till ſhe had diſtreſs'd him into a Compliance with that reaſonable Demand, of bringing his Wife to *Patane*.

May. *A.D.* 161 Good Tid *at Siam.*

We had now a Continuation of the Good News from *Siam*, by a freſh Advice, informing us of the ſafe Arrival of the *Globe* there, and the profitable Sale our Factors had of their Commodities. And ſoon after as bad Tidings from *Bantam*, of the great Loſſes our *Engliſh* receiv'd by Fires there; in which Calamities the *Dutch* alſo had a ſhare with them.

July.

The War begun by the King of *Jor*, proceeded to ſuch an extremity, and drew ſo many Misfortunes upon him, that he was by this time rendred incapable of diſturbing the Quiet of any of his Neighbours. The *Acheneſe* purſued him ſo cloſe, that they brought their Fleet under his very Walls; and after a ſtreight Siege, took the City, rifled it, carried away a great Booty of Slaves and Ammunition, and forc'd the miſerable Prince himſelf to fly his own Country, and ſeek a Refuge in ſome Foreign Territory.

The King of *Pahan* too was not in a much better Condition, his Country being horribly waſted by War and Famine; and he himſelf now at laſt reduc'd by the Arms of the Queen his Siſter-in-Law, to ſubmit to her Terms, and lie at her Mercy.

This Prince came to *Patane* when we were there, and invited us very civilly to a Traffick with his Country; which, alas, was at this time too much embroil'd, and impoveriſh'd, to give Merchants any Encouragement to come thither. The Queen indeed treated him civilly; but he was a meer Jeſt and Laughing-ſtock amongſt the *Patanee* Nobility; and the only Point of Reſpect that was ſhew'd him, was the killing all the Dogs in the Country when he came; he having a particular Averſion to that ſort of Animal.

Augu

Our Affairs at *Macaſſar* went but badly on, and our Factors there were ready to come away, being able to do nothing to the purpoſe; but in that Juncture an *Engliſh*

Sir Henry Middleton Dead at *Bantam*, and the *Trade's-Increaſe* in bad Condition there.

September.

The *Dutch* under Hatches at *Banda.*

Ship arriv'd with a good Lading of Cloth to ſettle a Factory there, which oblig'd them to ſtay longer. This Ship was the *Darling*, one of the three that went into the Red Sea, under the Command of Sir *Henry Middleton*; that worthy Perſon himſelf being lately dead at *Bantam*, and his Admiral Ship, the *Trade's-Increaſe*, yet lying there in very ill Circumſtances, as well as the Company left in her. The *Dutch* who a little before were getting Ground in the *Molucca's* upon the *Spaniards*, and had taken the Caſtle and the Iſland of *Solor*, were now like to loſe all at *Banda*, ſinking faſter here than they riſe in the other places. The *Bandaneſe* had as we underſtood confin'd their Government to the Caſtle, and kept them in ſuch awe that they dared not give an ill Word; a good part of their Men were gone off to the Natives, and become *Mahometans*; and the whole *Dutch* Power in that Iſland ſignified no more at this time than juſt to tyrannize in the Caſtle a little, and command the Junks that rid there with their great Guns.

The *Globe* returns from *Siam.*

The latter end of this Month the *Globe* came back from *Siam*, having finiſhed her ſecond Voyage thither: Our Factors there had ſent a Cargaſon of Goods to *Jagomai*, but had no News of the Succeſs of it when the Ship came away; the Wars between the People of *Ava* and *Lanianh* having cut off all intercourſe between thoſe places.

October.

Patane almoſt deſtroyed by Fire.

Patane had now it's ſhare of Misfortune amongſt the reſt, tho' not by War, yet by Fire, an Enemy more mercyleſs and outragious than the Sword. This came about by the Villainy of the *Javans*, who are the neverfailing Plagues of all Countries where they come; and Practiſe the ſame tricks of firing Towns and Houſes abroad with as much deſperateneſs as they do at home. We and the *Dutch* were oblig'd to join our Forces together for our common Security in the midſt of this hurly burly; for the Town was all in Flames about our Ears; and theſe cut-Throats were roaming about in a full Body, murdering all that came in their way, and rifling Houſes as faſt as they could. And they were juſt coming to make us a viſit, when we (reſolv'd to be before hand with them in Civilities of that Nature) had ſet out to meet them, which they having Intelligence of, and finding our Strength, were ſo wiſe as to run away and ſhift for themſelves, and ſo leave us to the Labour of driving them. Thus we did our ſelves a Kindneſs, and ſo much Service to the Town too, that we purchas'd the name of it's Defenders thereby. We had ſtaied by this time ſo long at *Patane*, as to ſet the Wheels of Trade a-moving there and at ſome other places about; which Buſineſs done we prepar'd to return back to *Maſulipatan.*

Go for *Maſulipatan.*

November.

In our Courſe from hence, we came to the dangerous Riff, which falls off from the Point of *Jor* four Leagues into the Sea, and we paſs'd it not without ſome Difficulty and Hazzard, having the Point with the three little Iſlands W. S. W. from us. But 'tis beſt to keep towards the Sea till you bring thoſe little Iſlands ſhut in with the Point of *Jor*, and *Pedra Bianca* open with the Iſle of *Bantam.* This *Pedra Bianca* is a great Rock, upon which vaſt numbers of Fowl do live, and covering the Clifts of it with their Dung make it look very white, from whence it has that Name.

We underſtood by the way that the King of *Achen* having routed out the old King of *Jor* had ſettled a new one in his room, Nephew to the former; and had given Orders for the rebuilding the Fort and City, ſo, that that Country was like to be in a thriving Condition again, after ſo many Calamities, eſpecially ſince the King of *Achen* (by an Alliance with this new King) has as it were engaged himſelf in the Defence and Protection of it.

December

Come to *Maſulipatan.*

We arriv'd at *Maſulipatan* the middle of *December*, and found here a Ship of our own Nation (the *James*) waiting for us, being ſent directly to Second us in our Voyage.

We agreed with the Governour at 4 *per Cent.* Cuſtom, and fell to lading of Goods; but the *James* was ſent away for *Petapoli*, and from thence for *Bantam.*

Tidings from *Pegu.*

January.

News came to us here from *Pegu*, that the King of *Ava* (a Country lying about a great River of *Pegu*) had taken the Fort of *Siriangh*, and ſlain all the *Portugueze* that kept it. This Town or Fort of *Siriangh*, ſtands in an Iſland below the Mouth of the aforementiond River of *Pegu*; and 'tis to be noted that when the King of *Arracan* had (according to the former Relation) made himſelf Maſter of the Kingdom of *Pegu*; he put this Town and Fort into the Hands of the *Portugueze*, who behav'd themſelves there (as they do in all other places) after a very inſolent and domineering Manner; and particularly to requite the Kindneſs of the King of *Arracan*, they ſhortly after took his Son Priſoner, and extorted a vaſt Sum of Money and a huge Quantity of Rice for his Ranſom. This ingratitude to their Benefactors was very well puniſh'd by the King of *Ava*, who it ſeems broke in upon them with a good Force, and routed them entirely out of that Neſt. This Prince pretends to reſtore the decayed Empire of *Pegu* to ſomething of a Luſtre again; having call'd in all the diſpers'd *Peguans*, and given Orders for the Rebuilding the old City, with many fair Promiſes of Quiet and Protection there. The *Moors* at *Maſulipaton* were highly pleas'd at theſe Actions of the King of *Ava*, becauſe they hope they ſhall now get the Trade of *Pegu* into their Hands again, which the *Portugueze* lying thereabouts had in a great meaſure deprived them of. But whatever Sentiments of Pleaſure the King of *Ava*'s Actions excited in the *Moors*, the King of *Narſingas* were no leſs agreeable to us: For now that mighty Prince ſent his Embaſſadours to us to excuſe the former Neglect of Correſpondence with us when we were at *Paleacatte*, and to invite us to ſettle a Factory in his Country where we pleas'd our ſelves; and all this ſweeten'd with the Promiſe of what Privileges we would deſire.

A. D. 1614.

July.

King of *Narſinga's* Offer to the *Engliſh.*

Indeed the Complaints of the People went a great way towards the procuring this Favour for us; for they were netled to ſee our Ships paſſing by them every Year, and not have the Liberty of Trading there as the *Dutch* had. And tho' the *Dutch* did all they could to keep us out, yet the Country was ſenſible that they were not ſo much their Friends as their own, in endeavouring to exclude us; and therefore they never left the King, till he had in this friendly manner invited us to a Trade there. His Letter brought to us was written upon a Leaf of Gold, and together with it, was deliver'd his Cave or Safe Conduct, and his Abeſtiam, or the Token of our Privilege, which was a white Cloth, upon which the King's Hand was Printed in Saffron.

The King of *Narſinga's* Letter and Caul.

August.

Strange Floods.

In the Month of *Auguſt*, the Country about *Narſapur peta* and *Golconda* was laid under Water in a moſt frightful manner. Many Thouſands of Men and Cattle were ſwept away, whole Towns were ruin'd, and all the Fruits of the Field deſtroyed; Plants and Trees were carried along with the Flood, and the Water lay three Yards high above the Level of the Ground. The City of *Golconda* ſuffer'd very greatly in it's Houſes and Bridges by this inundation; 4000 Houſes were waſh'd away to rights, and two very fair Bridges rais'd at leaſt three Fathom above the ordinary height of the Water, were now three Foot under Water; and tho' exceeding ſtrong, as being built of Stone and conſiſting, the one of 19 and the other of 15 Arches, yet there were ſix Arches of the biggeſt entirely carried away with the Force of the Stream.

October.

King of *Narſinga* dies.

The Superſtitious *Indians* might poſſibly eſteem this to be ominous, and not think themſelves miſtaken, when preſently after (in the ſpace of a few Weeks) ſo great an event follow'd as the Death of the mighty King of *Narſinga.* At the Celebration of his Funeral, three of his Queens burnt themſelves quick with the Corps, in Teſtimony of their Love and Conſtancy, after the manner of that Country. Very great Troubles were now like to follow upon this ſtroke, and all Foreigners were oblig'd to look to themſelves and their Concerns in that Country as well as they could. As for our parts we endeavour'd to get in our Debts with all ſpeed, and for that end ſent to the Governour to come and clear all Accompts with us. But that deceitful Miniſter did nothing but abuſe and trifle with us, put us off with frivolous Pretences and Excuſes, till he had delay'd the Buſineſs ſo long, that it would have been very injurious to us to have loſt any more time.

November.

And therefore ſeeing nothing was like to be done by fair Means, we were forc'd to uſe other Methods; by which tho' we might ſeem to run a very great Riſque, and do an Action which all the World would call deſperate in theſe Countries; yet our Circumſtances which was little leſs than deſperate would admit of no other Remedy.

An adventurous ſtroke of the *Engliſh*, in ſeizing the Governour's Son.

Having ſecretly convey'd ſome Weapons aſhoar (for they will not let Foreigners appear with any publickly) and concerted all Matters relating to the Execution of our Plot; we went directly to the Cuſtom-Houſe at a convenient Seaſon, intending to ſieze either the Governour, himſelf, or his Son, and ſo keep the Prey a Ship-board in ſafe Cuſtody till the Debt was diſcharged. All things fell out as well as could be; and concurr'd to render our Attempt eaſie and proſperous. The Governour's Son was there with a very ſlight Guard; we ſiez'd the Souldiers Weapons, arreſted him and got him into our Boat, and ſo row'd away to the Ship with as much ſpeed as we could. We were indeed quickly purſued by a vaſt number of Boats, and the whole Poſſe of the Town was rais'd upon us; but with our Fire-Arms we made good our Retreat, and deliver'd our Priſoner quietly in at the Ship, and that in the ſight of Three or Four thouſand People.

Some of our Men were left aſhoar to give the Reaſons of this Act of Hoſtility on our part, and to gather in the ſcattering Debts; who tho' they might ſeem very much expos'd to the Fury of the provok'd People in this caſe; yet they had a good Protection, for the Governour himſelf took particular Care to ſecure them from all Harm, becauſe his Son was in our Hands, and conſequently in Danger of feeling the Effects of any Wrong that ſhould be offer'd to them aſhoar. The Governour was now under a Neceſſity of doing us Juſtice, and that in a very little time too, if he lov'd his Son's Life; not that we intended to offer him any Violence, but his own Superſtition would have given him Death without any Remedy. For it ſeems he was a *Bramen*, and all of that Character are forbidden by the Laws of their Sect to eat or drink any thing but what they provide themſelves. All animal Food is an abomination to them, and they have ſo many peculiarities of Diet (and then being oblig'd to be their own Cooks too) that the poor *Bramen* was like to ſtarve a Ship-board, keeping a longer and ſeverer Faſt than perhaps his Religion ever put him upon. He would not touch a bit of any thing we had, and tho' Nature ſtruggl'd hard, and made heavy Complaints for Relief, yet Conſcience reſtrain'd and curb'd her, ſilenc'd all that Noiſe, and got the Victory; ſo that the young Man muſt certainly die in a very ſhort ſpace, unleſs he could either over-rule his Conſcience, or perſwade his Father to ſhew a little in paying a juſt Debt.

Superſtition of the *Bramens*.

And this being the Caſe, the old Governour diſputed the Buſineſs no longer; the Sence of his Sons Danger ſoftned and overcame him, and to avoid being his Murderer, he diſcharged the incumbent Debt, and balanc'd all Accompts with us: So we ſent back the mortified Priſoner again, having faſted now ſome four or five Days, enough to make a Man hate that Superſtition, and forſwear being a *Bramen* any longer.

The Governour pays the Debt.

His Son ſet at Liberty.

But yet how ridiculous and idle ſoever the Doctrine of the *Bramens* be in the Theory, 'twas very uſeful and profitable to us in the Practice of it; for if we had not got a *Bramen* into our Hands, a Fellow that muſt be preſently redeemed, or elſe would ſtarve himſelf out of Conſcience, we don't know when we ſhould have got our Money.

Decem.

We deſired the People to make this uſe of what had paſs'd, to learn thereby to deal juſtly and honeſtly, and not pretend to Wrong our Nation, nor any other any more in that nature; And alſo by Letters directed to the new King, to deſire him to order Matters ſo for the time to come, that more quick Juſtice may be done by his Miniſters to thoſe that come to Trade in his Country.

Go to *Bantam*. *January.*

After this we parted in a fair and friendly manner, and all Buſineſs being done we took leave of *Maſulipatan*, and went away for *Bantam*, where we arriv'd the beginning of *January*. We found ſome *Engliſh* Ships here, and particularly the *James* our Second, lately come from *Patane*, and had notice of our other Affairs at *Macaſſar*, *Siam*, &c. which at this time went on but dully becauſe of the Commotions in thoſe Countries,

February.

Captain *David Middleton* coming in hither the next Month with three *Engliſh* Ships more (all in very good caſe) a Council was held for ordering the ſeveral Diſpatches of theſe Ships, which by Agreement were diſpers'd to various parts of the *Indies*, to *Sumatra*, *Ambrina*, *Patane* and *Japan*, to inſpect the Trade, and viſit our Factories in thoſe parts.

As for us in the Globe we left *Bantam* the latter end of this Month ‡ (having ſent the *James* ſometime before us) and holding our Courſe for *England*, after * five Months ſailing or little more, had the happineſs to Arrive there in ſafety.

‡ *Auguſt. A. D.* 1615.

* Note that by the Obſervations made in this Voyage, the Iſle of S. *Helena* lies 100 Leagues more to the Weſt than the Common Charts do make it.

Chap. XXII.

An Account of a Voyage to the East-Indies, *in the* Pearl, *Commanded by Captain* Samuel Caſtleton. *Written by Mr* John Tatton, *Maſter of the ſame Ship.*

Auguſt, A. D. 1611.

THis Ship ſet out from *Graveſend* the 22d of *Auguſt*, *A. D.* 1611. But the Accounts of the former part of her Voyage having nothing conſiderable and entertaining in them, we ſhall omit them upon that Score. We will let her paſs the *Canaries*, the *Azores*, and the Iſles of Cape *de Verd*, call in at *Soldania*, and turn the moſt Southern Point of *Africk*, making her way up to the Equator again. 'Tis to no purpoſe to attend her, while ſhe only caſts Anchors, Sounds the depth of the Water, or Bartars a little old Iron, for a few Sheep and Beeves, with the Barbarous People as ſhe Sails along.

At the *Indian* Coaſts we fell in with her again: Here ſhe begins to do Buſineſs and furniſhes matter ſomething worth Obſervation.

Pearl at *Priaman* and *Teco*.

In the firſt place therefore we find them Trading upon the great Iſland of *Sumatra*; *Teco* and *Priaman* are places fam'd enough for their Pepper, and here our Ship was buſie for ſome time, 'tis to be preſum'd upon that ſame Account, tho' we are not told what particular Concerns ſhe had there.

Auguſt. A. D. 1612.

Ayrebangye Bay deſcrib'd.

From hence ſhe went towards the Iſland of *Ceylon*, putting by the way into the Bay of *Ayrebangye*. This Bay receives it's name from a Town ſo call'd, lying a little to the South ſide of it, and 'tis in Eight Min. North Latitude. At the entrance into it there's a Shoal, all round about which there's nine Fathom Water; but between it and the main is the beſt Channel with a North Wind, becauſe the Point of the Iſle lies Shoal a good Cables length off to the N. ſide. So again about two Miles of the ſhoar, athwart the Weſtern Point lies another, where there is but 8 or 9 Fathom at moſt, and very Rocky too. But then all over between that Land and the long Iſland in the Offing, that lies about ſeven Leagues diſtance, there is 28 and 60 Fathom.

Pattahan Iſle a good River. *September.*

They proceeded next to the Iſland of *Pattahan*, the great River of which they deſcribe as very good and commodious. The Water of it is excellent, and a Ship may advance into it ſix or ſeven Foot upon the Barr. They reckon the Latitude here, 28 Min. to the North of the Line; and tell us that the Coaſt hereabouts is Ouzie all along the Shoar, except in ſome few places where 'tis Shoally. Some 25 or 26 Leagues to the North of *Pattahan*, and in 1 Degree 40 Min. North Latitude they came to a pretty big Iſland, which deſerves to be mention'd, in that 'tis a kind of a Guide to the finding out of a very lovely Bay.

A great Iſland with a fair Bay.

The Iſland is about two Miles from the Main, has two other ſmall ones to the South of it, and a high round Hummock ſtanding between it and the Main. Upon the N. W. ſide of it there's a Freſh running down a ſteep Cliff like a River, and may be ſeen by the white Appearance it makes at a matter of ſeven or eight Leagues diſtance. By this Deſcription the Iſland it ſelf may be found, and then the Bay ſo commended is eaſily diſcover'd; for 'tis but looking upon the North ſide of this Iſland and there you find it. Going fair along by the Iſland, you have good Depths in moſt places, and ſo alſo within it, and cloſe up to the very Main, all Ouzie Ground, and your Anchor over both Flooks.

Nicobar Iſlands. *October.*

When they had viſited this Iſland and Bay, they ſail'd on to the *Nicobar* Iſlands, where they met with very good Refreſhing, and the People as much diſpos'd to Trade and Deal with them: Nay, when they went from thence the *Canoes* follow'd them for ſome time, and kept the Trade ſtill going on. Their Courſe from theſe Iſlands was towards that of *Ceylon*, an Iſland not much viſited by our *Engliſh* Ships. The South Point of *Ceylon* call'd *Diundra*, they place in the Latitude of ſix Degrees, or thereabouts; for when they made that Latitude by the Suns Meridian Altitude, *Diundra* at the ſame time bore due Eaſt of them. The varying hereabouts, or rather in 5 Degr. 32 Min. was 13 Degr. and 24 Min.

Ceylon Iſland *Velegam* Bay

They ſail'd directly into *Velegam* Bay upon this Iſland ſeeing a great many Boats there, and hoping to find good watering. And ſince they were ſtrangers to theſe ſort of

People, and were uncertain what kind of Treatment they ſhould find amongſt them, they would not preſently go aſhoar amongſt them, but ſent out their Skiff with a Flag of Truce.

November.

The Natives ſeem'd inſenſible of their meaning, and made ſigns that they did not underſtand the *Portugueze* Tongue in which they ſpoke. Upon this they ſent the Boat to the other ſide of the Bay, where there were a parcel of Houſes built by the *Portugueze*, who were planted there amongſt theſe People, for all they pretended ſo much ignorance of their Language. Here they could talk *Portugueze*, tho' they could not at the other place; at leaſt one of them did do ſo, and 'tis likely that others might as well as he. This Perſon who was the Spokesman for the reſt (as they pretended) told the *Engliſh*, that they could not be ſupplied with any thing there till the King had given leave, and that the next morning they ſhould have the King's Anſwer about the Buſineſs at the ſame place.

Treachery of the Natives and *Portugueze*.

In ſhort 'tis probable enough that ſome of theſe were *Portugueze* in diſguiſe, or at leaſt were ſet a work by them to wheedle and draw our Men into their ſnares. For at the ſame time they eſpied by chance a party of *Portugueſe* lying very cloſe together ready for an aſſault, which in all probability had been made then if they had held in talk much longer; but having diſcovered thoſe Preparations, they ſpoil'd the Deſign by making off from the Shoar. However to try what the event would be, a few Days after they ſent their Skiff again towards the Shoar, but under the Protection of their Boat, which was provided for it's Defence. The People aſhoar kept themſelves cloſe and ſtill, but diſpatch'd one of their Company to talk with the Skiff, promiſing them Water if they would pay for't, which the *Engliſh* did not deſire to have upon any other Terms. This fellow having acted the part he was ſent for, by a ſudden retreat away from them, gave the appointed ſign to the Ambuſcade, who immediately diſcharg'd a mighty Volley of Shot upon them; and having done that, preſently ſally'd out of the Buſhes, running into the Water, as far as they could to lay hold of the Skiff. But the Boat that was her Guardian played ſo briskly upon them with her Shot, that they were quickly forc'd to get out of the Water and retire into the Buſhes again.

And thus being fully convinc'd of the Treachery and ill Deſigns of theſe People; as alſo that nothing of Refreſhment was to be procured here, they left them, continuing notwithſtanding to coaſt along the Iſle. We don't hear of any thing of a Trade they met with any where upon this Iſland; they indeed once propos'd to go to *Maricalo* (a conſiderable City) for that purpoſe; but ſince they ſay nothing of it, 'tis likely that the Proofs they had of the baſe unhoſpitable Temper of the People, did put a ſtop to that Deſign. The *Portugueze* alſo were ſo great amongſt them, that no good was ever to be done by our Men.

Colombo Fort.

People of *Ceylon.*

They have a Fort there called *Colombo*, and are encroaching farther and farther upon the Peoples Liberties, every Day, as they have opportunity. All the Natives we ſaw were an old ſort of People; huge great holes in their Ears, and their Hair (many of them) tied up in a Knot upon their Crowns. They have no covering, but a piece of Cloath, which hangs down before as low as their Knees. And after all, their Minds are by far more naked and unpoliſh'd than their Bodies; they are void of all Principles of Vertue and Humanity; a ſly ſubtle intriguing People, naturally diſpos'd to Villanous Actions, and ready to take all Advantages to commit them.

March.
Rippling Water.

Nothing to purpoſe being to be done upon this Coaſt, they ſet ſail homeward again; in which Courſe they met with various Currents and ſtrange Ripplings of the Water from 4 Degr. 30 Min. South Latitude, to 13 Degr. Sometimes thoſe Ripplings were ſo great, that they would make a Noiſe like Over-falls; this was eſpecially in the Parallel of *Pedras Brancas* to the Weſt of it. They had alſo once 24 Degr. 26 Min. varying, the greateſt they ever had in all the Voyage, and this was in 13 Degr. 7 Min. South Latitude; again in South Latitude 16 Degr. 50 Min. they had varying 23 Degrees 10 Minutes, ſo that the varying heightned going Southward. On the North ſide of the Line about the Coaſt of *Ceylon*, they had no higher than 12 and 13 Degrees and ſome odd Minutes varying, as far as five and ſix Degrees of Latitude.

Pearl Iſland, and the Products of it.

Being come into 21 Degrees South Latitude they diſcover'd an Iſland of a very high ſituation, good anchoring all about it, in a fine black Sand; and from forty to four Fathoms cloſe in to the Shoar. The North Eaſt Point of it very high and ſteep; and a little to the S. Eaſt there's low Land, refreſh'd with a very good running Water; a Boat can't go into it, but notwithſtanding 'tis a very compleat convenience for Watering. They call'd this Iſland *Pearl* Iſland, according to the Name of the Ship that diſcover'd it; and a very choice and valuable one 'tis too, tho' it has hitherto ſcaped falling into the Hands of any particular Maſter or Poſſeſſour. 'Twas wholly deſtitute of Inhabitants; which ſure muſt be, becauſe it had lain conceal'd, and no body had the luck to hit of it before; for ſo fine a Spot as this could never have been deſpis'd, and if it had not been ſeiz'd for a dwelling, yet at leaſt it would have been known and viſited ſometimes. It is all over moſt delightfully ſhaded, and appears more like a Thicket (ſtanding in the Sea) than any thing elſe. Here are land *Tortoiſes*, ſo many, ſo large and ſo good, that few places can ſhew the like. Of Fowl there are Geeſe, Ducks, Doves, Parrots, and a white Fowl as big as a Turkie, extreamly Fat, and ſo ſhort winged, that it cannot Flie. They are all ſtrangely tame and familiar, and may be eaſily taken without the help of Ginns and Snares, or any devices of Art. They have liv'd here calmly and quietly by themſelves, never us'd to any thing of Noiſe and Violence, or expos'd to the out-rages of their fellow Creatures. Here had been no Fowlers to Hunt and Perſecute them from one place to another, no Guns to moleſt and Terrifie them, and make them afraid of Mankind. There was no appearance of any ravenous ſort of Fowl neither amongſt them, that by preying upon them, and diſturbing their eaſie peaceable Life, might help to make them ſhie and frightful. Upon this Account they diſcover'd all the Boldneſs and Freedom of that innocent undiſturbed Life they had always been us'd to; they knew not what Injuries meant, and therefore fear'd none, and ſo ſuffer'd themſelves very tamely to be taken. Our *Engliſh* Men 'tis probable were the firſt that ever invaded their free and quiet State; that began to exerciſe Dominion and Arbitrary Power amongſt them, in Sacrificing ſome of their Lives to their Neceſſities. But Tyranny being a perfectly new thing to them, they were eaſily brought under the Yoke; ſo eaſily, that they ſay ten Men may with little difficulty get Fowl enough to ſerve forty People a whole Day.

As for Fiſh they tell us of none but Eels, ſome of the largeſt and faireſt in the World. Strike them with a Pike, and they'll move a Yard or two, and then lie ſtill and be taken; as if the Fiſh were tame as well as the Fowl; having been always free from Vexation and Fright, by the Plots of buſie Anglers and Poachers, the everlaſting Plagues of their Element. The North part of this Iſland is finer and more pleaſantly beſet with Trees than the South ſide, tho' that be charmingly ſhaded too.

Having refreſh'd here to their Hearts content, they ſet ſail homewards *April* the 1ſt, *A.D.* 1613. All that they met with remarkable in this Courſe, was the conſiderable quantities of the Saragoſſa, a Sea Weed with a ſmall long Leaf, and white Berries of the ſize of a Pepper Corn; 'tis called the Sea of *Graſs*.

CHAP. XXIII.

The Eighth Voyage ſet forth by the Eaſt-India *Company, with three Ships, the* Clove, *the* Hector, *and the* Thomas, *under the Command of Capt.* John Saris: *His Courſe to, and Actions in the* Red Sea, Java, Molucca's, *and the Iſle of* Japan, *where firſt began and ſettled an* Engliſh *Trade. Taken out of his own Journal.*

April, A. D. 1611. *Auguſt.*

* Note concerning the Winds.

September.

WE ſail'd out of the *Downs* with the three good Ships, the *Clove*, the *Hector*, and the *Thomas*, *April* the Eighteenth; and the Firſt of *Auguſt* put in at the Bay of *Soldania*, where we refreſh'd for ſome Days. For ſome Weeks Sailing after, we had paſs'd the Cape of *Good Hope*, * we found nothing of the Monſons of Weſterly Winds, which are ſo commonly talk'd off; but on the contrary had North Eaſterly, South Eaſterly, and Eaſterly Winds, with furious Storms of Rain, Thunder, and Lightning: Yet in the beginning of *September*, the Weather ſo very fair and hot, that ſome enſuing Calms were very much to be doubted. The ſame ſort of Winds continued moſt conſtantly throughout the whole Month, except ſome little Touches of a S. W. or S. S. W. Wind, tho' that very ſeldom.

Currents.

Angoxas Iſles

We were ſenſible of no ſort of Current, till having had ſight of St. *Auguſtine*'s Bay, on the Iſle of St. *Lawrence*, we were got beyond the Tropick of *Capricorn* to the Northward; and then we found a very ſtrong one ſetting S. S. W. And holding on our Courſe towards the Iſles *de Angoxas*, we had for the moſt part thoſe Southerly Currents working againſt us, in ſome places more violently, in others leſs, as the Obſervations of the Latitude, and the Ships way did aſſure us; only coming up about a Seven Leagues diſtance from the Iſles *Angoxas*, we had the Current ſetting the quite contrary way, *viz.* to the N. N. W. for we cou'd perceive by the Land, that we ran very faſt to the Northward; yet making a nearer approach to them, the Current ſetting to the Southward, took place again.

Obſervations of the Iſles *Angoxas.*

Theſe Iſles of *Angoxas* are many in number, and for the moſt part falſly plac'd in the Plats; for whereas they generally ſtand there in 15 Degr. 40 Min. South Lat. we find them to be in 16 Degr. 20 Min. and the Variation to be 13 Degr. Weſterly.

There's a very bad Shoal that lies Eaſt of the North-part of the moſt Northerly of theſe Iſlands, at the leaſt three Points into the Sea, having a dry Splat of White Sand between it and the Main. We ſounded, and had Ground at 30 Fathom, red Stones like Coral, with grey Sand and Shells: And finding the Current ſetting ſo ſtrongly here to the S.W. by W. and ſuch uncertain Shoaling beſides, we ſtood off for St. *Lawrence*, ſteering N. E. N. E. by E. and E. N. E.

A remarkable paſſage about the Iſle *Juan de Nova.*

And in this Courſe, (the next Day after our parting from *Angoxas* Iſle) we began to look out for the Iſle *Juan de Nova*, which *Linſchoten* adviſes Sailors to take care of coming near in a ſmall Moon, and which Rule we were forc'd to tranſgreſs by an abſolute neceſſity that lay upon us, of getting out of the Current, and other Inconveniencies that then attended us. We had no proſpect of any thing like the Iſle *Juan de Nova*; but on the other hand, after a continuance of the E. N. E. Courſe for two Days more, to our very great wonder we ſaw Land lying to the Weſtward, ſome four or five Leagues off, where we ſo little expected to ſee any, that we waited only for a proſpect of *Juan de Nova* to the Eaſtward, which we reckon'd cou'd not be above ſix Leagues to the Southward from us. And this Land that ſurpriz'd us, what ſhou'd it be, but the Northermoſt of the Iſles *das Argoxas*, which we parted from a few Days before; which did ſo effectually diſappoint, and at once diſcourage all our Mariners, that they began to conclude, there wou'd be no proceeding in the Voyage this way.

Now the Reaſon of all this, we ſuppoſe, to be ſome Counter-current, which in the Small of the Moon ſets E. N. E. and W. S. W. from the *Plaſhella*, or Point of the Shore, which lies N. E. by E. of the Northermoſt part of *Juan de Nova*; and this Current meeting with the common N. N. E. Current, did certainly carry us thus away to the Weſtward. And from hence 'tis plain, that if there be any ſuch Iſland at all as this *Juan de Nova*, it does not lie ſo far Weſtward as *Daniel*'s Plats do make it, but certainly is poſited nearer to the main Iſland; for otherwiſe we cou'd not have miſſed the ſight of it.

Trick of the *Portugueze* in the wrong Poſition of *Juan de Nova.*

Caution.

Thoſe of the Fourth Voyage made in the *Aſcenſion*, aſſured themſelves, that they paſs'd to the Eaſtward of this Iſland, and St. *Lawrence*; which thing the *Portugueze* pretend to be impoſſible; ſaying, that it ſtands ſo near the main Iſland, that there's no paſſage, but a little narrow Channel, which one of their Ships was once forc'd to put through; but no Ship, either before or ſince (as they have heard of) has ever done the like. To ſpeak the plain Truth, the *Portugueze* ſeem to have abus'd the World in this matter, and to deſign (by placing ſuch an Iſland ſo far to the Weſtward), that thoſe that ſail hereabouts, being not ſo well experienc'd as themſelves, ſhould fall into the Snare of the ſtrong Weſterly Current. And therefore 'tis neceſſary for all that are bound this way, to be upon the Coaſt of St. *Lawrence* by the firſt of *June*, and from the Cape of St. *Auguſtine* till they come into 12 Degr. to keep up to the Eaſtward, and not make their way to the W. of the N. or N. by W. for fear of the S. W. Current, which (with Calms and 14 Degr. 2 Min. Var. Weſterly) will certainly ſet them over upon the Coaſt of *Sofala*.

Beſides, in *Auguſt* and *September*, you ſhall have here ſuch violent N. W. Winds, that if you wou'd ſtand it over for St. *Lawrence*, you ſhall not be able to fetch it without danger of the Sholes of *India*, (that is, if you be to the North of the ſaid Sholes), neither can you ſtop upon the Main to keep your Latitude; for 'tis broken Ground, and very deep Water.

October.

Come to *Moyela.*

After many of theſe Difficulties we came to an Anchor between *Sofala* and *Mozambique*, where we had Latitude 16 Degr. 32 Min. Longitude 76 Degr. 10 Min. Variation 11 Degr. 50 Min. W. We anchor'd under an Iſland near the Main, at which place we had neither freſh Water, nor People to direct us to any; ſo leaving that uncomfortable Harbour, we put out to Sea again, and were toſs'd up and down between the variable Winds, and the old N. E. Current, till the latter end of *October*, when we came to an Anchor at *Moyela*, which is one of the Iſles *Comora*, and in 12 Degr. 13 Min. South Lat. Here we found both People and Proviſions too; the Inhabitants were kind and free, and brought out all their Stores to us. As Nature had been frank and liberal in her Favours to them, ſo they did with an open hand paſs over her Bounties to us.

Products of the place.

In exchange for little Haberdaſhry Ware of a trifling value, we had Bullocks, Goats, Hens, Fiſh, Eggs, Milk, Sugar-Canes, Tamarinds, Coco's, Plantans, Pomegranates, Papanes, Limons, Rice, and almoſt whatever we cou'd have occaſion for.

The People.

The King of *Moyela.*

The People have all the Characters of Negroes in their Colour, Feature, ſhort curl'd Hair, and Dreſs; about their Middles they wear a Pintadoe, and white Caps on their Heads, tho' thoſe of them that are *Mahometans* wear Turbants. And this is the prevailing Religion of the Iſland, at leaſt amongſt the better ſort: The King himſelf is a Diſciple of *Mahomet*, and at the time of our being there kept his *Rammadam*, or *Lent*, according to the Laws of his Prophet. 'Twas for this Reaſon that he cou'd not accept of a Banquet we provided to entertain him; the Sun was above the Horizon, and he cou'd not eat then without affronting his Religion. Yet he had ſo good a mind to the Entertainment, and his Appetite was charm'd ſo far, that I doubt he broke the Commandment in his Heart; for he carried all the beſt of the Victuals home along with him, and reſolv'd to eat it there as ſoon as the Sun was down. This Prince cou'd ſpeak a little *Arabick*; and his Devotion having once carried him a Pilgrimage to *Meccha*, had purchas'd thereby the Title of *Xeriff*, a Term of Honour, affected by the moſt ſtanch and zealous Princes of the *Mahometan* Sect.

His Apparel was only a white Cotton Coat, a Turbant upon his Head, and a *Guzurat* Pintado about his middle.

The People in general are more deſirous of Trading for dry Money, than by way of Barter for other Commodities; only if it be for any Commodity that's eatable, they'll barter as long as you pleaſe; and bring them but Crimſon Cloth, *Cambaya* Cloth, red Scull-Caps, and Sword-Blades; and you may have any thing of that nature that the Iſland affords, and good Bargains too.

His Note for Friendſhip.

At our departure the King gave me a Note under his own Hand, written in *Arabick*, as a Teſtimony of his Friendſhip, and requeſted my Letter of Commendations, to ſhew to any others that ſhou'd come thither; for a ſtanding Evidence of his fair Dealing and Civility towards us, and an Encouragement to thoſe that ſhou'd viſit him afterwards.

I found a *Dutch* Admiral that had been here, had given ſuch a Teſtimony, and ſo follow'd his Example with another; only adding a Caution privately, that Strangers ſhou'd not be off their Guard here, nor truſt theſe People too far: For how fairly ſoever they carry it, when Care and Vigilance won't allow them to do otherwiſe, yet one does not know what they might be, or do, if by a ſecure preſuming upon their Honeſty, one ſhou'd give them an Opportunity to play the Knave.

November.

Note concerning the Main Land of *Melinda*.

December.

Thus we parted in a very Friendly manner from *Moyela*, directing our Courſe now to the Iſle of *Zocotora*. We made the Main-land of *Melinda*, (coming up within four Leagues S. E. of the Bay of *Formoſa*) when by our Reckoning we were more than 48 Leagues diſtance from it: And hence conclude this Land to lie more Eaſterly than 'tis placed in our Plats; for otherwiſe we cou'd not have fallen with it ſo ſoon.

A Rippling Sea.

We had frequently a fearful rippling Water, ſometimes to ſuch a degree, that 'twas like the Fall at *London*-Bridge; and this too out of the ſight of the Land, and where we cou'd find no Ground at a Hundred Fathom Water. Theſe Ripplings ſhew juſt like Shelves, and are very uncertain as to the Meaſures of their Greatneſs or Smallneſs, tho' in this Courſe we met with them very often in a Day. They make as much Noiſe by the Ship's ſide, as if ſhe ran five Leagues a Watch, when at the ſame time ſhe ſcarce goes a-head. The Southerly Current, and theſe Ripplings, for the moſt part, went together, and when the one went off, the other grew inconſiderable likewiſe. Being off from the Main, we had almoſt a continual Calm, and the further we went, ſtill the leſs Wind.

Uſeful Obſervation.

The latter end of *December* we found our ſelves put back into 5 Degr. 25 Min. South Lat. when a Month before we were 1 or 2 Min. to the N. of the Equator, cloſe by the Shore; and therefore it may be uſeful for all that are bound to *Zocotora*, at this time of the Year, to obſerve this Method. Let them hold to the Eaſtward of *Pemba*, 200 Leagues Eaſt by N. the Variation, there increaſing Weſterly, which will bring them the more Northerly; and ſo keeping the Iſle of *Zocotora* open, between the N. by E. and the N. N. E. they ſhall be in a Condition to make the beſt uſe of thoſe Winds, which blow near the Main, with a conſtant Gale between the E. by N. and E. by S. tho' off at Sea about the Iſles *Maſcarenha's*, they are generally at N. E. N. and ſometimes at N. W. W. and W. by S. with Varieties of Weather, ſometimes calm, and at other times Storms of Thunder and Lightning, with a fearful Rippling of the Water. And obſerve, that tho' the N. E. and N. Winds, are but indifferent Helps, yet you'll have this advantage, that by how much the more Eaſterly you are, by ſo much the more you ſhall recover to the Northward of the Line, before you meet with the Main; and if you can avoid the Main, 'tis beſt to do ſo in the time of the Eaſterly Monſon, till you are got into 10 Degr. North Lat. whereas in the Weſterly Monſon you muſt keep the Shore aboard, ſtill remembring that it lies more to the Eaſt than the Platts do repreſent it.

January.

Doara.

Having made the Cape *Das Baxos*, upon the Main of *Magadoxa*, (which we did the firſt of the New Year) we had much Wind and Current Southerly, and made the Main of *Doara* (up higher upon the Coaſt of *Africk*) about the middle of this Month: A ſandy barren Country 'tis, (and not very high), as indeed 'tis moſtly along from *Magadoxa* hither.

February.

Cape *Dorſui.*

The next Land that came within view, was Cape *Dorſui*, which appears very high and barren by the Sea-ſide: And we had ſome Reaſon to take Notice of it, becauſe the Current ſetting to the N. W. which began to play its part with the Ships about the Coaſt of *Doara*, did work us about ſo effectually, that after we had parted from Cape *Dorſui*, and been out at Sea ſome eight or nine Days; this N. Weſterly, or rather perhaps W. N. W. Current, brought us within ſight of it again, when we thought of forty five or fifty Leagues diſtance from it. As for the Variation in general, for a Direction to thoſe that ſhall ſail this way, they may take Notice of what Experience has taught us, *viz.* That tho' the Variation obſerves no certain proportion, yet in running to the Eaſtward, we have Variat. Weſterly increaſing, and ſtanding in to the Shore N. W. our Variation was Weſterly decreaſing; ſo that reckoning according to the Plats, we found our ſelves much further off the Land, than the juſt proof by Variation wou'd allow. This is a Truth that we are ſure of, and our ſo often falling with the Main, gain'd us that Point of Knowledge, which others may make uſe of to their advantage.

Obſervation of the Var.

Come to *Tammerin.*

We came to an Anchor in *Tammarin* Road, in the Iſle of *Zocotora*, the latter end of this Month, having by the hindrance of Winds and Currents ſpent, at leaſt fourteen or fifteen Weeks in our paſſage between *Moyela*, and this place.

The King gave us a very Friendly Entertainment, and together with a Preſent, ſent me the Letters left there by Sir *Henry Middleton* for me. Theſe gave an Account of his horrible Uſage at *Moha*; and in ſhort, the whole Series of the Misfortunes attending the Fleet under his Command in the *Red Sea*; together with Advice to us, to make the beſt uſe of thoſe Examples, of the perfidious dealing of the *Turks*, for our ſecurity and defence.

But ſince there was no Buſineſs to be done upon this Iſland, the King having no Aloes to furniſh us with; and then no going for the *Indies* till the end of *September*, becauſe the Monſon wou'd not ſerve till then; for thoſe Reaſons, and ſeveral others, we concluded notwithſtanding to ſail away for the *Red Sea*. Beſides, we had the Grand Seignior's Paſs and Safe Conduct, which we had Reaſon to believe, wou'd have ſome Influence to procure us a Civil Treatment at leaſt in thoſe parts. Or if matters came to the worſt, and no Trade was to be had there, we ſhou'd be in a Condition to defend our ſelves, from any Violence the *Turks* cou'd pretend to offer; and alſo to take ſome Courſe for revenging the Affronts our Nation had receiv'd from them.

Go for the *Red Sea.*

March.

At our departure the King counſell'd us, if we went to the *Red Sea*, to be ſure to ply to the Southward of *Abba del Curia*; becauſe keeping to the North-ſide, we ſhou'd be put over to the *Arabian* Shore, and not be able, without great difficulty, to fetch Cape *Guardefui*; and by proof we did find it beſt to keep the *Abaſſine* Shore aboard, according to the purport of his Direction. About the Bay of *Monte Felix*, we had excellent Fiſhing, and plenty of Water and Wood at the Town, but not in the bottom of the Bay: The paſſage up to the Town is ſo large, that three Ships may go a-breaſt without danger, and the going in is between the high Hummock, and the low ſandy Point. This place affords excellent good Gums, which are a delicate Perfume when burnt; and curious Mats, which are greatly in requeſt at *Aden*, *Moha*, and the *Eaſt-Indies*.

Note.

Felix, or *Felack* Town

We had not ſeen a Drop of Rain for above four Months, when now, a little before we came up with the Streights of *Babelmandel*, we had a light ſprinkling, and that was all.

Come to *Moha.*

We came to an Anchor in *Moha* Road, the middle of this Month of *March*, having had better Luck at our coming in, than the *Trades-Increaſe* had, by avoiding that fatal Shole, where ſhe ſtuck, to her very great danger for twenty four Hours.

This Shole will diſcover it ſelf by the Colour of the Water, and you muſt bring the Steeple of the high Church in the Town E. N. E. Eaſterly, before you can be clear of it at your coming into the Road. We were ſoon ſaluted by a Meſſenger from the Governour, to know what we were, and what we pretended to in coming thither: By whom I return'd Anſwer, That if the Governour wou'd ſend an equal Pledge to ſtay aboard in my room, I wou'd come aſhore, and ſatisfie him my ſelf*. The State of Affairs was, it ſeems, now alter'd at *Moha*, much for the better, and 'twas quite another place than what 'twas when General *Middleton* was there: For the barbarous Aga, that ſo rudely handled our *Engliſh* then, was thrown out of his Government, and another fix'd in his place, a Man, as 'twas reported, of a good Temper, courteous to Strangers, and a zealous Promoter of Trade. 'Twas poſſible at this time to go aſhore without fear of being rifled, plunder'd, or knock'd on the Head, by a parcel of rude *Turks*; there was ſomething of Juſtice and Civility in the place, which in the time of *Regib*, Aga, were abſolutely baniſh'd hence.

* Thus it was reported to them.

A better Governour at *Moha.*

Having ſatisfied the Governour however who we were, and the Warrant we had from the *Grand Seignior* for our coming hither; I received a very courteous Welcome from him, both by Word of mouth and Letter. He promis'd a ſufficient Pledge for my ſafe return if I pleas'd to land; plain and open dealing in all points, without any thing of that plotting Fraud and Treachery, that had ſo abus'd our Nation before; only as to the main Buſineſs of a fixed Trade he could not determin it till the *Baſſa*'s Orders (which he expected) were come, but if in the mean time any of my Men came aſhoar they ſhould be well us'd, and buy or ſell without moleſtation. And whether it were Conſcience or fear of Revenge I know not, but the *Aga* was in all reſpects to a Punctilio as good as his Word: Our Men that went aſhoar were feaſted and careſs'd in the higheſt degree, veſted in Cloth of Silver, and carried up and down the Town, with Muſick playing before them to ſhew the People how welcome they were.

The General goes aſhoar.

Shortly after he ſent three Perſons of conſiderable figure to remain as Pledges in thy room, upon which Security given I went aſhoar with all the Merchants; being receiv'd by a Body of the great Men, with the *Turkiſh* Muſick and ſeveral Volleys from the great Guns of the Caſtle. My reception at the *Aga*'s Palace was agreeable to all the reſt of the Scene; every thing appear'd ſtately and magnificent, expreſs'd welcome and reſpect, and afforded pleaſure and delight, only the Complements of the *Turks* were troubleſome, and that very formal ceremonious way they uſe in their addreſs to Strangers was ſome allay to the reſt of the Entertainment.

The *Aga* receiv'd our King's Letter reſpectfully, but the *Grand Seignior*'s Paſs he took with a Reverence and Devotion almoſt Religious; kiſſing and laying it on his Head, as he would have done his Alcoran. He made a world of excuſes for the Wrongs done to Sir *Henry Middleton* laying all the blame upon the drunken Soldiers, and the ill humour of the late *Aga* who had acted beyond his Commiſſion, and had receiv'd a due Puniſhment for his Inſolence by a diſgraceful remove from his place; by all which diſcourſe it was very manifeſt that they ſuſpected a deſign of Revenge, and fear'd we would call them to a reckoning for thoſe paſt Injuries.

Their Entertainment at the *Aga's*.

After this a noble Dinner was prepared for us; which yet (had the Liquid part been proportionable to the reſt) would have been much more entertaining, eſpecially to Sea-men; but our Drink was only pure Element, or elſe (for variety) a kind of decoction of a certain bitter Herb, which made it an abſolute Doſe, and was ten times worſe than the Water in it's own pure naturals.

Their way of Eating,

Their way is to ſerve up all the ſeveral Diſhes together, and ſet them down at once, before the Gueſts fall to Eating; and then they don't place them upon a Level as we do; but pile them up one over another, ſtory upon ſtory, a matter of a Yard high; ſo that ſitting (according to the manner of the *Turks*) croſs legg'd upon a Carpet in the Floor, the higheſt Diſhes were almoſt above our Heads. Theſe Diſhes are alſo made with Feet that they ſtand hollow above one another, and the meat in any of them may be come at conveniently enough (if one can but reach) without removing them out of their places.

And Perfuming.

After Dinner the *Agas* little Boys came in with their Chaffing-diſhes, and ſeveral rich Perfumes, as Ambergriece, Lign-Aloes, *&c.* to gratifie that Sence as well as the reſt: This is a Ceremony they uſe in all their great Entertainments, and it being the Cuſtom, we ſubmitted to it, and held our Noſes down over the Chaffing-Diſhes. And 'tis true thoſe Odours were very grateful and pleaſant; yet I think at the rate that Liquor went in the *Aga*'s Houſe, we had no need of Fumigations at that time, and could have gone back ſoberly enough to our Ships, without the help of Ambergriece, or any of thoſe fine Scents to ſet our Heads to rights.

For a Concluſion of the whole Careſs, a rich Sute of Apparel after the *Turkiſh* Mode was brought forth; the Veſt of Cloth of Gold, the Turbant ſutable, and a curious Damaskeen or Scimeta, all which the *Aga* put on with his own Hands.

Captain *Saris* led thro' the Town in great Pomp.

This as he told me was the *Grand Seignior*'s Preſent, and I muſt needs walk in this Garb with the great Officers through the Town, that the People might all ſee the Marks of the Emperor's Favour conferr'd upon me. I ſhould have ridden indeed, for that's the Cuſtom, and a ſtately Horſe was provided for that purpoſe; but I choſe rather to walk, that I might have more opportunity to make a nice Obſervation of the Town.

Return to their Ship.

This Ceremony over, I returned to the Palace, and took my leave of the *Aga*, who ſtill moſt earneſtly deſired that all paſt Offences might be put up; and thoſe Thoughts of Revenge ſo juſtly awakned in us, might give way to Sentiments of perfect Love and Friendſhip for the Future. Thus we went back to our Ships with the Reſpect and Applauſe of the whole Town of *Moha*, and being come, we diſcharged the Turkiſh Pledges. Mention being made before of the *Grand Seignior*'s Patent, and it being all our Foundation and Security in this Attempt upon a Trade with theſe parts; it may be worth while to incert here a Copy of the ſame exactly taken from the Original *Arabick*.

The *Great Turk*'s Letters Pattents *Engliſhed*.

YOU that are My moſt Laudable, Fortunate, Wealtly, and great Vice-roys *and* Beglerbeys, *that are on the way from My moſt Happy and Imperial Throne (both by Sea and Land) unto the Confines and Bounds of the* Eaſt-Indies, *Owners of ſome part of Dignity, and thoſe unto whom belongeth to give aid, help, and ſuccour in God's cauſe, and* Muſſulmanical *Religion, upon their Emperious beck, The Wealth and Greatneſs of whom let it continue for ever. Likewiſe unto ye My moſt Laudable and Valiant* Saniacq Beys, *that are under the above-named* Beglerbeys, *owners, and hope of future greater Dignities, and theſe unto whom belongeth dutiful Aid and Help in God's cauſe and Religion, upon their Emperors Direction: the Honour and Dignity of whom be ever continuing. And unto ye My moſt Laudable, Wiſe, and Prudent Juſtices of Peace, Judges and Miniſters of Juſtice, that are within the Precincts of the ſaid* Saniacq Beys, *whoſe Judgments, Juſtice, and Words do flow, as from a Fountain of all Wiſdom and Prudence: The Worthineſs and Greatneſs of whoſe Dignity and Function, let it continue for ever. Alſo unto ye My Laudable, Great, and moſt Worthy Captains and* Reyſes *of all Our Navies and Shipping that ſwim upon the Face of the Sea. Unto ye my laudable Captains of the Caſtles, Cities and Towns: And unto ye Worthy and Laudable Cuſtomers, dwelling upon the Sea-Coaſt, upon Rivers, Bridges, and all other parts of Our Dominions, and thereunto adjacent. Upon ſight of this My moſt High and Imperial Commandment, in conformity of your moſt Bound Duties, ye ſhall ariſe, and do Obeiſance and Reverence thereunto.*

Hereby ye ſhall underſtand, that the Embaſſadour of the King of Great Britain *that reſideth in Our Happy and moſt High Port, hath given us to underſtand by his Supplication; That foraſmuch as ſome of his Maſters the King of* Great Britain *his Subjects, have with great Charge and Labour, diſcover'd a Trade in the* Eaſt-Indies, *and withal underſtand of Wealth, and likelihood of Trade in ſome Parts of Our Dominions by the way to be had in their Paſſage to the ſaid* Indies, *being therefore deſirous to viſit thoſe places for the better enlarging of their ſaid Trade. To the end that ſuch Men may in ſo good and laudable Enterpriſes have all Favour, Aid, and Help, (ſo far as lawfully and conveniently may be granted) Hath requeſted us in the Name of his ſaid Maſter the King of* Great Britain, *to vouchſafe them our ſafe conduct and recommendations. In conformity of whoſe Requeſt, as alſo in regard We and our Predeceſſors, are and have been for the ſpace of many Years in ſtrict League and Amity, with the afore-mentioned King of* Great Britain, *and the Subjects of that Kingdom, who long have had, and at this preſent have free Traffick and Trade in Merchandizing in our Dominions and Provinces through the* Mediterranean *Seas. We therefore do Command, and expreſly charge ye all, and every of ye, our above mentioned Subjects and Officers, that ye will not only kindly and lovingly entertain and receive the ſaid Merchants and Subjects of* Great Britain, *coming or paſſing through or by any of our Dominions, eſpecially intending to Trade to the Dominions of* Yemen, Aden, *and* Moha, *and the parts adjoining thereunto. Aſſiſting and relieving them with all things needful for themſelves, their Men and Ships: but alſo freely to permit them by Land or by Sea, to go or ſail, outward and returning, even as their Occaſion ſhall require, and to remain in any of our Dominions, Countries or Cities, granting them ſuch liberty of Traffick and Privileges as ſhall be reaſonable, without giving or ſuffering any let or hindrance, injury or moleſtation to be offered or done unto them. Yea, ye ſhall yield unto them ſuch Offices of Benevolence and Humanity, as ſhall be meet and convenient to be yielded unto honeſt men, and Strangers, undertaking ſo long and laborious a Voyage. And if ſo be that We ſhall underſtand, that contrary to the Capitulations, the Amity and League, which is between us and the King of* Great Britain, *ye do offer them the leaſt wrong, and any way moleſt and trouble the ſaid Merchants in their Traffick, and ought elſe: Know ye for certain, that ye ſhall not only incur Our high diſpleaſure, but ye ſhall be puniſhed for example unto others: and therefore carry your ſelves conformable to this My Imperial Commandment, and give credit to this My Imperial Enſign. Written at Our Manſion*

Guard at Conſtantinople, *on the fifteenth day of the Moon called* Zilkigie, *Anno.* 1019.

Deceitful Tidings.

Some little time after this came the long expected Meſſenger from the *Baſſa*, and word was accordingly ſent me from the Captain of the Town that the Orders of the Pattent would be inviolably obſerv'd, and a free Trade eſtabliſh'd. And yet at the ſame time I had ſome private hints given, intimating that the *Baſſa* had ſpoke another Language in his Letter to the *Aga*; that matters if they did not run againſt us, were not order'd to our Advantage, and that we ought to take care and not come aſhoar without Pledges; no tho' the *Aga* and all his Officers ſhould ſwear all round upon the *Alcoran* for our Security; (for as our Informer told us) they were Souldiers, and had Conſciences of ſo ſtrong a digeſtion, that no Perjury in the World would ſit uneaſie upon them.

April, A. D. 1612.

Some *Indian* Ships came in the beginning of the next Month, laden with Indicoes, Calicoes, Pintadoes, Ambergrice, and Spices, all very good and vaſt quantities of each, and theſe we held by us in our own Defence, in caſe any Injury ſhould be offer'd aſhoar. And there was a great deal of Reaſon to ſuſpect that ſome Miſchief was hatching, becauſe the Governour all this while had taken little notice of the *Baſſa*'s pretended Licence for our Trade; at leaſt only in ſuch obſcure and general Terms, as would rather have excited than ſilenc'd a Suſpicion of ſome perfidious Deſign; but on the other Hand was very earneſt for me to come aſhoar again, and then I ſhould underſtand more of the Buſineſs.

The *Turks* fly off from their Promiſe.

But for this Point of Civility I begg'd his Pardon and Excuſe, having no mind to make any more Viſits at *Moha* as matters ſtood; but I ſent one of my Company, who tho' he went without Pledges in his room came back again as it happen'd, and brought Word of the appearing Fruſtration of our whole Deſign; that the *Turks* gave no hopes of performing their Promiſe, and that the *Aga* concluded we muſt ſend ſome of our People to the *Baſſa* at *Zenan*, and get our Diſpatch immediately from himſelf.

Sir *Henry Middleton* comes with his Ships.

And this Courſe (ſince there was no other left) I had certainly purſued; when by the ſudden Arrival of Sir *Henry Middleton*, and a Summons from him to quit the place as ſoon as was poſſible, the whole Scene was changed, and all Deſigns of that kind for ever laid aſide. We had done now courting the falſe and perfidious *Turks* for a Trade; the General was come back from the *Indies* with a full Deſign of Revenge, and the *Infidels* that had hitherto abus'd us were no longer to be excus'd from making Satisfaction. Theſe were his Reſolutions; tho' I could have wiſh'd firſt to have ſeen what the *Turks* would have done with us, and what would have been the Reſult of our Perſonal Application to the *Baſſa*; whether they would have granted us a fair and quiet Traffick, according to the Intent of the *Grand Seignior*'s Letters, or have gone on in the ſame Road of Cheat and Abuſe to the end of the Chapter. There were ſeveral ſtrong Suſpicions of ill Deſigns a-Foot; and for all I know the *Turks* might have given our Nation in this Affair too, a ſecond Demonſtration of their ſurpaſſing Skill in the Arts of Tricking, Wheedling and Diſſembling; yet the Captain of the Gallies now ſent poſitive word that the *Baſſa* had commanded the *Aga* to ſhew all the Kindneſs imaginable to us, to let us have a publick Ware-houſe in *Moha*, and a Factory ſettled there without any more ado; and beſides to take care for the ſafe Conduct and good Accommodation of thoſe *Engliſh* Merchants in their Journey that deſign'd to come to *Zenan* to him. But a Man is ever at a loſs that has to do with People of ſuch a Principle and Diſpoſition as the *Turks* are; A People that can Flatter and Deceive ſo perfectly, hide an ill Deſign ſo artificially, deal ſo rudely when out of Fear and Danger, and ſpeak ſo very fairly when under any uneaſie Apprehenſions.

Note this Story of their Dealing with the *Indian* Ships is in General *Middleton's* Voyage, and therefore not to be repeated here. Only the bare Account of what concern'd Capt. *Saris* in particular.

In ſhort theſe flattering Methods of the *Turks* now did no good; and as Sir *Henry Middleton* perſiſted in his Deſign of forcing Satisfaction from them; ſo I concluded to joyn with him in ſo juſt an Attempt, and in purſuance thereof, got clear from *Moha*, and came up with my Ships to his. The Agreement made betwixt us, was, That both Fleets ſhou'd joyn to Trade with as many of the *Indian* Ships as we cou'd meet with; and Sir *Henry* to diſpoſe of Two thirds of the Goods that ſhou'd be barter'd for, and my ſelf the other One third. The whole Cargaſon of Commodities I barter'd for with the *Indian* Ships in this place, amounted but to 46174 Rials of Eight, as I make appear by the Diſcharges and Acquittances given by the Captains of thoſe Ships.

The Weights and Meaſures at *Moha*.

While I lay here at *Moha*, I order'd my Men aſhoar to take an Account of the Meaſures and Weights, in uſe at that place, and alſo of the Prizes of ſeveral Commodities moſt in vogue. The moſt common Weight here us'd is the Juen, which contains two Rottala's, each Rottala being One Pound weight of theirs; and Ten Junes, which make Twenty Pound of their Weight, comes to Twenty three Pound of our *Engliſh Averdupoize*, or Twenty four Pound ſometimes, as the weigher has a mind to befriend you. Indico is ſold by the Charl, which is in their Weight 150, and in ours betwixt 166 and 170 Pound. Cotton Wool is ſold by the Bahar, which is 300 Rottala's, and makes between 332 and 344 Pound *Engliſh* Weight, at Eighteen Rials *per* Bahar very good and clean. Their Meaſure of Length is call'd a Peck, and is about Three fourths of our *Engliſh* Yards.

How the Trade ſtood at *Surat* at that time.

I had alſo at this time the following Account of the ſtate of Trade at *Surat*, and the Prizes of Commodities there but a little before. Broad Cloth of Twenty three Pound, a Cloth of ſeveral colours at Twenty Mamoodies the Conido; the Conido is a meaſure of 35 Inches *Engliſh*, and the Mamoodie is in value One fifth part of a Rial of Eight. Kerſies at 84 Mamoodies the piece, which was leſs than ours coſt in *England*. Lead, the great Maund, which contains Thirty three pound *Engliſh*, at Seven and One third Mamoodies. Tin, the leſſer Maund, containing Twenty five Pound *Engliſh*, at 5 [illegible] Rials of Eight.

And at *Dabul*.

At *Dabul*, Iron went at 21 Rials the Bahar, which is about 360 pound *Engliſh* Weight. Pieces Damask'd, from Twelve to Eighteen Rials the Piece. Elephants Teeth at Sixty five Mamoodies the greater Maund. Indico of *Cirkeſa* (whereof there's three ſorts) the beſt at Fourteen Roupies the greater Maund, the ſecond ſort at Twelve, and the third at Eight; and Fourteen of theſe Roupies make about half a Rial of Eight. Indico of *Labor* (which is the beſt of all, and of which alſo there's three ſorts) the beſt at 36 Rupies, the biggeſt Maund of 55 pound, the ſecond ſort at Thirty, and the third at Twenty four Roupies. The Charges of bringing it to the Waterſide was 10 in the hundred for *Cirkeſe* Indico, and 20 in the 100 (Cuſtom) for that of *Labor*.

Auguſt. Captain *Saris* goes for *Bantam*.

Having ſeen the laſt reſult of our Affairs in the *Red-Sea*, we ſet ſail in proſecution of our *Indian* Voyage, directing our courſe firſt of all to *Bantam*. We put in by the way at *Zocotora* for a Bargain of Aloes, it being about this time of the Year that the King of that Iſland had told us he ſhould be able to furniſh us with a quantity. He held it up at a very high rate, demanding Forty Rials of Eight *per* Rintal, which is 104 pound weight, alledging that the *Portugueze* courted him to let them have the refuſal of it, and would be glad of it at that Price. We agreed with him at laſt at Thirty Rials for one parcel, and Thirty eight for another, and ſo took of him the quantity of 4067 pound, which coſt us to the value of 1418 [illegible] Rials of Eight; but we found him falſe both in his Word and Weight too, tho' we made no breach with him upon that ſcore for the ſake of future Trade.

September.

Take in Aloes at *Zocotora*.

A remarkable Phænomenon.

After we had parted from this Iſland we were one night ſurpriz'd with a ſtrange ſparkling and glaring of the Water all about us. 'Twas but juſt before ſo dark that one could not ſee half the length of the Ship any way round, and now there was ſuch a clear Skie on every ſide, as would have ſerv'd to have read by tolerably well. And this was not a ſudden flaſh of light that gave a ſhort glare, and then was gone again preſently, but it held us for a matter of half an hour ſailing; and when all came to all, and the Philoſophy of the whole Fleet was puzzl'd to find out the cauſe of it, 'twas a parcel of Cuttle Fiſh ſwiming about us that made this appearance, and were ſo kind as to afford us the Aſſiſtance of their Light in the dark Night, when the Stars denied us theirs.

The deceit of the Plats in the Poſition of Cape *Cammorin*.

When we came up with Cape *Cammorin*, upon the *Malabar* Coaſt, we found by Obſervation that it's erroneouſly placed in the common Plats, lying conſiderably more Northerly than they make it; for whereas the Latitude is generally reckoned ſix Degrees ten Minutes, we find it to be 7 Degrees 42 Minutes to the North of the Line. Beſides we had no ſight of ſeveral other Iſlands mentioned in our Plats; particularly we light of none of the *Maldives*, which are ſo very numerous, according to the vulgar Accounts, neither indeed did we deſcry any Land till we ſaw the Main of *Malabar*.

October.

Being in ſight of the Iſland of *Sumatra* (the Eaſt part of which did then bear E. N. E. 14 Leagues diſtance) and in 4 Degr. 49 Minutes South Latitude, we found a very ſtrong Current ſetting to the South ſide, which put us forcibly off from the Land.

Note of the Current near *Sumatra*.

From hence it may be proper to give this caution to thoſe that are bound for the *Streights of Sunda*, that they keep *Sumatra* aboard after they are come into 1 Degree 30 Minutes South Latitude, becauſe there the Current begins; and for diſtance, that they hold a matter of 30 Leagues off with good looking out, becauſe there are ſeveral Cayos 15 or 20 Leagues off, which by Reaſon of the Current we did not ſee.

Come to *Bantam.*

We came to an Anchor in *Bantam* Road the latter end of this Month, finding here ſeveral Ships of our own Nation, and the *Dutch's*, and more of ours every Day expected. The Arrival of all theſe Ships, and the expectation of ſo many more, made a ſtrange alteration in the Price of Commodities; thoſe in any Requeſt being hoiſted up to three times the Value of what they were ſold for but two Days before. Cloves which went but at ſixteen Rials of Eight the Peecul, were now riſen to above forty; and the Price of Pepper encreaſed in a far greater proportion; this Peecul tried by our *Engliſh* Weights, bears about 132 pound. At the time of our being here the Protector was all in all in the Country; the King tho' of Age did nothing but fill up the Throne, and enjoy his Pleaſures, committing all Buſineſs to the ſole management of the Protector.

November. Trade for Pepper.

The Main of the Buſineſs done here this Seaſon was the laying in Twelve or Fourteen thouſand Sacks of Pepper for the lading two of my Ships quickly, to be diſpatch'd from hence to *England*; and this we had at ſeveral Prices, from 160 to 125 Rials the 100 Sacks, and all of the *Chineſe* Merchants who are the great Dealers here. Beſides this, we took in 700 Sacks of the ſame Commodity for a trial how 'twould go off at *Japan*; for thither I was bound from this place, going to make the firſt Attempt at ſettling an *Engliſh* Factory upon that Iſland. One of our Nation (Mr *William Adams*) was at this time in very great Repute and Favour with the Emperour there; he had been in *Japan* ever ſince the Year 1600, and liv'd in very good Circumſtances, and from him Letters came to us at *Bantam*, giving us very great Hopes of a good Reception, and profitable Trade at that Country.

January.

Danger near *Pulo Lack.*

Currents.

My two Ships the *Hector* and the *Thomas* being ſent away laden for *England*, I weighed out of the Road for *Japan* with my biggeſt Ship the *Clove*. The very next Day a Miſfortune overtook us, that had like to have oblig'd us to put back to *Bantam* again, to the very great Prejudice of our intended Voyage. For having *Pulo Lack* on our Star-board, and paſſing within two little Iſlands that lie to the Eaſt ſide of it, we run aground, and ſtuck faſt for ſome Hours in a very forlorn caſe. The Miſchief that reduc'd us to this Diſtreſs, was a Shoal lying in that Paſſage, which has not above ſix Foot on the Top of it, nor is above half a Cable's length every way; hard aboard it there's ten Fathom, and the next caſt on ground, as we found by ſad experience. Obſerve, that to go clear of this Shoal, you muſt keep cloſe to the Iſlands and not to the Main, for that's all Shoald. In the Courſe from hence to the Iſland *Celebes*, we had the Current changing two or three ſeveral ways: Not far from the watering place call'd *Ting Ina*, which is about fourteen Leagues from *Bantam*, you ſhall find it ſetting to the E. S. E. which you muſt allow for, as you have the Wind; we had it as we ſteer'd near the Eaſt of thoſe two Iſlands, that lie over againſt the Watering place, and are about five Miles diſtance from the Point of *Jacatra*. In the Latitude ſix Degrees nine Minutes (after having paſs'd the Iſle *Pulo Labuck*) the Current run directly (at leaſt pretty near) to the Weſt ſide, and within ſight of the *Celebes* (the Eaſt part bearing Eaſt by North ſix Leagues off, and Latitude five Degrees 52 Minutes) it ſet to the North Weſt ſide.

Here we took in our Sails to keep ſhort of the Streights of *Deſalon*, and keeping our Lead all Night, we had firſt 20 Fathom, and then drove into 33 and ſo to 47 Fathom, fearing a Shoal, which lies almoſt a League from the *Celebes*, and at low Water plainly diſcovers the breach upon it.

Paſſage by the *Celebes* dangerous.

Directions to ſail there.

February.

On the *Celebes* ſide 'tis very dangerous, and full of ſunken Ground; and for that Reaſon, we haled over for *Deſalon* ſide, having for a Mark the piked Hill, which is next to the Sea ſide, and riſes up like an Iſland. When this Hill bears N. by W. then you are thwart the Eaſt end of the Shoal, and when 'tis North you are thwart the Weſt end of it, and then will the Iſland which you leave on your Star-board ſide, bear E. N. E. ſo that you may boldly ſteer out in the middle between the two Iſlands. Obſerve alſo, that the Eaſt end of *Deſalon*, ſhews like an Iſland, and will go near to deceive you till you come to it; but when once you have brought the North end of the Point to bear E. N. E. half a Point Eaſterly, then you may go ſecurely on, for you are clear of all Dangers from the aforementioned Shoal.

About four or five Leagues diſtance from *Cambine*, we found the Current carry us to the North ſide, and near the Iſland *Tingaleſſe* to the N. E. which is a near Neighbour to the conſiderable Iſle of *Botun*.

Strain of *Botun.*

Directions to paſs that Streight.

From the Eaſt Point of *Botun* the Land falls away ſuddenly, with two or three great Bays to the North Weſtwards, by which the three great Iſlands, that lie to the North ſide of *Botun*, are the Streights ſo call'd made. 'Tis requiſite to obſerve concerning theſe Streights, that the Paſſage is not above a League broad, and the entrance is of the North ſide of the Iſland, and if you come from the Weſt ſide, when you are athwart the N. W. Point, your Courſe is E. N. E. and E. by N. up to the Road, and no Danger but what you may eaſily ſee; but then you muſt leave the three Iſlands to the North ſide of you, and yet not go between any of them; and when you fall with the Weſt end of *Botun*, don't go between it and the two long Iſlands that lie off it; but leave them on your Star-board ſide, becauſe 'tis all broken Ground between them and *Botun*. But if the Wind ſerve you, then hale to the North ſide of all the Iſlands, either between *Botun* and *Cambina*, or elſe to the North ſide of that too, and ſo you may keep the Coaſt of *Celebes* ſafely enough.

Come to the *Molucca's.*

The latter end of this Month, we came up with the Iſland of *Bachig* (call'd by our *Engliſh* Sailors *Halebolin*) which is one of the *Mobucca's*, and very eaſily known by the Proſpect it yields, being a high copped round Iſland, and very different in ſhape from any other Iſlands to be ſeen thereabours. The Point of this Iſland bearing E.N.E. four Leagues of, and Latitude one Degree 16 Minutes, we found the Current ſetting N. E. and the high Land of *Machian* bearing N. by E. and Latitude 51 Minutes. We had it ſetting to the N. N. E. *Bachian* has been famous for the production of Cloves, and would ſtill have maintained it's Reputation for the ſame Commodity, did not the unhappy Commotions there diſturb the Labours and induſtrious Endeavours of the Natives.

Wars in the Iſle *Bachian.*

The ill Deſign of the *Dutch* and *Spaniards* in *Bachian.*

They are altogether by the Ears in a Civil War; and whilſt they are forming Plots and Stratagems to run down and deſtroy one another, the Clove-Tree ſtands neglected, and the noble Spice rots upon the Ground. The *Dutch* and the *Spaniards* (who both make their Pretentions to this place) ſtand by and ſee thoſe Contentions of the *Bachians* with no ſmall Pleaſure; and if they did not at firſt make the quarrel between them, yet they do all they can to foment and encreaſe it. They ſit ſecure in their ſtrong Forts, diverting themſelves with the Proſpect of the Spoil theſe People make of one another; and for fear their Paſſions ſhould cool, and the raging Fit go off, they loo them on with all the eagerneſs in the World, and continually inſpire them with freſh Jealouſies and Suſpicions, ſo that the Feud holds up to its height, and muſt be immortal while theſe Incendiaries are amongſt them, at leaſt while there is a race of People left that will be ſo fooliſh as to hearken to their Suggeſtions. Theſe Foreigners are too cunning to meddle at all in the Matter, but think it the better way to leave them to work it out by themſelves; that is, they have too little Honeſty and good Nature to do any thing towards the making of Peace, and bringing the contending Parties to a good underſtanding, at leaſt by affording a juſt Aſſiſtance to the weaker and injured ſide, to help to bring the Aggreſſours to reaſonable Terms: this won't anſwer their Deſign, for the inverted Sence of the Proverb is true as well as the direct, when honeſt People fall together by the Ears, the Knaves that ſtand by lay hold of their Right; let the Natives murder and diſpatch one another, and then the Iſland is all their own, without any farther coſt or trouble. The poor Natives groan under theſe Calamities, and would be heartily glad to be rid of the troubleſome Company of the *Dutch*, as they freely confeſt to me, wiſhing that the *Engliſh* were planted here in their room. The King would fain have come aboard the Ship, but the *Dutch* oblig'd him to forbear; and the People would have ſold us Cloves too, but the terrour of the *Dutch* kept them in ſuch awe, that they declar'd 'twas a hazarding of their Lives to do it.

The *Dutch* Force ſmall in *Bachian.*

And yet the Strength of the *Dutch* is inconſiderable there too, if they did not buſie themſelves, as I did not think they would in matters of this nature; for according to the Report of their Captain himſelf, their Fort (tho' ſtrong and ſubſtantially built) is not furniſhed with above thirteen Pieces of Ordnance, and thirty Souldiers, a trifling Power to ſtrike ſuch a Terrour into a whole Country; but the great Guns are the main Buſineſs, and a ſmall number of Men with a Train of Artillery on their ſide, may command a vaſt multitude furniſh'd at no better rate than theſe *Indians* are. But tis to be hoped that the *Dutch* will be ſtronger in time, and have a Troop of Souldiers of their own breed to Fight the *Bachians*, for they have taken care to furniſh their Fort well with Women, ſome of their own Country, and thoſe of ſo huge and large a ſize, that they were a good Garriſon themſelves; fit to defend the Fort without any more Aſſiſtance, and certainly cannot fail of bringing very luſty Souldiers into the World.

This Band of *Amazons* follow'd the *Dutch* Captain to our Ship, and preſently falling to the Victuals with the common Sailors, gave ſo good Proof of their Ability that way, that if it be anſwerable other ways, the Men may e'en go to ſleep, and turn over the Fort to the Care of theſe Females; one of which is almoſt big enough to ſtop up any Breach an Adverſary ſhou'd make in the mean time.

* The Road by the Fort is call'd the Road of *Amaſane.*

The Town of *Bachan* ſtands hard by the Fort, and any that ſhou'd have a mind to come to Anchor out of the Command of the Guns, may do it on the Eaſt-ſide of the Bay, in twelve, ſixteen, and twenty Fathom, hard Coral Ground, at the opening or going out near a little Iſland, taking care of a Shoal that lies to the Southward of the Fort, about three Cables length, in Lat. 50 Min.

March.

The Variation of the Compaſs here, is 4 Degr. 48 Min. Eaſterly.

Go for *Machian.*

The State of this Iſland not allowing any Trade, we ſail'd away for *Machian*, another of the *Molucca's*; the rather, being invited thereto by a *Moor* of Quality in this place, who promis'd good ſtore of Cloves there, and furniſh'd us with Pilots for the Voyage.

The Streights in the paſſage to *Machian.*

The Proſpects of *Machian* and *Tydore*, are ſomething like that of *Bachian*, being high copp'd Iſlands, only *Tydore* is not ſo high Land as that of *Machian* ; it is ſhut into the Point of the Weſtern-ſide of the outwardmoſt Iſle of the three that lie in the going out, two of them being without the Narrow or Streight, and the Third makes the Streights it ſelf, tho' there are more Iſlands on the Eaſtern-ſide.

The Iſland call'd *Tanally Bachar*, is one of thoſe that contributes to the making of the Streights, on the Southern-part of which is a Shoal reaching over to the Southern-part of *Bachian*, having three Fathom on the Skirts, and is dry at low Water.

We reckon it five Leagues from the Streights of *Narrorat*, and fourteen from the Road of *Amaſane* to this Paſſage. About the little Iſland that lies in the Streight's Mouth, you have Anchoring from eighteen Fathom and upwards: And a touch both of a Southerly and a Northerly Current, before you paſs the Streights, the latter eſpecially, towards the Streights themſelves. We found the Sound clear of all Iſlands between *Bachian* and *Gilolo*, S. E. and N. W. and 'tis all very broad; but there are Iſlands lying on the Starboard-ſide, as you go to the Northwards.

The Channel between *Bachian*, *Machian*, and *Gilolo*, lies N. by W. and S. by E. and is ſix Leagues over in the narroweſt part.

Machian wrong plac'd

Paſſing between *Gilolo* and *Caia*, we had by Obſervation North Lat. 17 Min. ſo that *Machian* is not truly plac'd in the Plats, ſince the Equator there cuts it in the middle, and we find it to lie five Leagues more Northerly.

The Variation of the Compaſs where this Obſervation was made, was 4 Degr. 58 Min. Eaſterly, and a Current in the ſame place ſetting to the Southward.

Tabanee Road very good.

About the middle of this Month, we came to an Anchor in the Road of *Pelebero*, hard by the Town of *Tabanee*, in *Machian*, where there's the beſt Riding of the whole Iſland (tho' very near the Shore) and free from all danger.

The ſame Day we came, we took in a quantity of Cloves, the Price at 60 Rials of Eight *per* Bahar, the Bahar containing 200 Cattees, and each Cattee amounting to the Value of three Pound five Ounces *Engliſh*.

The *Dutch* angry at their coming

The *Dutch* were highly diſguſted at our coming hither, and as inquiſitive to know who directed us to this place; threatning all with Plagues and Death, that had been concern'd in the matter, if they cou'd find them out; and particularly, that they wou'd treat thoſe with the utmoſt Severity, that ſhou'd offer to bring any Spice to us. They pretended to have conquer'd this Country by juſt Arms, and to have a good and lawful Title to it; and therefore told us we were injurious to come and pretend here, where they had ſo fairly planted themſelves.

The Natives forward to Trade.

But as theſe ſpecious Pretences wou'd never prove them to have a juſt and ſufficient Title to this Country, or ſuch a Property in it as to exclude all others from Trade, and conſequently were little regarded by us; ſo all their Threatnings were as little valued by the Natives: They found us to be their Friends, Perſons that came not to attempt any thing to the prejudice of their rightful Liberties and Privileges, but only to eſtabliſh a Commerce to the mutual advantage of both Parties; and therefore they wou'd not be curb'd by the *Dutch*, but declar'd they wou'd come aboard us, and bring Spice, notwithſtanding their imperious Orders to the contrary. And they were as good as their Word, maintaining the Trade with us, in ſpite of the inſolent *Hollander*; we barter'd *Cambaya* Cloth for Cloves with them, and ſome we ſold for ready Money.

But the induſtrious Malice of our Adverſaries quickly oppos'd it ſelf by more effectual Methods to overturn this good Correſpondence; and the Natives, who ſaw it, inform'd us of it, and at the ſame time repin'd at their ill uſage, and that they were not able to relieve themſelves or us.

The Methods took by the *Dutch*, to prevent their Trade at *Machian.*

The *Dutch*, it ſeems, got an Order from the Prince of *Ternate*, commanding all the Iſlanders upon pain of Death to forbear bringing any Cloves to us; and to make ſure on't, they guarded all the Avenues and Paſſes of the Iſland, by which 'twas poſſible that any Communication ſhou'd be held between us and the Shoar. They drein'd all their Forts and Garriſons, and brought out their whole Power to watch upon the Coaſts, and attend the Motions of the Natives, and our Ships; nay, more than that, they ſent to *Tydore* for a couple of their great Ships to come and beat us out of the Road: And now the Natives (who knew no better) expected to ſee us driven away with a Vengeance.

In the mean time the Prince of *Ternate* (whom I had before endeavour'd to qualifie by a good Preſent) came to give me a Viſit a Shipboard, and there in the midſt of the good Entertainment, very frankly promis'd to ſtand our Friend in the matter of Trade, to revoke that invidious Order the *Dutch* had extorted from him to our prejudice, and give the Natives a full Licenſe to bring their Spice to us.

April.
A. D. 1613.
Go out of *Pelabery* Road

But this Prince (as the Event proved) was afraid to diſpleaſe the *Dutch*, and durſt not be honeſt and true to his Word; tho' to do him Juſtice, I believe he had a mind to be ſo. The Coaſts were all faſt lock'd up; and the Spies upon the Sea ſo diligent and curious in their Watch, that all the Arts that cou'd be uſed to deceive the quick-ſighted Jealouſie of our Adverſaries, were to no purpoſe. The *Dutch* Ships kept cloſe to us, but made no offer to aſſault us; and ſince to have gotten the Trade, we muſt firſt have ſunk them at Sea, and then have beat all their Forces at Land too (which if we cou'd have effected, 'twas more Violence than we intended) the matter being thus, we left the *Dutch* to enjoy their Repoſe here, and ſail'd away out of the Road.

A Trade as they go away

We obſerv'd the Latitude in this Road of *Pelabery*, to be 26 Min. to the Northward, and the Variation of the Compaſs 3 Degr. 28 Min. But good Luck, which was not over ready to come to us while we ſtaid there, began to follow us when we went away: For as we ſail'd along, the Natives (who watch'd for an Opportunity as heartily as the *Dutch*) having their Cloves ready, whipp'd them aboard in a trice; and they held doing ſo for a pretty while, as faſt as ever we cou'd weigh and pay for them. The *Dutch* followed, and perhaps were ſenſible of this, but were not able to prevent it; for we were got ſo far to the Windwards of them, that the Bargains were all made and concluded, before they cou'd come to the ſpoiling of them. We bought thus at parting a conſiderable quantity of Spice, and had done a great deal more, if the People had not been frighted at the ſight of a *Dutch* Veſſel paſſing by: However, 'twas pretty well, and ſo much the better, in that it was wreſted out of the Hands of thoſe that would unjuſtly have engroſſed the whole Commodity to themſelves.

We directed our Courſe now to the Iſle of *Tydore*, the two *Dutch* Ships ſtill plying after us.

Dangerous Shoal.

About the Iſles *Motiere*, *Machian*, and *Marre*, the paſſage between, or on any ſide, is free from all danger; but between *Marre* and *Gilolo*, you have a dangerous Shoal ſtretching N. E. and S. W. which requires the Pilot to look well about him: The Water looks whitiſh about it, and when 'tis Flood, the Shoal is even with the Water, but at Ebb 'tis eaſie to be diſcern'd; and the beſt way to eſcape it, is to keep cloſe to the Iſlands: It ebbs about this place ſix Foot, and the Tide ſets ſix Hours to the Northward, and as many to the Southward.

Come to *Tydore.*

The *Spaniards* Fort at *Tydore*, ſtands on the Eaſt-ſide of the Iſland, all whereabouts the Water is very deep, and no good Anchoring, tho' there is a particular place about 1 ½ League from the Fort, where a Ship may ride well enough. At our firſt coming within ſight and reach of the Fort, we were welcom'd with a Shot or two made at us; which tho' it did us no harm, yet obliged us to be upon our Guard. The *Spaniards* it ſeems miſtook us for *Flemings*, and notwithſtanding our *Engliſh* Colours wou'd not believe the contrary, till they had ſent out a Boat to parley with us, and ſatisfie themſelves from our own Mouths.

The Policy of the *Dutch.*

And the Reaſon of this was, becauſe the *Dutch* had ſometimes cheated them, by hanging out *Engliſh* Colours inſtead of their own, and ſo had got by the Fort under the Protection of thoſe Colours, which otherwiſe with their own they wou'd not have done: For the *Spaniards* wou'd beat their Ships in pieces, before they'd let them paſs here.

The *Spaniſh* Friendly Carriage in appearance.

After this diſcovery who we were, the *Spaniards* were extreamly civil to us; the Captain-General ſent his Pilot-Major to bid us Welcome, and bring the Ship into the beſt Anchoring-place; they ſent us Preſents, and came to Treats a Shipboard; and there was ſuch a reciprocation of Kindneſſes betwixt us, as if our two Nations had never fallen out, and we had been all of a piece, both in our Civil and Religious Intereſts.

They promis'd moreover, to diſpatch Letters to the Maſter de Camp at *Ternate*, for his Orders to Trade with us, and earneſtly deſired my ſtay till the return of the Meſſengers; and when News came that thoſe Orders were arrived at *Tydore*, the Captain-General, and another Great Officer, ſent word, They wou'd come aboard me the next Day to do Buſineſs. We made ready to receive them, and by the noiſe of the great Guns, thought verily they had been coming; when we found that ſhooting to be for the Arrival of the Warlike Prince of *Tydore*, who was come home in Triumph with the Heads of a hundred *Ternates*, and amongſt them the Head of the Prince of *Ternate*, whom we had careſs'd at *Machian*.

The Slaughter of the *Ternatees* by the Prince of *Tydore*.

This Prince of *Ternate* was call'd over to *Machian* by the *Dutch*, on purpoſe to keep the Country People from ſelling their Cloves to us; and the *Tydorians* who attended their Motions in going back, and lay in Ambuſh for them, cunningly drew them into their Snares, and making a ſudden and furious Aſſault upon them, cut them all off to the number of 160 Men: The young Prince himſelf underwent the Fate of War amongſt the reſt, and his Head was brought in a very triumphant manner, for a Preſent to his Siſter, Wife to the Conquerour, Prince of *Tydore*.

Beſides this, there were two other Royal Victims which fell at that time, by the raging Sword of the *Tydorian*, the younger Brother of that Prince of *Ternate*, and the King of *Gilolo*: The *Dutch* have often felt the Effects of the Force and Courage of this Prince, and 'twas but a little before this, that he ſurpriz'd and took one of their Men of War.

We were oblig'd now to keep double Watch and Ward, and be in all the readineſs imaginable to withſtand an Aſſault, having this daring Prince ſo near us: Beſides the *Spaniards* increas'd their Forces, and ſeem'd to be providing for ſome attempt; all which appear'd very doubtful and ſuſpicious, and were Symptoms of ſo ill and threatning an Aſpect, that I reſolv'd to prevent the Danger that might follow, by a ſudden Remove away from them. 'Tis true, the Prince of *Tydore* promiſed a good parcel of Cloves, if we ſtaid a little while longer; but thoſe Cloves might poſſibly have coſt us too dear; and ſuch a Deſperado as he, with the aſſiſtance of the *Spaniards*, might have ſold us a very bad Bargain; upon which ſcore we left him to ſell his Cloves to other Chapmen, being reſolved to take none upon thoſe Terms.

State of Trade, &c. at the *Molucca's*.

It may not be amiſs here, before we take our leave of theſe *Molucca* Iſles, to give ſome Account of the Original of the *European* Intereſt there, the Fortune of the Country under its ſeveral Maſters, and the Civil Circumſtances of it, as to Trade and Commerce, at the time of our being there.

The * *Portugueze*, we know, were the firſt *Europeans* that found the way to theſe Iſlands; at leaſt, that open'd a Correſpondence with them: When they came hither, they found a dreadful War commenc'd between the Kings of *Ternate* and *Tydore*. Theſe two Princes had drawn their Swords, and the whole Intereſt of the *Molucca's* being divided between them, either as their Subjects or Confederates, all the other Iſlands were up in Arms, and became Seconds in the ſame Quarrel. The *Portugueze*, for the better ſettling of themſelves, joyn'd themſelves to neither Party, but pretended to be Friends to both; and conſequently having no Work upon their Hands, while the others fought, they fell to building of Forts and Caſtles upon both the Iſlands of *Ternate*, and *Tydore*: They left the two Kings to diſpute which ſhou'd be Maſter of the others Country; and in the mean time took care, that neither of them ſhou'd be ſo, or rather to make both their Vaſſals. By this means they got the whole Clove-Trade into their hands; the *Molucca's* were abſolutely at their Command and endured the Yoke of their domineering Power, till the Year 1605.

* See the Circum-Navigators, *l.* 1. *c.* 2.

Portugueze, *Spaniſh*, and *Dutch*, Poſſeſſors of the *Molucca's*.

But the *Dutch* (who were charm'd with ſuch a Proſpect as the *Molucca's* yielded) then took their Turn for a Taſte of the Profit and Pleaſure of them, drove out the *Portugueze* by main Force, and planted themſelves in their room. But they were ſcarcely well-ſeated here, before the *Spaniards* came to deſire them to remove, and by the ſame Law that they ſucceeded the *Portugueze*, they forced themſelves to be the *Dutch*'s Succeſſors, in the enjoyment of thoſe Iſlands.

The *Spaniards* were gotten into the *Philippine* Iſlands at the ſame time, that the *Portugueze* were at the *Molucca's*, but they wou'd not pretend to diſplace them, being not only Neighbours in Country, but Brethren in Religion, and Sons of the ſame Holy Church together with themſelves: But the great thing was, that the Pope had commanded them not to meddle; the Church gave Orders to the contrary; otherwiſe, if the Mother had not interpoſed her Authority, 'tis likely enough that theſe good Children of hers might have ſquabbled, and gone together by the Ears, about ſo fine a Toy as the *Molucca's* were. Whereas the *Dutch* had hardly time to look about them, before the Catholicks came from the *Philippines* to drive them out; they had no Pope of their ſide, no Intereſt in the Motherly Care and Protection of the Church; and therefore as a Spurious and Baſtardly Race, were to be expell'd, and not ſuffer'd to ſhare the Inheritance of thoſe parts with her own Genuine Off-ſpring. However, the *Dutch* (who value not the Rattling of the Keys, the Snarling of the Pope, nor the Curſes of the Church; that fear no Storms but thoſe at Sea, nor no Excommunication but that from a good Trade) were ſome time after that even with them; working themſelves ſo effectually into theſe Iſlands, that all the Endeavours of the *Spaniards* have not been able to remove them ſince. They have Forts more or leſs upon every one of the Iſlands, and ſome of them ſtrong and well furniſh'd too; ſo that now they ſeem to be ſo well fix'd, that unleſs the Church can drive them out by her Prayers, and other Spiritual Weapons, for all that appears, they are like to ſtay there.

The Quantities of Cloves produced by the ſeveral Iſles.

Of all theſe Iſlands, *Machian* is the moſt rich and fruitful of Cloves, and yields in the Year of the great Monſon (as they call it) above 1800 Bahars. *Ternate* yields 1000; *Tydore* 900; *Bachian* 300; *Motiere* 600; *Meau* 50; *Batta China*, or *Gilolo*, 35. Theſe are the Proportions, according to the Accounts of the Inhabitants, one Year with another. Every Third Year is conſiderably more fruitful than the two foregoing, and this is call'd the Year of the great Monſon, when Nature ſeldom fails by an extravagant Bounty, to make amends for her Sparingneſs at another time.

The *Dutch* pretend a Contract of perpetual Obligation with the Natives for all their Cloves, at the Rate of fifty Rials of Eight *per* Bahar: As for our parts, we were willing to give ſixty, in order to the having a quick Lading; and that increaſe of the Price of 10 Rials in the Bahar, made the People ſo ready to furniſh us, that if the *Dutch* had not perfectly ſcar'd them, and kept them in by force, I ſhou'd have had my full Lading in one Month's time.

Our Trade was moſtly by way of Barter with them, and that chiefly of your Cloths of *Cambaya*, and *Coromandel*. The Sorts requeſted, and the Prices they went at, were as follows:

The Commodities vended at the *Molucca's*.

The Candakeens of *Barochie*, for ſix Cattees of Cloves.
The Candakeens Papang, or flat, at three Cattees.
Selas, or ſmall Baſtas, ſeven and eight.
Your Patachere Malayo, ſixteeen.
Dragam Chere Malayo, the ſame.
Fine Caſſas, at twelve.
Courſe of that kind, eight.
Betellias, or Tancoulos red, forty four, and forty eight.
Saraſſas-chere Malayo, forty eight and fifty.
Sarampouri, thirty.
Chellos, Tapſiels, and Matafons, twenty and twenty four.
White Caſſas, or Tancoulos, forty and forty four.
Drougerius, fine of that kind, twelve.
Courſe of the ſame, eight and ten.
Pouti Caſtella, ten.
Ballachios, the fineſt, thirty.
Pattachere Malayo of two Fathoms, eight and ten.
Great Potas, or long, four Fathom, ſixteen.
Parcallas white, twelve.
Salalos Ytam, twelve and fourteen.
Turias and Tappe Turias at one and two.
Patolas, of two Fathoms, fifty and ſixty.
Thoſe of four and one Fathom, in like manner.

Rice goes here at the Rate of one Rial of Eight for twenty eight Pound.

Sagu, which is a Root they make their Bread of, and is the chiefeſt Food through the Country, is ſold in Bunches, and is worth one fourth of a Rial *per* Bunch.

And to conclude, all Velvets, Sattens, Taffata's, *China* Stuffs and Silks, are in very great requeſt at theſe Iſlands.

Having ſtaid now ſome time at *Tydore* to no purpoſe, and our longer ſtay there being likely to be attended with

more

Go from the *Molucca's.*

more Danger than Profit, we went on with our Voyage, calling in at *Ternate* by the way ; where we found as little good to be done as at *Tydore.*

Between the *Dutch* and the *Spaniards*, all thoſe Iſlands are ſo managed, that they themſelves alone have the entire advantage of them ; they devour all, and then are ſo ſpiteful, that they wou'd rather chuſe to ſee the Commodities ſpoil'd and confounded, (as the Spice is now by their means partly) than ſuffer any others to take them at a good Price.

Doy, a great Iſland, and its Products.

Sailing along from *Ternate*, we had an Eaſterly Current continually, till we came up with the great Iſland *Doy* ; and all about the Northern Point of that Iſland, the Current ſet very ſtrongly the ſame way. We found a very large Bay here, where there's Anchoring good enough, but pretty deep ; and off the Northern Point lies a great Shoal half a League into the Sea. We found no People upon this Iſland, but other Creatures in ſome plenty, which we had more occaſion for at that time : There were a very large ſort of Swine and Deer, Pheaſants, Woodcocks, and Wood-pigeons, the latter very plump, and large bodied like Hens. It yields likewiſe good ſtore of Cokers, Penangs, Serie, and Palmita's ; and the tops of theſe Palmita-Trees, dreſs'd with Beef, are as good and ſweet as any Cabbage in the World : And that nothing might be wanting to our complete Refreſhment at this place, we had Water and Wood enough, not only for the Supply of a preſent Neceſſity, but to make what Proviſion we pleas'd for future Wants.

May.

Tho' no People appear'd, yet upon enquiry aſhore, we found the Ruines of Houſes, and certain old Pieces of Houſhold-ſtuff ; ſo that 'tis certain the Iſland had been inhabited, as it very well deſerv'd to be, tho' the People, by ſome Calamity or other, were deſtroy'd or driven away from their Habitations.

This *Doy* is the North Eaſtermoſt Iſland of *Gilolo*, or *Battachina* ; the Latitude here is 2 Degr. 35 Min. N. and the Variation 5 Degr. 20 Min. Eaſterly. We refreſh'd at this place for the better part of a Month, and then purſued our Voyage to *Japan.*

June. Iſles *Dos Reyes Magos.*

Having paſs'd the Tropick of *Cancer*, we had ſight of the Iſles *Dos Reyes Magos*, which lie along N. E. and S.W. They are ſmall Iſlands, and at leaſt ten or eleven in number, with broken Ground and Breaches, reaching over to each Iſland, ſo that we cou'd diſcern no Paſſage to the Weſtward.

Ximo Iſle, or *Maſhma.*

Japoneſe Fiſher-boats.

We had ſight of various other Iſlands (in our paſſage from theſe) which were wholly unknown to us ; but the next Land that came in view, that we were certain of, was the great Iſland *Ximo*, to the Southward of *Japan*, and a part of that Empire, call'd by the Inhabitants *Maſhma.* Here ſome of the Natives that were abroad a Fiſhing came up to us with their Boats, in the Contrivance of which we found ſome Curioſity worth our Obſervation. They were about five Tun a piece Burthen, fitted with one Sail, which ſtood like that of a Skiff, and ſkull'd with four Oars of a ſide : Their Oars reſted upon a Pin faſtned on the top of the Boat's ſide, the Head of which Pin was ſo let into the middle-part of the Oar, that the Oar hung in an exact poize, giving thereby much leſs trouble to the Rower in the management of it, than otherwiſe it muſt be. Beſides, the Rowers perform their Work ſtanding, as ours do ſitting, and ſo take up abundantly the leſs room in the Boat ; and as they take up leſs room, ſo they do leſs time too, for they row at a far ſwifter rate than we can pretend to. We agreed with ſome of theſe to Pilot us to *Firando* ; which they very willingly agreed to, and as honeſtly perform'd, bringing us ſafe into the Road, before the middle of this Month.

Arrival at *Firando.*

The King of *Firando* comes aboard

For our firſt Welcome hither, we had a Viſit a Shipboard from Perſons of no leſs Figure than the Old and the Young King of this Iſland of *Firando* ; which is one of the Particulars of the large Empire of *Japan.* The two Kings came attended with a great ſhew of Boats and Gallies, which when they were near us, fell back, and made way, in a very decent manner, for the two principal Gallies to come up to the Ship.

Their Habit.

They were both of them dreſs'd in Silken Gowns girt to 'em, with a fine Shirt, and a Pair of Flaxen Breeches next to their Bodies ; they had no Stockins on, but a ſort of Shooes or Sandals ; the forepart of their Heads very cloſe ſhaven, and their Hair behind long, and tied up in a Knot, which was all that part had either for Ornament or Defence, they wearing nothing of Hats, Caps, or Turbants, as other People do. They had each of them two Cattans (or Swords of that Country) girt by their ſides, the one of half a Yard, the other a quarter long ; a deſperate kind of Weapon, and nothing inferiour to the *Indian* Criſes, or *Turkiſh* Scimitars.

The manner of Saluting Strangers in *Japan.*

Their manner of Salutation was thus : Firſt they put off their Shooes, then clapping their Right-hand within the Left, they put them down towards their Knees, and ſo in that ſtooping poſture they waved their Bodies, ſideling to and fro, inclining this way and that way alternately, and all the while crying out, *Augh, Augh*, which is a Word of Complement and Welcome amongſt them.

They were very highly pleas'd with the Entertainment we gave them, and our *Engliſh* Muſick made no ſmall part of their Diverſion and Pleaſure a Shipboard ; they made no ſcruple of promiſing all the Encouragement and Kindneſs that Country cou'd afford us, eſpecially upon the preſenting of our King's Letters, which they receiv'd with a wonderful Joy and Satisfaction. This Letter the King wou'd not pretend to open, till he had ſent for *Auge* (as he call'd him) to interpret it to him : This *Auge* ſignifies in their Language a *Pilot* ; and the Perſon intended by it was no other than Mr. *Adams*, our Country-man, and Friend, and at this time a Man of no little Note and Significancy in *Japan.* A Diſpatch was ſent away immediately for him ; as likewiſe to the Great Emperour up in the Country, to give him Notice of our Arrival and Buſineſs.

The Nobility come and bring them Preſents.

After theſe two Great Perſonages had been with us, all the Lords and Great Men came aboard us in a full Body ; they came with ſuch a Train, that we hardly knew where to beſtow them ; they made a perfect Crowd, and there was ſcarce any ſtirring to and fro in the Ship, for Noblemen and their Attendants. But they were ſo far from coming to ſpend upon, or be chargeable to us, that they brought their own Entertainment along with them, (at leaſt as much as it was worth) every Noble-man made his Preſent, ſome in Veniſon, ſome in Wild-Fowl, others in Fiſh, Fruits, or ſomething or other very acceptable and good. They mightily admired the Structure and Contrivance of the Ship, view'd it in all its parts, and ſurvey'd it from one end to the other, with ſo much Attention and Curioſity, that we thought they wou'd never have had enough of the ſight.

Multitudes of People come to ſee them.

But we had more trouble with the common People, who were our next Viſitants, and quickly ſupplied the place of the Lords, when once they were gone. There was no poſſible keeping of them away, the Ship was ſuch a Wonder to them : And when we were as full as ever we cou'd ſtand wedged by one another, the reſt contented themſelves with gazing upon the Ship out of their Boats ; ſome admired the Head, and ſome the Stern, and others the Tackling ; and at the ſame time crowded ſo thick about her, that ſhe cou'd no more ſtir for Boats, than we cou'd that were in her for Swarms of People. In ſhort, I believe, if the Ship had been big enough, the whole Nation wou'd have come aboard at once ; and as it was, if the King's Orders had not prevented them, they wou'd certainly have taken their Turns all round the Country, and never left till every Body had ſeen it. 'Tis true, the People were very civil, and far from offering any thing of Rudeneſs or Violence; they pretended to no more than a little ſtaring and peeping about ; but that Curioſity of theirs was ſo unwearied, and grew ſo troubleſome to us, that we were forc'd to deſire the Preſence of an Officer of the King's, as well to prevent any Diſorder that might happen in ſuch a promiſcuous Multitude, as to give us a little Reſpite from theſe tireſome Viſits.

I can't but take Notice of an odd Miſtake, in a matter of Devotion, made by ſome of the *Japoneſe* Gentlewomen, whom I admitted into my Cabin. Theſe were ſome whom the *Portugueſe Jeſuits* had been at work upon, and had receiv'd from them ſome little Matters of Chriſtianity, about as much as the ſaying of a few Gibberiſh Prayers, or the cringing before an Image or Picture might come to.

The Miſtake of the *Japan* Chriſtians.

The good Women being in the Cabin, chanc'd to caſt their Eyes upon a Picture of *Venus* and *Cupid* that hung there ; at which ſight they were immediately ſeiz'd with a Fit of Devotion, and clapp'd upon their Knees without any more adoe, tumbling out all the Religion they had learn'd of the Fathers ; and very zealous they were in their Addreſſes to the two modeſt Deities there painted before them. The Buſineſs was, they miſtook this Pair for the Bleſſed Virgin *Mary* and her Son, whom the Jeſuits had given them ſo very ſlender an Account of, that they knew no difference between them, and *Cupid* and *Venus.* A very ſtrange thing, that the Reverend Planters of Chriſtianity in theſe Parts, which make two thirds of the Religion they teach, to conſiſt in a Concern with Pictures, ſhou'd do that Work ſo ſleeveleſly : That they ſhou'd not make their Converts perfect in ſuch an important Point, as knowing the Picture of the Bleſſed Virgin, eſpecially from that of a lewd Strumpet, that's always drawn with an Air of Looſeneſs and Immodeſty, and plainly diſcovers her ſelf at the firſt Glance : 'Tis to be fear'd, ſuch *Japoneſe* Chriſtians as theſe, are no profound Scholars in the Doctrines of Religion, when they han't learn'd the Introductory Leſſon of Pictures; and that the Jeſuits, that have not ſhewn them the difference between *Venus* and the Virgin *Mary*, han't labour'd very hard at teaching them their Catechiſms.

The King's Women, and their Skill in Muſick.

Quickly after the King came aboard again, and was ſo complaiſant and free, as to bring ſome of his Miſtreſſes, and Ladies of Pleaſure along with him: An Argument of the very great difference between the free, open, and jolly Temper of theſe *Japoneſe*, and that ſour, moroſe, and jealous Diſpoſition, that prevails all over the *Mahometan* World; where the Women are cloiſter'd up in Seraglio's, and live like ſo many Priſoners of State, inviſible to all Human Eyes, except thoſe of a few Eunuchs, and their Paramours. Theſe Ladies had, all of them, very good Complexions, comely and graceful Features, and extreamly well Carriag'd; a nice Judge of Beauty might have ſaid, they were defective in Stature, and a ſize too low, and perhaps wanted Bluſh in their Faces; yet their other Graces excuſed well enough their want of height; and as for Colour, they fetch'd in aſſiſtance from Art, and painted themſelves, ſince Nature had not done it.

Their Habit was Silken Gowns, girt cloſe about them; no Stockins, but a ſort of Buskins bound with a Ribbond about their Inſtep; their Hair, which was very black and long, handſomely tied up upon the Crown of their Heads, but no where ſhaven as the Mens was.

They ſung very finely, and play'd upon ſeveral ſorts of Inſtruments; one of which was very much like our Lute in the ſhape of it, and fretted like that, only longer in the Neck, and had but four Strings, which were not Wire neither, but Gut-ſtrings; and then in their Play they don't ſound the Inſtrument with their Fingers, but touch the Strings with a little piece of Ivory, as we do when we play upon a Cittern with a Quill. They have their Songs for Vocal Muſick, and their Leſſons for Inſtrumental, orderly prick'd down in their Muſick-Books, as we have; and thoſe Books have the Diviſions of Lines and Spaces for the ſeveral Notes, much after the rate of ours, tho' what particular and leſs material Differences there may be between the Muſick of this Country, and ours, I can't pretend to tell.

The King having invited us to come aſhore, and fix upon a Houſe for the Entertainment of our ſelves and our Goods, we went to do that piece of neceſſary Buſineſs, as alſo to pay a reſpectful Viſit to the King himſelf, who had made us ſo many, and that in ſo familiar a manner; beſides, we had the very good Errand of delivering a Preſent from our King to him, which was of the Value of about 140 *l.* This was taken with extream kindneſs, and a Noble Feaſt (after the *Japan* manner) was made, to expreſs how Welcome the Bringers of it were.

Goes aſhore to Viſit the K. of *Firando*.

They ſit at Meat in the ſame poſture that moſt of the Eaſtern Nations do, croſs-legg'd, upon rich Carpets and Mats; and I think they are as good Drinkers as moſt of the Eaſtern Nations too, at leaſt they'll do it when a Health is call'd: The Old King, notwithſtanding his Age, turn'd off his Cup (that held near a Quart) of Spirits diſtill'd from Rice, every whit as ſtrong as our *Aquæ Vitæ*, and this without ſtopping till he came to the bottom; and all the *Japoneſe* Lords there preſent did the ſame; and I my ſelf, for Company, was obliged to do the like, it being a Health to the King of *England*.

July. How Matters of Trade went at *Firando*; with their Meaſures and Weights, &c.

Having a Houſe now agreed upon and provided for us, we brought part of our Effects aſhore, and attended the Beginnings of a Trade. At our coming hither, we found Broad-Cloths of fifteen or ſixteen Pound a Cloth, to be ſold by the *Dutch*, in *Firando*, at forty eight Rials of Eight, which is eight Pound Sterling the Matt, that being two Yards and a quarter: But we deſirous to keep up the Price of our Cloth, and finding the *Dutch* had good ſtore of them, came to this Agreement with them, that we wou'd of both ſides ſet Rates upon the Cloths we had, and be punctual in not ſelling any under the Prices determin'd by us.

Ill Dealing of the *Dutch*.

But they very eaſily broke the Bonds of this Agreement, and preſently ſhipp'd off great Quantities of Cloths for ſeveral Iſlands thereabouts, ſetting them at baſe low Prices, for the more ſpeedy Vent of their own, and glutting the places before ours came.

Your *Bantam* Pepper ungarbled, which coſt at *Bantam* 1 ¼ of a Rial of Eight *per* Sack, was worth here at our coming ten Tayes the Pecul, which is a hundred Cattees, and makes about 130 *l.* *Engliſh*; and the Taye is 5 *s.* Sterling. A Rial of Eight in ordinary Payment, goes but for ſeven of their Maſſes, which amounts to about 3 *s.* 6 *d.* in our Money. Tin went at thirty Tayes the Pecul, Elephants Teeth at eighty, Iron caſt Pieces at ſix, Powder at twenty three, Aloes Succotrina at ſix Tayes the Cattee, Fowling-pieces at twenty Tayes a-piece, Callicoes, and your *Cormandel* and *Guzurat* Commodities, at uncertain Prices, as they were in goodneſs.

At the Iſle *Maſhma* (or *Ximo*) there ſeem'd to be a good Vent for moſt of the Commodities we generally bring into theſe parts; tho' 'twas not ſo much upon our own Experience, as that of the *Dutch*, we came to underſtand this: For they did all they cou'd to conceal the Trade at that place from us, and wou'd not be known to have ſold a Penny-worth of Goods there: But we had Notice, that they did not only make a good Market there, but return'd alſo good ſtore of Bars of Silver; which they endeavour'd to keep as ſecret as they cou'd. And they were pleas'd too, to uſe that cunning Fetch in theſe parts, which they have done in ſeveral other parts of the World, for their own advantage, but not at all to ours; and that is, to call themſelves *Engliſh-men*; expecting more Reſpect, and better Treatment abroad under that Name, than otherwiſe as *Dutch-men* they cou'd ever pretend to.

Now 'tis odd, that any People ſhou'd behave themſelves ſo, as to be aſham'd of owning their own Country, leaſt it ſhou'd be ſaid that Country yields a Pack of Knaves; but 'tis much worſe, that another Country ſhou'd be ſtigmatiz'd, and lie under a Diſreputation for it, that *Dutch-men* ſhou'd do diſcommendable things, and *Engliſh-men* bear all the blame.

The Reports of the Jeſuits concerning the *Engliſh* in *Japan*.

But the *Engliſh* Name has been much more ſullied and blacken'd by the ſcandalous Reports of the *Portugueſe* Jeſuits; the *Japoneſe* knew us long before we came hither; but 'twas as a parcel of Pyrates and Rovers, that lived only upon the Spoil of other People, and were the Plagues of all the Seas in that part of the World. And they had inſinuated this Notion ſo far into the *Japoneſe*, that they had made a Song of us to that purpoſe, the ſinging of which they uſed to accompany with ſeveral Actions and Geſtures, ſhewing how we ſeize and plunder the *Spaniſh* Ships. And thus ſinging and acting the *Engliſh*, they us'd to ſcare their froward brawling Children out of their noiſe and troubleſomneſs, and make them quiet; juſt as the *French* did theirs, with the Name of the Lord *Talbot*; and the *Turks* theirs, with that of *Scanderbeg*.

But when we came upon the Spot, the *Japoneſe* ſignified by all the Particulars of their moſt obliging Carriage to us, that we had been unfairly, and very diſproportionally repreſented to them; that the Jeſuits had given them a falſe Pourtraicture of us, and that their Picture was as much unlike the Original it ſelf, as the Picture of *Venus* to that of the Virgin *Mary*.

Cuſtoms in puniſhing Criminals, and the manner of their Executions.

The Laws of this Country are horribly ſtrict and ſevere in many Particulars, and Offenders are no where treated with more Bitterneſs and Rigour than in *Japan*. Duelling is here an unpardonable Crime, whether in the Natives, or Foreigners that ſtay here but for a time; the Laws will take hold of all of them alike: And the *Japoneſe* will not allow the Stain of any Bloodſhed in that manner to lie upon their Country. Nay, if a Man does but draw a Weapon in Anger upon another, the Cattans are preſently at work upon him, and he is cut in pieces without any farther Ceremony, tho' he has done no harm, nor given no Wound to him he threatned: But if any Miſchief be done, not only the Aggreſſor himſelf, but all his Family are involved in the Puniſhment, and the Law (which I confeſs is barbarous) exerciſes the ſame Severity upon them, as on him.

To ſteal a Slave from another Perſon, is Death without Mercy alſo: Or if the thing wrongfully taken from another, be of ever ſo trifling a nature, if the Fact be clearly proved, there's no Reprieve, nor Mitigation of the Sentence of the Law, as far as I can find.

Their ſolemn Executions are perform'd with theſe Ceremonies following:

In the firſt place marches a Man with a Pickaxe, who is follow'd by another with a Shovel, to dig the Grave of the Malefactor, (if at leaſt that Favour be permitted him, as in the Caſe of ſome Crimes it is not) next to theſe comes a Perſon carrying a ſmall Table, upon which the Offence for which the Party dies is written, and expos'd to the view of all; then follows the Criminal himſelf, having his Hands bound behind him, and unto him is faſtned a ſort of a little Banner, upon which his Offence is likewiſe written; the Executioner brings up the Rear, with his Murdering Weapon by his ſide, holding in his Hand the end of the Cord with which the condemned Man is bound, and on each ſide of him walks a Soldier, reſting his Pike on the Shoulder of him that is to die, to prevent his attempting to make an eſcape from Juſtice.

And in this manner I ſaw one led to Execution, who at the ſame time carried it with ſuch an Air of Courage, appear'd ſo abſolutely intrepid, and above all the Horror of his Circumſtance, that I ſhou'd hardly have thought (had I not ſeen it) that Human Nature cou'd ever have arriv'd to that degree of Triumph over the Fears of Death, which are ſo natural to it.

Common Women allow'd in *Japan*, and their Prizes ſet.

But notwithſtanding the Rigour of the *Japoneſe* in ſome caſes, they are looſe and ſlack enough in others; a Thief muſt die, but a Whore or a Bawd may live, and have the Law of their ſide: A Man muſt not ſteal two or three handfuls of Rice, tho' it be to keep Life and Soul together; but a Man may throw away his Eſtate upon Wenches, and ruine his Family at a naughty Houſe. They have a great number of Men amongſt them, whoſe Buſineſs and Profeſſion is nothing but pandering and furniſhing thoſe that want Whores. Every one of theſe has ſuch a ſtock of Women of his own, bought for the moſt part with his Money, and according as Nature has made them finer or courſer, ſo he rates them, and puts down the ſeveral Prices at which they ſhall be let out; 'tis left to his own diſcretion to ſettle this Point at firſt, but after he has once ſet his Price he can't raiſe it, fall it he may; but if he offers to exact any more, upon complaint made, he certainly dies for it. Now when any Man is diſpos'd for an Entertainment of this kind, he has nothing to do to conſult the Inclination of the Female, whether ſhe likes him or no, much leſs to make any Bargain with her; all the difficulty lies in ſettling the Price with the Maſter Pander, which once done the Women are obliged to fulfil the Conditions of the Agreement. And at this rate the greateſt Noble-men in *Japan* make no ſcruple of ſending for theſe lewd Fellows to their publick Inns when they are upon the Road, and agreeing with them for ſuch a number of Wenches as they have a mind to, and that in the moſt open manner in the World, as if they were driving a common bargain, or treating of the moſt innocent matter in the way of Trade.

Theſe publick Women are the Actors of their Plays too many times.

The *Japoneſe* abuſe the dead Bodies of the Panders.

But the Panders tho' in ſo very great requeſt while they live, are of all men us'd with the moſt contempt after they are dead; they are not allow'd Burial like other Men, but as the vileſt creatures in the World, are firſt dragg'd about the Streets and thro' every Kennel, and then loaded with filth and mire, are left to rot upon ſome Dunghill in the Fields. A plain intimation that the *Japoneſe* think the Employment ſcandalous and odious, and yet they ſupport it by their lewd Practices, without which it would fall of courſe.

The King of *Goto's* Invitation of the *Engliſh*.

In this Month a certain petty King of a neighbouring Iſland came to *Firando* upon the fame of our being there: It was the King of *Goto*, who hearing the news of us and our Ship, came with an earneſt deſire to ſee both, which he did to his very great Satisfaction, and heartily invited us to come and Trade at his Iſland, where he promis'd us as kind a Welcome as we had at *Firando*.

Go for the Court. *Auguſt.*

But it was now time for us to go and wait upon a far greater Prince, even the mighty Emperour of *Japan* himſelf; a Command was come for our Journey to Court, in order to which we prepar'd the ſeveral Preſents that were to be made to the Emperour and the great Perſons about him. The old King of *Firando* furniſh'd us with a Gally, and all things neceſſary for our Paſſage; the beſt part of my Company was left there to inſpect the Affairs of the Houſe and Ship in our abſence, ſome few only going along with me to this Grand Audience. Before we went we had the Comfort of ſeeing our Country Man Mr *Adams*, who was come to interpret our King's Letters to the old King of *Firando*: He ſtill gave us the ſame Encouragement concerning a Trade in this Country, and the ſame Character of it's good diſpoſition thereto by word of Mouth, that he did by his Letters ſend to *Bantam*.

Fuccate a great City.

Having ſet ſail from *Firando*, we paſs'd by divers Iſlands, the moſt part of which were very well Inhabited, and had fair Towns upon them; but the firſt of note that we put in at was *Fuccate*, a very large and conſiderable place, not much leſs than *London* within the Walls, very well built, and ſo even and uniform, that one might ſee from one end of a Street to another. It has a ſtrong Stone Caſtle, a good Ditch and a Draw-Bridge, all kept in very good repair, but no Souldiers nor Ordnance: As for Ordnance indeed I did not ſo much wonder to find none, ſince there was no ſuch thing at *Firando*, and 'tis a ſort of Military Furniture that the *Japoneſe* are wholly without.

No Ordnance amongſt the *Japoneſe*.

Women Divers.

All along this Coaſt and ſo up to *Ozaca*, we found Women that liv'd with their whole Families upon the Water, getting their livelyhood by Fiſhing, at which they were very great Artiſts. But they had two Strings to their Bow, and 'twas next to impoſſible for the Fiſh to eſcape them; for what they miſs'd with their Lines and Nets they would dive for, and catch that way without fail; and this they would do with eaſe to the depth of 8 Fathom. Theſe Women were very eaſie to be known from all others, for by continual diving their Eyes were ſtrangely alter'd, and look'd as red as Blood; and by this Token the diving Women are diſtinguiſh'd in *Japan*.

Oſaca a large Town, and a Sea Port.

When we had paſs'd the Streights of *Xemina-ſeque*, the next Town of note we came to was *Oſaca*, nothing inferiour to the former in Compaſs and Dimenſions, and one of the Principal Sea-Ports of the Empire. There's a River comes up to it as wide as the *Thames*, and ſeveral very fine Timber Bridges laid over it; it has a Caſtle very extraordinary for bigneſs and ſtrength, with very deep Trenches about it, and ſeveral Draw-Bridges artificially made, and Gates ſo ſtrongly plated with Iron, as may ſeem to bid defiance to any battery in the World. The whole building of the Caſtle is of Free-Stone, and the Walls are of the ſame, but a matter of ſeven Yards thick, and put together without any thing of Mortar or Cement, the Stones being ſo nicely cut as to lie perfectly cloſe together, and need no other binding; only if there happens to be a void ſpace any where, they throw a little Earth in to fill up the crevice, and that's all they do. 'Tis regularly contrived, ſtrengthned with Bulwarks and Battlements, with good ſtore of loop holes for ſmall Shot and Arrows, and various Paſſages for the throwing out of Stones upon thoſe that ſhould come to attempt it. And one would eaſily believe it to be a mighty ſtrong and ſecure building, without having a particular Account of it, when one hears what uſe the Emperor puts it to, and of what importance the Jewel is here kept in ſafe Cuſtody. In ſhort here lives (lock'd up in this Caſtle) the true and genuin Heir of the Empire of *Japan*; here I ſay he lives, but ſo happy as to be ignorant of his real Quality, Rights, and Juſt Pretenſions, tho' at the ſame time ſo unfortunate as to be excluded from all. The truth of the matter is, The preſent Emperor is an Uſurper, and ſtept into the Throne in a way not only contrary to the Laws of that Kingdom, but the more ſacred ones of eternal Juſtice and Reaſon. The old Emperor Father to the Prince (at our being there a Priſoner in the Caſtle of *Oſaca*) when he died left this Son, then an Infant, to the Care and Tuition of four principal Noble-men, whereof *Ogoſhoſamma*, the preſent Emperor was One and Chief. The other three Governours, Men of intrigue and ill Principles, and fonder by far of flattering their own Pride and Ambition, than diſcharging the Duties of a ſacred Truſt committed to them; made Pretentions to the Sovereignty, and put in for the Crown themſelves. In oppoſition to whom, as alſo to aſſert the Rights of the Royal Pupill, *Ogoſhoſamma* took up Arms, and having entirely routed the other Pretenders, had the ſupreme Power, ſuddenly clap'd all into his own Hands. And now (perhaps not thinking of any ſuch thing before) the charming Opportunity told him he had e'en as good be Emperor himſelf; all his Competitors were remov'd out of the way, the true Heir was incapable of underſtanding and redreſſing his caſe, all the Power was his own, and he wanted only the name of an Emperor, which was ſo very ſmall a thing that he reſolved not to be without that any longer. The young Prince he kept always about him, and in perfect Ignorance of himſelf and his relation to the Crown, ſuffering him to know no other but that he is his Son; all that are about him being ſuch as the preſent Emperor has brought up from their Cradles, and ſo not able to give him any better information. And to make all ſure when he was grown to Years, he married him to his own Daughter, and ſo confin'd them to the Caſtle of *Oſaca*, where they live like the Children of an Emperor, as to all points of State and Grandeur, only Liberty, that ſweetens all the reſt, civil policy is pleas'd to deny them.

A ſtrong Caſtle.

The Story of the Prince of *Japan* kept in *Oſaca* Caſtle.

Sacay

Over againſt *Oſaca*, on the other ſide of the River, lies another great Town call'd *Sacay*, a place of very great Trade for all the Iſles thereabouts.

Fuſhimi.

At *Fuſhimi* to which we came next, we found a Garriſon of 3000 Souldiers appointed for the keeping ſome of thoſe parts in good order; this Garriſon is ſhifted every three Year, and the change happening when we came thither, we had the advantage of ſeeing ſomething of the Rules of their Millitary Diſcipline. They generally march no more than five a Breaſt, and to every ten Files there's an Officer deputed, who regulates the March, and keeps all in perfect Order. Their diſpoſition according to the quality of their Arms is thus. Firſt of all march their Shot, that is Calievers, for Muskets they have none, neither will they uſe any; then follow Pikes, then Cattans and Targets, Bows and Arrows, Waggadaſhes or Hooks, and laſtly Calievers again cloſe the March; and amongſt all theſe they have no Colours, Drums, Trumpets, nor any ſort of Warlick Muſick.

The Diſcipline of the *Japoneſe*.

Their Companies conſiſt of uncertain Numbers, from 150, to 500, and in the midſt of every Company, they have ſpare Horſes led along, very nobly trapp'd and furniſh'd.

The Captain comes laſt of all on Horſeback, but riding in ſuch a poſture as wou'd better befit a Mountebank, or a Market-man, than a Commander of Soldiers: His Bed, and all his Neceſſaries, are pack'd up upon his own Horſe, and over them is ſpread a red *China* Felt for a Covering; and ſo the Captain ſits mounted up a high upon his Pack, with his Legs upon the Horſes Neck, much after the rate that our Butter-Women ſit upon their Paniers, and truly as handſomely.

As in the parts of the ſame Troop, or Company, thoſe Files that march next the Captain, are more pompous in their Furniture than thoſe that are remoter; ſo 'tis in whole Troops, thoſe that come neareſt the General, who is laſt of all, are much more bravely accoutred than thoſe that went before: The Glory of the Army ſinks and falls by equal ſteps, from that part where the General is, and where it ſhines with the brighteſt Luſtre: A good hint for the General by the way, and may ſerve to put him in mind, that he ought to be indeed the Glory of the Army; and to anſwer his Character and Truſt, ſhou'd outſhine all the reſt in Military Vertues, as much as he does in viſible Pomp and Splendour.

The *Japoneſe* Horſes are not great and tall, but of the ſize of our middling Nags, ſmall Headed, and extreamly mettleſome, and in my Opinion far beyond your *Spaniſh* Gennets, both in ſtately Carriage and Stomach too.

Their good Orders.

Their Soldiers obſerve very good Orders upon the Road, and are ſo exactly govern'd, that they are as welcome at the Publick Houſes as any Gueſts whatſoever: No Man is in the leaſt diſturb'd, or diſcommoded by them, they take what they find, as other People do, and pay for't, without any quarrelling. The Roads are very well ſtock'd with Houſes of Entertainment; and when there are Soldiers upon the March, they provide Victuals ready for them, ſo that they have at an inſtant's warning what they want, and that at very cheap Rates, a Dinner of good wholeſome Food, and enough, from Two Shillings downward to a Penny.

The Diet in *Japan.*

The Diet generally uſed through the Country, is Rice of divers ſorts, (the white being counted the beſt;) Fiſh, freſh and ſalted; Herbs, Radiſhes, Beans, Duck, Teal, Pheaſant, Partridge, Quail, and Hens: Of Beaſts, they have all ſorts of Deer, Wild Boars, Goats, and Kine: Cheeſe alſo in great plenty, but Butter they make none, neither will they eat any Milk, becauſe they eſteem it as the Blood of the Animal; and for what Reaſon I know not, they will not touch a bit of any tame Beaſt, tho' they have them in abundance.

Their Wheat ought not to be forgotten, which is as plump and good as any our Nation can ſhew, but all of the red Colour. We did, in our Travels in the Country, buy Rice at a Half-penny per Pound; Hens and Pheaſants the beſt and fatteſt, for Three-pence a piece; Pigs very large, for a Shilling; a fat Hog for Five Shillings; a good Beef at Sixteen Shillings; and a Goat at Three Shillings.

The Drinks in requeſt in the Country, are only the Spirits diſtilled from Rice, very ſtrong, and of the Colour of Canary, and common Water, which is all in all amongſt the poorer ſort of People, that can't reach to the Price of the other Liquor: They always drink their Water warm, and ſay, that 'tis good to kill the Worms in the Maw; which I ſhould be very ready to believe, provided they put good ſtore of Salt in it.

They travel by Land.

Our Motions being directed to *Suranga*, where the Emperor then kept his Court; by the latter end of this Month we had gone as far as our Way lay by Water; and now being to finiſh the remainder of our Journey by Land, we were furniſh'd with Horſes and all Conveniencies for that purpoſe at the Emperor's Charge. I had alſo a Palankin, or one of their Sedans, provided for me; and a freſh ſupply of Men drawn out of every place ſucceſſively, for the Office of carrying me therein, when I was tired of my Horſe, and for the greater State, a Slave appointed to run with a Pike before the Palankin: The King's Harbingers alſo went before, and took up our Lodgings upon the Road.

September. The Goodneſs of the High-ways in *Japan*, and the Conveniencies of them.

This part of the Journey was very pleaſant and eaſie; the Way for the moſt part was exceeding even and plain, and where-ever there was any rugged mountainous Ground, a ſmooth level paſſage was cut through it. This Road (which is the great one of all this part of the Country) is all along good Sand and Gravel; 'tis divided into Leagues for the benefit of Travellers, and at every Leagues end, are two ſmall Hills rais'd of either ſide one, and upon each of them a fair Pine-Tree planted; the Deſign of which Marks, is to make Travellers competent Judges of the length of their own Journeys, that ſo they may not be abus'd by the Hackny-men, and thoſe that let out Horſes, and pay for a greater number of Miles than they have rode.

All along the Road, you meet with a World of People paſſing to and fro, and ever and anon Towns and pleaſant Villages, Farms, and Country-houſes; and ſometimes Temples, ſtanding at a little diſtance, in ſhady Groves, with the Habitations of the Prieſts all round about them.

Dead Bodies of Malefactors upon Croſſes.

The moſt unpleaſant ſight we had, was the dead Bodies of Malefactors, faſtned upon Croſſes near all the Great Towns where thoſe Executions had been performed: Crucifying is a very common Puniſhment in *Japan*; and as they manage it, 'tis ſome ſort of a Puniſhment to Travellers too, to paſs by a multitude of noiſome putrifying Carkaſes; and beſides the Horror of the Sight, to have the Diſturbance of the Smell thoſe Bodies yield. And we had the worſt Trial of all of this kind, when we came to *Suranga*; there were Croſſes, Scaffolds, and Gibbets, Heads, Carkaſſes, and Limbs, hanging about in ſo many places without the City, that our Pleaſure in going along was wonderfully leſſen'd.

Come to *Suranga*.

Suranga ſeems to be full as big as *London*, taking in the whole Compaſs of the Suburbs too: The outer parts of it we found entirely taken up by Mechanicks and Artificers of all ſorts, who are plac'd there for the eaſe and quiet of the Genteeler People, that don't care to be diſturb'd with the Noiſe and Buſtle the others make in their Trades.

Audience of the Emperor

After a Repoſe of a Day or two, I went with all my Company in a Body, to the Caſtle, to have Audience of the Emperor, and deliver the Preſents intended for that Court. I was introduc'd by two of the greateſt Men then in Attendance, the Emperor's Secretary, and his Admiral: Theſe led me firſt into a very fine matted Room, where we ſat down for ſome time, according to their Cuſtom, upon the Matts, then they brought me into a Chamber of Preſence, where ſtood an empty Chair of State, to which I was oblig'd to do Reverence; after ſome ſhort time, word was brought, that the Emperor was come into the Room of Audience, to the Door of which theſe Courtiers brought me, but durſt not preſume to look in themſelves. The Cuſtom is, for all the Preſents that are brought, to be plac'd in order upon the Mats of that Room into which the Emperor comes; and accordingly when I came in, I found them all in a very orderly manner laid before him. He receiv'd His Majeſty's Letter with the Civility of that Country, lifting it up towards his Forehead, and then, by his Interpreter, bid me Welcome. He deſired me to go and ſee the King his Son at *Eddo*, (with all the Neceſſaries for which Journey, he wou'd take care to furniſh me) and by that time I return'd, his Letters ſhou'd be ready for our King.

The Articles relating to the Matters of Trade and Privilege, which we requeſted His Majeſty's Confirmation of, were all eaſily granted by him, one only excepted, reſpecting the *Chineſe*. The Tenour of it was to this purpoſe, That whereas the *Chineſe* had refus'd all Trade and Commerce with the *Engliſh*, if we cou'd take any of them abroad at Sea, it might be lawful for us to bring them into *Japan*, and make Sale of the Goods ſo taken, in His Majeſty's Dominions. This the Emperor granted at firſt, but his Mind was alter'd afterwards, by a Conference with the Leiger of *China*, and he refus'd to allow it: The reſt all paſt under his Great Seal; which is not of Wax, like ours, but ſtamp'd like a Print, and colour'd red. The Secretary wou'd take no Preſent, nor any thing like a Gratuity from us; the Emperor, it ſeems, had commanded the contrary, and 'twas as much as his Life was worth to do it.

Having ſeen this Buſineſs done, we ſet out from *Suranga* for the Great City of *Eddo*, where the Emperor's Son, the young King, keeps his Court. The Country is well inhabited between theſe two Cities, the Towns and Villages lie thick, and the *Fotoquis*, or Temples, ſcattering up and down in good numbers too.

The Idol *Dabis*.

There's one mighty Image (which they call *Dabis*) that ſtands in this Road, at which all the *Japoneſe* ſtop to pay their Devotions when they go this way: It is made of Copper, all hollow within, tho' very thick; 'tis in the ſhape of a Man kneeling on the Ground, with his Buttocks reſting on his Heels, and his Arms extended; he is repreſented wearing of a Gown, and notwithſtanding that bending poſture, is twenty two Foot from the Level of the Ground, and all the Body proportionably large. Some of our Men went into the Body of it, and there fell a hollowing and hooping; the Noiſe of which, out of the wide Mouth of the Image, was much ſuch agreeable ſort of Muſick, as, I believe, was made by *Phalaris*'s Brazen Bull. It ſtands conveniently to entertain the Devotion of Pilgrims in their paſſage to the celebrated Temple of *Tencheday*; they always make a pauſe at *Dabis*. But this is but a ſlight Ceremony, 'tis at *Tencheday*'s Temple the Great Work is

Tencheday's Temple.

to be done, and the Pilgrims expect to receive the Reward of their Travel: And here one may meet all ſorts of People, rich and poor, ſound and diſtemper'd, continually coming and going thither, and that by Night as well as by Day, and that all the Year round.

Strange Cuſtom.

The Stories told by the *Japoneſe* of this their God *Tencheday*, are too unaccountable to be related with any meaſure of Confidence; ſo that inſtead of their Accounts, (which I ſhall abſolutely wave) I ſhall only offer what Mr. *Adams*, our Country-man (who has been at this Temple) told me as Matter of Fact, and of his own Knowledge.

He ſays, That there is conſtantly, every Month, one of the lovelieſt Virgins that the whole Country will afford, brought into this Temple, in a very neat Apartment of which, ſhe is ſhut up all alone; and that at certain times *Tencheday*, as they call him, comes to her in a viſible Form, and having known her carnally, reſolves any Doubts or Queſtions ſhe puts to him, according as the Prieſts inſtruct her; and at his going away, leaves behind him a ſort of Scales like thoſe of Fiſhes. Mr. *Adams* ſays, 'Tis certain a freſh Virgin is taken in every Month: But what becomes of them, and how they are diſpos'd of, he is utterly ignorant: As to the other Circumſtances of the Story, there's no opportunity for any Body but the Prieſts and the Virgins themſelves, to be ſure of the Truth or Falſhood of them; and therefore the Credit of them depends ſolely upon their Report, as far as I ſee: For Mr. *Adams* does not pretend ever to have ſeen any of thoſe Appearances, or the ſurprizing Effects of them mention'd. In ſhort, if *Tencheday* be the Devil, his Frolicks in *Japan* are very unaccountable, and different from what they are in other places; but if *Tencheday* be one of the Roguiſh Bonzes, or Prieſts, 'tis no ſtrange thing that he deſires a Monthly Sacrifice of Virgins, conſidering what an Aſcendant the wanton Planet has all over that Country.

Arrive at *Eddo*.

About the middle of this Month we came into *Eddo*, a City much larger than *Surunga*, nobler in its Buildings, and every way more glorious in its Appearance; the very Tiles of the Houſes are gilded, and the Poſts of the Doors ſet off with a ſhining Varniſh: They have no Glaſs-Windows, but all of Board, which open in Leaves, and are very delicately painted.

There's a Cawſey runs clever thro' the chief Street of the City, which Street is as broad as any in *England*, and a fine River paſſes along by, or rather underneath the Cawſey; at every fifty Paces there's a Well-head ſubſtantially fitted up of Free-ſtone, and ſerv'd with Buckets for the People to fetch Water with, in caſe of any danger by Fire.

The Caſtle of this City is a much ſtronger and nobler Edifice than that at *Surunga*; and the young King lives in much greater State, and has a more pompous Attendance than the Emperour his Father.

Entertainment by the young King.

He receiv'd us in a very courteous obliging manner, taking the King's Letters and Preſents with a wonderful Satisfaction and Content, and giving us all the Welcome imaginable. He gave us Letters for our King, and a Preſent of two entire Suits of *Japan* Armour, finely varniſh'd; and a long Sword and Waggedaſh for my ſelf: 'Tis to be noted, that the Cattans are a common wear; but the Tatches, or long Swords, are worn only by great Soldiers, and Perſons of the beſt Account.

'Tis ſaid to be no leſs than Twenty two Days Journey by Horſe, from this City of *Eddo*, to the Northermoſt part of *Japan*; which makes it a Country of a vaſt extent. Our Buſineſs here being no more than the paying of a Complement; that being done, we had no further occaſion of ſtaying here: And ſo having got this Prince's Letters and Preſents for the King of *England*, we went back for *Surunga*, where we arrived again at the end of this Month.

October.

We had not been here long, before the Emperor's Letters to our King were ready for us; as alſo the Grant, or Inſtrument of Privilege relating to our Trade and Settlement in *Japan*; the Tranſlations of both which, as near the Original as may be, are here ſubjoyn'd.

To the King of *Great Britain.*

Your Majeſty's kind Letter, ſent me by your Servant Captain John Saris, *(who is the firſt that I have known to arrive in any part of my Dominion) I heartily embrace, being not a little glad to underſtand of your great Wiſdom and Power, as having Three plentiful and mighty Kingdoms under your powerful Command. I acknowledge your Majeſty's great Bounty, in ſending me ſo undeſerved a Preſent of many rare things, ſuch as my Land affordeth not, neither have I ever before ſeen: Which I receive not as from a Stranger, but as from your Majeſty, whom I eſteem as my ſelf. Deſiring the continuance of Friendſhip with your Highneſs: And that it may ſtand with your good liking, to ſend your Subjects to any Part or Port of my Dominions, where they ſhall be moſt heartily Welcome, applauding much their Worthineſs in the admirable Knowledge of Navigation, having with much facility diſcovered a Country ſo remote, being no whit amazed with the Diſtance of ſo mighty a Gulf, nor Greatneſs of ſuch infinite Clouds and Storms, from proſecuting Honourable Enterprizes, of Diſcoveries, and Merchandiſing: Wherein they ſhall find me to further them, according to their Deſires. I return unto your Majeſty a ſmall Token of my Love (by your ſaid Subject), deſiring you to accept thereof, as from him that much rejoyceth in your Friendſhip. And whereas your Majeſties Subjects have deſired certain Privileges for Trade, and ſetling of a Factory in my Dominions, I have not only granted what they demanded, but have confirmed the ſame unto them under my Broad Seal, for better eſtabliſhing thereof. From my Caſtle in* Surunga, *this Fourth Day of the Ninth Month, in the Eighteenth Year of our* Dary, *according to our Computation. Reſting your Majeſty's Friend. The higheſt Commander in this Kingdom of* Japan.

Subſcribed,

Minna. Mouttono. yei. ye. yeas.

Privileges granted by *Ogoſhoſamma*, Emperor of *Japan*, unto the Right Worſhipful Sir *Thomas Smith*, Knight, Governour; and others the Honourable and Worſhipful Adventurers to the *Eaſt-Indies*.

1. IMprimis, *We give free Licence to the Subjects of the King of* Great Britain, *viz. Sir* Thomas Smith, *Governour, and Company of the* Eaſt-Indian *Merchants and Adventurers, for ever, ſafely to come into any of the Ports of our Empire of* Japan, *with their Ships and Merchandizes, without any hindrance to them or their Goods. And to abide, buy, ſell, and barter, according to their own manner, with all Nations: To tarry here as long as they think good, and to depart at their pleaſures.*

2. Item, *We grant unto them Freedom of Cuſtom, for all ſuch Merchandices as either now they have brought, or hereafter ſhall bring into our Kingdoms, or ſhall from hence tranſport to any Foreign Part. And do Authorize theſe Ships that hereafter ſhall arrive, and come from* England, *to proceed to preſent Sale of their Commodities, without further coming or ſending up to our Court.*

3. Item, *If any of their Ships ſhall happen to be in danger of Shipwreck, we will our Subjects not only to aſſiſt them, but that ſuch part of Ship and Goods as ſhall be ſaved, be returned to their Captain, or Cape Merchant, or their Aſſigns. And that they ſhall, or may build one Houſe, or more, for themſelves in any part of our Empire, where they ſhall think fitteſt. And at their departure to make Sale thereof at their pleaſure.*

4. Item, *If any of the* Engliſh *Merchants, or other, ſhall depart this Life, within our Dominions, the Goods of the Deceaſed ſhall remain at the diſpoſe of the Cape Merchant. And that all Offences committed by them, ſhall be puniſhed by the ſaid Cape Merchant, according to his Diſcretion; and our Laws to take no hold of their Perſons or Goods.*

5. Item, *We will that ye our Subjects trading with them for any of their Commodities, pay them for the ſame, according to Agreement, without delay, or return of their Wares again unto them.*

6. Item, *For ſuch Commodities as they have now brought, or ſhall hereafter bring, fitting for our Service and proper uſe: We will that no Arreſt be made thereof, but that the Price be made with the Cape Merchant, according as they may ſell to others, and preſent Payment upon the delivery of the Goods.*

7. Item, *If in Diſcovery of other Countries for Trade, and return of their Ships, they ſhall need Men or Victuals, we will that ye our Subjects furniſh them for their Money, as their need ſhall require.*

8. *And that without other Paſs-port, they ſhall and may ſet out upon the Diſcovery of* Yeadzo, *or any other part, in or about our Empire.*

The Diſcovery of Trade to the Northward.

From our Caſtle in *Surunga*, this Firſt Day of the Ninth Month, and in the Eighteenth Year of our * Dary, according to our Computation. Sealed with our Broad Seal, &c.

* Or Reign.

Under-written,

Minna. Mouttono. yei. ye. yeas.

The Language.

The *Japonian* Language ſeems to agree with the *Chineſe* in this, That they expreſs whole Words compendiouſly, by their ſeveral proper Characters, not compounding them of diſtinct Letters and Syllables as 'tis in other Languages; the Character is very different from that of the *Chineſe*, and they read beginning at the Right hand and ſo downwards perpendicularwiſe in the ſeveral lines. They take a wonderful deal of care to ſpeak and write in the ſhorteſt and conciſeſt manner that can be; they are not given to flouriſh and inlarge upon a Subject, but deliver their Minds in very pertinent, exact and comprehenſive Terms, contracting a great deal of Sence into a little Compaſs. The Letters and the Inſtrument were both written in it very fairly after their manner, and the firſt rarities of that kind that our Nation I believe ever had.

Go from Surunga.

Meaco.

The Order of the Trades at Meaco.

Thus was all our Buſineſs at *Surunga* finiſhed too, upon which we took leave of the Emperor and Court, and ſet out for *Firando*. Our way lay by land as far as *Oſaca*, and in paſſing thither we took *Meaco* in our way; this is abſolutely the greateſt City in *Japan*, and a place of mighty Trade. All the Trades-men dwell in a part of the City by themſelves, and all of ſuch an employment in ſuch a Street by themſelves; the *Japoneſe* think it very unſeemly and irregular to have men of ſo many ſeveral Profeſſions and Buſineſſes mixt and huddled together in ſuch a confus'd manner as they are in other places, they are for making all of the ſame Trade (who are fitteſt to converſe together) neighbours to one another; Birds of the ſame Feather to be all in a diſtinct Flock by themſelves, that a Man that looks may know where to find them. And the plain Truth on't is, this Order is not without it's Beauty and Conveniency, and it added methoughts a peculiar grace to the City, which all it's other Advantages would not have given it.

The Great Eyoqui.

Idol Mannada

The moſt magnificent Temple of the whole Country is here at *Meaco*, built of Free-ſtone and as long as St. *Pauls* in *London* from the Quire, arch'd, adorn'd with mighty Pillars, and as lofty as that. It has one peculiar Altar, at which they make their Offerings of Rice and ſmall Money (call'd Cundries, twenty of which make a Shilling) for the maintenance of the *Bonzee's* belonging to it; and by this Altar ſtands the great Idol *Mankada*, made of Copper, and of the ſame form with *Dabis* before mentioned, but much higher, reaching up to the very Arch.

The Temple ſtands advantageouſly upon the top of a high Hill, and upon each ſide the Aſcent you have a long row of Columns of Free-Stone, about 50 in each Series, ten Paces diſtant from one another, and upon the top of every Pillar is a Lanthorn, the Lamps in which are lighted every night, and make a very glaring ſhew. There are divers other Temples beſides this, but this vaſtly exceeds all the reſt in all Points of Beauty and Grandeur: 'Twas juſt finiſhed at our being there, the Foundation being laid by the fam'd *Taicoſania*, whoſe Horſe (in memory of him) is kept in an apartment hard by, and is to be maintain'd here in a Life of perfect eaſe and reſt as long as nature will allow him to hold it out.

Jeſuits College.

The *Portugueze* Jeſuits have a ſtately Colledge in this City very well furniſhed with men of that Society; they breed up abundance of *Japoneſe* Youth, reading Philoſophy and the Popiſh Divinity to them, making a great many them Preachers, and I ſuppoſe at laſt Jeſuits too. There's no doubt but they endeavour to make them as good as they can, and amongſt other Arts teach ſome of thoſe that are peculiar to their Order.

New Teſtament in the *Japan* Language.

They have the New Teſtament tranſlated into the *Japoneſe* Tongue, and beſides this hopeful fry breeding up in the College, there are reckon'd five or ſix thouſand that profeſs Chriſtianity in *Meaco*, While we ſtaid here we receiv'd the Emperor's Preſents for our King, which were ſent after us; *viz*. Ten Beobs or large Pictures to hang a Room of State with.

November.

Come to Firando.

From hence we travell'd to *Oſaca*, where the Gally that ſet us down before was attending our return, to tranſport us to *Firando*; and this at the charge of the brave and generous old *Foyne*, the King of that place. This Prince was extreamly glad at our return to his Iſland, as alſo of the ſucceſs of our Affairs at Court; and had carried it with the ſame ſteady and even hand of Kindneſs to our Company left there that he did to all of us when together. But yet the Trade amounted to little or nothing in our abſence, the *Japoneſe* had been no good Cuſtomers, tho' we had come from tother end of the World to take their Money. One reaſon of this was, becauſe it was not yet certain that we were to be allow'd in the Country, and till the Trade has it's publick Warrant from the Emperor, as no Stranger may offer to ſell, ſo no Native may dare to Buy. But another thing (and of no inconſiderable prejudice to us) was this; the moſt part of our Commodities we intended for theſe parts were broad Cloaths, (which had not long before been ſold here at forty Rialls of Eight *per* Mat which is two Yards) a ſort of Ware the *Japoneſe* were now almoſt out of conceit with, becauſe we did not take care to recommend the goodneſs of it by our own wearing.

The *Japoneſe* find fault at our not wearing our own Cloths.

You (ſay they) cry up your broad Cloths to us, and at the ſame time hardly wear a rag of it your ſelves, but are all for your Silks and Stuffs, and any thing in the World, except juſt what you would have us buy of you. And the truth on't is, the *Japoneſe* are in the right, and their Objection not eaſily to be anſwer'd; we ought to be more fond of our own Country Commodities, and tell other Nations they are valuable by the uſe of them we make our ſelves. Forreigners won't be ſo ready to believe us if they ſee we don't order our Faſhions ſo as to give a Reputation to what we recommend abroad in the World; and for all I know other Nations may tell us as well as the *Japoneſe* of not wearing our own broad Cloth, may reproach us with the neglect of our own Commodities, and deſpiſe them till they ſee us do otherwiſe our ſelves.

This *Firando* is a very good place for our Ships to put in at with reſpect to the Point of Victualling and all that, but it is not ſo proper for Trade becauſe it lies off from the main Iſland of *Japan*, where are not only the moſt, but the moſt conſiderable People, capable of giving an encouragement to Trade, which in theſe little by-Iſlands is to be not expected.

Oringgaw the beſt part for our Ships.

We might, I don't queſtion, be welcome at any of them all, and the Kings of two of theſe petty Iſlands gave us a formal invitation; but there's few of them can afford a Buſineſs that will turn to account, and defray the Charges of a Settlement. Therefore my Advice is, that our Ships that come to Trade here would ſail not to *Firando*, but to Oringgaw upon the main Iſland, and about 15 Leagues diſtance from *Eddo*, where they will find very good Riding and a much greater proſpect of Advantage. This place indeed is not capable of giving ſo good an Entertainment as may be deſired, Proviſions are not altogether ſo plentiful here as at *Firando*; but that want may be ſupplied by a Correſpondence with the circumjacent Country. Chriſtianity makes no conſiderable Figure comparatively any where in this Empire, but at *Meaco* and *Langaſacque*, a Town ſituated upon the Sea-Coaſt, about eight Leagues from *Firando*. It had 'tis true gotten footing in *Eddo*; but the Emperor upon ſome pique taken againſt the Chriſtians baniſh'd them all from thence, and confin'd them to *Langaſacque*; and as a prevention of it's creeping into the Court, and rooting it ſelf any where near him; he made it death to any that ſhould offer to build a Church or ſing Maſs within ten Leagues of the place where he reſided. This change was but a very little time before our going to *Eddo*, notwithſtanding which, the Religion is otherwiſe indulged; the Chriſtian *Japoneſe* at preſent have (as far as I ſee) the ſame Protection and Privilege with the others, and the Jeſuits ſeem to enjoy an unreſtrained Liberty in the making of Proſelytes.

December.

Factory ſettled.

The Foundation of a Factory being now firmly laid in the Emperor's full Grant to that purpoſe, we proceeded to build upon it, being the rather encouraged to it, in that we were now aſſur'd that *Engliſh* Factories were actually ſettled at *Siam* and *Patane*, as alſo that the *Dutch* made ſomething of their Buſineſs here, and we had reaſon to believe we had not a leſs ſhare in the Good Will and Eſteem of this Country than they We therefore appointed ſome of our Company to reſide here upon this Affair, with inſtructions alſo to make what Diſcoveries they could upon the Coaſt of *Corea*, *Tuſhmay*, and other parts adjoining againſt the next return of the Ships.

Go from Firando.

By exact obſervations made during our ſtay here, we determine the Latitude of *Firando* to be 33 Degrees 14 Minutes North, and the varying of the Compaſs two Degrees 50 Minutes Eaſterly. When we took our leave of old King *Foyne*, he gave me a Letter for our King written in the Chineſe Language, out of which it was by two *Chineſe* Merchants tranſlated into the *Malayan*, and from thence into *Engliſh* as follows.

To the King of Great *Britain*, &c.

Moſt mighty King, how acceptable your Majeſties loving Letter and bountiful Preſent of many worthy things ſent me by your Servant Captain John Saris *is unto me, I cannot ſufficiently expreſs, neither the great happineſs I eſteem my ſelf to be in, by enjoying your Highneſs friendſhip: For which I render you many thanks, deſiring the continuance of* *your Majeſties love and acquaintance. I am heartily glad of your Subjects ſafe arrival at my ſmall Iſland, from ſo long a journey. My help and furtherance they ſhall not want to the uttermoſt, for the effecting of their ſo worthy and laudable enterpriſes of Diſcovery and Merchandizing, greatly commending their forwardneſs therein: referring their hitherto entertainment to the report of your Servant, by whom I return unto your Majeſty an unworthy token, wiſhing your Majeſty long life. From my Place of* Firando, *the ſixth day of our tenth Month.*

Your Majeſties loving Friend,
Commander of this Iſland
Firando, in *Japan*,

FOYNE SAM-MASAM.

Errors of the Plats.

Setting ſail from hence we reſolved to keep along the Coaſt of *China* (our Courſe directed to *Bantam*) in doing which we came to feel the great Current that ſhoots out between *Corea*, and the Main of *China*, and makes a very great Sea. The Iſlands that lie along the Coaſt of *China* we find to lie more Southerly than the Plats repreſent them; and there's not a leſs material miſtake in their placing the Land of *Cambcia*, which lies not ſo far to the Eaſt as they make it; the Land lies here S. S. W. and N.N.E. with divers Rocks like Iſlands, ſome one League, ſome one League and a half off from the Main, beſides which there's no other Danger that we could diſcover. 'Tis worthy of note too that here we found the Winds trade along the ſhoar, for from *Firando* hither we did go large, finding the Winds to follow us as the Land trends.

Linſchoten Obſervations true, and *Mole's* Plat.

And to give *Hugen van Linſchoten* his due praiſe, it muſt be ſaid that the Obſervations of his Book are very true and juſt as far as we had opportunity of reducing any of them to a Trial; for in plain Terms we directed our Courſe ſolely according to his meaſures ever ſince our ſetting forth from *Firando*. The like Character is to be given of the Plat made by *Janſen Mole* a *Hollander*, for we find the poſition of thoſe Iſlands, that make the Streights of *China Bata* (or *Pulo Bato* as 'tis call'd by ſome) to be as he has plac'd them; and the Shoal that lies in the entrance of the Streights to be rightly plac'd, and a true account given of it's depths.

January, Come to *Bantam*.

The beginning of this Month we came to an anchor in *Bantam* Road, where we found the beſt part of the Men left in the Factory at our going to *Japan* dead, and the Survivours had as good have been dead too for the Service and Buſineſs they did in our abſence: There was nothing of a lading got in readineſs, no Pepper laid in, and the Commodity riſing every day, and nothing more certain than that, we that were homeward bound, and muſt of neceſſity procure a lading, ſhould be made to pay for what we had to the purpoſe.

All the Factories reduc'd to one.

Beſides, we found a diſadvantage in having ſo many ſeveral diſtinct Factories as we had in this one place; for by this means it came about that one party endeavouring to out-bid another on the account of their own particular Voyage, the priſes were rais'd, and ſo the publick Intereſt was ſtill a ſufferer by it. To redreſs this therefore, we reduc'd all the ſeveral Factories at *Bantam* to one Government, and fix'd them in one Houſe together, and leſſen'd the number of Ware-houſes, taking care to regulate the placing and diſpoſing of our Goods with more diſcretion for the time to come. I bought here of the *Chineſe* Merchants Four thouſand Sacks of Pepper at thirteen Rials of Eight *per* ten Sacks, the Baſſe three in the Hundred.

Bantam burnt to the ground.

Before we went away we had the misfortune of ſeeing very near the whole City of *Bantam* laid in Aſhes; how the fire begun is uncertain, but when once 'twas kindled the Wind carried on the Flame with that irreſiſtible fury, that the whole Town almoſt was preſently conſum'd, the *Engliſh* and *Dutch* Houſes only excepted (which were providentially ſpared) and ſome very few more; but as if theſe few muſt of neceſſity follow the reſt in their fate, a ſucceeding Fire two or three days after devour'd them too; only the *Dutch* and *Engliſh* Houſes had ſtill the ſame powerful and kind Protection, lifting up their Heads when all the other Buildings of the Town were levell'd with the Duſt about them.

February. *May* A. D. 1614.

Thus leaving theſe two Houſes to bear the name of the Town till it roſe out of it's Aſhes again, we ſet ſail homewards, coming to an Anchor in *Soldania* Bay by the middle of the ſucceeding *May*, where we found the *Concord* of *London*, the firſt Ship that was ever ſet out by the Joint Stock.

Concord the firſt that went for the United Stock.

The Natives here were grown exceſſively rude and treacherous, and tho' they never had good Manners, yet they uſed not to be ſo forward to ſhew their ill Manners and barbarous Temper; both the Concord and we felt the effects of their Treachery, and we for our parts had like to have loſt all the Men that kept the Skiff by a ſudden and furious aſſault of theirs while the reſt were aſhoar; nay, they had periſh'd every Man if they had not immediately hurried themſelves out into the Water. Some reports have been, that the Beef of this Country wont take Salt well tho' all allow it to be very good meat; but by the experience we had of it in a good quantity, which we powder'd, it ſeems to take Salt as well as any meat of that kind in the World.

September. Arrive at *Plimouth*.

We finiſh'd this long and tedious Voyage the latter end of *September*, when we came ſafe into *Plimouth* Road; here the Winds and Weather were more ſevere upon us than in all thoſe vaſt and mighty Seas that we had paſs'd; we were actually in more danger than we had ſeen in ſailing above half the Globe, and fear'd we were come from *Japan* to *China* to be wreck'd at our own very doors: This tempeſtous weather held for five or ſix Weeks, and then went off.

I have thought fit to let this Account of *Yedzo* (which I had from a *Japoneſe*, who had been twice there, at my being at *Eddo*) attend the former Journal.

Intelligence concerning Yedzo, *receiv'd at the City of* Eddo *in* Japan, *from a* Japoneſe *that had been twice there.*

Yedzo an Iſland.

THis Intelligence ſays, that *Yedzo* is certainly an Iſland lying on the N. W. ſide of *Japan*, and about ſome ten Leagues diſtance from it. That the People are of a fair Complexion, good manner'd enough, far more humane in their temper and conditions than their outward aſpect and appearance, being all over rough and hairy almoſt like Monkeys, yet their Skin (as before hinted) white and clear. The Weapons us'd amongſt them are Bows and poyſon'd Arrows: Thoſe in the Southern parts are the much more underſtanding People, and fit for Commerce, having the knowledge of Weights and Meaſures, which in the middle parts of the Iſland they are entirely ignorant off.

The Natives.

Dwarfiſh People to the Northward.

That up in the Northern parts are a People which ſeem to be different from the reſt of the Iſland, and of quite another race, being ſo extreamly low and ſhort that they may be call'd Dwarfs in a ſtrict and proper Sence, whereas the *Yedzoes* are commonly of the ſtature of the *Japoneſe*. They have none of them any ſort of Apparel but what is brought them from *Japan*, and ſo the moſt part of their Rice (if not all they are ſupplied with) is brought from thence too; but then they have that amongſt them, which will make other People think it very well worth their while to come and bring them theſe neceſſaries; they have a great deal of Silver, and a ſort of Sand-Gold, in which they make all their payments to the *Japoneſe* for what they take of them.

Commodities carried thither.

The Commodities moſtly tranſported hither are Rice, Cotton, Cloth, Iron and Lead; but of all things, neceſſarie for the Back and Belly, are the moſt welcome and acceptable to theſe People; particularly Rice carried from *Japan* to *Yedzo* has yielded four for one.

Matchma Town.

The chief Meat-Town where the *Japoneſe* reſide and trade is call'd *Matchma*, where they have alſo a Fort, and at leaſt 500 Families of that Nation conſtantly dwelling there. In *September* the Natives come down in vaſt numbers to buy and lay in their Winter ſtores, and in *March* they bring Salmon, and ſeveral ſorts of dried Fiſh (beſides other Wares) which they barter with the *Japoneſe*. This *Matchma* is the chief Town for Buſineſs known to the *Japoneſe* upon the whole Iſland, and they have no manner of concern or ſettlement any where but here.

The Winds and Currents;

The Winds hold the ſame Courſe here for the moſt part that they do in *Japan*, *viz*. The Northerly begin in *September* and end in *March*, and then the Southerly ſucceed them, and begin their courſe. And as a concluſion of the whole Account, there ſets a very violent Current between *Yedzo* and *Japan*, which comes from *Corea*, and goes away to the E. N. E.

A SUPPLEMENT to CHAP. XXIII.

Concerning divers Cuſtoms of the Japoneſe, *and ſome Remarkable Occurrences at* Firando. *Taken out of the Relation of Mr.* Richard Cocks, *Cape-Merchant, and chief Reſident in the* Engliſh *Factory there.*

Japoneſe Feaſts.

'TIS common enough every-where in the World, for Friends to meet and make merry together, for kind and good natur'd Neighbours to make much of one another, and ſtrengthen their Friendſhip by mutual Entertainments: Now in this point the *Japoneſe* go beyond all the reſt of Mankind, and make ſuch Feaſts as hardly any other People, I believe, dare pretend to the like. We ſhou'd think it very odd, for a parcel of People in one Country, to invite their Friends in another two or three thouſand Leagues off, to come and take part of a Collation; for a Man in *England* to ſend to another in *Japan*, or the remoteſt parts of *Tartary*, to come and Dine with him ſuch a Day. But the *Japoneſe* are far more extravagant than this comes to; and deſire their Friends to take a much longer Journey: They look out into the other World for Company; give Invitations to the Dead, and call at the Grave's Mouth for Gueſts at their Entertainments.

Strange Gueſts invited.

When the Seaſon for this Solemnity is come, very great Preparations are made all over the place; the Streets are ſwept clean, and Gravel is laid in a decent manner before every Man's Door; at Night too there are Illuminations, and Candles are hung out every-where: This muſt be either for a Token of Joy and Welcome to their Friends at their Arrival, or elſe to give them a little Direction, and prevent their being Blunder'd by the Way. All things thus ſet in order, in the dead of the Night they march with abundance of Lights to the Graves and Tombs, carrying all their Proviſion both for Eating and Drinking along with them; and here they ſet to it, and are exceeding merry, enjoying all the Pleaſures of Good Fellowſhip at this rate, for ſeveral Nights together. At the breaking up of the Feaſt, they go up and down the Town in Companies, with Flags and Banners, beating upon Great Pans, and dancing very briskly to that fine Muſick, before every Great Man's Door, and at all the Temples and Sepulchres. This is the Concluſion of the whole Solemnity, and now the airy Gueſts are diſcharg'd till the next Invitation.

They are ſo very ſtrict in obſerving the Orders of this Feaſt, that 'tis made Capital for any Man to neglect his Duty here: 'Tis Death not to ſweep a Door, and hang out a Candle, upon this occaſion; and that was the Fate of one poor *Japoneſe*, at the time of our being at *Firando*.

Maſquerades

Beſides this, the *Japoneſe* are mightily given to another ſort of Night-Diverſion, and that's Maſquerading, in which the Kings, and the Noble-men, act the moſt conſiderable parts: All the Streets are now enlightned with Candles again, and the Muſick plays the Company along with all the Jollity imaginable; they march ſometimes to one great Houſe, and ſometimes to another, according as the Frolick works, and ſpend perhaps the beſt part of the Night in the Dancings, and other Comical Parts of this Entertainment.

The Nights hardly paſs away any where, I think, more merrily, than at *Firando*; when other People are a Bed and a Sleep, they are at the Balls and Publick Dancings, perhaps Maſquerading up and down the Streets, or Carowſing in ſome Great Man's Houſe, at one of their Mid-night-Feaſts. This is their common Trade, and the old King *Foyne* is as good at it as any of them all, has as much Air and Youth in all Diverſions of this kind, as the young King his Grand-ſon: 'Tis the Temper of this People to be airy, jolly, ſociable, love Entertainments, and Publick Meetings, chuſe rather to wear away the melancholy Night in the Company of their Friends, than ſpend it in Solitude, and upon dull Repoſe.

Shooting Exerciſes at Firando.

There is not leſs Feaſting and Doings of all ſorts, at the time of their Publick Shooting-Matches. The Kings, and all the Nobles then appear on Horſeback, and are follow'd by all the whole *Poſſe* of Slaves, Pikes, Bow-men, and Small-ſhot. The Exerciſe is chiefly managed by the Archers, who ride full ſpeed, and diſcharge their Arrows in the Carcer at a Buckler, that hangs up againſt a Wall. 'Tis perform'd in the Street before their great Pagod, or Temple; and the Deſign of it (I ſuppoſe) is to encourage that ſort of Dexterity, and make them skilful Marksmen, that they may be able to do better Service in the Wars.

Japoneſe Plays.

And amongſt other Recreations in uſe in this Country, thoſe of the Stage are not to be forgotten; for the *Japoneſe* are not ignorant of theſe things, and have both Air and Life, Carriage, and Wit enough, to make a handſome appearance in a Drama. The worſt part of the whole Entertainment, is the baſe Muſick that attends it; I know not what Influence it may have upon the Spirits of the *Japoneſe*, or how agreeable it may be to them, but there's nothing of Sweetneſs or Harmony in it to an *European* Ear: 'Twas all Diſcord to us, ſo harſh, flat, and confus'd, that one wou'd think it ſhou'd rather diſcompoſe the Audience, and prejudice their Temper, than excite any pleaſing ſuitable Paſſions in them, and give a reliſh to the Play.

This Muſick (at leaſt what we ſaw) was a ſort of Tabors made in the form of an Hour-glaſs, great at both ends, and ſmall in the middle; they beat upon one end with one Hand, and ſtrain the Strings with the other, proportioning the Sounds as they pleaſe to their Voices which accompany it; beſides which, they have ſomething of a Fiſe, or Flute; but Tabor, Voice, and Flute, are all dull and unmuſical. Some of their Women indeed, ſing and play ſweetly enough upon the Cittern of their Country; but the Muſick of the Stage, where it ought to be fineſt, is there the moſt ordinary and courſe.

In ſome Circumſtances it muſt be own'd, that they go beyond us; for in all their extraordinary Plays, the Actors are no leſs Perſons than the Kings themſelves, and the top of the Nobility; ſuch who by heighth of Birth and Blood, and an Elevation of Mind and Temper anſwerable to that of their Fortune, are very well qualified to act a Real and a Natural Part, and to give the utmoſt Degrees of Life and Strength, to thoſe Repreſentations of Heroical Vertue, that are contain'd in the Play.

The Subject Matter of thoſe Drama's, is always ſome important Affair of their own Country; they don't concern themſelves with any Foreign Stories, but ever draw the Scene for ſome place within the Bounds of *Japan*: They run over (at ſeveral times) the whole Hiſtory of the Country, the various Fortunes of it, the Wars and Valiant Actions of their moſt Renown'd Anceſtors; by which means they keep up a lively Remembrance of them amongſt the People, and provoke them to a generous Imitation of thoſe Vertues they ſee repreſented, with ſomething more of Advantage, than if the Perſons of the Play were abſolute Strangers to them. Nay, they come down from Antiquity to the preſent Times, and bring the Life and the Fiction ſometimes together; making thoſe Circumſtances the Subjects of the Drama, that were real to themſelves, and thoſe Perſons Actors, that bore a part in the Life. And in this Caſe, no doubt the Performance muſt be very agreeable, becauſe Nature has here ſuch a part to play; and the very Hero's themſelves, who can moſt decently excite and manage their own Paſſions, are brought upon the Stage to do it.

The Feaſtings after the Plays.

All theſe great Plays, in which the Courtiers are concern'd, conclude with as Noble an Entertainment; and whatever be the Prologue, a good Feaſt to be ſure makes the Epilogue. The Nobles all ſend in their ſeveral parts of the Proviſion, and do every thing to make it as pompous as can be: And then all the People that come to ſee, are Royally Feaſted, and made very much of, both ſmall and great, without exception. There is no excluſion of any, either from the Play or Entertainment, but as many as the place will contain, are admitted: And there's ſome Reaſon for it too, ſince the moſt of them that are any thing ſubſtantial, contribute to the Feaſt as well as the Nobles. They are very merry at theſe times, but yet in their decent civil way.

Tho'

Superſtition of the *Japoneſe.*

Tho' the *Japoneſe* can be very Civil and Friendly to Chriſtians, and the Religion is entertain'd by ſome of them themſelves, yet the Country in general, ſeems to be poſſeſs'd with ſome ſort of ſtrange ſuperſtitious Prejudices; the Effects of which are ſuch, as repreſent Chriſtians (if not Chriſtianity it ſelf) to be deſpicable amongſt them. Thus if a Chriſtian dies there, as they have a Burying-place to themſelves, ſo the Corps muſt never be brought in ſight of any of their Pagods; if the place of Interment be but at the end of a Street, or hard by, if there be a Church of theirs in the way, the Funeral muſt go two or three Mile about, unleſs there be any ſhorter Cut, by which 'tis poſſible to avoid the Street where the Church ſtands.

Thus they ſerv'd us, when one of our Company was to be buried; we were forc'd to carry the Corps by Water I know not how far round, becauſe the foppiſh Prieſts wou'd not ſuffer us to bring it along the Street, ſanctified by the Preſence of one of their Idol-Temples. And if we had had no Boat or Skiff of our own, to convey a Corps by Water, we muſt e'en have buried our Companions upon the ſpot where they died, or have flung them into the Sea; for they won't ſuffer any of their Boats to touch the dead Body of a Chriſtian. Nay, more than that, they won't be hired, any of them, to dig a Grave; ſo that in this Country we are forc'd to be Sextones to one another, having none elſe to do that Office for us: For the *Japoneſe* will rather endure the ſtench of a putrifying Body, than ſet their Hands to the laying it under Ground.

The Bonzees and their Jugglings.

The Bonzees of this Country are mighty Pretenders to the Knowledge of Future and Secret Things, which they ſay are reveal'd to them by their Oracle: Thus they pretend to reſolve all ſorts of knotty, dark, myſterious Queſtions, to determine the Circumſtances of contingent Events; in ſhort, to give an account of all thoſe Things, which cannot be accounted for, but by ſuppoſing them to have ſome ſupernatural Intelligence. But the miſchief on't is, they very often ſhoot beſides the Mark; their Predictions and the Events very ſeldom agree: Upon which account (ſince it is not to be ſuppos'd that they have thoſe falſe Informations from any good Spirit), 'tis paſt all doubt, that either the Devil tells them Lyes, or they tell Lyes of the Devil.

Fires at *Firando.*

They very often put the Town into a diſmal Fright about Fires, which they ſay poſitively ſhall happen ſuch a Day; and then all the People are in a hurry, providing Tubs and Buckets, and filling Water againſt the fatal time comes; and at laſt perhaps they have their Labour for their Pains, and may e'en throw their Water out again, for any uſe they have for it at that Seaſon. 'Tis true, the Town is very often fired; and I think it may be almoſt compared with *Bantam,* for the frequency of that Calamity: But then 'tis very ſeldom ſo, when the Bonzees tell of it; that they had better either quite hold their Tongues, or lay their Plot ſo ſure, that the Town may be ſet on fire without fail: For we make no doubt at all, but the Bonzees are either the Incendiaries themſelves, or at leaſt ſome employ'd by them; and that partly out of hopes of getting Plunder, when the People are in a Confuſion, and of eſtabliſhing the Reputation of their Predictions, by making the Event anſwerable. So that when a Fire does happen as they foretel it, there's no neceſſity of ſuppoſing any Magick in the Caſe, or that an Oracle reveal'd this Myſtery to them: For a Villain may foretel his own leud Actions, without being call'd a Conjurer if they come to paſs.

The matter ſtands thus: The Bonzees can't have their deſired Spoils, without ſetting the Town a-fire, nor they can't be Prophets, except they tell on't before-hand; but Spoil they will have, and Prophets they will be too, and therefore to anſwer both theſe ends, they have no other way, but to form the Plot themſelves, and tell the People before-hand, that the Devil will put it in execution at ſuch a time. And when it is done, it is really perform'd with ſo much ſlyneſs and ſubtle management, that there is hardly any finding the Authors of it; I don't remember of all the Fires that happen'd at *Firando* at our being there, (and there were ſeveral) that there was any diſcovery or ſeizure of a Villain made: They have been ſeen indeed ſometimes at a diſtance, and purſued; but there are ſo many ſly places, and cunning holes, for Rogues to lie ſkulking about in, that 'tis almoſt impoſſible to catch them. Otherwiſe it might be ſuſpected, that the Bonzees laid the Saddle upon the right Horſe, and that ſome evil Spirit indeed was concern'd in the miſchief; but the purſuit of the Villains takes off that; and beſides, there are Crowds of pilfering People lying about the Town, that break very often into Houſes, and rob and ſpoil, and offer Violence of all other ſorts; where there are ſuch ſort of Cattle, there's no need of going farther a-field, to fetch the probable Authors of ſuch Villanies as theſe.

In order to the future more effectual prevention of theſe Diſturbances, we (whoſe ſhare of dread and danger by the Fires was not the leaſt) made a Motion to the King, That an Edict might be publiſh'd, enjoyning a moſt ſtrict and particular Watch to be every-where kept; that no Man ſhou'd be ſuffer'd to be out late, but what cou'd give a very good Account of himſelf, and his Buſineſs; and beſides, always to have a Light before him, that he might be ſeen what he was. And theſe Orders were accordingly put in execution with all diligence: So that now there's hopes, that the Town, and the Merchants in it, will enjoy a more undiſturb'd Repoſe: For the plain truth on't is; what with the terrible Apprehenſions of the Fire, the Hurry of the Town thoſe Nights 'twas expected, and the Noiſe and Bellowing of a parcel of Fellows in the Streets, that go about to give Warning, and bid People have a Care of their Houſes, there was no Reſt to be had, and a Man liv'd continually in all the Extremities of Confuſion and Haring at ſuch times as thoſe: Beſides, the Calamity was likely enough to come, and the Bonzees Emiſſaries, we know, wou'd not fail of the utmoſt Care to give a Reputation to their Predictions.

Good Orders eſtabliſh'd at *Firando*

A moſt fearful Tempeſt at *Firando.*

In *September,* at which time Captain *Saris* was gone upon his Journey to the Emperor's Court, we were ſurpriz'd at *Firando,* with the moſt horrible Tempeſt that perhaps ever any Man ſaw: We that had been at Sea, and in all the Extremities of Weather in that unquiet Element, never ſaw any thing comparable to it; and the oldeſt *Japoneſe* then alive, declar'd it the greateſt Prodigy ever ſeen in their Country.

The Airy Regions were all over in a Hurly-burly; and as one wou'd have imagin'd (by the furious Motions they were then put into) commencing a War that ſhou'd end in an Univerſal Confuſion. The Noiſe of the Wind (raging above the degree of a Tuffon) was accompanied with a Diſcharge of Thunder and Lightning ſufficient to have ſhaken the moſt fix'd and ſteddy Courage in the World; the Rains fell at the ſame time, in a moſt violent manner, which tho' perhaps an advantage in reſpect of the Lightning, yet added exceedingly to the Horror of the Storm. The Winds beat ſo fiercely upon the Town, that above a hundred Houſes were preſently overthrown; a great part of the reſt were until'd and laid open, and all trembled, as if the Earth it ſelf had ſuffer'd a Convulſion. The Sea at the ſame time feeling the Effects of the general Commotion, and not able to keep within its uſual Bounds, broke into the Town, undermin'd the Great Wharf, beat down the Stone-Wall, and ſunk and ſhatter'd in pieces above fifty Barks that then lay in the Road. God be thanked, our Ship eſcap'd in this common Calamity, and came off with the loſs of one of her Anchors only.

This Storm did more Miſchief at *Langaſaque,* than here at *Firando:* All the while it continued, the ſuperſtitious People run up and down the Streets with Firebrands, a Ceremony, I ſuppoſe, intended to pacifie the angry Deity that ſent that bad Weather: But this in all probability had ſet the Town a-fire, if the Rains had not done ſomething by way of prevention.

CHAP. XXIV.

Obſervations made by Capt. John Saris, *relating to the Univerſal Trade of the* Eaſt-Indies, *the moſt remarkable Places, the Commodities they afford, or are chiefly in requeſt in every one of them; with the Rates, Prices, Cuſtoms, and Impoſt, every-where obſervable.*

Rules for the Choice of certain Drugs, with the Places from whence they come.

Lignum Aloes

LIgnum Aloes, (call'd by the *Malayans Garroo*) the beſt of it comes from *Malacca*, *Siam*, and *Cambaya*, and is in large Sticks, and very maſſy, black, and mix'd with Veins of an Aſh-colour. 'Tis bitter if taſted; and laid upon the Fire, yields a moſt delectable Smell, and fries away till it be quite conſum'd, much after the rate that Pitch does.

Benjamin.

Benjamin, (call'd by the *Malayans*, *Minnian*;) the beſt ſort comes from *Siam*, which is a very pure, clear, and white, with little Streaks of Amber-colour. There is another ſort which comes from *Sumatra*, which is very good, but not ſo white and fine. And a third ſort, particularly from *Priaman*, and *Barrowſe*, which is very coarſe, and not valued in *England*, tho' at *Bantam* it goes off well.

Civet.

Civet, the beſt is that which is of a deep yellow Colour, inclining to that of Gold: If it be of any conſiderable Age, and looks white, 'tis a ſign 'tis adulterated; but if it be newly taken, 'tis natural for it to look ſomething whitiſh, with bright Colour, by degrees, wears away into a yellow.

Musk.

Musk, there are three ſorts of it, black, brown, and yellow; of which the firſt is ſtark naught, the ſecond good, and the third beſt of all: It ought to be of the Colour of the beſt Spikenard (that is of a deep Amber) and incloſed within one Skin only, and not with ſeveral one over another, as 'tis many times ſeen to be, and not over moiſt neither, which increaſes the Weight, but is no ſign of the Goodneſs of the Commodity; 'tis beſt to chuſe that alſo, that has ſome few Hairs like Briſtles, little Stones, Pieces of Lead, or other Traſh mix'd with it (for all this is natural) and of ſo ſtrong a Scent, as to be rather offenſive than otherwiſe; eſpecially if taſted when the Fumes of it ſeem to pierce violently into the Brain, and ſearch the Head at a wonderful rate: If it be right, a bit of it taken into the Mouth, will not be preſently diſſolved; as neither on the other hand, ought it to remain undiſſolv'd any conſiderable time. You muſt take care not to keep this Drug near any of your fine ſcented Spices, leaſt it loſe its own Odour thereby.

Bezoar.

Bezoar is of two kinds, the Occidental, and the Oriental Bezoar; which latter is worth full double the Price of the former. The Forms of both ſorts are various, ſome round, others long, like Date-ſtones, others like Pigeon-Eggs, others again in the ſhape of a Kidney, or like a Cheſsnut; but all, for the moſt part, not ſharp and picked, but blunt at the ends. There is as much Variety in the Colour too; for there is a light Red, a Honey-colour, a dark Aſh-colour, but for the moſt part 'tis of a Wateriſh Green. The Oriental Bezoar (or that from the *Eaſt-Indies*) conſiſts of ſeveral diſtinct Peels, or Coats, lying one over another, as thoſe of an Onion. They all of them appear bright and ſhining; but the inner one's ſtill more reſplendant than the outer: They are thicker or thinner, in no certain proportion, but moſtly according to the largeneſs of the Stone, and the largeſt are the moſt valuable, and beſt for Sale.

A certain way to try the Goodneſs of your Bezoars, is to put the Stone into the Water for three or four Hours (having firſt taken the exact Weight of it), then taking it out, obſerve if the Surface of it be whole, and even as before, not divided by Cracks and Chinks; as alſo, at the ſame time, take the Weight of it again pretty nicely, and if it weighs ever ſo ſmall a matter more than it did at the firſt Trial, you may build upon it that it is not good. In this way of proceeding, I have ſeen ſeveral Bezoars at *Bantam* (that have promis'd very fair to the Eye) diſſolve into a perfect Chalk, and diſcover nothing but traſhy matter in the inſide. The places that afford them are *Patane*, *Bemermaſſin*, *Macaſſar*, and *Soocadanna*; but thoſe that come from this laſt place, do oftner impoſe upon us, and prove naught, than thoſe that are yielded by any of the other places.

Amber.

Amber, if you reſpect the Colour, is of various ſorts, as Black, White, Brown, and Grey, of which the Black is uſually the baſeſt; and the Grey, or at leaſt the Aſh-colour mix'd with White, is the beſt and pureſt. 'Tis a Characteriſtick of this fine and clean ſort, that being put into the Water, it does not ſink but floats upon the Surface; and tho' this may alſo poſſibly agree to ſome Amber that is abuſed and ſophiſticated; yet 'tis certain, that all that is good and pure muſt ſwim; and if it does otherwiſe, it may be pronounc'd baſe and adulterate.

The Characters of the chief Towns of Trade in the Eaſt-Indies, *the Commodities they afford, and deſire from Foreign Parts.*

Bantam.

BAntam, upon the Iſle of *Java Major*, is a Town of very great Reſort, and equal Trade, for divers ſorts of Commodities. The genuine Products of the place it ſelf, are chiefly Cotton-wool, and Pepper; but the great numbers of Foreign Ships that come hither, bring other Materials for Trade beſides.

The Meaſures.

Their Harveſt for Pepper is in the Month of *October*, and the Quantities gathered in at a time, may be ſome 32000 Sacks (or Timbangs as they call them). Now two Timbangs is a Peecul, three Peeculs is a ſmall Bahar, and four and a half a great Bahar, which makes 445 Cattees and half; ſo that the Sack contains 49 Cattees and a half, and every Cattee amounts to 21 Rials and a half *Engliſh*. The *Javans* not being perfect in the uſe of the Beam, moſt commonly deal by the Coolack, which contains ſeven Cattees and a quarter, which is one Cattee and a quarter more than the Beam allows, and indeed there ought to be no difference; but the Weighers at *Bantam* being always *Chineſe*, they manage the matter ſo as to favour their Country-men when they ſee good, and will fit them with a bigger or a ſmaller meaſure, according as they are gratified and pleas'd.

Deceits in Weight and Meaſure at Bantam.

Coyn of Bantam.

The King has no Coyn of his own, but what comes from *China*, which is call'd Caſhes, and is melted out of the Droſs of Lead; they are round thin Pieces, made with Holes for a String to go through them, in which manner they are deliver'd up and down in Payments. A String with a thouſand of theſe Caſhes upon it, is call'd a Pecoo, which is of divers Values, according as Caſhes riſe or fall. They make their Accounts thus: Ten Pecooes is one Laxſan, ten Laxſans a Cattee, ten Cattees a Uta, ten Uta's a Bahar.

Deceits in Payment.

By the Law of the Country there ought to be a full thouſand Caſhes upon a String; and if the number falls ſhort, the Perſon that makes Payment is to allow accordingly; and the *Javan* Strings are indeed, for the moſt part pretty honeſt and juſt; but the *Chineſe* are horribly deficient, and if you don't look to them very well, they'll cheat you of 150, or 200 Caſhes ſometimes in a Pecoo. Always upon the going away of the Ships and Juncks the Caſhes fall, and you may get thirty four or thirty five Pecoos for a Rial, which before the next Year comes about, you may put off again at more than one third profit; but then the great danger in this caſe of engroſſing is Fire, which as 'tis a very common Calamity at *Bantam*, ſo 'twill make bad work where it comes amongſt the Leaden Coyn of this place.

Profit to be made by engroſſing the Caſhes.

The Weights

The Weight in uſe here for weighing Bezoars, Gold, and Civet, is call'd a Tail, which makes 2 ¼ Rials of Eight, or two Ounces *Engliſh*: This is the *Javan* Tail; but the *Malayan* is 1 ½ Ounces *Engliſh*, and the *Chineſe* 1 ¼ Ounces *Engliſh*: So that the *Chineſe* Tail is ⅝ of the *Javan* exactly.

Commodities vendible at *Bantam.*

The Commodities which find the beſt Sale and Acceptance here, are theſe following of our own and other Countries:

Iron, long and thin Bars, at ſix Rials *per* Peecul.

Lead in ſmall Pigs, at 5 ½ Rials *per* Peecul.

Powder fine, round, corn'd, at 25 Rials *per* Barrel.

Engliſh Trade

Pieces ſquare and ſanguin'd, of ſix Foot long, ten Rials *per* Piece.

Pieces ſquare and damask'd all over, of 6 ½ Foot, fifteen Rials.

Broad Cloth of 10 *l.* the Cloth, of a *Venice* Red, three Rials *per* Gaſs, which is ¼ of a Yard.

The beſt Opium, eight Rials *per* Cattee.

Amber in great Beads, 6 Rials *per* Tail *Maleyan.*

Coral, in large Branches, five and ſix Rials, by the ſame Weight as the Amber.

But above all things, Rials of Eight are the beſt Commodity you can bring hither.

China Trade.

This is moſtly the *Engliſh* Trade; but then in the Months of *February* and *March,* there comes conſtantly three or four Junks very richly laden from *China,* with all theſe ſorts of valuable Commodities, *viz.*

Your Raw Silk of *Lamking,* which is the beſt, and goes at 190 Rials *per* Peecul.

Raw Silk of *Lauton,* which is coarſer than the former, at 80 Rials.

Taffata in Boults, holding 112 Yards in the Piece, at 46 Rials the Corge, which is 20 Pieces.

Velvets of all Colours, 13 Yards, at 12 Rials.

Damasks of all Colours, 12 Yards at 6 Rials.

White Sattins, 12 Yards, 8 Rials.

Burgogues, 10 Yards long, at 45 Rials *per* Corge.

Sleeve Silk, the beſt made Colours, 3 Rials *per* Cattee.

Musk, the beſt, at 22.

Sewing Gold, the beſt, 15 Knots, every Knot 30 Strings, at 1 Rial.

Velvet Hangings, embroider'd with Gold, 18 Rials.

Sattins embroider'd, 14 Rials.

White Curtain-Stuffs, 9 Yards the piece, at 50 Rials *per* Corge.

White Damask flat, 9 Yards the Piece, at 4 Rials.

White Sugar very dry, at 3 ½ Rials *per* Peecul.

Sugar-Candy very dry, at 5.

Porceline Baſons, very fine and broad, 2 Rials a piece.

Callicoe-Cloth, coarſe, white and brown, 15 Rials *per* Corge.

Benjamin, very white and good, at 30 and 35 Rials *per* Peecul.

Lignum Aloes, at 80.

Alom, as good as our *Engliſh,* at 2 ½.

Coromandel Trade.

All your *Coromandel* Cloths are topping Commodities here; but the moſt vendible ſorts are the Gobarees, the Pintadoes, the fine Tappies of St. *Thomas,* the Ballacho's, *Java* Girdles, Callicoe Lawns, Book Callicoes, and White Callicoes, made up in Rolls.

The Meaſure that takes place in theſe Commodities is the Haſta, which is about half a Yard, or as much as from the Elbow to the extremity of the Middle-finger: And ſome of theſe Cloths are more, and others leſs in length, tho' none above 34 Haſta's; and in general, all ſorts of *Malayan* Cloths are ordinarily 8 Haſta's long: And to conclude this Head, all kinds of Cotton Cloth which are broad, and hold out a good length, are in very good eſteem at *Bantam.*

Cuſtom and Impoſt, *&c.*

The Cuſtoms taken at *Bantam* are of ſeveral ſorts; the King's Cuſtom call'd *Chukey,* is eight Bags upon the Hundred, rating Pepper at 4 Rials of Eight *per* Sack, what Price ſoever it bears.

Then there is that call'd *Billabilian,* which is thus: If any Ship come into the Road laden, the King is to be immediately acquainted with the Sorts, Quantities, and Prices of the Commodities in her, before any part can be landed; upon which he ſends his Officers to the Ship, and takes of all the ſorts what he likes, perhaps at half your Price, or it may be ſomething better, according as you can agree. So if you lade Pepper according to the Law of this Duty, you pay for every 6000 Sacks, 666 Rials, or elſe are obliged to be the King's Chapman for as many thouſand Sacks, at one half, or three fourths of a Rial more than the Current Price of the Town.

The *Dutch* indeed go a more compendious way to work, and to avoid the trouble of the Duty, agree with the King ſo much in the groſs, for the Lading of a Ship, which is generally about ſeven or eight hundred Rials. And 'tis to be noted, that tho' you have ever ſo prudently provided before-hand Lading to diſpatch your Ships, yet you ſhall not be excus'd from this ſort of Duty; for if you pretend to diſpute, or refuſe it, they'll ſtop the Lading of your Ship.

The *Rooba,* at *Bantam,* is a Duty for Anchorage, and 'tis 500 Rials of Eight upon 6000 Sacks. The Sabandars Duty is 250 Rials upon 6000 Sacks. And the Weighers Duty is 1 Rial upon 100; and the ſame of the Weighers belonging to the Cuſtom-Houſe.

Jortan.

The Town of *Jortan,* upon the ſame Iſland, pretends moſtly to Victuals, Cotton-wool, and ſpun Yarn. There is alſo ſome little matter of Spice, Pepper, by the Juncks of *Jambi* that come hither, and ſome Mace and Nutmegs by thoſe of this Town that go to the Iſle of *Banda.*

Macaſſar.

Macaſſar, at the *Celebes,* affords great ſtore of Bezoar-ſtones, Rice, and other Proviſions, with a ſmall quantity of Spice, by means of a Correſpondence with *Banda.*

Balee Iſle.

Balee, an Iſland to the Eaſtward of *Mackaſſar,* in 8 ½ Degr. South Lat. yields plenty of Rice, Cotton Yarn, coarſe White Cloth, a good Commodity at *Bantam:* Thoſe that this place requires, are the ſmalleſt ſort of Blew and White Beads, Iron, and coarſe Porceline.

Timor.

Timor is a very large Iſland, lying to the Eaſtward of *Balee;* 'tis famous for the Production of the White Saunders, the greateſt Logs of which are eſteem'd the beſt, and are worth at *Bantam,* twenty Rials of Eight *per* Peecul, at the coming in of the Junks: It yields alſo great plenty of Wax, which is made up in large Cakes, and goes at *Bantam* for eighteen, and ſo to thirty Rials *per* Peecul, as the time ſerves; there's a great deal of deceit, very often, in this Commodity; and to be ſure that you are not cheated, the beſt way is to break it, and ſee whether it looks agreeably within.

The Trade there.

The Wares to be carried hither, are Chopping-knives, *China* Frying-pans, *China* Bells, ſmall Bugles, Porcelines, colour'd Taffatees, but no Blacks, Pieces of Silver beaten flat and thin, and of the breadth of one's Hand. There may be good Profit made of the Trade to this Iſland; for the *Chineſe* have given four for one, to ſome of our *Engliſh* that ventur'd with them thither.

Banda.

Banda Iſles are celebrated for their Mace and Nutmegs, with the Oyls of both thoſe Spices. The Harveſt comes three times a Year upon theſe Iſlands, *viz. July, October,* and *February;* but the greateſt gathering in is in *July,* which is call'd here the *Monſon Arepotee.*

The Trade there.

Some report, theſe Iſlands were once in Subjection to the King of *Ternate;* but whatever they once were, now they are a ſort of a Common-wealth; yet is there one Supreme Officer, whom they call a Sabandar, that appears at the Head of the State, and has the Trouble of Managing, but not the full Power of Diſpoſing of any Publick Affair, without the good Liking, and intervening Approbation of the People.

Their way of Dealing is by Bahar and Cattee: The ſmall Bahar is ten Cattees of Mace, and a hundred of Nutmegs; and the great Bahar a hundred of Mace, and a thouſand of Nutmegs. And the Cattee here is 5 Pound 13 Ounces *Engliſh;* the Prices variable.

The Commodities requeſted here, are *Coromandel* Cloth, Cloth of *Cambaya,* and all ſorts of the *Malayen* (or *Cherra Malaya,* as they call it), Broad Cloth, Stammel, Callicoes black and red, *China* Boxes, Baſons without Brims, light colour Damasks, Taffatees, Velvets, Gold Chains, Plate Cups gilt, Head-pieces damask'd, Guns, Sword-blades, but not ſuch as are back'd to the Point. There's a great deal of Profit in bringing Gold Coyn hither; for you ſhall have that for the Value of 70 Rials in Gold Coyn, that will coſt you 90, if you pay in Rials: And 'tis not to be forgotten, that Rice good and fair, is as vendible a Commodity as moſt at this place.

* See the Trade of, and at the *Molucca's,* ſtated in Capt. *Saris's* Voyage, *ch.* 1. of this 4th Book, and ſo is here omitted. *Siam,* the Trade there.

* *Siam,* (in 14 ½ North Lat.) the Capital City of a mighty Empire, is poſſeſs'd of no ſmall advantage to encourage a Trade. You have at this place ſome of the beſt *Benjamin* perhaps in the World, and in great plenty; and the glorious Gems of *Pegu* ſhine here likewiſe: There's a vaſt quantity of Silver in Bullion, that's brought hither from *Japan;* but Rials of Eight are more in requeſt, and will bring in Bullion ¼ of a Rial Profit. Their Tayle is 2 ¼ Rials of Eight.

All your broad *Stammel* Cloth, Iron-works, and fair Looking-Glaſſes, are things that take exceedingly here; and all ſorts of *China* Commodities, are much cheaper than at *Bantam.*

The Juncks from *Guzurat* come to *Siam* in the Months of *June* and *July,* touching firſt at the *Maldive* Iſles, and then at *Tenaſſere,* from whence the Merchants may go over Land to *Siam* in twenty Days ſpace.

Borneo.

Borneo, the principal City of the Iſle of that name, is rich in Gold and Bezoar Stones; abounds in Wax, Retans, Cayulacca, and Sanguis Draconis; and no leſs Trade for all theſe things at *Bennermaſſin,* a Town upon the ſame Iſland.

The Commodities deſired here, are much the ſame with thoſe for the Iſles of *Banda:* Bezoar Stones are likewiſe ſold here by the Tayle, as they are at *Bantam*; but the Tayle is different from that, it being 1 ⅓ Ounce *Engliſh*; and the Stones go at five or ſix Rials the Tayle.

Soocadanna, and its Diamond Trade.

But the great place of Note upon this Iſland is *Soocadanna* (in 1 ½ Degr. South Lat.) and ever will be ſo, while it has the Reputation of yielding the beſt and nobleſt Diamonds in the World. All the Trading part of Mankind being fond of this precious Commodity, the place conſequently never wants a crowd of Ships, Praws and Junks, that come to Trade for them. The Riches of the Country in this kind are inexhauſtible, and *Soocadanna* is never unprovided of Diamonds for them that viſit her upon that Account: But yet the greateſt quantities are met with in *January* and *April*, and tho' they are at no time ſcarce, yet then they are more than ordinarily plentiful, and the place is in the height of it's charming Luſtre. And the Reaſon why they have more in thoſe Months is, becauſe the Rains which fall with an exceſſive violence in *July* and *October*, and ſome of the latter Months, are then well gone off, and their Effects upon the Rivers abated too; they are ſunk by this time to their uſual depth, and the ſtreams became more ſlow and plocid, ſo that the Divers may venture upon their Work, without fear of being carried away and loſt. For all theſe Diamonds are gotten as Pearl are by Diving; and the River moſt celebrated for the ſearch and diſcovery of them is the River *Lane*; ſuch a one as which, any Prince that had it in his Dominions, would not have very much cauſe to complain, if it yielded the Country no Fiſh.

Commodities in requeſt here are *Malacca* Pintadoes, Coromandel Cloths, Callico Lawns, light colour'd *China* Silks, Sewing Gold, Slane Silk, Stammelly and broad Cloth, Bugles of all ſorts.

Concerning which 'tis to be noted, that the blew Bugles made at *Bantam* in form of a Tun, and of the bigneſs of a Bean, and which you give there at the rate of a Rial of Eight for 400, are worth a Maſs the 100 at *Soocadanna*, the Maſs being three fourths of a Rial of Eight. The Advantage of trading with Gold is conſiderable too here, for you ſhall have a Stone for one Rial in Gold, which you ſhall not have for one Rial and half, or one Rial and three fourths in Silver.

When a Ship is bound for this place the beſt way is to go firſt to *Bemermaſſen*, and there barter what Commodities ſhe has (proper for this Iſland) for Gold, which may be had for three Cattees Caſhes the Malacca Tayle, which is nine Rials of Eight: and then bring it to *Soocadanna* it may be put away for Diamonds and four Cattees Caſhes the Tayle, which is one Rial and ſeven eights in weight, ſo that you ſhall gain three fourths of a Rial upon a Tayle. But the Principal Gain muſt be in the Diamonds, which are of four ſeveral Waters, White, Green, Yellow, and a Colour betwixt both, or mixt of Green and Yellow; of all theſe the White Water Diamonds are the beſt.

Weights at *Soocadanna*.

The Weights in uſe here are the Maſs, the Coopang, the Booſuck, and the Pead; four Coopangs make one Maſs, two Booſuck make one Coopang, and one Pead and half is a Booſucks, by which proportion of theſe Weights to one another, and the above mentioned value of a Maſs in Rials, the value of any of theſe may be eaſily expreſs'd in Rials likewiſe. The Tayle at this place is ſixteen Maſs, and one fourth of the Tayle they call a Pahaw, by which they generally weigh not only Diamonds, but Gold too.

China Trade at *Lankin* and *Canton*

The Towns upon the Coaſt of *China* that make a great Figure in Trade are *Lankin*, *Canton* and *Hocchu*. Your raw Silks of *Lankin* are worth there 80 Rials *per* Peecul, the *Hocchu* Taffata, 30 Rials *per* Corge, the *Canton* Damask 50 Rials *per* Corge. Sewing Silk 100 Rials *per* Peecul, Embroidered Hangings the beſt ten Rials of Eight a piece; Sewing Gold is ſold by the Bundle, each containing ten Papers, and every Paper five Knots, and the beſt has 36 Threads in a Knot; this goes at two Rials *per* Paper; Sattens the beſt at one Rial the piece, great Baſons, three for a Rial, White Sugar the beſt at half Rial *per* Peecul, Porceline of the ſmall ſorts, the beſt one, Rial *per* Cattee, Pearl-boxes, the beſt five Rials a Piece, Velvets of nine Yards long five Rials of Eight a Piece, Sleeve Silk the beſt 150 Rials *per* Peecul, Musk ſeventeen Rials *per* Cattee, Caſhes ſixty Peecoes for a Rial, broad Cloth, which is three fourths of a Yard, worth ſeven Rials, Looking-Glaſſes very large ten Rials a piece, Tin fifteen Rials *per* Peecul, Wax the ſame, Musket Barrels twenty Rials a piece, Japan Sables eight Rials a piece, Elephants Teeth the beſt and greateſt, 200 Rials *per* Peecul, the ſmall half of that, White Saunders the beſt in great Logs, worth forty. The Cuſtom of Pepper inwards is a Tayle upon a Peecul, but outwards there's no Cuſtom at all; and they look very narrowly that no Ammunition of any ſort be carried out of the Country.

China Trade to the *Manilles*.

In *March* the Juncks bound for the *Manilles* ſet out from *Chauchu*, and return in *June*: Their lading outwards is raw and wrought Silks, far better than thoſe they carry for *Bantam*; but they come home laden only with Rials of Eight, perhaps forty of them in a Year, and ſo ſlightly guarded, that a Ship-boat may take them without any trouble. This Voyage from *China* to the *Manilles*, is about ten days ſail.

Japan Trade.

As for the Noble Iſland of *Japan*, there is hardly any ſort of Commodity but what is vendible there ſomewhere or other; and the Trade there being of a later date, and much leſs known than at other places before mention'd, it may not be amiſs to add this particular Account of it.

The ſorts of Coin current here, are principally Maſſes and Canderins, the Canderin being one tenth of the Maſs; and 'tis by theſe that the Prices of Commodities are moſt ordinarily Meaſur'd.

Your Broad Cloths of all ſorts, *viz.* Black, Yellow, Red, &c, which coſt in *Holland* eight or nine Gilders the *Flemiſh* Ell, is worth here, three, or four, and ſo to five hundred: Where note that Cloth of a high Wool is in no requeſt, but ſuch as is low ſhorn; ſo alſo your fine Bays of the aforeſaid Colours, but not according to the *Portugueze* wear, but thoſe that are well Cotton'd.

Then *India* Goods of all ſorts are in eſteem, together with Damaſks, Silks, Sattens, Velvets, Taffata's, and your Silk Grograms, Turkey Grograms, and Chamblets, Sayes, Raſhes, Bourats ſingle and double.

All *Holland* Cloths from fifteen to twenty Stivers, and not above, Diapers and Damaſks; which the better branch'd and flower'd the more acceptable.

Then Pictures, Carpets, Painted and Gilded Leather of all ſorts, eſpecially with ſmall and fine Flowers, are very much valued; only as to Pictures, the larger they are the better, but they are not ſo much for Faces; as Landſkip, repreſentations of War, amorous Intrigues, ſome remarkable Story or comical Fancy, as the Painter's Invention guides him.

Then all the ſerviceable Metals, Copper in Plates, Lead in Sheets and Barrs, Tin in Loggs, Iron, Steel and Quick-ſilver are very good Commodities.

For Drugs, *China* Roots, *Collomback* Wood, Saunders, Sapon or Red-Wood, Amber, Camphire, Roach Allom, Elephants Teeth, Rhinocero's and Harts-horn; to which add Honey, *Spaniſh* Soap, Sugar Candy, Pepper, Nutmegs, Salt, all ſorts of Leather, and Wax-Candles.

Then hardly any thing that ſerves for Houſhold Uſe or Ornament comes amiſs in *Japan*, no ſort of Inſtrument or Utenſil, but what will find ſome Cuſtomer or other that will have a mind to it: In ſhort 'tis a place of ſo general a Vent, that I believe 'twill be hard to find out a Commodity of any ſignificancy that will not take there.

Note here that the *Chineſe* will commonly truck for your Silver, and give you Gold of 23 Carrats, from fifteen to twenty the Ounce Silver; but ſometimes there comes too much and other times too little.

Commodities to be bought in *Japan*.

The Commodities *Japan* affords, are Hemp very good, 10 Cattees (which is 120 pound *Holland*) worth from ſixty five to ſeventy.

Eye Colours for dying Blew near as good as *Indico*, made up in round Cakes and pack'd 100 Cakes in a Fardel, worth from 50 to 60 *per* Fardel.

Dying for a while, enclining to Red, made in Fardels or Balls of fifty Gautins Malio's worth from five to eight.

Rice very white and good, worth 8 ½ *per* Tare; and of a worſe ſort worth 7 ½ *per* Bale.

At *Eddo*, *Succaio*, *Oſaca*, and *Meaco* is the beſt Furniture for all ſorts of Colours, and for Gilding too.

Brimſtone coſts here ſeven *per* Peecul.

Salt-Peter one and a half.

Cotton-Wool ten.

Theſe are the Commodities of moſt note which this Iſland yields, of all which kinds tho' it produces thoſe that are good; yet the greateſt excellency it pretends to, ſeems to lie in the Materials for Gilding and Colouring, wherein perhaps it has not many places that can pretend to Rival it.

An Account of ſome remarkable Occurrences, and divers things relating to the State of the Engliſh *Trade in* Japan, *taken out of the Letters of two* Engliſh-men, *a long time reſident there, Mr.* Cocks *and Mr.* Sayer.

These Letters being ſome of them long and tedious, and beſides intermixt with abundance of very vulgar, frivolous, and unprofitable Matters, we ſhall not impoſe upon the Reader the ungrateful Task of going over them in their full length, but endeavouring at once both to ſhorten his Labour and make his Entertainment better, by preſenting him with a faithful and as conciſe an Account as may be, of the moſt material Things, ſeparated from the other Impertinences.

An Account of a Letter of Mr. Cocks, *Dated from* Firando *in* Japan, December *the* 10*th* A. D. 1614. *Sent to Captain* Saris.

Wars between *Ogoſha-ſam*, and *Fidaia-ſam*.

AS to the Affairs of *Japan*, the Writer of this Letter gives us an Account that they were at that time in a very diſmal and unquiet Condition; a Civil War being ready to commence, that threaten'd very great Calamities to the whole Country.

The Prince's name was *Fidaia-ſam*, Son of *Tico-ſam* the Old Emperour.

We have heard before that the rightful Heir of this mighty Empire was ſhut up in the ſtrong Caſtle of *Oſaca*, where 'twas deſign'd he ſhould live in perpetual Ignorance of himſelf, and his juſt Title to the Crown; or at leaſt if he ſhould by any means come to the knowledge of his true Quality, ſhould by that cloſe Confinement be depriv'd of all Opportunities of giving any diſturbance to the preſent Poſſeſſour But the uſurping Emperor's Plot (it ſeems) did not take the deſired Effect; the young Prince ſome way or other came to know himſelf, and accordingly took up Arms to aſſert and maintain his Right. He converted his Priſon into a ſtrong Garriſon, and inſtead of other Keepers, got quickly about him an Army of 100000 Men, bold, reſolute, hardy Souldiers, moſt of them Outlaws, Exiles, and Male-Contents, which flock'd in to him from all parts of the Empire, and will ſpend their Blood to ſet him in the Throne. Beſides this Force of Men he had laid in as good a ſtrength of Proviſion, having furniſh'd the Invincible Caſtle of *Oſaca* with Victuals for three Years. This was the alarm which *Ogoſhe-ſam* ever dreaded the hearing of: Nothing could look with a more threatning, malignant Aſpect upon his State and Power, than a black Cloud gathering about the Caſtle of *Oſaca*. However to maintain his own Pretenſions, he was march'd in Perſon with an Army of 300000 Men towards the Prince, and ſome little bickerings had paſs'd between parties of both Armies at the time of the writing of this.

But now the whole Empire expected the reſult of a pitch'd Battle, in which that controverſy ſhould be ſolemnly decided, which of theſe two Pretenders ſhould finally wear the Crown Imperial of *Japan*. The one is reſolved to purſue his Right, and the other as much to maintain Preſent Poſſeſſion, which being the caſe, the Diſpute between them is like to be very violent, and as ſtubbornly maintain'd on both ſides. 'Twas not long before this that the Emperor declar'd himſelf a publick Enemy to the Chriſtians, giving order for the baniſhing all Jeſuits, Friars, Nuns, and their adherents out of *Japan*, pulling down their Churches and Monaſteries, and to make ſure work with them, not only ordering their Baniſhment, but actually ſhipping them away himſelf, ſome for *China*, and others for the *Manillia's*.

A ſtrange Tuffon at Eddo.

And in a ſhort ſpace after this Perſecution a very great Confuſion happen'd at *Eddo* (one of the largeſt Cities of the Empire) occaſion'd by a moſt dreadful Tuffon which raged there. The City was almoſt demoliſh'd by it, a great part of the Buildings being broke down, and the Sea beating in at the ſame time threatn'd to ſwallow up all the reſt; ſo that the Inhabitants were forc'd to quit the place, and run up into the Mountains for ſhelter. The *Pagan* and the Chriſtian *Japoneſe* are very contrary to one another in their Opinions and Aſſertions concerning the cauſe of this horrible Commotion. The latter ſay 'tis a Judgment of God upon the Nation for the Affronts offer'd to the Chriſtian Religion; particularly for the Emperour's Baniſhing it, with all the Pious Jeſuits that preach'd it, away from his Court at *Eddo*, as he lately did; ſo that the Circumſtance of the Calamity with reſpect to the place, clearly (as they ſay) expounds the Cauſe of it. On the other ſide the *Pagans* ſay 'tis Witchcraft, and that the Jeſuits upon their Baniſhment fell a conjuring, and rais'd that Storm to plague the Country in revenge.

At the time of Captain *Saris*'s being in *Japan*, 'twas thought that if any other *Engliſh* Ship came into thoſe Ports, the Goods might immediately be ſold off, without the formality of making and carrying a freſh Preſent to the Emperour; but 'twas afterwards found to be otherwiſe, and every Ship that came in, was under a neceſſity of doing it, paying its Cuſtom that way. More than this they could have no Liberty, ſo much as to ſet out a Junk, without the Emperours Licence were annually procured; for 'twas made death for any *Japoneſe* Mariner to ſtir out of the Country without leave; only their own Ships might go in and out freely, whenever they had occaſion.

Attempt for a China Trade.

A good Project was ſet a foot for beginning a Trade upon the Coaſt of *China*, at a Town near *Languin*, to which place a Ship might ſail from *Firando* with a good Wind in three or four Days time. This was firſt propos'd and undertaken by ſome conſiderable *Chineſe* then in *Japan*, who labour'd very hard in the matter, and made no queſtion of accompliſhing it ſo far that three *Engliſh* Ships ſhould have a Vent for their Commodities every Year at that place. The Endeavours of the *Engliſh* Factory (ſetled at *Firando*) towards a Trade from *Tuſhma* into *Corea* prov'd ineffectual, very little to any Purpoſe being to be done there.

No Trade at *Corea*.

There was no vent for any Commodities but Pepper only, and not much of that; then the Weight is much bigger than that of *Japan*, tho' ſold at ſomething a better rate. By all Circumſtances it ſeems to appear, that the *Coreans* are not at all diſpos'd to a Correſpondence with them of *Tuſhma*, ſince they'll allow them but to come into one little Town, and forbid them to go without the Walls of that upon pain of Death, ever ſo little a way up into the Country; and that the King of *Tuſhma* is no Subject to the Emperour of *Japan*, ſo that there was no Danger of this latter Prince's getting any footing amongſt them by the opening of a Correſpondence with the former. Yet the *Coreans* are poſſeſſed with ſuch Jealouſies and Fears of the *Japoneſe*, that they'll not indulge any of their Neighbourhood in any manner of Liberties by which it may be poſſible to faſten any hold upon them. And the Truth on't is, they are not fearful and miſtruſtful without a cauſe, if at leaſt former Attempts upon their Liberty may be a Reaſon why an Adverſary that made them, ſhould be diſtruſted for the future.

Tico-ſam invaded *China*.

Now this was the Caſe; for *Tico-ſam* the Emperour before this did actually make an Irruption into *Corea*, intending to have carried on his Conqueſt to the very Gates of *Peking*, and ſurpriz'd the *Chineſe* Emperor in his Palace; but he was in the midſt of that Career of Fortune prevented by a *Corean* Noble-man, who to ſerve his Prince and Country in that extremity gave the Conquerour his Death in a Cup of Poiſon, dying himſelf with him at the ſame time. By this means the *Japoneſe* loſt all that they had gotten in *Corea*, and left *China* to the after Conqueſt of the *Tartars*, which was very like at this time to have fallen to their own ſhare. Now 'tis very probable that this is the Reaſon of the horrid and inveterate Prejudices theſe two People do entertain one againſt the other; the *Japoneſe* were the Invaders of the *Coreans*, and the *Coreans* robb'd the *Japoneſe* of a glorious and fortunate Prince.

But yet that Prince how dear ſoever he was to the *Japoneſe*, he was an Invader of the Juſt Rights and Liberties of the *Coreans*, and they had no Reaſon tamely to give way to a Foreign Power, that pretended to enſlave and trample upon them, if they could find any means either by Force or Policy to put a ſtop to the Progreſs of it. However 'tis certain that the *Japoneſe* do mortally hate the *Coreans*, and can never be poſſeſſed with Sentiments of Tenderneſs and Friendſhip for them as long as the World ſtands, unleſs the humour of the Nation ſtrangely alters. They cannot with any Patience bear the ſight of a *Corean*, and thoſe People they take for ſuch cannot walk the Streets without a whole rabble at their Heels, houting and pelting them with Dirt and Stones. Thus 'twas with Captain *Saris* in ſeveral Towns in *Japan*, where the People did not know what the *Engliſh* were; there was hardly any paſſing along, the Mob was ſo very rude and clamorous, nay, the very Children had it in their Mouths as well as the reſt, *Corè, Corè, Cocorè, Warè*, you *Coreans* with falſe Hearts! The *Japoneſe* are the civileſt and moſt well bred People in the World, only they cannot poſſibly be civil to a *Corean*, or any Man they think to be ſo.

The Bogs ſailing Waggons and Commodities of *Corea*.

'Tis ſaid that there are very large Cities in this Province of *Corea*, and alſo towards the Sea a great many Bogs impaſſable by Horſe or Foot, almoſt ſo that they uſe the ſailing Waggons, which are furniſh'd with Wheels as other Waggons are, but much broader and flatter, that they may not cut deep into the Mire, and have alſo Sails like a Ship, by which contrivance obſerving their proper Winds, they paſs all thoſe Bogs eaſily.

The Country affords Damaſks, attens, Taffata's, and other Silks as *China* does; but they carry moſt of their Goods up and down in thoſe Sailing-Waggons.

The Contents of another Letter, written by the ſame Perſon, from Firando, *bearing Date the ſame Tear and Month as in the laſt. To Sir* Thomas Wilſon.

The growing Power of the *Dutch*.

ACcording to the reports of this Letter, the *Hollanders* made a very conſiderable Figure, and as great a ſtir with their Shipping and Sea-forces at this time in the Eaſtern World. They had quite cow'd the *Spaniards* in the *Molucca's*, broken the Heart of their Trade and Power there, encroached ſo far upon them, that the next ſtep was like to be a compleat ejection of them, and conqueſt of thoſe Iſlands to themſelves. They had made ſuch Preparations to accompliſh this Deſign, that the *Spaniards* were forc'd to ſend an Embaſſadour to the Emperor of *Japan*, to ask leave to take up all the *Spaniards* and *Portugueze* in his Dominions, for the Service and Defence of the *Molucca's* and *Philippine* Iſlands, which they expected the *Dutch* would very ſhortly attempt too: The Emperor refus'd to grant this Requeſt, urging, that his was a free Country and none ſhould be forc'd or preſs'd out of it againſt their Wills, tho' all that had a mind to go might uſe their Liberty. The *Portugueze* alſo ſtood in ſuch fear of them at the ſame time, that they paſs'd the Seas up and down under the moſt terrible Apprehenſions imaginable of being ſurpriz'd by the *Dutch*. But 'tis not only *Portugueze* and *Spaniards* that they are ſuch a Plague to, but the *Chineſe* themſelves, who are not their Rivals in any Points of Conqueſt and Dominion as the other are, nor cannot be ſo much in matters of Trade; they rifle their Ships and make a vaſt ſpoil of them, which Conduct of theirs ſeems to be very unaccountable, and muſt certainly prejudice them in their future Pretentions to a *China* Trade (if ever they make any) without good Satisfaction. And no doubt but they'll treat the *Japoneſe* after the ſame manner if there comes to be a rupture between them, which is not improbable, ſince the Emperor not long ago refus'd to accept the Preſent they ſent him, or to ſpeak to the Meſſengers that brought it, and that carriage is no prognoſtick of a very good underſtanding between them for the future. The Emperor carried it much after the ſame rate likewiſe to a *Portugueze* Miniſter, that came upon the ſame Errand a ſhort time after.

Reports of the *Engliſh* in *China*.

The Character of the *Engliſh* Nation was ſo good in *China*, that the hopes of the Trade there were much confirm'd. 'Twas particularly a very great recommendation of them to the Favour of that Prince and People that they had been ſuch a Scourge to the *Spaniards*, whoſe Ambition, Cruelty and ill Manners had render'd them odious in ſo many parts of the World. This the *Chineſe* Merchants ſay has been a very entertaining ſubject of Diſcourſe at the Court of *China*, and that the Emperour himſelf and the *Mandarins* have heard it with a great deal of pleaſure.

The only impediment that appears is the ill management of the *Dutch*, whom they look upon to be our Neighbours and Allies; they rob their Ships, and 'tis poſſible that we may pay for't with the loſs of our Trade. The *Chineſe* ſeem to be very inquiſitive whether the King of *England* won't reſtrain the *Dutch* from doing them thoſe Injuries; and as deſirous that we bring along with us no *Padre's* as they call them (that is Jeſuits) the very Name of which Men they abhor, and ſay that when they came formerly amongſt them, they quite wearied them out with continual craving and begging one thing or other of them.

Diſaſters of the *Engliſh* at *Cauchin* in *China*.

We have an Account here alſo of the ill ſucceſs of ſome of our Merchants, who were ſent to *Cauchin-China* to deliver a Preſent to the Prince of that Country, and carry on a Trade there. The Preſent was kindly accepted, and the *Engliſh* were entertained with all the ſeeming Courteſy in the World; which the *Dutch* ſeeing they would needs put in for a ſhare too, as they did, and to appearance were made very welcome. But in ſhort, quickly after the *Engliſh* and *Dutch* chief Merchants with their Interpreters and Attendance were ſurpriz'd and all kill'd; and this the *Chineſe* and *Japoneſe* affirm to be the King of *Cauchin-China*'s Revenge, becauſe the *Dutch* not long before had burnt one of his Towns, putting Man, Woman and Child to the Sword: And the Reaſon why they did this, was, becauſe ſome of their Factors had fallen Sacrifices to popular rage and fury there at *Quinham*; but then they kindled the Flame upon themſelves that devoured them; they cheated and abus'd the People with falſe Money, and ſo provok'd them to that Out-rage; ſo that the Cauſe of all theſe Miſchiefs trac'd up to it's true Original, does at laſt appear to be their own lewd and diſhoneſt Practices.

The Contents of another Letter, by the ſame Perſon, bearing Date from Firando, February *the 15th*, A. D. 1617.

THe *Hollanders* (as this Letter informs us) perſiſting in their Deſign of making all the Encroachments poſſible upon the *Spaniards*, ſail'd away with a good Fleet from the *Molucca's* to the *Philippines*, in order to fight and drive them out from thence. The *Spaniards* ſeeing the *Dutch* ſo ſtrong, politickly kept themſelves within their Ports, chuſing rather to bear the Inſults and bold Defiances of their Adverſaries, than expoſe themſelves to a fatal over-throw. The *Dutch* upon this very imprudently divided their Fleet, ſending away a part to go and rob the *Chineſe* Ships; which they did too (as the *Chineſe* declar'd) all under the Name of *Engliſh-men*: But in the mean time the *Spaniards* came out and fell upon the other part of the Fleet, ſinking two good Ships beſides their Admiral, and the reſt hardly eſcaping. But they in their Succeſs being guilty of the ſame imprudent Conduct with the *Dutch* before, that is, to divide their Strength in purſuit of the *Dutch*, were alſo over-match'd by ſome *French* Ships that came in upon them, which coſt them the loſs of their Vice-Admiral.

This Action was in *A.D.* 1616.

Dutch and *Spaniards* fight.

The Emperor rejects the Vice-roy of *New-Spain's* Preſents.

The Vice-roy of *New-Spain* ſent two Friars in the quality of Embaſſadours to the Emperour, with good Preſents too, by this means to inſinuate themſelves into his Favour and Protection in that Country again, but the Emperor would neither receive their Preſents, nor vouchſafe them that brought them the Honour of his Preſence; but ſent them Word that they ſhould be gone out of his Dominions, for he had ſome time ago baniſh'd all Men of their Coat, and he continued ſtill in the ſame Opinion.

†This Letter intimates too the reſult of the Grand Diſpute between the Emperour and the Prince *Fidaia-ſam*, upon the Important Subject of the Crown. Might (it ſeems) overcame Right in this Matter, and the Prince's cauſe did not ſucceed according to the Juſtice and Merit of it. The Blood of 400000 *Japoneſe* has been ſpilt in the quarrel on both ſides, but it ſeems now to be fully ended, and the Prince is either killed or retired into ſome very ſecure ſhelter

† We take the main Account of the Battel out of another Letter which having nothing elſe valuable in it, is for that Reaſon wholly omitted, tho' the preſent Letter gives a hint of it too.

Shelter. However, our Affairs cannot ſuffer, but may rather be in a better Condition by his loſing the Victory, than by his giving of it; for 'tis reported, that he had promis'd the Jeſuits to ſettle them in full Liberty in *Japan*, if he prov'd Conquerour; and then 'tis paſt doubt, that we had been all expell'd from thence. 'Tis poſſible, that this Promiſe was a Bribe to the Jeſuits, to pray for his good Succeſs in that Battle; but the Fathers either forgot the Buſineſs, or elſe did not employ the right Saint to ſollicit and manage that Affair above.

The Contents of another Letter by the ſame Perſon, bearing Date from Firando, *March* 10. *A. D.* 1619.

THE Perſecution in this Country, which before proceeded no further than Baniſhment, and loſs of Civil and Religious Liberties, has ſince (as this Letter tells us) run up to all the Severities of Corporal Puniſhment. The Chriſtians ſuffer'd as many ſorts of Deaths and Torments, as thoſe in the Primitive Perſecutions; and ſuch was their Conſtancy, that their Adverſaries were ſooner weary of inflicting Puniſhments, than they of enduring the Effects of their Rage. Very few, if any at all, renounc'd their Profeſſion: The moſt hideous Forms in which Death appear'd (by the Contrivance of their Adverſaries) wou'd not ſcare them, nor all the Terrors of a ſolemn Execution, overpower that Strength of Mind with which they ſeem'd to go through their Sufferings.

They made their very Children Martyrs with them, and carried them in their Arms to the Stake; chuſing rather to reſign them to the Flames, than leave them to the Bonzees to be educated in the Pagan Religion. All the Churches which the laſt Storm left ſtanding, this had entirely blown down and demoliſh'd, and Heathen Pagods were erected upon their Ruines.

Horrid Perſecutions in *Japan*.

The Dead were perſecuted too, as well as the Living; the Graves torn open, and the Bodies and Bones there incloſ'd, thrown out into ſome baſer Receptacle. So that now if Chriſtianity ever flouriſhes again in *Japan*, it muſt be upon a Second Plantation, the Firſt Stock ſeeming at this time to be compleatly pull'd up by the Roots. There were other Troubles and Stirs, beſides theſe in *Japan* at this time; another dangerous Rebellion was riſing at *Fruſhma*; but the Prince of that place, happening to be at that time in the Court, the Emperour commanded him, either to write to his Subjects to lay down their Arms, or immediately to rip up his own Belly: He choſe rather to do the former, and ſo the Tumult was at an end. But he was turn'd out of that Government, and ſent into a Corner in the Northern part of *Japan*, and the great Caſtle of *Fruſhma* (bigger by Report than the City of *Rocheſter*) levell'd with the Ground: All the Stones being carried away to *Oſaca*, to rebuild that Noble Piece, which the laſt Emperor, *Ogoſhe-ſam*, deſtroy'd, after his routing the Army of the Prince *Fidaia*. For it muſt be noted (tho' our Author does not expreſly tell us of it), that the Emperor ſpoken of in this Letter, was not *Ogoſhe-ſam*, but ſome other his Succeſſor, of whom we have no other Account, than theſe Actions of his give us.

'Tis ſaid alſo, that the Prince *Fidaia* was gotten ſafe out of the great Battle, and lay *Incognito* ſomewhere about *Meaco*: But this our Author hardly credits, it having been often reported ſo before.

Unreaſonable Inſolence of the *Dutch*.

Laſtly, He gives us an Account of the horrid and barbarous Deportment of the *Dutch* towards the *Engliſh*, then reſiding in *Firando*. Without any manner of Provocation they openly proclaim'd War againſt them, declar'd they wou'd burn their Ships and Effects, and deſtroy their Perſons where-ever they cou'd meet them; and this they did ſolemnly by Sound of Trumpet, both aſhore, and aboard all their Ships. And to be as good as their word, they broke into the *Engliſh* Houſe with all their Force, and had actually ſacrificed every Perſon there, if the *Japoneſe* had not come in and fought vigorouſly in their defence; for the odds was vaſtly great, and one *Engliſh-man* had at leaſt a hundred *Dutch* to deal with.

All this, and much more of this kind, they did; but for what Reaſon it cannot be imagin'd, unleſs becauſe they wou'd be Maſters every-where, and have the whole World to themſelves.

One paſſage only, which ſhews their Modeſty in thoſe parts of the World, is not to be forgotten, and the rather, becauſe 'twas in the Preſence of the Great Emperor of *Japan* himſelf, and all his Court.

Our Author being there to do his Duty to the Emperor, upon the coming in of the *Engliſh* Ships, found in the Preſence a certain boaſting *Dutch-man*, that told the Emperor ſtrange Stories of his own Country, and extoll'd his King of *Holland* to the Skies, as the greateſt and moſt potent Prince in all that part of the World; together with a vaſt deal of ſuch Stuff as that. But he who underſtood the *Japan* Language, tho' the *Dutch-man* thought he had not, told him before the Emperor, He need not have told His Majeſty ſo loud and broad a Lye as that, ſince all the World knew, they had no King in *Holland*, but only a Stadt-holder; who did not ſo much govern the People, as the People govern'd him. And whereas he had the Forehead to ſay, That his King, as he call'd him, held all other Princes of Chriſtendom in Subjection; 'twas well known the King of *England* had been his Country's Protector, or they had never been in a Condition to come and make a Noiſe abroad in the World. The *Dutch-man* was, it ſeems, pretty much confounded to loſe his King ſo all of a ſudden; but there was no help for it; and the *Spaniards* and *Portugueze*, that were there at the ſame time, well knew the Truth of what was ſaid. Upon the whole, our Author adds, that the Company were extreamly diverted with this paſſage; and that there was old Laughing, eſpecially amongſt the *Europeans*, to ſee the *Dutch-man* ſo bewilder'd to find out his King, which they very well knew he cou'd never do.

CHAP. XXV.

The Tenth Voyage by the East-India *Company, with the Two good Ships, the* Dragon *and* Hoſiander, *(accompanied with the* James *and* Solomon, *for other Voyages.) Taken out of the Journals of the Captain, Maſter, and others employ'd in the ſame Voyage,* Tho. Beſt *chief Commander herein.*

February, A. D. 1611.

Juan de Nova.

July, A. D. 1612.

WE have few Remarks of Note to offer upon that part of our Voyage, as far as the Iſle *Juan de Nova*, from whence therefore we ſhall begin our Account. Some Doubts have been ſtarted by modern Sailors, about the right placing of this Iſland in the Plats, which many have miſs'd in their ſailing this way, or perhaps not found where they expected it, according to the Direction of thoſe Charts they went by. And 'tis very probable, that ſome Charts may give a very different Account of it from what others may do; however, this we can alledge, that the Iſland which goes by the Name of *Juan de Nova*, was ſituated both for Latitude and Longitude, upon the Globe, much in the ſame manner that the Plats we follow'd had fix'd it: And its Latitude we determine upon a nice Obſervation to be 17 Degr. to the South of the Line, and Long. 19 Degr. 40 Min. from the Cape of *Good Hope*.

Sign of coming near *Juan de Nova*.

The multitudes of Sea Fowl you ſee, is a certain ſign of your approaching to this Iſland, and this may be truſted to univerſally: They are ſome of them black, and others white, which latter have alſo their Wings painted with black Spots.

We cou'd perceive no danger here, only a ſmall Breach at the S.S.E. end of it, about a Mile's diſtance; and there's no fear (being bound this way) of haling in ſight of it, but there is rather danger of falling in with the Southern Current, by haling over for the Main; and therefore to avoid that Inconvenience, let it be a ſtanding Rule, not to hale much to the Weſtward of this Iſland of *Juan d: Nova*, ſince you may go in ſight without any real ground of fear, and ſo miſs the Current.

Mal-Ilha one of the Iſles *Comoro.* *Auguſt.*

Our Courſe from hence was to *Mal-Ilha*, which is one of the Iſles *Comoro*, the next to *Comoro* it ſelf, and diſtant from it about twelve or fourteen Leagues to the S. E. The Latitude here is 12 Degr. 30 Min. Long. 23 Degr. 2 Min. Variation, 15 Degr. 20 Min. This Iſland is very properly call'd *Mal-Ilha*, or *Mala Inſula*, for it's certainly one of the moſt dangerous places a Ship can come to. At the North-end of it you have a Rocky Sea for a matter of eight or nine Mile, quite along from the main Iſland, to another that lies on the Northern ſide; ſo going along the Weſtern-ſide, you have another great Ledge of Rocks that continues till you have brought the high Iſland (at the Northern end of *Mal-Ilha*) S. E. of you, and then it ends; and then you may ſteer in with the Land, keeping the Iſland fair aboard, or directly put into the Bay, where you have good Anchoring.

A dangerous place.

The Town a good place.

But 'tis better to go to the Town which lies a Mile Weſtward of the Bay, and affords ſome of the beſt Conveniences for refreſhing, that are to be had in all theſe parts: The People are Good-natur'd, and they can furniſh you with as good Beeves, Goats, Hens, Limons, and Coco's, as need be wiſh'd for; there's very good Water to be had too, and the Air has the Character of being exceeding healthy and proper, to recover ſick and weakly Conſtitutions. The beſt way to come to it, is to ſail along upon the S. E. ſide of the Iſland, but have nothing to do, if poſſible, on the Northern-ſide, where you have ſo many, and ſo threatning Dangers on every part of you; remembring alſo to keep off the Shoal that lies to the Eaſtward, in coming from the long Ledge of Rocks, and is about five or ſix Mile from the Iſland it ſelf, and no Ground between them at forty or fifty Fathom, that we cou'd diſcover.

September. Come to *Surat.*

We ſail'd from hence to the Coaſt of *India*, and came to an Anchor at the Bar of *Surat*. The People expreſs'd a great deal of Satisfaction at our Arrival, and a very promiſing appearance there was of good Trade and kind Uſage amongſt them; the Governour of *Surat* ſending his Certificate aboard for our aſſurance in that point. However, to go upon the ſureſt Grounds that cou'd be, we concluded to ſend a Diſpatch to *Agra*, to know directly from the *Great Mogul* himſelf, whether we ſhou'd be permitted to have a Free Trade, and to ſettle a Factory in his Country, which otherwiſe we wou'd immediately depart. And the Reſult of it was this; that in a very little time the Governour of *Amadavar* came to us with full Power to treat upon that Subject, and to enter into ſolemn Articles with us, which were to be ratified with the Seal of the *Great Mogul*, in forty Days after, or elſe to be null and void.

October.

By this Agreement we had the Privilege of ſettling Factories, and trading in any City within the Compaſs of the *Mogul*'s Dominions; an Account of which is here ſubjoyn'd, as it was concluded between us and the Governours of *Amadavar* and *Surat*, in *Swally* Road.

The ARTICLES Agreed upon, and Sealed by the Governour of *Amadavar*, and the Governour of *Surat*, and four principal Merchants, and to be Confirmed by the Seal and Firme of the *Great Mogul*, within Forty Days after the former Sealing, or elſe to be void; for the Settling of Trade and Factories in the Cities of *Surat*, *Cambaya*, *Amadavar*, *Goga*, or in any other part or parts of this Country, within the *Great Mogul*'s Dominions. Witneſſed under our Hands and Seals, the One and twentieth of *October*, 1612.

The Articles of Agreement for Trade.

1. IMprimis, *That all which concerneth Sir* Henry Middleton *be remitted, acquitted, and cleared to us: That they ſhall never make ſeizure, ſtoppage, nor ſtay of our Goods, Wares, and Merchandices, to ſatisfie for the ſame.*

2. *That they ſhall procure from their King, the* Great Mogul, *at their proper Coſt, his Grant and Confirmation of all the Articles of Agreement under the Great Seal of his Land, and ſhall deliver the ſame unto us for our Security and Certainty of perpetual Amity, Commerce and Dealing with them, within Forty Days after the Sealing hereof.*

3. *That it ſhall be lawful for the King of* England *to keep and continue his Embaſſador at the Court of the* Great Mogul, *during the time of the ſaid Peace and Commerce, there to compound and end all ſuch great and weighty Queſtions, as may any way tend to the Breach of the ſaid Peace.*

4. *That at all times upon the Arrival of our Ships in the Road of* Swally, *there ſhall be Proclamation in the City of* Surat *three ſeveral Days together, That it ſhall be free for the Country People of all ſorts to come down to the Water-ſide, there to have free Trade, Dealing, and Commerce with us.*

5. *That all* Engliſh *Commodities ſhall pay Cuſtom, according to the Value or Price that it beareth at the time that it is put into the Cuſtom-Houſe, after the Rate of Three and an half the Hundred.*

6. *That all Petty and Pedlarly Ware be free of Cuſtom, provided that it exceed not in value Ten Rials of Eight.*

7. *That we ſhall have ten Manu for our Manuda, carried from the Waters-ſide to* Surat; *and after the ſame Rate back again: And for Carts we are to repair to the* Moccadam *of* Swally, *to ſend for* Surat, *and at* Surat, *to repair to the Broker for Carts down again.*

8. *That if any of our Men die in thoſe Parts, that then neither the King, nor Governour, nor Under-Officer ſhall make Title or Challenge to any thing that to the Dead belonged, nor demand Fees, nor any kind of Taxes, nor Cuſtoms.*

9. *That if all our Men die here in theſe parts, between the times of the coming of our Ships, that then by ſome Officer thereto appointed, juſt and true Inventory, Notice and Knowledge be taken, of all ſuch Moneys, Goods, Jewels, Proviſions, Apparel, and what elſe to our Nation belongeth: And the ſame ſhall ſafely preſerve and keep, and deliver to the General, Captain, or Merchants of the firſt Ships that ſhall hereafter arrive: And to receive a Diſcharge from the General, Captain, or Merchants, to whom ſuch Goods and Moneys ſhall be deliver'd.*

10. *That they ſecure our Men and Goods upon the Land, redeeming all ſuch both Goods and Men, as ſhall happen to be taken upon the Land by the* Portugals; *and ſhall deliver both Men and Goods again to us free of all Charges, or the Value of our Goods and Men inſtantly.*

11. *That as in all Kingdoms there are ſome Rebels and diſobedient Subjects; ſo in our Nation there may be ſome Pyrates and Sea-Rovers, which may happen to come into theſe parts, and here may rob and ſteal: If any ſuch ſhall happen, then will not we by our Trade and Factory here, be liable or anſwerable for ſuch Goods ſo taken, but will aid them with our beſt means that are ſo grieved, by Juſtice to our King, for redreſs and reſtitution unto them.*

12. *That all ſuch Proviſions of Victuals as ſhall be ſpent during the time that our Ships ſhall remain here in the Roads of* Surat *and* Swally, *ſhall be free of Cuſtom: Provided it do not amount unto above a thouſand Dollers in Money.*

13. *That in all Queſtions of Wrongs and Injuries that ſhall be offered unto us, and to our Nation, that we do receive from the Judges, and thoſe that be in Authority, preſent and ſpeedy Juſtice, according to the Quality of our Complaints and Wrongs done us, and that by Delays we be not put off, and wearied, either by Time or Charges.*

The Buſineſs brought to this Iſſue, the Preſents for the *Mogul* were laid out in a readineſs to be deliver'd, as ſoon as the Writings had paſt his Seal.

November. The vaſt Trade of the *Portugueze.*

At this time there ſail'd within ſight of us, a Fleet of *Portugueze* Frigats, to the number of 240 Sail, all Merchants, and bound for *Cambaya*: And ſuch a Fleet as this, goes every Year for that place; from whence they bring the greateſt part of the Lading, which the Carracks and Galleons carry away for *Portugal*: And from hence 'tis plain, that the Concerns of the *Portugueze* in theſe parts of the World, turns to no little Account to them.

But now we were alarm'd with the News of another Fleet of them, that was coming to give us a Welcome into the *Eaſt-Indies*; for tho' the *Great Mogul* had granted us Liberty of Trade, yet the *Portugueze* were reſolv'd it ſhou'd not be ſo, and therefore came with four great Galleons, and twenty ſix Frigats from *Goa*, to drive us away out of thoſe Seas. The Action between us was not finiſh'd all in one Day, or at one ſingle Trial, but made 3 or 4 ſeveral diſtinct Fights one Day after another. In the firſt Bruſh was concern'd no more than the Admiral Ships of both ſides: Our *Dragon* going on to meet their Admiral, and Vice-Admiral, wou'd not be provok'd to ſhoot till ſhe was got betwixt them both, but then ſhe ſaluted each of them with a Broadſide, and a Volley of Small-ſhot, ſo heartily, that they immediately took their Leaves of her, and the Fight, for that Day.

The *Portugueze* Fleet comes to fight the *Engliſh.*

The next Day, after ſome Hours fight, the *Dragon* having play'd with her Great and Small-ſhot very fierce and hot, upon three of the Galleons, forc'd them a-ground upon the Sands, a-thwart the Bar of *Surat*; and there the *Hoſiander* perfectly danced the Hay about them, while they kept all out of ſight, and did not dare to ſhew a Man upon Deck.

The ſame Day after the Galleons were recover'd by the help of the Frigats, the Fight was renewed again betwixt us, but no conſiderable damage done on either ſide.

December.

But the fourth and laſt Trial, (which was after ten Days Refreſhment) was that which ended the Diſpute, and gave the *Portugueze*, as well as the whole Country beſides, a ſufficient proof, that it was not ſo very eaſie (as they had made it by their Noiſe and Bragging) to force two *Engliſh* Ships to a diſgraceful Flight.

This Fight was well managed, and ſtubbornly maintain'd on their parts as well as ours; but (Providence favouring our Cauſe) the happy Concluſion of it was, that the *Portugueze* not able to hold it any longer, cut their Cables, and fled away from us with all the ſpeed and confuſion in the World: And 'twas the more remarkable, in that there was at that time, a whole Army drawn up upon the Shore, that were Spectators of the Action, and very joyful Witneſſes of our Victory. The *Indian* General that commanded that Army then upon the Sea-Coaſt (employ'd in the reducing of a certain Caſtle there by), gave an Account of this Action afterwards to the *Mogul* himſelf, who was not a little amaz'd at it, conſidering the Reputation the *Portugueze* had all over that Country, to be invincible at Sea.

The Loſſes on both ſides.

The *Portugueze* own themſelves to have loſt 160 Men in this Fight, but the Country reports very near 500: We had not ſix Men in all killed and wounded; our greateſt loſs was Powder and Shot, there being ſpent ſixty Barrels of Powder, Six hundred and eighty Great Shot, and Three thouſand Small Shot; tho' we hope to ſome good purpoſe, as well for the increaſe of our Nation's Reputation, as the chaſtiſing the Inſolence of ſo proud and daring an Adverſary.

January. The *Mogul's Firman* is brought.

Having waited here at *Surat* ſome time, the *Mogul's* Ratification of the Articles came; which was deliver'd to us by the Governour in a very ſolemn manner, and accompanied with many Profeſſions of that Princes Good Will to our King and Country.

This Affair now brought to its deſired end, we proceeded in our Voyage to *Sumatra*; and obſerve in that Courſe, that all the way from *Daman* to *Goa*, the Shore is very fair, good Shoaling, not without ſixteen or ſeventeen, nor within ten Fathom, and ſure Anchoring all along the Coaſt: Likewiſe from *Goa* to *Cochin*, we never had above 20 Fathom, at 4 or 5 Leagues from the Land, and at 2 or 3 Leagues diſtance we had 10 and 12 Fathom.

From the Latitude of 11 Degr. 30 Min. as far as *Cochin*, you have very low Land by the Sea-ſide, but very high all along up in the Country; and as a Mark it may be obſerv'd, that four or five Leagues ſhort of *Cochin*, you have a very high piece of Land, mounting up like a Table in the Country before you; and to the Northward of that a Ridge of long Hills or Mountains.

February. The Road of *Beringar.*

About ſome twenty ſix Leagues ſhort of Cape *Comori*, is a little Town call'd *Beringar*, at which we anchor'd and refreſh'd. And it is certainly a moſt agreeable place for that purpoſe, there being a good plenty and variety of Proviſions, a good Road and good Water, and the People of a free, harmleſs, and courteous Diſpoſition, ready to entertain and trade with Strangers, and (which makes them much the better) very great Enemies to the *Portugueze*. From this place to Cape *Comori*, the People are Chriſtians all along the Sea-Coaſt, and have a Friar conſtantly reſident amongſt them.

Note.

A Ship may ſail along this Coaſt of *Malabar*, even to the Cape, without fear of danger, obſerving only a Point of Care and good Conduct, about a Neck of Land ſome eight Leagues diſtance from the Cape. You ſee there this Point of Land, from which the Coaſt trents away E. S. E. with the Cape *Comori*; and here 'tis that you are to be cautious, and avoid that Point as much as may be, becauſe of two great Rocks that lie under Water about four Mile from it: Your danger is to come within 22 or 24 Fathom; but if you keep in 28, or thereabouts, you go clear of them. But then you muſt be ſure not to go beyond the Limits of 35 or 40 Fathom, becauſe of the Current that ſets off South with the *Maldive* Iſlands; and which taking, you may bring your Ship into conſiderable danger, by forcing her in amongſt thoſe Cluſters of Iſlands. You ſhall know whereabouts this danger from the Rocks lies more exactly by this; that thwart the forementioned point of Land, are plac'd two very large Rocks, a good heighth above Water, and then a League off directly from the Eaſtermoſt of theſe two extant Rocks, are the other two ſunken ones, the fatal Miſchiefs we warn you of.

Cape *Comori*.

Cape *Comori* it ſelf is very low Land; but the Country about is remarkable enough by high Crags and Rocks: The Latitude of the Cape is 7 Degr. 50 Min. Longitude, 57 Degr. 20 Min. from the Cape of *Good Hope*: Variat. 14 Degr. 30 Min. W.

March. *Ceylon* Iſle.

As we Coaſted along the Iſle of *Ceylon*, we ſent ſome of our Company aſhore; but the People there wou'd have nothing to do with us, nor ſuffer us to have any manner of Proviſions, alledging that our Nation had wrong'd them, and formerly taken one of their Boats. We were beholding to the *Dutch* for this kind uſage, for they took the Boat, and very probably told the Natives they were *Engliſh-men*; as we know they have often done. We determine Lat. of *Colombo* upon the ſame Iſland, to be 6 Degr. 30 Min. or near upon; and that of *Tenadare* (which lies E. S. E. from *Punta de Galle*, ſome ten or twelve Leagues) to be 5 Degr. 30 Min.

Linſchoten's Obſervations of the Sands about this Coaſt, ſeem true; we ſaw one of them that lies two Leagues from the Land, over-againſt which is a great high Rock like a Tower, by the help of which Mark it may be avoided.

April. A. D. 1613. Come to *Achen.*

From hence we ſail'd away directly for *Achen*, where the greateſt of our Concerns lay, and the moſt important Buſineſs (we had now remaining in the *Indies*) was to be tranſacted. The Cuſtom here is for every Ship to preſent the King immediately upon the landing of her Men, in requital of which, an Entertainment of Meats is always ſent back by the King. The ſame Ceremonies paſt on both ſides at our Arrival; and after this Introduction, we were ſent for to make our ſolemn appearance at Court. The Letters and Preſents of Foreign Princes, (eſpecially ſuch as he pays the higheſt Reſpect to) are brought to the King of *Achen* with a great deal of Pomp; they are carried in Golden Baſons, upon an Elephant richly furniſh'd, as His Majeſty's of *England* now was, and as it had been done before.

See Sir *James Lancaſter's* Voyage.

The Contents of the Letter we brought, were highly pleaſing to this Prince, and he readily promis'd to do all things to procure the Satisfaction of our King and Country; and particularly to ratifie all the Articles of the Treaty agreed on formerly between his Predeceſſor, and Sir *James Lancaſter*, ſent to that Court by Queen *Elizabeth*. He is one of the beſt accompliſh'd Princes that Country perhaps has had; the King and the Gentleman do equally diſcover themſelves in his Perſon and Carriage, and while he ſhews you all the Greatneſs and Majeſty of the one, he does no leſs charm you with the Civility and Good Breeding of the other. And he is no leſs a Soldier in his Martial Aſpect and brave Spirit, than he is either of the former; and it appears by his Victories and Succeſſes, that the Qualifications of a good General do as well belong to him, as thoſe of a fine Prince.

Sports at the King of *Achen's* Court.

He was mighty free to ſhew us all the Sports and Diverſions of his Court, and wou'd hardly take any publick Pleaſure, but what our General muſt ſhare with him in. Thus we were very often invited to ſee his Elephants fight, ſometimes his Rams, and at other times his Buffles; which encounter'd one another with an extraordinary fierceneſs, and 'twas work enough for ſixty or eighty Men ſometimes to part them, when they were hotly engaged, and that not without great Ropes faſtned on to their Hinder-Legs, to pull them aſunder neither.

The King of *Achen's* Banquet in the Pond.

'Twas one of his beloved Diverſions too, to go a Swimming, for which he has a delicate Pond, at five or ſix Miles diſtance from his Court, into which none but himſelf, and the Lords, or other Great Perſons and Favourites (which he invites) do go. Hither he carried our General; and after ſome time ſpent in the Sports and Exerciſes of the Water, he gave him a Noble Banquet; which was all brought into the Pond, ſerv'd up, and eaten there upon the ſpot; neither wou'd the King let any of the Company ſtir out of the Water, till all was clear'd, tho' there was a matter of Five hundred Diſhes, and a proportionable quantity of Rack, and other ſtrong Liquors. He always call'd the General by the Name of *Orancaia Puto* (that is, the *White Lord*), and granted him free Acceſs to his Preſence at all times, without the Ceremony of waiting for his Creeſe; which is ordinarily ſent forth by the Hands of ſome Great Miniſter, to introduce all thoſe that come before the King.

He earneſtly deſired the General, to recommend him to the King of *England*, and tell him, He wou'd be very glad to have a Couple of fair Women out of his Country; for then (ſays he) if I get a Son by one of them, I'll make him King of *Priaman*, and all that Country from whence you fetch your Pepper; and ſo you ſhan't need to come to me, but may go to your own *Engliſh* King for theſe Commodities.

The Letter he ſent to our King was very finely ſet off with Painting, and curiouſly written in the Character of that Country; the Stile of it lofty and ſwelling, ſtuff'd with high Titles, and ſplendid Characters of his own Riches and Greatneſs; according to the manner of theſe Eaſtern Princes, who ever fill up half almoſt of their Letters, and Publick Writings, with pompous Enumerations of this kind.

The Copy of it is here added, as well to ſhew a ſignal Example of the Oſtentation, and Vain-glory, which appears to be ſo natural to theſe Parts of the World, as to diſcover the Acceptance and Welcome of our Nation at that time in this Country, and the proſpect of a happy Commerce between both.

The Letter is thus Engliſhed:

The King of *Achen's* Letter. *July.*

PEducka Sirie Sultan, *King of Kings, Renowned for his Wars, and ſole King of* Sumatra, *and a King more famous than his Predeceſſors, feared in his Kingdom, and honoured of all bordering Nations; in whom there is the true Image of a King, in whom Reigns the true Method of Government, formed as it were of the moſt pure Metal, and adorned with the moſt fineſt Colours; whoſe Seat is high, and moſt complete, like to a Chryſtal River, pure and clear as the Chryſtal Glaſs; from whom floweth the pure Stream of Bounty and Juſtice; whoſe Preſence is as the fineſt Gold, King of* Priaman, *and of the Mountain of Gold,* viz. Solida, *and Lord of nine ſorts of Stones, King of two* Sombrieroes *of beaten Gold, having for his Seats Mats of Gold; his Furniture for his Horſes and Armour for himſelf, being likewiſe of pure Gold. His Elephant with Teeth of Gold, and all Proviſions thereunto belonging: His Launces half Gold, half Silver, his ſmall Shot of the ſame; a Saddle alſo for another Elephant of the ſame Metal: A Tent of Silver, and all his Seals half Gold half Silver. His Veſſels for Bathing of pure Gold, his Sepulchre of Gold (whereas his Predeceſſors had all theſe half Gold half Silver), his Services complete of Gold and Silver. A King, under whom there are many Kings, having taken the King of* Arrow: *All the Country of* Priaman, Tecoo, Barouſe, *being ſubdued by him, is now under his Command: Seventy Elephants, and much Proviſions carried by Sea, to make his Wars at* Arrow, *where God gave me more Victory than any of my Predeceſſors.*

This Great King ſendeth this Letter of Salutation to James, *King of* Great Britain, *viz.* England, Scotland, France, *and* Ireland; *to ſignifie the great Content he hath received by his Highneſs's Letter, delivered by the Hands of* Arancaia Pulo, Thomas Beſt, *His Majeſty's Embaſſador, at the Receipt whereof, his Eyes were ſurprized with a Celeſtial Brightneſs, and his Spirits raviſhed with a Divine Joy: The opening thereof rendred a Savour more fragrant than the moſt odoriferous Flowers, or ſweeteſt Perfumes in the World. For which cauſe, I the Great King of* Sumatra, *do profeſs my ſelf to be of one Heart, of one Mind, and of one Fleſh, with the moſt potent Prince* James *King of* England; *and do earneſtly deſire, that the League begun, may be continued to all Poſterities. And herein I take my greateſt Felicity, there being nothing in the World more pleaſant or joyful to me. And for a Teſtimony of my Deſire, that the League and Amity begun may be continued betwixt us, I have returned this Letter unto your Majeſty, making alſo my Prayers unto the Great* GOD, *for the continuance of the ſame. And it ſhall be my greateſt Honour to receive Memorial from ſo great a Potentate, and ſo remote a Nation. And for a Pledge of my Love and Honour, and Continuance of our League, I ſend your Majeſty a Creeſe wrought with Gold, the Hilt thereof being beaten Gold, with a Ring of Stones, an Aſſagaya of Swaſs, half Copper half Gold, eight Purſlan Diſhes ſmall and great, of Camphire one Piece of Sowring-ſtuff, three Pieces of Callicoe-Lawn: Which your Majeſty accepting as from a Brother, I ſhall reſt ſatisfied, and much honoured. And ſo with my Prayers to the Great* GOD, *Creator of Heaven and Earth, for your Majeſty's long Life, with Victory over your Enemies, and Proſperity in your Land.*

Given at our Palace of *Achen*, the 1022 Year of *Mahomet*, by the Account of the *Moors*.

Having laid now this happy Foundation for a Trade, in the procurement of the King's Grant for that purpoſe; we went away from *Achen* towards the other Trading Places of this Iſland, in order to the building and proceeding thereupon. We had free Liberty to go to *Teco*, *Priaman*, *Paſſaman*, or any where; having the King of *Achen*'s Letter along with us, no place dar'd deny us Trade and good Entertainment.

Go to *Teco*, *Priaman*, &c. *October.*

Our firſt Courſe accordingly was to *Teco*, from whence the *Hoſiander* was diſpatch'd to *Priaman*, and another Company to *Paſſaman*, upon the ſame Deſign: But this laſt place prov'd ſo very unhealthful to us, that we were quickly forc'd to come away, and quit our Pretenſions to a Factory there. The Air has ſo much malignity in it, and the Water ſo very bad too, that 'twere better for our Nation to blot the Name of *Paſſaman* out of the Liſt of her Trading Places, than for a little advantage (which may as well be gotten other where), to expoſe ſo many Lives, which might do good Service in a more benign Climate.

Dragon goes to *Bantam*.

The *Dragon* traded at *Tecoo* for 120 Tun of Pepper; from whence ſhe went for *Bantam*, while the *Hoſiander* ſtaid there to make Sale of the *Surat* Commodities.

Sails home. *A. D.* 1614.

At *Bantam* the ſame Ship traded for 17000 Bags of Pepper, at 13 Dollars *per* Bahar; and having finiſh'd her Concerns, ſail'd directly from thence for *England*, coming into the *Thames* the ſame Day ſix Months, that ſhe ſet Sail out of *Bantam* Road.

CHAP. XXVI.

The Twelfth Voyage ſet out by the Eaſt-India *Company, with the good Ship the* Expedition, *under the Command of Capt.* Chriſtopher Newport, *Written by Mr.* Walter Payton.

[This is ſubjoyn'd in the next place after the former, becauſe the Eleventh is wholly omitted, as not offering the Reader any thing much worth his Notice.]

January. *A. D.* 1612.

WE ſet Sail from *Graveſend* in the beginning of *January*, having aboard us Sir *Robert Shirley*, the *Perſian* Embaſſador, and Sir *Thomas Powell* then going into *Perſia*, with their ſeveral Retinues; all which were to land upon the Coaſt of that Country, and ſo purſue our Voyage to the *Eaſt-Indies*.

July. *A. D.* 1613.

Moyela Iſle. See Captain *Saris's* Account of this Iſland and People.

Having viſited the ſeveral uſual Places of Refreſhment in this Voyage, along the Coaſt of *Africk*, and the Iſle St. *Lawrence*, we ſail'd from this laſt directly to the Iſle of *Moyela*, which is commonly reckon'd one of the *Comora* Iſlands, a place of good Entertainment, and the People very civil and courteous to us. They ſeem'd to expreſs a very great Averſion for the *Portugueze*; and pretended, that they wou'd infallibly cut the Throats of all that Nation that came thither; and tho' I don't doubt but the Deportment of the *Portugueze* may be rude and bad enough to deſerve ſuch a Treatment as that, yet I believe at this time, the People had not altogether ſo much Choler and Indignation againſt them as they pretended; but rather did it becauſe they knew we hated them, and thought we ſhou'd be eaſier in our Dealings with them, to find them ſuch inveterate Enemies to our Enemies. For at the ſame time, to the beſt of my Obſervation, they traded with the *Portugueze* up and down, tho' they did it very ſlily, and in the dark; and 'tis very probable, that ſo violent an Enmity as they pretended, wou'd have rooted out all Inclinations to Traffick, and common Correſpondence with them. But they are *Moors*; and that not only in Complexion, but Religion too; and a Grain of Diſſimulation is to be allow'd them at leaſt, upon each of thoſe two Accounts.

Some of the better ſort of them ſpeak the *Portugueze* very well (which by the way is a good proof, that they are no Strangers to one another); and 'twas by the aſſiſtance of this, that we had any Converſe with them; for their own Tongue is a kind of a corrupted *Moriſco*, difficult to learn, eſpecially not to be any thing tolerably attain'd in ſo ſhort a time as we ſtaid there: Yet I took notice of theſe following Words, which may be of uſe to thoſe that go thither, to call for common Proviſions, when a Man does not either underſtand the *Portugueze* himſelf, or elſe is concern'd with the ordinary People, that are ignorant of it too.

Some common things in the *Moyela* Tongue.

A Bullock, they call *Gumbey*; a Goat, *Buz*; a Hen, *Coquo*; Oranges, *Tudah*; Limons, *Demon*; Water, *Mage*; Coco-Nuts, *Sojavoye*; Plantans, *Figo*; Pines, *Queneme*; Paper, *Cartaſſa*; Needles, *Siuzano*; Bracelets, *Arembo*; the King, *Soutan*: Which ſeems to be only the corruption of the Word *Sultan*, the common Term for a Prince all over the *Mahometan* World.

Others of them alſo ſeem to be broken *Latin*, and *Arabick* Words; as *Cartaſſa*, from the *Latin*, *Charta*; and *Mage*, from the *Arabick*, *Moia*. And 'tis probable, that the whole Tongue, at preſent, is nothing but a Medley of *Arabick* and *Portugueze*, (with a ſhare of their own barbarous *Moriſco*, or whatever it be) ſince their Religion has concern'd them with the former of thoſe Languages, and their Trade in the World with the latter.

So they did of Capt. *Saris*.

'Tis Cuſtomary for them at this Iſland, to deſire the *Europeans* that come to Viſit them, to leave behind them a Letter of Commendations of their Entertainment there; this Favour they requeſted of us; and we obliged them in granting it; adding only ſome neceſſary Cautions to thoſe that might come after us, not to expoſe themſelves to any ſort of danger, by an over-great Confidence in the *Moyelians*.

Iſles *Curia Muria*.

Horrible Fogs *Auguſt*.

Doffar.

Reſcit.

We deſign'd to have ſail'd from hence to *Zoccotora*; but having miſs'd that Iſland, we went on for the Iſles of *Curia Muria*, in 18 Degr. North Lat. lying over-againſt the Waſte of *Arabia Felix*. Through this whole Courſe, the Air was ſo horribly thick and dark with Fogs, that we had not the leaſt Glimpſe of Sun or Stars, and cou'd not ſee half a Mile before us upon the Water. We had no way poſſible to help our ſelves in this diſtreſs, but by the Lead, and Obſervations of the changing Colour of the Water, and ſometimes the Weeds and Graſs that floated upon the Surface of it; by this means we made a ſhift to gueſs our way towards the Land, which at laſt prov'd to be near the City of *Doffar*, in *Arabia Felix*. The Weather clearing up too, we diſcover'd a good Road to Anchor in, which was at *Reſcit*, a little Town not far from *Doffar*. The *Arabs* of theſe places were exceeding kind and friendly to us, giving us all the Entertainment and uſeful Inſtructions, about the Country, that we cou'd deſire. The Governour of *Doffar* came down, and carried on the Civility, bringing all the Varieties of Proviſion along with him that the Country wou'd afford; he expreſs'd much Joy that he had ſuch an Opportunity to teſtifie his Reſpects to us, and gave us full Liberty to go aſhore any where in the Country within the Bounds of his Juriſdiction.

Cape *Reſoit*, that takes its Name from the place adjoyning, is in 16 Degr. 38 Min. North Lat. there's good Anchorage there, and freedom from all Winds, except from E. to the S. by E.

Here alſo we were deſired to leave a Teſtimony of our courteous Entertainment, for the Reputation of the Country, and the Encouragement of other Ships that might come thither; which reaſonable Requeſt we willingly complied with.

September.

From hence we went Coaſting along the *Arabian* Shore towards *Perſia*, hoping to find ſome ſafe and convenient place thereabouts, for the landing of the Embaſſadors.

Mazira Iſle.

Cape *Raſalgat*

We obſerv'd in this Courſe the Iſle *Mazira*, lying cloſe to *Arabia*, to be in 23 Degr. 30 Min. North Lat. and the Variation 20 Degr. 10 Min. The Eaſtermoſt part of *Arabia Felix*, call'd Cape *Raſalgat*, in Lat. 22 Degr. 34 Min. Variation 19 Degr. 20 Min.

Being got into the Gulf, we had quickly ſight of the Coaſt of *Perſia*, having at that time 25 Degr. 10 Min. Lat. and Variation, 18 Degr. 30 Min.

Country of the *Baluches*.

Coming near the Shore, a Company was ſent out to make ſome Diſcoveries of the Country; by whom we receiv'd Information, that the Country before us was call'd *Getche Macquerene*, and the People *Baluches*, under the Government of a King that was Tributary to the *Perſian*, and had his chief Reſidence at the Port of *Guador*. The Natives told them alſo, That their King wou'd ſee the Lord Embaſſador ſafely conducted to the King of *Perſia*'s Court at *Spahawn*; but adviſ'd us for that purpoſe to ſail on to *Guador*, which was beſides the beſt and moſt convenient place for the landing of our *Perſian* Company. This Account was ſo harmoniouſly given by all the People about upon that Coaſt, that we reſolv'd to proceed directly to *Guador*; tho' we cou'd procure no Pilot amongſt them, and were not well acquainted with that Coaſt our ſelves.

Teradas, great Boats.

Sailing on thitherwards in the beſt manner we cou'd, we got ſight of two great *Teradas*, or *Baluche* Boats, which were ſailing along the Shore to *Ormus*; to theſe we ſent out our Skiff, with no other deſign than only to get a Pilot out of one of them, by fair means, if poſſible; but if not, by force.

Rudeneſs of the *Baluches*.

The *Baluches* wou'd not let the Skiff come near them, nor return any Civil Anſwer to the common Salutations of the Sea; and when our Men fired a Piece at random, with a deſign to fright them into a little more compliance, they return'd it with another direct Shot at the Skiff, and a whole Shower of Arrows in to the bargain. Upon this the Skiff was forc'd to return, and the Boat was diſpatch'd to manage the Point with the *Teradas*; which ſhe did ſo effectually, that one of them was driven a-ground, the moſt part of her Men deſperately flinging themſelves into the Sea: The other had had the ſame Fate too, if the Boat had not ſav'd her, and brought her off. The Maſter of this *Terada* (his Life and Fortune being in our power) we eaſily perſwaded, upon reaſonable Terms, to be our Pilot to *Guador*; we obliging the *Terada* at the ſame time to go along with us thither, that ſo the News of our being in theſe Parts, might not be ſpread about the Gulf, and alarm the *Portugueze*; who might poſſibly, (had they been rouz'd) have come with a Force, that might have given us a fatal diſturbance.

The *Portugueze* abſolute Command of the Seas.

'Tis to be noted, that the *Portugueze* do hold all the Country hereabout in ſtrange Subjection, and not a Ship or a *Terada* dares ſail without their Licence: Nay, more than that, they have it fix'd in their Paſſes, what places they ſhall go to, what Commodities they carry, how long the Paſs ſhall continue in force, and all theſe things are regiſtred in their Offices at the Caſtle of *Muſcat*: This we diſcover'd by the peruſal of a *Portugueze* Paſs, which this *Terada* that we took carried along with her. All this while our Apprehenſions of the Place and People (we were going amongſt) continued the ſame that they were upon the former repeated Teſtimonies of the Natives; for our Pilot, and all the *Baluches* aboard us, ſpoke exactly the ſame Language with them, and had they all laid their Heads together in one Plot, they cou'd not have been more nicely in one Tale than they were.

Come to *Guador*.

With our firſt Thoughts and Hopes therefore we arriv'd at *Guador*; and here the Governour told us (by a Meſſenger) the ſame Story as before, together with ſo much Welcome and Careſs in to the Bargain, that we were now paſt all doubt of being come to the right place that was to ſerve our purpoſe.

But to lay the finer Varniſh over their Deſigns, he ſent to Complement the Lord Embaſſador in a very ſolemn manner, promis'd him a Guard to *Spahawn*; order'd ſeveral Preſents and Proviſions to be brought aboard; and all this he declar'd, the King his Maſter was very glad to do, as well out of reſpect to the Embaſſador, as to expreſs his Loyal Regard to the King of *Perſia* his Sovereign.

All theſe things looking with ſo good an Aſpect, the Embaſſador was ſo far influenc'd by them (being inſtigated too by an earneſt deſire to make what haſte he cou'd to the *Perſian* Court), that he forthwith ſent the beſt part of his Treaſure and Carriage aſhore with the *Baluche*-Boats that came for that purpoſe.

The Treachery of the *Baluches*.

The whole Cargoe was beſtowed in a Tent, particularly erected for the Reception of it, and ſecured there by ſome of his Lordſhip's Retinue, till he came himſelf in Perſon, which he intended to do the ſame Day.

It happen'd that while the Goods were carrying into the Tent, ſome of the *Baluches* ask'd the Embaſſador's Servants, Whether there was all or no? To which, when 'twas replied, That there was no more behind but Jewels, which wou'd come with the Embaſſador himſelf: Some of the Villains made Anſwer to their Fellows ſtanding by, That 'twas no matter, for there was enough already for Plunder for the Soldiers.

This was over-heard, and underſtood by a *Perſian* of the Retinue; and 'twas the firſt Step of the Plot diſcover'd: But immediately after that, it was reveal'd in its full length, and all its Particulars, to the ſame *Perſian*, by one, who it ſeems, had more Honeſty and Good Nature than the Barbarians he lived amongſt. Their Deſign was to have ſacrific'd the Embaſſador, and all the Company, except the Chirurgeons, Muſicians, and thoſe that wou'd have been uſeful to them; and after that, with a Fleet of *Teradas* to have fallen upon the Ship; and having gotten that into their Power to have diſpos'd of us in like manner. 'Twas a mighty happy Providence that our Skiff was at this very time a filling of Water by the ſhoar, ſo that our *Perſian* taking the Advantage of that help, quickly came and prevented our farther Danger by putting a full ſtop to our Motions; and it was as luckily tim'd as it could well be, for the Embaſſadour was juſt then a ſetting out, attended with all the beſt appearance the Ship could make. Thus our Lives were ſav'd, but his Lordſhips Goods were in the Hands of theſe vile People, and our next concern was for the redeeming of them.

Their Plot to right themſelves upon the *Baluches*,

In order to this we therefore ſent Word to the perfidious Vice-roy, that the Embaſſadour by reaſon of an illneſs, had defer'd his coming to the next Day, but deſired that then two or three Boats might be ſent for him and his Company, together with ſome of the Principal of the *Baluches*, and this in reſpect to his quality as the King of *Perſia*'s Embaſſadour. This propoſal was very readily agreed to; and promiſe made that the Embaſſadour's juſt deſire herein ſhould be punctually ſatisfied. But beſides this by the politick management of ſome of our Men, we got ſome of the moſt valuable things out of the Embaſſadour's Trunks aſhoar that ſame Night, without the leaſt diſcovery or ſuſpicion, which might well be performed, ſince a part of his own retinue had the overſight of them till he landed himſelf.

And more than that, another of the richeſt Cheſts was brought off clear by as good a Stratagem; the Servants pretending a preſent Occaſion their Lord had for ſomething contain'd in it, and in the room of it leaving another (for all that the Baluches knew fill'd with Gold and Jewels) but indeed with Stones, Billets and Rubbiſh; which all paſs'd well enough, and the Plotters ſmelt nothing of a Plot upon themſelves. The next Morning the Boats came according to the appointment; and the conſiderable Men of the Baluches were no ſooner aboard, but they deſired to ſee the Gun-room, which fell out very well too, for that was the Pound into which we had a mind to draw them. In ſhort having them faſt ſhut up here, we preſently ſiez'd all their Weapons, and then charg'd them with all the Particulars of their barbarous Deſign upon us, which they denied with all the forhead and obdurateneſs in the World, ſtanding ſtoutly in it that they deſign'd us no miſchief. However expecting another manner of Satisfaction than that, we diſpatch'd ſome of the meaner ſort of them with a Meſſage to the Vice-roy to this effect; that if he did not return all that belong'd to us both Goods and Men within the ſpace of two Hours, we would cut all thoſe Baluches in pieces that we had aboard the Ship; and this ſharp Meſſage produc'd the deſired Effect out of Hand; it ſcar'd him into a Surrender of his intended Prey, and forc'd him to be juſt whether he would or no. And thus by the Influences of a kind Providence upon our own good Conduct and Management, we eſcap'd the Effects of as villanous a piece of Treachery as perhaps was ever contriv'd. But this was no new thing it ſeems amongſt the Baluches, neither were we the firſt that they had practis'd thus upon; for as the honeſt Diſcoverer of this Plot (who alſo totally left them, and came away to us) told us they had drawn three Ships at this rate into their ſnares, ſince he had been amongſt them, and what miſchief they had done before of that kind, themſelves only know. And then they had impos'd upon us as much in pretending a Subjection to the King of *Perſia*, as they had in all the reſt of the fine Stories they told us; for they were at that time in actual Rebellion, had openly denied that Tribute which the Generations before them had all quietly paid, and ſuch was their Spleen againſt the King of *Perſia* that they had made it death for any Body but to name him amongſt them. And the Truth of all this had this demonſtration in Fact to clear it up; that the King of *Perſia* had then levied a mighty Army, which he deſign'd ſpeedily to employ in the enterpriſe of reducing thoſe Rebels to their former Obedience.

And the ſucceſs of it.

I have now done with thoſe baſe People, only taking notice of *Guador* the Capital City of their Province *Maquerona*. It is a convenient Port enough, and affords good Anchorage; it ſtands in about 25 Degrees North Latitude, and the varying is there ſeventeen Degrees fifteen Minutes.

They ſail forwards to India.

River *Sinde*, or the *Indus*.

Our expectations of landing the Embaſſadour here being fruſtrated, we ſail'd on towards *India*, and came to an Anchor near the City of *Diul*, in the Mouth of the River *Sinde*, in 24 Degrees 38 Minutes North Latitude, and our varying at the ſame place 16 Degrees 45 Min. Here is Lordſhip landed at laſt; the Governour entertaining him with all the Reſpect befitting his Character, and promiſing his beſt Aſſiſtance in furthering his Journey thro' that Country into *Perſia*. And having now diſcharged that truſt of ſetting him ſafe aſhoar, we were to attend the Affairs of Trade; which if it might be procured at that place, we had Commodities ready to vend there, but if not we would only refreſh and depart. This we deſired the Embaſſadour to repreſent to the Governour as the Sum of our Pretentions in coming to that place; which was accordingly done at the firſt ſolemn interview betwixt them. But 'twas impoſſible for this place to prove kind and favourable to us ſince the *Portugueze* had an Intereſt there; the Governour in all appearance would have been friendly to us, but their Malice blaſted all the Endeavours of his Kindneſs, and nipp'd our moſt promiſing Hopes in the end. The Embaſſabour zealouſly urging our Buſineſs was as warmly oppos'd by the *Portugueze* Miniſters; very high Words paſs'd between them, and they did not ſpare to tell him in plain Terms that he was a Pirate. This they ſaid upon an Information from *Ormus* that we had arreſted the *Baluchian Terada* in thoſe parts, tho' 'twas without any other Damage done than what thoſe ill People deſperately plunged themſelves into. And to Compliment the Embaſſadour a little further than this yet, they made a cheat of him too, as well as a Pirate; nay one of the worſt of cheats; for when he produc'd the King of *Spain*'s Paſs under his own Hand and Seal; they diſown'd it as a Counterfeit, and made no ſcruple to charge him with downright forgery. Theſe Abuſes were too foul to be endur'd with Patience by any Man that was innocent, much more by a Man that had Honour as well as Innocence to protect him from ſlander; and therefore as he eaſily juſtified himſelf, ſo he told ſo much of the Hiſtory and Circumſtances of the *Portugueze* Nation, as was ſufficient to leſſen that Opinion of their Grandeur which ſo many foreign Countries who knew no better had entertain'd.

Conteſt between Sir *Robert Shirley* and the *Portugueza*.

October. *Portugueza* endeavour to undermine them.

The Governour to carry it as ſteady as might be between both contending parties, tho' he ſeverely rebuked the *Portugueze* for their inſolent Carriage towards the Embaſſadour; yet would come to no final Reſolution about the Point of our Trade, till he had had a Conference with ſome of our Merchants upon that Subject. In the mean time the *Portugueze* labour'd by all imaginable ways to prevent our Encouragement and Settlement at *Diul*, ſometimes promiſing and ſometimes threatning the Governour to leave the place, and Trade there no more; and then again by abuſing and railing at the *Engliſh* in all the dirty and ſcandalous Terms that could be, to prejudice the People, and make them think we were as arrant Thieves and Raſcals as they repreſented us to be. On the other hand the Governour to teſtify his Reſpect to the *Engliſh* Nation, had us conducted to his Caſtle (where the Conference was to be) with the greateſt Solemnity and Splendour that could be; and whatever the *Portugueze* had done to diſgrace us, the People (as we paſs'd along) expreſs'd by many Signs that they had conceived no bad Opinion of us. But in ſhort the Reſult of the Debate was this, That we could not have any Trade at *Diul* this Voyage. He freely own'd the Intrigues of the *Portugueze* againſt us, and declar'd at the ſame time he would be glad to be rid of them, if he could introduce a Trade more Beneficial to the place in the room of theirs. But this was the Caſe, the *Portugueze* Trade was worth to them every Year 10000 pounds Sterling; and we had at this time brought ſo few Commodities, that the Profits coming from us would not amount to near the former Sum; and therefore for this Year at leaſt they muſt ſuffer conſiderably in their Revenues, if the *Portugueze* ſhould deſert the place as they had vowed they would. Beſides he urged that he did really farm the Cuſtoms of that Port of the *Mogul* his Maſter, being bound for the annual payment of ſo much Money into the Treaſury at *Agra*, whether his place yielded it or no; ſo that all the Deficiencies muſt either be made good out of his own Pocket, or he muſt take the Conſequences of it in his Prince's diſpleaſure, which might poſſibly be his undoing. But notwithſtanding he promis'd that we ſhould be admitted to a Free-Trade the next return of our Ships upon theſe two Conditions, that we came ſo provided that our Trade might make amends for the loſs of the *Portugueze*, and then that we gave him an Aſſurance that we would commit no act of hoſtility upon the Perſons, Ships or Goods of any belonging to the *Great Mogul*. This Treaty was confirm'd by Writings interchangeably deliver'd on both ſides, in which the Governour and we ſolemnly bound each other to make good the Articles before ſpecified.

The conditional Treaty.

The Commodities.

The Commodities required for that place were theſe: Broad-Cloths of all light Colours, Elephants Teeth, Iron, Tin, Lead, Steel and Spices. Thoſe which we ſhould deal for there, were Indicoes, Calicoes, Pintadoes, all ſorts of *Guzurat* and *Cambaya* Goods, and ſeveral kinds of Drugs.

This

The Commodities. *November.* Go for *Priaman* and *Tecu.*

This was all the Buſineſs we could now pretend to do at *Diul*, which therefore being done, we ſet ſail from thence for *Sumatra*. At *Priaman* we beat the Price of Pepper from twenty two to ſeventeen Rials *per* Bahar; but we bought no more than two Bahars, the unjuſt Governour pretending to make it the Condition of our Trade, that we ſhould preſent and gratifie almoſt all the Officers and Merchants round the Cuſtom-houſe. But being invited to *Tecoo* by one of our own Ships then there, with the Promiſe too of as much Pepper as we would care to lade, we went thither fill'd with Expectations of ſome very mighty doings But truly we found them troubled with the ſame Diſtemper as thoſe of *Priaman*, covetous, greedy, and gaping after Preſents, horribly exacting for Anchorage, and hoiſting up the price of their Pepper from 12 and 13 to twenty Rials *per* Bahar. Beſides, ſo intolerably trickiſh and abuſeful in their Delays too, that a Ship muſt be expos'd to great Inconveniencies to wait upon them and attend their leaſure.

We had no way to cure them of thoſe Diſtempers, but by weighing Anchor, and pretending to be gone; and then they could come after us faſt enough, and bring the Pepper aboard too in to the Bargain, whereas before we could not get any aſhoar.

December. Come to *Bantam.*

The Praws came ſo thick about us, and pour'd it in ſo faſt upon us, that we were held cloſely to it for four Days to weigh what they brought. We took to the quantity of 200 Bahars at eighteen Rials *per* Bahar, and two Rials Cuſtom for the Governour upon every Bahar.

January. Sail home for *England.* *July*, 1614.

We proceeded from hence to *Bantam*, where we provided the reſt of our Lading, and from thence ſet ſail for *England*; having all our Company we brought out not only alive, but in a good ſtate of Health too, which was never interrupted by any Sickneſs among us, till we croſs'd the Line the ſecond time in our Voyage from *Bantam*, and then the Scurvy broke out in the Ship: But we had quickly the Remedy of the comfortable ſight of our own Native Country.

CHAP. XXVII

An Account of the Second Voyage ſet forth by the United Stocks of the Eaſt-India Company. Taken chiefly out of the Journals of Captain Nicholas Downton. chief Commander herein, and Capt. Thomas Elkington, his Succeſſour in that Poſt.

Note, that now the Order of reckoning of the Voyages is alter'd; thoſe that are remaining being not ſet forth by particular Ships, Stocks or Factories, but by a Joint-ſtock, in which the whole Company was concerned. So that we call this the ſecond Voyage upon the Joint-ſtock. *March, A.D.* 1614. *July, A. D.* 1616. See Captain *Downton's* former Voyage in the *Pepper-Corn.* Difference between the varying now and formerly. See the varying of *Soldania*, in Mr. *Davis's* Direction for *Eaſt-India* Voyages. *Coree* marches off.

OUR Fleet conſiſted of theſe following good Ships, the *New-Years Gift*, Admiral, of 650 Tun, the *Hector*, Vice-admiral of 500, the *Merchants Hope* of 300, the *Soolmon* of 200, all very well furniſh'd and provided for the Exigencies of ſuch a Voyage.

In our paſſage to the Bay of *Soldania*, I obſerved ſome ſurpriſing differences between the varying now, and what it was ſome Years ago, when I ſail'd this way in the *Pepper-Corn*, which inclin'd me (when we came to an Anchor in the Road of *Soldania*) to order ſome further Obſervations to be made upon that matter. And accordingly we found upon trial one Degree 45 Minutes varying Weſterly, whereas for the moſt part by former Accounts, the varying at this place has been reckon'd Eaſterly. The Reaſon of this may lie in the dark, but the Matter of Fact is in as clear a Light as juſt obſervation can ſet it. We loſt here the Company of *Coree* the *Soldanian*; who having been tranſported into *England*, had lived there a pining diſcontented Life, and could never be eaſie till he was brought back again to the beaſtly Company of the *Soldanians*. All the good uſage of the *Engliſh*, all the Toys and Trifles given to pleaſe him; Sports, Company, good Victuals and Apparel, ſignified nothing to this Brute out of his own dirty Element. Nothing could make him a ſufficient amends for the loſs of thoſe agreeable Pleaſures and Diverſions which his Native Soil afforded him. To run about the Woods with the reſt of that wild and brutiſh Herd, to dance and roul in the Mud, and eat raw Guts and Garbage: To be dreſs'd in Sheep-ſkins, according to his Country mode, and rubb'd all over with Graſs and Cow-dung: Theſe Enjoyments the poor Creature droop'd and quite languiſh'd after, and could not poſſibly hold out any longer in that State of cruel ſeparation from them.

To eaſe him therefore of his Burthens he was brought back hither again, where we had his company for a little while, but then he pack'd up all his things, and went up into the Country, promiſing to be with us again, tho' we never ſaw him after that time. So 'tis poſſible that either he was ſo powerfully engaged by the Pleaſures of his happy ſtate then renew'd upon him, that he was not able to break looſe from them ſo long as while he viſited us; or elſe that the *Soldenians* knock'd him o'th Head, as one that they ſuſpected to have loſt the purity of the manners and breeding of his own Country, by a debauching Acquaintance with another.

Auguſt. Go to St. *Auguſtine* Bay.

When we came to St. *Auguſtine's* Bay, all the People unanimouſly quitted their Habitations, and run away from us with as much haſt as if we had come with a deſign to murder them. However at laſt they recover'd ſo much ſpirit as to come and ſhew themſelves, and by degrees were bold enough to come and venture upon a little Trade with us, we having no farther deſign upon them, than that came to, in order to the procuring ſome Neceſſaries for our refreſhment.

September. To *Zocotora.*

We ſail'd from hence to the Iſland of *Zocotora*, where the King receiv'd us in a very civil manner. He inform'd us of the Stirs and Tumults in the *Eaſt-Indies* at this time; how the *Great Mogul* and the Kings of *Decan*, &c. had join'd their Powers together to root the *Portugueze* out of the Country, who had lately robb'd one of their Ships with three Millions of Treaſure. The News of Captain *Beſt's*, Victory over them too, was ſpread all about theſe parts, to the no little Advantage and Encreaſe of the *Engliſh* Nation's eſteem amongſt them. I dealt with the King for 2722 pounds of Aloes; and having taken the ſmall Refreſhment *Zocotora* could afford us, we purſued our Voyage to the *Indies*. When we came hither we found the Affairs of this Country in no little diſorder as the King of *Zocotora* had inform'd us; the *Mogul's* Forces had actually laid ſiege to *Damon* and *Diu*, two Cities held by the *Portugueze* in thoſe parts, and Preparations were making for other Attempts againſt them. Only the *Mogul* having beſtowed the command of his Army upon *Mocrebchan*, it look'd as if the War would not be carried on with ſo much warmth and vigour; that corrupt Miniſter being a favourer of the *Portugueze*, and one of their moſt uſeful tools for carrying on their Deſigns formerly at Court. He was alſo at this time Governour of *Surat*, and all the Country adjoining, which fell out very ill for us; he being as much the profeſſed Enemy of our Nation as he was the under-hand Friend of th *Portugueze*. Theſe croſs Circumſtances on every Hand, made our Affairs not a little troubleſome and intricate; the ſincere Friendſhip of *Mocrel-chan* was hardly to be hoped for, and his pretended Kindneſs was as little to be eſteem'd and truſted to, and yet nothing could be done without him, his Authority in all thoſe parts being ſo conſiderable. However ſome Attempts were to be made, and all fair Endeavours to be us'd, to ſweeten his ill Temper if poſſible, and make him our Friend, at leaſt not an Adverſary to our Intereſt and Trade.

Come to *Surat.* Wars in India. *October.*

Conference between Captain *Downton* and the *Indian* Commiſſionert.

In order to the accompliſhing of this, I went aſhoar to confer with a great Man ſent down by him for that purpoſe; but knowing that the Humour of this Country is ſuch, that they'll hear no Diſcourſe of this kind that is not well prefac'd with Gifts and Preſents, I made that neceſſary Introduction with a good Preſent both for himſelf and *Mocrel-chan*. When we came to the Point, I made my Demands for the enlargement of ſeveral Privileges, and the leſſening of our Cuſtom; and particularly that we might be allow'd a Market at *Barcch*, for the Convenience of our People; and that according to the Tenor of the *Mogol's* Firman before given. But none of all theſe Demands, as far as I could find, were likely to be ſatisfied;

as for the leſſening of our Cuſtom, that could not be done, becauſe the King had farm'd it out to a certain Officer that gave ſo much *per Annum* for it, who to be ſure would never yield to the diminiſhing of his own profits. As for the Market (he replied) we might have that for ſome particular ſorts of Proviſion, but not for Beefs and Kine (which was that which we only wanted it for) becauſe the *Bannians* who in their Principles are againſt the ſhedding the Blood of any Animal, had bargain'd with the King for ſo much a Year, that the Lives of all thoſe Creatures might be ſpar'd. Now this was manifeſtly to croſs and thwart us under a pretence of yielding and being kind to us; for tho' the *Bannians* are fooliſh and ſuperſtitious enough to do as much as that comes to, yet why ſhould not they be as tender of the Lives of Sheep and Goats, as of Oxen and Bullocks, and why did they pay the price of the Lives of juſt thoſe very Animals that moſt ſuited our Neceſſities, and not of the reſt that we did not care for? Beſides, I never knew that we were under any ſuch reſtraint in *India* before; and 'twas odd that the Superſtitious Humour of the *Bannians* ſhould work ſo violently juſt at that time, and at that particular place too, where the Conveniencies of our Affairs principally required a Market. But the great thing that lay upon Hand, was for us to aſſiſt them in their War againſt the *Portugueze*; if we would ſtrike in with them here, any favour ſhould be done us, and we ſhould find *Mocreb-chan* as kind as we could deſire.

Some of the *Engliſh* Merchants go to *Mocrebchan*.

In ſhort, this Perſon had either no Power or no Will to grant us any thing; and therefore there was but one Card more to be played, and that was to ſend ſome of my Company (with due Inſtructions) along with him to *Mocreb-chan* himſelf, that we might hear his Sence and Determinations concerning us immediately from his own Mouth. At this Conference the ſame Demands were made on both ſides as before; on ours as to the matter of Trade, and on theirs as to the Buſineſs of engaging in their quarrel againſt the *Portugueze*. This Point *Mocreb-chan* inſiſted upon with ſo much eagerneſs and concern, that all our Succeſs turn'd upon this hinge, and no other Conſideration appear'd to be of any moment in the determination of our Affairs.

Portugal was at that time ſubject to *Spain*; the Grand Revolt not being till about *A. D.* 1640.

Our Deputies according to their Inſtructions, told him that there being Peace at that time between us and the King of *Spain*, for us without any juſt provocation to fall upon the *Portugueze* (Subjects to that Crown) would be to act unjuſtly, and violate the Articles of that League which was eſtabliſh'd betwixt the two Countries. That in caſe the *Portugueze* came and bid us defiance, or offer'd any Violence or Affront that would juſtifie the taking up Arms againſt them, he ſhould find us not backward to expreſs our juſt Reſentments, and treat them as they deſerv'd. But in the mean time we could not with any Face of Juſtice or Reaſon, have the leaſt concern in any act of hoſtility; much leſs could we openly draw a Sword againſt them in Compliment to the *Indians*, who had done ſo.

Mocrebchan won't grant the *Engliſh* Demands, becauſe they won't fall out with the *Portugueze*.

Being therefore thus reſolved to be Friends to Juſtice, we muſt unavoidably loſe the Friendſhip of *Mocreb-chan*; for he diſmiſs'd our Men with this ſhort Anſwer, That ſince we would do nothing for him, he would do nothing for us. Not that there was any manner of Reaſon to believe that this Man was tranſported with ſo wonderful a Zeal for his Prince's Honour and Intereſt, as to be thus angry with us becauſe we would not be of his Prince's ſide; for he had no ſuch mortal hatred to the *Portugueze*, neither was he ever ſo fond of his Maſters Glory. But the Buſineſs was, that whatever Kindneſs he might have for the *Portugueze*, he had a greater for himſelf and his own Honour, and if by our Aſſiſtance he could have got ſome Victory over them, and ſo made a further ſtep into his Prince's Favour and Good Opinion, he would gladly have done it, and what cared he then for the Anger or Reproaches of the *Portugueze*? His Buſineſs was to do himſelf a good turn, and a Man of ſuch a treacherous ambitious Temper, would not ſtick at overturning *Portugueze*, or *Engliſh*, or any elſe that lay in his way, when his own Intereſt was to be ſerv'd by the ruin of others. However upon our refuſing to join in this Action, *Mocrebchan* was very greatly our Enemy, and ſet himſelf to do us all the diſcourteſies he could; he vilified the Preſents ſent by his Majeſty to the *Mogul*; he reſtrain'd our Trade, and abus'd our Merchants himſelf with ill Language, and his Guard (who durſt not do it without his Order or Connivance) by open violence. The Jeſuits too, who never fail'd to do us all good Offices of that kind, did all that could be to encreaſe his Jealouſies, that we would join with the *Portugueze* againſt him.

November.

For tho' they never uſe to ſet any value upon the Friendſhip of the *Engliſh* Nation, yet at this Juncture, to do us a Miſchief, they would pretend to it; and therefore they told *Mocrebchan* that the Vice-roy of *Goa* had ſent Word, that unleſs he made Peace with him, he and the *Engliſh*, his Friends and Allies would both fall upon him. This was a wicked Artifice, and the higheſt Expreſſion of Enmity that could be, in that Circumſtance to claim ſuch an Intereſt in our Friendſhip and Alliance. But after all theſe croſs and contrary Events notwithſtanding, the Scene changed at laſt in Favour of us: For the *Mogul*'s Firmans came empowering us to Trade, and ſo all things ran in the right Channel. Now were his Majeſties Preſents order'd to be forthwith diſpatch'd to *Agra*; the Merchants were entertain'd in honourable ſort, and preſented by *Mocrebchan*; all paſt miſ-underſtandings ſeem'd to be forgotten, and nothing remain'd but ſweetneſs and careſs. He ſent his Preſents to me a-Ship-board, and quickly after paid the other part of the Complement by his Son, who came to deſire an interview aſhoar. This friendly Correſpondence between us and the Country was renew'd in a happy time for them, conſidering the ſtorm that now threaten'd to beat upon them, and from the fury of which they had no other Protectours but our ſelves. For now certain Advices came that the *Portugueze* Vice-roy was coming from *Goa*, with all the Force of that Nation, to purſue the War begun; and 'twas certain that they had actually done great damage at *Goga*, having burnt the Town and ſeveral Villages about it, beſides ten great Ships and 120 ſmall Veſſels. 'Twas expreſly ſaid too, that the Armado was ſet out upon our account as much as the *Indians*, and that they came to drive us away as well as to chaſtiſe the others; for 'tis not at all unlikely, that the Jeſuits that told *Mocreb-chan* we were Friends to the *Portugueze*, ſent the *Portugueze* Word that we were Friends to (and would ſtand by) *Mocrebchan*. That Miſchief that was done at *Goga*, was done by a Squadron of Frigats, that came out before the main Fleet; there was about twenty two of them in all, and after that Action they came and Anchor'd in ſight of us in the Rivers Mouth. Here they did all the little villanies they could, chaſing up and down the *Indian* Boats, and firing ſome few Houſes that lay ſcattering upon the River, all which time we lay ſtill and made no Pretences to gainſay them. Some little bickering happen'd between one of our Ships and them, upon the occaſion of a Granado of the *Portugueze*; but we came to no Action, we not thinking it prudent to weaken our ſelves by ſpending upon a part, that muſt quickly be forc'd to fight the whole Fleet together.

The *Mogul's* Firmans come.

December.

The *Portugueze* Fleet coming towards *Surat.*

January. The *Portugueze* Fleet comes all up.

The reſt of the Frigats came in quickly after, and they were ſoon follow'd by the Vice-roy himſelf, with all the more formidable part of their Sea-Force. Their ſtrength conſiſted of ſix Galleons, three Ships, two Gallies, and ſixty Frigats, a very unequal match for our four Ships. But beſides the Advantage of their vaſt number, they had ſeveral others every whit as conſiderable; for out of that great Fleet the Vice-roy could ſupply his fighting Ships with Men as faſt as any were kill'd or diſabled; but 'twas impoſſible for us to do ſo, we having no more than what the neceſſary Offices of our Ships required; beſides in the *Portugueze* Fleet, there was a diſtinction between Souldiers and Mariners; they had Slaves and Inferiour Fellows to do all the burdenſome ſervile Work, the Souldiers being kept freſh and in good Heart; but with us the Souldiers and the Sailors were the ſame Perſons, Men half tired and ſpent with heaving at Capſtain, getting up Anchors, ſetting of Sails, and various other toilſome Works, which may be well ſuppos'd to unfit Men for ſo hot action as they were to be engag'd in. The *Portugueze* Fleet was no ſooner come to an Anchor in the Road, but *Mocrebchan* (terrified with the Proſpect of ſuch a Power) ſent Meſſengers to the Vice-roy to treat of a peace; and the better to perſwade him to it, urg'd him (amongſt other arguments) with that of Gifts and Preſents. This was what the Vice-roy wanted; but ſeeing the fear and deſpicable cowardice of *Mocrebchan*, he ſtood off with all the ſeeming ſtifneſs and averſion that could be; braving and inſulting ſo much the more, as he perceiv'd the other diſpos'd to cring and court him to a Peace. And *Mocrebchan* was e'en willing upon any Terms to compound and make up the matter with the Vice-roy, ſo black were his Apprehenſions of the Conſequences of this War: For he and all the Country abſolutely deſpair'd of our being able to do any thing in their defence againſt ſo mighty an Adverſary; they believ'd it would be but ſport and play to that vaſt Fleet to ſink and take ours, or do any thing to them that they had a mind to do. On the other hand, the Preſumption of the Vice-roy was as great as their deſpair, and that was one Reaſon why he rejected *Mocrebchan*'s Propoſals; be-

Mocrebchan wou'd make peace with the Vice-roy.

cauſe after he had conquer'd us, which he made no doubt of, ſhe ſhou'd appear ſo much the more formidable to the *Indians*, and force them to a Submiſſion upon more advantageous Terms.

The Fight begins.

As for our ſelves, having taken all due Meaſures for our Defence and Security in this difficult and diſadvantageous Conflict; with the concurrent Approbation of all our Captains and Maſters, as the beſt Courſe to be taken, I commanded one of my Ships, the *Hope*, at low Water, to move towards the Adverſary, to prepare them for ſome Attempt, and ſtood after her with the other three Ships, upon the coming on of the Flood. The *Portugueze* preſently thinking that we had been all contriving to run away, made out as the Stream wou'd permit them to ſtop our Motions, and the *Hope* being foremoſt, they immediately attack'd her with three of their great Ships, the two Gallies, and the beſt part of the Frigats; the Galleons alſo making after as faſt as they cou'd for the Sands. By that time we came up to her defence, the Enemy had boarded her with a good number of Men; but they quickly found themſelves in a great Streight, how and where to diſpoſe of themſelves; for they cou'd neither ſtay in the *Hope*, nor get back again to their own Ships, for our great and ſmall Shot which we threw pretty plentifully in upon them. As the beſt courſe they could take therefore in this extremity, they very fairly leaped overboard, truſting to their own Ships to fiſh them up as they cou'd, tho' a great number of them were drown'd, and a much greater (at leaſt the more conſiderable part of them for quality) loſt their Lives in the encounter aboard the *Hope*.

Having thus fail'd of taking the *Hope* this way, they reſolv'd, if poſſible, to ſet her a-fire, and to accompliſh it, they ſet ſome of their own into a light Flame; but theſe flaming Ships which were intended to be let looſe upon ours, drove quite from us, and run a-ground upon the Sands, where they continued burning till the next Flood quench'd them.

We had five Men kill'd, and ſome few wounded, and the Tackling of ſome of our Ships prejudic'd, which was the Sum of all the Loſs we ſuſtain'd by that Day's Action.

And tho' the *Portugueze* were as ready to leave off fighting as we, yet had it not been for the Injuries the *Hope* had receiv'd in the firſt Onſet, I had not diſcharged them ſo, nor let the Vice-Roy have retired, before I had exchanged a Gun or two with himſelf.

The Country was not a little revived, to ſee the Diſpute ſo ſucceſsfully managed againſt the *Portugueze*: Thus far *Mocrebchan* was by this time indifferently well recover'd of his Fright; and now began to Bounce as the Vice-Roy did before; declaring he had no mind to make Peace with them; and he never wou'd agree upon any Terms with them, but what ſhould be equally advantageous to us, and to themſelves. He ſent us in Proviſions too for our own Neceſſities; and Timber, what we wanted, for any Reparations of our Ships; and nothing in the World cou'd be more obliging to him than this Fight was; in the Honour of which he hop'd to have ſhare, tho' he had none in the Danger and hard Service of it.

The Jeſuits attempt to poyſon them.

In the mean time the Jeſuits took as much pains to provide our Deſtruction at Land, as their Friends the *Portugueze* had to ruine us at Sea; and ſince no other way was practicable at preſent, they attempted it by Poiſon; an Art which much Practice and Experience has rendred them very skilful in. The Governour of *Surat* was deſired by them to undertake the Active Part of the Work; but the Invention and Contrivance they wou'd furniſh him with; and that was to poiſon the Well, from whence we had all our Water. But he a Man of juſt and honourable Principles, deteſting in his Heart ſo baſe a Villany, rejected the Propoſal with Indignation, and forthwith came and told us of the Deſign. And that we might live ſecure, and know by an infallible Sign, whether the Jeſuits had ſecretly poiſon'd the Water or no; he told us, he had put ſome Tortoiſes into the Well; which by dying wou'd demonſtrate the abuſe of the Water.

The Portugueza loſs.

The *Portugueze* all this while lay ſtill as to any Attempt upon us; but the World was very buſie at the ſame time, in talking of them, and their Loſſes ſuſtain'd in the late Encounter. For the News came from *Damen*, that they had ſent 350 Men to be buried there; and by a modeſt Computation, we can't allow leſs than a hundred more kill'd and burnt in the Ships, beſides them that were drown'd.

They treat for Peace but ineffectually.

The *Perſians* at this time too were engag'd againſt them at *Ormus*; and at *Malacca* they had their Hands full with other Adverſaries: Upon all which Accounts they were now pretty well inclin'd to Peace, and 'twas high time, when the King of *Perſia*, the *Mogul*, and the *Engliſh*, were all in Arms againſt them together.

The Jeſuits eagerly follow'd the Buſineſs of making them and the *Mogul* Friends again, and wrought ſo far as to bring Matters to a Treaty; but the Pride and unjuſt Demands of the *Portugueze* ruin'd all: For whereas they had done prodigious Damages, they were ſo far from yielding to make any Satisfaction, that they demanded a vaſt Sum of Money from the *Mogul*: The Sence of which was, that they had been at ſome Charge to waſte and ſpoil his Country, and they wou'd be paid what they were out of Pocket upon that Account. So that now they ſtood upon the ſame Terms with one another as before, and the Vice-Roy accordingly ſent for more Supplies for carrying on of the War.

To ſpeak the truth, that Sum of Money ſo inſolently demanded by the *Portugueze*, if 'twas due any where, 'twas moſt juſtly due to us: For all the Streſs and Burthen of the War, lay upon our Shoulders; the *Indians* quarrell'd with them, but we were to fight; they had nothing to do but to guard the Shores, and look on, while we prodigally ſpent our Blood for the Service and Defence of the Country.

Perpetual Liberty of Trade, is certainly the leaſt Debt the *Mogul* owes the *Engliſh* Nation; and 'tis not immodeſt to ſay, that we have (as far as this comes to) purchas'd a Title to his Country, by being the undoubted Protectors of it.

It needs no proof, that the *Mogul*'s Force at Sea is very contemptible, eſpecially if compar'd with that of *Portugal*, a Nation of ſuch great Ability that way: And it is as eaſie to be conceiv'd, what wou'd have been the Conſequences of the *Portugueze* coming down upon them at *Surat*, without meeting an adverſe Power to bid them Defiance by the way.

Great Robbing in *India*. *February*. Commodities brought aboard.

Some of our Company, who had been diſpatch'd to ſeveral parts of the Country, upon the Concerns of Trade, had bought up conſiderable Quantities of Indico, as well as other Commodities. They found it very dangerous travelling, and were hardly able to paſs along ſafe, even with a good Guard, becauſe of the Resboots, or Gentile *Indians*, that were robbing every-where upon the Road. But notwithſtanding thoſe Thieves at Land, and the *Portugueze* watching us upon the Water, we got our Commodities ſafe aboard; which were (beſides Indico) black, white, and blew Baſtus, Candikens, Crecany, and Cotton-yarn.

Fire-ſhips come.

But the freſh Supplies ſent for by the Vice-Roy, were come at this time, and the Affairs of Trade muſt again be adjourn'd, and give place to thoſe of War. Theſe Supplies (as it afterwards appear'd), were more, and rather Fire-ſhips, than Fighting ones; and the *Portugueſe* deſpairing of worſting us any other way, had brought up theſe Machines, fill'd with all ſorts of combuſtible matter, to burn and blow us out of the Road. They plainly diſcover'd, that they were too ſenſible of the ill Conſequences of the paſt Engagement, to be forward to enter upon another, in a fair and open manner. For now they wou'd put up an Affront, and tamely bear to be inſulted and provok'd to fight; and I very often diſcharg'd one of my biggeſt Guns, directed to the very Prow of the Vice-Roy, to try his Temper; but he wou'd not ſtir.

The Portugueze plainly afraid to fight.

All their hopes of Succeſs againſt us, depending upon the happy management of the Fireſhips, they played that part with all the Policy in the World; giving us falſe Alarms, and drawing our Expectations of an Aſſault from them towards one particular Quarter, that ſo while we uſed our chief Care in guarding that way, they might drive their flaming Ships in upon us the contrary way. But they taught us by theſe Tricks how to defend ourſelves; and not making the Thruſt home where they pretended to offer it, we were caution'd to guard a leſs ſuſpected part.

They attempt to fire the *Engliſh* Ships.

And it was to very good purpoſe that we follow'd their Directions; for accordingly in the dark Night, the Machines having crept round about us, came driving along with the Tide directly upon us; which our Watch (beſtow'd that way) diſcovering at a reaſonable diſtance, we had timely Warning to prepare our ſelves for. They blew up as they paſs'd by us, and diſcharg'd a vaſt quantity of Murthering-ſtuff; but (God be prais'd) did no harm to any of our Ships.

They attempted us by the ſame Method two ſeveral times afterwards; but the Succeſs was ſtill the ſame; Diſappointment on their Parts, and happy Deliverance from the Danger on ours. Thus we were hitherto triumphant, both over the Power and Policy of that injurious People.

The Vice-Roy ſues for Peace, and is denied.

The Vice-Roy now (weary as well of the Shame, as the Diſadvantage of ſo many Baffles) began to think with ſome Concern how to diſengage himſelf; and ſo great was the abatement of his Stomach, by theſe Diſappointments, that he prov'd humble enough to make Motions for Peace.

This was a very ſurprizing Change; he that a few Days before, in the ſence and feeling of his own Strength, had promis'd himſelf ſo many glorious Victories, pretended to impoſe Laws upon the whole Country, and to be the ſole Diſpoſer of the Fate of it, was now the Country's humble Servant, and willing to be at Peace with her almoſt upon her own Terms.

But *Mocrebchan* (ſenſible of his Compliance) now took his turn to bounce and inſult, and acted juſt the ſame part that the Vice-Roy had before towards himſelf. In ſhort, he ſent him poſitive word, That he wou'd make no Peace with him: As alſo, that ſince he was not able with all his Fleet, to drive four *Engliſh* Merchant-men out of the Road, he wou'd be reckon'd a much leſs formidable Enemy by the Country for the future.

The Vice-Roy goes away.

The Vice-Roy was fain to take this Anſwer, ſince he cou'd get no better; and ſo leaving ſome of his Frigats to attend hereabouts, he ſet Sail with the reſt of the Fleet for *Goa*, carrying along with them the Glory of their Great Actions perform'd at *Surat*.

We had now no other Occaſions to detain us here, but only to fit up our Ships (that wanted it), into a Condition for the proſecution of our Voyage to other parts. But the *Indians*, who look'd upon us as the Guard and Strength of their Country in this Juncture, wou'd not be brought to conſent we ſhou'd go very ſuddenly, leaſt the *Portugueze* having gotten more Forces together, ſhou'd as ſoon come about upon them again. We yielded therefore to their Importunity, in agreeing to ſtay ſome few Days longer, as well to oblige them, as to provide for our own neceſſary Occaſions.

Mocrebhan comes to ſee the General.

In this time I had a ſolemn Interview with *Mocrebchan*, who came to make his Prince's, and Country's Acknowledgment of the Benefit they had receiv'd by us. I went aſhore to the Tent ſet up for our Entertainment, where this great Favourite of his Prince was ready to receive me, with all the Expreſſions of his Reſpect and Good Will that cou'd be imagin'd. And to return his Civility, I made him the Complement of an Invitation a Shipboard, which he as readily accepted; ſeeing all the Particulars of our Fleet with a great deal of Satisfaction. He beſtowed ſome Money amongſt the Sea-men, in Token of our Victory over the *Portugueze*; preſented me with his own Sword, which is the Cuſtom of that Country, with reſpect to Officers that have ſignaliz'd themſelves in any conſiderable Action: But we were no way in Debt, either to the Publick or himſelf, eſpecially conſidering that we were not behind-hand with him in Preſents; nor receiv'd any thing, but what we did as good, if not more than buy.

They go away. *March.* Another Fleet of Frigats comes to *Surat*, with Galleons, &c.

All Ceremonies of this kind being at an end, and the Viſits of the Great Men paid, we ſet Sail from *Surat*; but we were but juſt gone out of the Road, when we deſcried a conſiderable Fleet of *Portugueze* Frigats making towards the Town. To ſhew our Good Will, as alſo to encourage our Friends in the Town, we ſhot at ſome of them, tho' we were at too great a diſtance to do them any miſchief.

They follow the *Engliſh*.

They had behind ſeveral Galleons and Gallies, which made the greateſt part of their Strength, and coming up, put towards the Shore; but having diſcover'd us, immediately began to ſtand after us; tho' they made ſo little haſte, as plainly ſhew'd they had no mind to overtake us. I very well knew, that they durſt not attempt to land at *Surat*, till they were ſure we were too far off to come to prevent or diſturb them in that Deſign; but yet neither wou'd the Seaſon, or our other Affairs, allow us to lie there and watch their Motions, and wait till they began the Enterprize they intended, whatever it was. Our Care therefore was to endeavour to draw them after us, not only for the advantage of more Sea-room, if it came to a Battle, but alſo to gain ſo much time for the refreſhing our feeble and tired Men. And this Plot ſucceeded according to our deſires; for as we ſail'd on, the *Portugueze* came after us, at their ſtately rate; ſtill keeping in motion, but coming on ſo heavily, that to attend them any longer had been an Injury to our ſelves.

The *Portugueze* retire.

To bring the Matter therefore to an iſſue one way or other, we concluded (if they wou'd come a little nearer to us), to charge them without any farther Ceremony, and for the greater Terror of the reſt, to begin with the Vice-Roy himſelf, plying him with the Ordnance of all the Ships at once. And accordingly we making a little halt, which the *Portugueze* interpreted to be a ſtaying for them till they came, and ſo a kind of Defiance or Contempt of their Power, they immediately turn'd about, and ſail'd towards the Shore, deſiſting from any further purſuit of ſuch an untoward Game as we proved to be.

They went on towards *Goa*, and were obliged to do ſo, becauſe of the ill Winter Weather now quickly to be expected; ſo that *Surat* was ſecure for this Year, and we ſee their Danger paſt before we our ſelves were, as it were gone out of Call.

Go for *Bantam*. The Green Iſland.

Having our Hands clear of them, we proſecuted our Voyage towards *Bantam*; in which Courſe we diſpatch'd the *Hope* for *England*; and having doubled the Cape *Comorin*, came to an Anchor with the reſt of the Fleet, under a pleaſant Iſland to the North of the Salt Hill. Ships may ride very well there in twelve Fathom, within a Stone's-caſt of the Shoar; and 'twou'd be a very good place for refreſhing, if it had but the advantage of good Water, which it wants. Otherwiſe there are Hogs and Coco's enough to be had; but no good Water any nearer than the Iſland that lies beyond the burning one.

Come to *Bantam*. *June*, *A. D.* 1615.

At *Bantam* we weigh'd Mace, and took in Silk to lade the *Solomon* for *Maſulipatan*, which was ſent thither with a conſiderable number of Merchants.

We had Advice here of the violent Proceedings of the *Dutch*, againſt ſome of our Factors at *Macaſſar*; and that they threatned to come with a Force to turn the King of *Bantam* out of his Kingdom, and place another in his room.

* 'Twas as much as ever we cou'd do, to live in any tolerable Peace with them here too, they being ſo very ready to quarrel with us; and rather than fail, as prone to make and contrive Occaſions for Contention.

*** Here the brave Capt. *Dounton* died, and ſo his Accounts of things being interrupted, we take the remaining ſhort Notes out of the imperfect Memorials of his Succeſſor Captain *Elkington*, &c. Come home. *October*, *A. D.* 1616.**

A Noble *Indian* came hither from *Puloway*, to make ſome Propoſals to us about Trading with that and the other Iſlands of *Banda*. He declar'd in an Aſſembly of our Merchants, That thoſe Places were ſo oppreſs'd with the horrid Inſolence and Tyranny of the *Dutch*, that they were all very well diſpos'd to an unanimous Attempt for their Expulſion, at leaſt, they wou'd endeavour to force them to be more quiet and civil than they were. That if we wou'd ſtand by them, and furniſh them with Ammunition for the carrying on ſuch a Deſign, they wou'd turn over all the Spice-Trade of thoſe Iſlands into our hands. But we cou'd enter into no ſolemn Agreement with them of this nature, till we had farther Orders from *England*, tho' in the mean time we promis'd what Aſſiſtance we cou'd, as alſo to ſend a Ship to know their Propoſals at large, and what Security they cou'd give us for the performance of what they engaged to do, with reſpect to the putting us in poſſeſſion of that Trade.

This was the Sum of our Tranſactions at *Bantam*, from whence we ſail'd directly for *England*, being entertain'd with no remarkable Occurrents by the way.

AN APPENDIX to CHAP. XXVII.

Containing ſome Accounts of a Journey from India, *into* Perſia, *made by two* Engliſh-men, *belonging to Capt.* Dounton*'s Company.*

WE ſhall not follow theſe Travellers into every particular Inn, or Village upon the Road, nor ſtop with them in all their ſeveral Reſting-places; we ſhall only obſerve to fall in with them, where they have any thing worth Obſervation to ſhew us upon the Way, that the Reader may not be a Traveller in a worſe Sence, and grow weary before he comes to the end of his Journey.

***March.* *A. D.* 1614. A pleaſant Journey from *Agra* to *Labor*.**

Having determin'd to paſs into *Perſia* by the way of *Candahar*, as being of all the moſt frequented, and beſt for the Company of Merchants and Caravans; they ſet out from *Agra*, and proceeded to *Labor*; from which place the Road is well beaten to *Candahar*. There can hardly be (according to their Relation) any pleaſanter Travelling in the World, almoſt, than between theſe two

Cities. The Country all about is the richeſt and moſt fruitful of *India*, and 'tis as well manur'd and improv'd by the Care of the Husbandman. At every five or ſix Coſe end, you have a fine Seray, or Publick Houſe for the Entertainment of Travellers, which are very neat Structures all of them, and yield as good Accommodations within, as they make a handſome appearance on the outſide; ſpecial Care being taken for that purpoſe by the King, and thoſe Great Nobles who were the Builders of them, that nothing ſhou'd be wanting in the Contrivance or Furniture of them, that might ſerve the Conveniencies of thoſe that were to uſe them. Beſides, you have Rows of Mulberry-Trees planted all along on both ſides the way, throughout the whole 600 Mile, from *Agra* to *Labor*; which is ſuch a Walk, as hardly any, 'tis preſum'd, Country, can ſhew the like.

The Rules of Travelling there.

Upon this Account, if a Man does not travel in the ſcorching Heat of the Summer, he may take a great deal of pleaſure in paſſing this Road; and it is as ſafe as it is delightful, if one don't make any Night-Journeys, but be ſure to put up in the Serayes in good time, and ſo go out with Day-light again the next Morning. For if a Man does not obſerve theſe regular Hours, 'tis ten to one but he is ſnapp'd by Thieves, which are always the Plague of this Country, and of this Road too, in no ſmall degree; and therefore in all the Serayes they obſerve that Rule not to open the Gates to any Man before Day-break, and then all the whole Company ſets out together.

The good Order in the Serayes.

In all the Serayes upon this Road, the Old Saying ſtrictly obtains in practice; *Firſt come, firſt ſerv'd:* When a Man comes in, and takes up ſuch a Lodging, 'tis in vain for any other that comes after him, to have a mind to the ſame Apartment; if he can by fair means procure the firſt to exchange with him, well and good; otherwiſe he muſt take his Lot; for by the Laws of the place no Man can be thruſt out of his Lodging, when he has once fix'd upon it.

Trade from *Labor* into *Perſia*.

At *Labor* (which is the Centre of the whole Trade of the Country), they tell us that all the *Indian* Merchants meet together, turning a great part of their Moneys into Goods, and ſo joyn themſelves into Caravans, in order to paſs the Mountains of *Candahar*, and ſo into *Perſia*. And according to the common Accounts, there paſſes no leſs than Twelve or Fourteen thouſand Camels loaden in a Seaſon along this way, 'tis now ſo much frequented; whereas formerly there did not uſe to be above Three thouſand, all the reſt going by the way of *Ormus*.

But the Merchants are put to very great Expences in this Journey betwixt *Labor* and *Spahawn* in *Perſia*; for they reckon that every Camel's Lading ſtands them in near 130 Rupies, by that time they get thither. For what by the Badneſs of the Way, and the Extremities of Weather, (beſides other Dangers) they commonly ſpend ſix Months, if not ſeven between thoſe two places. By this way alſo is *Perſia* furniſh'd with Pepper, and other Spices, over Land, from *Maſulipatan*.

But none made more of the Trade of this famous City, than the *Portugueze* did, (as long as they had the Wit to keep Friends with the *Great Mogul*:) For all the Merchandize they dealt for with the Foreigners, or *Indians*, at *Labor*, was here embark'd upon the ſpot, and ſo (down the *Ravee*, into the *Indus*) away for *Perſia*, *Ormus*, and thoſe parts; and then all the Merchants that paſs'd that way betwixt *India* and *Perſie*, paid them Freight. But beſides this, they drove a vaſt Trade along this River for Spices, which they bought in other parts of the *Indies*, and ſo bringing by Water up hither, furniſh'd all theſe parts of *India* with that Commodity. They had better have abated ſomething of their proud and inſolent Demands upon the *Mogul*; or taken care ſome way or other to have ſatisfied and pleas'd him again, and ſo have kept this profitable Trade in their hands: Friendſhip, and all theſe Advantages together, wou'd have been far more eligible, than to loſe and be turn'd out of all, and be beaten beſides into the Bargain.

Vaſt Trade of the *Portugueze* formerly.

But other People have no Reaſon to be angry with them for throwing themſelves out of this Buſineſs; and tho' they may be call'd Fools for their Pains, yet no Man can owe them any Ill-Will upon that ſcore. Into this mighty Figure and Reputation is *Labor* now grown, for Trade and Correſpondence: Which is the more ſurprizing too, in that 'tis ſo little a while (in compariſon), that it has been riſing up to ſuch a degree of Greatneſs. In the time of the *Potane* Kings, it was but a trifling Village, and never made any conſiderable appearance, till the preſent *Mogul*'s Grandfather ſet himſelf to the enlarging and adorning of it. So that 'tis true of both the Grand Metropolis's of *India* at this Day, that they owe the Riſe of their Glory to this Family: For as *Labor* grew up under the Nurſery of the Grandfather, ſo did *Agra* under * that of the Father of the preſent Monarch. From hence they paſs'd on to *Multan*, a great and an ancient City, ſeated pretty near the River *Indus*, and pretending to ſome Trade for Linen Cloth. When the *Potane* Kings maintain'd their Ground in *India*, this place was in a very flouriſhing Eſtate, whilſt *Agra* and *Labor* lay both in the greateſt obſcurity: But now ſhe has little to pretend to, theſe upſtart Rivals have robb'd her of her Trade and Glory, and left her nothing great to lay claim to, but the advantage of her Venerable Antiquity. The place is ſo poor, that Caravans are obliged to ſtay hereabouts eight or ten Days, whether they have Buſineſs or no, that they may do it a kindneſs, by ſpending ſome of their Money; neither will the Governour let them paſs on, till they have reſted themſelves here for as much time as that comes to.

May.

Multan.

In their paſſage between this place and the Mountains, or Streights of *Candahar*, they were very often diſtreſs'd for want of Suſtenance for themſelves and their Beaſts; the Country about them being barren, and the Water many times very brackiſh and unpleaſant. The Captains of the Mogul's Forts and Garriſons, in many places impoſing and exacting upon them, demanding ſo much Duty upon every Camel's Head, where nothing at all was due, either in Juſtice, or by the Rules of Cuſtom, but all was clear Gain to themſelves, and went into their own Pockets. Nay, they go farther than this too, in their Abuſes of Travellers ſometimes; for whereas the Mogul maintains them there to be a Guard againſt Thieves, they often prove the Thieves themſelves; but ever (whether they rob or no) are as great Villains as any of thoſe they are ſet there to keep in order.

Mountains of *Candahar*.

Theſe Mountains of *Candahar* are extreamly ſteep and rocky, troubleſome, and bad for travelling. The Streights themſelves are ſo narrow, and fenc'd in with horrid Crags ſo on every ſide, that a ſmall Company poſſeſs'd of them, might maintain their Ground againſt a numerous Army. But the difficulty and danger of Travelling here, is vaſtly increas'd by the Circumſtance of the ill People that lie up and down all about theſe Mountains.

July.

The *Potanes*.

Theſe are the *Potanes*, or as ſome call them the *Agwans*, a fierce and barbarous People, ſomething whiter than the *Indians*, horribly thieviſh and treacherous, and by their natural ſtrength and roughneſs, pretty well qualified for all the hard Services of that Thieviſh Life they live. 'Tis very probable, that they are ſome of the Remainders of the old *Indians*, who have either by a conſtant Succeſſion ever maintain'd themſelves in the enjoyment of theſe Territories, or elſe by ſome Inundation of a Foreign Power, were driven out of the other parts of that Country, and retired for ſhelter into theſe Mountains, where they lie ſecure and quiet.

Formerly they were far more troubleſome than they are now, and uſed to cut off whole Caravans at once, lying continually in Ambuſcades for that purpoſe; but the taſting of the Sweetneſs and Profit of Trade, has made them a little more civil; and partly too, the Awe they ſtand in of the Great Mogul at preſent, tho' it ſeems impoſſible he ſhou'd ever make an abſolute Conqueſt of them, whatever Reſtraints his Forces may lay them under. But they are not yet acquainted with ſo much Honeſty and Humanity, as to forbear injuring thoſe that happen to fall into their Power, when they can do it without running themſelves into any danger thereby. If they meet any ſtraggling Traveller, they won't fail to make a Prey of him, carrying him up into the Mountains, where he is ſold for a Slave, and condemn'd to all the Miſeries and Hardſhips of a Life of perpetual Drudgery.

This Guard of Mountains paſs'd, our Travellers came to the City of *Candahar* it ſelf. Here the Great Mogul keeps a conſtant Garriſon of Twelve or Fifteen thouſand Horſe, becauſe of the near Neighbourhood of the *Perſians*; and this place alſo is one of the main Keys of his Country. It has the Defence of a Wall only on the S. and the E. Quarters, it needing nothing of that nature on the W. ſide, becauſe of the mighty Rocks which environ it there, and defend it to much better purpoſe, than any Work of Art cou'd poſſibly do. It is no place of great Trade of it ſelf, as for any Commodities afforded by it, or the Country about it; but being the certain, and ſtated Rendezvous of all the *Indian*, *Perſian*, and *Turkey* Merchants, it may challenge any City in that part of the Eaſt, for great Dealings and Concerns. Upon this ſcore Proviſions are dear there, tho' they are very plentiful at the ſame time; there is ſuch a vaſt Reſort of People, (who muſt of neceſſity all be Traders for the Belly) that 'tis impoſſible but Eatables muſt go off at good Rates, as all other Commodities do, where the Number of Buyers is ſo very conſiderable. And by this means too the place is vaſtly grown in bigneſs, and takes up a much larger Compaſs of Ground than formerly it did; People muſt have Lodgings, as well as Meat and

Candahar.

---

* See Mr. *Finch*'s Journey thro' *India*, in the Deſcription of *Fettipore*.

The Wars brought *Candahar* into ſuch requeſt.

Badneſs of of ſome parts of *Perſia.*

Drink, and therefore to make room for all their Company, they have enlarg'd it ſo with Buildings of late Years, that the Suburbs do now vaſtly ſurpaſs the Dimenſions of the City it ſelf. The good Fortune of *Candahar* in all theſe Reſpects is owing to the turning the ſtream of the Trade into theſe parts, which before uſed to run chiefly by the way of *Ormus*. That old Channel was ſtopt up, and all intercourſe cut off between *India* and *Perſia* that way, by reaſon of the Wars between the *Perſians* and the *Portugueze*. So that the Merchants if they would Trade into that Country muſt take *Candahar* way of neceſſity, tho' round about as to a great part of the *Mogul*'s Dominions, for it would be a far ſhorter cut to croſs the River *Indus* about *Tatta* and thoſe parts, and ſo ſtrike directly into *Perſia*; but 'tis impracticable by reaſon of the wild and barren ſtate of all that tract of Land that lies between the *Indus* and the borders of *Perſia*. 'Tis bad enough a great way into *Perſia* it ſelf, betwixt *Candahar* and *Spahawn*, it being hard to ſee any Green thing ſometimes in two or three Days travel; but 'tis much worſe down along the Banks of the *Indus*; and the Deſerts of *Arabia* are not more troubleſome perhaps than ſome Patches in that Country. This Account our Travellers do give us as to ſeveral parts of *Perſia* that lay in their way; a ſcorch'd ſandy Soil, no delightful ſhade or ſhelter of Trees, ſoft graſſy Walks or Fields, as 'tis in ſome of the happier parts of the ſame Country. And beſides this, the ſame calamity of the want of good Water afflicted them often here as it did in *India*: it was either brackiſh, muddy, or downright ſtinking, that both Man and Beaſt were puniſh'd to drink it. Neither were the King of *Perſia*'s Officers (except in ſome very few places) much more conſcientious than the *Mogul*'s as to the point of impoſing Duties upon Paſſengers; every now and then, here as well as there, a Camels Head was to be paid for, ſo that at this rate, before a Man gets to his Journeys end, he may pay over and over the Price of the Beaſt he makes uſe of.

Tatta.

Tatta was the firſt place of note they came to in *Perſia*; a Town defended with a ſubſtantial Wall of Sun-dried Bricks, which are uſed about moſt of their Caſtles and other Buildings thereabouts. This place has the Bleſſing of a good Soil, and wholſome Water; the latter is ſo precious a thing with them, that where they have it, it is wonderful to ſee with what Art and Induſtry they manage it for the Advantage of their improveable Grounds; what Trenches they cut, and neat Devices they have for the deriving of Water to a good ſpot of Ground that wants it. All Merchants that go into *Perſia* are obliged to ſtay here till the King's Treaſurer has weighed all their Packs, and valued them as he thinks fit, taking three *per Cent*. Cuſtom.

When they are going from hence into *Perſia*, they are uſed with a great deal of Favour and Indulgence, for fear they ſhould make complaints at Court, which would be very fatal to thoſe Officers, the King having given a ſtrict Charge for the good uſage of Merchants, and threatned the contrary with moſt rigorous Penalties. But then when they go into *India*, they are very ſevere and exact upon them; for then they fear no telling of Tales, and have hardly any other Reſtraints to influence them, than what Juſtice, Conſcience and Good Nature might be ſuppos'd to lay, which a Man would be pretty hard put to it to find any thing of amongſt theſe out-lying Officers.

Merchants ſearched at *Tatta.*

They'll allow no Man to tranſport Horſes or Slaves out of the Country, and as for Gold or any Silver Coin but juſt the King of *Perſia's*, 'tis death for him that attempts to carry any thing of it abroad; and therefore here the Merchants are ſtripped even to the very Skin, the ſcrutiny is ſo nice and ſevere upon this account.

Salt-deſert.

Between this and *Spahawn* they paſs'd thro' that barren and deſolate ſpot commonly call'd the *Salt-deſert*, which is a matter of four Days Journey. All the *Caravan* ſtop before they enter upon this, and refreſh ſome Days on purpoſe to prepare them the better for the horrid Fatigues of that Country: But after all their Care and Proviſion, 'tis very often that they miſcarry in it, and ſome Carcaſes or other are left in thoſe Sands to be back'd into Mummy by the violent heat of the Sun.

September.

Our two *Engliſh* Men now go directly to *Spahawn* to do Buſineſs with Sir *Robert Shirley*, for the *Eaſt-India* Company, by whom they were employ'd. And they come in good time, for that Perſon was then ſetting out for *Spain*; going thither in the quality of the King of *Perſia*'s Embaſſadour. The deſign of his Miſſion to that Court, was, to confer about Methods for the more ſpeedy and effectual overturning the Intereſt of the *Portugueze* in theſe Parts, and bringing in the *Spaniards* in their room. As for their Buſineſs with Sir *Robert Shirley* from the *Eaſt-India* Company, tho' there had been ſome miſunderſtandings between him and them, yet he concluded (as he was an *Engliſh* Man) to do the Intereſt and Trade of his Country all the faithful Service he could, and therefore procured all the Firmans to be made that they deſir'd, and gave them into the Hands of theſe Meſſengers, ſeal'd with the King of *Perſia*'s Broad Seal. That which concern'd the Privilege of the *Engliſh* Nation in common for Trading in any part of the King of *Perſia*'s Dominions, ran thus, as tranſlated out of the Language of that Country.

The Copy of the King of *Perſia*'s Firman, Tranſlated out of the *Perſian.*

Firman or Command given unto all our Subjects, from the greateſt, unto what Degree ſoever, unto the Souf-baſha *or* Conſtable *of our Country, to kindly receive and entertain the* Engliſh *Franks or Nation, at what time any of their Ships or Shipping ſhall arrive at* Iaſques, *or any other of the Ports in our Kingdom; to conduct them and their Merchandize to what place or places they themſelves deſire; and that you ſhall ſee them ſafely defended about our Coaſts, from any other Frank or Franks whatſoever.*

Thus I Will and Command you ſo to do, as you will anſwer to the contrary. Given at our Royal City, the twelfth of this Moon Ramaſſan *(October) in the Year of Our* Tareag 1024. A. D. 1615.

Frank, a name given in the Eaſt to all Weſtern Chriſtians, ſince the Expedition into the Holy Land; the *French* being chief therein, and a *French* Councel at *Claremont* cauſe thereof.

Commodities and Moneys of *Perſia.*

There were three of theſe Firmans given out by the King of *Perſia*'s Vizier; one of which was ſent to the Governour of *Jaſques*, a Second carried into *India* for the Benefit of the Merchants there; and the Third brought over into *England* to the Company.

As to the Trade of *Perſia* they give us this ſhort Account of it. Their chief Commodities are Carpets of all ſorts, Gold, Silver, Silk, Cotton, and theſe mix'd together; raw Silk, of which it yields (according to the King's Books) 7700 Batmans yearly.

The Province of *Coraſan* produces good ſtore of Rhubarb and Worm-ſeed. The *Perſian* Coins are, of Silver the Abacee, the Mahomedee, the Shaſhee, and the Biſtee; of which the Mahomedee is one half the Abacee; and the Shaſhee one half the Mahomedee; and the Biſtee two fifths of the Shaſhee; and in the value of a Rial of Eight, they reckon the Shaſhee to be one thirteenth of a Rial of Eight: As for their Copper Coins they are much the ſame with the *Tanga's* and *Piſo's* of *India*. The Weights differ conſiderably in different places.

At *Tauris* the two Mahans make but one of *Spahawn* Weight, and ſo 'tis likewiſe as to the *Batman*. The Meaſure of Silks is generally the ſame with the Pike of *Aleppo*, which is about 27 Inches.

Sir *Robert Shirley* being here, brought upon the Stage in *Perſia*, whereas he was left before in *India* at *Diul* in order to his *Perſian* Journey, *'twill not be out of the way to ſhew the Dangers he paſs'd in coming hither, by the barbarous Practices of the *Portugueze*: Sir *Robert Shirley* was a proper Object for their Malice and Revenge to work upon on a double account, both as he was an *Engliſh* Man, and the King of *Perſia*'s Embaſſadour, with whom they were then at variance. Theſe wicked People influencing the Governour of *Diul* ſo far, that he began for their ſakes to neglect him, he being weary of that ill uſage, and alſo of a Life of continual fear and hazard by the *Portugueze* at that place, deſired leave to go for *Tatta*, which the Governour refuſing to permit, he took Courage and went without his permiſſion. But being purſued and overtaken by a Troop of Souldiers ſent out to bring them all back again to *Diul*, they were worſe handled than before, Sir *Robert* himſelf being actually impriſon'd and narrowly ſcaping with his Life ſeveral times, the *Portugueze* were ſo mad a plotting to deſtroy him. However, not long after the Governour (not able to anſwer the leaſt part of what he had done to his Maſter) better bethought himſelf, and gave him his Diſpatch for *Tatta*, where he was entertain'd according to his quality, and from whence he proceeded to *Agra* as well to make his Complaints as to do emergent Buſineſs at that Court. The *Mogul* promis'd him Satisfaction, and immediately ſent for the Governour to Court to anſwer the Crimes laid to his Charge, and there's no doubt but his ill Behaviour coſt him his Head.

* See Mr. P tons Journal before.

Sir *Robert Shirley* abus'd by the *Portugueze.*

From hence Sir *Robert*, having been very generouſly treated by the *Mogul*, went away to *Perſia*, to his own Maſter.

CHAP.

Chap. XXVIII.

The Second Voyage into the Eaſt-Indies *perform'd by Captain* Peyton, *with the* Expedition. *Together with the* Dragon, Lion, *and* Pepper-Corn, *under the Command of Captain* Keeling, *Taken out of Captain* Peyton's *large Journal and the Obſervations of ſome others.*

Jan. A. D. 1615 Note, Sir *Thomas Rowe* Lord Embaſſadour from His Majeſty of *England* to the *Great Mogul*, went over with this Fleet; but what particularly concerns him is to be brought in afterwards in his own account of his Embaſſy.

THE Buſineſs of this Voyage, tho' it lay in ſeveral parts of the *Eaſt-Indies*, yet in the firſt place our Courſe was to be directed for *Surat*, where Sir *Thomas Row* his Majeſties Embaſſadour was to be ſet down. Beſides all the *Engliſh* Company that went upon this Occaſion, we had ſeveral Foreigners aboard us, *Japoneſe*, *Guzurats*, *Indians*, which had been formerly brought over, and were now going back to their reſpective Countries. And to make the variety ſtill the more conſiderable, over and above this medley of other Nations, we had a load of the choice Drugs of our own Country; which the Law having ſwept out of doors at home, were to be diſpos'd of up and down in foreign parts at diſcretion. Theſe were a pack of Thieves and other lewd Malefactors, which Juſtice had ſome time before condemn'd to the Gallows; but the *Eaſt-India* Company interceded with His Majeſty for their Pardons, that they might be ſent over in theſe Ships to make Diſcoveries in thoſe places where they ſhould be left. But we had not loſt ſight of the *Engliſh* ſhoar before theſe Newgate Birds were ſome of them upon the Wing, and had very near flown quite away from us, and notwithſtanding all our care to prevent it, one of them did break out of his Cage, and took his ramble with ſome other of the Ship-company, which were Birds of as good a Feather as himſelf, and therefore all decently join'd in the ſame Flock together.

March. Wrong ſituation of Iſle *Forteventura* and Cape *Bajadore.*

Having proceeded in our Voyage as far as the *Canary-Iſlands*, we had there an opportunity to take notice of, and rectifie a Miſtake concerning the Situation of one Iſland belonging to that cluſter. It is that which is commonly call'd *Forteventura* Iſland, which our Experience tells us, is plac'd no leſs than a whole Degree more Northerly than it ought to be; the ſame errour we diſcover'd too with reference to Cape *Bajadore*, and theſe Miſtakes of our Plats run us into no little Danger.

A. D. 1615. *June* *Coree's* reform amongſt the *Soldanians.*

When we came to the Bay of *Soldania*, we found much better Temper and Carriage in the Natives towards us, than ever us'd formerly to be. They had loſt in great meaſure that Shineſs and thoſe frightful Apprehenſions of us, that made it many times ſo hard to bring them to any thing of a Trade. They ſeem'd to put a ſort of a Confidence in us, and were free and forward to converſe after their barbarous way; and out of a reſpect to us took care not to affront us by thieving and pilfering as they us'd to do. Nay, which was a very ſtrange thing, ſome of them had ſo good an Opinion of us, as to be willing to leave their own Native Country, and go for *England* in our Ships when we came back. All theſe wonderful Alterations we attributed to the Inſtructions which *Coree* (their Country-man) had given them; for he himſelf was yet alive amongſt them, and came down with ſome of the reſt to make us a viſit; and having been ſo kindly treated in *England*, as an Expreſſion of his Gratitude he carried ſome of our Men up into the Country to ſee his Houſe, and Wife, and Children, at one of their Towns, which conſiſts of about 100 Houſes, about five Miles from the Bay. Here *Coree* kept (exceeding Charity) all his Particulars that he brought with him out of *England*; here was his Copper Armour and the reſt of his Furniture, which all put together made him the fineſt fellow in the whole Country. And 'twas upon this Account, that ſome of the reſt were ſo willing to go with us into our Country; there was more Copper ſuits to be had in *England*, and *Coree* had ſped ſo well that they wanted to try their Fortunes in ſo good a place. Theſe People alſo by ſeeing more of the World are grown much wiſer in the matters of Trade, as to what concerns their own Advantage. Time was when Iron-hoops and Nails would have ſerv'd the turn, but the humour alter'd from that to Copper; now they are come from Copper to Braſs, and they ſay they muſt have pieces of a Foot ſquare or more; nay, they have inſiſted upon Baſons, Skillets, Scummers and ſuch like Utenſils for a Houſe in exchange for their Cattel, and ſome of our Nation have lately dealt with them upon theſe Terms. But this being moſtly ſince *Coree's* return home amongſt them, we believe he has help'd to enlighten their underſtandings in theſe matters, and ſhown them how little we value in *England* thoſe things which they ſet ſo high a rate upon.

Criminals ſet aſhoar at *Soldania.*

We left here a ſet of our condemn'd Men, turning them looſe into the Country, and tho' to bring Thieves to *Soldania*, is but carrying Coals to *New-Caſtle*, or Rats and Mice into a Houſe that ſwarm'd with Vermin before, yet for that Reaſon this appear'd to be the fitteſt place for them. Let a reſolute Villain be thrown amongſt the *Javans*, a cunning Cheat amongſt the *Chineſe*, and an impudent Thief amongſt the *Soldanians*, and the Men are diſpos'd of as they ſhould be; and 'tis better thus many times than to place them in better Company, for a pack of Knaves of the ſame faculty may help to keep one another Honeſt; at leaſt (as to the preſent Caſe) our Men and the *Soldanians* could not well debauch one another. When they were aſhoar they form'd themſelves into a Society, and choſe a Captain to command them; ſo giving them each a Weapon for their defence, we left them to their future Fortunes.

Other errors of the Plats.

Between the Bay of *Soldania* and the Iſland St. *Lawrence*, we had a farther Proof of the erroneouſneſs of *Daniels* Plats. For inſtance, the Land to the Weſt of Cape *de Arecife* (which lies to the Eaſt of the Cape of *Good-Hope*) is placed 27 Minutes more Northerly than it ſhould be; and ſo when according to the meaſures of thoſe Plats we ſhould have ſeen the Land of St. *Lawrence*, we found an error which amounted at leaſt to as much as 70 Leagues.

July. See Capt. *Peyton's* firſt Voyage. *Davis* in his firſt Voyage reckons five of theſe *Comori* Iſlands.

We came to an Anchor next at *Moyela*, one of the Iſles of *Comori*, a place of late pretty much viſited by our *Engliſh* Ships. Theſe Iſlands are four in number, *Moyela*, *Angazelia*, *Juanny*, and *Magotta*, and they all lie almoſt Eaſt and Weſt of one another in a parallel, except *Angazelia*, which juts out a little to the North. There's none of them all but affords very good refreſhing, tho' *Magotta* has the beſt character upon that Account from all the *Arabians* that inhabit thereabouts; and next to *Magotta*, the Iſland of *Juanny* has the Reputation for the beſt. *Angazetia* is extreamly high Land, and moderately fruitful too as far as ſome of the common Neceſſaries of Life do go, but beyond Kine and Goats, Cocoes, Oranges and Limons it has very little to pretend to.

The Government of theſe Iſlands.

As for the Government of thoſe Iſlands at the time of our being there, *Angazelia*, had no leſs than ten petty Sultans in it, *Moyela* had three, and in *Juanny* rul'd an old Sultaneſs that was as it were the Soveraign of them all, and to whom all the reſt repair'd for Juſtice both in civil and criminal Cauſes. The Sultan that govern'd in that quarter of *Moyela*, where we anchor'd, kept all his Subjects in ſuch extream awe, that no Man dared ſell us ſo much as a Coco-nut till ſolemn leave was granted by him. To open a Trade, therefore we were obliged to ſend ſome Men aſhoar in order to the procuring of it. Theſe being landed, were receiv'd and entertain'd by a certain Governour under the Sultan, whom they found ſitting upon a Mat of Straw, wrapt in a Mantle of red and blew Linen, beſides which he was all bare, only a ſorry chequer'd Cap upon his Head. A ſmall Preſent made him, eaſily procur'd his Good Will and Conſent to the Peoples trading with us, which he preſently ſignified to them by Meſſengers diſpatch'd for that purpoſe. While he entertain'd our Company with Cocoes, he himſelf ſat chewing Beetle and burnt Oyſter Shells mixt with the Kernels of the Arecca-Nuts: Theſe Nuts are hot and biting in the Mouth draw away a conſiderable deal of Rheum, ſtrengthen and fix the Teeth, and 'tis all the Phyſick they uſe in theſe parts.

Their Reception by the Governour.

They'll make a Man that is not us'd to them light and giddy headed at the firſt eating, and by degrees will change the Teeth from their natural white, into a ruſty black, which is one of the effects of them that the Moyelians principally admire them for, ſince Teeth of that hew are reckon'd a part of very great Beauty amongſt them.

Fambone.

The Town whither our Men went to this Governour was call'd *Fambone*, lying about ſome four Leagues to the Eaſt ſide of our Road; the People made very much of them, and gave them (after the Governour's Treat was over) an Entertainment at one of the principal Mens Houſes.

Cuſtoms in Eating &c.

In the firſt place Water was brought to every Man in a Coco-ſhell to waſh his Hands in, and for a Towel a parcel of the Rinds of the Coco. Then they brought in boil'd Rice cover'd over with roaſted Plantans, pieces of Hens and Goats broil'd; their Bread was made of Cuſcus beaten and mixt with Honey, and ſo fried; and for Drink they had Palmeto-Wine and Coco Milk. They don't ſit croſs Legg'd down upon the Floor at their Meals as the *Mahometans* and all Eaſtern People generally do, but in a more decent manner upon Benches, all round the Table, which ſtands high upon Treſſels.

Houſes.

Their Houſes are far from being rich or ſtately, yet they are kept very ſweet and clean, and there's as much neatneſs in all their Furniture and Houſhold-ſtuff, tho' nothing at all for ornament and fine ſhow. They are built with Lime and Stone, ſmall and low roof'd, Plaiſter'd in the inſide with Mortar, and without fenc'd round with Canes; at top they have only Rafters of Wood cover'd over with Leaves. They have their little Gardens adjoining to them too, which are paled in with Canes, but hardly afford any thing elſe beſides Tobacco and Plantan-Trees.

Doman.

The place where the Sultan commonly reſides is *Doman*, the chief Town of that part of the Iſland, and diſtant about three Miles from *Fambone* the Governour's Town. We had no opportunity of ſeeing this place, tho' the Lord's Embaſſadour ſent ſome on purpoſe to viſit the Sultan; but he happening at that time to be at *Fambone*, the Journey to *Doman* was prevented. He gave theſe Perſons a courteous Reception, and made them Dine with him very familiarly; as for any thing elſe he appear'd nothing greater or ſtatelier than the Governour, and was not to be known by any other mark than that of the profound Reſpect which all the reſt paid him He aſſumes the honourable Title of *Xeriffe*, and calls himſelf one of *Mahomets* Kins-men; a thing that a World of the *Mahometans* do pretend to, that are no more a kin to *Mahomet* than they are to *Moſes*, and are of a far honeſter race than they would make the World believe they are by that Pretention.

The *Sultans.*

In ſhort theſe Sultans of *Moyela* are very mean ſorry Fellows, if one may gueſs by one of them that came to the Lord Embaſſadour; a poor bare footed Rogue, that could not pretend to any higher Trade than for a matter of four or five Rials of Eight, and when he could not get his Bargain, fell to begging of Shooes and Stockings. This was one of the High Blood of the Prophet, a Kinſman of *Mahomet*, Brother to the *Xeriff*, Subſultan of *Moyella*, and no body knows what beſides; a Man would rather have taken him for ſome raſcally Derviſe or begging Saint that was going a Pilgrimage bare Foot to *Mecca*, and wanted a pair of Shooes to help him over the rugged way.

Jealouſies of their Women and Churches.

The People of this Country are very fearful of letting their Women be ſeen, and as Jealous too leaſt any Chriſtians ſhould ſee their Moſquets or any of the Rights of their *Mahometan* Devotion. One of our Men did but go into a Village ſo far as to be ſpied by one of their Prieſts, who immediately fell a ſcreaming, and made ſuch a Noiſe as if a Troop of Ruffians had been come to knock them all on the Head; all the Women were ſhut up cloſe within Doors, and the People were in the greateſt tumult imaginable, threatning the Man if he came near their Church that they would certainly kill him. Now a Man might ſafely ſee all the Riches of their Moſquets, without being tempted to Sacrilege, as well as the beſt Charms of their Women, without any provocations to unchaſt Deſires; but ſuch is their ridiculous Fancy of a mighty Sanctity amongſt themſelves, and as great an Impurity in the Chriſtians that they will not permit any thing of this Liberty.

Informations given by a *Mooriſh* Pilot

A certain *Mooriſh* Pilot at this place gave us ſome Informations, which 'twould be very well worth while to enquire into the Truth of. He affirmed that on the South ſide of St. *Lawrence* there was good ſtore of Ambergrice, and Cocoes of the Sea; that the chief part of his own Country (which lay in two Degrees ten Minutes North Latitude upon the Coaſt of *Africk*) would give us a good lading with Marfil, Amber and Tinta Roxa. That in many places along the Coaſt of *Africk* towards *Mozambique*, *Magadoxa*, &c. we might Trade for Gold and Silver, and particularly that of the latter, they had a great deal of Gold mix'd with Sand and Earth about the Country, which the Inhabitants made very light of. He gave alſo ſome account of the Countries names between *Magadoxa* and *Preſter John's* Dominions, and by his own Chart rectified ours in ſome Reſpects, as to the diſtance between *Zocotora* and the Main, and raſing quite out ſome Iſlands which were laid to the South ſide of *Moyela*, there being in reality none ſuch at all.

Tides and Currents.

The *Magadoxians* have propagated a Notion that the Current ſets at this place fifteen Days Eaſtward, and fifteen Days Weſtward, and fifteen Days lies ſtill and ſets no way. But this is very idle Diſcourſe for Sea-men; the Current does here ſet moſt certainly and conſtantly to the South Weſt, that is the ſtated courſe of it. Now before the full of the Moon it had ſuch power on the Ebb and the Flood, that we never woond at all, but at the full Moon and Spring Tides we rode upon the Flood againſt the Current, the Current running under, and the Tide above, and the Ebb winding back with the Current. So that this ſtrange pretended alteration of the ſetting of the Current, is indeed nothing elſe but the influence of the Tide, which at thoſe times high'd to a matter of ſixteen Foot Water, and was powerful enough to overcome the Current; and there's no miracle nor myſtery in this, that the Courſe of the Water ſhould be different when the Tide prevails over the Current from what 'twas when the Current was ſtrong enough to maſter the Tide. And that this is the true account of the matter is plain, becauſe the Spring being paſt, the Current return'd and took it's regular courſe again, as we found when we were at a diſtance clear of all the Eddies of the Iſlands. For tho' 'tis true, that when we weighed from hence, we were ſet the firſt Day Eaſtward and the next Weſtward; yet the Reaſon of that was evidently from the Eddies of *Juanny* one Day, and *Angazelia* the other, and being out of the reach of them, it for the future influenc'd us only to the Weſtward.

Varying and Longitude, &c.

The varying at *Moyela* is ſixteen Degrees forty Min. and we make it to lie under the very ſame Meridian with Cape St. *Auguſtine*; and from hence conclude that the Iſles of St. *Lawrence* ought to be laid to the Eaſt 39 or 40 Leagues, and ſo all the Coaſt of the Main (being broader than the Land in the Chart) ought to be ſet in proportion to the Eaſt; for tho' the Longitudes be ever ſo falſe in themſelves, yet they are true in their Proportions to one another.

Auguſt. Winds

We ſail'd away from theſe Iſlands for that of *Zocotora*. In this Courſe we had very great trouble with buſtling impetuous Winds about *Abbadelcuria*; all the while the Moon was below the Horizon (being then in the ſecond Degree increaſing) they tore and raged after a moſt horrible manner, but when ſhe riſe they were quiet and ſtill; ſo ſoveraign a Lady is ſhe of the Weather in thoſe parts, and ſo much depends upon her Influence and Preſence. And therefore let thoſe that have occaſion to Anchor hereabouts in the Night time be careful to avoid ſtanding over the rocky Ground, where the Winds will certainly force them from their Anchors; but chuſe to ride where ſome defence may be afforded by Land againſt the violence of the Winds beating from the Hills. But the beſt way will be to touch at Cape *Guardafui*, and ſo ſail from thence to *Abbadelcuria* the next Morning by break of Day, and when come thither to Anchor upon the Weſt ſide of it in ſeven or eight Fathom under the low land; or if they can get no Anchorage to keep to the South ſide in the Night, leaſt the Winds and the Northerly Current put them too much to Leeward before Day light. The Winds don't keep ſteadily to a point notwithſtanding the Monſon, but ſometimes blow South by Weſt, and S. S. W. but very ſeldom to the Eaſt of the South.

Direction about ſailing to *Zocotora.*

Deliſha Road.

We came to an Anchor firſt in *Tamerin*, and then in *Deliſha* Road, which very well deſerves that name for the delightfulneſs and peaceableneſs of it. Between the Water and the ragged Mountains of *Tamerin*, you may bring the two little Hommocks (that lie on the low point without the Land to the Eaſt ſide) S. E. and the low Land (that was Eaſt by North of you in *Tamerin* Road) North Weſt by Weſt, and ſo ride very conveniently in ten Fathom within three fourths of a Mile of the ſhoar. Your Latitude here is thirteen Degrees five Minutes, varying eighteen Degrees twenty Minutes. The Ground white Sand, but rocky, ſo that 'twill be needful for the Sea-man to coatch or booy his Cables. The King of *Zocotora* gave us a very civil Reception as he does to all that are like to prove good Cuſtomers, and will lay out their Money with him.

The Town and King's Palace.

We bought ſome quantity of Aloes of him, which being very new, or by reaſon of the Sun's heat was perfectly liquid; he made us give after the rate of thirty Rials of Eight *per* Kintal (each Kintal containing by our Beam 103 pound and a half) for which reaſon we bought the leſs.

* Other Accounts of this Iſle ſee before in Sir *Henry Middleton's* and Captain *Saris's* Voyages. Theſe Obſervations were then made by none of them.

* One of our Company who was aſhoar had the opportunity of making ſome Obſervations, which may (not unprofitably) be here annexed. The Kings Town of *Tamerin* that makes a very fair ſhew in the Road, makes a much leſs handſome appearance to a Spectator that's got into the midſt of it. 'Tis built of Lime and Stone whited over, has ſomething of ornament from Battlements, and Pinacles that look well at a diſtance, but within ſide one finds it but a poor ſorry Town. The King's Palace was ſuch too as an ordinary Gentleman in *England* might poſſibly make a ſhift with; and whatever his upper Rooms were, his lower ones were moſt of them Ware-houſes, and Ward-robes; in which latter beſides ſome change of Cloths, there were kept the Books of their Law, Religion, and Hiſtory of the Lives of their Saints. And as for the others the Ware-houſes, one muſt excuſe the finding ſuch apartments as theſe in the Palace; for His Majeſty is a Merchant, and lives by his Trade as other Honeſt Men of that Profeſſion do. Every Evening at Sun-ſet the People fall to their Devotions with their Faces turned towards the Weſt, and in this poſture the King comes and throws Water upon all their Heads; but this had not need to be in any great quantity, leaſt the cold Water ſhould ſtrike a damp to the Zeal of thoſe Religious Perſons, and put out the Fire of their Devotion. And by one Paſſage that occur'd aſhoar, it appears that their Minds are not ſo intenſly fix'd in their Religious Exerciſes, but a little matter may be ſufficient to divert them; for this *Engliſh* Man of our Company having obtained the Favour to be preſent in the Moſquet at the time of Divine Service, and happening to pull out his Watch there; the Prieſt having ſpied that fine thing, was ſo taken with the ſight, that he had not patience to hold on in his Work any longer, but preſently left off ſerving of God to come and ſtare upon the Watch.

A very zealous Prieſt.

The Kingdom of *Tartach* in *Arabia Fœlix*, which is under this Prince's Father, lies all along the Coaſt from fifteen to eighteen Degrees, and Northward advances to the Mountains. The *Turks* have Tribute all over *Arabia*. but only from this King of *Tartach*, who lives in peace with them, and makes no other acknowledgment than this, to aſſiſt the *Turks* upon any occaſion with 5000 Men, who are alſo to be paid by the *Turks* themſelves.

September. Come to *Surat.*

Our little affairs at *Zocotora* being ended we ſail'd away for *India*, and came to an Anchor in *Swally* Road. Here we landed and the Lord Embaſſadour with all the State and Ceremony befitting his quality, and he was as well receiv'd by the Grandees of *Surat*. But one baſe Cuſtom of theirs occaſion'd ſome diſpute and difference at firſt, and that was their examining and ſearching the Pockets of thoſe that came aſhoar. The Embaſſadour's Character indeed exempted him from any thing of that nature; but then they pretended to practiſe it upon his retinue, which tho' he openly proteſted againſt ſtanding upon the Privilege of an Embaſſadour, yet could procure no farther favour than only to have ſome few of the chief excuſed too. As for the inferiour ſort they were very narrowly ſearch'd every Man of them, both Pockets and other places, according to the rude Faſhion of the Country, where a Man muſt pay for a Rial of Eight in his Purſe, or a good Knife in his Pocket, and not only ſo, but if he happens to have any rarity about him, ten to one but the Governour, under the pretence of buying it, takes it quite away,

Baſe Cuſtom at *Surat.*

Coins at *Surat.*

The current Coin of *Surat* is Rials of Eight, of which the old with the plain Croſs are beſt eſteem'd, and worth about five Mamudies a piece, the new with Flower-de-luces at the ends of the Croſs go at 4 ½ if they be not light. The Mamudie is a courſe Silver Coin, containing thirty of their Copper Pice, each Pice being twelve Drams. The *Engliſh* Shilling if it be weight will yield Thirty three Pices and one half. Their Larines are much about the value of the Mamudies, but the Rupies are of ſeveral ſorts, ſome worth half a Rial of Eight, others leſs, which if a Man does not mind well he may be very eaſily cheated.

The chief Trade is managed by the *Banians*, who muſt be as well look'd to as the Money, for they are very ſubtle cheating Fellows, whether they act the parts of Buyers or Sellers. The Weights of every City almoſt do differ from one another, ſo that to give an account of theſe, muſt be to give a compleat Hiſtory of *India* in this Reſpect. The Trade at *Surat* takes in all manner of *Engliſh*, *China* and *Guzurat* Merchandize, Pictures, Toys, Drugs and all kind of Spices.

Go for *Callecut.* *March*

After a conſiderable ſtay here at *Surat*, we ſail'd away for the *Malabar* Coaſt, and came to an Anchor in the Road of *Callecut*. The King's Deputy was very quickly diſpatch'd to bid us welcome in his Maſters Name, and to repreſent the earneſt Deſire he had to have a Conference with us upon the matters of Trade. That Prince was then at *Crangalor*, beſieging a Caſtle of the *Portugueze*, with whom he was at War, which was one of the beſt encouragements that could be given to our Hope of a Happy Settlement in his Country; for as we deſire no better proſpect in a Foreign Country where we pretend to Trade, than to ſee it clear of the *Portugueze*, ſo there is nothing that they take for a worſe omen of the decay of their Intereſt any where, than to ſee us come and ſit down amongſt them.

The Great *Samorin* of *Callecut's* Offers to the *Engliſh.* Note that it was Capt. *Keeling* Commander of the *Dragon* that went aſhoar to make the Agreement with the *Great Samorin.*

The King of *Callecut* deſiring our Company at *Crangalor*, we went thither to him; and here what favourable Grants, what Immunities and Privileges could be thought of that ſhould not immediately be vouchſafed and confirmed to us? An *Engliſh* Factory muſt be eſtabliſh'd in his Country; and to invite us to it (beſides all the Common Expreſſions of Good Will to our Nation, he offer'd us a very good Houſe rent-free, and a total exemption from all Cuſtom, Tax, or Duty whatſoever, for all Goods both imported and exported out of his Dominions. And whereas at that time we were not able to leave any quantities of Merchandize for the Furniture and Support of a Factory, having been already at *Surat* and now going to other parts; this Objection was removed by his Declaration, that 'twas no matter for a preſent ſupply of Goods; but only that we laid the Foundation of the Factory by leaving ſome of our Company there, which would be a Pledge to him of our return the next Year with better Proviſions to perfect the Work that was now begun. He aſſur'd us likewiſe that we might every Year have at leaſt one Ship lading of Pepper there, and the certain vent of all our Commodities.

Factory at *Crangalor.*

Upon theſe Conſiderations therefore it was determin'd, that a Factory ſhould be erected at *Crangalor*, and accordingly what Men and Goods we could allow for that purpoſe were forthwith ſet aſhoar. The ſubſtance of this Agreement between the King of *Callecut* and us was drawn up in a Writing, and tranſmitted to us by him, with this Promiſe over and above, That if he recover'd the Fort of *Crangalor* from the *Portugueze*, it ſhould be put into the Hands of the *Engliſh*. We make the Latitude at *Callecut* 11 Degrees 10 Minutes North, and the varying fifteen Degrees forty Minutes.

In our paſſage from hence towards Cape *Comorin*, we had the luck to take two or three *Portugueze* Prizes; their principal lading was Grain, Sugar, Drugs and Bengala Stuffs; had we treated them according to their deſerts we had burnt their Ships, and taken every penny-worth of their lading away, tho' to ſet them an example of Courteſy and Good Nature, we ſhew'd them more Favour than they could have expected, or would have ſhewn us in the like caſe.

Note for *Brinnion.*

It is proper for a Ship bound this way to ride at *Brinnion* till the end of *March*, and not double the Cape *Comorin*, becauſe of the Calms, and the Current ſetting South to the *Maldives*; but then at that time the Eaſterly Monſon ends. This *Brinnion* is about ſixteen Leagues from the Cape, the Courſe ſetting South Eaſt by South, a bold and free Coaſt; it is a Town ſeated in a little round Bay, and to be known by a long white Breach to the North, and to the South all high Land, and in the ſame part a great red cliff near the Sea. The Latitude here is eight Degrees thirty Minutes, and varying fifteen Degrees.

May A. D. 1616 Come to *Sumatra.*

Having doubled the Cape *Comorin* our Ships parted Company, the *Dragon* and the *Pepper-Corn* going directly for *Sumatra*, and we in the *Expedition* firſt for *Bantam*. But our ſtay at that place now was but ſhort, and Buſineſs quickly obliged us to follow our Company to *Sumatra*. We had ſome Trade at *Tecoo* and *Priaman* for Pepper, but the other Ships had furniſh'd themſelves with the ſame Commodity at *Achen*, tho' 'twas all tranſported thither from theſe places. This Pepper Trade is brought to *Achen* by the King's particular Order, and for his own particular Advantage too; for he forces the People of *Tecoo*, &c. to bring their Spice to him, and ſo puts off his *Surat* Commodities in truck for it, at what Rates he pleaſes; and ſo many times he ſends his Merchandice to thoſe places, and ſells them off upon the ſpot, and then to be ſure there's no buying nor ſelling for any other, till all his Cargo is gone off.

Theſe places laſt mentioned on the Iſland, are celebrated only for a plentiful production of Pepper; but there are others which beſides that Commodity yields others far more valuable.

Jambi.

Jambi which lies on the Eaſt-ſide, affords a large Grain'd Pepper, like that of *Priaman*, a place not acknowledging the King of *Achen*'s Sovereignty, as do thoſe which lie on the Weſtern ſide.

Paſſaman.

Paſſaman, beſides the beſt Pepper upon the Iſland, produces the fineſt Gold, and in the greateſt plenty; but the Temper of the Climate is ſo very bad, that all the Riches of its Mines, can't make amends for it.

Baruſe.

Baruſe, (to the North of *Paſſaman*) yields good ſtore of Benjamin; and Cotta-tinga, the ſame Noble Commodity with *Paſſaman*; and all thoſe places are under the King of *Achen*'s Command: That is, they are really a part of his Dominion, and they'll receive his Orders with the utmoſt Submiſſion, and ſhew of external Reverence; but they'll obey them as they think fit, at leaſt as far as they can have their own Wills, without an open Contradiction of his.

Ill People at *Tecoo*.

And this we found by Experience; for when our other Ships came hither to *Tecoo* and *Priaman*, bringing the King of *Achen*'s Letters along with them, they made an old ſtir with kiſſing the Letter, and laying it upon their Heads, to ſhew their Reſpect to it; but hardly any thing of the Contents of it wou'd the Heathens perform. And they are ſometimes ſo wicked and unruly too, that we ſhall have a hundred Criſes drawn upon us, if we refuſe to let them have their Wills, in taking our Goods upon Truſt, or at their own Rates; not to mention their Frauds and Cheats, by falſe Weights, Miſ-reckonings, down-right Thieving, and all the Methods of that kind, that can be purſued by an Ill-minded People.

But theſe Diſorders may be eaſily rectified by a Complaint to the Court of *Achen*, and the *Tecoans* had beſt have a care their Villanies don't make a Noiſe in the Ears of that ſevere Prince; who if he knew of their Proceedings, wou'd make nothing to cut off the Legs of a hundred of them, and this a gentle Puniſhment too. And in order to keep them the better in awe, he does obſerve that point of Policy, to plant his *Acheneſe* Officers up and down amongſt them; but they are either too often as bad as the reſt, or elſe are corrupted by Bribes into a Negligence of their Duty, and Connivance at the Crimes of thoſe they ſhou'd reform; ſo that there's little Redreſs, many times, to be had, by an Appeal to them.

The *Thomas*'s Agreement at *Achen* for a Factory.

The *Thomas*, another *Engliſh* Ship, had, as well as we, enough to do with theſe rude People at *Tecco*: And tho' they had gotten the King of *Achen*'s Letters to bear upon, yet they found it pretty hard work to bring the inſolent *Tecoans* to comply with the Contents of it. That Ship had agreed with the King of *Achen* for a Factory there, paying Cuſtom as other Nations did (which was Seven in the Hundred); which put the *Dutch* into a very great ferment.

And as for our other Ships, the *Dragon* and *Pepper-Corn*, tho' they had fix'd Matters with the King for a Trade at *Tecoe*, yet the time of that Trade was limited but to two Years, after which the Merchants were to repair to *Achen* it ſelf, which the King was reſolv'd to make the main Seat of Buſineſs.

K. of *Achen*'s falling out with the *Dutch*.

At preſent we ſeem to have the better hand of the Trade upon this Iſland: The *Dutch* had their ſhare here too, but they have diſguſted the King of *Achen*, and made him in ſome meaſure their Enemy. One way by which they affronted him, was, their demanding an Officer of theirs, who was entertain'd in his Service, and commanded ſome part of his Fleet of Gallies that were deſigned for *Malacca*. But then they refus'd him a Ship, which by an old Contract he affirm'd was due to him: And this heightned the Difference ſo far, that he forbid them coming aſhore; upon which Account the *Dutch* were forc'd to comply and reſign the Ship according to the Agreement.

And it may be this Miſunderſtanding might have worn off, if by a freſh Contempt of the Laws of his Country they had not renew'd it, and ſtirr'd his Choler a third time.

'Tis a ſtated Law at this place, that none muſt come aſhore till the King has ſent them his Chop, which gives them Licenſe ſo to do. Now the *Dutch* Reſident here at *Achen*, imagining or pretending to a much greater ſhare of the King's Favour, than it ſeems he had, made bold to bring a General of his own Country aſhore, without that Token of his Welcome, and the King's Leave; which being known, the King ſent for the Reſident to Court, and had him well toſs'd by an Elephant (as a Puniſhment for his Preſumption), tho' the Fright was more than the real Damage: For thoſe Creatures are taught how to manage an Execution ſo, as to give the Offender ſuch a portion of Puniſhment, more or leſs, as 'tis deſign'd they ſhou'd. The *Dutch-men* told the King, This was leſs than his Crime deſerv'd; and 'twas a very Mild and Fatherly Correction that he had given him: But yet, in ſhort, he pack'd up, and ſtole away from the place (out of the reach of the Elephants), being reſolv'd to have no more of the King of *Achen*'s Fatherly Correction, nor be toſs'd into his Duty by thoſe ſurly Executioners again.

Several of the reſt follow'd his Example, and march'd off too (tho' they were taken and brought back); but however, the King took this ſo ill, that ſince they did go out themſelves, he ſeconded them ſo far, as to ſhut the Door upon them, and to put us in poſſeſſion of their Houſe.

September.

All Buſineſs diſpatch'd at *Sumatra*, we left that Iſland, and went for *Bantam* once more. Here the Pepper-Trade was very brisk, and the Prices run conſiderably high, occaſion'd partly by the number of *Dutch* and *Engliſh* Ships trading for that Commodity at that time. But the main Reaſon was the great Noiſe made by the *Dutch*, of vaſt Sums of Money brought over this Year by them; they pretended to have 1600000 Rials of Eight ready Money, lying by them, which tho' probably a meer Boaſt, and made with a Deſign to out-brave us) yet ſo far animated the covetous *Chineſe*, and *Javans*, that they preſently hoiſted up the Price of their Commodities, and reſolved to make their own advantage by it.

The prejudice Factories receive in Foreign Parts by the Intemperance of thoſe that manage them.

The ill Condition we found a great part of our Men in belonging to the Factory of this place, renders it neceſſary to make ſome little Reflection upon the moſt probable Cauſe, as well of many Illneſſes here, as in ſeveral other parts of the *Eaſt-Indies*. 'Tis true, no place is, or can be perfectly free from Diſtempers; nor no Conſtitution ſo ſound and happy, as not to lie open to an Invaſion of this kind.

In many places where we Trade, the Air is malignant and infectious; our Water tainted with ſome hurtful or diſagreeable Quality; the Proviſions we are forc'd to take up with, many times, not ſo nicely ſuted to the Temper and Diſpoſition of our Bodies, which are uſed to other Methods in our own Native Climates. But tho' all this be true, and each of theſe Doors is wide enough to let in a fatal Diſtemper, yet none does it ſo certainly and effectually as that of Intemperance. A Man may poſſibly preſerve his Body in good Temper in a bad Air, an unhealthy Soil, and with diſagreeable Food; provided he will live ſoberly and regularly, and does not debauch his Health.

Now this is the common Crime of our *Europeans* abroad, in theſe Eaſtern Countries; they let looſe the Reins to a licentious Appetite of Drinking, and are never well but when they are pouring down all the ſtrong and fiery Liquors, which the Caſe-harden'd *Indians* themſelves are us'd to. The Arack Houſes are continually crowded with them, where they ſit Guzzling whole Days and Nights together, making a Sea of that ſcalding Fluid in their Bellies, which proves more fatal to a great many of them, than that of Salt Water, from which they come.

* This is the great Drink at *Bantam* and *Sumatra*; a thing of that violent heat and ſtrength, that 'tis a wonder how Nature does to overcome it: And certainly, if a Man's inſide were made of dry combuſtible Matter, it would go near to ſet him of a light Fire. Now for People to come where the raging Heat of the Climate commands all the Temperance and good Management in the World; to ſit down in the middle of the Torrid Zone, and ſcald their inſides with burning Spirits, while the Sun is roaſting them without; this is almoſt as likely a way to die, as to leap into a flaming Pile, or a boiling Furnace, and a Man may expect it one way as well as the other. Men ought not to live here, as they might live, were they ſtarving in the Froſts and Cold of *Greenland*, or *Nova Zembla*; nor drink that while they are melting in *India*, that wou'd be ſufficient to keep them from freezing under the North Pole.

And yet after all the Lives that are thus ſacrificed to Riot and Intemperance, thoſe leud Courſes muſt not bear the Blame of it; the Fault is in the Air, or the Diet, or the Voyage it ſelf; 'tis any thing kills them, but their own Extravagance and Unrulineſs, and no Man will charge his Death upon the harmleſs Arack. 'Twere to be wiſh'd, that our Sea-men and Factors abroad, wou'd more ſtrictly obſerve the Rules of Morality, and Sober Living, in this reſpect; and not render themſelves incapable of filling up their Stations, and doing Publick Buſineſs, by an Indulgence in thoſe Liberties; which are at once a Reproach to Human Nature in general, a Damage to Themſelves, a Diſſervice to their Country, and an Affront to their Sacred Religion.

November.

From *Bantam* we were bound home for *England*: And conſidering the time of Year that we went this Courſe, we offer it as good Advice to all Ships coming towards the Cape at this Seaſon, not to take up at an Anchor ſhort

of

* 'Tis commonly diſtill'd from Rice, which is ſteep'd in a Liquor taken from the Coco-Tree. This is the Arack: But the Aracape is another of their ſtrong Liquors, as bad, if not worſe than the former.

Directions in Sailing from *Java* to *England.*

of *Soldania* Road at leaſt, but rather to put in at *Penguin* Iſland, and Anchor there till the Wind ſerve them. In the Months of *December*, *January*, and *February*, the S.S.E. Winds are very furious there, from the New Moon to the Full, this is to be allowed; yet notwithſtanding we eſteem it dangerous to neglect this place, in hope of St. *Helena*, the finding of which is very uncertain, and thick miſty Weather, and ſmall Aſſiſtance afforded either by Sun or Moon, being likely enough to blunder the moſt skilful Sailor (perhaps to the loſs of Men and Ships), at this Seaſon of the Year.

In our paſſage between the Bay of *Soldania* and *England*, we ſaw great Quantities of the Sea-weed call'd *Saregoſſa* *, which lay in long Ridges at ſome diſtance from one another as the Wind drive, with which they continually alter'd and ſhifted. It has a Leaf like Sampier, but not ſo thick, and a yellow Berry very ſmall: We found it ſcattering about from 22 Degr. 3 Min. North Lat. to 32 Degr.

* See the Voyage made by the *Pearl*, where 'tis deſcrib'd as having a white Berry; which therefore probably was another ſort.

We finiſh'd this Voyage, coming to an Achor in the *Downs* in *May*, *A. D.* 1617.

* CHAP. XXIX.

Some further Account of the Proceedings of the Factory at Crangalor, *in the King of* Calecut's *Country. Taken out of the Memorials of Mr* Roger Haves, *Reſident at that place.*

* Theſe Tranſactions here mention'd were after Capt. *Peyton*, and the reſt, were gone.

IN the foregoing Voyage we have ſeen the *Engliſh* ſettling themſelves in a new Dwelling in the Eaſtern Continent, and a potent Prince (hitherto a Stranger to them), giving them a kind Welcome at their Arrival. Our Nation had made her Succeſsful Viſits to all the Potentates and States almoſt round the *Indies*, but ſhe had never yet made any conſiderable Attempt at the Friendſhip and Correſpondence of the Great *Samorin* of *Calecut*.

That Prince, how worthy ſoever he might be of this Notice, yet was hitherto hardly capable of being a Friend to the *Engliſh*, becauſe of his intimate Correſpondence with the *Portugueze*, their moſt irreconcilable Adverſaries. But that Band of Union being broke, and the *Portugueze* inſtead of Favourites now proclaim'd his Enemies; the Prince is prepar'd for a new Alliance, and the *Engliſh* are invited to take their places. And beſides the preſent Diſtreſs of the War with the *Portugueze*, and the Deſire of routing them entirely out of his Dominions (in which the Valour and Strength of the *Engliſh* might be of conſiderable uſe to him), there might probably be a more valuable Cauſe inclining the *Samorin* to this Friendly Carriage towards them. For the Noble Captain *Dounton*, the laſt Voyage he made into the *Indies*, (when the Vice-Roy of *Goa* was ſo fairly and throughly beaten by him) had made ſome Applications on the behalf of his Country, by the means of a *Mallabar* Captain, to the King of *Calecut*. He had deſired him to move to his Prince, that a favourable Entertainment might be given to our Merchants that ſhou'd come into his Ports: And this, together with the encreaſing Fame of the *Engliſh* in thoſe parts, upon that ſignal Victory over the whole Power of *Portugal*, might diſpoſe the Prince to yield to thoſe Motions. And ſince that brave Perſon did not live to ſee the Fruit of his commendable Endeavours for the Good of his Country, the Praiſe and Honour of it muſt ſerve to adorn his Name and Memory, which will be far leſs mortal than he himſelf was.

Capt. *Dounton* had prepar'd the way to our Settlement, in the K. of *Calecut's* Dominions.

The ARTICLES of Agreement between the *Samorin*, and Capt. *Keeling*, were expreſs'd in theſe Terms, and compriz'd under theſe following Heads.

Agreement between the K. of *Calecut* & the *Engliſh*.

UNderecon Cheete, *the Great* Samorine, *&c. To* James *by the Grace of God, King of* Great Britain, *&c. Whereas your Servant and Subject*, William Keeling, *Eſq; arrived in my Kingdom in the Month of* March, Anno 1615. *with three* Engliſh *Ships at the Port of* Cranganor, *in Latitude ten Degrees fifteen Minutes, and at my earneſt Sollicitation came aſhore to ſee me: There was concluded by me for my part, and by him for the* Engliſh *Nation, as followeth:*

Mar 4. 1615: Cranganor Caſtle and Iland promis'd to the *Engliſh*.

As I have been ever an Enemy to the Portugals, *ſo do I purpoſe to continue for ever: I do hereby faithfully promiſe to be, and continue a Friend to the* Engliſh, *and my Succeſſors after me: To endeavour the taking in of the Fort of* Cranganor, *and to poſſeſs the* Engliſh *thereof, as their own, with the Iſland thereof, which is in length on the Sea-Coaſt nine Miles, and in breadth three:*

Provided, That I purpoſe to build therein a Houſe for ſome of my own People, to the number of One hundred Perſons.

I will alſo endeavour, with the Aid of the Engliſh, *hereafter to take in the Fort and Town of* Cochin, *belonging formerly to my Crown and Kingdom, and then to deliver it into the poſſeſſion of the* Engliſh, *as their own proper Lands and Poſſeſſions: Provided, that the Charge of the Surprize be equally born, the one half by my ſelf, the other by the* Engliſh *Nation: And the Benefit of the Spoils thereof, in whatſoever quality, the one half to belong me, the other half to the* Engliſh *Nation.*

Cochin promiſed, and covenanted, to be given to the *Engliſh*.

The Samorine *to have no Right, Title, or Intereſt, in the aforeſaid Town, Precincts, or Appurtenances of* Cochin *at all.*

And the Samorine *doth alſo Covenant for himſelf, his Heirs and Succeſſors, that the whole Trade of the* Engliſh, *in whatſoever Commodities brought in, or carried out, ſhall pay, yield, or allow no manner of Cuſtom, Impoſition, Tax, Toll, or any other Duty of whatſoever quality.*

And to theſe Covenants, which the ſhortneſs of time did not permit to amplifie; I the Samorine *have religiouſly ſworn by the great God I ſerve, to perform accordingly; and that not only for my ſelf, but for my Succeſſors after me: And in Witneſs hereof, have laid my Hand upon this Writing.*

And the ſaid William Keeling *doth promiſe, to acquaint the King's Majeſty with the Premiſſes, and to endeavour his Majeſty's Undertaking thereof accordingly.*

As for the Proceedings of the Factory (as far as appears by theſe imperfect Memorials) they were not ſo ſucceſsful as one wou'd have imagin'd they might have been. Where the Fault lay is hard to determine, eſpecially amongſt ſo ſly and ſubtle a People, and ſo perfect Diſſemblers as the *Indians* generally are. The King carried it fairly to them, and the People ſeem'd fond of their Company, and yet ſome ſecret Obſtacles prevented the growth and increaſe of Trade. 'Twas ſome time before they cou'd procure a Licence to carry their Goods to *Calecut*; however, that was permitted after many Delays, and the Factors went away to make a Trial of their Fortune at that place.

April, A. D. 1615

At their firſt coming thither, they were forc'd to take up in the Publick Cuſtom-Houſe for a Seaſon, till a more convenient place was made ready for the Reception of them, and their Merchandice; and if the Welcomes of the People wou'd have done the Buſineſs they came for, they had undoubtedly made a very profitable Work of it. But tho' to have to do with good temper'd People be a great advantage, yet to be under the Command of an ill temper'd Governour, is a Diſadvantage that in many reſpects overballances the contrary Advantage, and makes it of little uſe and ſignificancy.

Now this was the misfortune of the *Engliſh* there, the Governour was a perfidious diſſembling Fellow, a Friend only in appearance to them, but a real Well-wiſher to the *Portugueze*. He did as much as he dared, or cou'd (without an open Affront to his Prince), obſtruct the Deſigns of their Trade and Settlement in the Country; and wou'd, had it been poſſible, have totally diſpoſſeſs'd the *Engliſh*, and reſtor'd the *Portugueze* to their ancient Seat and Privileges there again.

Their Sufferings by the Governour of *Calecut*.

Our Factors being a little ſettled at *Calecut*, wou'd fain have given Notice to their Friends and Correſpondents at *Surat*, of their new Eſtabliſhment here; but the treacherous Governour wou'd not permit it, till all the Goods were ſold off, that thoſe at *Surat* (as he pretended) might be the better encouraged to come thither too. And when by his procurement a part of the Goods were ſold off to the Merchants of *Calecut*, they were ſo diſpos'd of, that they had as good almoſt have kept them ſtill in their hands; for the Cuſtomers he help'd them to, were ſuch as brought no ready Money; and tho' ſpeedy Payment was promis'd, yet by their many Delays, and ſhuffling Tricks, the Debt appear'd to be little better than deſperate.

July.

However, after this beginning of the Trade, he cou'd not defend himſelf any longer from their Importunities about ſending to *Surat*; which was accordingly done, tho' the Attempt was attended with a very great misfortune: For the Meſſenger diſpatch'd thitherwards, came back again with a Story, That he was beſet by the way with Thieves, ſoundly beaten, and robb'd of all his Money and Letters: The Circumſtances of which were ſuch, as afforded ſhrew'd Suſpicions, that the Fellow was robb'd with his own Conſent, and for his own particular part loſt nothing but his Honeſty. The Governour too hung down the Head upon the Report, and diſcover'd ſome plain Symptoms of a guilty Concern in this matter.

Cheating Merchants.

Now all this while the Merchants of *Calecut* and *Naſſapore*, were buſie a buying, but it was all upon the Stock of Credit; the Trade went on, but no Money came in. And whether the Governour and the Debtors had agreed together to ſhare the Profits of the Cheat betwixt them, or no, yet 'tis certain, that they did by Bribes procure him to get the Payment deferr'd, and put off from one time to another: So that if he was not a Knave of as great a magnitude as that comes to, yet he came as near the Proportions of ſuch a one as he well could.

The *Samorin* himſelf, all the while, carried it with the ſame ſteddy Hand of Favour and Reſpect to them, and no convincing Circumſtance appears, that renders his Fidelity ſuſpected, or reflects any part of the Blame of the Miſmanagement upon him: And if he was falſe, he was ſo with a wonderful deal of Art and Policy, and his Treachery was ſo fine, that (if it could be a pardonable Crime) it wou'd deſerve it upon that ſcore.

The Method they took to get their Money.

But the Governour and the Merchants were bare-fac'd, in compariſon; theſe latter cou'd find no Money to pay their Debts, but they cou'd for Bribes and Preſents to the Governour, in order to the ſecuring his Protection and Countenance in their ill Deſigns. Some Courſe there- muſt be taken, to force their Right out of the hands . theſe People, or they muſt reſolve to be ſtill put upon, in like manner, by every Knave of the Country; or elſe if not that, they muſt quite throw up their Buſineſs, and bid Adieu to all Trade at *Calecut*.

Now nothing cou'd give them a more happy advantage in this matter (had the beſt Fancy been ſet a Work to contrive one), than the fooliſh and ſuperſtitious Humour of the *Mallabars* *. From what monſtrous Principle of Impertinence their Cuſtom proceeded, is neither much material, nor very clear; but a Cuſtom they had, of obſerving a total Abſtinence from all manner of Food, and Waſhing, and every thing of that kind, as long as the *Engliſh* were within their Doors.

* This was a Bars length beyond the Folly of the Bramens, for they won't eat the Meat of other Peoples Dreſſing, but theſe won't eat their own, and at their own Houſes.

Theſe People indeed ought to have conceal'd, or diſſembled this Cuſtom, if they had reſolv'd not to pay what they ow'd; or elſe they ſhou'd have fortified themſelves in their Houſes, and kept their Creditors out of Doors: For Famine is as ſevere a Puniſhment, as any the Sword of a Magiſtrate can inflict; and 'tis as bad every whit to be ſtarv'd within Doors, as to be hang'd without. And tho' they were in no great danger of the latter, yet our Factors were forc'd to threaten them with the former, and that by getting into their Houſes, and declaring their Reſolution to ſtay till the Debts were diſcharged.

Here the *Mallabars* had three things left to their Choice, each of which was attended with its difficulty; either to pay their Debts, to deny their avowed Principles of eating with Strangers in their Houſes, or elſe to ſtarve with all their Proviſions about them: The firſt was offering Violence to Temper; the ſecond to Cuſtom, and perhaps to Religion; the third to the Laws of Nature, and Self-preſervation. In ſhort, they choſe the firſt of the three; Self-love prevail'd, and they agreed to pay their Debts; tho' they were not honeſt in ſo doing; no more than a Thief is honeſt, that reſigns the Prey that will be forc'd from him; or a Rebel is loyal, that gives up a Fort, which Famine, and all the Plagues of War, will let him hold no longer.

December.

This is the ſecond deſperate Debt that the ſtarving Method has help'd to recover. See Floris's Voyage for the other inſtance of it.

By this Policy they pick'd up a conſiderable part of their Debts, tho' it came in ſeveral Driblets, a little parcel from this Man, and as much from another; ſtill cloying them with their Company, till they cou'd hold out no longer, and then fifty or a hundred Fanos wou'd come out to procure their Releaſe, and ſend the *Engliſh* going. From whence it ſeems likely, that the *Mallabars* did not ſuſpect that the *Engliſh* were acquainted with that Cuſtom of theirs, which gave them ſuch an advantage upon them; for elſe they wou'd have guarded their Doors, and kept them out; had they been ſure the others came with a deſign to make ſuch uſe of it as they did.

But it muſt be own'd, that beſides their own Endeavours to recover the Money due to them, the *Samorin* himſelf took ſome care of the Affair, and employ'd ſome of his Nairo's to gather up their Debts for them; but theſe Villains, tho' they did no Buſineſs, wou'd come and demand a Reward; nay, go to the Debtors Houſes, and ſqueeze Money out of them to put in their own Pockets, and never be concern'd about bringing away any for thoſe that entruſted them. There was indeed at this time, hardly any Law, or Government, in the Country; and therefore no Juſtice, nor honeſt Dealing.

January. Attempts made by the Portugueze.

The *Portugueze*, about this time, came into *Calecut* Harbour, with a Fleet of thirty four Sail: There were only three *Mallabar* Frigats that lay there to entertain them; but they did it ſo well, that the *Portugueze* went off with a great deal of diſgrace. Some of them that were forc'd aſhore, were treated with the utmoſt Severity, hang'd up two Days by the Heels, and then toſs'd into the Dens of the wild Beaſts.

The Loyal Governour of the place had, as it ſeem'd, prepar'd very kindly for the *Portugueze*'s more eaſie Admiſſion there; for he was gone from his Charge, moſt of the great Guns were lock'd up, and they had not Powder and Shot for them that were in the way, for above two Diſcharges.

February. March.

The *Samorin* buſie in his Wars, ſent Letters to our Factors, wiſhing, that when the *Engliſh* Ships came, they would come to him at *Panean*; and to make them at *Calecut* eaſie in the mean time, bid them not be troubled about the Money that was due to them, for he would ſee them paid, tho' his Jewels were ſold to effect it.

Here the Account breaks off, and our Factors are not ſo kind as to proceed to tell us, whether the King of Calecut *was as good as his Word or no.*

Some Obſervations of Capt. Peyton's, *concerning the* Engliſh *and* Portugueze *Trade, Factories, and Acquiſitions, in the* Eaſt-Indies.

Factories ſettled by the *Eaſt-India* Company.

HE tells us, That when this laſt Voyage into *India* was made, the Company had Factories ſettled at theſe following places: At *Bantam, Jacatra, Surat, Amadavar, Agra, Azmere, Bramport, Calecut, Maſulipatan, Patania, Siam, Benjarmaſſe, Soccadania, Macaſſar, Achen, Jambi, Tecoo, Japan, Banda, Firando* in *Japan*.

As for the *Portugueze*, they have ſpread their Intereſt and Buſineſs into a far larger Compaſs than the *Engliſh* have, and take up much more room in the Eaſtern Parts than they; and beſides have this advantage, that they are abſolute Lords and Maſters in many places; they ſtand upon a Foundation of Dominion and Property, whereas the *Engliſh* are only Traders, and whatever they do in the Weſtern, claim no Dominion in the Eaſtern World. But this may appear no very great wonder, if two things be conſider'd: Firſt, That the *Portugueze* were earlier in their Viſits to theſe Parts than we; they began before us, and having had a longer time to Work, 'tis not ſtrange that they have done more Buſineſs.

But then they have other Ways and Methods to purſue the Enlargement of their Intereſt by, than the *Engliſh* Nation ever thought fit to practiſe, or ſubmit too. All is Fiſh that comes to Net with them, and right or wrong they ſeize any thing that lies within their reach.

And then 'tis a fine compendious way to get the poſſeſſion of a Country, to have a Bull from the Pope; and ſo enter to Rights upon the Privilege of Religion. 'Tis a mighty advantage to be the Sons of a Church, that has the Keys of the Nations hanging at her Girdle, and profeſſes a Power to draw the Lines of Inheritance and Dominion all the World over. Such Helps as theſe (together with Force to make them effectual) may very well conduce to the propagating of an Intereſt, and the good Settlement of a People abroad in the World.

Portugueze Trade and Poſſeſſions in the Eaſt.

And if we conſider Capt. *Peyton's* Account, that follows, we ſhall find the *Portugueze* have thriven very conſiderably upon it. To begin from the Coaſt of *Africk*, and ſo on Eaſterly.

On the Coaſt of *Africa*.

They have a Trade upon the River *Quame*, in 21 Degr. 50 Min. South Lat. for Gold, Ambergreeſe, Elephants Teeth, and Slaves.

At *Mozambique* for the ſame.

At *Mombaza* for the ſame, in truck for *Guzurat* Commodities.

At *Magadoxa* for the ſame, and ſeveral ſorts of Drugs.

From all theſe places they drive a Trade to *Cambaya*, the *Red Sea*, and divers other parts, curiouſly obſerving the Monſons, which blow Weſtward in *April*, *May*, *June*, *July*, *Auguſt*, and part of *September*; and Eaſtward all the reſt of the Year; the ſmall ſpace intercepted between both, being either quite calm, or an uncertain mixture of many ſorts of Weather.

About the *Perſian* Gulf.

At *Ormus* they make a profitable Buſineſs on't. From hence they trade into *Perſia*, *Arabia*, and *India*; they draw great Quantities of Pearl from *Balſora* hither, and with them, and other *Perſian* Commodities, they ſend out a Ship or two yearly for *Diul*, upon the Coaſt of *India*, which they reach in the end of *Auguſt*, or beginning of *September*: This is as it were their Mint or Treaſury too, from whence they pour out vaſt Quantities of Coyn (Rials of Eight), into other places where they trade: In ſhort, next to *Goa*, 'tis certainly the beſt Poſt they are poſſeſs'd of in all the Eaſt.

At *Musket* they have a ſtrong Fort and Caſtle, tho' no great Trade; they are not ſo much Merchants, as proud domineering Maſters at this place: For here they keep all in the moſt ſervile Awe and Subjection about them, and give out their Paſſes and Licenſes for the going up and down of other Ships.

Upon the *Mogul's* Country.

At *Diul*, near the Mouth of the River *Indus*, and at *Diu*, in *Guzurat*, where they have a very ſtrong Caſtle.

Damon is entirely inhabited by them; and here they are fortified in a ſubſtantial Caſtle, and have, by Report, a Territory containing a hundred Villages taken in within their Lordſhip.

Serra de Bazion, which lies a little South from *Damon*, and borders upon the *Decanees*, this they are poſſeſs'd of; and between this place and *Chaul*, they have three Ports, *Gazien*, *Banda*, and *Maia*.

Upon the Coaſt of *Decan*.

Chaul is a large City, with a Caſtle, where they are well ſeated.

Dabul has a Factory, but not any Fort.

Goa is their *Indian* Metropolis, the Seat of the Vice-Roy, and all the Gallantry of the Nation, and the general Rendezvous of all their Forces, both for Land and Sea Service. This place has a large ſhare of Trade too: In ſhort, here are the ſtrongeſt Sinews that ſupport and hold together the parts of their Eaſtern Empire, which were they cut, the mighty Body wou'd quickly fall and drop all to pieces.

Onor has a ſmall Fort; *Barcelor* a Caſtle; and here they trade for Pepper, Ginger, and ſeveral ſorts of Drugs.

Mangalor and *Cananor*, both ſtrengthned with Caſtles, and affording the ſame Trade as the former.

Upon the *Malabar* Coaſt.

They are quite thruſt out from *Calecut*; and the *Samerine* is trying to do the like at *Crangalor*, where they have a Fort notwithſtanding.

Cochin is a place of conſiderable advantage to them; the City it ſelf is ſtrong, and the Caſtle like it; it enjoys a ſweet Air, and has a pleaſant Situation by the Sea-ſide, with a very convenient River for Ships to ride in.

Coulan, *Quilaon*, *Tuccatra*, all of them defended with good Caſtles, and moſtly fill'd up by the *Portugueze*, either Laiety or Clergy: For St. *Laurence*, a Village belonging to one of them, is entirely a Neſt of Friars and Jeſuits.

We follow them next off from the Continent, but ſhall quickly ſtep thither back again.

Upon the Iſle of *Ceylon*.

Maner, betwixt Cape *Comorin*, and *Punto de Galla*, is a Town wholly theirs: So alſo is *Colombo*, and ſeveral other places upon that Iſland. They are working themſelves in apace here; and if they hold on as they begin, the King of *Ceylon* will, in time, come to call him of *Portugal* Sovereign. Here they have a warm Trade for Cinamon and Drugs.

We now turn the Corner of Cape *Comorin*, and go up the other ſide of the Continent.

At *Nagapatan* they have a Factory; but *Maliapore*, (or St. *Thomas*) a Walled City is their own.

Upon the *Coromandel* Coaſt.

Up towards the *Ganges*, they have ſeveral ſmall Reſidencies, good Factories in ſome places, and every-where ſome Advantages or other, that make it worth their while to ſettle there.

In the Kingdom of *Bengala* they are poſſeſs'd of a good Town.

In *Pegu* they have a Factory; and ſo likewiſe in *Arracan*, and upon the River of *Martaban*.

At *Junſulao* they have a great Factory, from whence they lade vaſt Quantities of Tin for the *Malabar* Coaſt.

Upon the Continent on t'other ſide the *Ganges*.

At *Malacca* they are Maſters of City and Caſtle, which are both very ſtrong; and in being ſo, they are Maſters of the beſt part of the Trade of all thoſe adjoyning Countries: For *Malacca* has very few Cities (if any) that can pretend to Rival her all thereabouts, for the Sovereignty of Trade. But here the King of *Achen* is endeavouring to root them out; who if he ſucceeds, puts a Period to all the *Portugal* Greatneſs on this ſide the *Ganges*.

Coaſt of *China* and *Japan*.

At *Macao*, an Iſland on the Coaſt of *China*, they have a City with a Caſtle, and, as the Report goes, a very great Trade with the *Chineſe* there.

In *Japan* they have no Fort nor Caſtle, but only a Factory, that Prince being ſo wiſe as to keep them off at Arms length, and not ſuffer them to take any manner of hold upon him.

And this is the Draught our Captain has given us of the *Portugueze* Acquiſitions in the Eaſtern World.

Chap. XXX.

* *An Account of Sir* Tho. Roe's *Embaſſy to the Court of the* Great Mogul: *Taking in all the Particulars of thoſe Tranſactions, with other things remarkable that happen'd during his Abode there. Collected from his own Journal.*

* Note, All that relates to Geographical or Nautical Obſervations in this Journal, is inſerted already into that of Capt. *Peyton's*, with whom the Embaſſador went over. *September*, *A. D.* 1615. The Embaſſador ſets out for the Court.

Being come aſhoar at *Surat*, and having repos'd there ſome little time, after my long and tedious Voyage, I began my Journey towards the Court of the *Great Mogul*.

The Country that lies between *Surat* and *Bramport*, as far as it fell within the reach of my Obſervation, is for the moſt part poor and barren; the Towns and Villages built of Mud, and other baſe Materials, and hardly a convenient Houſe upon the Road for a Traveller to lodge in. There appear'd very little of the Pomp and Pleaſure of *India*, or of its Riches and Fruitfulneſs, this way that I went, tho' other Roads might poſſibly diſcover more. At a certain Village call'd *Batherport*, two Mile ſhort of *Bramport*, is their great Store-houſe of Ordnance; I ſaw abundance of Braſs Pieces there, of the *Indian*-make, which ſeems to be very irregular, thoſe Guns being for the moſt part as much too ſhort, as the Bore of them (in proportion) is too wide.

November, Comes to *Bramport*. His mean Accommodations there

Between this and *Bramport*, I was met by the Cutwall (or Marſhal) with a good Attendance, and ſo conducted to the Lodging prepar'd for me. But my Apartment was ſo mean and ſcandalous, that I choſe rather to lodge in my Tent, than take up with it; it conſiſted of four little Diviſions, not ſo much like Chambers as Ovens, being exactly of that form, and a very ſmall matter bigger. This ſorry Treatment obliged me to ſend the Cutwall word, That I would depart the Town out of hand, ſince I was entertain'd no better: But he deſir'd me to ſubmit to it, at leaſt for that one Night, and expreſſed ſo much unwillingneſs that I ſhould go away in a diſcontent, that I yielded to ſtay there.

But there was a more powerful Reaſon to induce my ſtay, than all the Cutwall's Perſwaſions, and that was a kind of neceſſity I lay under of making a Viſit to Sultan *Peruſe* (the King's Second Son), who reſided at *Bramport*, at that time. Here he lives almoſt in the ſame Royal Pomp that his Father does; a vaſt Crowd of Nobles, and a mighty Army is ever about him; and *Can Canna*, the Generaliſſimo of the *Mogul*'s Forces, manages all Affairs under him.

Goes to Viſit the Prince, and the manner of his Reception.

I could not avoid waiting upon this Great Perſon, ſince to have paſt him by, would have been interpreted a very heinous Contempt of his Dignity, and an Affront to the King as well as himſelf. Beſides, he was pleas'd to deſire a Viſit; and tho' that is but a civiller way of deſiring a Preſent in theſe Countries, where no Prince is ever addreſs'd without Complements of this nature; yet his Invitation added ſtrength to the Obligation I lay under upon other Accounts. So I went to his Palace, taking with me ſuch a Preſent as I thought might be grateful to him. I was receiv'd by the Cutwall at the Gate of the outward Court, in which were a hundred Gentlemen on Horſeback, arm'd, and making a Lane, through which I was to paſs. The Prince himſelf ſate mounted up in a round Gallery, in the inner Court, with a Royal Canopy erected over him, and as rich Carpets ſpread before him. As I drew near him, an Officer came and told me, I muſt pull off my Hat, and touch the Ground with my bare Head; but that ſort of Ceremony, tho' it might become his own Courtiers and Domeſticks well enough, yet I (who was none of that number) upon the Privilege of my Character made bold to refuſe it. But coming within the Rails, to the Steps of his Throne, I did him there that Reverence that I judged agreeable; in return to which he bowed his Body.

All the Grandees ſtood on both ſides of him, in the moſt humble poſture imaginable, with their Hands folded before them, as if they had been tied: And upon the Aſcent was plac'd his Secretary, whoſe Buſineſs there, was to give him, in the conciſeſt Terms, an Account of what was ſpoken or diſcours'd.

The Crowd of the Nobles and Attendants was ſo great, that I was willing to have gone up the Steps, and ſtood ſomething nearer him; but the Prince told me, That could not be granted; and even the Great Turk himſelf, if he were there, ſhou'd not be allowed to do it. Then I deſired the Liberty of a Chair; but that cou'd not be admitted neither; for his Highneſs aſſured me, That no Man, of how great Quality or Character ſoever, did ever ſit in that place, but himſelf only: Yet as a more than ordinary Favour, I was permitted to eaſe my ſelf, by leaning upon one of the Pillars that ſupported his Canopy. Upon the whole, I muſt ſay, the Prince carried it to me in a manner ſufficiently courteous and obliging.

Engliſh Factory at *Bramport*.

The State and Pride of theſe *Indian* Princes is intolerable, and they will hardly upon any account whatſoever, abate the leaſt Punctilio of Ceremony and Reſpect; but I believe I had as many, or more Conceſſions made me, than any of my Character, and the Prince condeſcended to lower Terms in treating with me, than the ſtrict and nice Rules he uſually obſerves, do allow of. He did the main Buſineſs I waited on him for, at the firſt Word, without the leaſt ſcruple or heſitation; the ſettling of a Factory there in *Bramport*. He gave order for the Firman to be preſently drawn up; which was to Authorize the Merchants both to come, and to reſide there.

The Preſents I made him, he took very kindly; and I had now gotten ſo much of his Favour, that I was invited to a free and familiar Converſation with him, in a more retired place. At that Publick Audience, and before ſo great an Appearance, he was obliged to conſult his Greatneſs, and carry it with more ſtate and diſtance; but he would withdraw into another Room, where all that ſtiffneſs ſhould be laid aſide, and I ſhould have the Liberty (as he told me) of coming up to him.

But an odd Accident deprived me of this Honour: For a part of my Preſent to him, being a Caſe of Bottles fill'd with rich Cordial Waters, the Prince (who was going into the withdrawing Room) ſupp'd ſo liberally of his Bottles by the way, that he became wholly unfit for Company at that time. 'Twas a ſudden turn, and the Strong-Waters were preſently got up into his Highneſs's Head; but there they were, and that to ſuch purpoſe, that he was forc'd to ſend an Officer to excuſe his not calling for me now, and to deſire my Company ſome other time.

Having finiſh'd all that required my ſtay and preſence at *Bramport*, I proceeded in my Journey towards the Court. By the way travelling through the Country of * *Raja Ranna*, I had a proſpect of the Ruines of the ancient and famous City of *Gurchito*. As the Prince himſelf is generally reckon'd the true Succeſſor of *Porus*, whom *Alexander* the Great conquer'd, ſo this City is eſteem'd to have been one of *Porus*'s Royal Seats; tho' the Old *Delly* that lies more Northward, is believ'd to have been the Capital City of the ancient *Indian* Empire. Amongſt the Ruines of *Gurchito*, are to be ſeen the tatter'd Carkaſſes of at leaſt a hundred Temples, all built of fair carved Stone, a vaſt number of Houſes, Towers, Arches, and Pillars; of all which, devouring Time and Wars have only left ſo much, as is ſufficient to make a Spectator gueſs what the place was formerly, and to lead him into ſome pleaſant Thoughts of the Glory and State of old *Porus*'s Kingdom.

* See Mr. *Finch's* Relation of his Travels thrô *India*, where the Caſtle is mention'd, tho' no Account of the City there.

Indeed, the Moguls themſelves do contribute as much to the defacing and ſpoiling theſe Noble Remains of Antiquity as Age it ſelf, and other Accidents have done. They take care to have all the Inhabitants entirely remov'd from them, and ſtrictly forbid all manner of Reparation, and careful Endeavours of Builders, or any others, to preſerve the decaying Strength and Beauty of thoſe Buildings. The Reaſon of which is very hard to be imagin'd, unleſs it be, that they would have nothing appear great in the whole Empire, but what they themſelves are the Authors and Founders of; and are willing the World ſhould believe *India* had no degrees of Splendor and Beauty to pretend to, but what it has derived from their Family, ſince they became the Maſters of it. Tho' if this be their Deſign, they are like to come ſhort of it, unleſs they can bury vaſt Rocks and Mountains (with the Ruines of Cities and Caſtles upon them) under ground; unleſs they can ſink thoſe mighty Pillars (whoſe Foundations are ſo ſtrong and deep below) quite down to the Center, or let them plunge into the great *Abyſſe*. For as long as any of theſe things are above ground, all People that have Eyes, will ſee what the old *India* was, and by ſeeing thoſe remaining Monuments of it, will be perſwaded that whatſoever this *Tartar* Family may have done towards the adorning of her, they have robb'd her of better Ornaments than they have given her; and with all the Advantages of their new and more modiſh Buildings, have left her far beneath the pitch of her own primitive Magnificence.

Embaſſadour arrives at *Aſmere*, and his Entertainment by the *Mogul*. *January.*

From hence I proceeded in my Journey for *Aſmere*, where the Court was at that time; and having reſted ſome time in the Lodgings provided for me, went to have my firſt Audience. The Ceremonies of this were ſo like that of my waiting upon the Prince, the *Mogul* himſelf ſitting in the ſame manner, and his Nobles and Attendants in the ſame poſtures about him, that it does not need any particular Deſcription. It is ſufficient to ſay that there is a lively repreſentation of a Theater when this Monarch ſits in State upon all publick Occaſions. Himſelf and his great Men ſtanding orderly about him upon the Aſcents of his Gallery (raiſ'd to a conſiderable height) appear like the Actors on a Stage, whilſt all the wondering croud below in the Pit are employing the utmoſt ſtrength of Eyes and Ears, to ſee and hear what paſſes above. When I came into the preſence, and had made my ſeveral Reverences to him, he was pleas'd to prevent my dull Interpreter and begin himſelf, bidding me heartily welcome; welcome to him who was the Friend and Brother of my Maſter the King of *England*. He curiouſly viewed his Majeſties Letters, my own Commiſſion as Embaſſadour, and the Preſents I brought him in my King's Name. And becauſe I had been ill a conſiderable part of the Journey, very kindly offer'd me the Care and Aſſiſtance of his own Phyſicians, and gave me a very great charge to look nicely to the preſervation of my Health while I was in his Country; for which purpoſe he adviſ'd me to keep my Lodgings till I had perfectly recover'd my ſtrength; and if in the mean time I wanted any thing neceſſary to my eaſe and refreſhment, to ſend freely to him, whom I ſhould always find ready to grant my Deſires. If the Obſervations of the *Europeans* there preſent were juſt and impartial, I was receiv'd by him with more Expreſſions of Grace and Good Will than any Embaſſadour had been before. I had the Liberty granted of uſing the Cuſtoms of my own Country, and was not oblig'd to that very ſervile adoration, that kneeling and knocking of the Ground with the Head, that the *Turk* and *Perſian* Embaſſadours can never be admitted into his Preſence without. 'Twas allow'd me to pay my reſpects to him in the ſame manner that I did to my own Prince, and provided I obſerved thoſe Ceremonies exactly, he would not impoſe thoſe of his own Court and Country upon me.

One particular of his Majeſties Preſent to this Prince being a fine Coach (a thing wholly new, and conſequently to be preſumed pleaſing to him) he was ſo taken with it, that he got the ſame Night into it, and made ſome of my Men draw him about the Court. And his *Engliſh* Coach-man has a rare place on't, and will in all probability quickly get a very great Eſtate, ſince, beſides a noble Salary which is allowed him, he ſeldom drives the *Mogul* any where, but he has a Preſent to the value of five or ten Pounds.

The Embaſſadour goes to ſee Sultan *Caroon*, and procures his orders for *Surat*.

The King's third Son Sultan *Caroon* having the Supreme Command of all things at *Surat*, the place of our principal Reſidence and Trade, I was for that Reaſon (as well as his Relation to the King) oblig'd to make him a formal viſit. He is the King's favourite Son, and a moſt violent Enemy to all Chriſtians; on which Account (fearing ſome affront) I firſt ſent word of my deſign of coming to wait on him when he was pleas'd to receive my Viſit. But the Prince prov'd much more courteous and complaiſant than the Character of his Temper allow'd me to expect; he return'd me a promiſe of good Entertainment, and was far genteeler and civiler than he had promis'd to be. I deliver'd him a Preſent (not as from his Majeſty, who was not then acquainted with his Title as Lord of *Surat*, a thing lately confer'd upon him) but as the Reſpect of our *Engliſh* Merchants, who did by me commend themſelves to his Favour and Protection. And as he receiv'd all in very good part, ſo he promis'd the full and effectual Redreſs of all Grievances at *Surat*, and to give any Security that could be deſired for the Quiet and Defence of our Factory there. This was as much as could be crav'd at his Hands, and having obtained this, I left him with no ſmall Satisfaction at my Happy Succeſs. And 'twas not long after before I had occaſion to addreſs the King himſelf (a ſecond time) about theſe Affairs.

His ſecond Audience of the King, and Firmans gotten for the *Engliſh* at *Amadanar*.

Our *Engliſh* ſeated at *Amadanar* had been horribly injur'd by the Governour there both in their Perſons and Goods; having been impriſon'd, fin'd, and ſtrangely exacted upon every way. Theſe corrupt Officers had got a trick of demanding new Cuſtoms at every Town as our Goods paſs'd along to the Port, contrary to all the meaſures of Juſtice and the eſtabliſh'd Rules of Trade. But this Burden was taken off effectually at my firſt Complaint; I think the Raſcals eſcaped with their Lives, but they were ſtrictly commanded to do Juſtice, and make reſtitution to a Farthing of all that they had ſo illegally extorted from the Merchants. And to make all this as ſure as might be, there were two Firmans drawn up, in which was granted a compleat Releaſe from all thoſe new Cuſtoms, all Money or Goods taken upon that account order'd to be reſtor'd, and a Confirmation of all the Favours and Privileges formerly vouchſafed to our Merchants and Factors. But 'tis to be obſerv'd I never went to Court but I carried ſome Preſent or other, for the King always expects it, and that from every Body that comes about Buſineſs; be it ever ſo ſmall he accepts it, even as low as the value of a ſingle Rupie, and from many People it does not come to much more; ſo that conſidering this, it ſeems to be rather a piece of ſtate, than any thing of the effect of an Avaritious Temper. 'Tis hard to ſuppoſe a Monarch as rich as all this noble part of the World can make him, that is able to pave his way with Gold and Precious Stones, and build him Houſes almoſt with the ſame coſtly Materials; 'tis hard to imagine him ſo ſordidly Covetous, as to demand a Rupie of an Inferiour or a Poor Subject, meerly for the lucre of the Money. And yet unleſs a Man complies with this Cuſtom there's nothing to be done, and his Cauſe tho' ever ſo juſt muſt be uſhered in with ſome acknowledgment of this nature, or never come before the King, for which Reaſon it may more probably be a Deſign of Policy than any baſe Intent to ſqueeze his Subjects, and rake away their Money from them, eſpecially the poor ones, who obſerve the ſame Law in their proportion with the reſt.

The *Mogul*'s reſpect to Sir *Thomas Roe*. *March.*

What I preſented his Majeſty withal upon theſe Occaſions, had generally the good Fortune to be very well liked, tho often of no great value; and the King took as much care to make thoſe that were about him ſenſible of it, by ſeveral Methods in which he expreſs'd his kind Reſentments. He commonly made me ſtand nearer to him, and in a more elevated place than the reſt of the Courtiers; and for this I needed not to wait his own Motion, or the Ceremony of asking leave, but come directly to the place appointed for me, doing all the ſtated Reverences by the way. Thus great and particular was his Reſpect to my Soveraign Lord and Maſter, whom he had no other way to Compliment ſo immediately and directly, as by his Civilities to my ſelf who had the Honour to repreſent his Perſon there. But yet all this while the main deſign of my Embaſſy was not accompliſh'd, nor in any good degree of forwardneſs. The King himſelf was kind, but his Courtiers and Miniſters of State were ſome of them envious, ill natur'd, and Men of intriegue. There was wanting yet a more Solemn, Formal and Authentick Confirmation of the Agreement, than that by common Firmans, which were granted upon every trifling occaſion, and till this was done, my Endeavours at this Court came ſhort of their moſt deſired Succeſs. And ſome formidable Enemies ſtood in my way while I attempted the gaining of this. The Prince (*Sultan Caroon*) was not my Cordial Friend, notwithſtanding all the Careſs that had paſs'd betwixt us, and the Civil Offices he had lately done me. Whether 'twas his hatred to the Chriſtian Name in General, or any particular averſion for the *Engliſh* Nation or my ſelf, I am not certain, but an Obſtacle he was in my way, and a conſiderable, tho' a ſly and ſecret one.

His Difficulties and Enemies at Court, with a remarkable Paſſage.

But there was another whoſe Power was more to be dreaded than his, tho'he was the Kings Son and his Darling too; this was *Aſaph Can*, the Brother of *Normahel*, the *Mogul*'s moſt beloved Wife. This Woman was ſo much Miſtreſs of his Heart, that ſhe rul'd both him and the great Empire even as ſhe pleas'd her ſelf: She could command what Lives or Fortunes ſhe would, places of Truſt, Honour, and Preferments were at her diſpoſe. To procure her Favour was the ſureſt way for a Man to riſe to any heighth of Dignity or Glory that he deſired; for her Good-Will once gotten, the King's was certain and infallible, he being a perfect ſlave to her, and not able to deny her any thing that ſhe ask'd. This Brother of hers was raiſ'd by her, from a baſe and ſordid Condition, *Notumque furens quid Fœmina poſſit,*

The Embaſſadour goes to the King to complain.

to the ſublimeſt Poſts in the Empire, made (of an ordinary mean Fellow) a Prince, and the greateſt of Princes about the King, and which is more his Friend and moſt intimate Counſeller. Whatever Deſigns this Man had to carry on, 'twas only needful for him to engage his Siſter on his ſide; her Charms could make his way into the Kings Heart and Secrets, and diſpoſe the yielding Monarch to a Compliance, tho' Reaſon and Intereſt ſeem'd to ſtand in the way. And as theſe Perſons that are thus ſuddenly lifted up upon the Wings of Fortune to ſo vaſt a height above their own natural level, are moſt apt to forget themſelves, and take upon them to controul and govern others, ſo was this *Aſaph Can*; he preſum'd ſtrongly upon his great Alliance, ſet up for a Controuler in the Court, and pretended to have his Hand in the diſpoſing and ordering all Affairs that paſs'd. But it does not always happen that theſe People have their Wills, and carry all irreſiſtably before them: A managed Prince ſometimes comes to himſelf and takes the Reins into his own Hands, in ſpite of all the Arts and Tricks of his crafty Governours. The *Mogul* did ſo in the Buſineſs I am now going to relate; *Aſaph Can* could not keep him in order, and *Normahles* Charms were then out of ſight. I had all along truſted this Man with my Affairs, he being ſo near to, and ſo great about the King, and being wholly ignorant of his Good Temper and Virtues, I thought I might do it ſecurely. But by degrees I found I was left in the dark, my Buſineſs was delay'd and put off, and nothing but good Words and fair Promiſes came. For which Reaſon I reſolved to go to the King, and enlighten my ſelf by a plain and free Diſcourſe with him, which Honour was always permitted me without reſtraint, and the Favourite himſelf could not deprive me of it. When I came I was admitted my ſelf, but my Interpreter was excluded by the Intriegue of *Aſaph Can*, who fear'd he would interpret more than ſtood with his Intereſt for the King to underſtand. But this Plot did not take; and the King himſelf was the Confuſion of it, by beginning to enter into a Diſcourſe with me; for I was not able to anſwer any of his Queſtions, and by a Friend thereby ſignified as much to his Majeſty, adding alſo that my Interpreter was, for I knew not what Reaſons, denied the Liberty of coming in. Upon this he being call'd in, I commanded him to tell the King I deſired to ſpeak to him, which he willingly granted; but preſently the oppoſite Faction began to croud ſo cloſe about the Throne that all ſight and hearing was taken away, and one of them was ſo civil as to pull my Interpreter away by force. But I made him ſpeak ſo loud to the King that all their malicious Endeavours could not prevent his hearing, and commanding way to be made for me to my accuſtomed place within the Rails. Thus I ſtood on one ſide of my Interpreter while *Aſaph Can* planted himſelf on the other, on purpoſe to over-awe him, or bribe him into Silence, or a wrong and defective Story of the Matters he was to repreſent: This was evident by his Motions of winking and jogging, which I diſcern'd well enough, tho' the buſie Miniſter perhaps thought I had not. In a word I deliver'd my full mind to the King, and deſir'd to be at ſome certainty about the reſult of all my Endeavours and Attendance at his Court. Our Nation (I told him) could not ſettle ſecurely in his Country upon the Foundation laid at preſent, and unleſs ſomething ſurer and firmer were done, that might infallibly prevent all Diſorders for the future, our Endeavours to keep up a Trade there would be to no purpoſe. I added that I forbore filling his Majeſties Ears with Complaints (how juſtly ſoever I might do it) ſince I hoped his Royal Orders given out for that purpoſe would take away all cauſe of uneaſineſs and diſturbance for the time to come.

The *Mogul* in a rage with his Son.

This laſt hint touch'd the guilty *Aſaph Can* to the Quick, and made him attempt to pull the Interpreter away; he knew himſelf concern'd too nearly to be quiet and patient while ſo tender a point as this was diſcuſſed. But however all his ſigns and intimations to the Interpreter to hold his Tongue would not do; it was out and too far gone to be recall'd; the King took the alarm in a violent rage, demanded who 'twas that had preſumed to do us any Wrong. He ſpoke with ſo much terrible fury and eagerneſs that I was willing to have let the Buſineſs drop, ſince I did not know what might be the effect of ſuch a ſtorm. I replied therefore that I would not trouble his Majeſty with what was paſt, but apply my ſelf for Juſtice to his Son, whoſe Favour and Protection I doubted not to obtain. But he (whoſe Paſſion had almoſt taken away the free and regular uſe of his Sences) hearing the mention of his Sons Name, and believing I had accus'd him as one of the Plotters againſt our Liberties, began to exclaim in a more fierce manner *Mio Filio, Mio Filio*, and preſently order'd him to make his appearance and anſwer for himſelf. Now all the Company was in a conſternation; *Aſpah Can* ſtood by pale and trembling, and the beſt Courtiers in the Preſence did little better. When the Prince came the King reprov'd him in ſmart and bitter Terms, and would hardly give him leave to ſpeak in his own Defence. But as his Heat went off, I made him ſenſible of the miſtake; that the Prince was not accus'd nor his Name mention'd upon any ſuch diſhonourable account. And as the Prince had offer'd me a Firman before, ſo I did him the Juſtice to acknowledge it to his Father, tho' at the ſame time 'twas ſuch a one as the Conditions of it render'd wholly inſignificant; which alſo I was oblig'd to tell for my own defence from blame and cenſure. The matter carried on thus far, brought us into a very hot diſpute; *Aſaph* and *Mocrebchan* (now both come to again, and able to ſpeak after the late Fright) took the Prince's part, run down the *Engliſh*, argued for the *Portugueze*, and labour'd to prevent my Buſineſs from coming to a Head. The *Jeſuits* and all the *Portugueze* Faction put in, and all at once endeavour'd to gain the King from me. But as my contempt of thoſe Men was too great to allow me to undertake any particular diſpute with them; ſo my main care was to keep the King on my ſide, and poſſeſs him with an opinion of the Juſtice and Reaſonableneſs of what I propos'd. And in this point I ſucceeded ſo well, that all the reſt were ſilenc'd, and I had free Scope and Liberty granted me to make my Propoſals; the Sum of which was this, that for the more perfect ſecuring of Trade, Peace and all Offices of Friendſhip between the Subjects of the *Great Mogul* and the King of *England*, his Majeſty would pleaſe to order three Firmans to be drawn up, one of which ſhould be ſign'd by himſelf, the other by the Prince, and a third by my ſelf in the Name of my King.

The Embaſſadour gains his point in the Diſpute.

In order to this all my Demands were to be preſented in Writing, to be perus'd by the King and his Council; which if they were approv'd of, the Firmans were to be made according to the Tenour of them with all diſpatch; if not, there was a compleat Anſwer given, and we knew what we had to depend upon. Thus this Buſineſs ended favourably in ſpite of all that would have confounded and perplexed it; the King and the Prince both engaged themſelves to Seal, if they found my Terms fair and reaſonable, and I did the like on the behalf of my Royal Maſter; and now the Aſſembly broke up. I can't omit taking notice of the King's mighty care and concern about the Preſents that his Majeſty of *England* would ſend him upon this ſtrict and ſolemn renewal of the League betwixt them. Methoughts it look'd a little mean and odd in ſo great a Monarch to trouble himſelf about ſuch trifling things; but the Cuſtom has obtain'd, and do it they will in ſpite of all their greatneſs that commands the contrary. To ſend him Gold or Jewels, or any rarities of that kind, which his own Country afforded in ſuch Plenty, and ſupplied the reſt of the World withal, this I told him would be to no purpoſe; but whatever things our Country yielded that were rare and excellent, and were ſtrangers to his, with all ſuch things he might be ſure our King would take care to gratify his Majeſties Fancy. And to do him Juſtice he was not ſolicitous at all about any of thoſe rich things mentioned, but was very earneſt to have a breed of *Engliſh* Horſes; and if I would procure him a Preſent of thoſe Creatures, it would be the greateſt Pleaſure I could do him. Now the difficulty of tranſportation was conſiderable upon the account of the length of the Voyage, and 'twas ten to one whether the Horſes came alive to *India* or no, at leaſt in any tolerable caſe, and fit for the uſe of ſo great a Prince; but all thoſe Objections were nothing to him, whoſe Fancy was ſtrongly ſet this way; the Horſes muſt be ſent for, and if they came lean and poor, he ſaid he would take care to fat them again.

April. The Prince argues with the King againſt the *Engliſh*. *A. D.* 1616.

After this I found by ſome Intelligence that the Prince applied himſelf with great diligence to the work of ruining our Affairs at Court. He pretended to demonſtrate to the King that we were a Burden and a Detriment to the Country in compariſon with the *Portugueze*; that their Buſineſs amounted to vaſtly more than ours, and beſides brought his Majeſty Pearls and Jewels, whereas we never preſented him but with Pedlary Ware, Knives Swords and Cloth, and other Toys of little value. I concluded by this that the effects of the late Diſpute were highly diſobliging to him, and he took himſelf to be affronted by what I had done, tho' 'twas moſt evident that 'twas all a miſtake on the King's part, and there was no deſign in the leaſt of expoſing him to his Fathers diſpleaſure at that time. This *Aſaph Can* was ſenſible of, and confeſs'd to me afterwards that both the Prince and himſelf had all imaginable Reaſon to aſſert and juſtify my ſincere Intentions in that matter; but they both know how to diſſemble, and I found by their Actions that they believ'd me guilty, tho' by Words they declar'd me Innocent.

June.

But now there was ſome proſpect of the Removal of this Adverſary of our Nation (the Prince I mean) away from the King's Ear and Councils; tho' perhaps our Circumſtances would have been little mended by it upon other accounts; for tho' he was out of the way of doing miſchief at Court, yet he was in the way of doing it ſomewhere elſe, and would be abſolute and above controul wherever he was; and as no Complaints would ſignifie any thing againſt him while he was exerting his Power and Soveraignty any way to our prejudice; ſo it would be impoſſible ever to procure any Satisfaction for Wrongs he ſhould do at that diſtance.

The Buſineſs deſign'd for him was the command of the Army employ'd in the *Decan* Wars, in which he was to ſucceed his elder Brother Sultan *Peruiſe*, who was now to be recall'd from that Poſt. The King had conſulted the *Bramens* and the Religious Men in this Affair, more than his Council and the Military Officers that were capable of giving him better Advice.

Sultan *Caroon* not loved by the Souldiers.

It was directly, contrary to all their Sence and Notions, that Sultan *Caroon* ſhould have the Supreme Command devolved upon him; for all the Souldiers hated him for his barbarous tyrannical Humour, and the Generals themſelves refus'd to ſtay, and declar'd they would lay down their Arms if he came amongſt them. But the Council of the Holy Men prevail'd, and the Prince muſt go tho' all the Army runs away at his arrival; 'tis probable that thoſe Wiſe Men had ſhewn the King ſome lucky Preſages of Victory and Succeſs under his management, either the Sacrifices had yielded happy Tokens to theſe curious Obſervers of them, or they had found it out in the Scheme of his Nativity. 'Twas thought by all that Sultan *Peruiſe* would reſent his coming ſo high an affront that he would ſet himſelf to revenge it; and that if the two Brothers happened to meet, there would be ſome Blood ſhed on both ſides before they parted again.

The King indifferent which of his Sons gets the better.

July.

But the King made but a Jeſt of all this; let them fight it out (ſays he) and end the quarrel between themſelves as well as they can, he that gets the Victory, and proves himſelf the beſt Man of the two, ſhall carry on the War againſt the *Decanees*, and the other ſhall come home.

But this may be of worſe conſequence to his State than he ſeems now to be aware of, and ſhould his Sons (ſo violently enrag'd againſt each other as they are) involve the Country in a Civil War, the old Prince may have time enough to repent his eaſineſs and indiſcretion, and may wiſh his Affair had been more prudently conducted.

The *Engliſh* ſecur'd at *Baroch*, by the means of *Mahobet Can*.

Our Buſineſs at *Barech* had about this time a favourable turn given to it, by the kind and diſcreet management of *Mahobet Can*, a Perſon of the higheſt rank in the Empire. He is a Man beloved of his Prince, greatly truſted by him, and ſeems one of the main ſtays and props of his Government. His good Qualities deſerve all the Honours and Preferments that have been heap'd upon him, and 'tis hard to find in all this Court where the King's Favours could have been more worthily plac'd than here. The Prince Sultan *Caroon* has no Kindneſs for him; but as that's one Argument of his being an honeſt and good natur'd Man; ſo on the other ſide he neither fears nor cares for Prince, and that's as good a Proof of his Courage and Reſolution. This Perſon made (at my firſt requeſt) our Firman for *Barech* as effectual as could be deſir'd. The *Engliſh* therein had a Houſe granted them juſt by the Governour's, by which means they were fix'd more out of the way of violence and treacherous uſage, and nearer their Remedy in caſe of any Diſorder. But there were all poſſible Precautions againſt any thing of that nature likewiſe, and ſevere Penalties to be inflicted upon thoſe that ſhould offer any Diſturbance by Sea or Land. All the Cuſtoms were freely remitted; and they might buy, ſell or tranſport any Commodities at pleaſure, without the leaſt moleſtation from any Man. Theſe Privileges the Prince would never have granted, but now they were procur'd without his Favour, and ſo would (under the Protection of this great Man) be continued without the ſame. For the King who knew and lov'd his Loyalty and other Vertues, rewarded his Merit with a large and almoſt an abſolute Power in the Country, to do and diſpoſe things as he ſaw fit; ſo that he continuing our Friend (and there's no likelyhood of his loſing the *Mogul's* Favour) our Trade may thrive conſiderably, and we may be far more eaſie than ever.

Baroch will now be a ſafe retreat to us from the Injuries and Oppreſſions of the Prince, and by his remiſſion of the Cuſtoms at leaſt 1500 pound *per An.* will be ſaved, beſides all the loſſes conſequent upon ſearches into our Goods and other cheating methods practis'd by the common Officers; and laſtly, our Trade and Privileges will not now ſtand upon ſo uncertain and precarious a Foundation as they muſt while we depend ſolely upon the Prince, where upon every change of Humour, or Bribe, or Story of a fawning corrupt Courtier, our Intereſt was ſhaken, and a building erected with no little coſt and pains, every moment in danger of tumbling to the Ground.

By the way this Perſon made one diſcovery to me, which ſerves as well to evince the Integrity and Generoſity of his own temper, as to ſhew the avarice and ill management of the Officers in all the trading Towns. The *Great Mogul* himſelf demands nor takes no Cuſtoms, neither is there any that way that comes into his Treaſury. 'Tis the Governours do all this for their own private Advantage, they impoſe what Duties they pleaſe, and rigorouſly exact (what they think fit to demand) of all Foreigners they have to do with. And if the miſchief ſtopt here and went no farther it were yet ſomething tollerable; but are there is no bounds ot their Extortion and Covetouſneſs, ſo there is no end of their racking and preying upon Strangers; they ask what they will, and take what they ask, and 'tis well if they don't take more in to the Bargain. And in all theſe caſes 'tis hard for a Man to come by a Remedy, nay, 'tis many times more chargeable and troubleſome than the Diſeaſe it ſelf; it muſt be only (if it be at all) by making ones own complaint in Perſon to the King, for there's no truſting any of the great Men about him to manage the Cauſe, or deliver the Sence of it to him, ſince 'tis infallibly certain that they'll never let him underſtand the Truth of it. They always obſerve theſe two Rules in diſcourſing of any matters of this nature to the King; either to ſpeak what pleaſes themſelves, and makes for the Intereſt of their own Faction, or elſe what they know will be agreeable to him and ſutes his Fancy and Humour, be it true or falſe. How unhappy (in this Reſpect) is the Condition of a mighty Monarch, who (while the World bows before him, and Crowns and Scepters are laid at his Feet) is himſelf the moſt govern'd thing of all, and has his Mind and Sences under the management of others. The intriguing Courtiers that ſurround him keep guard upon his Underſtanding; meaſure out all his Knowledge to him, and ſhape and mould the Objects of it into what form they think beſt. Truth and Falſhood both appear in the Colours they are pleas'd to dreſs them up in; and the Proſpect of all Objects about him is preſented by their Glaſſes, which make the Appearance ſuch as ſerves their turn. The eaſie Prince (given up to his Pleaſures) examines nothing, but takes all upon truſt; all Cares and Troubles are excluded from his Happy Retirements; he gluts himſelf with the Joys of his own Palace, and lives trick'd and impos'd upon by the flattering Courtiers all his Days.

To finiſh all the Buſineſs I had to do in *India*, I wanted but ſuch another Diſpatch for other places, as I had now for *Baroch*, by the Civility of *Mahobet Can*.

August.

But beſides this Perſon, the King had the happineſs of another very Great and Loyal Subject, as well as we our ſelves of a good and obliging Friend; and truly both theſe were ſo ſcarce in *India* at my being there (I mean Men of real Honour and Generoſity, upright and diſintereſted in their Actions, ſuch as dared to be truly zealous for their Prince, and juſt and kind to Strangers) that all we find of them may without any great trouble be mention'd.

The Civility of the Vice-roy of *Patan* to the Embaſſadour.
